There are, however, for the reign of Fīrūz Shāh Tughluḳ, a number of references, principally in works of the *manāḳib* idiom, stating that that Sultan levied *djizya*. The anonymous *Sirat-i Fīrūz Shāhī*, (772/1370-1), (India Office Library Roto 34 of Bankīpur MS, fol. 61b), claims that Fīrūz Shāh Tughluḳ ordered that only canonical taxes should be collected, a claim repeated in the *Futūḥāt-i Fīrūz Shāhī*, ed. Shaykh Abdur Rashid, ʿAlīgaṙh 1954, 6. Shams al-Dīn Sirādj ʿAfīf, *Taʾrīkh-i Fīrūz Shāhī*, states (*Bib. Ind.* ed. 382-4) that Fīrūz, having obtained a *fatwā* that *djizya* should be levied from the Brāhmans, ordered it to be levied, but reduced its incidence, after protest from the Brāhmans of Dihlī and petition from other Hindūs, from the three rates of 40, 20 and 10 *tanka*s to 10 *tanka*s of 50 *djītal*s. The contemporary collection of ornamental epistles, *Inshā-yi Mahrū* (ed. Shaykh Abdur Rashid, ʿAlīgaṙh n.d.), also mentions (41, 53-4) the levy of *djizya*, although the latter context suggests it was not distinguished from land revenue.

In the Sayyid and Lodī period nothing is heard of the levy of *djizya*. From the manner in which the historians of Akbar's reign report its abolition by him, even the references to it in the Tughluḳ period may be largely panegyrical There is indeed no agreement on the date at which the abolition took place. Abu 'l-Faḍl in the *Akbar-nāma* (*Bib. Ind.*, ii, 203), places it in 971/1564, Badāʾūnī in 987/1579 (*Muntakhab al-tawārīkh*, *Bib. Ind.*, ii, 276). The latter, who is otherwise quick to condemn Akbar for any deviation from orthodoxy, mentions the event without comment. Niẓām al-Dīn Aḥmad does not refer to *djizya* but mentions an abolition of *zakāt* in 989/1581.

Following a number of orthodox measures discriminating against non-Muslims, Awrangzīb imposed *djizya* in 1090/1679, the *Mirʾāt-i Aḥmadī* states (i, 296-8), after a petition by *ʿulamāʾ* and *fuḳahāʾ*. Financial stringency as well as Awrangzīb's personal inclination doubtless helped to prompt the decision, although this would not, of course, explain the discriminatory character of the tax. Īsar Dās, *Futūḥāt-i ʿĀlamgīrī*, (British Museum Add. 23884, fol. 74a-74b), states that government servants were exempted and that there were three rates of tax—owners of property worth 2,500 rupees were assessed at 16 rupees, those worth 250 rupees at 6 rupees 8 annas, and those worth 52 rupees were assessed at 3 rupees and 4 annas, the blind, the paralysed, and the indigent being exempt. Its introduction encountered popular and court opposition at Dihlī, which was, however, overborne. The *Mirʾāt-i Aḥmadī* states that *djizya* brought in 500,000 rupees in the province of Gudjarāt.

Djizya did not long survive the death of Awrangzīb in 1118/1707. Bahādur Shāh, Djahāndār Shāh, Farrukhsiyar and Muḥammad Shāh are all said to have abolished it, although Farrukhsiyar had at one time struck a *dirham sharʿī* to facilitate payment of the *djizya* at the canonical rates (see dār al-ḍarb,

iii). Niẓām al-Mulk Āsaf Djāh attempted to revive it in 1135/1723, and Muḥammad Shāh nominally restored it in 1137/1725, but this restitution was never carried into effect.

DJŌDHPUR or Mārwāŕ was the largest of the former Indian States in the Rajputana Agency with an area of 36,120 sq.m. and a population of 2,555,904 (1941 Census). There appears to be no evidence to support the Rādjpūt legend that the state of Djōdhpur was founded by the Rādjpūts of Kanawdj after their defeat by Muḥammad of Ghūr in 590/1194. Siyāhdjī, the founder of the Rāthōr dynasty of Djōdhpur, was probably descended from Rāthōr rādjās whose inscriptions are found in Djōdhpur as early as the tenth century. The city of Djōdhpur dates back to 1459. Rāw Māldew of Djōdhpur, who refused to grant asylum to Humāyūn, was defeated by Shīr Shāh and by Akbar whose tributary he became. From this time the rulers of Djōdhpur were closely connected with the Mughal emperors of Dihlī, giving their daughters in marriage to the imperial family and serving in the Mughal armies. The most famous Rādjpūt in the service of the Mughal emperors was Mahārādjā Djaswant Singh (1048-89/1638-73). Because of Awrangzīb's orthodox religious policy war broke out in 1090/1679. Djōdhpur was sacked, but guerilla warfare continued for many years. The Sayyid brothers forced the ruler of Djōdhpur to give a daughter in marriage to the Emperor Farrukhsiyar. With the decline of Mughal power Djōdhpur was overrun by Marāthās and by the forces of Amīr Khān the Paṭhān freebooter. It came under British protection in 1818. Mahārādjā Takht Sing who was loyal to the British in 1857 was guaranteed the right of adoption in 1862. The history of the State under British protection is uninteresting. In 1949 Djōdhpur was merged into the new Indian State of Rādjāsthān.

DJOLOF (Diolof) is the name of a kingdom which was set up on what is now Senegalese territory from the 13th to the 16th centuries. At the height of its power this kingdom included Walo, Cayor, Baol, Sine, Salūm and Dimar, as well as part of Bambūk. The inhabitants and their language are called *Wolof* (modern spelling: *Ouolof*).

Physical features.—Djolof, which now designates merely one region of the Republic of Senegal, lies between 14°-16° N., and 16°-18° W. On the north it is bounded by Walo, Dimar and Fūta Toro, on the east by Fūta Damga and Ferlo, on the south by Niani-Ouli and Baol, and on the west by Cayor and N'Diambour.

The Nounoum runs across Djolof from south-east to north-west, a river which is permanent only in its lower reaches where, from downstream, it receives the outflow from lake Guiers. It is one of the least fertile regions of Senegal; it can count on only 500 mm. of rain during the four months of the rainy season (July to October), called *navète*, a period of violent storms alternating with dry tornadoes. A transition period which is already dry, the *lollé*, though sometimes marked by a little rain (*heug*), then follows, corresponding with the ground-nut season (November to January). It is then that water-melons (*beref*) are cultivated, being harvested at the end of the dry season (*nor*). The harmattan blows violently in February and March, while in May and June, during the *tiorom*, the drought is alleviated and vegetation begins to grow green again.

History.—The history of Djolof is not fully known. Legend relates that in about 595/1200, a pious Muslim of the Prophet's family, by name Būbakar (Abū Bakr) b. ʿUmar, also called Abū Dardāy, came from Mecca to settle in Senegal, and converted the country to Islam. Apparently it was only in the 15th century that one of his presumed descendants, Ndiadiane Diaye, freed Djolof from the domination of Tekrūr and annexed Walo, Baol, Sine and Salūm in turn. The sovereigns bore the title of *Bour ba Djolof*. Quarrels that broke out between the various Ouolof communities led to the secession of the Lebou who crossed Cayor and went to settle on the peninsula of Cap Vert under the suzerainty of the *damel*. In the 16th century a certain Koumbi Guielem, with the help of the Lebou, started a revolt against *Bour* Biram Diem Koumba who crushed it, but was unable to prevent the chiefs of Cayor and Baol from seceding. In the middle of the 16th century, Leleful Fack was unable to withstand a further revolt, led by a certain Amani Goné Sohel who was the true founder of the kingdom of Cayor, with M'Bour as its capital.

Probably as a result of the profoundly democratic temperament of the Ouolofs, there is not a single sovereign from this period whose name is outstanding. But the linguistic and cultural mark had been set, and was later confirmed during the colonial period.

Djolof, being situated inland, was affected by European colonization only at a late date. In the 16th century Islam had only superficially penetrated to this region where the pagan practices of the Ouolofs scandalized the pious Muslims. However, the progressive Islamization of the inhabitants was noted as early as 1445 by Ca da Mosto.

After settling on the coast from 1683, the French explored the interior. In 1682 Lemaire gave information about the Ouolofs, while three years later La Courbe sent his agents to make a treaty with the *Bour ba Guiolof*. From 1749 to 1753, Djolof was visited by the French naturalist Michel Adanson. A century later it served as a place of refuge for the rebels during the campaigns conducted against Lat Dior, *damel* of Cayor. In 1871 the Tīdjānī chief Aḥmadu Sheykhu invaded Djolof and Cayor, but was routed by an expeditionary force and killed in 1875.

In 1889, a force under the command of Colonel Dodds put the *bour ba Djolof* to flight. The latter's brother acknowledged the French Protectorate on 3 May 1890. Henceforth Djolof shared in the development of Senegal and, in 1931, a branch line of the

Dakar-Saint Louis railway reached Linguère in the heart of the Djolof country. At the present time the region is almost entirely Islamized. In every village can be found a place reserved for communal prayer (*diāma*) and one or more marabouts. The Muslim Ouolofs are very strict in praying and fasting; the name *tabaski* (Touareg *tafaski*, from *pascha*) which they give to *al-ʿīd al-kabīr* is evidence of their partial conversion by the Berbers; they are very ready to become members of a religious confraternity, usually the Ḳādiriyya. It was from Djolof that Aḥmadu Bamba, founder of the Murīd sect, recruited his followers. This Murīdism (in a peasant form) is regarded as a "Ouolofisation" of Islam.

Society.—According to tradition, the first villages are said to have been formed by gifts of land by the Burba Djolof to warriors who had distinguished themselves in expeditions. As in most of the Ouolof country, society is divided into endogamous groups which no-one can leave or join. The freemen (*gor*) are descendants of the founder of the village or marabout: artisans, cobblers (*wudé*), blacksmiths (*teugne*), wood-workers (*laobé*), sorcerers (*gueveul*). The caste of the unfree (or *diame*) seems to have disappeared.

The place of habitation is the village (*deuk*), formed of squares which house the scattered family. Although the ground-nut has noticeably improved living conditions, Djolof is one of the most barren regions of Senegal, and hence the temporary emigration of the men to the towns.

(R. Cornevin)

DJUBAYL, a small port in Lebanon situated between Bayrūt and Tripoli on the site of the ancient Byblos (or Gebal in the Old Testament), formerly a centre at once maritime, commercial and religious, closely connected with Egypt since the 4th millennium B.C., and as celebrated for the worship of Adonis, of a syncretistic nature, as for its specialization in woodwork and products from the forests on the mountains nearby. If Byblos remained truly prosperous in the Roman period and later became the seat of a bishopric, it appears to have greatly declined by the time when it was conquered by the Muslims, and when Muʿāwiya established a colony of Persians there, as in the neighbouring territories. Djubayl, which was attached to the *djund* of Damascus, kept a small garrison until the 5th/11th century. At that period, when the Fāṭimids had extended their domination over the Syrian coast, it was under the direct dependency of the Shīʿī ḳāḍīs of Tripoli, the Banū ʿAmmār. According to the traveller Nāṣir-i Khusraw who passed through it in 438/1047 the town, triangular in shape and surrounded by high walls, stood by the sea, whilst the surrounding plain, at the foot of Mount Lebanon, was covered with date-palms.

Captured in 496-1103 by Raymond de Saint Gilles, Count of Tripoli, it became a feudal domain under the name Gibelet, and was given to a family of Genoese origin who were known as the "lords of Gibelet"; it remained in the hands of the Crusaders until reconquered by Saladin in 583/1187. Archaeological traces of the Frankish period can be seen in the castle which stands on a hill at the north-east angle of the enceinte, no doubt on the site of an earlier Muslim fortress, and in the church of St. John, most of which was later rebuilt, though the baptistery, a masterpiece of Romanesque art, has survived intact.

At one time reoccupied by the Franks, to whom the Kurdish garrison put there by Ṣalāḥ al-Dīn had surrendered in 593/1197, the town was reconquered in 665/1266-7 by Baybars who restored the fortifications, and later made it part of the Mamlūk district of Bayrūt. Then, at the end of the 9th/15th century, it fell into the hands of the Banū Ḥamāda, a family of Mutawālīs dominating Upper Lebanon, and remained in their power until the 12th/18th century. The importance of its port had by then greatly diminished, its place being taken by Djūniya, a rival port from ancient times which had long been in control of the local coastal shipping.

At the present day Djubayl is merely a small village of about 1,500 inhabitants, almost all Maronite, and it is chiefly known for the ruins of the Phoenician town which have been methodically excavated since 1921 by the French mission under the direction of M. Montet and M. Dunand respectively.

(D. Sourdel)

AL-DJUBAYL, a Saʿūdī Arabian port on the Persian Gulf, located at 27° 00′ N., 49° 39′ E.; also known as ʿAynayn. Al-Djubayl al-Baḥrī, a rocky islet several hundred metres offshore, is the most prominent landmark of the site; al-Djabal al-Barrī is a hill about 12 km. to the south of the town. Al-Djubayl is located at the start of the Darb al-Kunhurī, a caravan trail and motor track leading to al-Riyaḍ. Members of the tribe of Āl Bū ʿAynayn assert that the site was settled by their ancestor Khuwaylid b. ʿAbd Allāh b. Dārim of Banī Tamīm

and took the name ʿAynayn from its two flowing springs; it is also said to have been once occupied by the tribe of ʿAbd al-Ḳays. In the early Islamic period ʿAynayn was noted for its plentiful date palms and for a poet, Khulayd ʿAynayn, who is chiefly remembered for exchanging lampoons with the famous Umayyad satirist Djarīr b. ʿAṭiyya. The site was later abandoned. The present town was populated about 1330/1911-2 by members of Āl Bū ʿAynayn who emigrated from Ḳaṭar, with the permission of the Turkish authorities, as the result of a local dispute. The settlers were Mālikī Sunnīs engaged in pearl fishing and other seafaring occupations. Al-Djubayl came under Saʿūdī rule during the conquest of al-Ḥasā by ʿAbd al-ʿAzīz Āl Saʿūd in 1331/1913. The town was formally acknowledged to be Saʿūdī territory in the treaty of 1334/1915 by which Britain recognized the independence of ʿAbd al-ʿAzīz. During the consolidation of the Saʿūdī Kingdom, al-Djubayl became a port of entry for goods destined for Central Arabia. Its significance has since diminished as the result of the decline in the Persian Gulf pearling trade and of the development of modern communication routes through the port, rail, and road centre of al-Dammām [*q.v.*]. The population of al-Djubayl was estimated in 1960 at 4,200.

AL-**DJUBAYLA**, a small town of 50-60 dwellings located in Nadjd at 24° 54′ N, 46° 28′ E, on the left bank of Wādī Ḥanīfa between al-ʿUyayna and al-Dirʿiyya. Yāḳūt mentions a place called al-Djubayla as the chief town of Banū ʿĀmir of ʿAbd al-Ḳays, but there is no evidence definitely linking this place with the present town. According to Ibn Bulayhid and local tradition, the site of ʿAḳrabāʾ [*q.v.*] is near the present town. Mounds on the right bank of Wādī Ḥanīfa, called locally Ḳubūr al-Ṣaḥāba, are believed to be the graves of Companions fallen in the battle of ʿAḳrabāʾ, and ʿAḳrabāʾ is the name of the garden area of al-Djubayla, a small *rawḍa* about one kilometre east of the town, which is said to be the actual site of the gardens in which the battle took place.

Ibn Bishr relates that in 850/1446 al-Djubayla belonged to Āl Yazīd, whom Mūsā b. Rabīʿa b. Māniʿ al-Muraydī, an ancestor of Āl Saʿūd, attacked and virtually exterminated shortly thereafter. Āl Dughaythir of al-Dirʿiyya claim descent from the survivors of Āl Yazīd, who were a branch of the Banū Ḥanīfa (Ḥanīf b. Ludjaym of Bakr ibn Wāʾil), the supporters of Musaylima al-Kadhdhāb at the battle of ʿAḳrabāʾ and the tribe which gave its name to Wādī Ḥanīfa. The battle site of ʿAḳrabāʾ was in ancient al-Yamāma, which is believed to have extended as far north as the present town of al-Djubayla and its garden of ʿAḳrabāʾ. However, in many cases the identification of ancient places by modern usage remains inconclusive.

Both al-Djubayla and ʿAḳrabāʾ are mentioned several times by Ibn Bishr as the scene of clashes between the growing power of Āl Saʿūd and the influential lords of Banū Khālid from al-Ḥasā (al-Aḥsāʾ) between 1133/1721 and 1172/1758-59.

In 1153/1740 the young reformer, Shaykh Muḥammad b. ʿAbd al-Wahhāb, then virtually unknown outside of al-ʿUyayna, destroyed the alleged tomb of Zayd b. al-Khaṭṭāb, the eldest brother of the Caliph ʿUmar and one of the Companions who fell at ʿAḳrabāʾ, as a step towards the obliteration of false worship in Nadjd. Today the site of the tomb is forgotten.

Al-Djubayla lies at the juncture of two roads from al-Riyāḍ to al-Ḥidjāz; one road winding across the rolling rocky country between the east bank of Wādī Ḥanīfa and al-Riyāḍ, and a second road which is paved as far as al-Dirʿiyya [*q.v.*] and then follows the bed of Wādī Ḥanīfa to al-Djubayla. These roads give the town access to al-Riyāḍ for the sale of crops raised in the garden of ʿAḳrabāʾ and a small steady income from trans-peninsular motor traffic. In 1961 a new road was completed which provides a paved all-weather route from al-Riyāḍ to the Tuwayḳ escarpment at Shaʿīb Luḥā (sometimes shown on maps as al-Ha) south-south-east of al-Riyāḍ, whence it proceeds north-west, parallel to the escarpment, as far as Marāh where it rejoins Darb al-Ḥidjāz, eliminating completely the difficult stretch of road between al-Djubayla and the pass of al-Ḥaysiyya at the head of Wādī Ḥanīfa.

Bibliography: Ibn Bishr; Ibn Bulayhid; Philby, *Saʾudi Arabia*, London 1955; Yāḳūt. (R. L. HEADLEY)

DJUBBA [see LIBĀS].

AL-**DJUBBĀʾĪ**, ABŪ ʿALĪ MUḤAMMAD B. ʿABD AL-WAHHĀB, one of the most celebrated of the Muʿtazila [*q.v.*]. Born at Djubbā in Khūzistān, he attended the school at Baṣra of Abū Yaʿḳūb Yūsuf al-Shaḥḥām who at that time occupied the chair of Abu ʾl-Hudhayl al-ʿAllāf. He succeeded al-Shaḥḥām, and it can be said that he was able to add a final brilliance to the tradition of the masters, while at times he refreshed it and opened the way to new solutions. He died in 303/915-6.

He thus holds a place in the line of the Baṣra Muʿtazila who, especially over the question of human actions, differ from the Baghdād Muʿtazila. In Baṣra itself, he was particularly at variance with al-Naẓẓām (whom he opposed) and al-Djāḥiẓ, but he also differed from the two lines of thought of al-Aṣamm and ʿAbbād although these were closer to his own. The two last-mentioned both combined the influence of Muʿammar with the tradition of Abu ʾl-Hudhayl; and the two former added to the Baṣra teaching influences deriving from Baghdād (school of al-Murdār).

Al-Djubbāʾī had two pupils who later became celebrated: his son Abū Hāshim (cf. below), and Abu ʾl-Ḥasan al-Ashʿarī [*q.v.*] who, after breaking away, was to devote himself to refuting Muʿtazilism and to become the "founder" of the so-called school of the *Ashʿariyya* [*q.v.*]. The traditions of the *ʿilm al-kalām* take pleasure in recounting the dialogue reputed to have brought al-Ashʿarī and his teacher into conflict on the subject of the fate of the "three brothers"—one pious, one impious and one who died *infans*. In this issue was posed the problem of the rational justification of the divine Decree. Al-Djubbāʾī, it is said, was unable to reply, and al-Ashʿarī left him. W. Montgomery Watt has reminded us that the wish to "justify" absolutely the divine Decree in respect of every human destiny seems to derive perhaps from the Baghdād Muʿtazila rather than from the Baṣra school (*Free will and predestination in early Islam*, 137).

However that may be, no complete work of al-Djubbāʾī has survived until the present time. We know that he left a *Kitāb al-uṣūl*, to the refutation of which al-Ashʿarī devoted several treatises (cf. in

the bibliography of McCarthy, *Lumaʿ*, Appendix iii, nos. 16, 61, 65, 78), and various polemical works against Ibn al-Rāwandī and al-Naẓẓām. But one of the best available sources allowing us to evaluate his tendencies is still the *Maḳālāt al-Islāmiyyīn* of al-As͟hʿarī (see particularly Cairo ed., ii, 181-5, 196, 199-201, 243, etc.).

The teaching given by al-Dj̲ubbā'ī followed after the reaction by caliph Mutawakkil which dates from 235/850. Muʿtazilism is no longer the official doctrine. Certain tendencies of al-Dj̲ubbā'ī are linked with the best traditions of the school, others already proclaim the solutions of the As͟hʿarī *kalām*. On the one hand, he maintains the validity of *ʿaḳl* (reason) as a criterion, and he continues to affirm the identity of the divine attributes and the divine essence; on the other hand, however, he tends to introduce once again the mystery of the divine Will and its action upon the world.—Two examples: (1) those of the Bag͟hdād Muʿtazila, followed with certain modifications by al-S͟haḥḥām, who adopted the idea of "acquisition" (*kasb, iktisāb*), applied it only to involuntary human actions, God being, in their view, in no way the "cause" of free human actions; for al-Dj̲ubbā'ī, on the contrary, God retains Supreme Power even over the actions which man performs freely. But, unlike the later As͟hʿarī solution, he refuses to apply the theory of the *kasb* to free actions; and he calls man the "creator" (*k͟hāliḳ*) of his actions, in the sense that man acts, or his actions proceed from him, with a determination (*ḳadar*) which comes from God.—(2) ʿAbbād objected to any association of God with evil, and for example refused to speak of *s͟harr* or *ḳabḥ* as sickness or weakness; according to al-Dj̲ubbā'ī, they can be called "evils", provided that this term is taken metaphorically. Similarly, he offers personal solutions to the problem of "divine aid" (*tawfīḳ*) and "divine favour" (*luṭf*), which do not destroy the voluntary character of the action. What is more, foreshadowing certain As͟hʿarī theories, he breaks away from the Muʿtazila tradition of allotting merit and demerit according to an exact, rational criterion, and maintains that God grants to whom He will His favour or good-will gratuitously (the problem of *tafaḍḍul*).

Al-Dj̲ubbā'ī was no doubt one of the Muʿtazila whom al-As͟hʿarī took the greatest pains to refute, all the more since he knew him better; but this did not happen without his influence being felt, and we have already noted al-Dj̲ubbā'ī putting forward certain As͟hʿarite arguments. This complex relationship between al-As͟hʿarī and his former teacher helps, we feel, to explain the paradox of As͟hʿarism in its infancy: claiming kinship with the "Ancients", particularly Ibn Ḥanbal, but rejected, no less than Muʿtazilism, by contemporary Ḥanbalites.

Abū Hās͟him ʿAbd al-Salām, son of al-Dj̲ubbā'ī, d. 321/933. He was a contemporary of al-As͟hʿarī, and one of the very last Muʿtazila to exercise a direct influence on Sunnī thought. He conducted a school, his disciples being called *bahs͟hamiyya*, or even, by their enemies, *d͟hammiyya* [*q v.*] (mentioned in al-Bag͟hdādī). The Muʿtazilī influence, though opposed by the official Sunnism, continued to affect the S͟hīʿa, and Ibn ʿAbbād al-Ṭālaḳānī (326-85/938-95), vizier of the Būyid princes Mu'ayyid al-Dawla and Fak͟hr al-Dawla, recognized Abū Hās͟him as his master.

The works of Abū Hās͟him have not survived, and we know almost nothing of the author himself except from later polemical works. He was known chiefly for his theories of "modes" (*aḥwāl*), a sort of conceptualism which was to exert great influence on the *falsafa* on the one hand, and on the later *kalām* on the other. It was on the question of the relationship between the divine attributes and the divine essence that the problem was raised. Anxiety to safeguard the absolute Unity of God led the Muʿtazila, and even al-Dj̲ubbā'ī, to "extenuate" (*taʿṭīl*) the reality of the attributes to the point of turning them into simple denominations. Abū Hās͟him made use of the grammatical notion of *ḥāl*, "state" of the verb in relation to the agent, to define the degree of reality of mental concepts, and thence the degree of reality of the divine attributes. According to an observation of L. Massignon (*Passion d'al-Ḥallād͟j*, 556), he compares "les modes [*aḥwāl*] d'inhérence des attributs divins en Dieu avec les modalités [*id.*] d'insertion des concepts en notre esprit". Now, as Fak͟hr al-Din al-Rāzī was to say (*Muḥaṣṣal*, 38), the *ḥāl* is the "state" established in our mind by the meaning according to which the idea is received, and it is intermediate "between existence and non-existence".

From the human concept to the divine attribute there is thus, for Abū Hās͟him, a constant interplay between the logical (and noetic) and the metaphysical. Just as the *kasb* of al-S͟haḥḥām (rejected by al-Dj̲ubbā'ī) was later taken up and transformed by the As͟hʿarīs, so the *ḥāl* of Abū Hās͟him was later adopted in terms of their own perspectives by al-As͟hʿarī, no doubt by Bāḳillānī, and certainly by Dj̲uwaynī, master of al-G͟hazzālī in *kalām*. What is more, it is not inopportune to turn to Abū Hās͟him's theses to explain the semi-conceptualism of Ibn Sīnā and his commentator the S͟hīʿī Naṣīr al-Dīn al-Ṭūsī.—Al-Dj̲ubbā'ī and his son thus exerted on Muslim thought an influence which far surpassed the direct rôle of Baṣra Muʿtazilism, considered as an independent school.

DJ̲UBŪR, a large and predominantly sedentary Sunnī tribe of central and northern ʿIrāḳ. A considerable community so named occupies land and villages in the K͟hāliṣ *ḳaḍā* of the Diyālā *liwā'*, and another on canals drawing from the Ḥilla branch (right bank) of the Euphrates, below Ḥilla. Minor sections calling themselves Dj̲ubūr are also found elsewhere in central ʿIrāḳ. But the largest body lives in riverain villages on the Lesser Zāb between Altun Köprü and the Tigris, and on the latter river between points south of Mosul and north of Takrīt. The former of these branches have habitually quarrelled with the ʿUbayd of the Ḥawīd͟ja west of Kirkūk

and the Dizā'ī in the plain between the two Zābs; the latter have a long history of bad relations with the Shammar (Djarbā) of the Djazīra. All alike were in frequent collision with the Turkish Government in the 13th/19th and earlier centuries. As with most settled ʿIrāḳ tribes, however, disorder and disobedience are now less in evidence than ever before.

The Djubūr have limited sheep-grazing sections, who take their flocks into the steppe each winter; but the great majority are cultivators on the flow canals of the Khāliṣ or the Ḥilla river, or on the water-lift lands of the Zāb and Tigris where mechanical pump-irrigation and some flow-irrigation have greatly developed. Many from the latter districts work for the oil company whose pipelines from Kirkūk oilfields cross or skirt their territory.

The various Djubūr sections have little cohesion, and have produced no unifying leader for generations. They consist of many unconnected elements with little bond save their name. The usual legend of noble origins in Nadjd, and entry into ʿIrāḳ via the Wādī Ḥawrān as conquering immigrants, does not contain any assessable historical basis.

(S. H. Longrigg)

DJUČI or rather Djoči (ca. 580-624/1184-1227), the eldest son of Čingiz-Khān [*q.v.*] and the ancestor of the Khāns of the Golden Horde, Ḳrīm, Tiumen, Bukhārā and Khīwa. A depalatalized, perhaps Turkish form of his name, Toshī or Doshī, is represented by the Tūshī of Djuwaynī and Djūzdjānī, the Tosucchan (*i.e.*, Toshī Khān) of Carpini and the Dūshī of Nasawī. The historical data on this progenitor of so many dynasties are sparse and contradictory. His very paternity is uncertain. It is implied in the *Secret history of the Mongols* that his real father was Čilger Bökö of the Merkit, by whose tribe his mother Börte Fudjin was carried off into captivity shortly after her marriage to Čingiz-Khān. On the other hand Rashīd al-Dīn, who reproduces the *Altan Debter*, the official chronicle of the imperial family, specifically states that Börte was already pregnant at the time of her capture. Contrary to the *Secret history* she was not, according to Rashīd al-Dīn, rescued by a joint expedition of Čingiz-Khān, Djamuḳa and Ong-Khān but was handed over by the Merkit to the last named, with whose tribe, the Kereyt, they were then at peace. Delivered up by Ong-Khān to an emissary of Čingiz-Khān Börte gave birth to Djoči in the course of the homeward journey; and the circumstances of his birth are in some way reflected in his name, apparently the Mongol word *djoči* "guest". Djoči is first mentioned in the *Secret history*, under the year 1207, as being sent on a campaign against the Oyrat and other forest peoples along the western shores of Lake Bayḳal: after conquering these peoples he advanced in a westerly direction to receive the submission of the Ḳïrghïz tribes in the region of the Upper Yenisey. Rashīd al-Dīn, whilst recording the submission of the Ḳïrghïz in 1207, makes no mention of Djoči in this connection, though he refers to him as having suppressed a revolt of that people in the winter of 1218-19. Djoči took part in his father's campaigns against the Chin rulers of Northern China, being active with his brothers Čaghatay and Ögedey in Shan-hsi (1211) and Chih-li, Ho-nan and Shan-hsi (1213). He likewise took part, in 1216 or 1217, in a campaign against the remnants of the Merkit which resulted in their defeat and annihilation in what is today the Kustanai region of Northern Kazakhstān. A clash with Sultan Muḥammad Khwārizm-Shāh [*q.v.*] as the Mongols were returning eastwards from this campaign formed the prelude to the hostilities which broke out in 1219. Upon the arrival of Čingiz-Khān's forces before Otrar, probably in September of that year, Djoči was dispatched upon an expedition down the Sïr-Daryā. The details of this expedition, which is passed over in silence by the contemporary Muslim sources, are given by Djuwaynī, who refers to Djoči as Ulush-Idi, a title which Rashīd al-Dīn, in reproducing Djuwaynī's account, takes to be the name of a general in joint command. Advancing down the Sïr-Daryā Djoči captured Sughnak, Özkend, Barčin and Ashnās. It had been his intention not to attack Djand but to rest his troops in the Ḳara-Ḳum steppe to the north-east of the Aral Sea in what is now Central Kazakhstan. However a report on the conditions prevailing in Djand caused him to change the direction of his march and lay siege to the town, which surrendered in April or May, 1220. Djoči now proceeded to the Ḳara-Ḳum steppe and seems to have remained in this region or in the Djand area until the end of the year, when he was ordered by Čingiz-Khān to join Čaghatay and Ögedey in the siege of Gurgāndj [*q.v.*]. The siege operations appear to have been hampered by a quarrel between Djoči and Čaghatay: upon the fall of the town in Ṣafar 618/March-April 1220 it became part of Djoči's *yurt* or appanage, which now extended from the region of Ḳayalïgh [*q.v.*] to the eastern banks of the Volga, comprising within its limits almost the whole of the present-day Kazakhstan. From Gurgāndj Djoči withdrew northwards into this enormous territory, there to remain till the spring of . . . /1223, when he joined his father and brothers in the Ḳulan-Bashï steppe between the present-day Čimkent and Djambul in Southern Kazakhstān, driving before him, for the purposes of a *battue*, great herds of wild asses: he brought also with him, as a present for Čingiz-Khān, 20,000 grey horses. After the *battue* the princes passed the remainder of the summer in Ḳulan-Bashï and Djoči then returned to his own territories, where he remained for the rest of his life, apparently on bad terms with his father, whom he predeceased by several months. Upon his death his *yurt* was divided between his eldest son Orda and his second son Batu [*q.v.*], the founders respectively of the White Horde and the Ḳipčak Khānate or Golden Horde.

DJUDĀLA [see gudāla].

DJUDDA, pronounced Djidda locally, a Saudi Arabian port on the Red Sea at 21° 29′ N., 39° 11′ E. Its climate is notoriously poor. The town, flanked by a lagoon on the north-west and salt flats on the south-east, faces a bay on the west which is so encumbered by reefs that it can only be entered through narrow channels. By paved road, Djudda is 72 km. from Mecca and 419 km. from Medina.

Most Arab geographers and scholars maintain that Djudda, signifying a road (Lane; al-Bakrī, ii, 371) is the correct spelling of the name of the town, rather than Djidda or Djadda (grandmother) as claimed by Gautier, Philby (*Heart*, i, 221) and others (cf. Yāḳūt, ii, 41; Hitti; Wahba) on account of the existence (until 1928), of the "tomb of Eve" not far from the city (for description and photographs, see E. F. Gautier, *Mœurs et coutumes des Musulmans*, Paris 1931, 64-6). The town dates

from pre-Islamic times. Hishām b. Muḥammad al-Kalbī in *al-Aṣnām* claims that ʿAmr b. Luhayy of the Khuzāʿa introduced idols from Djudda into Mecca several centuries before Islam (cf. al-Anṣārī, in bibliography). According to Yāḳūt, Djudda b. Ḥazm b. Rabbān b. Ḥulwān of the Ḳuḍāʿa took his name from the town which was part of the territory of the Ḳuḍāʿa [*q.v.*]. The foundations of Djudda's importance were laid in 26/646 by the Caliph ʿUthmān, who chose it as the port of Mecca in place of the older port of al-Shuʿayba a little to the south (al-Batanūnī, 6; Nallino, 155). As the focus of the Muslim world, Mecca became a great importing centre, its supplies coming from Egypt and India via Djudda.

By the 4th/10th century Djudda was a prosperous commercial town and its customs were a considerable source of revenue to the rulers of al-Ḥidjāz (Muḳaddasī, 79, 104). In addition, taxes were levied on pilgrims at Djudda, for it was here that those who came by sea landed on Arabian soil. Nāṣir-i Khusraw (ed. Schefer, 65; 181-3 of the translation) describes the city in the 5th/11th century as an unwalled town, with a male population estimated at 5,000, governed by a slave of the *sharīf* of Mecca, whose chief duty was the collection of the revenues. A century later Ibn Djubayr (ed. De Goeje, 75 ff.) gives a picture of the town with its reed huts, stone *khāns*, and mosques, and he praises Ṣalāḥ al-Dīn for having abolished the taxes levied by the *sharīfs*.

With the decline of the ʿAbbāsid Caliphate, much of the trade formerly going to al-Baṣra was diverted to Djudda, where ships from Egypt, carrying gold, metals, and woollens from Europe, met those from India carrying spices, dyes, rice, sugar, tea, grain, and precious stones. Djudda exacted about ten per cent *ad valorem* on these goods. After 828/1425 the Mamlūk Sultans of Egypt, whose cupidity had been aroused by Djudda's prosperity, took the collection of customs at Djudda into their own hands (although they shared it with the *sharīfs* from time to time), thus making Djudda politically as well as economically dependent on Egypt (Ibn Taghrībirdī, iv, 21, 41; v, 79).

The coming of the Portuguese to eastern waters, and their attacks on Muslim shipping from 1502 onward, brought a new threat to Djudda, which the Mamlūks and after them the Ottomans made determined efforts to meet. Ḥusayn al-Kurdī, the Governor of Djudda, appointed by the Mamlūk Sultan Ḳānṣūh al-Ghūrī, built a formidable wall around the town in 917/1511 (al-Batanūnī erroneously states that it was in 915/1509) and made Djudda a base for attacks against the Portuguese fleet. Lopo Soares de Albergaria sailed to the Djudda harbour in 923/1517 in pursuit of the Mamlūk fleet commanded by Salmān Reʾīs but declined to attack the city because of its powerful fortifications (Danvers, *The Portuguese in India*, 1894, 335). In 945/1538 the Ottoman naval expedition, on its way to India, called there, and collected masts and guns (Hammer-Purgstall, *GOR*², ii, 156-8; Uzunçarşılı, *Osm. Tar.*, ii, 379 ff., 538; Fevzi Kurtoğlu in *Belleten*, iv, (1940), 53-87; Stribling, 89-90). In 948/1541 the Portuguese made their last unsuccessful attempt to take the city, which was defended by the Sharīf Abū Numayy. The Sultan Süleymān repaid him for his successful resistance by granting him half of the fees collected at Djudda (Daḥlān, 53). The trade of the Red Sea did not, as was at one time thought, end with the Portuguese circumnavigation of Africa, but continued under Ottoman protection, right through the 10th/16th century. Ottoman sources of this period refer to the regular appearance at Djudda of ships from India, and a Venetian consul in Cairo, in May 1565, speaks of the arrival of 20,000 quintals of pepper at Djudda. It was not until the late 16th and early 17th centuries that the transit trade through the Red Sea began to come to an end (F. Braudel, *La Méditerranée et le monde méditerranéen à l'époque de Philippe II*, Paris 1949, 423-37; Halil İnalcık, in *Belleten*, xv, (1951), 662 ff.).

Little of importance occurred in the history of Djudda during the 11th/17th and 12th/18th centuries. Al-Ḥidjāz, under the suzerainty of the Sultan, was ruled locally by the Ḥasanid family of the *sharīfs*, who intrigued to their own advantage against the declining power of the Turks (Daḥlān, al-Djabartī). The town of Djudda was a sandjaḳ, for a while the centre of the *eyālet* of Ḥabesh, later part of the *wilāyet* of Ḥidjāz. According to Ottoman sources, the Grand Vizier Ḳara Muṣṭafā Pasha (held office 1087/1676-1094/1683) endowed Djudda with a mosque, khān, ḥammām, and water supply.

During the 13th/19th century, Djudda passed through a number of vicissitudes. In 1217/1803 the Wahhābīs [*q.v.*] besieged the *sharīf* Ghālib in Djudda but were unable to take the town, which began to boast of itself as a Gibraltar (Ibn Bishr, i, 122). Ghālib later surrendered and Djudda was subject to the rule of the Wahhābīs until 1226/1811, when Muḥammad ʿAlī restored nominal Ottoman sovereignty. In 1229/1814 Burkhardt described Djudda as a town with 12,000 to 15,000 inhabitants, among whom indigenous elements were scantily represented, while strangers from the Yemen and Ḥaḍramawt appeared to be numerous. Both Burton (i, 179) and al-Batanūnī (6) mention the coral and mother-of-pearl taken from the Red Sea at Djudda and made into prayer beads at Mecca and crucifixes at Jerusalem. In 1256/1840 Egyptian rule was replaced by the direct rule of the Porte, represented by a *wālī* in Djudda.

On 3 Dhu 'l-Ḳaʿda 1274/15 June 1858 Djudda was the scene of a massacre, instigated, it is thought, by a former Djudda police chief, and several dissatisfied Djudda merchants, in which about 25 Christians were killed, including the British and French Consuls and a group of wealthy Greek merchants. The British steamship *Cyclops*, anchored in the harbour, bombarded the city for two days and restored order without much damage (Isabel Burton, ii, 513 ff.).

Djudda was the first Ḥidjāzī city to fall into sharīfian hands after Sharīf al-Ḥusayn's proclamation of Arab independence in 1334/1916 (Naṣīf, 50). The Turks surrendered the city on 15 Shaʿbān/17 June after a combined land attack by Sharīf al-Ḥusayn's army and a six-day bombardment by the British navy. The port then became the major supply depot for the sharīfian forces operating behind Turkish lines during the Arab revolt.

Under the short-lived Kingdom of al-Ḥidjāz, Djudda was a focal point in the struggle between the Wahhābīs and the *sharīfs* for control of al-Ḥidjāz. After the Saʿūdī occupation of Mecca in Rabīʿ I 1343/October 1924, Djudda became the capital of the government of ʿAlī b. al-Ḥusayn. The city was under siege by the Wahhābī forces, situated in the coastal hills ten miles from the town, for almost an entire year from Djumādā II 1343/January 1925 until its submission in Djumādā II 1344/December 1925. Defence of the city was hindered by the inadequacy of the sharīfian army, estimated by

Philby (*Forty Years*, 114) at 1,000 regulars augmented by Bedouin recruits, and by internal divisions among the citizens, a party of whom, led by the Ḳāʾimmaḳām, favoured negotiation with the Saʿūdīs and the deposition of ʿAlī (Naṣīf, 156 ff. Details of the town's history during this year are contained in the newspaper *Barīd al-Ḥidjāz*, ed. Muḥammad Naṣīf). In Dhu 'l-Ḳaʿda 1345/May 1927 ʿAbd al-ʿAzīz Ibn Saʿūd and Gilbert Clayton met in Djudda and concluded the Treaty of Djudda in which Britain recognized the "complete and absolute" independence of Āl Saʿūd's territories.

Nallino, describing the town in 1938, mentions the site of the tomb of Eve, quietly demolished by the Saʿūdis in 1928, the so-called European cemetery, which is thought to date from 1235/1820 and which contains the remains of some Jews and Asiatics, and the villages beyond the wall. These included al-Hindawiyya to the south, al-Nuzla to the south-west, al-Baghdādiyya and al-Ruways to the north, and Nākatū, a reed hut settlement inhabited by Takārīr (sing. Takrūrī) [*q.v.*], all of which have become part of the enlarged city.

The city now has a population variously estimated at 106,000 to 160,000; it is governed by a Ḳāʾimmaḳām (the only local governor in Saudi Arabia who still retains the Turkish title), who is under the administrative authority of the Governor of Mecca. The town has an elected Municipal Council. Since World War II, Djudda has experienced a commercial boom. Its wall was demolished in 1946-7, and the town expanded in three directions: east along the road to Mecca, north along the road to Medina, and south along the pier road. Many of the traditional coral block houses with their latticed balconies have been razed in the old section of the town to make room for modern office buildings. Djudda is known for the cosmopolitan character of its populace: Bukhārīs, Yamanīs, Ḥaḍramīs, and some tribal communities, notably Ḥarb, still live in separate quarters of the town.

Djudda has numerous light industries including a cement plant and several marble cutting works. A new water system completed in 1948 supplies the town with over 2,500,000 gallons of water a day, most of which is piped in from wells in Wādī Fāṭima. A modern port at the southern end of the city, equipped with a two-berth pier 1,300 feet long, handles over 800,000 tons of cargo a year. Djudda is the official air and sea port of entry for pilgrims on their way to Mecca, over 147,000 of whom landed in Djudda during 1381/1961. The city has a quarantine station, with a hospital and an observation clinic, and two Pilgrim Towns, one attached to the pier and the other attached to the airport, all built since 1950, to handle the pilgrims.

(R. Hartmann-[Phebe Ann Marr])

DJUDHĀM, an Arab tribe which in Umayyad times claimed descent from Kahlān b. Sabaʾ of Yemen and relationship with Lakhm and ʿĀmila; this certainly corresponded with the prevailing political alliances. However, the North Arab tribes claimed that Djudhām, Ḳuḍāʿa and Lakhm were originally of Nizār but had later assumed Yemenī descent. Djudhām were among the nomads who had settled in pre-Islamic times on the borders of Byzantine Syria and Palestine; they held places like Madyan, ʿAmmān, Maʿān and Adhruḥ, and ranged as far south as Tabūk and the Wādī 'l-Ḳurā. The Judaized tribe of al-Naḍīr in Medina allegedly arose from them. From their Byzantine contacts, part of Djudhām were superficially Christian, but Ibn al-Kalbī includes them among the "people of Syria" who worshipped the idol al-Uḳayṣir.

When Muḥammad was expanding northwards, Djudhām barred his way at Muʾta. One clan, that of al-Ḍubayb, had become Muslim, but punitive expeditions under Zayd b. Ḥāritha and ʿAmr b. al-ʿĀṣ were necessary. Djudhām were among the Arab allies (*Mustaʿriba*) of the Emperor Heraclius, and fought for him at the Yarmūk in 15/636; later, they became Muslims and took part in the conquest of Syria. Under the Umayyads, they formed the greater part of the Djund of Filasṭīn, and together with Kalb, were the mainstay of the Yemenī party in the tribal warfare in Syria. On the death in 64/684 of Muʿāwiya b. Yazīd, their chief Rawḥ b. Zinbāʿ proposed the succession of Marwān b. al-Ḥakam as Caliph, and their connexions with the Marwānids remained close until the fall of that dynasty.

(C. E. Bosworth)

DJŪDĪ, Djabal Djūdī or Djūdī Dagh, a lofty mountain mass in the district of Bohtān, about 25 miles N.E. of Djazīrat Ibn ʿUmar, in 37° 30′ N. Djūdī owes its fame to the Mesopotamian tradition, which identifies it, and not Mount Ararat, with the mountain on which Noah's ark rested. It is practically certain from a large number of Armenian and other writers that, down to the 10th century, Mt. Ararat was in

no way connected with the Flood. Ancient Armenian tradition certainly knows nothing of a mountain on which the ark rested; and when one is mentioned in later Armenian literature, this is clearly due to the gradually increasing influence of the Bible, which makes the ark rest on the mountains (or a mountain) of Ararat. The highest and best known mountain there is Masik (Masis), therefore Noah must have been stranded on it; the next stage in the growth of the Armenian tradition is due to Europeans, who transferred Ararat (Armen. Ayraraṭ), the name of a district, to Masik, through an incorrect interpretation of Genesis, viii, 4.

The tradition that Masik was the mountain on which the ark rested only begins to find a place in Armenian literature in the 11th and 12th centuries. Older exegesis identified the mountain now called Djabal Djūdī, or according to Christian authorities, the mountains of Gordyene (Syr. *Ḳardū*, Armen. *Kordukh*) as the apobaterion of Noah. This localization of the ark's resting-place, which is found even in the Targums, is certainly based on Babylonian tradition, and arose out of the Babylonian Berossus. Besides, the mountain Niṣir which appears in the Flood-legend in the cuneiform inscriptions might well be located in Gordyene (in the widest application of the name). The ancient Jewish-Babylonian tradition was adopted by the Christians and the Arabs learned it from them, when their conquests carried them into Bohtān in 20/640. "They simply transferred the name Djūdī, which the Ḳur'ān (Sūra XI, 46) mentions as the landing-place of Noah, to Mount Ḳardū which had, from the remotest times, been regarded as the apobaterion". Thus writes Nöldeke in the *Festschr. für Kiepert* (1898), 77, and he is clearly right. But the Ḳur'ān meant Djūdī in Arabia (Ḥamāsa, 564 = Yāḳūt, ii, 270, 11 = *Mushtarik*, 111), which was probably considered the highest mountain of all. It is also possible that the Ḳur'ān in its localization of the mount on which the ark rested had taken over some older tradition current in Arabia. For this view we might quote a remark of the apologist Theophylus (*ad Autolycum*, lib. iii, c. 19) who mentions that, even in his time, the remains of the ark were to be seen on the mountains of Arabia. The transference of the name Djūdī from Arabia to Mesopotamia by the Arabs must have taken place fairly early, as has been mentioned, probably as early as the time of the Arab invasion; even in the older poets, for example, Ibn Ḳays al-Ruḳayyāt (ed. Rhodokanakis, cf. Nöldeke, *WZKM*, xvii, 91) and Umayya b. Abi 'l-Ṣalt (ed. Schulthess, *Beitr. z. Assyr.*, viii, no. 3, 5) Djabal Djūdī is no longer the Arabian, but the Mesopotamian mountain. The transference of the name Djūdī to the Ḳardū chain and the rapid acceptance of the new name may probably have been favoured by the circumstance that the land south of Bohtān, towards Assyria, had often in the Assyrian period formed part of the district of Gutium, the land of the Gutī (Ḳutū) nomads, and this, the name of a people and district, had not quite disappeared in the early years of Islam. On the geographical term Gutium, which is known to have existed even in the early Babylonian period, see Scheil, *Compt.-rendus de l'Académie des Inscript. et Bell. Lettres*, 1911, 378 ff., 606 ff.

If we assume, as is obvious, that the term Ararat (Assyr. Urarṭu) at one time also included an area to the south of Lake Van (cf. the mountain name Ararṭi in the Gordyene cuneiform inscription; see also Šanda, in the bibliography) then Masik (Great Ararat) and Djebel Djūdī, both traditional resting-places of the Ark, might each be called Mount Ararat in conformity to the Biblical account.

Like the whole country round Ararat, the neighbourhood of Djabal Djūdī is to this day full of memorials and legends which refer to the Flood and the life of Noah after leaving the ark. Thus for example at the foot of the mountain is the village of Ḳaryat Thamānīn = "the village of the 80 (Syr. *Thᵉmānīn*; Armen. *Tʿmān* = 8; now: Bētmānīn)" where legend says the people saved in the ark first settled; cf. Hübschmann, xvi, 333-4. The Arab geographers also mention a monastery on Djūdī in their time, Dayr al-Djūdī; on this cf. Shābushtī, *Kitāb al-Diyārāt* (J. Heer, *Quellen*, 1898, 96; Sachau, *Vom Klosterbuch*, Berlin 1919, 20, no. 49) = Yāḳūt, ii, 653. The ruined sanctuary (known today as *Safīnat Nabī Nūḥ*) is venerated by Muslims, Jews and Christians (G. L. Bell, *Amurath*², 293).

We might further mention that Layard and subsequently (1904) L. W. King discovered rock-sculptures and inscriptions of Sennacherib in the Djabal Djūdī; King therefore proposes to identify this mountain with the Nipur of the Sanherib texts. Cf. Layard, *Niniveh u. Babylon*, 621; King in the *Journ. of Hellenic Stud.*, 1911, xxx, 328².

(M. Streck*)

DJŪDĪ AL-MAWRŪRĪ, eminent Andalusian grammarian. His complete name is Djūdī b. ʿUthmān al-ʿAbsī al-Mawrūrī (of Morón). Born in Toledo, he later went to Granada where he specialized in grammatical studies. He made a long voyage to the East where he studied with leading representatives of the school of Kūfa, such as al-Ru'āsī, al-Farrā' and al-Kisā'ī. Returning to Spain he brought with him the book of al-Kisā'ī and set up to teach it. This is considered a marked event in the history of grammatical studies in Spain, because all such studies in that part of the Muslim world had hitherto been based on the principles of the school of Baṣra, particularly the book of Sībawayh. In spite of the

predominance of the Baṣrans, the Kūfans found their way and gained disciples. The two schools were later on reconciled in Spain, thanks to the work of the most active of the grammarians of Muslim Spain, al-Rabāḥī [*q.v.*]. Djūdī was successful in his work. His *ḥalaḳa* in the Mosque of Cordova was famous. Umayyad amīrs chose him to teach their sons. Ibn al-Abbār attributes to him a book called *Munbih al-ḥidjāra*, a title which suggests an agreeable sense of humour. He died in 198/813.

AL-**DJUFRA**, a depression in the Libyan desert situated on the 29th parallel, between the district of Sirte and the Fezzān. The word denotes the three oases of Waddān, Hōn and Sokna, and also the depression (170-280 m.) in which they are situated between the Dj. Waddān and the gloomy volcanic massif of the Dj. al-Sōdā (803 m.). The historical significance of Djufra is explained by the abundance of the underground water-supply throughout the depression, and also by its position at the meeting-point of three traditional routes which were once much frequented and which lead respectively from Tripoli via Bū-Nedjem, from the Sudan via the Fezzān, and from Egypt via Djalo and Awdjīla.

When the Arab conqueror ʿUḳba b. Nāfiʿ imposed his authority in 47/667 upon the local prince, the latter was called the Waddān, after the name of his principal oasis. It was inhabited by Mazāta Berbers. It was for a time Ibāḍite and belonged to the district of Surt. In the 5th/11th century the settlement at Waddān consisted of two hostile quarters inhabited, according to al-Bakrī (29-30), by Sehmids and natives of the Ḥaḍramawt; but there was only one large mosque, and there a number of scholars. Most authors speak highly of the quality of the local dates. This remote oasis served as a hiding-place for the Armenian adventurer Karakouch who was traced there, captured and put to death by the Almoravid Ibn Ghāniya (1195). We know almost nothing about the region during the centuries that followed, either in respect of its trade, or at what period Sokna took the place of Waddān as leading town of the district, or when the district took the name of Djufra. It was comparatively independent, being partly isolated by the powerful and dreaded tribe the Ūlād-Slīmān (of the Debbāb), nomads who were partly exterminated by the Turks after the revolt of their chieftain ʿAbd al-Djalil in 1842; at that the Djufra was a *ḳaḍā'* dependent upon the *sandjaḳ* of the Fezzān. Of the 19th century European travellers, only Rohlfs has left us detailed information (chapters VI and VII). The district was occupied by the Italians in February 1928 and abandoned by them in 1943.

The population consists of about 5,000 inhabitants, most of them settled. A copious supply of water not far below the surface enables date-palms to bear crops, provided that they are cross-fertilized; there are known to be about 90,000 date-palms of which 15 to 20,000 are infertile. The best crops of dates are produced in gardens irrigated from wells worked by animals; the cultivation of other crops is of secondary importance, and this is true also of the breeding of camels and sheep which for grazing go as far as the ravines of the Dj. al-Sūda.

Waddān, the most easterly and no doubt the oldest of the settlements, still stands on its mound, encircling the ruins of its old castle; but the greater part of the population lives in an ancient town which lies to the north. In 1936 there were 1,700 inhabitants; half of them claim to be *shurfa*, and a quarter of the rest are semi-nomadic. To the west, the houses of Sokna huddle round the old castle, within crumbling ramparts pierced by eight gates: the Turks made this the leading town of the district, and their garrison occupied a small fort to the north. Half of the 1,200 inhabitants still speak Berber and live in a separate quarter, and from two to three hundred are semi-nomadic Riyāḥ. Hōn, in the centre, is a settlement of recent date, 4 km. to the north of a ruined village. The Italians made it the leading town. The 1,800 inhabitants, several groups of whom are said to be Berber, live in a compact and crowded rectangular area of houses; the market-place and the Italian buildings lie to the south.

DJUGHRĀFIYĀ, Geography.

(I) The term *djughrāfiyā* and the Arabs' conception of geography

The term *djughrāfiyā* (or *djighrāfiyā*, *djāōghrāfiyā*, etc.), the title of the works of Marinos of Tyre (c. 70-130) and Claudius Ptolemy (c.A.D. 90-168) was translated into Arabic as *Ṣūrat al-arḍ* which was used by some Arab geographers as the title of their works. Al-Masʿūdī (d. 345/956) explained the term as *ḳaṭʿ al-arḍ*, 'survey of the Earth'. However, it was used for the first time in the *Rasā'il Ikhwān al-Ṣafā'* in the sense of 'map of the world and the climes'. The Arabs did not conceive of geography as a well-defined and delimited science with a specific connotation and subject-matter in the modern sense. The Arabic geographical literature was distributed over a number of disciplines, and separate monographs on various aspects of geography were produced under such headings as *Kitāb al-Buldān*, *Ṣūrat al-arḍ*, *al-Masālik wa 'l-mamālik*, *ʿIlm al-ṭuruḳ*, etc. Al-Bīrūnī considered *al-Masālik* as the science which dealt with fixing the geographical position of places. Al-Muḳaddasī came nearest to dealing with most aspects of geography in his work *Aḥsan al-taḳāsīm fī maʿrifat al-aḳālīm*. The present use of the term *djughrāfiya* for geography in Arabic is a comparatively modern practice.

(II) Pre-Islamic and Early Islamic Periods

In pre-Islamic times the Arabs' knowledge of geography was confined to certain traditional and ancient geographical notions or to place-names of Arabia and the adjacent lands. The three main sources where these are preserved are: the Ḳur'ān,

the Prophetic Tradition (*ḥadīth*) and ancient Arabic poetry. Many of these notions must have originated from Babylonia in ancient times or were based on Jewish and Christian traditions and indigenous Arab sources.

The geographical concepts or information contained in ancient Arabic poetry reflect the level of understanding of the pre-Islamic Arabs of geographical phenomena and the limits of their knowledge. The Ḳur'ān preserves traces of some geographical and cosmographical ideas which resemble ancient Babylonian, Iranian and Greek concepts and the Jewish and Christian Biblical traditions. Verses like 'the heavens and the earth were joined together before we clove them asunder' (XXI, 30); 'God is He Who created seven Firmaments and of the earth a similar number' (LXV, 12); 'God is He who raised the heavens without any pillars' (XIII, 2); 'And we have made the heavens as a canopy well guarded' (XXI, 32); 'He withholds the sky from falling on the earth except by His leave' (XXII, 65); and verses that describe the earth as being spread out and the mountains set thereon firm so that it may not shake, all form a picture which resembles the ancient Babylonian concept of the universe in which the Earth was a disc-shaped body surrounded by water and then by another belt of mountains upon which the Firmament rested. There was water under the Earth as well as above it. Again, concepts like that of 'the Sun setting in a spring of murky water' (XVIII, 86) referring to the Atlantic, and of the earth's being flat must have had their origin in Greek geography. The concept of the two seas, one of sweet water and the other saline (XXV, 53), referring to the Mediterranean and the Arabian Sea, and that of *al-barzakh*, 'the barrier' between them (a by-form of *farsakh* 'parasang', from Pahlavi *frasang*) were most probably of Iranian origin. Besides, certain terms in the Ḳur'ān, *e.g.*, *burūdj* (= Gr. Πύργος, Latin *burgus*), *baladun* or *baladatun* (a Semitic borrowing from the Latin *palatium*: Gr. Παλάτιον), *ḳarya* (> Syriac *ḳritha'*, a town or village), indicate the non-Arab origin of the concepts with which these terms are associated in the Ḳur'ān.

There are some traditions attributed to ʿAlī b. Abī Ṭālib (d. 40/660), Ibn ʿAbbās (d. 66-9/686-8), ʿAbd Allāh b. ʿAmr b. al-ʿĀṣ and others, which deal with cosmogony, geography and other related questions, but it seems that these traditions which reflect the ancient geographical notions of the Arabs were concocted in a later period to counteract the scientific geographical knowledge that was becoming popular among the Arabs of the period, although they were presented as authentic knowledge by some geographers in their works. Though scientific knowledge advanced, some of the traditions exercised deep influence on Arab geographical thought and cartography, *e.g.*, the tradition according to which the shape of the land-mass was compared to a big bird whose head was China, right wing India, left wing al-Khazar, chest Mecca, Ḥidjāz, Syria, ʿIrāḳ and Egypt and tail North Africa (Ibn al-Faḳīh, 3-4) became the basis of the geographical writings of the Balkhī School. It is not unlikely that this concept had its origin in some ancient Iranian maps observed by the Arabs.

The political expansion of the Arabs, after the rise of Islam, into Africa and Asia, afforded them opportunities to collect information and to observe and record their experiences of the various countries that had come under their sway or were adjacent to the Arab Empire. Whether such information was gathered for military expeditions or for other purposes, it is very likely that it was also utilized in the topographical works that were produced during the early ʿAbbāsid period.

(III) The Transmission of Indian, Iranian and Greek Geographical Knowledge to the Arabs

It was not until the beginning of the ʿAbbāsid rule and the establishment of Baghdād as the capital of the empire that the Arabs began acquainting themselves with scientific geography in the true sense. The conquest of Īrān, Egypt and Sind gave the Arabs the opportunity to gain first hand knowledge of the scientific and cultural achievements of the peoples of these ancient cradles of civilization, as well as giving them ownership of, or easy access to their centres of learning, laboratories and observatories. But the process of acquiring and assimilating foreign knowledge did not begin until the time of the Caliph Abū Djaʿfar al-Manṣūr (135-58/753-75), the founder of Baghdād. He took a keen interest in the translation of scientific works into Arabic, which activity lasted for nearly two hundred years in the Islamic world. The Barmakid [*q.v.*] *wazīrs* also played an important role in the promotion of scientific activity at the court. Quite often the translators were themselves eminent scientists whose efforts enriched the Arabic language with Indian, Iranian and Greek geographical, astronomical and philosophical knowledge.

Indian Influences. Indian geographical and astronomical knowledge passed on to the Arabs through the first translation into Arabic of the Sanskrit treatise *Sūrya-siddhānta* (not *Brahmasphuṭasiddhānta* as believed by some scholars) during the reign of al-Manṣūr. The work showed some earlier Greek influences (see A. B. Keith, *History of Sanskrit literature*, 517-21), but once translated into Arabic it became the main source of the Arabs' knowledge of Indian astronomy and geography, and formed the basis of many works that were produced during this period, *e.g.*, *Kitāb al-Zīdj* by Ibrāhīm b. Ḥabīb al-Fazārī (wrote after 170/786), *al-Sind Hind al-ṣaghīr* by Muḥammad b. Mūsā al-Khwārizmī (d. after 232/847), *al-Sind Hind* by Ḥabash b. ʿAbd Allāh al-Marwazī al-Baghdādī (second half of the 3rd/9th century) and others.

Among other Sanskrit works translated into Arabic during this period were: *Āryabhaṭīya* (Ar.: *Ardjabhad*) by Āryabhaṭa of Kusumapura (b.A.D. 476) who wrote in A.D. 499; then, *Khandakhādyaka* of Brahmagupta son of Djishnu of Bhillamāla (near Multān). He was born in A.D. 598 and wrote this work in A.D. 665. It was a practical treatise giving material in a convenient form for astronomical calculations, but this was based on a lost work of Āryabhaṭa, who again agreed with the *Sūrya-siddhānta*. The Sanskrit literature translated into Arabic belonged mainly to the Gupta period.

The influence of Indian astronomy on Arab thought was much deeper than that of Indian geography, and although Greek and Iranian ideas had a deeper and more lasting effect, Indian geographical concepts and methods were well known. Indians were compared to the Greeks in their talent and achievements in the field of geography, but the Greeks were considered more accomplished in this field (al-Bīrūnī, *al-Ḳānūn*, 536).

Among the various geographical concepts with which the Arab scientists became acquainted were: the view of Āryabhaṭa that the daily rotation of the

heavens is only apparent, being caused by the rotation of the earth on its own axis; that the proportion of water and land on the surface of the Earth was half and half; that the land-mass, which was compared to a tortoise, was surrounded by water on all sides, and was shaped like a dome whose highest point had Mount Meru (an imaginary mountain) on it directly under the North Pole; the northern hemisphere was the inhabited part of the Earth and its four limits were Djamakūt in the East, Rūm in the West, Lankā (Ceylon) which is the Cupola and Sīdpūr, and the division of the inhabited part of the Earth into nine parts. The Indians calculated their longitudes from Ceylon and believed that this prime meridian passed through Udjdjayn [*q.v.*] (Ujjain). The Arabs took over the idea of Ceylon's being the Cupola of the Earth, but later believed that Udjdjayn was the Cupola, mistakenly thinking that the Indians calculated longitudes from that point.

Iranian Influences. There is sufficient evidence in Arabic geographical literature to point to Iranian influences on Arab geography and cartography, but the actual process of the transmission of Īrān's knowledge to the Arabs has not been worked out in detail. J. H. Kramers correctly points out that during the 9th century Greek influence was supreme in Arab geography, but from the end of the 9th century the influence was more from the east than from the west, and it was from Īrān that these influences mainly came, for most of the authors came from the Iranian provinces (*Analecta Orientalia*, i, 147-8). Djundaysābūr was still a great centre of learning and research and there is little doubt that the Arabs were acquainted with some of the Pahlavi works on astronomy, geography, history and other subjects which were extant in some parts of Īrān during this period. Some of these works were translated into Arabic and formed the basis of the Arabic works on the subject. Al-Masʿūdī ascribes to Ḥabash b. ʿAbd Allāh al-Marwazī al-Baghdādī an astronomical treatise *Zīdj al-Shāh* which was based on the Persian style. He also recorded a Persian work entitled *Kāh-nāma* which dealt with the various grades of kings and formed a part of the larger work entitled *Āʾīn-nāma*, '*Book of Customs*'. Again, he mentions having seen at Iṣṭakhr in 302/915 a work that dealt with the various sciences of the Iranians, their histories, monuments, etc. and other information that was not found either in *Khudāʾī-nāma*, *Āʾīn-nāma* or *Kāh-nāma*. This work was discovered among the treasures of the Persian kings and was translated from Persian into Arabic for Hishām b. ʿAbd al-Malik b. Marwān (105-25/724-43). It is not unlikely that works of this nature formed part of the sources of the Arabs' knowledge on the geography and topography of Īrān and on the limits of the Sāsānian Empire, its administrative divisions and other details.

Among the various Iranian geographical concepts and traditions followed by Arab geographers, the concept of the Seven *Kishwar*s (*Haft Iklīm*) was the most important. In this system the world was divided into seven equal geometric circles, each representing a *kishwar*, in such a manner that the fourth circle was drawn in the centre with the remaining six around it, and included Īrānshahr of which the most central district was al-Sawād. The Arab geographers continued to be influenced by this system for a long time, and in spite of the view of al-Bīrūnī that it had no scientific or physical basis and that the Greek division of the Climes was more scientific, the Greek division of the world into three or four continents never appealed to them. The concept of the two main seas, namely, the Baḥr al-Rūm and the Baḥr Fārs (the Mediterranean and the Indian Ocean) which entered the land from the Baḥr al-Muḥīṭ (the Encircling Ocean), one from the north-west, *i.e.*, the Atlantic and the other from the east, *i.e.*, the Pacific, but were separated by al-Barzakh ('the Barrier', *i.e.*, the Isthmus of Suez), also dominated Arab geography and cartography for several centuries. As pointed out by J. H. Kramers, although it is very probable that the notion rests in the last resort on Ptolemy, the fact that the Indian Ocean is most often called Baḥr Fārs, seems to prove that this sea, at least, formed part of the original geographic sketch of the Persians. As to the origin of this sketch itself we find ourselves in uncertainty (*Analecta Orientalia*, i, 153).

Persian traditions deeply influenced Arab maritime literature and navigation also, as is evident from the use of words of Persian origin in the nautical vocabulary of the Arabs, *e.g.*, *bandar* (port), *nākhudā* (shipmaster), *rahmānī* (book of nautical instructions), *daftar* (sailing instructions), etc. Certain Persian names like *khann* (rhumb), *kuṭb al-djāh* (pole), etc., also indicate Persian influences on the Arab windrose. Such examples can be multiplied. Persian influences are apparent in Arab cartography as well, an indication of which is found in the use of terms of Persian origin, *e.g.*, *ṭaylasān*, *shābūra*, *kuwāra*, etc., to describe certain formations of coasts. These terms, originally indicating certain garments, were used right down to the 7th/13th century. They also point to the existence of maps in ancient Īrān (J. H. Kramers, *op. cit.* 148-9). As for the 'Indian map which is at al-Kawādhiyān' (Ibn Ḥawkal, ed. Kramers, 2) Kramers pointed out that al-Kawādhiyān must contain here an allusion to more primitive maps of the Balkhī-Iṣṭakhrī series, because the maps of Ibn Ḥawkal are partly in conformity with this series and partly different (Kramers, *op. cit.*, 155). A correct identification of these maps or their discovery would certainly help to solve the problem of the origin of the maps of the Balkhī school. Here it may be pointed out that if we read Ibn Ḥawkal's text as 'the geometrical map at al-Kawādhiyān' (a town near Tirmidh in Central Asia), then he must have been referring to some map that was there and was used by geographers as a basis for cartography. It is quite likely that it was based on the Persian *kishwar* system, for al-Bīrūnī remarks that the term *kishwar* was derived from 'the line' (*al-khaṭṭ*) which really indicated that these divisions were as distinct from each other as anything that was drawn in lines would be (*Ṣifat*, ed. Togan, 61).

Greek Influences. More positive data are available on how Greek geographical and astronomical knowledge passed on to the Arabs in the mediaeval period. The process began with the translations of the works of Claudius Ptolemy and other Greek astronomers and philosophers into Arabic either directly or through the medium of Syriac.

Ptolemy's *Geography* was translated several times during the ʿAbbāsid period, but what we possess is the adaptation of Ptolemy's work by Muḥammad b. Mūsā al-Khwārizmī (d. after 232/847) with contemporary data and knowledge acquired by the Arabs incorporated into it. Ibn Khurradādhbih mentions having consulted and translated Ptolemy's work (perhaps it was in the original Greek or in Syriac translation) and al-Masʿūdī also consulted a copy of

the *Geography* and also the world map by Ptolemy. It seems that some of these translations had become corrupt, and foreign material was interpolated into them which did not belong to the original work, *e.g.*, the copy consulted by Ibn Ḥawḳal (ed. Kramers, 13). Among other works of Ptolemy translated into Arabic and utilized by Arab geographers were: *Almagest* (Ar.: *Almadjisṭī*); *Tetrabiblon* (Ar.: *al-Maḳālāt al-arbaʿa*); *Apparitions of fixed stars*, etc. (Ar.: *Kitāb al-Anwāʾ*).

Among other works translated into Arabic were: the *Geography* of Marinos of Tyre (c. A.D. 70-130) consulted by al-Masʿūdī who also consulted the world map by Marinos; the *Timaeus* (Ar.: *Ṭaymāʾūs*) of Plato; the *Meteorology* (Ar.: *al-Āthār al-ʿulwiyya*), *De caelo* (Ar.: *al-Samāʾ wa 'l-ʿālam*) and *Metaphysics* (Ar.: *Mā baʿd al-ṭabīʿa*) of Aristotle.

The works of these writers and of several other Greek astronomers and philosophers, when rendered into Arabic, provided material in the form of concepts, theories and results of astronomical observations which ultimately helped Arab geography to evolve on a scientific basis. Persian influences were no doubt marked in regional and descriptive geography as well as in cartography, but Greek influence dominated practically the whole canvas of Arab geography. Even in fields where it may be said that there was a kind of competition between Persian and Greek ideas or methodology, *e.g.*, between the Persian *kishwar* system and the Greek system of Climes, the Greek were more acceptable and remained popular. The Greek basis of Arab geography was most prominent in mathematical, physical, human and bio-geography. The Greek impact had a very lasting influence, for it remained the basis of Arab geography as late as the 19th century (traces found in 19th century Persian and even Urdū works on geography written in India), even though on European minds Ptolemaic influence had decreased much earlier. It cannot, however, be denied that throughout this period there was an undercurrent of conflict between the theoretical concepts of the Greek masters on the one hand and the practice and observation of the merchants and sailors of this period on the other. Al-Masʿūdī refers to it in the case of the Ptolemaic theory of the existence of an unknown land in the southern hemisphere. On the other hand Ibn Ḥawḳal considered Ptolemy almost infallible. The fact was that Greek information when transmitted to the Arabs was already outdated by about five centuries, and so difficulty arose when Arab geographers tried to incorporate fresh and contemporary information acquired by them into the Ptolemaic frame-work and to corroborate it with Greek data. The result was confusion and often misrepresentation of facts in geographical literature and cartography, as is evident from the works of geographers like al-Idrīsī.

(IV) The Classical Period (3rd-5th/9th-11th centuries)

(a) The Period of al-Maʾmūn (197-218/813-33):

Over half a century of Arab familiarity with, and study of Indian, Iranian and Greek geographical science, from the time of the Caliph al-Manṣūr (136-57/754-74) up to the time of al-Maʾmūn, resulted in completely revolutionizing Arab geographical thought. Such concepts as that the Earth was round and not flat, and that it occupied the central position in the Universe, were introduced to them for the first time properly and systematically. Henceforth, the Ḳurʾānic verses dealing with cosmogony, geography, etc. and the Traditions were utilized only to give religious sanction to geographical works or to exhort the believers to study geography and astronomy. Thus, by the beginning of the 3rd/9th century the real basis was laid for the production of geographical literature in Arabic and the first positive step in this regard was taken by the Caliph al-Maʾmūn, who successfully surrounded himself with a band of scientists and scholars and patronized their academic activities. Whether al-Maʾmūn's interest in astronomy and geography was genuine and academic, or whether it was political is not certain. During his reign, however, some very important contributions were made towards the advancement of geography: the measurement of an arc of a meridian was carried out (the mean result gave $56^2/_3$ Arabic miles as the length of a degree of longitude, a remarkably accurate value); the astronomical tables called *al-Zīdj al-mumtaḥan* (*The verified tables*) were prepared by the collective efforts of the astronomers; lastly, a World Map called *al-Ṣūra al-Maʾmūniyya* was prepared, which was considered superior to the maps of Ptolemy and Marinos of Tyre by al-Masʿūdī who had consulted and compared all three (*Tanbīh*, ed. De Goeje, 33). It was most probably based on the Greek system of climes.

(b) The Astronomers and Philosophers:

The Arab astronomers and philosophers made equally important contributions to mathematical and physical geography through their observations and theoretical discussions. From the time of the introduction of Greek philosophy and astronomy in the second half of the 2nd/8th century up to the first half of the 5th/11th century a galaxy of philosophers and astronomers worked on various problems of mathematical, astronomical and physical geography. The works of the Greek scientists had already provided enough basis and material for this. Thus the results of the experiments, observations and theoretical discussions of the Arab scientists were recorded in their more general works on astronomy and philosophy or in monographs on special subjects like tides, mountains, etc. The contemporary and later writers on general geography in Arabic often, though not always, reproduced these results in their works and sometimes discussed them. Some of these writers reproduced various current theories, Greek or otherwise, about a problem in the introductory parts of their works. Thus a tradition was established of writing on mathematical, physical and human geography in the beginning of any work dealing with geography. This is noticeable, for example, in the works of Ibn Rusta, al-Yaʿḳūbī, al-Masʿūdī, Ibn Ḥawḳal, etc.

Among the outstanding Arab philosophers and astronomers whose works were utilized and theories discussed by Arab geographers were: Yaʿḳūb b. Isḥāḳ al-Kindī (d. 260/874), to whom two works on geography are attributed, (1) *Rasm al-maʿmūr min al-arḍ* and (2) *Risāla fi 'l-biḥār wa 'l-madd wa 'l-djazr*. One of al-Kindī's pupils, Aḥmad b. Muḥammad b. al-Ṭayyib al-Sarakhsī (d. 286/899), is also said to have written two works, (1) *al-Masālik wa 'l-mamālik* and (2) *Risāla fi 'l-biḥār wa 'l-miyāh wa 'l-djibāl*. Neither the works of al-Kindī nor those of al-Sarakhsī are extant, and what we know of their geographical views are from other sources which used them. It seems that the two authors utilized the works of Ptolemy and other Greek writers, as

we find in al-Masʿūdī that their works did contain Ptolemaic information on physical and mathematical geography and on oceanography. Al-Kindī's work *Rasm al-maʿmūr min al-arḍ* may have been a version of Ptolemy's *Geography* as the title of the work itself suggests; al-Masʿūdī consulted a work of Ptolemy's entitled *Maskūn al-arḍ* and a world map called *Ṣūrat maʿmūr al-arḍ* (al-Masʿūdī, *Murūdj*, i, 275-7; *Tanbīh*, 25, 30, 51).

Among other philosophers and astronomers whose writings served as a source of information on mathematical and physical geography were: al-Fazārī (second half of the 2nd/8th century); Aḥmad b. Muḥammad b. Kathīr al-Farghānī (d. after 247/861) author of *al-Fuṣūl al-thalāthīn* (al-Masʿūdī, *Murūdj*, iii, 443; *Tanbīh*, 199) and *al-Mudkhil ilā ʿilm hayʾat al-aflāk*; Abū Maʿshar Djaʿfar b. Muḥammad al-Balkhī (d. 273/886), author of *al-Mudkhil al-kabīr ilā ʿilm al-nudjūm*; al-Masʿūdī consulted another work by him entitled *Kitāb al-ulūf fi'l-hayākil wa 'l-bunyān al-ʿaẓīm*; then Abū ʿAbd Allāh Muḥammad b. Djābir al-Battānī (d. 317/929) and others. The fourth *Risāla* of the *Rasāʾil Ikhwān al-Ṣafā* deals with *Djughrāfiyā*. Written in about 370/980, it simply deals with elementary knowledge about mathematical and physical geography based on Greek geography, since the main purpose of the writers was to guide the reader to achieve union with God through wisdom.

(c) General Geographical Literature:

By the 3rd/9th century a considerable amount of geographical literature had been produced in various forms in the Arabic language, and it appears that the Arabs had at their disposal some Pahlavi works, or translations thereof, dealing with the Sāsānian Empire, its geography, topography, postal routes and details essential for administrative purposes. These works must have become available to those interested in geography and topography. It is not surprising, therefore, to find that early writers like Ibn Khurradādhbih, Ḳudāma and others were heads of postal departments or government secretaries, besides being men of learning. During the 3rd/9th century, therefore, a number of works were produced that were given the generic title *al-Masālik wa 'l-mamālik*. In all probability the first work bearing this title was that of Ibn Khurradādhbih. The first draft of his work was prepared in 231/846 and the second in 272/885; it became the basis and model for writers on general geography and was highly praised by almost all geographers who utilized it. He was the Director of the Post and Intelligence Department and was a man of learning and erudition. What prompted him to write a geographical treatise may be explained from his own statement that it was in fulfilment of the desire of the Caliph, for whom he also translated the work of Ptolemy (from Greek or Syriac) into Arabic (Ibn Khurradādhbih, 3). However, the desire of the Caliph may itself have arisen from the practical needs of the government. We find that Ḳudāma b. Djaʿfar al-Kātib considered the 'science of roads' (*ʿilm al-ṭuruḳ*) not only useful for general guidance in the *Dīwān*, but also essential for the Caliph who might need it for his travels or for despatching his armies (185).

The geographical works produced during the 3rd/9th and 4th/10th centuries may be divided into two broad categories: (1) works dealing with the world as a whole but treating the ʿAbbāsid Empire (*Mamlakat al-Islām*) in greater detail. They attempted to give all such secular information as could not find a place in the general Islamic literature, and hence this category is called 'the secular geographical literature of the period'. The writers described the topography and the road-system of the ʿAbbāsid Empire and covered mathematical, astronomical, physical, human and economic geography. Among the representatives of this class of geographers were: Ibn Khurradādhbih, al-Yaʿḳūbī, Ibn al-Faḳīh, Ḳudāma and al-Masʿūdī. Since ʿIrāḳ was the most important centre of geographical learning at this time and many of the geographers belonged to it, we may for the sake of convenience use the term ʿIrāḳī School for them. Within this School, however, two groups of writers may be discerned: those who present the material following the four directions, *viz.*, north, south, east and west, and tend to consider Baghdād as the centre of the world, and those who arrange it according to various *Iḳlīm*s (regions) and for the most part treat Mecca as the centre. (2) To the second category of works belong the writings of al-Iṣṭakhrī, Ibn Ḥawḳal and al-Muḳaddasī, for whom the term Balkhī School has been used, as they followed Abū Zayd al-Balkhī (see below). They confined their accounts to the world of Islam, describing each province as a separate *Iḳlīm*, and hardly touching upon non-Islamic lands except the frontier regions.

(i) The ʿIrāḳī School. The works of Ibn Khurradādhbih, al-Yaʿḳūbī and al-Masʿūdī are distinguished from the writings of other geographers of this School by two special features: first, they follow the Iranian *kishwar* system, and second, they equate ʿIrāḳ with Īrānshahr and begin their descriptions with it, thus placing ʿIrāḳ in a central position in Arab regional and descriptive geography. According to al-Bīrūnī the Seven *kishwar*s were represented by seven equal circles. The central *kishwar* was Īrānshahr which included Khurāsān, Fārs, Djibāl and ʿIrāḳ. He considered that these divisions were arbitrary and had been made primarily for political and administrative reasons. In ancient times the great kings lived in Īrānshahr, and it was necessary for them to live in the central zone so that they would be equidistant from other kingdoms and therefore find it easy to deal with matters. Such a division had no relation either to the physical systems or to astronomical laws, but was based on political changes or ethnological differences (*Ṣifa*, ed. Togan, 5, 60-62). With the foundation of Baghdād as the capital of the ʿAbbāsid Empire, ʿIrāḳ naturally occupied a central and politically important position in the world of Islam. Ibn Khurradādhbih equated ʿIrāḳ with Īrānshahr and the district of al-Sawād which was called *dil-i Īrānshahr* in ancient times occupied the central position in his system of geography, and he begins his account with its description. Similarly, al-Yaʿḳūbī considered ʿIrāḳ as the centre of the world and 'the navel of the earth' (*surrat al-arḍ*), but for him Baghdād was the centre of ʿIrāḳ, for it was not only the greatest city of the world unparalleled in its glory, but it was also the seat of government of the Banū Hāshim. Because it occupied a central position in the world, ʿIrāḳ had a moderate climate, its inhabitants were handsome and intelligent and possessed high morals. But in his system of geography Baghdād is grouped with Sāmarrā, and the description begins with these two towns. A similar note of the superiority of ʿIrāḳ is struck by the historian and geographer al-Masʿūdī, who thought of Baghdād as the best city in the world (*Tanbīh*, 34; cf. Ibn al-Faḳīh, 195 ff.).

As against these writers, Ḳudāma, Ibn Rusta and

Ibn al-Faḳīh display no enthusiasm for ʿIrāḳ or Īrānshahr. In their system Mecca and Arabia are given precedence. In Ḳudāma Mecca is given absolute precedence and all roads leading to Mecca are described before an account of roads leading out of Baghdād is given. He did give importance to ʿIrāḳ, but as the capital province of the *Mamlakat al-Islām*. Thus he considered it important, but only from a political and administrative point of view. In his system of geography, therefore, there is a slight shift of emphasis from the Iranian concept to what might be termed an 'Islamic approach' to geography. A similar tendency is also noticeable in Ibn Rusta (beginning of 4th/10th century) who departed completely from the Iranian traditions and assigned to Mecca and Medina the foremost place in his arrangement of geographical material. In his description of the Seven *Iḳlīm*s he prefers to describe them according to the Greek pattern and not according to the *kishwar* system. In the geographical work of Ibn al-Faḳīh also, the description of Mecca takes precedence, but a considerable portion of the work is devoted to Fārs, Khurāsān, etc. and the *Iḳlīm*s are described according to the *kishwar* system.

An important feature of the works of Ibn Khurradādhbih, al-Yaʿḳūbī and Ḳudāma is that the material in them is arranged and described following the four directions, namely, east, west, north and south according to the division of the world into four quarters. Such a method of description must have had its origin in some Iranian geographical tradition, and the Arab geographers must have had some pattern before them to copy. According to al-Masʿūdī the Persians and the Nabataeans divided the inhabited part of the world into four parts, *viz.*, Khurāsān (east), Bākhtar (north), Khurbarān (west) and Nīmrūz (south) (*Tanbīh*, 31; cf. al-Yaʿḳūbī, 268). However, Ḳudāma points out the arbitrariness of such a division. For him the terms east, west, north and south had only a relative value. In Ibn Rusta and Ibn al-Faḳīh, the arrangement is by regions.

Ibn Khurradādhbih, who may be called the father of geography, laid down the pattern and style for writing geography in the Arabic language. But, as J. H. Kramers pointed out, he was not an inventor of this style or pattern. He must have had some pattern or sample of an earlier work on the subject before him. There is a great likelihood that an Arabic translation of some earlier Pahlavi work on ancient Īrān was accessible to him. His work covers not only the *Mamlakat al-Islām*, but describes its frontiers and kingdoms and the peoples bordering on them. He was well acquainted with Ptolemy's work as is evident from his description of the limits of inhabited parts of the world and from the description of the Greek conception of the continents, namely, *Arūfā*, *Lūbya*, *Ityūfiyā* and *Isḳūtiyā*.

Aḥmad b. Abī Yaʿḳūb b. Wāḍiḥ al-Kātib al-Yaʿḳūbī (d. 284/897) claims to have travelled a great deal. He emphasized the fact of having obtained information from the inhabitants of the regions concerned, and of having verified it from trustworthy persons (232-3). His object in writing the book was to describe the routes leading to the frontiers of the Empire and the territories adjacent to them. It is for this reason that he dealt in a separate monograph with the history and geography of Rūm (the Byzantine Empire), and devoted another work to the conquest of Ifrīḳiya (North Africa). Al-Yaʿḳūbī's work deals mainly with topography and itineraries, and his arrangement of the material is similar to that of Ibn Khurradādhbih.

Ḳudāma b. Djaʿfar al-Kātib (4th/10th century) devoted the eleventh chapter of his work *Kitāb al-kharādj wa ṣanʿat al-kitāb* to a description of the postal stations and routes of the ʿAbbāsid Empire. The main objective of his work was to describe the *Mamlakat al-Islām* and its frontiers, especially the frontiers with the Byzantine empire (Rūm) which he considered the greatest enemy of Islam (252). In his geography the 'Islamic approach' is perceptible, but a political attitude like the defence of the frontiers is also discernible. His work also covers descriptions of peoples and kingdoms surrounding the *Mamlaka*. He deals with general and physical geography and seems to have borrowed information on regional and descriptive geography from the Greek sources.

Ibn Rusta's work (beginning of 4th/10th century) entitled *al-Aʿlāḳ al-nafīsa* resembles that of Ḳudāma in that it describes Mecca and Medina in the very beginning of the portion dealing with regional geography. The main purpose of the work, however, seems to have been to provide general information about the world as a whole, and hence one finds in it, besides a description of the Islamic lands, descriptions on a regional basis of several countries lying outside the limits of Islam. He dealt with mathematical geography in a systematic and exhaustive way and collected varied theories and opinions about various problems (23-4). He presents material on general and physical geography and describes the *Iḳlīm*s after the Greeks. Considering the variety of information accumulated in it, his work may be described as a 'small encyclopaedia of historical and geographical knowledge'.

Like Ibn Rusta, Ibn al-Faḳīh al-Hamadhānī also arranged his geographical material on a regional basis in his *Kitāb al-Buldān* (written c. 290/903). The description of Mecca takes precedence over other places, and the general arrangement of the subject-matter resembles that of al-Iṣṭakhrī and Ibn Ḥawḳal. He incorporated the account of the merchant Sulaymān on India and China, but the special feature of his work is that, along with trustworthy and authentic information, it records long pieces of verse, various traditions and information of a legendary character. The work is poor in the treatment of general and mathematical geography.

Abu 'l-Ḥasan ʿAlī b. al-Ḥusayn al-Masʿūdī (d. 345/956), the celebrated historian, combined the qualities of an experienced traveller with those of a geographer of high distinction. Unfortunately his own account of his travels (*Kitāb al-Ḳaḍāyā wa 'l-tadjārib*) is not extant, but an approximate idea of his travels can be formed from his extant works, namely, *Murūdj al-dhahab wa maʿādin al-djawhar* and *al-Tanbīh wa 'l-ishrāf* (the work entitled *Akhbār al-zamān*, etc. ed. ʿAbd Allāh al-Ṣāwī, Cairo 1938, and a MS of the Maulana Azad Library, Muslim University, ʿAlīgaṙh (Qutbuddin Collection, MS No. 36/1) entitled *Kitāb ʿAdjāʾib al-dunyā* (in the colophon *Kitāb al-ʿAdjāʾib*) are both wrongly attributed to al-Masʿūdī and have nothing to do with his great work *Kitāb Akhbār al-zamān* which is lost). Al-Masʿūdī regarded geography as a part of history, which explains the fact that his works deal with geography as an introduction to history. He drew upon the earlier geographical writings in Arabic as well as upon contemporary travel accounts and maritime literature. This he reinforced by the information collected by himself during his travels or from people whom he met. He does not give any systematic topographical account

of the ʿAbbāsid Empire or deal with routes of the kingdom or postal stations, but he presents an excellent survey of contemporary Arab knowledge on mathematical and physical geography. However, al-Masʿūdī's main contribution was in the field of human and general geography. He advanced geographical science by challenging certain theories and concepts of Arab geographers which he found baseless in the light of his own experience and observation. He did not hesitate even to question the age-old theories of the Greek masters like Ptolemy, *e.g.*, the existence of land in the southern hemisphere. In the field of human and physical geography he emphasized the influence of the environment and other geographical factors on the physique and character of animals, plants and human beings. Al-Masʿūdī was also influenced by Iranian geographical traditions, *e.g.*, the Seven *kis̲h̲war* system, considering ʿIrāḳ as the central and the best *iḳlīm* in the world and Bag̲h̲dād as the best city, etc.

An outstanding geographer of this period whose influence on the development of Arab geography was as varied and deep as that of Ibn K̲h̲urradād̲h̲bih was the Sāmānid *wazīr* Abū ʿAbd Allāh Muḥammad b. Aḥmad al-D̲j̲ayhānī (earlier part of the 4th/10th century). Unfortunately, his work *Kitāb al-Masālik wa 'l-mamālik* (the Kābul MS has nothing to do with the great work of D̲j̲ayhānī, see V. Minorsky, *A false Jayhānī*, in *BSOAS*, xiii, 1949-50, 89-96) has not come down to us; but it is quite likely that al-D̲j̲ayhānī used the original text of Ibn K̲h̲urradād̲h̲bih's *Kitāb al-Masālik*. Being in the privileged position of a *wazīr* and writing in Buk̲h̲ārā he 'could extend the field of his investigation much deeper into central Asia and the Far East than was possible for his Arab contemporaries' (Minorsky, *Marvazī*, etc. 6-7, London 1942). He collected first-hand information from different sources, hence the importance of his work. A large number of later Arab geographers utilized al-D̲j̲ayhānī's work which, in the opinion of al-Masʿūdī, was 'interesting because of its novel information and interesting stories'.

The anonymous *Ḥudūd al-ʿālam*, written in Persian in 372/982 is one of the earliest works in Persian on world geography. The author utilized numerous earlier Arabic authorities on the subject and he had undoubtedly a copy of the work of al-Iṣṭak̲h̲rī before him. There is a tendency in the work towards completeness and numerical exactitude. Besides, the author is independent of other geographers in his geographical generalizations and terminology. The originality of the author lies in his conception of the division of the inhabited world into 'parts of the world' and separate 'countries' (see Barthold, Preface to *Ḥudūd al-ʿālam*, 21-33). The work appeared in an English translation with an excellent commentary by V. Minorsky (London 1937), one of the most exhaustive ever written on any Persian or Arabic geographical work in modern times.

(ii) The Balk̲h̲ī School. To the second main category of writers on general geography belonged al-Iṣṭak̲h̲rī, Ibn Ḥawḳal and al-Muḳaddasī as well as Abū Zayd Aḥmad b. Sahl al-Balk̲h̲ī (d. 322/934) after whom this School is named. Al-Balk̲h̲ī wrote his geographical work *Ṣuwar al-aḳālīm* (primarily a commentary on maps) in 308/920 or a little later. He spent some eight years in ʿIrāḳ and had studied under al-Kindī. He had travelled widely before his return to his native place and had acquired a high reputation for knowledge and erudition. However, probably in the later part of his life he held orthodox views and wrote several treatises which were highly appreciated in orthodox circles. Although the text of al-Balk̲h̲ī's geographical work has not yet been separately established, and the MSS, at one time attributed to al-Balk̲h̲ī, have now been proved to be of al-Iṣṭak̲h̲rī, the view of De Goeje still seems to hold good that the work of al-Iṣṭak̲h̲rī represents a second and greatly enlarged edition of al-Balk̲h̲ī's work, compiled between 318/930 and 321/933, in al-Balk̲h̲ī's lifetime.

The geographers of the Balk̲h̲ī School gave a positive Islamic colouring to Arab geography. In addition to restricting themselves mainly to Islamic lands, they laid emphasis on such geographical concepts as found concurrence in the Ḳur'ān or were based on the traditions and sayings of the Companions of the Prophet and others, *e.g.*, they compared the land-mass with a big bird (see above). This was in conformity with a tradition attributed to ʿAbd Allāh b. ʿAmr b. al-ʿĀṣ (Ibn al-Faḳīh, 3-4). Again, the land-mass, round in shape, was encompassed by the 'Encircling Ocean' like a neck-ring, and from this Ocean the two 'gulfs' (the Mediterranean and the Indian Ocean) flowed inwards without joining each other, being separated by al-Barzak̲h̲ [*q.v.*], the 'barrier' at al-Ḳulzum, a concept found in the Ḳur'ān (see above). Again, unlike some geographers of the ʿIrāḳī School, the geographers of the Balk̲h̲ī School assigned to Arabia the central place in the world, for it had Mecca and the Kaʿba in it. These new trends in the methodology and treatment of the subject-matter became the dominant feature of the geographers of this School, and must in all probability have been a culmination of the early process wherein Mecca was given precedence over ʿIrāḳ by one group of geographers. The prime object of these later geographers was to describe exclusively the *bilād al-Islām* which they divided into twenty *iḳlīm*s, except that they discussed the non-Islamic lands in general in their introductory notes. The basis of the division of these 'provinces' was neither the Iranian *kis̲h̲war* system nor the Greek system of Climes. It was territorial and purely physical. This was a positive advancement on previous methods and in a way 'modern'. As pointed out by Ibn Ḥawḳal (2-3) he did not follow the pattern of the 'seven *iḳlīm*s' (of the map at al-Ḳawād̲h̲iyān, see above), for although it was correct, it was full of confusion, with some overlapping of the boundaries of the 'provinces'. Hence he drew a separate map for each section describing the position of each 'province', its boundaries and other geographical information. An important contribution made by these geographers was that they systematized and enlarged the scope of geography by including in it new topics with a view to making it more useful and interesting, for they believed that a much wider range of people were interested in it, like the kings, the people of *muruwwa* and the leading sections of all classes (Ibn Ḥawḳal, 3). In cartography, besides drawing the regional maps on a more scientific basis, they may be said to have introduced the element of perspective. They drew a round map of the world showing the various 'regions' of the *bilād al-Islām* and other non-Islamic 'regions' of the world. The aim was to bring them in proper perspective and to show the relative position and size of each. But since it did not represent the true size and shape (round, square or triangular) of the respective *iḳlīm*s, they mapped each in a magnified form. Their drawing these on a purely physical basis was

probably the first experiment of its kind in Arab cartography. The maps of al-Iṣṭakhrī and Ibn Ḥawḳal are, in this respect, superior to those of al-Idrīsī, who divided the seven latitudinal Climes into ten longitudinal sections each and drew a map for each section separately with the result that these sectional maps do not represent geographical units but geometrical divisions. Al-Iṣṭakhrī, Ibn Ḥawḳal and al-Muḳaddasī present for the first time the concept of a country as defined in geographical terms, and even go so far as to delimit the boundaries of each, just as they define the boundaries of the four main kingdoms of the world.

Abū Isḥāḳ Ibrāhīm b. Muḥammad al-Fārisī al-Iṣṭakhrī (first half of the 4th/10th century) seems to have been mainly responsible for spreading the ideas of the Balkhī School. Little is known of his life, but he travelled a good deal and incorporated the experiences of his travels in his work *al-Masālik wa 'l-mamālik* (a new edition of this work has appeared recently, ed. by M. Djābir ʿAbd al-ʿĀl al-Ḥīnī, Cairo 1961). There is little doubt that the work was based on that of Abū Zayd al-Balkhī. Al-Iṣṭakhrī's work served as an authentic source of information for the geographers of this School. It was translated into Persian and became the basis of many Persian works on geography.

Abu 'l-Ḳāsim Muḥammad b. Ḥawḳal, a native of Baghdād, completed his geography entitled *Kitāb Ṣūrat al-arḍ* (2nd ed. J. H. Kramers, Leiden 1938) in c. 366/977. From his childhood, Ibn Ḥawḳal was interested in geography and had travelled widely between 331/943 and 357/968. He was so devoted to geography that the works of al-Djayhānī, Ibn Khurradādhbih and Ḳudāma never parted from him during his travels. About the first two he says that they so engaged him that he was unable to devote any attention either to the other useful sciences or to the Traditions. However, what prompted him to write his work was that he found none of the existing works on the subject satisfactory. He claims to have improved the work of al-Iṣṭakhrī whom he had met. However, the claims of Ibn Ḥawḳal may not be accepted unequivocally, for the similarity between the works of the two geographers itself suggests that Ibn Ḥawḳal must have been considerably indebted to al-Iṣṭakhrī. There is little doubt, however, that he ranks among the most outstanding geographers of the period, for in cartography he shows independence and individuality and does not follow others slavishly. Besides, he incorporated new information based on his travels or acquired from hearsay. He remained an authentic source of information for the succeeding geographers for several centuries to come.

Abū ʿAbd Allāh Muḥammad b. Aḥmad al-Muḳaddasī (d. 390/1000), the author of *Aḥsan al-taḳāsīm fī maʿrifat al-aḳālīm* was a very original and scientific geographer of his time. He rightly claims to have put Arab geography on a new foundation and given it a new meaning and wider scope. Since he considered the subject useful to many sections of society, as also to the followers of various vocations, he widened its scope, including in it a variety of subjects ranging from physical features of the *iḳlīm* (region) under discussion to mines, languages and races of the peoples, customs and habits, religions and sects, character, weights and measures and the territorial divisions, routes and distances. He believed that it was not a science that was acquired through conjecture (*ḳiyās*), but through direct observation and first-hand information. Hence he laid his main emphasis on what was actually observed and was reasonable. From the earlier writers he borrowed what was most essential 'without stealing from them'. Thus, according to the nature of the sources of information, his work may be divided into three parts: what he observed himself; what he heard from trustworthy people; and what he found in written works on the subject. Al-Muḳaddasī is one of the few Arab geographers who discusses geographical terminology and specific connotations of certain phrases and words used, besides giving a synopsis and an index of the *iḳlīms*, districts, etc., in the introduction of his work for the benefit of those who want to get an idea of the contents quickly or wish to use it as a traveller's guide. Unlike Iṣṭakhrī and Ibn Ḥawḳal, al-Muḳaddasī divided the *Mamlakat al-Islām* into fourteen *iḳlīms* (seven *ʿarab* and seven *ʿadjam*) perhaps to conform to the belief that there were seven climes north of the Equator and seven others to its south, an idea attributed to Hermes, the legendary figure known to the Arabs as an ancient philosopher of Egypt. In this respect he differed from Abū Zayd al-Balkhī and al-Djayhānī, whom he however considered *Imāms* (here authorities). An important feature of his work is that like a *mufassir* he discusses at length certain questions relating to general geography, *e.g.*, the number of the seas, etc., in order to bring them into conformity with the Ḳurʾānic verses relating to them.

(d) Trade and exploration: the maritime literature:

An important aspect of the development of Arabic geographical literature of this period was the production of the maritime literature and travel accounts, which enriched the Arabs' knowledge of regional and descriptive geography. This became possible firstly, because of the political expansion of the Muslims and the religious affinity felt by them towards one another irrespective of nationality or race, and secondly, because of the phenomenal increase in the commercial activities of the Arab merchants. Incentive to travel and exploration was provided by several factors, *viz.*, pilgrimage to Mecca, missionary zeal, deputation as envoys, official expeditions, trade and commerce, and, last but not least, the mariners' profession.

From very ancient times the Arabs played the rôle of intermediaries in trade between the East (India, China, etc.) on the one hand and the West (Egypt, Syria, Rome, etc.) on the other. But with the foundation of Baghdād as the capital of the ʿAbbāsid Empire and the development of the ports of Baṣra and Sīrāf, the actual and personal participation of the Arabs now extended as far as China in the east and Sofala on the east coast of Africa. They had learned and mastered the art of navigation from the Persians, and by the 3rd/9th century Arab navigators had become quite familiar with the monsoon and trade winds, and their boats sailed not only along the coasts but direct to India from Arabia. They had become intimate with the various stretches of the sea between the Persian Gulf and the Sea of China, which they divided into the Seven Seas giving each a specific name. Again, they sailed from Aden to East Africa as far south as Sofala and freely sailed on the Red Sea, the Mediterranean, the Black Sea and the Caspian and also on a number of navigable rivers including the Nile and the Indus. Although their boats were small as compared to those of the Chinese, and the Indian Ocean was infested with whales, they performed long and

hazardous voyages with courage and fortitude. They used sea-charts (*rahmānīs* and *dafātir*). Al-Mas'ūdī (*Murūdj*, i, 233-4) records names of certain captains of boats whom he knew and expert sailors of the Indian Ocean; similarly, al-Muḳaddasī (10-11) gives the name of an expert merchant-sailor whom he consulted on the question of the shape of the Indian Ocean. Aḥmad b. Mādjid ([*q.v.*], see also below) speaks of an old *rahmānī* composed by Muḥammad b. Shādān, Sahl b. Abbān and Layth b. Kahlān (lived in the later part of the 3rd/9th century), but he considered them much below the standard (see Hourani, *Arab seafaring*, 107-8). Since none of these charts is extant, it is not possible to make a correct assessment of the contribution made by these early Arab navigators to nautical geography.

With the development of Arab navigation, Arab trade also expanded. With a strong political power in the Middle East and a developing economy at home, the Arabs acquired considerable importance as traders in the East. The sphere of their trade not only widened, but became more intensive. They even traded by barter with the primitive tribes of the Andaman and Nicobar Islands, whose languages they did not understand. Arab trade with China declined from about the end of the 3rd/9th century, for it is said that in the peasant rebellion under Huang Ch'ao (A.D. 878) large numbers of foreigners were massacred in China. From this time onwards Arab boats went only as far as Kala, a port on the western coast of the Malay Peninsula, no longer existing.

The Arabs' urge to explore new lands was mainly prompted by a desire for trade and rarely for the sake of exploration. Although some instances of early Arab adventures and exploration are recorded, many of these seem to have been 'wonder tales' (*e.g.*, the interpreter Sallām's account of his trip to the wall of Gog and Magog under the orders of the Caliph Wāthiḳ (227-32/842-7), see Minorsky, *Ḥudūd al-ʿālam*, 225). The story of a certain young man of Cordova (Spain) who sailed with a group of young friends on the Atlantic Ocean and then returned after some time, laden with booty, may have had some historical truth in it (al-Mas'ūdī, i, 258-9). On the whole the Arabs of this period did not make any substantial contribution to or improve upon the knowledge acquired from the Greeks. There is no doubt however that in regard to certain regions, *viz.*, North and East Africa, West Asia, Middle Asia, India and a few other countries, their information was much more authentic and intimate.

The fact that the Arabs did not explore the regions unknown to them, even those of which they had a theoretical knowledge, may be explained by several factors: wherever the trade incentive was satisfied, they did not proceed beyond that point; secondly, certain notions or preconceived ideas continuously dominated their thought and dissuaded them from taking a bold step, *e.g.*, the Atlantic was a Sea of Darkness and a Muddy Spring (*al-ʿayn al-ḥamiʾa*). For the same reason they did not sail further south along the east coast of Africa, for they believed that there were high tidal waves and sea commotion there, although al-Bīrūnī, on the basis of certain evidence discovered in the 3rd/9th century, namely, the discovery in the Mediterranean of planks from boats of the Indian Ocean (see above), had conceived that the Indian Ocean was connected with the Atlantic by means of narrow passages south of the sources of the Nile (*Ṣifa*, 3-4). Lastly, the fear of encountering aboriginal tribes and cannibals of the East Indies must have prevented the Arabs from sailing further east.

Among the travel accounts of this period that have survived, one of the earliest is that attributed to the merchant Sulaymān, who performed several voyages to India and China and described his impressions of the lands and the peoples in the travelogue *Akhbār al-Ṣīn wa 'l-Hind* (235/850). The work is a testimony of the keen but academic interest taken by Arab merchants in conveying to the Arabic-reading peoples of the time unique and interesting information about the distant lands of the East. This account was first published in 302/916 by Abū Zayd al-Ḥasan of Sīrāf along with other accounts collected and verified by him in a work entitled *Silsilat al-tawārīkh*. Abū Zayd was apparently a well-to-do person, and although he had not himself travelled, he was keenly interested in gathering information from travellers and merchants and in recording it. He met al-Mas'ūdī at least twice and exchanged much information with him. Al-Mas'ūdī, who represented the finest spirit of exploration of his time, had travelled very widely and sailed on many seas including the Caspian and the Mediterranean. He must have discussed with Abū Zayd the discovery near Crete of the planks of a boat belonging to the Arabian Sea. This was a unique phenomenon for it was believed that the Arabian Sea had no connexion with the Mediterranean. Al-Mas'ūdī came to the conclusion that the only possibility was that these planks may have flowed towards the East into the Eastern Sea (the Pacific) and then northwards and finally, through the *khalīdj* (an imaginary channel flowing down from the northern Encircling Ocean into the Black Sea) into the Mediterranean (*Murūdj*, i, 365-6). The fact that they both recorded this unique discovery is evidence of their concern about geographical problems. It also shows that interest in geography was dynamic during this period, and had not become static as in the later period.

An interesting writer of this period was Buzurg b. Shahriyār, the captain of Rāmhurmuz (299-399/912-1009) who compiled a book of maritime tales, entitled *Kitāb ʿAdjāʾib al-Hind* in about 342/953. The book relates a number of very amusing and very strange stories concerning the adventures of the sailors in the Islands of the East Indies and other parts of the Indian Ocean. These were apparently composed for the general reader, and though mostly fantastic, they cannot be completely brushed aside as untrue and ignored in any serious study of Arab geography and exploration. It seems that during this period there was a great demand for wonderful and amusing tales, which fact is borne out by the existence of several MSS in Arabic dealing with *ʿadjāʾib* literature.

This period was on the whole marked by a spirit of enquiry and investigation and exploration among the Arabs. But the maritime literature, most of which seems to have perished, posed itself against the theoretical knowledge derived from the Greek and other sources. Hence at times there was a contradiction between theory and practice, and this was the fundamental problem with which the Arab geographers and travellers were faced. It was this conflict between theory and practice that finally determined the course of the development of Arab geography in the later period. When the 'practicalists' gave way to the theoreticians, the decline of Arab geography became certain. Why the word of the sailor, the traveller and the merchant was not

given due credence is difficult to explain, but a large amount of maritime literature must have perished through either neglect or animosity.

(e) Al-Bīrūnī and his contemporaries:

The 5th/11th century may be taken as the apogee of the progress of Arab geography. The geographical knowledge of the Arabs, both as derived from the Greeks and others and as advanced by themselves through research, observation and travel, had, by this period, reached a very high level of development. Besides, geographical literature had acquired a special place in Arabic literature, and various forms and methods of presenting geographical material had been standardized and adopted. The importance of al-Bīrūnī's contribution to Arab geography is two-fold: firstly, he presented a critical summary of the total geographical knowledge up to his own time, and since he was as well-versed in Greek, Indian and Iranian contributions to geography and in that of the Arabs, he made a comparative study of the subject. He pointed out that the Greeks were more accomplished than the Indians, thereby implying that the methods and techniques of the former should be adopted. But he was not dogmatic, and held some important views that were not in conformity with Greek ideas. Secondly, as an astronomer he not only calculated the geographical positions of several towns, but measured the length of a degree of latitude, thus performing one of the three important geodetic operations in the history of Arab astronomy. He made some remarkable theoretical advances in general, physical and human geography. On the basis of the above-mentioned discovery in the Mediterranean of the planks of an Arabian Sea boat a hundred years earlier, he conceived the theoretical possibility of the existence of channels connecting the Indian Ocean with the Atlantic, south of the Mountains of the Moon and the Sources of the Nile. But these were difficult to cross because of high tides and strong winds. He argued that just as towards the east, the Indian Ocean had penetrated the northern continent (Asia) and had opened up channels, similarly, to balance them, the continent has penetrated the Indian Ocean towards the west; the sea there is connected through channels with the Atlantic. Thus, although theoretically he laid down the possibility of circumnavigating the South African coast, in practice it was never accomplished by the Muslims. The idea, however, persisted until the time of the arrival of the Portuguese, when it was hinted by al-Nahrwālī that the Portuguese might have taken this route. Al-Bīrūnī conceived that the land-mass was surrounded by water, that the centre of 'Earth's weight' shifted and caused physical changes on its surface, *e.g.*, fertile lands turned barren, water turned into land and *vice versa*. He described very clearly various concepts and the limits of the inhabited parts of the earth of his time, for which he seems to have had recourse to some contemporary sources which were not available to the earlier geographers. He made an original contribution to regional geography by describing India in detail.

Among the astronomers of the 5th/11th century one who deserves mention was Ibn Yūnus, Abu 'l-Ḥasan ʿAlī b. ʿAbd al-Raḥmān (d. 399/1009). While al-Bīrūnī was working in India and other places, Ibn Yūnus made valuable observations in the observatory on the Mt. al-Muḳaṭṭam in Egypt under the patronage of the Fāṭimid caliphs al-ʿAzīz and al-Ḥakīm. The results of his observations recorded in the *al-Zīdj al-kabīr al-Ḥākimī* became an important source of up-to-date astronomical and geographical knowledge for the scientists of the Islamic East.

Among the geographers and travellers contemporary to al-Bīrūnī there was the Ismāʿīlī poet-traveller Nāṣir-i Khusraw (d. 452/1060 or 453/1061) whose travel account entitled *Safar-nāma* written in Persian covers the author's personal experiences in and descriptions of Mecca and Egypt.

Abū ʿUbayd ʿAbd Allāh b. ʿAbd al-Azīz al-Bakrī (d. 487/1094) was the best representative of lexicography of the period in as far as place-names were concerned. His geographical dictionary *Muʿdjam mā 'staʿdjam min asmāʾ al-bilād wa 'l-mawāḍiʿ* is an excellent literary-cum-geographical work. It discusses the orthography of place-names of the Arabian peninsula mainly, furnishing literary evidence from Arabic literature, ancient Arabian poetry, *Ḥadīth*, ancient traditions, etc. His second geographical treatise *Kitāb al-masālik wa 'l-mamālik* has not survived in its entirety. Al-Bakrī was, however, more a litterateur than a geographer [see ABŪ ʿUBAYD AL-BAKRĪ].

(V) The period of consolidation (6th/12th-10th/16th centuries)

From the 6th/12th to the 10th/16th century Arab geography displayed continuous signs of decline. The process was chequered and with some exceptions like the works of al-Idrīsī and Abu 'l-Fidāʾ the general standard of works produced was low compared to those of the earlier period. The scientific and critical attitude towards the subject and emphasis on authenticity of information that was the mark of the earlier writers gave place to mere recapitulations and *résumés* of the traditional and theoretical knowledge found in the works of earlier writers. This was, in a way, the period of consolidation of geographical knowledge, and the literature may be divided into eight broad categories:

(a) world geographical accounts;
(b) cosmological works;
(c) the *ziyārāt* literature;
(d) *muʿdjam* literature or geographical dictionaries;
(e) travel accounts;
(f) maritime literature;
(g) astronomical literature;
(h) regional geographical literature.

(a) World geographical accounts:

The tradition of describing the world as a whole as practised by the geographers of the classical period continued to be followed by some geographers of this period, but works dealing exclusively with the world of Islam had become rare, for the ʿAbbāsid Empire had itself disintegrated. The pattern of description and arrangement was also different from the earlier works. There was a tendency towards rapprochement between astronomical and descriptive geography in these works, and Greek influence was still prominent in some works, while Persian influence had comparatively diminished probably because of the production of geographical literature in Persian as well. But geographical activity had expanded and places like Syria, Sicily and Spain had become important centres of geographical learning, and some very important works were produced there.

Among the important works on world geography and astronomy produced during this period we may mention *Muntahā al-idrāk fī taḳsīm al-aflāk* by

Muḥammad b. Aḥmad al-Kharaḳī (d. 533/1138-9); *Kitāb al-Djughrāfiyā* by Muḥammad b. Abū Bakr al-Zuhrī of Granada (lived towards 531/1137); *Nuzhat al-mushtāḳ fi 'khtirāḳ al-āfāḳ* by al-Sharīf al-Idrīsī (d. 56/1166); *Kitāb al-Djughrāfiyā fi 'l-aḳālīm al-sab'a* by Ibn Sa'īd (d. 672/1274); and *Taḳwīm al-buldān* by Abu 'l-Fidā (d. 731/1331).

Al-Zuhrī's work was based on the Greek system of *iḳlīms* and represented the trend of rapprochement between astronomical and descriptive geography. The work of al-Idrīsī, which also represents this tendency, is a fine example of Arab-Norman co-operation in geographical activities. It was produced at Palermo under the patronage of the Norman king Roger II. Al-Idrīsī, who was a prince, and belonged to the Ḥammūdid dynasty, was neither a renowned traveller nor a trained geographer before he joined the court of Roger. The aim of Roger in calling him to his court seems to have been to utilize his personality for his own political objectives. There is little doubt, however, that Roger was interested in geography and he was able to collect a team of astronomers and geographers in his court. As a result of their efforts, for the first time in the history of Arab cartography, seventy regional maps based on the Ptolemaic system of climes were drawn, and a large silver map of the world constructed. The total geographical information acquired from contemporary as well as earlier Greek or Arab sources was classified according to the relevant sections each of which formed a description of one of these maps. The work was an important contribution to physical and descriptive geography. The work of Ibn Sa'īd was based on the clime-system. It also gives the latitudes and longitudes of many places which facilitates their reconstruction into a map. By this time Syria had become an important centre of geographical activities. Abu 'l-Fidā', the Syrian prince, historian and geographer, completed his important compendium on world geography in 721/1321. The work gives latitudes and longitudes of places and treats the subject-mattei on a regional basis. It is arranged in a systematic way and covers descriptive, astronomical and human geography. The author seems to have utilized some contemporary sources, for we find some new information which is not available in earlier works.

(b) Cosmological works:

During this period several works were produced which dealt not only with geography but also with cosmology, cosmogony, astrology and such other topics. The main purpose of these works seems to have been to present in a consolidated and systematic form world knowledge for the benefit of the average reader. No doubt the authors utilized earlier Arabic sources, but on the whole the material is presented uncritically, and there is hardly any question of investigation or research, and the zeal of enquiry is totally lacking. The tendency to produce such works was mainly due to the decline in education and learning which affected the progress of geographical knowledge.

The following are some of the works that belong to this category: *Tuḥfat al-albāb* (or *al-aḥbāb*) *wa nukhbat al-'adjā'ib* by Abū Ḥāmid al-Gharnāṭī (d. 565/1169-70); *'Adjā'ib al-buldān* and *Āthār al-bilād* by al-Ḳazwīnī (d. 682/1283); *Nukhbat al-dahr fī 'adjā'ib al-barr wa 'l-baḥr* by al-Dimashḳī (d. 727/1327); *Kharīdat al-'adjā'ib wa farīdat al-gharā'ib* by Ibn al-Wardī (d. 861/1457).

(c) The *ziyārāt* literature:

A special feature of this period was that a number of works dealing with the towns and places of religious significance or places of pilgrimage were produced. These were not purely descriptive or topographical works. They dealt with the holy spots of Islam, tombs of saints, the *takyas* of the ṣūfīs and *ribāṭs* along with educational institutions (*madrasas*) specializing in various schools of the Sharī'a and other such topics. One finds in them detailed accounts of place-names in various towns like Mecca, Damascus, etc. On the whole such works were meant to be religious guides for pilgrims and devotees, and represent the period of religious reaction in Islam. Among the representative works of this type of literature are: *Ishārāt ilā ma'rifat al-ziyārāt* by al-Harawī (d. 611/1214); *al-Dāris fī ta'rīkh al-madāris* by 'Abd al-Ḳādir Muḥammad al-Nu'aymī (d. 648/1520); in the Maulana Azad Library, 'Alīgaṙh Muslim University, there exists a MS (Shērwānī Collection, MS No. 27/34) which, in all probability, is an abridgment of al-Nu'aymī's original work, written 50 years after his death.

(d) *Mu'djam* literature or Geographical dictionaries:

The traditions of geographical studies developed in Syria bore many fruitful results. Besides the Compendium of Abu 'l-Fidā' and the *ziyārāt* literature, Yāḳūt al-Ḥamawī (d. 626/1229) produced one of the most useful works in Arabic geographical literature, namely, *Mu'djam al-buldān*. Completed in 621/1224, this geographical dictionary of place-names, which includes other historical and sociological data, was in keeping with the literary and scientific traditions of the earlier period, and represents the consummation of geographical knowledge of the time. As a reference book it is indispensible even to-day for the student of Arab historical geography. The fact that Yāḳūt crowned the work with an introduction on Arab geographical theories and concepts and physical and mathematical geography shows the depth of knowledge of the author. The work also represents that period of Arab geographical development when scholars thought in terms of compiling geographical dictionaries, which would not have been possible without the vast amount of geographical literature that had already come into existence by this time and without the geographical tradition that was present in Syria. Another important work of Yāḳūt is the *Kitāb al-Mushtarik waḍ'an wa'l-mukhtalif ṣaḳ'an*, composed in 623/1226.

(e) Travel accounts:

During this period the Arabs' knowledge of regional and descriptive geography was considerably enriched by the production of travel literature in Arabic on a large scale. Besides the usual incentives for travel like the pilgrimage to Mecca or missionary zeal, the extension of Muslim political and religious influences, especially in the East, had opened up for Muslims new vistas of travel and more opportunities for earning a livelihood.

Among the outstanding travel accounts may be included the work of al-Māzinī (d. 564/1169); the *Riḥla* of Ibn Djubayr (d. 614/1217); *Ta'rīkh al-Mustanṣir* (written in c. 627/1230) by Ibn Mudjāwir; then the *Riḥlas* of al-Nabātī (d. 636/1239), al-'Abdārī (d. 688/1289), al-Ṭayyibī (698/1299) and al-Tīdjānī (708/1308) and others. Whereas these accounts are of great importance for the Middle East,

North Africa and parts of Europe, for they furnish contemporary and often important information, the work of Ibn Baṭṭūṭa [*q.v.*] (d. 779/1377) entitled *Tuḥfat al-nuẓẓār* remains the most important mediaeval travel account in Arabic for the lands of India, South-East Asia and other countries of Asia and North Africa.

(f) Maritime literature:

During the period under consideration Arab maritime activities were confined to the Mediterranean and the Arabian Seas. In the Mediterranean the Arab navies, using the term in a broader sense, could never really become all-powerful. They were always busy in sea-wars with the Christian navies and sometimes as many as a hundred men-of-war were employed in the forays. Again, although the Arab navigators were quite familiar with the Mediterranean, sailing on the Atlantic was still dreaded, and there is only one instance of Arab adventure, namely, that of Ibn Fāṭima (648/1250). From the account of his voyage preserved in Ibn Saʿīd it appears that he had reached as far as White mountain (identified with Cape Branco) along the West African coast. On the whole it is difficult to assess the amount of the contribution made by the Arabs of this Sea to nautical geography, for very little is known of their accounts. But with the rise of the Ottoman power in Asia Minor, the Ottoman Navy ultimately became very powerful in the Mediterranean (see VI below).

In the Indian Ocean, however, the Arab navigators maintained their importance until the arrival of the Portuguese. It was Shihāb al-Dīn Aḥmad b. Mādjid (the date of his birth or death is not known) who piloted the boat of Vasco da Gama from Malindi on the east coast of Africa to Calicut in India in 1498. This incident indeed marks the turning point in the history of Arab navigation and trade in the East. The advent of the Portuguese had an adverse effect on the trade and commerce of the Arabs. Their maritime strength was destroyed and their trade systematically ruined by the Portuguese.

Ibn Mādjid, who spent more than fifty years of his life on the high seas, may be considered as one of the greatest Arab navigators of all times. He wrote thirty nautical texts and was one of the most important Arab writers on oceanography, navigation, etc. His contributions bring him in line with the leading scientists of the period. His most important contribution is the work *Kitāb al-Fawāʾid fī uṣūl ılm al-baḥr wa 'l-ḳawāʿid*.

Sulaymān b. Aḥmad al-Mahrī, a younger contemporary of Ibn Mādjid, was another important navigator of this period. He was also author of five nautical works written in the first half of the 10th/16th century. Among these may be mentioned of special importance: *al-ʿUmda al-mahriyya fī ḍabṭ al-ʿulūm al-baḥriyya* compiled in 917/1511-2 and *Kitāb Sharḥ tuḥfat al-fuḥūl fī tamhīd al-uṣūl*.

The works of Ibn Mādjid and Sulaymān al-Mahrī represent the height of the Arabs' knowledge of nautical geography. These navigators used excellent sea-charts, which are supposed to have had the lines of the meridian and parallels drawn on them. They also used many fine instruments and made full use of astronomical knowledge for navigation. There is little doubt that their knowledge of the seas was considerably advanced, especially of the Indian Ocean, for in their works they describe in details the coastlines, routes, etc. of the countries they visited. They were familiar with the numerous islands of the East Indies.

(g) Astronomical literature:

During this period some very important works were produced on astronomy, and one of the most outstanding astronomers of this period was the Tīmūrid prince-mathematician Ulugh Beg (d. 853/1449). But with the death of Ulugh Beg Muslim astronomical literature may be said to have come to an end, for this was the last scientific effort on the part of a Muslim prince, before the period of decline in Islamic society set in, to revise the data of Ptolemy and to perform independent astronomical observations. The results of Ulugh Beg's observations in which his collaborators also participated were included in the *Zīdj-i djadīd-i Sulṭānī*.

(h) Regional geographical literature:

Between the 7th/13th and the 10th/16th centuries a large amount of geographical literature, both in Arabic and Persian, came into existence on a regional or 'national' basis. Although no outstanding contributions were made by the geographers of this period, regional geographical knowledge was enriched by the efforts of several historians and geographers. Geographical traditions of the classical period were kept up, but there was no originality in thought or practice. In astronomical, physical or human geography no substantial advances were made. The production of literature on regional geography during this period was closely connected with the extension of Islam and Muslim political power in the East, and due to the attention paid by Muslim potentates to historiography and geography mainly for political purposes.

In ʿIrāḳ and Mesopotamia, the old centre of geographical activity, little was produced in geographical literature; *Meārath Ḳudshē* by Bar Hebraeus (d. 685/1286) showed much influence of Islamic tradition and has a semi-circular world map. In Egypt and Syria the *khiṭaṭ*-literature was produced under the Ayyūbids and the Mamlūks. Interest in the *ʿadjāʾib* literature and ancient Egypt from the time of the Ayyūbids resulted in the production of and collection of some fantastic accounts and stories about ancient Egyptian kings (!) and other tales of common interest. However, some new and fresh information on the Muslim states of the East, India and other countries, was also incorporated in these accounts. Authors who wrote on such subjects were Ibrāhīm b. Waṣīf Shāh (wrote in 605/1209); Nuwayrī (d. 629/1332); Maḳrīzī (d. 845/1441-2); Ibn Faḍl Allāh al-ʿUmarī (d. 749/1348); al-Ḳalḳashandī (d. 821/1418) and others. In North Africa, al-Ḥasan b. ʿAlī al-Marrākushī wrote *Djāmiʿ al-mabādī wa 'l-ghāyāt* which gives latitudes and longitudes partly compiled by the author. Ibn Khaldūn's *Muḳaddima* contains a chapter on geography, representing the tradition of some Arab historians of describing the world as a prelude to history.

In Īrān, Central Asia and India some historical works in Persian dealt with regional and descriptive geography, and some monographs on world geography were also produced. The geographical works were mainly based on earlier Arabic authorities; additional contemporary information was included in general histories and accounts of conquests. Among the important works we may mention: Ibn al-Balkhī, *Fārs-nāma*, written in the beginning of the 6th/12th century; Ḥamdallāh al-Mustawfī (d. 740/1340), *Nuzhat al-ḳulūb*; Muḥammad b. Nadjīb Bakrān

(wrote for the Khwārizm-shāh Muḥammad, 596-617/1200-20), *Djihān-nāma*, which contains some 'interesting information on the geography of Transoxania'; ʿAbd al-Razzāḳ al-Samarḳandī (d. 887/1482), *Maṭlaʿ al-saʿdayn*; Amīn Aḥmad Rāzī, *Haft iḳlīm*, written in 1002/1594, a biographical work, but contains much valuable geographical information.

Bibliography: Arabic geographical literature is too vast to allow any brief survey here. Hence only a select bibliography is given below:

1. Texts, translations and commentaries: Abū Dulaf Misʿar b. al-Muhalhil, *al-Risāla al-thāniya*, ed. V. Minorsky, Cairo 1955; al-Bīrūnī, *Kitāb al-Ḳānūn al-Masʿūdī*, published by the Dāʾirat al-Maʿārif, Ḥaydarābād (India), 2 vols., 1955; idem, *Bīrūnī's picture of the world* (*Ṣifat al-maʿmūra ʿalā al-Bīrūnī*), ed. A. Zeki Velidi Togan, *Memoir ASI*, liii, New Delhi 1941 (the work contains texts pertaining to geography selected from al-Bīrūnī's: 1. *al-Ḳānūn al-Masʿūdī*, 2. *Taḥdīd nihāyāt al-amākin li-taṣḥīḥ masāfāt al-masākin*, 3. *al-Djamāhir fī maʿrifat al-djawāhir*, and 4. *al-Ṣaydana*); Ḥamdallāh Mustawfī, *Nuzhat al-ḳulūb*, ed. Muḥammad Dabīr Siyāghī, Tehrān 1958; al-Hamdānī, *Kitāb Ṣifat Djazīrat al-ʿArab*, ed. Muḥammad b. Balhīd al-Nadjdī, Cairo 1953; al-Harawī, ʿAlī b. Abī Bakr, *al-Ishārāt ilā maʿrifat al-ziyārāt*, ed. and French transl. J. Sourdel-Thomine, Damascus 1953-7; *Ḥudūd al-ʿālam*; Ibn Baṭṭūṭa (Eng. tr. H. A. R. Gibb, i- , Cambridge 1958-); Ibn Faḍlān, *Risāla*, second edition of the translation and commentary by A. P. Kovalevsky 1955 (transl. Canard, in *AIEO Alger*, xvi, 1958); Ibn Ḥawḳal; Ibn Khaldūn-Rosenthal; Ibn Mādjid, *Three unknown nautical instructions on the Indian Ocean*, published by T. A. Shumovsky, Moscow 1957; al-Idrīsī, *Polska i kraje sasiedni w świetle "Ksiegi Rogera", geografa arabskiego z XII w. al-Idrīsīʾego*, cześć i, Kraków, 1945; cześć ii, Warsaw 1954; al-Idrīsī, *India and the neighbouring territories in the Kitāb Nuzhat al-mushtāḳ fi 'khtirāḳ al-āfāḳ of al-Sharīf al-Idrīsī*, tr. and commentary by S. Maqbul Ahmad, Leiden 1960; al-Idrīsī, *India and the neighbouring territories as described by the Sharīf al-Idrīsī*, ʿAlīgaṛh 1954; al-Iṣṭakhrī, *al-Masālik wa 'l-mamālik*, ed. M. Djābir ʿAbd al-ʿĀl al-Ḥīnī, Cairo 1961; T. Lewicki, *Zrodla arabskie de dziejow stowianszczyzny*, i, Wroclaw, Cracow 1956; Muḥammad b. Nadjīb Bakrān, *Djihān-nāma*, reproduced with translation by Y. Borshčevsky 1960; al-Nuʿaymī, ʿAbd al-Ḳādir, *al-Dāris fī taʾrīkh al-madāris*, 2 vols., Damascus 1948-51; Marwazī, *Sharaf al-Zamān Ṭāhir Marvazī on China, the Turks and India*, text, tr. and commentary by V. Minorsky, London 1942; *Akhbār al-Ṣīn wa 'l-Hind, Relation de la Chine et de l'Inde, rédigée en 851*, text, French tr. and Notes by Jean Sauvaget, Paris 1948; Yāḳūt, *The Introductory chapters of Yāqūt's Muʿjam al-buldān*, tr. and annotated by Wadie Jwaideh, Leiden 1959; R. Blachère and H. Darmaun, *Extraits des principaux géographes arabes du moyen âge*², Paris 1957.

2. General Works: Nafis Ahmad, *Muslim contribution to geography*, Lahore 1947; Barthold, *Turkestan*; G. F. Hourani, *Arab seafaring*, Princeton 1951; Hādī Hasan, *A history of Persian navigation*, London 1928; G. H. T. Kimble, *Geography in the middle ages*, London 1938; J. H. Kramers, *Geography and Commerce* in *The legacy of Islam*, ed. T. Arnold and A. Guillaume, London 1943; *Analecta Orientalia, posthumous writings and selected minor works of J. H. Kramers*, Leiden 1954; I. Y. Kračkovskiy, *Arabskaya geografičeskaya literatura* (vol. iv of his collected works), Moscow 1957; *Al-Masʿūdī commemoration volume*, ed. S. Maqbul Ahmad and A. Rahman, ʿAlīgaṛh 1960; S. Muzaffar Ali, *Arab geography*, ʿAlīgaṛh 1960 (being the tr. of Section IIof M. Reinaud's *Introduction générale à la géographie des Orientaux*).

3. Articles: Ziauddin Alavi, *Physical geography of the Arabs in the Xth Century A.D.*, in *Indian Geographical Journal*, xxii/2, Madras 1947; idem, *Arab geography in the 9th and 10th centuries A.D.*, in *Muslim University Journal*, ʿAlīgaṛh 1948; Leo Bagrow, *The Vasco Gama's Pilot*, in *Studi Colombiani*, Genoa 1951; S. Q. Fāṭimī, *In quest of Kalah*, in *Journal Southeast Asian History*, i/2, September 1960; V. Minorsky, *A False Jayhānī*, in *BSOAS*, xiii, 1949-50, 89-96; S. Maqbul Ahmad, *Al-Masʿūdī's contribution to mediaeval Arab geography*, in *IC*, xxvii/2, 1953; *IC*, xxviii/1, 1954; idem, *Travels of Abu 'l-Ḥasan ʿAlī b. al-Ḥusayn al-Masʿūdī*, in *IC*, xxviii/4, 1954; C. Schoy, *Geography of the Muslims of the Middle Ages*, in *Geographical Review* (American Geographical Society), xiv, 1924, 257-69. Other articles in Pearson, pp. 269-79; idem, *Supplement 1956-60*, pp. 82-5.

(S. Maqbul Ahmad)

VI. The Ottoman geographers

The Ottoman Turks do not seem to have begun to write geographical works until the middle of the 9th/14th century. The first of these were small cosmographies in the style of *Books of Marvels*, which treat of the wonders of Creation. The best known of these works is probably the "Well-preserved Pearl" (*Dürr-i meknūn*) by Yazīdjī-oghlu Aḥmed Bīdjān (d. ca. 860/1456) [*q.v.*], the brother of the early Ottoman poet Yazīdjī-oghlu Meḥemmed (died 855/1451. The same Aḥmed Bīdjān was also the first to make a translation of extracts from an Arabic cosmographical work, the *ʿAdjāʾib al-makhlūḳāt* of Ḳazwīnī (1203-1283), under the same title, in which the stress likewise is less upon scientific knowledge than upon the wonders of Creation (see Rieu, *Catal. of Turkish Mss. in the Brit. Mus.*, 106 ff.).

Ḳazwīnī's *ʿAdjāʾib al-makhlūḳāt* was translated several times into Turkish (Brockelmann, S I, 882, indicates four Turkish translations of the work). Likewise under the same title there were in circulation Turkish translations of Ibn al-Wardī's (d. 1457) *Kharīdat al-ʿadjāʾib* (indicated in *Beiträge zur historischen Geographie .... vornehmlich des Orients*, ed. Hans Mžik, *Festband Eugen Oberhummer*, Leipzig and Vienna 1929, 86 ff.), among them one with some contemporary additions by a man of the early Ottoman period called ʿAlī b. ʿAbd al-Raḥmān (see my articles *Der Bericht des arabischen Geographen Ibn al-Wardī über Konstantinopel* in *Festband Eugen Oberhummer*, 84-91, and *Ein altosmanischer Bericht über das vorosmanische Konstantinopel* in *AION*, N.S., i, 1940, 181-9). Further, after Sipāhīzāde Meḥemmed b. ʿAlī (d. 997/1588) had produced a new Arabic edition of Abu 'l-Fidā's *Taḳwīm al-buldān* under the title *Awḍaḥ al-masālik ilā maʿrifat al-buldān wa'l-mamālik* with the material arranged in alphabetical order and supplemented (Brockelmann, II, 46), he translated extracts of the work into Turkish under the same title (Brockelmann, S II, 44).

One of the last of the translations from earlier geographical works is the "Views of the Worlds" (*Menāẓir al-ʿawālim*) by Meḥmed b. ʿÖmer (not ʿOthmān), b. Bāyezīd al-ʿĀshiḳ (b. 964/1555, date of death unknown; the book was completed 1006/1598). It consists of two parts, of which the first treats the "world above", that is, heaven, its inhabitants and the celestial bodies, and, in appendix, a part of the "world below", that is, hell and its inhabitants. Apart from astronomy, which indeed is only summarily included, this section consists almost exclusively of theology and mythology. But this first part is actually only an introduction. The bulk of the work is contained in the second part, which describes the "world below", that is, the earth and its inhabitants. It contains first a universal geography, that is, a little general knowledge of the earth, followed by separate descriptions arranged in the mediaeval manner according to natural objects: oceans, islands, swamps and lakes, rivers, springs, warm springs, mountains and finally, comprising the main section of the descriptive geography, cities. In this section all of the geographical material is arranged according to the seven climates of Ptolemy, the "actual climates" (*aḳālīm-i ḥaḳīḳiyye*). Within this framework the localities represented are arranged according to the 28 "traditional climates" (*aḳālīm-i ʿurfiyye*) or regions, a principle which ʿĀshiḳ had borrowed from the work of Abu 'l-Fidāʾ, with result that some of the cities treated, according to their location, appear in more than one of the *aḳālīm-i ḥaḳīḳiyye*, the applications of the two principles thus overlapping. Under each heading ʿĀshiḳ indicates in order the reports of his authorities translated into Turkish, of the mediaeval Arabic and Persian writers such as Ibn Khurradādhbih, Ibn al-Djawzī, Yāḳūt, Ḳazwīnī, Ḥamdullāh Mustawfī and Ibn al-Wardī, each with a precise indication of the source. ʿĀshiḳ supplements these with his own reports, especially for Anatolia, Rumelia and Hungary, also with precise indication that this particular information derived from the "writer" (*rāḳim al-ḥurūf*), with the date of his visit to the city in question, thus affording a chronological sequence of his travels.

The geography is followed by a universal descriptive natural science, that is, the solid, liquid and gaseous minerals, scents, metals, plants, animals and man. The work in its totality is a broadly sketched compendium of traditional geography and natural science.

Belonging in a wider sense to the translations of geographical literature is the manual of astronomy and mathematics written in Persian by ʿAlī Ḳushdji (d. 879/1474), formerly director of Ulugh Beg's observatory in Samarḳand and later the court astronomer of Meḥemmed II, which was several times translated into Turkish (see *ZDMG*, lxxvii, 1923, 40 note 2). To this category also belongs the "China Book" (*Khitāy-nāma*) written originally in Persian by Sayyid ʿAlī Akbar Khitāʾī in 1516, in which the author describes his journey to China in 912-4/1506-8 and his stay of three years there, and which he dedicated to Selīm I. Under Murād III, probably in 990/1582, it was translated into Turkish (see P. Kahle in *AO*, xii, 91 ff, and *Opera Minora* 322-3).

In the fields of marine geography and navigation the Ottoman Turks produced original works. In this respect special mention should to made of the work of Pīrī Muḥyi 'l-Dīn Reʾīs (d. 962/1554), a nephew of the famous naval hero Kemāl Reʾīs who knew every corner of the Mediterranean. In 919/1513 he produced a map of the world in two parts, of which only the western part has been preserved, which he presented to Sultan Selīm I in Cairo (923/1517). For that portion of his work treating the west Pīrī Reʾīs used as sources maps containing the Portuguese discoveries up to 1508, as well as a map, since lost, containing the discoveries made by Christopher Columbus during his third voyage (1498). He had got the latter from a Spanish sailor who had gone with Columbus to America three times and who in 1501 at Valencia had been made a Turkish prisoner by Pīrī Reʾīs's uncle Kemāl Reʾīs (see P. Kahle, *Die verschollene Columbus-Karte vom Jahre 1498 in einer türkischen Weltkarte von 1513*, Berlin-Leipzig 1933; idem, *A lost map of Columbus*, in *Opera Minora*, Leiden 1956, 247-65; Ibrahim Hakkı, *Eski Harıtalar*, Istanbul 1936; Afet, *Un Amiral Géographe turc du XVI^e siècle, Piri Reïs, auteur de la plus ancienne carte de l'Amérique* in *Belleten*, i (1937), 333-49; Sadi Selen, *Die Nord-Amerika-Karte des Piri Reïs (1528)*, ibid. 519-23).

Pīrī Reʾīs then wrote a nautical handbook of the Mediterranean, the *Baḥriyye*, containing 129 chapters each provided with a map in which he gives an exact description of the Mediterranean and all its parts. His models are Italian portulans and other navigational handbooks, the major part of which have disappeared. He first dedicated the work to Sultan Selīm I in 927/1521. After the latter's death he prepared a second edition with many additional maps, a modified text, and a poetical introduction of some 1200 verses in Turkish on the lore of the sea and the sailor, which he presented in 932/1525-26 to Sultan Süleymān by means of the Grand Vizier Ibrāhīm Pasha (see P. Kahle, *Piri Reʾīs und seine Baḥrīye* in *Beiträge zur historischen Geographie ..., Festband E. Oberhummer*, Leipzig-Vienna 1929, 60-76; idem, *Baḥriyya, das türkische Segelhandbuch für das Mittelländische Meer vom Jahre 1521*, the first part of an unfinished edition, Berlin-Leipzig 1926; the complete work in facsimile, *Kitabi Bahriye*, Istanbul 1935).

A similar work of marine geography and navigation on the Indian Ocean was written in 961/1554 by Seyyidī ʿAlī Reʾīs b. Ḥüseyn, known as Kātib-i Rūmī (died 970/1562), entitled "The Ocean" (*al-Muḥīṭ*). ʿAlī Reʾīs made use of the experience of South Arabian sailors who had served as guides for Vasco de Gama on his voyage to Calicut, and also translated parts of Suleymān al-Mahrī's *al-ʿUmda al-Mahriyya* into Turkish in his work (see W. Tomaschek and M. Bittner, *Die topographischen Kapitel des indischen Seespiegels Mohit*, Vienna 1897; for the Arabic precursors see Gabriel Ferrand, *Relations de Voyages et textes géographiques* ..., ii, Paris 1914).

Yet another work of marine geography from a later period is the "Book of the Black and White Seas" (*Kitāb Baḥr al-aswad wa 'l-abyaḍ*) written by Seyyid Nūḥ during the reign of Meḥemmed IV (see F. Babinger, *Seyyid Nūḥ and his Turkish sailing handbook* in *Imago Mundi*, xii (1955), 180-2).

A kind of terrestrial counterpart to these works of marine geography is the "Collection of Stations" (*Medjmūʿ-i menāzil*), an illustrated book by Naṣūḥ al-Maṭrāḳī (dates unknown) in which he describes briefly and depicts separately the stages of Sultan Süleymān Ḳānūnī's first Persian expedition (940-2/1534-5). It exists only in a single manuscript, in all probability the dedication copy for the sultan, in the University Library in Istanbul, and constitutes an important source for the military routes used by the sultans for their eastern expeditions (see Albert

Gabriel, *Les étapes d'une campagne dans les deux Irak d'après un manuscrit turc du XVI^e siècle* in *Syria* (1928), 328-41; Franz Taeschner, *The itinerary of the first Persian campaign of Sultan Suleyman 1534-36, according to Naṣūḥ al-Maṭrāḳī* in *Imago Mundi* xiii (1956), 53-5; idem, *Das Itinerar des ersten Persienfeldzuges des Sultans Süleyman Kanuni nach Matrakçi Nasuh*, in *ZMDG*, 1961).

The campaign itineraries of sultans Selīm I and Süleymān I, as well as those of Murād IV are contained, moreover, in the collection of documents called *Münshe'āt al-Selāṭīn* of Ferīdūn Aḥmed Beg (d. 991/1583), or his continuator (only the two volume second edition of the *Münshe'āt* contains the itineraries, Istanbul 1274-75/1857-59; the itineraries there are enumerated in F. Taeschner, *Das anatolische Wegenetz nach osmanischen Quellen*, i, Leipzig 1924, 20).

The most important comprehensive geographical work, constituting at the same time the transition in Turkey from the mediaeval oriental to the modern European point of view, is the "View of the World" (*Djihānnümā*) of the famous scholar Muṣṭafā b. ʿAbdallāh, known as Kātib Čelebi [*q.v.*] or Ḥadjdjī Khalīfa (1017-67/1609-57). The work has a complicated history. Kâtib Čelebi began it twice and twice it remained uncompleted. In 1058/1648 he had begun it as cosmography in the medieval style of such works as the one mentioned above of Meḥmed ʿĀshiḳ, which he used and acknowledged. After he had described oceans, rivers and lakes, he started on lands, of which the western came first, Muslim Spain and North Africa. The lands of the Ottoman Empire were to follow as the main section, which he began with the three imperial capitals, Bursa, Edirne and Constantinople, followed by the provinces of the European half of the empire, Rumelia, Bosnia and Hungary (from a manuscript of this version in Vienna, J. von Hammer translated *Rumeli und Bosna*, Vienna 1812; see F. Taeschner, *Die Vorlage von Hammers "Rumeli und Bosna"* in *MOG*, i (1923-25), 308-10).

When Kātib Čelebī had reached the heading Hatván in writing the description of Hungary he came across a copy of the *Atlas Minor* of Gerhard Mercator, edited by Jodocus Hondius in 1621 at Arnheim. He abandoned the *Djihānnümā* and from 1064/1654 on, with the help of a French renegade, Meḥmed Efendi Ikhlāṣī, he worked at a translation of the atlas, to which he gave the title *Lewāmiʿ al-nūr fi ẓulumāt-i Aṭlās Minūr*.

When this work was two-thirds finished Kâtib Čelebi began again to write his *Djihānnümā*, according to a new plan based on the western model. This time however he began in east Asia for which he used, in addition to European, Oriental sources as well, such as the *Khitāy-nāme* of ʿAlī Akbar; these preponderated the further west he moved. When he had progressed in his description from east to west as far as Armenia (Eyālet of Vān), death hastened on by an accident stayed his hand (1067/1657). Thus the second version of his work also remained unfinished.

Yet another European work was to provide the impulse for the continuation of the *Djihānnümā* and eventually its completion. On 14 August 1668 the Dutch envoy Colier presented to Sultan Meḥemmed IV in Edirne on behalf of his government a copy of the Latin edition in eleven volumes of Blaeu's *Atlas Maior sive Cosmographia Blaviana* (1662). A few years later, in 1086/1675, the Sultan had this work translated into Turkish by Abū Bakr b. Bahrām al-Dimashḳī (d. 1102/1691). Abū Bakr published his translation under the title *Nuṣrat al-Islām wa 'l-surūr fi taḳrīr-i Aṭlas Māyūr*, and based on it, with the further use of other, especially, Oriental sources, produced a "Major Geography" (*Djughrāfiyā-yi kebīr*) (see P. Kahle, *The Geography of Abu Bekr Ibn Behram ad-Dimashki*: Ms. A.S. 575 of the Chester Beatty Collection).

When later, in 1140/1728, the Hungarian renegade Ibrāhīm Müteferriḳa established the first printing-press in Istanbul, the *Djihānnümā* of Kātib Čelebi became the eleventh product (in 1145/1732) in the new Turkish art of printing. As a basis for this edition Ibrāhīm used the second version of the work, that is, the description of Asia begun by Kātib Čelebi, and supplemented this with the corresponding portions ("insertions", *lāḥiḳa*) from the work of Abū Bakr, so that the printed edition included the complete description of Asia. In the introductory chapters containing astronomical, mathematical and geographical data, he brought the work up to date by means of series of "printer's addenda" (*tadhyīl al-ṭābiʿ*) (see F. Taeschner, *Zur Geschichte des Djihānnumā* in *MSOS* ii, 29 (1926), 99-111; idem., *Das Hauptwerk der geographischen Literatur der Osmanen, Kâtib Çelebis Gihannüma* in *Imago Mundi* 1935, 44-7; *Kâtip Čelebi, Hayatı ve eserleri hakkında incelemeler*, Ankara 1957: on the *Djihānnümā* the essay by Hamit Sadi Selen, 121-36).

In 1153/1740 one Shehrīzāde Aḥmed b. Müdhehhib Saʿīd (d. 1178/1764-5) undertook a further continuation of Kātib Čelebi's *Djihānnümā* with the title *Rawḍat al-anfus*. But the work was never printed owing on the one hand to the death of Ibrāhīm Müteferriḳa (1157/1744) after which the press was silenced and, on the other hand, to the influx of original European literature in the face of which Turkish productions in the geographical field lost in originality and thereby in interest.

Concerning travel descriptions those of ʿAlī Akbar from China and his sojourn there have been mentioned. Worthy also of indication is the brief description by Seyyidī ʿAlī Re'īs of his journey to India and, after the unsuccessful Ottoman naval expedition against the Portuguese in the Indian Ocean, his fortunate return to the sultan's court in Edirne. These are contained in the tiny book *Mir'āt al-mamālik* (completed 964/1557 and printed Istanbul 1313; Eng. tr., A. Vambéry, *Travels and adventures of the Turkish Admiral Sidi Ali Reïs .... during the years 1553-1556*, London 1899).

The major work, however, in the field of travel description is the great, ten-volume "Travel Book" (*Seyāḥatnāme*) or "History of the Traveller" (*Ta'rīkh-i seyyāḥ*) of Ewliyā b. Derwīsh Meḥemmed Ẓillī, usually known as Ewliyā Čelebi [*q.v.*]. It is a unique work in the entire literature of the Islamic peoples. For forty years (1631-1670) Ewliyā Čelebi travelled in every direction throughout the Ottoman Empire and its neighbouring lands, largely as field chaplain in the retinues of dignitaries, governors and ambassadors, as well as with divisions of the army. His work is thus a kind of memoir and contains in addition to a knowledge of the lands which he visited many insights into the higher politics of his period. Besides his own experiences he has mingled the results of his reading and the manifold products of his lively imagination in the work. Through his contacts with political personalities and his participation in their destinies, Ewliyā Čelebi's book has become an important record for the history of his times.

A stimulation to travel description was provided by the annual pilgrimage to Mecca. There are indeed, especially from the 18th century, a series of texts which describe the journey from Üsküdar, the point of departure on the Asiatic coast of the Bosphorus for pilgrims to Mecca, and the ceremonies accomplished in Mecca. Most of the pilgrims limited their descriptions to the latter and touched only in passing the voyage itself. Some, however, did describe the journey and for that reason are of importance from the point of view of geography. The most detailed of these is "The ceremonies of the pilgrimage" (*Manāsik al-ḥad̲j̲d̲j̲*) by Meḥemmed Edīb (1193/1779) (printed in Istanbul 1232/1816-17; Fr. tr. by M. Bianchi, *Itinéraire de Constantinople à la Mecque* in *Recueil des Voyages et des Mémoires publiés par la Société de Géographie*, ii, Paris 1825, in which the work is wrongly dated 1093/1682 instead of 1193/1779).

To travel literature in a certain sense belong also the reports from the ambassadors of the Porte to European courts (*Sefāretnāme*). These belong at the same time to the category of historical literature, for which reason they are generally included by the historiographers of the Empire in their works (enumerated by me in *ZDMG*, lxxvii (1923), 75-8; more completely by Faik Reşit Unat in *Tarih Vesikaları*, reprinted in *Resimli Tarih Mecmuası*, 8 August 1950) (see further ELČI).

A brief word may also be said concerning cartography. Pīrī Reʾīs's world map of 1513, originally in two parts, has already been described above. In his sailing manual for the Mediterranean (the *Baḥriyye*), Pīrī Reʾīs included in each chapter, after the fashion of the Italian portulans and probably based on them, a map representing the region of the Mediterranean treated in the respective chapter. The late editor of the periodical *Imago Mundi*, Leo Bagrov, had in his possession such a map of the entire Mediterranean with parallel meridians, based on a mistaken planispheric concept.

The manuscripts of the first version of Kātib Čelebi's *D̲j̲ihānnümā* have in the margins finely sketched maps of the *Liwā* (*Sand̲j̲aḳ*) in question. The 1145/1732 printing of the *D̲j̲ihānnümā* is provided with full-page maps, obviously in the style of contemporary European cartography, but with inverse orientation (north at the bottom). From the workshop of the printer Ibrāhīm Müteferriḳa came as well a manuscript map of the Near and Middle East, now preserved in the Austrian Military Archives, dated either 1139/1726-7 or 1141/1728-9 (see F. Taeschner, *Das anatolische Wegenetz nach osmanischen Quellen*, ii, Leipzig 1926, 62 ff.).

In conclusion brief reference may be made to the world map known as that of Ḥad̲j̲d̲j̲ī Aḥmed of Tunis, dated 967/1559, in the Marciana in Venice. At one time believed to be of Muslim origin, this has now been shown to be of European manufacture, prepared for the Muslim market (V. L. Ménage, '*The Map of Hajji Ahmed' and its makers*, in *BSOAS*, xxi, 1958, 271-314; see also George Kish, *The suppressed Turkish map of 1560*, Ann Arbor (William L. Clements library, 1957 [includes facsimile]).

(FR. TAESCHNER)

D̲J̲UḤĀ (جحا or جحى), the nickname of a personage whom popular imagination made the hero of a few hundred jests, anecdotes and amusing stories. The oldest literary instance of this name goes back to the first half of the 3rd/9th century, in al-D̲j̲āḥiẓ, who numbers D̲j̲uḥā among others renowned for their follies (*Risāla fi 'l-Ḥakamayn*, ed. Pellat, in *Machriq*, 1958, 431), and attributes to him futile schemes and an extraordinary tendency to make mistakes and blunders; the same author also quotes (*K. al-Big̲h̲āl*, ed. Pellat, Cairo 1955, 36) a story borrowed from Abu 'l-Ḥasan [al-Madāʾinī?] in which D̲j̲uḥā gives an unexpected but witty retort to a Ḥimṣī (the inhabitants of Ḥimṣ were considered particularly dull-witted; see R. Basset, *1001 Contes*, i, 427-8, 451-2). Already a by-word by the time of al-D̲j̲āḥiẓ, D̲j̲uḥā soon became the central figure in a number of stories which were to form the anonymous miscellany called *K. Nawādir D̲j̲uḥā*, mentioned by the *Fihrist* (written in 377/987-8) in the following century (i, 313; Cairo ed., 435), from which later writers, notably al-Ābī (d. 422/1030) in *Nat̲h̲r al-durar* (*MS* Dār al-kutub) and al-Maydānī (d. 518/1124) were to borrow material. In recording the term *aḥmaḳ min D̲j̲uḥā*, the latter quotes three anecdotes and adds that D̲j̲uḥā was a member of the Banū Fazāra bearing the *kunya* of Abu 'l-G̲h̲uṣn; this is also mentioned in other works: the *Nat̲h̲r al-durar*, the *Ṣaḥāḥ* (s.v.) by al-D̲j̲awharī (d. ca. 400/1009), the *Ak̲h̲bār al-ḥamḳā wa -'l-mug̲h̲affalīn* (Damascus [1926]) by Ibn al-D̲j̲awzī (d. 597/1200), the *ʿUyūn al-tawārīk̲h̲* (Paris *MS*. 1588, s.a. 160) by Ibn S̲h̲ākir al-Kutubī (d. 764/1363), the *Ḥayāt al-ḥayawān* (s.v. *dād̲j̲in*) by al-Damīrī (d. 808/1405), the *Ḳāmūs* (sub *D.D̲J̲.N.*, *D̲J̲.Ḥ.W.*, *G̲H̲.Ṣ.N.*), the *Lisān* (sub *G̲H̲.Ṣ.N.*), the *Mud̲h̲ik al-ʿabūs* (anonymous *MS*. Dār al-kutub, 5102 *adab*.). As for his name, it varies according to the source: Nūḥ, Dud̲j̲ayn/al-Dud̲j̲ayn b. T̲h̲ābit (or b. al-Ḥārit̲h̲), finally ʿAbd Allāh. None of them calls into question his historical existence: the *Nat̲h̲r al-durar* makes him live more than a hundred years, and die at Kūfa in the reign of Abū D̲j̲aʿfar al-Manṣūr (136-58/754-75), and refers to a text, now lost, by al-D̲j̲āḥiẓ in which moreover was quoted a poem by ʿUmar b. Abī Rabīʿa (d. 93/712?) containing an allusion to D̲j̲uḥā (but this poem does not appear in the *Dīwān* of the poet); for his part, Ibn al-D̲j̲awzī, who undertakes the defence, asserts that he was simply scatter-brained (*mug̲h̲affal*) and that it was his neighbours, at whom he jested, who made up at his expense the stories which we know; he quotes among his contemporaries Makkī b. Ibrāhīm (116-214 or 215/734-830 or 831; see *Tahd̲h̲īb al-Tahd̲h̲īb*, s.v.; the passage from Ibn al-D̲j̲awzī was taken up by the author of the *Nuzhat al-udabāʾ*; but the translation given in *Fourberies* [see Bibliography], 4-5, should be corrected), and some anecdotes actually connecting him with certain personnages of the first half of the 2nd/8th century, particularly Abū Muslim and al-Mahdī.

The biographers make mention of a traditionist of weak reputation, Abu 'l-G̲h̲uṣn Dud̲j̲ayn b. T̲h̲ābit al-Yarbūʿī al-Baṣrī, whose mother was a slave of the mother of Anas b. Mālik [*q.v.*]; this *tābiʿī*, who collected traditions from Anas, Aslam (*mawlā* of ʿUmar), His̲h̲ām b. ʿUrwa, and handed them down to Ibn al-Mubārak, Wakīʿ, and even al-Aṣmaʿī, is said to have been called D̲j̲uḥā, so that he is sometimes confused with our hero. Ibn Ḥad̲j̲ar al-ʿAsḳalānī (d. 852/1449) rejects such an identification (*Lisān*

al-mīzān, s.v. Dudjayn), but an earlier and clearer passage from al-Kutubī (*op. cit.*) hints at the solution to this problem: it says in effect that Dudjayn, surnamed Djuḥā, died in 160/777 but adds, according to Ibn Ḥibbān, that two men, one the traditionist [of Baṣra] Dudjayn, and the other Nūḥ = Djuḥā [established at Kūfa], have been confused because both died in 160. This coincidence is, to say the least, strange, and it is not impossible that the traditionist of Baṣra was a victim of the spite of the inhabitants of Kūfa, but, until we are better informed, there is no reason to doubt the historic existence of Djuḥā, who might, moreover, have been called Abu 'l-Ghuṣn Nūḥ al-Fazārī. Some Shīʿī authors regard Djuḥā as a Shīʿī and consider him as a traditionist together with Abū Nuwās and Buhlūl [*qq.v.*]; as a matter of fact, al-Astarabādhī, *Minhādj al-maḳāl*, Tehran 1888, 258, mentions a *Musnad Abī Nuwās wa-Djuḥā wa-Buhlūl*... *wa-mā rawaw min al-ḥadīth*, which was in the hand of Abū Fāris Shudjāʿ al-Arradjānī, d. 320/932 (cf. J. M. Abd-El-Jalil, *Brève histoire de la litt. ar.*, Paris 1943, 169).

Al-Suyūṭī (d. 911/1505), who must have had at his disposal sources inaccessible to us, saw in Djuḥā (in *Ḳāmūs*) an open-hearted *tābiʿī* and declared that most of the stories of which he is the hero are without foundation; this proves that the character was well known in Egypt, but throws no light at all on the problem which now presents itself; which is, that at an undetermined date towards the end of the Middle Ages there appeared among the Turks another symbolic figure who, under the name of Naṣr al-Dīn Khōdja [*q.v.*], partially and at least locally took the place of Djuḥā. Indeed the first Arabic edition of the collection of anecdotes published in lithograph about 1880 at Būlāḳ bore the unexpected title of *Nawādir al-Khūdjā Naṣr al-Dīn al-mulaḳḳab bi-Djuḥā al-Rūmī*, and the Egyptians again turned Naṣr al-Dīn and Djuḥā into one and the same person.

For R. Basset (in *Fourberies*, see *Bibliography*), this confusion arises from the fact that the primitive *K. Nawādir Djuḥā* was translated into Turkish in the 9th/15th or 10th/16th century, and that this Turkish version, adapted and amplified, was in turn translated into Arabic in the 11th/17th century; if this latter assertion corresponds with reality, the first is not entirely accepted, and there is every reason for believing, with Christensen (see below), that the "follies" of Naṣr al-Dīn were an independent collection into which were incorporated the stories of Djuḥā which had been handed down orally. This problem, already complex enough, will be examined in the article NAṢR AL-DĪN. We should however note here that the introduction of the figure of Djuḥā among the Turks may have been accomplished through the intermediary of Persia, where A. Christensen (*Júḥí in the Persian Literature*, in *A Volume ... presented to E. G. Browne*, Cambridge 1922, 129-36) discovered some early evidence of Djuḥā (Djuḥī/ Djūḥī), notably in the *Mathnawī* of Djalāl al-Dīn Rūmī (d. 672/1273) and the *Bihāristān* of Djāmī (d. 898/1492).

The method advocated by Christensen, consisting in the search for stories about Djuḥā in literature prior to the presumed appearance of Naṣr al-Dīn, was recently applied independently and successfully by ʿAbd al-Sattār Aḥmad Farrādj, in his *Akhbār Djuḥā* (Cairo n.d. [1954]). Taking advantage of the article NAṢR AL-DĪN in the *EI*[1] (by F. Bajraktarevič), he took as his starting point R. Basset's thesis, without, however, referring to the works of that distinguished orientalist, and attempted partially to restore the original *K. Nawādir Djuḥā*, by a searching analysis of early literary works in Arabic; he thus discovered about 166 anecdotes of which two-thirds (107) appeared in the edition of the collection of *Nawādir Djuḥā*; of the other 241 anecdotes of this latter collection (which he had not immediately eliminated on account of their manifestly recent insertion), he counted 217 for which he could discover no early evidence, 17 in which Tīmūr Lang (8th/14th century) appeared, and finally 7 which contained Turkish words. From these figures, which are by no means final, two provisional conclusions may be drawn: the first, that the proportion of anecdotes attested at an early date is comparatively considerable (40%), and the second, that the additions of undoubted Turkish origin are rather few (6%). These proportions are given here only as an indication, for the published collection which served as a basis for the calculation is very far from containing all the stories in circulation under the name of Djuḥā which in fact belong largely to the world's folk-lore. Farrādj moreover has not examined all the works, as a matter of fact the more recent, which contain further stories about Djuḥā, whether or not the name appears therein, in particular Ibn Ḥidjdja (d. 837/1434), *Thamarāt al-awrāḳ*, Būlāḳ 1300; al-Ibshīhī (d. after 805/1446), *Mustaṭraf*, Cairo n.d.; al-Ḳalyūbī, *Nawādir*, Cairo 1302 (see O. Rescher, *Die Geschichten und Anekdoten aus Qaljûbi's Nawādir*, Stuttgart 1920); al-Balawī, *K. Alif bā'*, Cairo 1287; *Nuzhat al-udabā'*, B.N. Paris MSS 6008, 6710.

The jests of Djuḥā are known outside the Muslim world (see NAṢR AL-DĪN), and on the east coast of Africa they are attributed to Abū Nuwās [*q.v.*] but the character is popular in Nubia (Djawha), in Malta (Djahan), in Sicily and in Italy (Giufà or Giucca) and, with greater reason, in North Africa, where he was certainly introduced at an early period (al-Ḥuṣrī [d. 413/1022], *Djamʿ al-Djawāhir*, Cairo 1953, 82, knows that a wit of the 3rd/9th century, Abu 'l-ʿAbar, wore a ring on which was engraved "Djuḥā died on [a] Wednesday"; in the 11th/17th century Yūsuf b. al-Wakīl al-Mīlawī wrote an *Irshād man naḥā ilā nawādir Djuḥā*, see L. Nemoy, *Ar. MSS in the Yale Univ. Lib.*, New Haven 1956, no. 1203). Some vestiges certainly remain, in Arabic or Berber, of the primitive Arabic version, amplified doubtless by folk-lore elements from other sources. A. Mouliéras (see *Bibliography*) has succeeded in mustering 60 "fourberies" in Kabyle, and some of them can be found in several studies of Berber dialectology (H. Stumme, *Märchen der Berbern von Tamazratt*, Leipzig 1900, 39-40; R. Basset, *Zenatia du Mzab*, Paris 1892, 102, 109; idem, *Recueil de textes* .... Algiers 1887, 38; idem, *Manuel Kabyle*, Paris 1887, 37*; B. Ben Sedira, *Cours de langue kabyle*, Algiers 1887, *passim*; S. Biarnay, *Dial. berbère des Bet't'ioua du Vieil Arzeu*, Algiers 1911, 130; E. Laoust, *Dial. berbère du Chenoua*, Paris 1912, 185, 190). The personality of the Berber Djuḥā formed the subject of a rather detailed analysis by H. Basset, *Essai sur la littérature des Berbères*, Algiers 1920, 170 ff., which for the greater part holds good for the Arab Djuḥā. In dialectal Arabic, most manuals reproduce some anecdotes (see especially F. Mornand, *La vie arabe*, Paris 1856, 115-24; F. Pharaon, *Spahis et Turcos*, Paris 1864, 174-210; Abderrahman Mohammed, *Enseignement de l'arabe parlé*..., Algiers [2]1913, 1-28; Allaoua ben Yahia, *Recueil de thèmes et versions*, Mostaganem 1890, 1-66, *passim*; L. Machuel, *Méthode pour l'étude de l'arabe parlé*, Algiers [5]1900, 210 ff;.

references in H. Pérès, *L'arabe dialectal algérien et saharien, bibliographie* ..., Algiers 1958, 111). For Morocco, there is a series in G. S. Colin, *Chrestomathie marocaine*, Paris² 1955, 87-114, and *Recueil de textes en arabe marocain*, Paris 1937, 15-26. The Moroccans claim that the authentic Djuḥā (Žḥa) was originally from Fās, where a road bears his name (L. Brunot, *Textes arabes de Rabat*, Paris 1931, 118); as opposed to this Žḥa 'l-Fāsi, malicious and humorous, there are some secondary characters, also called Žḥa, but who symbolize the gullible provincial. The Moroccans make a sharp distinction between their national and multiform Žḥa and the "Egyptian" Djuḥā (Goḥa), confused in the printed collection with Naṣr al-Dīn.

The Goḥa who was the hero of a tale by A. Adès and A. Josipovici, *Le livre de Goha le simple*, Paris n.d. [ca. 1916] has just (1959) made his appearance in the cinema in a film in two versions, Arabic and French, based on the above-mentioned novel and entitled *Goha* (although pronounced Žḥa by the Tunisian actors).

There the popular figure of Djuḥā can hardly be rediscovered. Of him al-Suyūṭī (in *Ḳāmūs*) said: "No-one should laugh at him on hearing of the amusing stories told against him; on the contrary it is fitting that everyone should ask God to allow him to profit from the *barakāt* of Djuḥā [as a *tābiʿī*]"; he was a little ingenuous, simple and sometimes clumsy, but at times singularly clever, later on, he appeared in many different aspects: rarely completely stupid, he was more often, under a foolish exterior, supremely cunning; he sometimes assumed the demeanour of a simpleton only to hoax his fellows or to gull them and live at their expense, for parasitism was his life; his sham silliness was prompted by interest and his intentions were rarely honest. Fertile in expedients, capable, through his knack of doing the right thing, of extricating himself from the most delicate situations, he reminds us less of Gribouille than of Panurge and, by his "espiègleries", of Eulenspiegel.

It is indeed strange that folklore has retained the name of Djuḥā from among so many figures who were at an early period proverbial among the Arabs and who are now forgotten; that it has gathered round his name a great part of the little stories of which they were the heroes, and that it has preferred him to all the professional humorists (see F. Rosenthal, *Humour in early Islam*, Leiden 1956) who flourished in the 2nd/8th and 3rd/9th centuries and vied with each other in inventing droll stories [see NĀDIRA].

Bibliography: The first Arab edition of the *Nawādir* was followed in 1299/1883 by the *Nawādir Djuḥā*, then by the *Ḳiṣṣat Djuḥā*, Beirut 1890, and by a series of popular editions in booklet form. A translation of the Turkish collection was elaborated by Ḥikmat Sharīf al-Ṭarābulusī who published it under the title *Nawādir Djuḥā al-kubrā*, Cairo n.d.; also to be noted are Ḥasan Ḥusnī Aḥmad, *Djuḥā, taʾrīkhuh, nawādiruh, ḥikāyātuh, ʿilmuh, khawāṭiruh, falsafatuh*, Cairo 1950; ʿAṭāʾ Allāh Tarzī Pasha, *Djuḥā al-ḳāḍī*, in *al-Risāla*, no. 993 (4 July, 1952). R. Basset has explained his thesis in an introduction to A. Mouliéras, *Les fourberies de Si Djeh'a*, Paris 1892, 1-79 and 183-7, which comprises a comparative and abundantly annotated table of the three versions, Turkish, Arabic and Berber; there are also some studies by the same author, published in the *Revue des traditions populaires*, as well as *1001 Contes, récits et légendes arabes*, Paris 1924, i, *passim*, where some stories are translated. For translations, see Galland, *Les paroles remarquables, les bons mots et les maximes des Orientaux*, Paris 1694, the works cited by R. Basset, in *Fourberies*, 12, and especially A. Wesselski, *Der Hodscha Nasreddin*, Weimar 1911, 2 vols. and T. Garcia-Figueras, *Cuentos de Ŷeha* ..., Jerez 1934. —see also the Bibliography of the article NAṢR AL-DĪN. (CH. PELLAT)

DJUHAYNA [see Supplement].

DJULAMARG [see ÇÖLEMERIK].

AL-**DJULANDĀ** (also AL-DJULUNDĀ, according to *TA* and *al-Iṣāba*) B. **MASʿŪD** B. **DJAʿFAR** B. AL-**DJULANDĀ** was the chief of the Ibāḍī Azd in ʿUmān. During the caliphate of the Umayyad Marwān II al-Djulandā supported the claims of ʿAbd Allāh b. Yaḥyā, known as Ṭālib al-Ḥaḳḳ, who was defeated and killed in 129/747. When the ʿAbbāsids came to power the Ibāḍīs tried to assert their independence in ʿUmān and elected al-Djulandā as their first imām, but in the year 134/752 al-Saffāḥ sent an expedition under Khāzim b. Khuzayma al-Tamīmī against the Khāridjīs in the ʿUmān region. He first drove the Sufrīs out of Djazīrat Ibn Kāwān (Ḳishm [*q.v.*]); they took refuge in ʿUmān where they were routed by al-Djulandā, so that when Khāzim crossed to ʿUmān he had only the Ibāḍīs to subdue. They refused to pay homage to al-Saffāḥ and resisted successfully until Khāzim adopted the stratagem of setting fire to their hutments, thus causing them to abandon their positions and rush to save their women and children. In their panic they were cut down with an estimated loss of 10,000 men, including al-Djulandā.

DJULFA (i) [see Supplement]. (ii) [see IṢFAHĀN].

DJULŪS [see KHILĀFA, SULṬĀN, TAḲLĪD-I SAYF, TAʾRĪKH].

DJUMʿA (Yawm al-), the weekly day of communal worship in Islam. The only reference to it in the Ḳurʾān, LXII, 9-11, clearly indicates that the term is pre-Islamic, for v. 9 says: "When you are called to prayer *on the day of* the assembly", and not "to the Prayer of the Assembly". The decisive proof for the correctness of this interpretation is the fact that Ibn Ubayy read *yawm al-ʿarūba al-kubrā* for *yawm al-djumʿa*, the former being another pre-Islamic name for Friday, meaning eve of the Sabbath, cf. A. Jeffery, *Text of the Qurʾān*, 1937, 170; R. Blachère, *Le Coran*, 1950, 825.

The expression *yawm al-djumʿa*, "the day when people come together", an exact equivalent of Hebrew (and Aramaic) *yōm hak-kenīsa*, designated the market day, which was held in the oasis of al-Madīna on Friday, "when the Jews bought their provisions for the Sabbath", cf. Kāshānī, *Badāʾiʿ al-ṣanāʾiʿ*, Cairo 1327/8, i, 268 and Ibn Saʿd iii, 1, 83, where *tdjhz* (*tadjahhazu*) is to be read for *ydjhr*, as in Kāshānī. It is natural that the day preceding the weekly holiday of the Jews should have been chosen as the market day in a place like Medina, which had a large Jewish population. Similarly, in Islam, Thursday served as a weekly market day all over Arabia, cf. H.St. J. Philby, *Arabian Highlands*, 1952, 36, 130, 233, 274-5, 387, 485-7, 597. Friday as market day is well attested in pre-Islamic Jewish literature,

cf. S. Krauss, *Talmudische Archaeologie*, Leipzig 1911, ii, 690, note 340.

According to the unanimous testimony of the ancient Muslim sources, no Friday service was held in Mecca, cf., *e.g.*, al-Ṭabarī, i, 1256. However, even before Muḥammad arrived in Medina, the Muslims convened there for public worship, but it was Muḥammad who ordered that it should be observed regularly on "the day when the Jews prepared for their Sabbath", cf. Ibn Saʿd, quoted above, and parallel sources. The Jewish and Christian institutions of a weekly day of public worship might have served as an example in general, as suggested by al-Ḳasṭallānī, ii, 176. However, the reference to the Jews in the ancient account of the inauguration of the Friday service betrays no particular dependence on Judaism, nor a polemical tendency against the older religions —two assumptions in vogue in modern research on the subject, cf. D. S. Margoliouth, *Mohammed*, 1905, 248-9, M. Gaudefroy-Demombynes, *Mahomet* 1957, 522, and the works of Wensinck, Buhl and Watt quoted in the bibliography. It was Muḥammad's practical wisdom, which decided for Friday, as in any case on that day the people of the widely dispersed oasis dwellings of Medina gathered regularly for their weekly market.

This origin of the Friday service explains one of its most puzzling aspects: It is held at noon, a very inconvenient time in a hot climate. The market is dissolved early in the afternoon, see, for Arabia, *e.g.*, Philby, *Arabian Highlands* 234. In classical times, ἀγορῆς διάλυσις, the breaking up of the market, was a term designating the early afternoon, Liddell and Scott s.v. Thus noon was the reasonable time for the public prayer.

The admonition of the Ḳurʾān, not to leave the prayer and to run after business and amusement, LXII, 11, is to be understood against this background. The people of Medina were farmers, not business men; but Friday was their market day, on which also, as everywhere at fairs, amusements were provided.

The main feature of the Friday service is the *k͟huṭba* [*q.v.*], a sermon, the preacher of which holds in his hand a rod or sword or lance. These were originally, as C. H. Becker has pointed out, the insignia of the pre-Islamic judges. Market days provide a natural opportunity for people gathered there to settle their law suits. Philby describes the sitting of the judges on the weekly markets and the same custom prevailed in the Greek world and on the *yōm hak-kenīsa* of the ancient Jews. The ancient epithet *yawm al-ḥarba* "the Day of the Lance", see *TA*, i, 206, s.v. *ḥrb*, may have had its origin in this aspect of the *yawm al-d͟jumʿa*. However, the biographies of the Prophet do not seem to stress that he preferred Friday over other days for sitting as a judge.

From its very inception the Friday service had a political connotation. In early Islam it was a proof that the participants had joined the Muslim community; later on, it implied a manifestation of allegiance to the caliph or governor who conducted the service, or whose name was mentioned in the sermon. This religio-political background explains why attendance at the Friday service—as opposed to the daily prayer—is a duty incumbent on all male, adult, free, resident Muslims; why, according to the S͟hāfiʿīs and many others, it should, if feasible, be held only in one mosque (the *d͟jāmiʿ*) in each town; and why it required a minimum attendance of 40 according to the S͟hāfiʿīs, or at least a sizeable number according to others.

The fully developed Friday ceremonial consists of an *ad͟hān*, which is proclaimed inside the mosque, a *k͟huṭba*, which is said in two sections, during which the preacher is standing up, interrupted by an interval, during which he is required to sit down, and a *ṣalāt*, consisting of two *rakʿa*s, which follows the sermon. Usually, a *ṣalāt* of two *rakʿa*s is performed also before the *k͟huṭba*. According to C. H. Becker, some of these features follow the pattern of the mass in the ancient Oriental churches.

The *yawm al-d͟jumʿa* is not a day of rest. According to Mālik, the *aṣḥāb* disapproved of the practice of some Muslims who refrained from doing work on Friday in imitation of the Jewish and Christian weekly holidays (al-Ṭarṭūs͟hī, *K. al-Ḥawādit͟h*, Tunis 1959, 133). In general, the Sabbath institution is foreign to Islam (for a socio-economic explanation of this difference between Islam and the older religions cf. S. D. Goitein, *Jews and Arabs*, New York 1955, 39-40). Still we have reports about government offices and schools being closed on Fridays in ʿAbbāsid times, and a query addressed to Maimonides around 1200 speaks about Jewish and Muslim partners in a jewellery workshop, who replaced one another on Fridays and Saturdays (cf. Mos͟he ben Maimon, *Responsa*, Jerusalem 1934, 62). In modern times most Muslim states have made Friday an official day of rest. Turkey has chosen Sunday, while in Pakistān Friday is a half-holiday, Sunday a full day of rest.

As a holiday, Friday is honoured by special food —already referred to in the *Ḥadīt͟h*—and better clothing. The night preceding it is set aside for the fulfilment of matrimonial duties, to be followed on Friday morning by a bath, as well as perfuming.

The Sabbath should be a foretaste of the world to come, where the righteous are granted the beatific vision of God. This idea, prevailing in ancient Judaism, was enormously expanded—or perhaps developed independently—by Islamic mysticism and religious folklore. In Heaven, Friday is called *yawm al-mazīd*, the day of Allāh's special bounty (cf. Sūra L, 35). On it, Allāh sends to each of the pious Muslims in Paradise an apple. When they take the apple in their hands, it splits in two, and out steps a beautiful maid with a sealed letter containing a personal invitation from Allāh. Soon the general move of those who are thus invited begins. The men on horseback, the women in litters, the men led by Muḥammad, who is accompanied by Adam, Moses and Jesus, the women led by Fāṭima and other women saints, all move towards the Holy Enclosure, where a gorgeous meal, described with glowing details, awaits them. At its conclusion the pious call on Allāh asking Him to show them His face. Allāh lifts His veil and reveals Himself to them (cf. al-Ṭabarī, *Tafsīr*, 1326, xxvi, 108; Abū Ṭālib al-Makkī, *Ḳūt al-ḳulūb*, i, 72; Abu 'l-Layt͟h al-Samarḳandī, *Ḳurrat al-ʿuyūn*, 130-1 and the extensive literature quoted in S. D. Goitein, *Beholding God on Friday*, in *IC*, xxxiv, 1960, pp. 63-8).

DJUMĀDĀ [see taʾrīkh].

al-**DJUMAḤĪ** [see ibn sallām].

DJUMBLĀṬ [see djanbulāṭ].

DJUMHŪRIYYA, in Turkish *djümhūriyyet*, republic, also republicanism, a term coined in Turkey in the late 18th century from the Arabic *djumhūr*, meaning the crowd, mass, or generality of the people, and first used in connexion with the first French Republic. In classical Arabic, as for example in Arabic versions and discussions of Greek political writings, the usual equivalent of the Greek πολιτεία or Latin *res publica, i.e.*, polity or commonweal, was *madīna*; thus, the 'democratic polity' of Plato's classification is called, by Fārābī and others, *madīna djamāʿiyya* (Fārābī, *Arāʾ ahl al-madīna al-fāḍila*, ed. Dieterici, Leiden 1895, 62; E. I. J. Rosenthal, *Political thought in medieval Islam*, Cambridge 1938, 136, 278; F. Rosenthal, *The Muslim concept of freedom*, Leiden 1960, 100-1). According to the law as stated by the Sunnī jurists, the Islamic polity itself was to be headed by a non-hereditary, elective sovereign, subject to and not above the law (see khilāfa). This principle has led some 19th and 20th century writers to describe the Islamic doctrine of the Caliphate as republican (*e.g.*, Nāmîk Kemāl in *Ḥürriyyet*, 14 September 1868, cited by Şerif Mardin, *The genesis of Young Ottoman political thought*, Princeton 1962, 296-7; Agaoghlu Aḥmed, in *Khilāfet we millī ḥākimiyyet*, Ankara 1339 [= 1923], 22 ff.; Rashīd Riḍā, *Al-Khilāfa*, Cairo 1341, 5, tr. in H. Z. Nuseibeh, *The ideas of Arab nationalism*, Cornell 1956, 125). Others, perhaps under the influence of recent developments in the use of the term, have gone further, and described the government of the patriarchal caliphs as a republic. In the more technical sense of a state in which the head holds his place by the choice of a defined electorate exercised through prescribed legal processes, the term republic seems to have no precise equivalent in classical Islamic usage. Such states existed and were encountered in Europe, in Ragusa, Venice and other Italian city republics. Arabic seems to have used no special term for them; thus Ḳalḳashandī, speaking of the government of Genoa, calls them a *djamāʿa mutafāwitū 'l-marātib*; for Venice he speaks only of the Doge (*Ṣubḥ*, viii, 46-8). Turkish used *djumhūr*. Perhaps this was the word chosen by the dragomans of the Porte as equivalent, for official usage, to the Latin *res publica*. Thus, Venedik Djumhūru was the formal translation of 'Republic of Venice'. Even so, the word *djumhūr* was comparatively rare in the sense of republic; more commonly the Turks, in their letters to Venice and their discussions of Venetian affairs, preferred to speak of the Doge (Venedik Dozhu) or Signoria (Venedik Beyleri) rather than of the Republic.

The word *djumhūr* took on new life after the French Revolution, when it was used in Turkish to denote the French Republic as well as other republics —some of them on the borders of Turkey—that were formed on the French model. In Egypt, some of the translators attached to General Bonaparte's expedition, groping for an Arabic equivalent for republic, chose *mashyakha* (cf. J. F. Ruphy, *Dictionnaire abrégé français-arabe*, Paris, an X [1802], 185). This term is recorded by some subsequent Arabic lexicographers, and was used of the French Republic by Ḥaydar al-Shihābī (d. 1835: *Lubnān fī ʿahd al-umarāʾ al-Shihābiyyīn* Beirut 1933, ii, 218-9 etc.) and others. It was not, however, confirmed by subsequent usage. The documents of the French occupation of Egypt, as cited by Ḥaydar himself (ii, 222-4) and by Niḳūlā al-Turk (cited *op. cit.* 213 n. 1) and al-Djabartī (*ʿAdjāʾib*, iii, 5, etc.; *Maẓhar al-taḳdīs*, ed. Cairo n.d. i, 37) prefer the Ottoman term *djumhūr*, and speak of *al-Djumhūr al-Faransāwī*.

The modern word *djumhūriyya*—which is simply *djumhūr* with an abstract ending—was coined, like many other Islamic neologisms, in Turkey, the first Islamic state to encounter the ideas, institutions, and problems of the modern world, and to seek and find new terms to denote them. It was at first used as an abstract noun denoting a principle or form of government. and meaning republicanism rather than republic, the usual term for which was still *djumhūr* (see for example ʿĀṭif Efendi's memorandum of 1798, in Djewdet, *Taʾrīkh*², vi, 395, speaking of 'equality and republicanism'—*müsāwāt we-djümhūriyyet*; the documents on the Septinsular republic (*Djezāʾir-i Sebʿa-i Müdjtemiʿa Djümhūru*) of 1799 published by İ. H. Uzunçarşılı in *Belleten*, i, 1937, 633,—*djümhūriyyet wedjhile idjtimāʿ*; the despatches of Ḥālet Efendi from Paris in E. Z. Karal, *Halet Efendinin Paris Büyük Elçiliği* (*1802-06*), Istanbul 1940, 35; cf. ʿĀṣim, *Taʾrīkh*, i, 61-2, 78-9, and the Turkish translation of Botta's *Storia d'Italia*, Cairo 1249/1834, repr. Istanbul 1293/1876, passim. Shaykh Rifāʿa Rāfiʿ al-Tahtāwī (*Talkhīṣ al-ibrīz*), Būlāḳ 1834, Ch. 5 = Cairo ed. 1958, 252-3) uses *djumhūriyya* in both senses). From Turkey the term spread to the Arabs, Persians, Indians, and other peoples, and was used in the new political literature inspired by western liberal and constitutional ideas. In the 19th century republic and democracy were still regarded as broadly synonymous terms, and the same words were often used for both. It is instructive to trace the renderings of the terms democracy and republic in the 19th century dictionaries from English or French into Arabic, Turkish etc. Bocthor (1828) translates the two terms by *Ḳiyām al-djumhūr bi 'l-ḥukm* and *djumhūr* or *mashyakha*; Handjeri (1840) by *ḥukūmat al-djumhūr al-nās* [*sic*] and *djumhūr*; Redhouse (1860) translates democracy as *djümhūr* or *djümhūriyyet uṣūlu*, republic as *djümhūr*, and republicanism as *djümhūriyyet*. Zenker (1866) and Sami Frasheri (1883) already identify *djümhūriyyet* with republic. In Urdū the same word, with a minor variation, has served both for democracy (*djumhūriyyat*) and republic (*djumhūriyya*).

Republican ideas are rarely expressed in the writings of the 19th century Muslim liberals, even the most radical of whom seem to have thought in terms of a constitutional monarchy rather than a republic. Even where the terms *djumhūrī* and *djumhūriyya* do occur, they often connote popular and representative rather than republican govern-

ment (see for example the instructive comments of ʿAlī Suʿāwī in 1876 on the 'true meaning' of *djumhūr*, cited in M. C. Kuntay, *Ali Suavi*, Istanbul 1946, 95, tr. in Ş. Mardin, *op. cit.*, 382-3. It is probably in this sense that the term is used of the Lebanese peasant rebels led by Ṭanyūs Shāhīn: see Yūsuf Ibrāhīm Yazkak, *Thawra wa-fitna fī Lubnān*, Damascus 1938, 87; Eng. trans. M. H. Kerr, *Lebanon in the last years of feudalism..*, Beirut 1959, 53; cf. Raʾīf al-Khūrī, *Al-fikr al-ʿarabī al-ḥadīth*, Beirut 1943, 94). During the 20th century, however, republicanism developed rapidly. The first republics to be established were in the Muslim territories of the Russian Empire, when the temporary relaxation of pressure from the centre after the revolutions of 1917 allowed an interval of local experimentation. In May 1918, after the dissolution of the short-lived Transcaucasian Federation, the Ādharbāydjānī members of the former Transcaucasian parliament, together with the Muslim National Council, declared Ādharbāydjān an independent republic—the first Muslim republic in modern times. In April 1920 it was conquered by the Red Army, and a Soviet Republic formed. The same pattern was followed by the Bashkirs and other Turkic peoples of the Russian Empire, who set up their own national republics, all of which were in due course taken over and reconstituted by the Communists, and incorporated, in one form or another, in the U.S.S.R.

The first Muslim republic to be established outside the Russian Empire seems to have been the Tripolitanian Republic, proclaimed in November 1918 by Sulaymān Pasha al-Bārūnī [*q.v.*] (documents in ʿA. K. Gharāʾiba, *Dirāsāt fī taʾrīkh Ifrīḳiya al-ʿArabiyya*, Damascus 1960, 105 ff.), and later incorporated in the Italian colony of Libya. The first independent republic to remain both independent and a republic was that of Turkey, proclaimed on 29 October 1923 (for texts and debates see A. S. Gözübüyük and S. Kili, *Türk Anayasa metinleri*, Ankara 1957, 95 f.; K. Arıburnu, *Millî Mücadele ve inkılâplarla ilgili kanunlar*, i, Ankara 1957, 32 ff.; cf. E. Smith, *Debates on the Turkish constitution of 1924*, in *Ankara Üniv. Siyasat Bilg. Fak. Derg.*, xiii (1958), 82-105). In Syria-Lebanon republican ideas were current in some circles at an earlier date, and the forms of government set up by the French as mandatory power were generally republican in tendency. The republics were not, however, formally constituted until some years later; Greater Lebanon was proclaimed a republic on 23 May 1926, Syria on 22 May 1930.

The ending of West European colonial rule in Islamic lands after the second World War brought several new republics into being. The republic of Indonesia was proclaimed in August 1945; Pakistan, independent since 1947, introduced a new theme by declaring an 'Islamic Republic' in November 1953. In Africa, the Sudan became a republic on attaining independence in January 1956; Tunisia, already independent, abolished the monarchy and proclaimed a republic in May 1959. Among the older Arab states in the Middle East two new republics were established after the revolutionary overthrow of the existing monarchical régimes—in Egypt in June 1953, in ʿIrāḳ in July 1958. A union of Egypt and Syria, called the United Arab Republic (*al-Djumhūriyya al-ʿArabiyya al-Muttaḥida*) was formed in February 1958 and dissolved in September 1961. The name United Arab Republic has been retained by Egypt. An anti-monarchist revolution began in the Yemen in September 1962. At the present time the majority of Muslim states are called republics, though the common designation covers a wide variety of political realities.

DJÜMHŪRIYYET KHALḲ FİRḲASİ (modern Turkish *Cümhuriyet Halk Partisi*, Republican People's Party), the oldest political party in the Turkish Republic, was organized by Mustafa Kemal [Atatürk] in Ankara on 11 September 1339/1923. It was successor to the Society for the Defence of Rights of Anatolia and Rumelia (*Anadolu ve Rumeli Müdāfaʿa-i Ḥuḳūḳ Djemʿiyyeti*) the organization formed by Kemal in 1919 as the political instrument to fight the War of Independence. The party's original name was *Khalḳ Firḳasi*. On 10 November 1340/1924 the name was changed to *Djümhūriyyet Khalḳ Firḳasi*, and at the 4th National Congress in 1935, in connexion with the language modernization programme, became the *Cümhuriyet Halk Partisi* (*CHP*).

Few exact membership figures for the party are available. Membership in 1948 was estimated at 1,898,000, or about 10% of the population.

The party is organized vertically beginning with the branch (*ocak*) in villages, localities and subdivisions of towns and cities. The number of these local branches was estimated in 1950 to be about 23,000. The organization continues at the county (*nahiye*), district (*kaza*), and province (*vilâyet*) levels, and culminates in the national organization with head-quarters in Ankara. The party is headed by a General Chairman (*Genel Başkan*), a post occupied from 1923 to 1938 by Atatürk, and since that time by İsmet İnönü. In 1927 Atatürk was made "unchanging" (*değişmez*) General Chairman, and after his death the Special National Congress of 1939 proclaimed him "eternal" (*ebedi*) General Chairman. Most of the actual work of the party, however, is directed by the General Secretary. General Secretaries have included Recep Peker (1923-5 and 1931-6); Şükrü Kaya (1936-8); Refik Saydam (1938-9); Dr. Fikri Tuzer (1939-42); Memduh Şevket Esendal (1942-5); Nafi Atuf Kansu (1945-7); Tevfik Fikret Sılay (1947-50); Kasım Gülek (1950-9); Ismail Rüştü Aksal (1959-62); and Kemal Satir (1962 —). The National Congress meets periodically to make general policy and elect a 40-member Executive Committee. Fifteen regular Congresses were held between 1919 and 1961. The Sivas Congress of the Defence of Rights Society in 1919 is generally called the first Congress of the party. In addition there were special Congresses in 1939 and 1946. The 2nd National Congress in 1927 was the occasion of Atatürk's Six-Day Speech (*Büyük Nutuk*).

Party organization has vacillated from time to time between tendencies toward more or less centralization. In the 1920's the national organization controlled its branches tightly through a network of Inspectors and sub-Inspectors. In 1930 maximum authority and responsibility were given to local and provincial party officials. The period of greatest centralization was between 1936 and 1939 when the Interior Minister was concurrently CHP General Secretary, and governors of the provinces were also

CHP chairmen in their provinces. Since 1950 law as well as political expediency has resulted in considerable decentralization, though policy and party discipline remain in the hands of the national organization.

From 1923 to 1946 the CHP was the sole party in the Grand National Assembly, except for two occasions when opposition was permitted but then eliminated after short periods. The oppositions were the Republican Progressive Party (*Teraḳḳiperver Djümhūriyyet Firḳasi*) of 1924, composed of a group of prominent conservatives who split off from the CHP when Atatürk began his personal direction and domination. The Progressive Party was closed by the government in 1925 in reaction to a resurgence of conservative sentiment in the country. In 1930 another attempt at opposition took place when Atatürk persuaded several close friends to form the Free Party (*Serbest Fırka*), but this party also was dissolved after three months when it became the rallying ground for counter-revolutionary groups. Neither of these parties contested a general election. After the failure of the Free Party Atatürk introduced several "independent deputies" into the 1931 and 1935 Assemblies. They were to criticize and to be free of party discipline, but not to organize as an opposition or oppose basic aspects of the CHP program. By 1939, these independents were limited to a token representation of non-Muslim minorities. In addition the 1939 party Congress decided on the formation of an Independent Group of 21 members selected from among the already-elected CHP deputies. In the 7th Assembly in 1943 the size of the Independent Group was increased to 25. The Independent Group was abolished by the Special National Congress of 1946 when it was decided to permit opposition parties. Following the 1946 election a group of 35 young CHP deputies (the *Otuzbeşler*) rebelled against the policies of the Prime Minister Recep Peker, but did not leave the party.

In 1945 opposition parties were again allowed, and four CHP deputies, Celal Bayar, Adnan Menderes, Refik Koraltan and Fuat Köprülü formed the *Demokrat Parti* [*q.v.*]. In 1946 an election was held before the Democrats had time to organize in more than a few provinces, and the CHP retained a heavy majority. In 1950, however, the Democratic Party won a majority, and the CHP went into opposition. In the 1954 election the CHP strength was reduced to 21, but in 1957 it again increased to 178. Following the overthrow of the Menderes government by the army in 1960, three opposition parties arose to compete with the CHP in the 1961 election, in which the CHP received 36.7% of the vote and returned 173 members to the 450-man Assembly, and 36 to the newly-created 150-man Senate of the Republic. The CHP leader Ismet Inönü was appointed to head a coalition cabinet. The CHP's Assembly strength after each election since 1923 has been as follows:

Assembly 2 (1923): all CHP.
Assembly 3 (1927): all CHP.
Assembly 4 (1931): CHP 290, Independents 8.
Assembly 5 (1935): CHP 390, Independents 9.
Assembly 6 (1939): CHP 404, Indep. Group 21, Independents 4.
Assembly 7 (1943): CHP 416, Indep. Group 25, Independents 4.
Assembly 8 (1946): CHP 397, others 68.
Assembly 9 (1950): CHP 67, others 420.
Assembly 10 (1954): CHP 31, others 510.
Assembly 11 (1957): CHP 178, others 432.
Assembly 12 (1961): Assembly: CHP 173, others 277; Senate: CHP 36, others 114.

The Nine Principles (*Dokuz ʿUmde*) proclaimed by the Defence of Rights Society in April 1923 were adopted by the CHP that September as its first programme. Its points proclaimed that sovereignty belongs unconditionally to the nation, that full authority is granted to the Grand National Assembly, and outlined political, social, and economic reforms to be undertaken. When Atatürk brought into the open his plans for rapid and radical transformation of the Turkish nation, the programme was expanded to include the principles which in 1931 became the Six Arrows (*Altı Ok*), Republicanism, Nationalism, Secularism (*Lâiklık*), Populism (*Halkçılık*), Étatism (*Devletçılık*), and Revolutionism (*İnkilâpcılık*). In 1938 the Six Arrows were incorporated into Article 2 of the Constitution, and all except Étatism and Revolutionism were carried over into the Constitution of the 2nd Republic in 1961. Secularism has been one of the points of greatest emphasis in the CHP program, and was one of Atatürk's major interests. Its implications of rapid and radical change in the lives of the great majority of Turks have made specific policies for its application a major area of controversy among Turkish political parties, though all accept the secularization of political life as a principle. Revolutionism has been taken to mean various things from an acceptance of the Atatürk reforms to a spirit of continuous rapid and radical change until westernization is complete. Populism at the least means equality of all citizens before the law, and usually is taken to include the principle of majority democracy as well. One of the principles which most distinguishes the CHP from other parties is étatism, *i.e.*, a major rôle for the state in economic development. Most authorities agree that it was necessary in the 1920's and 1930's, but all of Turkey's other political parties contend that it is no longer needed today. The six principles remain at the head of the CHP programme, but since the beginning of the multiparty period in 1946 there have been tendencies to modify the more extreme policies for their implementation.

In 1931 the CHP abolished the *Türkocaği* national cultural organization and instead began creation of a series of People's Houses (*Halkevleri*) and People's Rooms (*Halkodaları*) throughout the nation to serve as centres of education and community activity. Their programmes included practical education in agricultural, home-making, and literacy skills; political education in the principles of secular, Republican politics; sports activities, cinemas, concerts, lectures, and libraries; and attempts to strengthen physical and social-psychological links between urban and village populations. In 1950 there existed 478 *Halkevleri* and 4,322 *Halkodaları*. Wholly owned by CHP, the *Halkevleri* became involved in political controversy during the multiparty period after 1946, and were closed by the Democratic Party régime.

The CHP has published the proceedings of most of its Congresses, as well as numerous reports of programmes and activities. In the 1930's the *Halkevleri* published a regular monthly magazine *Ülkü*, and local *Halkevi* publications abounded. The CHP central office today includes a Research Bureau which publishes analyses of political, social and economic problems. The party has published

its own daily newspaper in Ankara since 1920 under the name *Ḥākimiyyet-i Milliyye* ("National Sovereignty"), and later as *Ulus* ("The Nation").

DJUMLA [see NAḤW]

DJŪNĀGAŕH, a city and (formerly) a princely State in India lying between 22° 44′ and 21° 53′ N. and 70° and 72° E., with an area of 3,337 sq. miles and a population of 670,719 in 1941, of whom some 20% were Muslims. While otherwise contiguous with the Indian mainland, it is bounded on the west and south-west by the Arabian sea with the flourishing port of Vērāval, 300 nautical miles from Karachi (Pakistan). It is dotted with a group of the sacred Girnār hills, housing a number of Djayn and Hindū temples of great antiquity. The edicts of Aśoka are found inscribed on a rock in the gorge between the town of Djūnāgaŕh and the Girnār hills, pointing out unmistakably to the area being in ancient times thriving centre of Buddhism and forming a part of the Mawryan empire. The dense Gir forests are the only abodes of lions outside Africa; hence a favourite hunting ground for the nobility and native chiefs. The State also enshines within its boundaries the temple of Sōmnāth, sacked and destroyed by Sultan Maḥmūd of Ghazna [*q.v.*].

The Mawryas were followed by the Bactrians and the Greeks with their seat of government at Djūnāgaŕh (< Yavanagaḋha or Yavananagara, as is proved by the discovery of some Greek coins of Apollodotus at Bhadardaw). These foreigners in their turn were subjugated and expelled by the local Rādjpūt chiefs who were still ruling the territory when Maḥmūd of Ghazna invaded Sōmnāth Paŧan in 416/1025, conquered the place, ruined the temple and destroyed the idol of Sōmnāth. The victorious Sultan retreated to Ghazna leaving the place in the charge of a Muslim *fawdjdār* [*q.v.*], who was thereafter turned out by the Wādjā Rādjpūts of the area. Ḳuṭb al-Dīn Aybak [*q.v.*] marched on Sōraŧh (Skt. Sawrāshŧra = Kāŧhiyāwāŕ including Djūnāgaŕh) after conquering Anhilwāŕā [*q.v.*] in 593/1194, but it was no more than a plundering raid. Although during the next hundred years no Muslim ruler invaded the territory, it continued to be visited by Muslims from the North some of whom settled in the area. The Māʾī Gaḋīčī inscription dated 685/1284, discovered at Djūnāgaŕh, reveals that the place was the headquarters of a Muslim *ṣadr* (agent ?), who supervised the departure of Muslim pilgrims to Mecca via the port of Balāwal. In 697/1297 Almās Bēg Ulugh Khān, a brother of ʿAlāʾ al-Dīn Khaldjī, invaded Sōraŧh, wrested Sōmnāth from the Rādjpūts, and in a fit of fanaticism razed the already ruined temple to the ground. He, however, did not interfere with the Čawdāsamā Rādjpūts who were in control of Djūnāgaŕh. The historic temple seems to have been soon rebuilt, as it attracted the attention of Muḥammad b. Tughluḳ [*q.v.*] who in 751/1350 invaded the territory and captured the fort of Djūnāgaŕh which then became a dependency of the *ṣūba* of Gudjarāt. During the reign of Fīrūz Shāh Tughluḳ (752-89/1351-88), Shams al-Dīn Abū Ridjāʾ, *nāʾib* of the *nāẓim* of Gudjarāt, established a *thāna* (post) in Djūnāgaŕh. It, however, appears that the local chiefs were not completely reconciled to the change as Ẓafar Khān, the *nāẓim* of Gudjarāt, who later proclaimed his independence in 810/1407, twice marched on Sōmnāth in 797/1394 and 804/1401 in order to punish the refractory Rādjpūts, who continued to chafe under foreign rule until 871/1467 when the last ruler of the Čawdāsamā dynasty was defeated and ousted by Maḥmūd Bēgaŕā (863-917/1459-1511) of Gudjarāt, who annexed Djūnāgaŕh to his territory. Maḥmūd Bēgaŕā had to mount another two punitive expeditions in 872/1468 and 874/1469-70 to suppress the revolt of the deposed Rādjpūt ruler who regained much of his lost possessions. After a year of bitter fighting the Sultan was able to recover the fort of Djūnāgaŕh, terminating Hindū rule once and for all. The city was renamed Muṣṭafābād and Sayyids, ʿ*ulamāʾ*, *ḳāḍīs* and other notables mainly from Aḥmadābād were invited to settle in the town. The ancient citadel called Ūparkōŧ was repaired and well-to-do people were persuaded to build large houses, mosques, public buildings, etc., thus adding to the glory of the town. The citadel-town of Ūparkōŧ continued to be called Djūnāgaŕh while the new town lower down was named Muṣṭafābād, although this name was never popularly adopted.

The *sarkār* of Djūnāgaŕh remained in the possession of the Sultans of Gudjarāt till 999/1590 when it was conquered and annexed to the Mughal empire by the victorious armies of ʿAbd al-Raḥīm Khān-i Khānān [*q.v.*]. As a part of the *ṣūba* of Gudjarāt it was controlled by *fawdjdārs* appointed by the *nāẓim*. One such *nāʾib fawdjdār* Shīr Khān Bābī, a man of Afghan stock, whose ancestors had migrated from the Ḳalāt-Ḳandahār region to the plains of Hindustān in search of employment during the beginning of Mughal rule, taking advantage of the enfeeblement of the central authority, expelled the local *fawdjdār* Mīr Dūst ʿAlī and founded his independent dynasty in 1150/1737-8. A shrewd military commander, he successfully kept at bay the marauding bands of the Marāŧhās, who in the glow of easy victories wanted to overrun the whole of Kāŧhiyāwāŕ. During his rule of 20 years, marred by minor clashes with the Marāŧhās, he consolidated his position and firmly established his rule. On his death in 1172/1758 he was succeeded by his son, Muḥammad Mahābat Khān I, whose very first year of rule was marred by an abortive dynastic conspiracy to depose him. After a brief rule of 12 years he died in 1184/1770 and was succeeded by his minor son, Muḥammad Ḥāmid Khān, all other rival claimants having fully recognized the title of the Shīr Khān family to the rulership of the new principality.

After an otherwise inconspicuous rule of 27 years, which witnessed the murder of the Dīwān Amar-djī father of Rančōŕ-djī (see *Bibl.*), he died in 1226/1811. The East India Company entered into an engagement with the ruler of Djūnāgaŕh for the first time in 1222/1807. A year earlier, a settlement had been arrived at between Djūnāgaŕh and the vassal states of Manāwādār and Mangrōl and other *taʿlukas*, recognizing the overlordship of Djūnāgaŕh, regarding the amounts of *zorṭalbī* (tribute exacted by force), a relic of Muslim supremacy, due from the feudatory states etc., with the active intervention of the British Resident at Baroda. This incident, small in itself, throws ample light on the growing influence of the British in the internal affairs of even as

remote a part of the country as Kāthiyāwāŕ, long before the final eclipse of the Mughal rule in 1857. In 1821 the ruler of Djūnāgaŕh recognized the paramountcy of the East India Company, who undertook to collect *zōrṭalbī* on behalf of the ruler and pay it into his treasury. He died in 1840 and was succeeded by a minor son.

Among the later rulers, Muḥammad Rasūl Khān (1892-1911) deserves special mention as a progressive and enlightened chief. It was during his rule that a colege, a library and museum, a modern hospital a water-works and an orphanage were established. Steps were also taken for the protection and preservation of the historic edicts of Aśoka and the temple of Sōmnāth was repaired at considerable expense to the State. On his death in 1911, his son Muḥammad Mahābat Khān being a minor, the administration of the State was taken over by the Government of India. On his attaining the age of maturity the prince, the ninth in succession and the last *de facto* ruler of Djūnāgaŕh, was invested with full powers in 1920. According to the Attachment Scheme, introduced by the Government of India in 1943, the feudatory estates of Sardārgaŕh and Bāntwah and many other *taʿluka*s were attached to Djūnāgarh with a view to ensuring better administration. On the lapse of British paramountcy in August 1947 the State acceded to Pakistan. This was, however, disputed by the Government of India, and on the refusal of the ruler to retract his decision the State was occupied in November of the same year by Indian troops. The ruler, along with his family, took refuge in Pakistan (Karachi) where he died in 1960. The accession and possession of Djūnāgaŕh are still (1962) the subject-matter of a dispute between India and Pakistan, which figures on the agenda of the Security Council of the United Nations.

The chief city of the State, Djūnāgaŕh, is one of the most picturesque towns in India. Its ancient citadel, the Ūparkōṭ, is one of the strongest mountain fastnesses in the sub-continent. It has two large-size cannon dating back to the times of the Turkish Sultan Suleymān the Magnificent, brought to Djūnāgaŕh by gunners of foreign origin who were in the employ of the ruler. The town has a number of stately buildings, including the mausolea of the former rulers, their wives and the Minister Shaykh Bahāʾ al-Dīn, which are fine specimens of a style of architecture similar to that of the Deccan, the dominant feature of which, however, is the flanking minaret with an exterior winding stair-case, after the style of the minaret of the mosque of Ibn Ṭūlūn, found nowhere else in the subcontinent.

DJUNAYD, shaykh, the 4th Ṣafawid *shaykh* in line of descent from Shaykh Ṣafī al-Dīn Isḥāḳ, the founder of the Ṣafawid *ṭarīḳa*, succeeded his father Ibrāhīm as head of the Ṣafawid order at Ardabīl in 851/1447-8; the date of his birth is not known. Djunayd for the first time organized the Ṣafawid *murīd*s on a military footing and, unlike his predecessors, clearly aimed at temporal power as well as religious authority. His political ambitions at once brought him into conflict with Djahānshāh [*q.v.*], the Ḳara-Ḳoyunlu ruler of Ādharbāydjān, who ordered him to disband his forces and leave Ḳara-Ḳoyunlu territory; if he failed to comply, Ardabīl would be destroyed. Djunayd fled to Asia Minor, but the Grand Vizier Khalīl Pasha dissuaded Sultan Murād II from granting him asylum in Ottoman territory. After staying successively in Ḳaramān, with the Warsāḳ tribe in Cilicia, and at Djabal Arsūs in Syria, Djunayd was forced to flee northwards (Sultan Čaḳmaḳ [*q.v.*] had ordered the governor of Aleppo to seize him; this must have occurred before 857/1453, the year of Čaḳmaḳ's death), and went to Djānīḳ [*q.v.*] on the Black Sea. After an unsuccessful attempt to capture Trebizond (860-1/1456), Djunayd went to Ḥiṣn Kayfā in Diyār Bakr and thence to Āmid, where he spent three years (861-3/end of 1456 to 1459) with the Aḳ-Ḳoyunlu ruler Uzun Ḥasan [*q.v.*]. In 862-3/1458, or early 1459, Djunayd married Uzun Ḥasan's sister Khadīdja Begam. The advantages of a political alliance outweighed the religious antipathy between the Shīʿī Ṣafawiyya and the Sunnī Aḳ-Ḳoyunlu; each saw the other as a useful ally against the Ḳara-Ḳoyunlu who, doctrinally, were much closer to the Ṣafawiyya.

In 863/1459 Djunayd left Diyār Bakr and attempted to recover Ardabīl; threatened by superior Ḳara-Ḳoyunlu forces, he decided on an expedition against the Circassians (autumn 1459). While crossing the territory of the Shīrwānshāh Khalīl Allāh b. Shaykh Ibrāhīm, he was attacked and killed near Ṭabarsarān on the banks of the river Kur on 11 Djumādā I 864/4 March 1460.

Bibliography: The Persian and Turkish manuscript sources listed in W. Hinz, *Irans Aufstieg zum Nationalstaat im fünfzehnten Jahrhundert*, Berlin and Leipzig 1936, which contains the best and fullest account of Djunayd's life. For a discussion of the question whether Djunayd was the first Ṣafawid *shaykh* to adopt the title *sulṭān*, see R. M. Savory, *The development of the early Ṣafawid state under Ismaʿīl and Ṭahmāsp*, unpublished University of London thesis, 1958, 54-5. (R. M. Savory)

DJUNAYD, last of the *amīrs* of the family of the Aydīn-oghlu [*q.v.*]. Djunayd who is given in the Ottoman sources the surname of Izmir-oghlu, succeeded for nearly a quarter of a century in prolonging the existence of the Aydīn amirate through intrigues as clever as they were bold and by turning to account the dynastic wars between the sons of Bāyezīd I. The recent researches by Himmet Akın, whose efforts were directed mainly towards documents in Turkish archives, have helped to enrich the insufficient information from sources, and to shed light on the origins of this figure who has been unjustly called an adventurer. The son of Ibrāhīm Bahādur, Amīr of Bodemya, and grandson of Meḥmed Beg, founder of the Aydīn amirate, Djunayd appears in history after the departure from Anatolia of Tīmūr-Lang. In 804/1402 Tīmūr had restored the Aydīn amīrate annexed in 792/1390 by Bāyezīd I, and returned it to the sons of ʿĪsā b. Meḥmed, Mūsā, then Umūr II. Djunayd and his brother Ḥasan Agha, who had been the *ḳara-ṣubashī* of the upper fortress of Izmir (the fortress of the port, occupied since 744/1344 by the Knights of Rhodes, had been retaken in 804/1402 by Tīmūr) during Ottoman rule, contended for power with their cousins and obtained respectively Izmir and Ayasoluḳ. But upon the death of Mūsā in 805/1403, Umūr II sought the aid of his kinsman Menteshe-oghlu Ilyās Beg, who helped him to reconquer Ayasoluḳ and imprisoned Ḥasan Agha in Marmaris. Djunayd succeeded in arranging the escape of his brother who was brought to Izmir by boat, and then, thanks to the intervention of the former governor of the province of Aydīn, Süleymān Čelebī, who was proclaimed Sultan at Edirne he regained Ayasoluḳ and made peace with Umūr II whose daughter he married. On the death of his father-in-law in 807/1405, he alone governed the amīrate to which he had added Alashehir, Ṣāliḥli and Nif. In the same year ʿĪsā Čelebī, whom Süleymān supported, came to Izmir to seek the help of Djunayd against his brother Meḥmed; Djunayd brought into the war his neighbours, the amīrs of Ṣarukhan, Menteshe, Teke and Germiyān, but in spite of their greater numbers, the allies were defeated by Meḥmed; ʿĪsā fled, while Djunayd asked for pardon and safeguarded his authority by submitting to the victor. The following year Süleymān led a campaign in Anatolia; Djunayd, allied with the Amīrs of Ḳaraman and of Germiyān, made preparations for resistance; but, fearing betrayal by this allies, he deserted their side to ask pardon of the sultan; Süleymān, who now mistrusted him, took him into Rumelia and made him governor of Ochrida. In 814/1411, however, Süleymān was killed in fighting his brother Mūsā, and Djunayd profited from the troubles of the interregnum and returned to Izmir, expelled the governor of Ayasoluḳ, appointed by Süleymān and reconquered his former amīrate. But when Meḥemmed I had triumphed over Mūsā and consolidated his power in Rumelia, he turned against Djunayd and took the fortresses of Kyma, Ḳayadjīk and Nif; then he besieged Izmir which had to surrender after ten days. Once more Djunayd asked pardon and won it; according to Turkish sources, the sultan granted him the region of Izmir after making him renounce the right to pronounce the *khuṭba* and to mint money. The Sultan, however, had to alter his decision for, according to Dukas' testimony, towards 818/1415 Djunayd was sent to Rumelia and made governor of Nicopolis, while the province of Aydīn was given to Alexander, son of Shishman, of the royal family of Bulgaria, who was killed in 819/1416 during the revolt of Börklüdje Muṣṭafā. Djunayd, meanwhile, in his Danubian province, did not hesitate to get into contact with the pretender whom the Turkish historians call Muṣṭafā Düzme [*q.v.*] and who was, according to Neshrī and the Byzantine historians, the son of Bāyezīd I who had disappeared in the battle of Ankara. After seeking the aid of Byzantium and Venice, Muṣṭafā had taken refuge with the prince of Wallachia, with the support of some Begs of Rumelia; he made Djunayd his vizier. In 819/1416, profiting from the troubles aroused in Anatolia by the religious propaganda of Shaykh Bedreddin (Badr al-Dīn) and Börklüdje Muṣṭafā, and supported in part by Byzantium and Venice, Muṣṭafā laid claim to the throne. But Meḥemmed I, returning from Anatolia, concluded a treaty with Venice; Muṣṭafā and Djunayd took refuge in Salonika where the Byzantine governor refused to deliver the fugitives to the Sultan who blockaded the town. Meḥemmed I undertook to pay an annual allowance for the custody of the prisoners; Muṣṭafā was interned on the isle of Lemnos, and Djunayd in the monastery of Pammakaristos, at Constantinople. But in 824/1421, on the death of Meḥemmed, the emperor restored the prisoners to liberty. With the support of Byzantium, Muṣṭafā had himself proclaimed sultan at Edirne and won to his cause all the Begs of Rumelia. In spite, however, of his promise to the Emperor, he refused to restore to him Gelibolu, taken with his assistance, and Byzantium turned against him. The meeting with Murād II took place at Ulubād (Lopadion) in 825/1422; by trickery, Murād induced the defection of the Rumelian Begs and promised to Djunayd the restitution of his former territory, if he abandoned the pretender's cause; Djunayd fled in the night and returned to Izmir where the population welcomed him with open arms. But not content with the region of Izmir, he expelled from Ayasoluḳ the son of Umūr II, Muṣṭafā, who was subject to the Ottomans, and gradually reconquered the former amīrate of Aydīn. In 827/1424 Murād II turned against Djunayd; meaning to limit the possessions of the latter to the region of Izmir, he named as governor of the province of Aydīn a renegade Greek, Khalīl Yakhshī, who recaptured the towns of Ayasoluḳ and of Tire. But Djunayd did not stop raiding the Ottoman territories, and seized the sister of the new governor. Murād II sent against him a new army under the command of the son of Timurtash, Orudj, *beğler-beği* of Anatolia; the region of Izmir was conquered, and Djunayd had to take refuge in the fortress of Ipsili, situated on the coast opposite Samos; he put to death his prisoner, the sister of Yakhshī. From Ipsili, Djunayd sent a petition to Venice, asking help for himself and for the son of Muṣṭafā, brother of the Sultan Meḥemmed, who was with him; but Venice did not respond to this appeal. Meanwhile, Orudj having died, his post was given to Ḥamza, a forceful man. In 828/1425 there was a new appeal from Djunayd to Venice and a request for assistance to the amīr of Ḳaraman, who did not reply. Djunayd's army, under the command of his son Ḳurt Ḥasan, was defeated in the plain of Aḳ Ḥiṣār (Thyatira), and Ḳurt Ḥasan was taken prisoner. On the other side, with the help of some Genoese from Phocea, Ipsili was attacked from the sea. Blockaded on two sides, Djunayd had to surrender; but although he had obtained a safeguard for his life, Yakhshī, to avenge his sister, put him to death, as well as Ḳurt Ḥasan

and all the other members of his family. Such was the end of the Aydïn-og̲h̲ullarï.

(I. Mélikoff)

al-DJUNAYD, Abu 'l-Ḳāsim b. Muḥammad b. al-Djunayd al-K̲h̲azzāz al-Ḳawārīrī al-Nihāwandī, the celebrated Ṣūfī, nephew and disciple of Sarī al-Saḳaṭī, a native of Bag̲h̲dād, studied law under Abū T̲h̲awr, and associated with Ḥārit̲h̲ al-Muḥāsibī [*q.v.*], with whom indeed he is said to have discussed during walks all kinds of questions relating to mysticism, Muḥāsibī giving his replies *extempore* and later writing them up in the form of books (Abū Nuʿaym, *Ḥilyat al-awliyā*ʾ, Leyden MS, fol. 284a). He died in 298/910. With Muḥāsibī he is to be accounted the greatest orthodox exponent of the "Sober" type of Ṣūfism, and the titles which later writers bestowed on him—*sayyid al-ṭāʾifa* ("Lord of the Sect"), *ṭāʾūs al-fuḳarā*ʾ ("Peacock of the Dervishes"), *s̲h̲ayk̲h̲ al-mas̲h̲āyik̲h̲* ("Director of the Directors")—indicate in what esteem he was held. The *Fihrist* (186) mentions his *Rasāʾil*, which have in large measure survived, in a unique but fragmentary MS (see Brockelmann, S I, 354-5). These consist of letters to private persons (examples are quoted by Sarrādj, *Kitāb al-lumaʿ*, 239-43), and short tractates on mystical themes: some of the latter are cast in the form of commentaries on Ḳurʾānic passages. His style is involved to the point of obscurity, and his influence on Ḥallādj [*q.v.*] is manifest. He mentions in one of his letters that a former communication of his had been opened and read in the course of transit: doubtless by some zealot desirous of finding cause for impugning his orthodoxy; and to this ever-present danger must in part be attributed the deliberate preciosity which marks the writings of all the mystics of Djunayd's period. Djunayd reiterates the theme, first clearly reasoned by him, that since all things have their origin in God they must finally return, after their dispersion (*tafriḳ*), to live again in Him (*djamʿ*): and this the mystic achieves in the state of passing-away (*fanā*ʾ). Of the mystic union he writes "For at that time thou wilt be addressed, thyself addressing; questioned concerning thy tidings, thyself questioning; with abundant flow of benefits, and interchange of attestations; with constant increase of faith, and uninterrupted favours" (*Rasāʾil*, fol. 3a-b). Of his own mystical experience he says "This that I say comes from the continuance of calamity and the consequence of misery, from a heart that is stirred from its foundations, and is tormented with its ceaseless conflagrations, by itself within itself: admitting no perception, no speech, no sense, no feeling, no repose, no effort, no familiar image; but constant in the calamity of its ceaseless torment, unimaginable, indescribable, unlimited, unbearable in its fierce onslaughts" (fol. 1a). Eschewing those extravagances of language which on the lips of such inebriates as Abū Yazīd al-Bisṭāmī and Ḥallādj alarmed and alienated the orthodox, Djunayd by his clear perception and absolute self-control laid the foundations on which the later systems of Ṣūfism were built.

Bibliography: in addition to references in the text: A. H. Abdel-Kader, *The life, personality and writings of al-Junayd*, GMS, NS XXII, London 1962 (with text and translation of the Istanbul ms of the *Rasāʾil*).

(A. J. Arberry)

al-DJUNAYD b. ʿABD ALLĀH, al-Murrī, one of the governors and generals of the Umayyad caliph His̲h̲ām who in 105/724 appointed him governor of the Muslim possessions in India (Sind, and Multān in the south Pandjāb), conquered some years earlier in 92-4/711-3 by Muḥammad b. al-Ḳāsim. ʿUmar II had recognized Djūs̲h̲aba b. D̲h̲āhir, the Indian king who had embraced Islam, as sovereign of these territories. Al-Djunayd evidently had doubts about this man's loyalty for he attacked him, took him prisoner and put him to death; by subterfuge he also contrived the assassination of Ibn D̲h̲āhir's brother who was anxious to go to ʿIrāḳ to protest against what he considered to be perfidious behaviour. Al-Djunayd remained governor of Sind until 110/728-9, and during his tenure of office made several expeditions (*e.g.*, against the king of al-Kīrādj who was compelled to flee) and occupied various towns whose names are recorded in Arabic sources. Since the Muslim conquest of territories outside Sind only took place from the second half of the 4th/10th century, it should be noted here that from the time of al-Djunayd the Muslim invasions in the south penetrated into Gudjarāt, and in the east as far as the plateau of Mālwā in central India. Other expeditions in the north, according to Arabic sources, enabled al-Djunayd to reach the country of the G̲h̲uzz, and also a dependency of China where he captured a town and a castle.

In 110/729 al-Djunayd was dismissed from his post, and after his fall a revolt compelled his successor to give up Sind. However, he had not forfeited the caliph's esteem for he was appointed governor of K̲h̲urāsān by him in 111/729-30 (according to al-Balād̲h̲urī, in 112); his military skill was relied on to restore the situation in Transoxiana which had become precarious through attacks by the Turks, and As̲h̲ras b. ʿAbd Allāh al-Sulamī, the former governor of the K̲h̲urāsān, was at war with them. Al-Djunayd hastened to give help, joined forces with As̲h̲ras at al-Buk̲h̲ārā and fought a number of battles with the Turks, finally crushing them at Zarmān, not far from Samarḳand. On his return to K̲h̲urāsān (where he selected his lieutenants from among the Muḍar), he invaded Ṭuk̲h̲āristān, but was soon forced to return to Transoxiana, summoned to the aid of the prefect of Samarḳand, Sawra b. Ḥurr al-Tamīmī, in face of the threats of the Turkish *k̲h̲āḳān*. Al-Djunayd hurriedly crossed the Oxus. From Kiss he had a choice of routes to Samarḳand, either through the steppes or across the mountains; he decided to take the latter, but when he reached al-S̲h̲iʿb (= the Gorge) he was attacked by the people of Ṣug̲h̲d, S̲h̲ās̲h̲ and Farg̲h̲āna. The battle, in which a great number of Muslims perished, has remained famous in the history of Islam under the name Waḳʿat al-S̲h̲iʿb. However, it was not a complete disaster: al-Djunayd sent a message to Sawra ordering him to leave Samarḳand and come to his aid, and Sawra obeyed, although he realized the full extent of the danger to which he was exposing

himself. As was foreseen, he was attacked by the Turks and fell in the mêlée; his troops were wiped out. But al-Djunayd succeeded in disengaging from the enemy and entering Samarḳand. For the next four months he stayed in Ṣughd, and as Bukhārā, defended by Ḳaṭan b. Ḳutayba, was being besieged by the Turks and was in great danger he organized an expedition to free it. He defeated the Turks near al-Ṭawāwīs (Ramaḍān 112/730 or 113/731), and afterwards made his entry into Bukhārā. Transoxiana had been occupied only about twenty years earlier by Ḳutayba b. Muslim, and the conquest was far from being final; the instability of the situation can be gathered from the fact that Hishām had to send from al-Baṣra and al-Kūfa 20,000 men who rejoined al-Djunayd on the way and were later left at Samarḳand. At the beginning of the year 116/734 al-Djunayd was recalled, having incurred the caliph's displeasure by his marriage to al-Fāḍila, a daughter of the rebel Yazīd b. al-Muhallab. He died at Marw from a severe attack of dropsy even before his successor ʿĀṣim b. ʿAbd Allāh al-Hilālī arrived in Khurāsān. The latter could persecute only al-Djunayd's relatives and employees.

The report according to which al-Djunayd, after being dismissed from the office of governor of Sind, supported the anti-Umayyad movement fostered by Bukayr b. Māhān in Sind, seems to be absurd in view of the fact that he was almost immediately appointed governor of Khurāsān, and that he even had the leaders of this movement arrested there. The information which al-Dīnawarī (387 ff.) gives in this respect is suspect for it is wrong chronologically, as is also the information about the deposition of Asad b. ʿAbd Allāh (337).

Al-Djunayd must have been a general of exceptional qualities, and it was probably to his merits that the Muslims were indebted for the stability of their authority in Transoxiana during a very strong Turkish counter-movement. It is more difficult to judge his qualities as an administrator since on this point we have only one detail at our disposal: al-Djunayd left in the *Bayt al-māl* of Sind 18 million *ṭaṭarī* dirhams (1 *ṭaṭarī* dirham = 1½ dirhams of fine silver; see the glossary to al-Balādhurī and Dozy, *Suppl.*), and his successor sent the whole sum to the caliph.

(L. VECCIA VAGLIERI)

DJUND, a Ḳurʾānic word of Iranian origin denoting an armed troop. In the Umayyad period the term applies especially to military settlements and districts in which were quartered Arab soldiers who could be mobilized for seasonal campaigns or for more protracted expeditions. Quite naturally it also denotes the corresponding army corps. According to the chroniclers, the caliph Abū Bakr is said to have set up four *djunds* in Syria, of Ḥims, Damascus, Jordan (al-Urdunn, around Tiberias) and Palestine (around Jerusalem and ʿAsḳalān and, afterwards, al-Ramla). Later, the *djund* of Ḳinnasrīn is said to have been detached from this organization by the Umayyad caliph Yazīd I, and the fortified towns known as *al-ʿAwāṣim* [*q.v.*] by the ʿAbbāsid caliph Harūn al-Rashīd. The term *djund*, in practice restricted to the military areas in Syria which were to correspond approximately to the old Byzantine divisions, did not apply to the military settlements in ʿIrāḳ or Egypt. The army corps thus established consisted exclusively of Arabs drawing regular pay (*ʿaṭāʾ* [*q.v.*]), the sum required for this purpose being normally provided by the proceeds of the land-tax on the corresponding district, but the troops seem to have benefited also in the majority of cases from grants of property, though we still do not know the exact conditions under which such grants were made and enjoyed. These regular troops were generally accompanied by detachments of retainers or *shākiriyya*, and in addition there were often volunteers (*mutaṭawwiʿa* [*q.v.*]), who received no pay (Ṭabarī, i, 2090, 2807; Balādhurī, *Futūḥ*, 166).

In the ʿAbbāsid period the term *djund* continued to apply to Syrian administrative districts (Ṭabarī, iii, 1134) which survived until the time of the Mamlūks, but the *dīwān al-djund*, which can be proved to have been still in existence under al-Mutawakkil (Yaʿḳūbī, *Buldān*, 267, and Yaʿḳūbī-Wiet, 61), administered the non-Arab contingents. (Ṭabari, iii, 1507, 1685). The word *djund* in fact little by little took on a wider meaning, namely the armed forces (Ṭabarī, iii, 654, 815, 1369, 1479, 1736) while for the geographers of the 3rd/9th and 4th/10th centuries the *adjnād*, the equivalents of *amṣār*, denoted the large towns.

The Umayyad organization of the *djund* seems to have been partly imitated in the province of al-Andalus. From 125/742 Arab, Syrian and Egyptian contingents received grants of land in nine districts (*kūras*), called *mudjannada*, in the Iberian peninsula [see AL-ANDALUS, iii]. To the members of these *djunds* there were added, as in the East, enlisted volunteers (*ḥushūd*) who were all grouped together under the same denomination in the 4th/10th century and were distinct from the foreign mercenaries (*ḥasham*) who gradually eliminated the old army. In Aghlabid Ifrīḳiya the word *djund*, which at first denoted Arab contingents brought by the conquerors and successive governors, came ultimately to signify the personal guard, the nucleus of the new permanent army. Under the various dynasties connected with the Maghrib, the term *djund* kept a restricted sense which is often difficult to define, rarely applying to the whole army. Similarly, with the Mamlūks the word *djund* is sometimes applied to a category of soldiers in the sultan's service, but distinct from the personal guard [see ḤALḲA].

DJUNDAYSĀBŪR [see GONDĒSHĀPŪR].

DJUNDĪ [see ḤALḲA].

DJUNNAR, town in the Indian State of Bombay, 56 m. north of Poona. Its proximity to the Nānā Pass made it an important trade centre linking the Deccan with the west coast. The fort of Djunnar was built by Malik al-Tudjdjār in 840/1436. The district around Djunnar was one of the *ṭaraf*s or provinces of the Bahmanī kingdom of the Deccan during the administration of Maḥmūd Gāwān [*q.v.*]. It later formed part of the Sultanate of Aḥmadnagar. In 1067/1657 the town was plundered by Shiwadjī, the Marāṭhā leader, who was born in the neighbouring hill-fort of Shiwnēr. The surrounding hills are famous for their Buddhist caves. These are described in great detail in the *Gazetteer of the Bombay Presidency*, xviii (Part iii), 140-231. (C. COLLIN DAVIES)

DJŪR [see FĪRŪZĀBĀD].

DJUR'AT, *takhalluṣ* of Ḳalandar Bakhsh, an Urdū poet of Indian origin, whose real name was Yaḥyā Amān, son of Ḥāfiẓ Amān, one of whose ancestors Rāy Amān, after whom a street in Old Dihlī is still known, suffered at the hands of Nādir Shāh's troops during the sack of Dihlī in 1152/1739. The title of Amān or Mān was conferred on the ancestors of Djur'at, according to Mīrzā ʿAlī Luṭf (*Gulshan-i Hind*, 73), by the Emperor Akbar. Born at Dihlī, Djur'at was brought up at Fayḍābād and later joined the service of Nawwāb Muḥabbat Khān of Bareilly, a son of Ḥāfiẓ Raḥmat Khān Rohilla [*q.v.*] at an early age. In 1215/1800 he went to Lucknow and ingratiated himself with prince Sulaymān Shukōh, a son of Shāh ʿĀlam II [*q.v.*], titular emperor of Dihlī. The 'court' of Sulaymān Shukōh had become the refuge, after the sack of Imperial Dihlī, of great poets and writers like Muṣḥafī and Inshā' Allāh Khān [*qq.v.*], included among his stipendiaries. Ten years later Djur'at died in that city in 1225/1810.

A pupil of Djaʿfar ʿAlī Khān Ḥasrat, a poet of some note, he was a skilled musician and played on the guitar with dexterity. He was also a good astrologer and well-groomed in social etiquette, qualities which made him extremely popular with people of high rank. On account of cataract, which afflicted him in the prime of life, he lost his eyesight; others say he feigned blindness in order to further his amours. Essentially a *bon viveur*, Djur'at was a lyrical and especially an erotic poet. Author of more than 100,000 lines (Aḥad ʿAlī Yakta: *Dastūr al-faṣāḥāt*, Rampur 1943, 98 ff.), mostly passionate *ghazal*s, he wrote some voluptuous *mathnawī*s also, of which one, entitled *Ḥusn wa ʿishḳ*, deserves mention. The well-known Urdū poet Mīr [*q.v.*] spoke slightingly of Djur'at whose compositions he described as mere *bon mots*, of the 'kissing and hugging type'. Mīr's verdict has been characterized as wholly unjustified as he failed to appreciate the social and political conditions of Djur'at's times and the Lucknow of his days, where Mīr was comparatively a stranger. It was Djur'at, who for the first time in Urdū poetry, addressed his *ghazal*s to women, contrary to the time-dishonoured practice of showering praises on young, handsome boys and *amrads*. His *dīwān* was published in the now defunct *Urdū-i Muʿallā* (ed. Ḥasrat Mohānī), Kanpur, October-December, 1927.

Bibliography: All the relevant *tadhkira*s of Urdu poets (enumerated in *Dastūr al-faṣāḥat*, 99 n.); Muḥammad Ḥusayn Āzād, *Āb-i ḥayāt*, s.v. Djur'at; Ram Babu Saksena, *History of Urdu literature*, Allāhābād 1940, 88-90; T. Grahame Bailey, *History of Urdu literature*, London 1932, 55-6; Abu 'l-Layth Ṣiddīḳī, *Djur'at unkā ʿahad awr ʿishḳiyya shāʿirī*, Karachi 1952 (the first critical study of Djur'at). (A. S. BAZMEE ANSARI)

DJURAYDJ, a saint whose story is said to have been related by the Prophet himself and has therefore found a place in the *ḥadīth*. The various versions differ in details one from another, but one motif is common to them all, that the saint is accused by a woman, who had had a child by another man, of being its father; but the child itself, on being asked by the saint, declares the real father's name and thus clears the saint from suspicion. "Djuraydj" is the Arabic reproduction of Gregorius, and one version rightly states that he lived in the prophetless period (*fatra* [*q.v.*]) between Jesus and Muḥammad. There is a similar episode in the biographies of Gregorius Thaumaturgus, and it may be assumed as probable that the story became known among Muslims through the Christian tradition until finally it was accepted in the *ḥadīth*.

DJURBADHĀḲĀN [see GULPĀYAGĀN].

DJURDJĀN [see GURGĀN].

AL-**DJURDJĀNĪ**, ʿABD AL-ḲĀHIR [see Supplement].

AL-**DJURDJĀNĪ**, ʿALĪ B. MUḤAMMAD, called al-Sayyid al-Sharīf, was born in 740/1339 at Tādjū near Astarābādh; in 766/1365 he went to Harāt to study under Ḳuṭb al-Dīn Muḥammad al-Rāzī al-Taḥtānī, but the old man advised him to go to his pupil Mubārakshāh in Egypt; however he stayed in Harāt and went in 770/1368 to Ḳaramān to hear Muḥammad al-Aḳṣarā'ī who died before his arrival (al-Aḳṣarā'ī died in 773/1371: *al-Durar al-kāmina* iv, 207). He studied under Muḥammad al-Fanārī and went with him to Egypt where he heard Mubārakshāh and Akmal al-Dīn Muḥammad b. Maḥmūd, staying four years in Saʿīd al-Suʿadā'; he visited Constantinople in 776/1374 and then went to Shīrāz where he was appointed teacher by Shāh Shudjāʿ 779/1377. When Tīmūr captured the town, he took him to Samarḳand where he had discussions with Saʿd al-Dīn al-Taftazānī [*q.v.*]; opinions differed as to who was the victor. On Tīmūr's death he went back to Shīrāz where he died 816/1413. The usual tales are told of his brilliance as a student. He wrote on many subjects, on grammar and logic in Persian. He belonged to an age which wrote commentaries on earlier works; as a theologian he allowed a large place to philosophy, thus half his commentary on al-*Mawāḳif* of al-Īdjī [*q.v.*], is given up to it. On law, he wrote a commentary on al-*Farā'iḍ al-sirādjiyya* of al-Sadjāwandī; on language, glosses on al-*Muṭawwal* a commentary by al-Taftazānī on *Talkhīṣ al-miftāḥ* by al-Sakkākī; on logic, glosses on a commentary by al-Rāzī al-Taḥtānī on *al-Risāla*

al-shamsiyya fi 'l-ḳawāʿid al-manṭiḳiyya by al-Kātibī. In his *Taʿrīfāt* he was not afraid to be simple.

His son, Nūr al-Dīn Muḥammad, translated his father's Persian logic into Arabic, wrote on logic, also a commentary on his father's book on tradition and a *Risāla fi 'l-radd ʿalā 'l-rawāfiḍ*. Nothing is known of his biography except the date of his death in 838/1434.

Bibliography: al-Sakhāwī, *al-Ḍawʾ al-lāmiʿ*, v, 328; al-Shawkānī, *al-Badr al-ṭāliʿ*, i, 488; Muḥammad Bāḳir, *Rawḍat al-djannāt*, 497; al-Lakhnawī al-Hindī, *al-Fawāʾid al-bahiyya*, 125; Khwāndamīr, *Ḥabīb al-siyar*, iii/3, 89, 147; Brockelmann, II, 216, S II, 305; Browne, iii, 355; Storey, i, 36. (A. S. Tritton)

DJURDJĀNĪ, FAKHR AL-DĪN [see GURGĀNĪ].

AL-**DJURDJĀNĪ, ISMĀʿĪL** B. AL-ḤUSAYN ZAYN AL-DĪN ABU 'L-FAḌĀʾIL AL-ḤUSAYNĪ, often called al-Sayyid Ismāʿīl, a noble and celebrated physician who wrote in Persian and in Arabic. He went to live in Khwārizm in 504/1110 and became attached to the Khwārizmshāhs Ḳuṭb al-Dīn Muḥammad (490/1097-521/1127), to whom he dedicated his *Dhakhīra*, and Atsiz b. Muḥammad (521/1127-551/1156), who commissioned him to write a shorter compendium, *al-Khuffī al-ʿAlāʾī*, so called because its two volumes were small enough to be taken by the prince on his journeys in his boots (*khuff*). He later moved to Marw, the capital of the rival sultan Sandjar b. Malikshāh, and died there in 531/1136. His *Dhakhīra-i Khwārizmshāhī*, probably the first medical Encyclopaedia written in Persian and containing about 450,000 words, is one of the most important works of its kind; it also exists in an Arabic version, and was translated into Turkish and (in an abbreviated form) into Hebrew. Apart from the *Dhakhīra* and the *Khuffī*, al-Djurdjānī wrote about a dozen other works, some of them substantial, mainly on medicine and philosophy. Most of his literary output, which was highly regarded already by his contemporaries, has been preserved in manuscripts. A short treatise on the vanity of this world, *al-Risāla al-munabbiha* (in Arabic), was incorporated by Bayhaḳī in his biography.

Bibliography: Ẓahīr al-Dīn ʿAlī b. Zayd al-Bayhaḳī, *Taʾrīkh ḥukamāʾ al-Islām*, Damascus 1946, 172 ff.; idem, *Tatimmat Ṣiwān al-ḥikma*, ed. M. Shafīʿ, Lahore 1935, i, 172 ff. (text), 216 ff. (bibliographical notes); M. Meyerhof, in *Osiris*, viii, 1948, 203 f. (digest of the preceding, with additional bibliography); Niẓāmī-i ʿArūḍī, *Čahār maḳāla*, ed. Mīrzā Muḥammad, 1910, 70 f. (text), 233, 236 ff. (notes); transl. E. G. Browne, 1921, 78 ff. (transl.), 158 f. (notes); Ibn Abī Uṣaybiʿa, *ʿUyūn al-anbāʾ*, ii, 31; A. AL-**DJURDJĀNĪ, NŪR AL-DĪN** [see AL-DJURDJĀNĪ, ʿALĪ B. MUḤAMMAD].

AL-**DJURDJĀNIYYA** [see GURGANDJ].

DJURDJURA, a scarped chain of mountains 60 km. long in the Tellian Atlas of Algeria, enclosing and dominating the wide depression of the *wādī* Sahel-Soummam, and the principal Kabyle massif in the West, known as Greater Kabylia or Kabylia of Djurdjura. It consists of four ridges running roughly E.-W., almost everywhere exceeding 1,500 m. (4,921 ft.) in altitude and with the Dj. Haïzer reaching 2,133 m. (6,998 ft.), the Akouker 2,305 m. (7,562 ft.) and the Tamgout (Berber for summit) of Lalla Khadīdja 2,308 m. (7,572 ft.). Massive limestone deposits of the Lias and, in the West, of the Eocene, sharply inclined and faulted, give the appearance of Sierras, with such characteristic features as eroded rocky plateaux, vertical shafts leading to caverns, and swallow-holes (the one at Boussouil is over 360 m. [1181 ft.] deep).

Standing 50 km. from the Mediterranean, the Djurdjura has a very heavy rainfall (1200 to 1800 mm. [47.24 to 70.86 ins.]) and is under snow for from one to three months. For this reason it is the source of vigorous springs which are utilized by numerous villages on both sides of the range, as well as by various hydro-electric power-stations. The white mountain-tops tower above ancient but decayed forests of cedars and the remnants of groves of evergreen oaks, the home of colonies of Barbary apes. Grasslands provide summer pasturage for the small flocks from nearby villages. The altitude, the picturesque scenery and in addition the snow attract summer visitors and skiers in winter.

The villages, in which only the Kabyles speak Berber, are situated not higher than 1150 m. (3,772 ft.) on the north side and 1,350 m. (4,429 ft.) on the south side. The mountain range is thus inhabited. The altitude of the passes (*tizi*), 1,636 m. (5,367 ft.) at the Tizi n-Kouilal and 1,760 m. (5,774 ft.) at Tizi n-Tighourda, proves an effective barrier as regards both weather and inhabitants. Together with the wide belt of forest stretching eastward from the high ground of Sebaou and reaching as far as the sea, the range cuts off and isolates a Kabylia of irregular form, at the centre of which is Tizi Ouzou, and also a long depression, the *wādī* Sahel-Soummam, which again is Kabyle but exposed to the direct influence of Algiers and Bougie.

Bibliography: A. Belin, J. Flandrin, M. Fourastier, S. Rahmani, M. Rémond and R. de Peyerimhoff, *Guide de la montagne algérienne. Djurdjura*, Algiers 1947. See also KABYLIA. (J. Despois)

DJURHUM or **DJURHAM,** an ancient Arab tribe reckoned to the *ʿArab al-ʿĀriba* (see art. ʿARAB, DJAZĪRAT AL-, vi). According to later standard Arab tradition, Djurhum was descended from Yaḳṭān (Ḳaḥṭān). The tribe migrated from the Yaman to Mecca. After a protracted struggle with another tribe Ḳatūra (also referred to as ʿAmālīḳ), led by al-Sumaydiʿ, Djurhum under their chief (called Muḍāḍ b. ʿAmr, al-Ḥārith b. Muḍāḍ, etc.) gained control of the Kaʿba. This they retained till driven out by Bakr b. ʿAbd Manāt of Khuzāʿa. The above is doubtless the pre-Islamic form of the tradition, and it presumably has some historical basis. This older account, however, has been transformed by the introduction of Ḳurʾānic material about Ismāʿīl (Ishmael), who is said to have been given protection along with his mother by Djurhum and to have married a woman of the tribe. The Ḳurʾānic material, and the need for sufficient generations back to Ismāʿīl (by Biblical chronology) has encouraged the suggestion that Djurhum flourished in the distant past and was extinct by Islamic times. Careful study of references, however, especially those in early poems, shows that Djurhum had been at

Mecca in the comparatively recent past (cf. Th. Nöldeke, *Fünf Moʿallaqāt*, iii, 26 f.; S. Krauss, in *ZDMG*, xli, 717; also *ZDMG*, lxx, 352; al-Ḥassān b. Thābit, *Dīwān*, ed. Hirschfeld, 43 f. [= Ibn Hishām, 251]). This is further confirmed by the mention of Γόραμα and Γοραμῆνοι by the Greek writer Stephanus Byzantinus (London 1688, 276), and by the occurrence of an ʿAbd al-Masīḥ among the chiefs of Djurhum (cf. E. Pococke, *Specimen*, 79 f.). Al-Azraḳī (ed. Wüstenfeld, i, 54) speaks of a remnant in his day, and the *nisba* Djurhumī occurs. Al-Ṭabarī (i, 749) states that Banū Liḥyān are descended from Djurhum, but the basis of this is unknown.

Bibliography: Ibn Hishām, 71-74; Ṭabarī, i, 219, 283, 749, 768, 904, 1088, 1131-4; al-Azraḳī (*Chroniken der Stadt Mekka*, ed. Wüstenfeld, i), 44-56; Masʿūdī, *Murūdj*, iii, 95-103; idem, *Tanbīh* (*BGA*, viii), 80, 82, 184 f., 202; Ibn Ḥabīb, *Muḥabbar*, 311, 314, 395; Caussin de Perceval, *Histoire des Arabes avant l'Islamisme*, i, 33 f., 168, 177, 194-201, 218; Buhl, *Muhammed*, 106 n.; al-Aʿshā, *Dīwān*, 15, 44.

(W. Montgomery Watt)

DJURM (fine) (in the Ottoman Empire).

Though fines are unknown to the criminal law of the *sharīʿa*, some *fuḳahāʾ* admitted of monetary penalties in certain cases (see *e.g.*, Dede Efendi, *Siyāsetnāme*, at end). The Ottoman *ḳānūnnāmes* ([*q.v.*]; see also djazaʾ), while pretending merely to apply and complete the *sharīʿa*, prescribed fines (*djürm*, *djerīme* or *djereme*, *ḳinlïḳ*, *gharāmet*) for a large number of offences. These even included crimes liable to *ḥudūd* [*q.v.*] penalties, such as adultery, theft, the drinking of wine, etc. Generally fines were imposed in addition to corporal chastisement (*taʿzīr*, [*q.v.*]) and sometimes in addition to to blood-money (*diyet*) or damages (*taẓmīn*).

The fines were of three kinds: (*a*) a certain amount (one aḳče, more rarely half an aḳče or less) for each stroke inflicted on the offender; (*b*) a certain number of aḳče for each dirhem lacking in the weight of a price-controlled commodity; or (*c*) as usual in the Dhu 'l-Ḳadr codes (Barkan, *Kanunlar*, 120-9) and many Ottoman provincial *ḳānūnnāmes* where no *taʿzīr* is mentioned, a fixed amount of money. The fines of the third group were, similarly to the poll-tax (*djizya*), mostly graduated in accordance with the financial circumstances of the offender—rich, medium, poor (and very poor), the ratio being 4 : 3 : 2, 8 (6) : 4 : 2 : 1, etc. They varied between 10 and 400 aḳče, but a fifteenth century *fermān* (Anhegger-Inalcık, *Ḳānūnnāme-i Sulṭānī*, 58) and *ḳānūnnāme* (*TOEM*, 1330, Suppl., 28) prescribed higher fines. In many cases non-Muslims were to pay only half the fine imposed on Muslims (*MOG*, i, 29; Barkan, 81), but this privilege was partly cancelled out by discrimination in the way they were graduated. For certain offences slaves paid half the fine of a free Muslim, while in Egypt fellahs were subject to double the fine collected in the old Ottoman dominions (Barkan, 362). No fines were to be exacted from criminals sentenced to retaliation (*ḳiṣāṣ*) or to capital or severe corporal punishment (*siyāset*).

Fiscally the fines formed part of the *rüsūm-i ʿurfiyye* and were sometimes included in the *bād-i hawā* [*q.v*]. After the offender had been duly convicted by a *ḳāḍī*, the fine was exacted by the organs of the executive power (*ehl-i ʿurf*). Peasants on most of the "free" (*serbest*) lands had to pay fines to their "landowners" (*ṣāḥib-i arḍ*), *i.e.*, the Sultan, members of his family, *beylerbeyis*, *sandjaḳbeyis*, *zaʿīms* and other high officers, or to their agents, (*ʿāmils*, *emīns*, *voyvodas*, *mütesellims*, etc.). On lands that were not "free", *i.e.*, most of the smaller *tīmārs*, half the fines usually went to the fief-holder and the other half to the local governor and/or his subordinate (*subashi*). Fines from people on *waḳf* lands were due to the *waḳf* or, as in the case of offenders on privately owned land, to the Sultan's Treasury. In towns they generally belonged to the *subashi*, *ʿasesbashi* or *muḥtasib* [*q.v.*]. Egyptian fellahs paid to their *kāshifs*, Kurds to their *beys*. Special regulations also applied to soldiers, nomads, gypsies, foreigners and others who were subject to separate jurisdiction. No fines were imposed on fief-holders and holders of a *berāt* [*q.v.*].

In the cadastral registers the annual revenue from the fines of a certain district (*niyābet*, [*resm-i*] *djürm we djināyet*) was often entered as a fixed sum and those entitled to it used to lease out its collection. Many *fermāns* and *ʿadāletnāmes* contain strict orders to prevent illegal or excessive fining. From the 10th/16th century, however, such abuses greatly increased. The officials more and more ignored the prescribed amounts of fines which, despite the considerable depreciation of the Ottoman currency, had remained unchanged. On the other hand, many offenders punishable with fines (and *taʿzīr*) were henceforth sent to the galleys or forced labour. In the early 12th/18th century several provincial *ḳānūnnāmes* (Barkan, 333, 338, 354) abolished the fines, together with all other *rüsūm-i ʿurfiyye*, as impositions contrary to the *sharīʿa*. In the first two modern Ottoman penal codes (1840, 1851) no mention is made of fines; in the latter (iii, 10) they are even expressly forbidden. The last Ottoman criminal code (1858) prescribes a great many fines (*djezā-yi naḳdī*), now however in accordance with the French legal conception.

DJURZ, DJURZĀN [see gurdjistān].

DJUSTĀNIDS, DJASTĀNIDS [see daylam].

DJUWAYN, name of several localities in Īrān.

1. A village in Ardashīr Khurra, five *farsakh* from Shīrāz on the road to Arradjān, usually called Djuwaym, the modern Goyum, cf. Le Strange, 253; P. Schwarz, *Iran im Mittelalter*, 44, 173, 179 (not to be confused with Djuwaym Abī Aḥmad in the province of Dārābdjird, the modern Djuyum, see Le Strange, 254; Schwarz, 102, 201).

2. Djuwayn (also written Gūyān), a district in the Nīshāpūr country, on the caravan route from Bisṭām, between Djādjarm and Bayhaḳ (Sabzewār). The district, whose capital is given as Āzādhwār, later Fariyūmad (see *JRAS*, 1902, 735) contained 189 villages according to Yāḳūt, ii, 164-6, whose

information is taken from Abu 'l-Ḳāsim al-Bayhaḳī; they were all in the northern half, while the southern half was unsettled; cf. Le Strange, 391 ff. The plain of Djuwayn, enclosed on the north and south by ranges of hills, still forms a district of Sabzewār with about 65 townships, which lie along the river Djuwayn in a long series. In the middle of the valley, near the village of Āzādhwār, lie the ruins of the ancient capital. The modern centre is Djugatay (Čaghatāy) which is situated to the south-east of it, at the foot of the hills on the south; cf. McGregor, *Khorasan*, ii, 145, 225; C. E. Yate, *Khurasan and Sistan*, 389 ff.

3. Djuwayn or Guwayn, a fortified place in Sidjistān, 3 to 5 km. north-east of Lāsh on the Farāhrūd, appears under its modern name in ancient (see Marquart, *Ērānšahr*, 198: Γαβηνὴ πόλις, emendation on Isidorus of Charax) and mediaeval itineraries (Iṣṭakhrī, 248; Ibn Ḥawḳal, 304). The importance of the sister towns of Lāsh and Djuwayn still rests on the fact that the roads from Ḳandahār and Harāt from the Afghān side, and those from Mashhad, Yazd and Nāṣirābād on the Persian side, meet here. The Arab geographers say that Djuwayn on the road from Harāt to Zarandj was a Khāridjī stronghold (Muḳaddasī, 306; Ibn Rusta, 174). It was sacked by Yaḳūtī, the Ghuzz leader, in 447/1055-6 (*Ta'rīkh-i Sīstān*, ed. Bahār, 376-7).

Djuwayn, built on a slight elevation in the centre of a fertile plain covered with ruins, and surrounded by a quadrangular wall of clay, forms a striking contrast to the rocky stronghold of Lāsh; it appears to have considerably declined in the second half of the 19th century. Cf. Le Strange, 341 ff.; Euan Smith in *Eastern Persia*, i, 319 ff.; A. C. Yate, *England and Russia face to face in Asia*, 99 ff.

(R. Hartmann)

al-DJUWAYNĪ, ʿAbd Allāh b. Yūsuf Abu Muḥammad, a Shāfiʿī scholar, father of ʿAbd al-Malik [see the following art.], lived for most of his life in Nīsābūr, and died there in 438/1047. As an author, he was mainly concerned with the literary form of *furūḳ*, on which see Schacht, in *Islamica*, ii/4, 1927, 505 ff.

Bibliography: al-Subkī, *Ṭabaḳāt*, iii, 208-19; W. Wüstenfeld, *Der Imâm el-Schâfi'i*, etc., no. 365 (a), 248 ff.; Brockelmann, I, 482; S I, 667.

(J. Schacht)

al-DJUWAYNĪ, Abu 'l-Maʿālī ʿAbd al-Malik, son of the preceding, celebrated under his title of Imām al-Ḥaramayn, born 18 Muḥarram 419/17 February 1028 at Bushtanikān, a village on the outskirts of Nīsābūr; after his father's death, he continued the latter's teaching even before he was twenty years old. He was connected with the school of *ʿilm al-kalām* inaugurated by Abu 'l-Ḥasan al-Ashʿarī at the beginning of the 4th/10th century. But ʿAmīd al-Mulk al-Kundurī, vizier of the Saldjūḳ Tughrul Beg, declared himself against this "innovation", and had the Ashʿarīs, as well as the Rawāfiḍ, denounced from the pulpits. Al-Djuwaynī, like Abu 'l-Ḳāsim al-Ḳushayrī, immediately left his country and went to Baghdād; then, in 450/1058, he reached the Ḥidjāz where he taught at Mecca and at Medina for four years: hence his honorary name of "Imām of the two holy Cities". But when the vizier Niẓām al-Mulk came to power in the Saldjūḳ empire, he favoured the Ashʿarīs and invited the emigrants to return home. Al-Djuwaynī was among those who returned to Nīsābūr (the information in *ZDMG*, xli, 63 is not quite exact), and Niẓām al-Mulk actually founded in this town a special *madrasa* for him, which was called Niẓāmiyya like the similar establishment in Baghdād. Al-Djuwaynī taught there to the end of his days (we know that al-Ghazālī held a chair there for some time towards the end of his life, from 499/1105 onwards). Al-Djuwaynī died in the village of his birth—where he had gone in the hope of recovering from an illness—on 25 Rabīʿ II 478/20 August 1085. In his *Ṭabaḳāt al-Shāfiʿiyya*, al-Subkī devoted to him a long laudatory study, and declared (*Tab.*, ii, 77, 20) that the abundance of his literary production could be explained only by a miracle.

Al-Djuwaynī's researches were divided between the *fiḳh* (more precisely the *uṣūl al-fiḳh*) and the *ʿilm al-kalām*.—Fiḳh: His principal treatise, *K. al-Waraḳāt fī uṣūl al-fiḳh*, continued being commented upon until the 11th/17th century. His methodology is best expressed in the *K. al-Burhān fī uṣūl al-fiḳh*, where he was probably the first to wish to establish a juridical method on an Ashʿarī basis. In his *Ṭabaḳāt* (iii, 264), al-Subkī remarked the difficulty of the work and called it *laghz al-umma* ("the enigma of the Community"). He also drew attention to the reservations entered by al-Djuwaynī with regard to al-Ashʿarī and Mālik, reservations which would have prevented this juridical work from becoming very popular, espe cially among the Mālikīs.

ʿIlm al-Kalām: it is in the rôle of doctor in *kalām* that al-Djuwaynī made his deepest impression on Muslim thought; and to him goes the glory of being the teacher of Abū Ḥāmid al-Ghazālī in this discipline. Unfortunately, his great work, the *Shāmil*, has not been published. One manuscript (incomplete) is to be found in the National Library in Cairo (*ʿilm al-kalām*, no. 1290), copied from a manuscript in the Köprülü library; another copy, with extracts from al-Nasafī added, belonged to Dr. al-Khudayri in Cairo. These manuscripts have been studied by G. C. Anawati (cf. *Introduction à la théologie musulmane*, Paris 1948, 181-5). On the other hand, the compendium *K. al-Irshād ilā ḳawāṭiʿ al-adilla fī uṣūl al-iʿtiḳād* has been edited, and often studied and quoted. There are two modern editions: (1) by J.-D. Luciani, Paris 1938, with a French tr. (left unfinished by the death of the editor-translator); (2) by M. Y. Mūsā and A. ʿAbd al-Munʿim ʿAbd al-Ḥamīd, Cairo 1950, which is the best critical edition.

Al-Djuwaynī is important because he wrote in the intermediate period between the old Ashʿarism and the school which Ibn Khaldūn was to call "modern". This is marked by (1) a systematical enquiry, influenced—not without the introduction of new schemes—by that of the Muʿtazila (whose theories are rejected); (2) the emphasis laid, in the theory of knowledge, and with regard to the divine attributes, on the idea of "modes" (*aḥwāl*), thus taken over from the semi-conceptualist line initiated by the Muʿtazilī Abū Hāshim; (3) the importance attributed to rational methods, and the use of "reasoning by three terms" in the Aristotelian way: *e.g.*, the proof of the existence of God, which is nevertheless *a novitate* (rather than *a contingentia*) *mundi*. The Aristotelian syllogisms moreover remain affected by the inference "from two terms" (*istidlāl*), cf. Gardet-Anawati, *Intr. à la théol. musulmane*, 360-1.—The solutions to the principal problems are for the most part faithful to the Ashʿarī tradition. Methodological trends proper to al-Djuwaynī exist, but they show themselves mainly in the presentation of the problems, the conduct of the discussions, and

the importance accorded to the channels (*asbāb*) by which conclusions are reached. In *kalām* as in *fiḳh*, it was above all the question of the *uṣūl* that interested the Imām al-Ḥaramayn.

Tornberg), x, 77 (ann. 485); Ibn Taghribirdī, 771; Wüstenfeld, *Die Akademien der Araber*, no. 38; idem, *Shāfiʿiten*, no. 365; Schreiner, in *Grätz' Monatsschrift*, xxv, 314 ff.; Brockelmann, I, 388.

(C. Brockelmann-[L. Gardet])

DJUWAYNĪ, ʿAlāʾ al-Dīn ʿAṭā-Malik b. Muḥammad (623/1226-681/1283), a Persian governor and historian, author of the *Taʾrīkh-i djahān-gushāy*, a work which is almost our only source on the details of his life. His family belonged to Āzādwār, then the chief town of Djuwayn ([*q.v.*], No. 2). According to Ibn al-Ṭiḳṭaḳā (*al-Fakhrī*, ed. Ahlwardt, 209) they claimed descent from Faḍl b. Rabīʿ, the vizier of Hārūn al-Rashīd. ʿAlāʾ al-Dīn's great-grandfather, Bahāʾ al-Dīn Muḥammad b. ʿAlī, had waited on the Khʷārazm-Shāh Tekish [*q.v.*] when in 588/1192 he passed through Āzādwār on his way to attack Toghril II [*q.v.*], the last Saldjuḳ ruler of ʿIrāḳ-i ʿAdjam. His grandfather, Shams al-Dīn Muḥammad b. Muḥammad, was in the service of Sultan Muḥammad Khʷārazm-Shāh [*q.v.*], whom he accompanied on his flight from Balkh to Nīshāpūr. At the end of his life the Sulṭān appointed him *Ṣāḥib Dīwān*, a post which he continued to hold under Sultan Djalāl al-Dīn: he died during the latter's siege of Akhlāṭ, *i.e.*, at some time between Shawwāl 626/August 1229 and Djumādā I 627/April 1230. His son, Bahāʾ al-Dīn, ʿAlāʾ al-Dīn's father, is first heard of *ca.* 630/1232-3 in Nīshāpūr. Two of Djalāl al-Dīn's officers, Yaghan-Sonḳur and Ḳarača, had been active in this area, and Čīn-Temür, the Mongol governor of Khurāsān and Māzandarān, sent an army to dislodge them. Upon the approach of the Mongol forces Bahāʾ al-Dīn together with some of the chief notables of the town fled to Ṭūs, where they sought refuge in a castle amidst the ruins of the city. The governor of the castle handed them over to the Mongols, by whom, however, they were kindly received: Bahāʾ al-Dīn was admitted into the conquerors' service and held the office of *Ṣāḥib Dīwān* not only under Čīn-Temür but under his successors Körgüz and Arghun Aḳa. In 633/1235-6 he accompanied Körgüz upon a mission to the Great Khan Ögedey, from whom he received a *payza* or "tablet of authority" and a *yarlīgh* or rescript confirming his appointment as *Ṣāḥib Dīwān*. On several occasions he was left in absolute control of the occupied territories in Western Asia while the governor was absent in Mongolia. In 651/1253, being then in his 60th year, it was his wish to retire from the public service, but to this the Mongols would not agree, and he died during the same year in the Iṣfahān region, whither he had been sent to carry out fiscal reforms.

ʿAlāʾ al-Dīn tells of himself that while still a youth he chose, against his father's wishes, to take a position in the *dīwān*. He twice visited Mongolia in the suite of Arghun Aḳa, first in 647-9/1249-51 and then in 649-51/1251-3: upon the arrival of Hülegü in Khurāsān early in 654/1256, he was attached to his service and accompanied him on his campaigns against the Ismāʿīlīs of Alamūt and the Baghdād Caliphate. It was ʿAlāʾ al-Dīn who drew up the terms of surrender of the last Ismāʿīlī Grand Master Rukn al-Dīn Khur-Shāh, and it was through his initiative that the famous library of Alamūt was saved from destruction. In 657/1259, a year after the capture of Baghdād, he was appointed governor of ʿIrāḳ-i ʿArab and Khūzistān, a post which he continued to hold for more than 20 years, though under Abaḳa, Hülegü's son and successor, he was nominally subordinate to the Mongol Sughunčaḳ. During his tenure of office he did much to improve the lot of the peasantry and it was said, with some exaggeration, that he restored these provinces to greater prosperity than they had enjoyed under the Caliphate: at the expense of 10,000 dīnārs of gold he caused a canal to be dug from Anbār on the Euphrates to Kūfa and Nadjaf and founded 150 villages along its banks.

During the reign of Abaḳa both ʿAlāʾ al-Dīn and his brother Shams al-Dīn [see below] the *Ṣāḥib Dīwān* were much exposed to hostile attacks, of which the consequences were more serious for the former than the latter. In the late autumn of 680/1281 he was arrested, at the instigation of a personal enemy, on the charge of embezzling from the Treasury the enormous sum of 2,500,000 dīnārs. On 4 Ramaḍān 680/17 December 1281, thanks to the intervention of certain members of the Il-Khān's family, he was released from custody, only to be almost immediately re-arrested on a charge of maintaining a correspondence with the Mamlūk rulers of Egypt. His arrival in Hamadān to answer this charge coincided with the Il-Khān's death and he was retained in custody until the election of Abaḳa's successor Tegüder or Aḥmad (1282-4), a convert to Islam, who at once gave orders for ʿAlāʾ al-Dīn's release and reinstatement as governor. He did not long survive his rehabilitation. Tegüder's nephew, the future Il-Khān Arghun (1284-91), arrived in Baghdād in the winter of 681/1282-3 and reviving the old charge of embezzlement began to arrest the governor's agents and put them to the torture. News of these proceedings reaching ʿAlāʾ al-Dīn in Arrān, where he then was, he had an apoplectic stroke and died on 4 Dhu 'l-Ḥidjdja 681/5 March 1283.

ʿAlāʾ al-Dīn's references to the defects in his literary education must certainly be put down to conventional modesty; he is praised by his contemporaries as a highly cultured man and a patron of poets and scholars; and his history was held up as an unrivalled model of style. The work is divided into three main sections: I. History of the Mongols and their conquests down to the events following the death of the Great Khan Güyük, including the history of the descendants of Djoči and Čaghatay; II. History of the dynasty of the Khʷārazm-Shāhs, based in part on previous works such as the *Mashārib al-tadjārib* of Abu 'l-Ḥasan Bayhaḳī and the *Djawāmiʿ al-ʿulūm* of Fakhr al-Dīn al-Rāzī, and a history of the Mongol governors of Khurāsān down to the year 656/1258; III. Continuation of the history of the Mongols to the overthrow of the Ismāʿīlīs, with an account of the sect, based chiefly on works found in Alamūt such as the *Sargudhasht-i Sayyidnā*; other works now lost are also quoted such as the *Taʾrīkh-i Djīl wa Daylam* and the *Taʾrīkh-i Sallāmī* (written for the Būyid Fakhr al-Dawla). The *Taʾrīkh-i djahān-gushāy*, which has considerably influenced historical tradition in the East, is for us also a historical authority of the first rank. The author was the only Persian historian to travel to Mongolia and describe the countries of Eastern Asia at first hand; it is to his work and the *Journal* of William of Rubruck that we owe practically all we know of the buildings in the Mongol capital of Ḳara-Ḳorum. The

accounts of Čingiz-Khān's conquests are given nowhere else in such detail; many episodes, such as the battles on the Sīr-Daryā above and below Otrar and the celebrated siege of Khudjand are known to us only from the *Taʾrīkh-i djahān-gushāy*. Unfortunately Djuwaynī gives us in these cases not the first-hand impressions of a contemporary, but the opinions of the next generation, so that the details of his narrative, particularly the statements on the numbers of the combatants and the slain have to be taken with great caution; *cf.* for example, the fact, pointed out long ago by d'Ohsson (i, 232 ff.), that the citadel of Bukhārā according to Djuwaynī was defended by 30,000 men, all of whom were slain upon its capture, while Ibn al-Athīr (xii, 239), on the authority of an eye-witness, says the garrison consisted only of 400 horse. Again we find in Djuwaynī two versions of the struggle between the Ḳara-Khitay and Muḥammad Khwārazm-Shāh, based apparently on different sources (written or oral). It was only by later compilers like Mīrkhwānd that these contradictory accounts were woven into a uniform narrative, not, of course, in accordance with the standards of modern criticism; European scholars, to whom such compilations were much more accessible than the original authorities, have been frequently led astray by them.

Djuwaynī began work on his history during his residence in Mongolia in 650/1252-3; he was still working on it in 658/1260, for he refers to the state of Mā warāʾ al-Nahr in 658/1259-60 (Ḳazwīnī's text, i, 75, tr. Boyle, i, 96) and also to a Georgian rising that took place in the autumn of that year (text, ii, 261; tr., ii, 525); but there are no references to subsequent events, nor indeed to the operations against the Caliphate 655-6/1257-8), and there are many indications that the history was left in a state of incompletion.

Towards the end of his life he composed in Persian (not in Arabic as stated by Quatremère and repeated by Barthold in *EI*[1]) two treatises describing the misfortunes which had befallen him under Abaḳa, the first named *Tasliyat al-ikhwān* and the second bearing no special title: extracts from these short works have been published in the Persian introduction to Ḳazwīnī's edition of the *Taʾrīkh-i djahān-gushāy*.

Bibliography: The text of Djuwaynī's history is available in the edition of Mīrzā Muḥammad Ḳazwīnī: *The Taʾrikh-i-jahán-gushá* of *ʿAláʾu 'd-Din ʿAtá-Malik-i-Juwayni*, 3 vols., (*GMS*, Old Series, xvi/1, 2, 3), London 1912, 1916 and 1937; and in the translation of J. A. Boyle, *The history of the world-conqueror*, 2 vols., Manchester 1958. On Djuwaynī as a stylist see Bahār, *Sabk-Shināsī* iii, 51-100. (W. Barthold-[J. A. Boyle])

DJUWAYNĪ, Shams al-Dīn Muḥammad b. Muḥammad, Persian statesman known as "*Ṣāḥib Dīwān*", brother of the historian ʿAlāʾ al-Dīn Djuwaynī (difference in their respective ages unknown), was made Chief Minister in 661/1262-3 by the Ilkhān Hülegü [*q.v.*], according to Rashīd al-Dīn, ed. Quatremère, i, 302 ff., 402. Nothing is known about his youth, and his brother does not mention him in his historical work. He became *Ṣāḥib* (*-i*) *Dīwān* (approximately equivalent to Finance Minister), and also held this post under Abaḳa (664-81/1265-82); with the help of devoted officials he extended his influence throughout the whole state of the Ilkhāns. His reputation grew steadily, especially among his fellow-Muslims, whom he protected from many a despotic act on the part of their heathen overlords. His fortune grew simultaneously, especially with regard to landed property, from which, it is reckoned, he finally had a daily income of one *tūmān* (Waṣṣāf, ed. Bombay, i, 56; although Rashīd al-Dīn speaks of only one-tenth of this sum). Thus in 676/1277 Djuwaynī emerged as the fitting personality to strengthen the weakened position of the Mongols in Anatolia. He also succeeded in establishing himself with the Ḳaraman Oghullarī, installing his son Sharaf al-Dīn Hārūn as governor there (transferred to Baghdād 682/1283 and put to death there 685/1286), and then returned home to Īrān. In the meantime one of his opponents, Madjd al-Mulk Yazdī, had come to the fore and was created State Controller (*Mushrif al-mamālik*); all decrees had to bear his signature alongside Djuwaynī's (Waṣṣāf, ed. Bombay, i, 95). From now on Abaḳa withdrew his favour more and more from Djuwaynī; it has been supposed (Köprülü in *IA*) that the contrast between the anti-Islamic ruler with his policy of western alliance and the strictly Muslim Djuwaynī may have contributed to this. In this difficult situation Djuwaynī also met with a stroke of fate in the death of his (eldest?) son, the admittedly very harsh governor of Iṣfahān, Bahāʾ al-Dīn Muḥammad, in Shaʿbān 678/December 1279 (cf. Waṣṣāf, i, 60-6). Only Abaḳa's death (Muḥarram 681/April 1282) gave Djuwaynī the chance of ridding himself of Yazdī (put to death Djumādā I 681/ August 1282). Djuwaynī was once again the sole leading minister and stood in high favour with the new Ilkhān Aḥmad, who was the first Muslim in this position—the more so since he had helped him towards a temporary victory over the pretender to the throne, Arghun, son of Abaḳa. He made use of this time to bring about an agreement with Egypt (682/1283), and thus to terminate for the time being the struggles which, hitherto, had been religious in nature. When Arghun finally succeeded in establishing himself (683/1284) Djuwaynī at first attempted to flee to India, but later decided to ask the new Ilkhān for pardon. He offered a ransom for himself and his family but, as he was able to raise only 400,000 *dirham* out of the 2000 *tūmān* demanded, he was cruelly put to death on 4 Shaʿbān 683/16 October 1284 near the village of Ah(a)r between Ḳazwīn and Zandjān. Several of his sons also met with the same fate, although information about this is self-contradictory in detail.

Like his brother, Djuwaynī patronized theology, science and art to the best of his ability, and gave a large proportion of his income to this end (Ḥamd Allāh Mustawfī, *Taʾrīkh-i guzīda*, i, 584). A number of learned men such as Naṣīr al-Dīn Ṭūsī [*q.v.*], and theologians have dedicated their works to him or to one of his sons, and poets have composed *ḳaṣīdas* to him (*e.g.*, Saʿdī, Ṣaḥibiyya). Djuwaynī himself wrote Arabic and Persian poetry with great command of language which (with reservations about Arabic: Waṣṣāf, i, 58) was also recognized by his contemporaries (several published in the Tehrān periodical *Armaghān*, v, 284 ff.; xiii, 379 ff.). Besides these some of his writings from government offices have been preserved in collections (*munshaʾāt*).

Bibliography: M. Fuat Köprülü in *İA*, iii, 255-9; Spuler, *Mongolen*[2], Berlin 1955, index (here references to the original sources are also to be found). (B. Spuler)

DJUZʾ, pl. adjzāʾ, (i) a "foot" in prosody [see ʿarūḍ]. (ii) a division of the Ḳurʾān for purposes of recitation [see ḳurʾān].

DJUZʾ (pl. *adjzāʾ*), part, particle, term used in the technical language of *kalām* and of *falsafa*

to describe the (philosophical) atom in the sense of the ultimate (substantial) part, that cannot be divided further, *al-djuzʾ alladhī lā yatadjazzaʾ* (cf. al-Djurdjānī, *Taʿrīfāt*, ed. Flügel, Leipzig 1845, 78); *al-djuzʾ al-wāḥid* is sometimes used. Synonym: "elementary and indivisible matter": *djawhar fard*; *al-djawhar al-wāḥid alladhī lā yanḳasim*.—For other definitions of vocabulary see DHARRA.

Atomistic conceptions of the world (philosophical atomism) existed very early in Islam, sometimes along heterodox lines, sometimes fully accepted by official teaching. Thus we have the atomism of Muḥammad b. Zakariyyā al-Rāzī [*q.v.*], and of numerous trends from the *ʿilm al-kalām*. One of the first elaborations, as Horten has shown, was that of the Muʿtazilī Abu 'l-Hudhayl (contested by al-Naẓẓām and the Ismāʿīlī Abū Ḥātim al-Rāzī).—Al-Bāḳillāni and his school inherited this atomism, modified it along Ashʿarī principles, formed from it a strict occasionalism, and organized it into a natural philosophy which has become famous. Many Ashʿarīs were faithful to it, in a rigid form in various manuals and later commentaries (al-Laḳānī, al-Sanūsī of Tlemcen, al-Bādjūrī, etc.)—sometimes in a mitigated form, *e.g.*, al-Īdjī and his commentator al-Djurdjānī (there is a similar tendency in the Māturīdī al-Nasafī, and in al-Taftāzānī). It may be said on the other hand that the atomism of the old *kalām*, hardly mentioned and made much more flexible by al-Ghazālī, was practically abandoned by Fakhr al-Dīn al-Rāzī, whilst al-Shahrastānī attempted an intermediate solution (see below). It would therefore be inaccurate to join together, as has sometimes happened, occasionalist atomism and Ashʿarī solutions.

This atomism of the *kalām* certainly derives from Greek sources, Democritus and Epicurus, but transforming them; and still more perhaps from Indian sources (see S. Pines, *Beiträge zur islamischen Atomenlehre*, Berlin 1936, 102-23). It was known to Maimonides, explained and refuted in the "Guide to the Perplexed", but in a somewhat more rigid form. Thomas Aquinas made a similar refutation in the *Summa contra Gentiles*, and made it familiar to the Latin Middle Ages. A detailed statement of the atomist theses of Abu 'l-Hudhayl, and especially the Ashʿarī theses, would take a long time and belongs rather to the history of *kalām* [*q.v.*]. There is a suggestive summary in L. Massignon, *Passion d'al-Ḥallādj*, Paris 1922, 550-3. In brief: only the atom is substance, and material substance, tangible or tenuous; all the rest is of the order of "accidental" (*ʿaraḍ*); no accidental lasts longer than an instant (*ān, waḳt*); no accidental can be superadded to another, it can only reside in the substance-atom and cannot pass from one subject to another; each accidental is thus created directly by God; in consequence, all transitive action between two bodies is impossible; therefore, there can be no effective secondary causes (*asbāb*). We can see the link between atomism and the Ashʿarī negation of secondary causes.

To conclude, here is an enumeration that al-Djurdjānī gives, following al-Īdjī, in the chapter where he treats of the nature of simple bodies (*Sharḥ al-Mawāḳif*, Cairo ed. 1325/1907, vii, 5 ff.). He notes five possible theories, and centres them all on atoms, *al-adjzaʾ*: (1) atoms exist *in esse* (*bi 'l-fiʿl*), are determined and indivisible: these are atoms in al-Bāḳillānī's sense; (2) al-Naẓẓām's thesis (corrected by S. Pines, id., v. Index): atoms exist *in esse* but are not determined—a thesis that al-Djurdjānī compares to Galen and Xenocrates (?); (3) contrary thesis of al-Shahrastānī (this time closer to Plato (?): atoms are determined, which rules out hylomorphism, but they only exist *in posse* (*bi 'l-ḳuwwa*); (4) thesis of the *falāsifa*: atoms are not determined and exist only *in posse*, extent is absolutely continuous,—hylomorphism is thus the principle of explanation; (5) to these four theses collected by al-Īdjī, al-Djurdjānī adds a fifth which he attributes to Democritus; the simple body is composed of "little bodies" which cannot be divided in fact, but can in spirit, by hypothesis. From an historical point of view, need it be said, this summary requires revision. It is nevertheless an indication of the efforts of al-Īdjī and al-Djurdjani to give an account of all the theories—including the hylomorphism of the *falsafa*—in terms of atoms.

Bibliography: in the article. The fundamental work remains that of S. Pines, where essential references to Arabic texts and works in European languages are given. See in particular the article by O. Pretzl, *Die frühislamische Atomenlehre*, in *Isl.*, 1931, 117-30. Also Gardet-Anawati, *Introduction à la théologie musulmane*, Paris 1948, see index I, "Atomisme". (L. GARDET)

DJŪZDJĀN, Persian GŪZGĀN, the older name of a district in Afghān Turkestan between Murghāb and the Āmū Daryā. Its boundaries were not well defined, particularly in the west, but it certainly included the country containing the modern towns of Maymana, Andkhūy, Shibargān and Sar-i Pul. Lying on the boundary between the outskirts of the Iranian highlands and the steppes of the north, Djūzdjān probably always supported nomad tribes as it does at the present day in addition to the permanent settlements in its fertile valleys (cf. Ibn Ḥawḳal, 322 ff.; Ḥādjdjī Khalīfa, *Djihān-numā*, ed. 1145 A.H., 316). The principal wealth of the land lay in its flocks (camels: Ibn Ḥawḳal, *loc. cit.*; Vámbéry, *Reise in Mittelasien*², 213; horses: Marquart, *Ērānšahr*, 138, 147; Vámbéry, 222; sheep: Vámbéry, 213; Yate, *Northern Afghanistan*, 344; cf. Iṣṭakhrī, 271; Ibn Ḥawḳal, 322). Although the way from the highlands of Īrān to Mā warāʾ al-Nahr lay through Djūzdjān, it was used not so much for friendly intercourse as as a military road for armies passing through it.

The district, which in the beginning of the 1st/7th century was attached to Ṭukhāristān (see Marquart, *op. cit.*, 67), was conquered on the occasion of the campaign of al-Aḥnaf b. Ḳays in 33/653-4 by his lieutenant al-Aḳraʿ. The marches suffered not only from the wars with the Turks but also from domestic differences within Islam. In the year 119/737 the Khāḳān was defeated by Asad b. ʿAbd Allāh al-Ḳasrī near the capital of Djūzdjān (Shubūrḳān). In 125/743 the ʿAlid Yaḥyā b. Zayd, whose tomb was revered long afterward (cf. Wellhausen, *Arab. Reich*, 311), fell in battle here against the Umayyads. During the ʿAbbāsid period the governor's residence was in Anbār (probably the Djūzdjānān of Nāṣir-i Khusraw, 2, possibly the modern Sar-i Pul); the native ruling house of Gūzgān-Khudhā, the Afrīghūn dynasty, continued however to survive, and had its capital in Kundurm (cf. Iṣṭakhrī, 270; Ibn Ḥawḳal, 321 ff.; Yaʿḳūbī, 287). Shubūrḳān occasionally appears as the political centre of Djūzdjān, while Muḳaddasī (297) and Yāḳūt (ii, 149 ff.) mention al-Yahūdiyya (= Maymana [*q.v.*]) as the capital. The ancient name Djūzdjān appears gradually to have fallen into disuse, to survive in literature only for some time longer. The various towns in it continue to be repeatedly mentioned as the scenes of hostile

attacks; only the invasions of Čingiz Khān and Tīmūr can be mentioned here. Nothing shows the importance of the district more clearly than the fact that a number of towns have survived all these vicissitudes until the present day.

In modern times a number of petty Uzbeg Khānates (Akče, Andkhūy, Shibargān, Sar-i Pul, Maymana) have been established in the ancient Djūzdjān, but they were much harassed by raids of their more powerful neighbours such as the invasions of the Turkoman nomads. Since the time of Dūst Muḥammad these Khānates have gradually been incorporated in Afghān Turkestān; Maymana alone retains a vestige of independence under Afghān suzerainty.

al-DJŪZDJĀNĪ, Abū ʿAmr (not ʿUmar as stated by Storey, i, 68) Minhādj al-Dīn ʿUthmān b. Sirādj al-Dīn Muḥammad al-Djūzdjānī, commonly known as Minhādj-i Sirādj, the premier historian of the Slave dynasty of India, was born at Fīrūzkūh [*q.v.*] in the royal palace in 589/1193, as, on his own showing, he was 18 years of age in 607/1210-1 when Malik Rukn al-Dīn Maḥmūd was slain at Fīrūzkūh. His father, Sirādj al-Dīn, a leading scholar and jurist of his day, and a courtier of Sultan Ghiyāth al-Dīn, ruler of Fīrūzkūh, was appointed *ḳāḍī* of the army stationed in India by the Ghūrī sultan Muʿizz al-Dīn Muḥammad b. Sām, also known as Shihāb al-Dīn, in c. 582/1186. He seems to have returned to Ghazna and was subsequently summoned from Fīrūzkūh to Bāmiyān by Bahāʾ al-Dīn Sām b. Shams al-Dīn Muḥammad who appointed him the *ḳāḍī* and *khaṭīb* of his kingdom. Being a state dignitary his father was held in great esteem by the members of the royal family. Minhādj al-Dīn consequently passed his childhood in the *ḥarīm* of the princess Māh-i Mulk, a daughter of Ghiyāth al-Dīn Muḥammad b. Sām, sultan of Ghūr and Fīrūzkūh (558-99/1162-1202). In 622/1225 at the age of 33 he was sent as an envoy to the court of Malik Tādj al-Dīn Yināltigīn (incorrect form: Niyāltigīn, see V. Minorsky in *BSOS*, viii/1 (1935), 257), at Nīmrūz. He was sent on a similar mission again in the following year.

The same year, *i.e.*, 623-4/1226-7, he left for India, most probably at the invitation of Nāṣir al-Dīn Ḳabāča, ruler of Uč, where he was appointed, in view of his erudition and vast learning, principal of the Madrasa-i Fīrūzī, one of the earliest educational institutions in India established by the Muslims. On the overthrow of Ḳabāča by the Slave sultan of Dihlī, Shams al-Dīn Iletmish, in 625/1228, Minhādj changed his loyalty and accompanied the conqueror to Dihlī, where he held, under him, high legal and judicial offices, including that of the Chief Justice of the realm. A great orator and an accomplished scholar, his discourses and lectures were attended even by the highest nobles and the grandees of the Sultanate. In 639/1241-2 he was made *ḳāḍī al-ḳuḍāt* by the Slave king Muʿizz al-Dīn Bahrām Shāh (reigned: 637-9/1239-41). Disturbed by the prevailing political instability and confusion at Dihlī, al-Djūzdjānī decided to try his luck at the court of Lakhnawtī, the stronghold of Muslim occupation in Bengal. However, he did not find conditions very congenial there, and after a stay of two years returned to Dihlī in 642/1244-5.

He was once more the recipient of royal favours and held the double appointment of the *ḳāḍī* of Gwāliyar and the principal of the Madrasa-i Nāṣiriyya, a college named after the sultan Nāṣir al-Dīn Maḥmūd Shāh, son of Iletmish, who reigned from 644-64/1246-65.

The same Sultan, greatly impressed with his vast and varied knowledge of Islamic jurisprudence and the dispensation of justice, appointed him once again the Chief Judge of the realm. He, however, fell a prey to the machinations of a court clique, headed by ʿImād al-Dīn Rīhān, Wakīl-i Dar, who compassed his ruin, and he fell from grace in 651/1253, after having been in office for two years only. He was reinstated in 652/1254 and soon afterwards the title of *Ṣadr-i Djahān* was conferred on him. The next year he was re-appointed Chief Judge of the realm, through the good offices of his patron Ulugh Khān-i Aʿẓam, the powerful minister of Sultan Nāṣir al-Dīn. He was alive uutil at least 658/1259-60 when he completed *ṭabaḳa* 22 of his work. He seems to have died some time during the reign of Sultan Ghiyāth al-Dīn Balban (664/1265-686/1287), full of years and honours, and was, in all probability, buried at Dihlī.

His fame chiefly rests on his *magnum opus*, the *Ṭabaḳāt-i Nāṣirī*, written mainly during the years 657-8/1259-60, after his retirement from active life, and dedicated to Sultan Nāṣir al-Dīn Maḥmūd. It is the main source of information for the early Sultanate period, the author having utilized some of the works which are now no more extant. Among its notable omissions is the total lack of mention of the embassy of Raḍī al-Dīn Ḥasan b. Muḥammad al-Ṣaghānī [*q.v.*], who was sent by the ʿAbbāsid Caliph al-Nāṣir li-Dīn Allāh as a special envoy to the court of Iletmish in 616/1219-20 (see *TA* under the root *K.N.DJ* and the Urdū monthly *Maʿārif*, Aʿẓamgaṙh, June 1959). A Ṣūfī and a poet given to *wadjd* and *samāʿ*, he has been mentioned by ʿAbd al-Ḥaḳḳ Muḥaddith in his *Akhbār al-akhyār* (see Bibliography), where one *rubāʿī* of Minhādj has been quoted. Some other *tadhkiras* of Indian Persian poets (see Ḥabībī in the Bibl.) also mention him, but his poetry and other achievements have been overshadowed by his historical talents.

DOʾĀB, (Pers.) 'two-waters', corresponding to the Greek μεσοποταμία, is in the Indo-Pākistān subcontinent generally applied to the land lying between two confluent rivers, and more particularly to the fertile plain between the Djamnā and the Ganges in Uttar Pradesh. The long tongues of land between the five rivers of the Pandjāb are also known as *doʾābs*. Between the Satladj and the

Beʾās lies the Bist *doʾāb*; between the Beʾās and the Rāwī, the Bārī *doʾāb*; between the Rāwī and the Čenāb, the Rečnā *doʾāb*; between the Čenāb and the Djhelam, the Čadj or Dječ *doʾāb*; and between the Djhelam and the Indus, the Sind Sāgar *doʾāb*. The names for these *doʾāb*s are said to have been invented by the emperor Akbar (*Āʾīn-i Akbarī*, trs. H. S. Jarrett, ii, 311 ff.). The most famous *doʾāb* in Southern India is the Rāyčūr *doʾāb* between the Kistna (Krishna) and the Tungabhadra rivers which formed a fluctuating frontier between the Hindū kingdom of Vidjayanagara and the Muslim states of the Deccan. (C. Collin Davies)

DŌʿĀN [see dawʿān].

DOBRUDJA, the plateau between the Danube and the Lom river in the North, the Black Sea in the East and the Prowadijska river or the Balkan range in the South. Deli Orman in this area is distinguished from the steppe region, Dobrudja-Kîrî, in the East which is considered as the Dobrudja proper. Called Scythia Minor in the Graeco-Roman period, it was included in the Byzantine province of Paristrion (Bardjān in Idrīsī's world map) in 361/972. In Bulgarian Karvunska Chora, it was 'the land of Karbona' in the mediaeval Italian maps. Its modern name came from Dobrudja-eli (as Aydîn from Aydîn-eli) which in Turkish meant the land of Dobrudja, Dobrotič (as Karlofdja from Karlowitz) (cf. *Susmanos-eli* in Neshrī, *Ğihānnümā*, ed. Fr. Taeschner, Leipzig 1951, 66). Yanko or Ivanko, son of Dobrotič, was mentioned as Dobrudja-oghlu in Neshrī (66, 68).

From the early 5th century A.D. until the 13th/19th century Dobrudja became, primarily for the peoples of Turkic origin coming from the Eurasian steppes, a natural route leading to the invasion of the Balkans or a refuge for those pushed by their rivals beyond the Danube. Thus in the footsteps of the Huns (408 A.D.) came Avars (in 534 and especially in 587 A.D.), Bulghars (especially in 59/679) with their capital in Preslav, southern Dobrudja, Pečeneks (440/1048), Uz (456/1064) and Ḳîpčaḳs (Cumans) (484/1091). Among those the Ḳîpčaḳs appeared to play politically and ethnically the most important part in the history of Dobrudja until the advent of the Ottoman Turks. T. Kowalski finds (*Les Turcs et la langue turque de la Bulgarie du Nord-Est*, in *Ac. Pol. Mém. de la commission orientaliste*, xvi, Cracow 1933, 28) linguistic remains of these early Turkish invasions from the North in the Gagauz Turkish (cf. gagauz). The name Deli Orman comes from the Cuman Teli Orman (cf. G. Moravcsik, *Byzantinoturcica*, ii, Berlin 1958, 305-6). The Cumans in the Balkans were mostly Christianized, and, mingled with the native Wallachs and Slavs, they continued to play the rôle of a ruling military class among them (cf. L. Rásonyi-Nagy, *Valacho-turcica*, Berlin-Leipzig 1927, 68-96; P. Nikov, *The Second Bulgarian Kingdom*, Sofia 1937, in Bulgarian). Furthermore the Mongol invasion of the Dasht-i Ḳîpčaḳ in 620/1223 and the foundation of the Khānate of the Golden Horde in 635/1238 caused large groups of Cumans to flee to the West (cf. B. Spuler, *Die Goldene Horde*, Leipzig 1945, 19-20). As to the bulk of the Ḳîpçaḳs who remained in the Dasht under Mongol rule, they mostly adopted Islam and were to play a significant part under the name of Tatar in Dobrudja's history in the following periods. With their support Noghay [*q.v.*] established his overlordship on the Bulgarian kingdom by 681/1282, where the king and many of his boyars were of Cuman origin. The lower Danube with Sakdjî (Isaccea) was reported in the Arabic sources (Baybars, *Zubdat al-fikra*, in W. de Tiesenhausen, *Altînordu devleti tarihine ait metinler*, Turkish trans. I. H. Izmirli, Istanbul 1941, 221; Nuwayrī, *ibid.*, 282) as one of the headquarters of Noghay. He was, Z. V. Togan thinks (*Umumî Türk tarihine giriş*, Istanbul 1946, 256, 325), acting against the Byzantines under the influence of the *ghazā* preachings of Ṣaru Ṣaltuḳ, who was active in Sakdjî and the Crimea during this period. After the suppression of Noghay by Tokhtu, Khān of the Golden Horde (autumn 698/1299), Tukal Bogha, his son, was placed in the lower Danube and Sakdjî and Noghay's son Čeke came into Bulgaria to seize the throne for a short time (cf. Baybars and Nuwayrī, *ibid.*).

As for the Anatolian Turks who were said to come with Ṣaru Ṣaltuḳ in Dobrudja in this period, we are now in a position to assert after P. Wittek's comparative study of the original Turkish account of Yazîdjîoghlu ʿAlī with the Byzantine sources (*Yazîjîoghlu ʿAli on the Christian Turks of Dobruja*, in *BSOAS*, xiv (1952), 639-68) that these came actually to settle in Dobrudja after 662/1263-4 with Sultan ʿIzz al-Dīn Kaykāūs who was then a refugee in Byzantium. Michael VIII Palaeologus gave permission to Kaykāūs's followers in Anatolia to come to settle in Dobrudja, then a no-man's-land between the Golden Horde, Bulgaria and the Byzantine empire (the arguments of P. Mutafčiev, *Die angebliche Einwanderung von Seldschuk-Türken in die Dobrudscha im XIII. Jahrh.*, in *Bulg. Acad. Sci. Lett.*, lxvi/1, 2, are not valid after Wittek's study; cf. also H. von Duda, *Zeitgenössische islamische Quellen und das Oguznāme des Jazygyoglu ʿAli...*, *ibid.* 131-45; see also Adnan S. Erzi, in *İA*, v/2, 716). These Muslim Turks from Anatolia, mostly nomads, formed there "two or three towns and 30-40 *oba*, clans" (Yazîdjîoghlu in Wittek, 648; von Duda, 144). Abu 'l-Fidāʾ's note about the majority of the population of 'Ṣakdjī' being Muslims (*Géographie*, ed. Reinaud and de Slane, Paris 1840, 34) apparently referred to them rather than the Tatars settled under Noghay. With his headquarters in Sakdjî Noghay, then converted to Islam, must have become after Berke Khān's death (665/1267, cf. Spuler, 51) the protector of the Anatolian Turks in Dobrudja (cf. Z. V. Togan, *ibid.*). It is interesting to note that the emigration of them back to Anatolia about 706/1307 followed the death of Noghay and the arrival of Tukal Bogha, apparently a pagan like his father Tokhtu Khān. In 699/1300 Noghay's son Čeke too was killed by Svetoslav in Bulgaria. Yazîdjîoghlu noted (Wittek, 651) that these Turks decided to emigrate because the Bulgarian princes had risen up and occupied the larger part of Rumeli. Those who remained, he added, became Christians. These people of Kaykāūs were, as Wittek demonstrated after Balasčev, named *Ghaghauz* after their lord Kaykāūs (cf. Wittek, *ibid.*, 668). But in 732/1332 Baba Ṣaltuḳ (later Baba-dagh) was, Ibn Baṭṭūṭa reported (*Voyages*, ii, 416; English trans. Gibb, ii, Cambridge 1959, 499), an important town possessed by the 'Turks'.

By 766/1365 an independent despotate under a Christianized Turkish family rose in the part of Dobrudja where the Gagauz always lived (in the Ottoman *defter* of 1006/1598, Tapu Kadastro Um. Md, Ankara, no. 399, some Christians in the area still bore Turkish names such as Arslan, Ḳaragöz). Balîk (758/1357) (also Balica; the name is a Cuman name, cf. Rásonyi, *ibid.*; Iorga identified it with Rumanian Baliţa; *Notes d'un historien*, in *Acad.*

Roum. Bull. Sec. His. ii-iv (1913), 97. Čolpan, an important man under the son of Dobrotič, bore an Anatolian Turkish name) and especially his energetic brother Dobrotič (the name is undoubtedly of Slav origin) founded in the area from the delta of the Danube down to the Emine promontory south of Varna a despotate independent of Byzantium and Bulgaria. Its capital was at Kalliakra by 767/1366 (Iorga, *Dobrotisch*, in *Ac. Roum. Bull. de la Sec. His.* ii-iv, 1914, 295) and Varna by 790/1388 (Neshrī, 68). Apparently he profited from the Ottoman onslaught in Byzantine Thrace and Shishman's Bulgaria between 762-73/1361-71. From 763/1362 to 767/1366 his and the Ottomans' enemies were the same (cf. Iorga, *Dobrotisch*, 295). Allied with Venice, Dobrotič challenged the Genoese in the Black Sea. For Venice the wheat export of Dobrudja was then vitally important (cf. F. Thiriet, *Régestes des déliberations du Sénat de Venise concernant la Romanie*, i, 1958, documents nos. 545, 575, 576, 653, 671, 689). The land over which he ruled was named after him 'the Land of Dobrotič', *terra Dobroticii* (in 758/1357, *Acta Patr. Const.*, i, 367) or Dobrudja-eli in Turkish (Yazîdjîoghlu in Wittek, 649). His son Ivanko or rather Yanko (*Ioanchos*) was an Ottoman vassal by 790/1388 (Neshrī, 66, 68). It is most likely that Dobrotič too had accepted Ottoman suzerainty as had Shishman since 773/1371. Under Yanko Dobrudja experienced the first Ottoman conquest.

In the winter of 790/1388 Murād I hastily sent an army under ʿAlī Pasha against Shishman and Yanko who had refused to join as his vassals the Ottoman army against Serbia. ʿAlī passed the Balkan range through the pass of Nadir, captured Provadija (Pravadi), Shumla (Shumnu), Eski-Istanbulluk (ancient Preslav), Madera, and proceeded toward Trnovo (see BULGARIA). Then Yakhshi, son of Timurtash, was ordered to subdue the land of Dobrudja. According to a Turkish source (Neshrī, 66-70, reproduces an old and detailed account of this expedition. Rūḥī gives the same account with omissions. Fr. Babinger, *Beiträge zur Frühgeschichte der Türkenherrschaft in Rumelien*, München 1944, 30, confused the expeditions of 790/1388 and 795/1393) two men from Varna came and said that the notables of the city had decided to seize the Tekvur, son of Dobrudja, and surrender the fortress to the Pasha. But the fortress did not surrender when Yakhshi came (Neshrī, 68). The Ottomans, busy elsewhere, left Bulgaria to come back only in 795/1393. In the meantime Dobrudja and Silistre (Durostor) were occupied by Mirčea, a Wallachian prince. In his treaty with Poland in 791/1389 and in its renewal in 793/1391 he called himself 'the Lord of Silistre and Despot of the Land of Dobrotič' (*despotus terrarum Dobrodicii*) (N. Iorga, *Hist. des Roumains*, iii, Bucarest 1937, 339). The 'Turkish Towns' mentioned among his possessions (Iorga, *Dobrotisch*, 298) might be Sakdjî and other towns founded by the 'people of Kaykāūs'. From there Mirčea attacked the aḳîndjîs at the Ottoman *udj* of Karîn-ovasî (Karnobad) who were a constant threat to his new possessions (cf. A. Decei, *L'expédition de Mirčea I contre les akindji de Karinovasi*, in *Rev. des Ét. Roumaines*, Paris 1953, 130-51). It was this bold attack that made Bāyezīd I come to consolidate Ottoman rule in Bulgaria (see BĀYAZĪD I). Dobrudja and Silistre were taken under direct Ottoman rule during the operations in 795/1393. Then Dobrudja was made an important *udj* [*q.v.*] for aḳîndjîs, and preserved this character throughout its history, attracting warlike elements as well as dissidents and sectarians. Mirčea profited from the Ottoman disaster at Ankara in 805/1402 to take back Silistre and the northern Dobrudja (Iorga, *Hist. des Roumains*, iii, 385). Süleymān, Bāyezīd's successor in Rumeli, appears then to have recognized the fact. But soon the aḳîndjîs renewed their raids against Mirčea (Neshrī, 130; P. Ş. Nāstrul, *Une victoire de Voyvode Mirčea*, in *Studia et Acta Orientalia*, i, Bucarest 1958, 242). To free himself of them Mirčea invited and gave his support to Mūsā Čelebī, Süleymān's brother and rival (Neshrī, 130; P. P. Panaitescu, *Mirčea čel Bătran*, Bucarest 1943, 214). The aḳîndjîs joined Mūsā [*q.v.*] against Süleymān, and left Mirčea alone. In 819/1416 he supported Muṣṭafā, another pretender, and Shaykh Badr al-Dīn [*q.v.*] against Meḥemmed I [*q.v.*] in Dobrudja and Deli Orman. The *ṭovidjas*, aḳîndjî leaders, Ṣūfī dervishes who were in this *udj* area in great numbers joined them (cf. Ş. Yaltkaya, *Şeyh Bedreddin'e dair bir kitap*, in *TM*, iii, 251; Orudj, ed. Fr. Babinger, 45, 111). Though in their official titles Mirčea and Mihai, his successor, always mentioned 'the two sides of the Danube' among their possessions it was apparent that Dobrudja and Silistre were then actually in the hands of the akîndjîs, who in their antipathy toward Meḥemmed I must have continued their friendly relations with the Wallachian voyvodas. Mirčea's death (Dhu 'l-Ḥidjdja 820/ January 1418) and the ensuing confusion provided the Sultan with the opportunity to establish his control in Dobrudja in 822/1419. After he subdued his rivals in Anatolia, the Djāndārids and then the Ḳaramānids (see ḲARAMĀN OGHLU), Meḥemmed I organized a large-scale expedition against Wallachia in which both Anatolian principalities sent auxiliary forces. An Ottoman fleet participated in the operations. In the summer of 822/1419 he crossed the Danube, captured and fortified Yergögü (Giurgiu) and attempted to take Kilia while the raiders devastated the enemy's country. Mihai first took refuge in Argesh and then perished in an skirmish. Before his return the Sultan strengthened Sakdjî and Yeni-Sale against future attacks of the Wallachians. No mention is made of Silistre during this expedition. Dan I, the new Voyvoda, recognized Ottoman suzerainty, though the Emperor Sigismond had started southwards with the intention of invading the Dobrudja. He was delayed by the Ottoman action against Severin (autumn 822/1419). (Iorga, *GOR*, i, 375, and *Hist. des Roumains*, iii, 401-2, dates this expedition 820/1417. In this year Meḥemmed I was at war against the Ḳaramān oghlu in Anatolia, cf. Ibn Ḥadjar, text in Ş. Inalcık, *Ibn Hacer'de Osmanlılara dair haberler*, *AÜDTCF Dergisi*, vi/5, 525. Following Neshrī's confused chronology, Uzunçarşılı, *Osmanlı tarihi*, i, new ed. Ankara 1961, 356; and A. Decei, *IA*, iii, 635, adopted 819/1416 as the date of the expedition against Wallachia. For our dating see further O. Turan, *Tarihi takvimler*, Ankara 1954, 20, 56; Atsız, *Osmanlı tarihine ait takvimler*, Istanbul 1961, 20; Ibn Ḥadjar, *ibid.*, the years 821/1418 and 822/1419; and a letter of Meḥemmed I to the Mamlūk Sultan in Ferīdūn, *Munshaʾāt al-salāṭīn*, i, 164-5). The Wallachians under Dan attempted to take Silistre during the period of the renewed civil war in the Ottoman empire in 825/1422 (Iorga, *Hist. des Roumains*, iv, 20; Neshrī, 154; ʿĀshîḳpashazāde, ed. ʿĀlī, 105). Against him Fīrūz (Feriz) Beg was appointed in this *udj* to organize counter-raids.

Firmly established in Dobrudja since Meḥemmed I's expedition in 822/1419, the Ottomans used it as

a base to extend their control on the other side of the Danube. The imperial army under Meḥemmed II invaded Boghdan [*q.v.*] in 881/1476, passing through Dobrudja (see MEḤEMMED II), Bāyezīd II using the same route took Kilia and Aḳkermān in 889/1484. During this expedition he built the great mosque and the *zāwiya* of Ṣaru Ṣaltuḳ in Baba Ḳaṣabasī (Babadagh) and endowed them with all the tax revenues of the town and surrounding villages (for these endowments a *waḳf defteri* exists in the *Tapu ve Kadastro Um. Md.*, Ankara, no. 397). In his expedition against Boghdan in 945/1538 Süleymān I too showed the same interest in this pre-Ottoman Islamic centre (cf. Ferīdūn, i, 602-3).

According to the *defter*s (see DAFTAR-I KHĀḲĀNĪ) of the 10th/16th century (in the *Başvekâlet* Archives Istanbul, Tapu nos. 65, 542, 688, 304, 483, 732, and, in *Tapu ve Kadastro Um. Md.* Ankara, nos. 397, 398, 399) the sandjaḳ of Silistre and Aḳkermān comprised the *ḳaḍā*s of Aḳkermān, Djankermān, Kili, Bender, Ibrail, Silistre, Ḥīrsova, Tekfurgölü and the nāḥiyes of Varna, Pravadi, Yanbolu, Ahyolu, Rusi-Ḳaṣrī, Karin-ābād and Aydos. Balčık, Kavarna and Kaligra were included in the nāḥiye of Varna. The Ottomans applied in Dobrudja typical Ottoman laws and regulations with special provisions for such groups as *eshkündji*s, *müsellem*s, *Djebelü-Tatar*s, *Matrak-Tatarlarī*, *djānbāz* (cf. the *ḳānūnnāme*s in Ö. L. Barkan, *Kanunlar*, 272-89).

The following is a table drawn up according to the defters of 1006/1597 (*Tapu ve Kadastro Um. Md.*, Ankara, nos. 397, 398, 399).

Dasht-i Ḳīpčaḳ in autumn 797/1395. Their leader Aḳtaw was a general of Tokhtamīsh Khān (cf. Niẓām al-Dīn Shāmī, *Ẓafarnāma*, Turkish trans. N. Lugal, Ankara 1949, 194). Bāyezīd I took them into his own service with the same status as the *Yürük* [*q.v.*] (Ö. L. Barkan, in *Iktisad Fak. Mec.*, xv, 211-3). From Budjaḳ [*q.v.*] and the Crimea Tatar refugees continued to come into Dobrudja in later periods (especially in 918/1512 and 920/1514, cf. Müstecib H. Fazıl, *Dobruca ve Türkler*, Köstence 1940, 36). In 1007/1599 Baldasarius Waltheri reported that in the plain of Dobrudja lived 6000 Tatar families, Dobrudja Tatarlarī, who provided an auxiliary force to the Ottoman army under a Crimean prince (Müstecib H. Fazıl, *ibid.*, 37).

In the regions of Tekfur-gölü, Ḥīrsova, Silistre and Varna also lived the *Yürük* [*q.v.*] groups: those of *Ḳodjadjīḳ* 44 odjaḳ, each odjaḳ being regularly 30 men, *Nal-döken* 34 odjaḳ, *Tañrī-dagh* about 95 odjaḳ by 1009/1600 (cf. T. Gökbilgin, *ibid.*, 56, 70, 76, 212-30). Each odjaḳ furnished five fighters for the army.

Turkish Muslims made up, in the countryside too, the majority of the population. The study of personal names and village names (the above mentioned defters are *mufaṣṣal defter*s in which the names of the heads of the households are recorded) shows that an overwhelming majority of the villages were the new ones founded by the Turkish Muslim immigrants from Anatolia. We know that the Ottoman state made from the early conquest onwards forced settlements of Anatolian Turks in this important *udj* area (cf. Barkan, *Kanunlar*, 273, 274,

Town	Number of Muslim districts	Number of non-Muslim districts	Tax revenue
Silistre	16	8 1 Jewish 1 Gypsy	215,429
Isaḳdjī (Isaḳča, Saḳdjī)	1	6	187,995
Mačin	—	4	83,113
Baba (Baba-dagh)	16	2	107,350 (Waḳf)
Ḥīrsova	2	—	50,000
Tekfur-gölü	1	1 56 families of tuzdju	34,477
Balčīḳ	12	3	—
Ḳavarna	—	4	32,606
Pazardjīḳ	16	1	20,000
Kaligra (Kalliakra)	1 (dervishes in the zāwiya)	1	12,110

As separate small communities gypsies lived in all these towns. They were mostly Christians. Only in Silistre 21 Jewish families were recorded. Here is a table of the ports in Dobrudja with their revenues from the dues on fish, salt, mills and the customs dues:

Silistre: 566,666, Tulča, Isaḳdjī and Mačin together: 561, 675. Varna, Balčīk, Kaligra, Mangalya, Köstendje, Ḳara-Ḥarmanlīḳ, Ḳamčī-suyu, Galata, Baba-gölü and Yeni-Sale together: 281,004.

In 32 villages of the *ḳaḍā* of Ḥīrsova and in 9 villages of that of Tekfur-gölü lived *Tatarān-i Djebelüyān* (*Djebelü Tatarlar*) with the obligation to equip at their own expense 360 *djebelü*s for the army, and in return they were exempted from the *ʿawāriḍ* [*q.v.*] taxes. The Tatars of Aḳtaw who were settled around Tekfur-gölü, Pravadi, Varna, Yanbolu and Filibe (T. Gökbilgin, *Rumeli'de Yürükler, Tatarlar ve Evlâd-i Fâtihân*, Istanbul 1957, 26, 87, 88) had immigrated into Rumeli when Tīmūr invaded the and *Iktisad Fak. Mec.*, xv, 227). A great number of the villages bore a personal name ending with the word *ḳuyu*, well (Aḳīndjī Ḳuyusu, Ḳara Bali Ḳuyusu, Avunduḳ Ḳuyusu etc.). A large number of them revealed a tribal origin with the word *djemāʿat* (for example Ḳarye-i Eyerdji Khayr al-Dīn Pīnarī, djemāʿat-i Seyyid Khīzīr, Ḳarye-i Ḳartallu Muṣṭafā ʿan djemāʿat-i Ṣaliḥ Ṭovidja etc.). Apparently few villages with a mixed population of Muslims and Christians were pre-Ottoman. In the northern Dobrudja there existed large villages of exclusively Christian population (Mačin, Ḳara-Ḥarmanlīḳ, Esterbend etc.). Some names indicated their Romanian origin (Radul, Yanko, Mihne etc.). Most of the Christian villages enjoyed exemption from *ʿawāriḍ* taxes in return for their services to repair the bridges and roads, or for their work in the salt production.

The repopulation and prosperity of Dobrudja under the Ottomans were primarily due to the fact

that they considered it as an important *udj* area, and the Anatolian immigrants were encouraged to engage in agriculture by the increasing demand for and easy transportation of the wheat production of Dobrudja for Istanbul. From Ḳara-Ḥarmanlîḳ, Köstendje, Mangalya, Balčîk and Kaligra a large quantity of wheat and fish was exported regularly to the Ottoman metropolis. At these ports the state had built special storehouses for wheat. Muslims paid two per cent and *dhimmīs* four per cent as customs due on their export. The ports of Silistre, Tulča, Isakdjî, Mačin, Ḥîrsova exported, in addition, Wallachian timber, salt, felt of Brashow and slaves for Istanbul and Rumeli (The *ḳānūnnāmes* of the ports of Dobrudja in the above-mentioned defters are not yet published; also see ʿOthmān Nūrī, *Medjelle-i Umūr-i Belediyye*, Istanbul 1338, 781, and *Tarih Vesikaları*, v, 333). The towns of Ḥadjîoghlu Pazardjîk, Mangalya and Baba with their weekly fairs were important trade centres for the whole region (cf. Ewliyā Čelebi, *Seyāḥatnāme*, iii, Istanbul 1314, 329-71).

From 983/1575 onwards Cossack attacks became a constant threat to Dobrudja. In 995/1587 they burned down Baba (Babadagh). In 1003/1595 Mihai, the rebellious Voyvoda of Wallachia, supported by the Cossacks, renewed Mirčea's attacks on the Ottoman cities and fortresses in Dobrudja and caused a mass emigration (cf. A. Decei, in *İA*, iii, 637). The continuing Cossack threat made the Ottoman government decide to create a new *eyālet* including the sandjaḳs of the Eastern Black Sea with Silistre and Özü as its capitals (cf. ʿAynī ʿAlī, *Ḳawānīn-i Āl-i ʿOthmān* ..., Istanbul 1280, 13).

The Dobrudja was invaded by the Russian armies for the first time in 1185/1771. Babadagh, general headquarters of the Ottoman armies, fell in 1185/1771, and, when in 1188/1774 Ḥadjioghlu Pazardjîḳ, the new headquarters, also fell the Ottomans demanded a cease-fire. The Dobrudja became again a battlefield between the Ottoman and Russian armies in 1224/1809, 1244/1829 and 1271/1855. The Russian invasion of 1244/1829 proved especially ruinous for the Dobrudja, causing a mass emigration of the Turkish-Tatar population. Whole towns and villages were deserted. The population of the Dobrudja after this war was estimated at only 40,000 (Müstecib H. Fazıl, *op. cit.*, 75; E. Z. Karal, *Os. Imp. ilk nüfus sayımı*, Ankara 1943). Appreciating its strategical importance the Ottoman government took special measures to repopulate the Dobrudja by improving agriculture and bringing in settlers. In Muḥarram 1253/April 1837 Maḥmūd II (cf. H. Inalcık, *Tanzimat ve Bulgar Meselesi*, Ankara 1943, 27-8) and in spring 1262/1846 Sultan ʿAbd al-Medjīd (*Seyāḥatnāme-i Hümāyūn*, 11-5) visited the area. In 1266/1850 an expert was sent to explore the agricultural possibilities there (I. I. de la Brad, *Excursion agricole dans la plaine de la Dobroudja*, Const. 1850). At this date in the *ḳaḍās* of Tulča, Isaḳča, Mačin, Ḥîrsova, Babadagh, Köstendje, Mangalya, Pazardjîk, Balčîk and Silistre were 4800 Turkish, 3656 Romanian, 2225 Tatar, 2214 Bulgarian, 1092 Cossack, 747 Lipovani, 300 Greek, 212 Gypsy, 145 Arab, 126 Armenian, 119 Jewish and 59 German families. After the Crimean war in the period between 1270/1854 and 1283/1866 the Tatar immigrants from the Crimea who were settled in the Dobrudja were estimated at dabout 100,000 (F. Bianconi quoted in M. H. Fazıl, 90-1). When in 1281/1864 the *wilāyet* of Tuna was created the *sandjaḳs* or *liwās* of Tulča and Varna with a total population of 173,250 made a part of it. The former included the *ḳaḍās* of Balčîk, Pazardjîk, Pravadi, and Mangalya, the latter those of Baba, Ḥîrsova, Sünne, Köstendje, Mačin and Medjidiye (Karasu) (*Sālnāme*, 1294; cf. N. V. Michoff, *La population de la Turquie et de la Bulgarie au XVIII*ᵉ *et au XIX*ᵉ *siècles*, i, Sofia 1929).

The Turco-Russian war of 1877-8 caused about 90,000 Turks and Tatars to emigrate from the Dobrudja to Turkey and Bulgaria and most of them never returned. By the treaty of Berlin signed on 13 July 1878 (Art. 46), the sandjaḳ of Tulča and the Southern Dobrudja from the east of Silistre to the south of Mangalya were annexed to Romania. The rest of the Dobrudja made the part of the Principality of Bulgaria under Ottoman suzerainty (Art. 1-2). Under the Romanian administration emigrations of Muslim population into Turkey continued especially in 1300/1883 when these were subjected to compulsory military service and in 1317/1899 during the famine in the Dobrudja (M. H. Fazıl, 109-10). In 1328/1910 in the Romanian Dobrudja only thirty per cent of a population of 210,000 and in the Bulgarian Dobrudja forty per cent of a population of 257,000 were Muslim Turks and Tatars.

ḌOFĀR [see ẓAFĀR].

DOG [see KALB].

DÖGER, name of an Oghuz tribe (*boy*). They are mentioned in the *Oghuz-nāme* (the account of the life of the Oghuz people before they embraced Islam, see F. Sümer, *Oğuzlar'a ait destanî mahiyette eserler*, in *Ank. Ün. DTCFD*, xvii/3-4), where it is said that some prominent beys of the Oghuz rulers belonged to this tribe. According to the Syrian historian Shams al-Dīn Muḥammad al-Djazarī (658/1260-739/1338), the Artuk [*q.v.*] dynasty, ruling the Mardin-Diyārbekir region, belonged to the Döger tribe (F. Sümer, *op. cit.*, 405, n. 171), which must therefore have taken part in the conquests of the Selčuks. In the second half of the 8th/13th century an important branch of the Döger was living south of Urfa (Edessa) and

around Dja'bar; their leader was, in 773/1371-2, a bey named Sālim.

Sālim played a part in the events of North Syrian history and died towards the end of the century. Three sons of his are known. Dimashk Khodja, probably the eldest, was in 801/1398 appointed *nā'ib* of Dja'bar by the Mamlūk Sultan; profiting from the anarchy left by Tīmūr's invasion, he brought under his control also Rakka, Sarūdj, Harrān, Urfa and Siverek, but was killed in battle with the famous Arab *amīr* Nu'ayr (Muhammad b. Muhannā) and his head was sent to Cairo (806/1404). He was succeeded by his brother Gökče Mūsā, who, like Dimashk, was hostile to the Ak-koyunlu and friendly with the Kara-koyunlu: in 807/1405 he entertained at Dja'bar the Kara-koyunlu ruler Kara Yūsuf, who was travelling home from Syria; he assisted the Kara-koyunlu in various campaigns, helping Kara Yūsuf's son Iskender to defeat Kara Yülük 'Othmān Beg in the battle fought at Sheykh-kendi (between Mardin and Naṣībīn) in 824/1421. In 840/1436 he defeated Kara Yülük's grandson, 'Alī Beg-oghlu Djihāngīr, and sent him prisoner to Cairo, but died in the same year. Thereafter, under pressure from the Ak-koyunlu, the Döger lost even Dja'bar. In Gökče Mūsā's lifetime his younger brother Hasan Beg had entered the service of the Mamlūk Sultan and became *nā'ib* of 'Adjlūn; Hasan's son Amīrza was *nā'ib* of Karak in 890/1485.

Apart from Sālim's family, other beys of the Döger—Yār 'Alī, Muhammad and Katī—are found in Syria as leaders of Döger clans among the Turkmens of Haleb; Katī was in 857/1453 *nā'ib* of Buhayra for the Mamlūks. In the time of Süleymān I, the Döger of Syria were divided in three clans (*oymak*) in the regions of Haleb, Hamā and Dimashk. The *tapu* registers show two small groups in Jerusalem residing in the Bāb al-'Āmūd and Banū Zayd quarters (cf. B. Lewis in *BSOAS*, xvi/3 (1954), 479). Other clans were found around Diyārbekir, among the Boz-Ulus (one remnant of the Ak-koyunlu confederacy), at Karkūk, and even among the Turkish tribes in Persia. In the 10th/16th century the name Döger was found in many toponyms, few of which have survived.

(F. SÜMER)

DOGHANDJÎ, Turkish term for falconer, from *doghan*, falcon (*toghan* in Kîpčak Turkish, cf. *al-Tuhfa al-zakiyya fi 'l-lugha al-Turkiyya*, ed. B. Atalay, Istanbul 1945, 260), and in general use any kind of bird of prey. *Bāzdār*, from Persian, was also frequently used for the *doghandjî*.

In the Ottoman empire the term *doghandjî* in the same sense as in later periods was found as early as the 8th/14th century (cf. P. Wittek, *Zu einigen frühosmanischen Urkunden*, in *WZKM*, liv (1957), 240; lvii (1961), 103; for *doghandjî čiftligi* see H. Inalcık, *Sûret-i defter-i sancak-i Arvanid*, Ankara 1954, 106).

Hawking, a favourite traditional sport at the Ottoman court, gave rise to a vast organization in the empire. There were *doghandjî*s at the Enderūn and the Bīrūn [*qq.v.*], and in the provinces. The *doghandjî*s at the Enderūn, under a *doghandjî-bashî*, were found in the different *odas* (chambers). They accompanied the Sultan in his hawking parties. Their number varied according to the reigning Sultan's care for the sport (nine in 883/1478, forty in the early 17th century, cf. İ. H. Uzunçarşılı, *Osmanlı devletinin saray teşkilâtı*, Ankara 1945, 421-2).

At the Bīrūn the *doghandjî*s, generally called *shikār khalkî*, made three different *djemā'at*, groups, divided into *bölüks*, *čakîrdjîyān*, *shāhîndjiyān* and *atmadjadjîyān*, those taking care of *čakîrs*, merlins and falcons, of *shāhîn*, peregrine falcons, and of *atmadja*, sparrow-hawks. They were under a *čakîrdjî-bashî*, a *shāhîndji-bashî* and an *atmadjadjî-bashî* respectively. The *čakîrdjî-bashî* [*q.v.*] was the head of the whole organization, and in this capacity was usually called *mîr-i shikār*. In the hierarchy of aghas at the Bīrūn he stood in the fourth grade, the first being *yeničeri-aghasî* (cf. *Kānūnnāme-i Āl-i 'Othmān*, ed. M. 'Ārif, in *TOEM*, 1330 H., appendix, 12). When promoted, the *čakîrdjî-bashî* was made *sandjak-begi* under Mehemmed II (*ibid.*, 15), and beglerbegi in the 11th/17th century. The *shāhîndji-bashî* was then made *čakîrdjî-bashî*, and the *doghandjî-bashî* from the Enderūn *shāhîndji-bashî*. The *doghandjî*s at the court all received *'ulūfe*, salary (cf. Ö. L. Barkan, *H. 933-934 malî yılına ait bir bütçe örneği*, in *İst. Üniv. Iktisat Fakültesi Mecmuası*, xv (1953-4), 300; 'Aynī 'Alī, *Kawānîn-i Āl-i 'Othmān* . . ., Istanbul 1280, 95).

In the provinces there existed a similar organization. In the sandjaks [*q.v.*] where birds of prey were found, there were *doghandjî*s or *bāzdārān*, *čakîrdjî*s, *shāhîndji*s and *atmadjadjî*s under a *doghandjî-bashî*. Their number with their dependents reached 2171 persons in Anatolia and 1520 in Rumeli in 972/1564 (*Defter-i bāzdārān-i wilāyet-i Rumeli we Anadolu we ghayruh*, in Belediye Kütüphanesi, Istanbul, Cevdet Kitapları, O 60. This important source gives in *idjmāl*, summary, the number of *doghandjî*s and the copies of the *hükm*s, decrees, on them). They formed large groups especially in the sandjaks of Gallipoli (642), Vidin (706), Menteshe (503), Mar'ash (770) and Kars (537). The local *doghandjî-bashî*s were appointed by the *čakîrdjî-bashî* and were given *tîmār*s [*q.v.*]. Under each *doghandjî-bashî* there were two *khāṣṣa kushbāz*, *gürenčdji* (apparently from *güre*, wild) and *götürüdjü*, who also held *tîmār*s and were in charge of training and taking to the court the birds of prey caught in their areas.

Under the *doghandjî-bashî*s there were a group of *doghandjî*s living in the villages who were originally *re'āyā* [*q.v.*], Christian and Muslim, to provide birds of prey. They were assigned to this service by the Sultan's diploma, *doghandjî berātî*, which granted the possession for cultivation of a piece of land called *doghandjî čiftligi* or *doghandjî bashtinasî* (see ČIFTLIK) with the exemption from *'ushr*, *čift-resmi* [*q.v.*] and *'awāriḍ* [*q.v.*] taxes. They paid the *bād-i hawā* [*q.v.*] taxes to their *doghandjî-bashî* or to the Sultan's collectors directly. If they cultivated any land outside their *čiftliks* they had to pay in addition the regular *re'āyā* taxes for it to the land-holder. Their sons had the right of inheritance on the *čiftliks* and, in their turn, became *doghandjî*s (for all these cf. Ö. L. Barkan, *Kanunlar*, Istanbul 1943, 20, 272, 274, 280, 331). But in the 10th/16th century the *re'āyā* who were made *doghandjî*s only one generation before were not granted these exemptions.

The *doghandjî*s of *re'āyā* origin were divided into different groups according to the kind of bird of prey they were to catch or train as *bāzdār*s, *čakîrdjî*s, *shāhîndji*s or *atmadjadjî*s. Also according to their functions they were divided into *ṣayyād*s, hunters, and *yuwadjî*s, nest-tenders. The latter were in their

turn divided into *ḳayadjîs* and *dîdebāns*, *i.e.*, those who discovered the nests in the mountains and guarded them, and *tülekdjis*, those taking care of the nestlings. When the *ṣayyāds* or *yuwādjîs* delivered the birds to the local *doghandjî-bashî* they were given a *mühürlü tedhkire*, certificate of delivery. Then at a certain time of the year the *doghandjî-bashî* and *khāṣṣa doghandjîs* took the birds to Istanbul to deliver to the *čakîrdjî-bashî*. Anybody who took a bird of prey from the guarded places or through a *ṣayyād* had to pay a fine of 500 *akče* to the treasury. The ordinary *reʿāyā* and *ʿaskerî* were forbidden to hunt birds of prey.

From the 11th/17th century onward, the *doghandjî* organization in the provinces was neglected, and, in most places, abolished. The *doghandjîs* were returned to the status of simple *reʿāyā* with the abolition of their exemptions. But the organization in general survived until Rabīʿ II 1246/September-October 1830 when Maḥmūd II abolished it altogether.

DOLMA BAGHČE [see ISTANBUL].

DONANMA, 'a decking-out, an adorning', Turkish verbal noun derived ultimately from *ton*, 'clothes'. The word is used in Ottoman Turkish in two restricted meanings:

(1) 'fleet of ships, navy' (presumably a calque of Ital. 'armata'), for which see art. BAḤRIYYA, iii (adding to bibliography H. and R. Kahane and A. Tietze, *The Lingua Franca in the Levant*, Urbana 1958, 1-45).

(2) 'decoration of the streets of a city' (synonyms: *shenlik*, *shehr-āyîn*) for a Muslim festival or on a secular occasion of public rejoicing such as a victory, an accession, a royal birth, circumcision or wedding; and, more particularly, the illumination of the city by night (*ḳandîl donanmasî*) and the firework-displays which formed part of these celebrations. The most elaborate of these public feasts was that given by Murād III in 990/1582 for the circumcision of his son, the future Meḥemmed III.

DONBOLÎ [see KURDS].

DONGOLA (Arabic, Dunḳula, Dunḳulā; obsolete forms, Dumḳula, Damḳala), the name of two towns in Nubia; more generally, the riverain territory dependent on these towns. All lie within the present Republic of the Sudan. The arabized Nubians of Dongola are called Danāḳla, a regional, not a tribal, designation.

(1) Old Dongola (Dunḳula al-ʿadjūz), on the right bank of the Nile, is on the site of a pre-Islamic town, the capital of the Christian kingdom of al-Maḳurra. It was besieged by an army under ʿAbd Allāh b. Saʿd b. Abī Sarḥ [*q.v.*] in 31/652, but the Muslims withdrew after concluding a convention (*baḳt*, [*q.v.*]) which regulated relations between Nubia and Egypt for some six centuries. Mediaeval Dongola is described as a walled city with many churches, large houses and wide streets. The royal palace with domes of red brick was constructed in 392/1002. With the collapse of Christian Nubia, Dongola became a Muslim town; the mosque, formerly a church, has an Arabic inscription dated 16 Rabīʿ I 717/29 May 1317. With the establishment of Fundj [*q.v.*] hegemony over Nubia in the 10th/16th century, Dongola reappears as the seat of a vassal king (*makk*). His authority extended as far north as the Third Cataract, the border between the Fundj dominions and the Barābra [*q.v.*], who recognized Ottoman suzerainty. After the rise of the Shayḳiyya confederacy in the late 11th/17th century, the principal north-south trade-routes tended to avoid the Dongola region. In its last days, the territory was the prey of both the Shayḳiyya and of the Mamlūk refugees in New Dongola. The petty rulers therefore welcomed the Turco-Egyptian forces of Ismāʿīl Kāmil Pasha, who suppressed both these predatory military aristocracies (1236/1820).

(2) New Dongola (al-ʿUrdī, *i.e.*, Ordu, "The Camp"), now the principal town of the region, arose on the site of the settlement of the Mamlūks who escaped from the proscription by Muḥammad ʿAlī Pasha in 1226/1811. After their expulsion, New Dongola became the seat of a *kāshif* (later *mudīr*, governor) and the capital of the province of Dongola. Between 1886 and 1896 the province was ruled by Mahdist military governors (*ʿummāl*, sing. *ʿāmil*). Kitchener's Dongola campaign of 1896 effected the reconquest of the province. It has now lost its separate identity as, during the Condominium, it was fused with Wādī Ḥalfā and Berber [*q.v.*] to form the Northern Province.

Bibliography: The scattered and rather slight references in mediaeval sources are listed in Maspero-Wiet, *Matériaux*, 94. To these may be added O. G. S. Crawford, *The Fung kingdom of Sennar*, Gloucester 1951, especially 33-6. Old Dongola in 1698 was described by Ch. J. Poncet, *A voyage to Ethiopia*, London 1709; reprinted by Sir William Foster (ed.), *The Red Sea and adjacent countries at the close of the seventeenth century*, (Hakluyt Society, Second Series, no. C); London 1949, 99-100. It was described in 1821 by L. M. A. Linant de Bellefonds, *Journal d'un voyage à Méroé*, (ed. M. Shinnie), Khartoum 1958, 32-4. The official correspondence of the Mahdist period is preserved in the Sudan Government Archives in Khartoum. (P. M. Holt)

DÖNME (Turkish: convert) name of a sect in Turkey formed by Jews upon their conversion to Islam late in the 11th/17th century in emulation of Shabbetai Ṣebi whom they considered the Messiah.

The sect emerged out of mystic speculations justifying the conversion of Jews to Islam as a link in the chain of Messianic events, and served as a means to consolidate those who wished to emulate and remain faithful to the converted Messiah, even after his death. It attempted, in the spirit of the Messiah, to maintain secretly within Islam as much as possible of Judaism, its lore and rites, with sabbatian-messianic modifications. In the course of time the original concepts of the stormy period of messianism and conversion were largely blurred and forgotten, and the life of the group expressed itself in ritual pecularities, social welfare activity, and basic devotion to the memory of the Messiah in expectation of his reincarnation or second advent, with subsequent dissensions concerning rightful succession to leadership.

Thus, intermarriage with Muslims was avoided; the fast-day commemoration of the destruction of the Temple (9th of Āb) became a day of rejoicing as the birthday of the Messiah; some knowledge of Hebrew was maintained; outward conformity with Islamic rites was encouraged while, in secret, Hebrew names were preserved and separate marriage and funeral rites were held.

The group conversion took place, it seems, in Salonika in 1094/1683. Salonika became the the centre

but there were branches in Edirne, İzmir, later Istanbul, and in Albania.

Inner squabbles, mostly engendered by various pretenders to Messianic succession and leadership, brought about the split into three sub-sects (the names vary: the recent being *Hamdibeyler*, *Karakaş*, *Kapancılar*) all refusing intermarriage. This division may have been not unrelated to social divisions, and expressed itself in peculiarities of hairstyle and garb. The *Dönme* lived in separate quarters.

The sect considered itself the community of the believers (*ma'amînîm*). It maintained strict secrecy. After the initial period, its literary output appears to have shrunk to poems and prayers in Hebrew, Aramaic, Judaeo-Spanish, and Turkish. Paucity of sources and secretiveness combine to make the study of the sect difficult, and its history obscure.

Around 1700, there were a few hundred families belonging to the central Salonika group. About 1900, the number of that group was estimated at 10,000. They were represented in trade, crafts, and the civil service.

Toward the end of the 19th century, a growing new layer of westernized young people came to the fore as teachers, doctors, lawyers, journalists, and these took part in Turkish public life, sometimes with considerable success. Most spectacular was the rise of Djāwid Bey [*q.v.*] in the Young Turkish régime following the revolution of 1908.

On the whole the Muslims were indifferent to the sect's existence, but from time to time there was a spurt of inquiry or persecution (*e.g.*, in 1720, 1859, and 1875). Imputing *Dönme* origin to undesirables was not unknown.

A new phase began for the *Dönme* when, with the Graeco-Turkish exchange of population, the Salonika *Dönme* were forced to quit their ancestral town and to move into the Turkish Republic (1923-24). They settled mostly in Istanbul, smaller groups settling also in other cities. This change of domicile, the dispersal that followed, the loss of contact with the solid Jewish atmospere of Salonika, the influence of the secular Turkish national school—all contributed to a growing loss of cohesion and indifference among the younger generation of the *Dönme* although group existence, especially in the area of social welfare, continued. The arrival in Istanbul of several thousand *Dönme* stimulated a discussion of sectarian segregation *versus* national assimilation in the Turkish press in 1924-5. Intermarriage with Muslims is slowly spreading and complete integration into modern Turkish society, despite setbacks, is on the increase.

Bibliography: Accounts will be found in the general works on Jewish history by H. Graetz, S. Dubnow, S. W. Baron. G. Scholem's capital researches on Jewish mysticism are summarized in the sketch included in *The Jewish people*, i, New York 1948; idem, *Main trends in Jewish mysticism*, New York 1941, esp. 287-236; idem, *Shabbetai Ṣebī* (Hebrew), 2 vols., Tel Aviv 1957; idem, articles in *Zion* vi, *Kiryat Sepher* xviii-xix; idem, *Die kryptojüdische Sekte der Dönme* (*Sabbatianer*) *in der Türkei*, in *Numen*, vii (1960), 93-122; Cf. s.v. in *Encyclopaedia Hebraica* (xi, 1959, I. DÖNÜM [see misāḥa].

DŌST MUḤAMMAD [see dūst muḥammad].

DOUAR [see dawār].

DOWRY [see mahr].

DRAA [see darʿa].

DRAČ (Dîrač, Durač), Slavonic and hence Ottoman name for the classical Dyrrhachium (med. Latin Duracium, Ital. Durazzo, Alb. Durrës), the principal port of modern Albania (41° 18′ N., 19° 26′ E.). The classical town was founded (c. 625 B.C.) under the name Epidamnus at the southern end of a narrow rocky peninsula (once an island) running parallel to the mainland coast, to which it was connected in antiquity at the North by a sand-spit and at the South by a bridge; the lagoon so enclosed has progressively contracted over the centuries. In Roman times, now known (perhaps after the Illyrian name of the peninsula) as Dyrrhachium, to its commercial prosperity was added immense strategic importance as the starting-point of the Via Egnatia, the continuation, after the short and easy sea-crossing from Brundisium, of the Via Appia, and the principal military road between Italy and the East. Hence in Byzantine times too Dyrrhachium was strongly fortified as the Western gateway to the Empire.

After falling to Venice at the partition of 1205, Dyrrhachium changed masters repeatedly, to be ceded to Venice in 1392 by the native Thopia dynasty, who were no longer able to protect it against the Ottomans. The Venetians rebuilt the walls on a narrower circuit and made vigorous but fruitless attempts to scour the lagoon, in order to arrest the silting of the harbour and the spread of malaria. During Meḥemmed II's Albanian campaign of 1467, Durazzo, practically deserted by its terrified inhabitants, escaped a determined assault (see F. Babinger, *Mahomet II le Conquérant et son temps*, Paris 1954, 311-3); the end came only in 1501 (17 August), when, the governor being temporarily absent, Durazzo fell to a night-attack by ʿĪsā Beg-oghlu Meḥemmed Beg, sandjak-bey of the nearby Elbasan (Saʿd al-Dīn, ii, 113-4, following the contemporary account of Idrīs Bidlīsī). Thereafter Durazzo was administered as a *ḳaḍā* of Elbasan [*q.v.*]; its walls were reconstructed to enclose a still smaller area (600 m. × 250 m.) in the South-East corner of the antique city, leaving the ancient acropolis outside the enceinte.

Under the Ottomans practically nothing of Durazzo's old importance remained. Ewliyā (1670) describes a small town of 150 houses with only one mosque; it had still (as in mediaeval times) a considerable salt industry and a not insignificant trade, and was administered as a *voyvodalıḳ* under an *emīn* (who, with the *ḳāḍī*, resided at the more salubrious Kavaya, 20 kms. to, the South-East).

Durazzo's modern prosperity began shortly before the Second World War, with the construction by Italy of a first-class harbour; now linked by rail with Tirana and Elbasan, it has developed considerably both as a port and as a holiday-resort (pop. 30,000).

DRUZES [see DURŪZ].

DUʿĀʾ, appeal, invocation (addressed to God) either on behalf of another or for oneself (*li* . . .), or else against someone (*ʿalā* . . .); hence: prayer of invocation, calling either for blessing, or for imprecation and cursing, connected with the Semitic idea of the effective value of the spoken word. Cf. Ḳurʾān XVII, 11: "Man prays for evil as he prays for good".—*Duʿāʾ* therefore will have the general sense of personal prayer addressed to God, and can often be translated as "prayer of request".

I.—The scope and practice of *duʿāʾ*.

1. In the Ḳurʾān, *duʿāʾ* always keeps its original meaning of invocation, appeal. Man "appeals" for good fortune (XLI, 49), and "when misfortune visits him, he is filled with unceasing prayer (*duʿāʾ*)" (ibid., 51). To practise *duʿāʾ* is to raise one's supplications to God; *duʿāʾ* here assumes the general meaning of "prayer", of two categories in particular: (a) prayer (and especially prayer of request) made by the pre-Islamic worthy men and prophets; (b) the vain prayer of the infidels. In the first case, God is He who hears, who answers the *duʿāʾ*: it was so for Abraham (XIV, 39-40; XIX, 48) and for Zachariah (III, 38). In the second case, "the prayer of the infidels is but vanity" (XIII, 14; cf. XLVI, 5); and the false gods hear no part of the prayer addressed to them (XXXV, 14), etc.—Some shades of meaning should be distinguished: thus, in verse XXV, 77 (addressed to the opponents), *duʿāʾ* evokes any relationship of man to God; "Say: my Lord will not become anxious save through your prayer"; whilst XIX, 40, repeating a saying of Abraham, distinguishes between *ṣalāt*, a ritual and liturgical prayer to be "performed", and *duʿāʾ*, prayer, personal invocation: "Lord, make of me one who performs the *ṣalāt* (and let it be so) for my posterity, O Lord, and accept my prayer (*duʿāʾ*)".

2. There are numerous *ḥadīths* which speak of *duʿāʾ*. Traditionists and jurists define its significance, the principal ones being reproduced by al-Ghazālī, *Iḥyāʾ ʿulūm al-dīn* (Cairo 1352), i, 274-8.— Tradition attributed to ʿAlī: "my followers are those who have taken the earth as their carpet, water as their perfume, prayer (*duʿāʾ*) as their adornment".

Duʿāʾ must be clearly distinguished from *ṣalāt* [*q.v.*], ritual or liturgical prayer. But it would be inaccurate to express it as a contrast between *ṣalāt*, vocal fixed prayer, and *duʿāʾ*, mental prayer or orison. Ibn Taymiyya (*Fatāwā*, Cairo 1326, i, 197) proposes this scale of values: "the *ṣalāt* constitutes a form (*djins*) which is superior to Ḳurʾānic recitation (*ḳirāʾa*); recitation in itself is superior to *dhikr*, and *dhikr* to individual invocation (*duʿāʾ*)" (from the trans. of Laoust, *Essai sur les doctrines sociales et politiques de Taḳī-d-Dīn Aḥmad b. Taimīya*, Cairo 1939, 328-9). A critical enumeration frequently mentions *ṣalāt*, *dhikr* [*q.v.*] (incessant repetition, ejaculatory prayer), *ḥizb* and *wird* (supererogatory "liturgies"), *duʿāʾ*. Inward prayer would be suggested rather by *dhikr* and *fikr* (meditation), *duʿāʾ* always connoting the idea of a formulated request, of an invocation either beneficent or imprecatory.

3. The request addressed to God in the *duʿāʾ* can be greatly varied according to the circumstances. It is in this sense that it is legitimate to translate it (cf. translation from Laoust above) as "personal invocation"; it can also assume a communal value and aspect. The choice of words is free, but Ḳurʾānic texts or traditional prayers already in existence will often be used.

Treatises which recommend *duʿāʾ*, and especially the Ṣūfī treatises, like to define the conditions which must accompany it and the rules of its *adab*. Both of these seek to provide a maximum guarantee of its being received by God. A brief summary (al-Bādjūrī, *Ḥāshiya* . . . *ʿalā Djawharat al-tawḥīd*, Cairo 1353/1934, 90-1) gives them as follows. (a) *Conditions*: to eat only food that is legally permitted; to pray, feeling convinced that the prayer will be answered; not to be distracted during prayer; that the object of the request should not lead to any sinful act, or give rise to enmity between those of the same blood, or harm Muslims' rights; and finally, not to ask for anything impossible, for that would be a lack of respect towards God. (b) *Adab* (how to pray): to choose the best times, and al-Bādjūrī suggests during the *sudjūd*, when one is prostrate, or while standing upright (*iḳāma*), or during the summons to prayer (*adhān*); to precede the *duʿāʾ* with ablutions and the *ṣalāt* on the one hand, and on the other with a confession of faults and an act of repentence; to turn towards the *ḳibla*; to raise the hands towards heaven (*rafʿ al-yadayn*); to pronounce the "divine praise" (*al-ḥamdu li'llāh*) and the "blessing on the Prophet" at the beginning, in the middle and at the end of the *duʿāʾ*.

These detailed recommendations are in some measure "advisory". In some cases, however, when the object of the *duʿāʾ* concerns the common good of the Community, it assumes a ritual, set form recognized by all; in these circumstances it makes use of the procedure for *ṣalāt*. The most notable example is that of the *istisḳāʾ* ("prayer for rain"): for this, the *duʿāʾ* must be preceded by a ritual prayer of two *rakʿas* [*q.v.*], two *khuṭbas* ("sermons"), and the rite (sympathetic magic) of the "turning of the cloak". The "prayer for the dead" made communally (frequently during the "sessions" of the brotherhoods) also obeys various regulations.

These conditions and rules for the *duʿāʾ* are intended to surround it with guarantees of efficacy. And we see that to the power of the word there are added the effective forces of legal purity and of gesture. This last point provides matter for discussion. Texts which widely recommend the practice of *duʿāʾ* speak constantly of ablution and the *rafʿ al-yadayn*; in doing so they rely on *ḥadīth*: before raising his hands in the *duʿāʾ* the Prophet had performed the ablution of *wuḍūʾ* (al-Bukhārī, *Maghāzī*, ii, 55). But al-Nasāʾī and Ibn Ḥanbal (ii, 243) only accept the raising of the hands in the *duʿāʾ* of the "prayer for rain".

4. Islamic devotional trends insist on the *duʿāʾ* being regarded as a prayer of request for well-being, especially the public weal of the Muslim community, and the personal spiritual well-being of oneself and others. Beautiful *duʿāʾ* texts are not rare in Shīʿī works of piety. The popular pietism of the

Ḥanbalīs often mentions it. It is to be seen mingled with the liturgies of *ḥizb* and *wird* in the handbooks of the religious brotherhoods. It is, then, much less an appeal of invocation (and of imprecation, especially) than an appeal trusting in divine Mercy. It is in this way that the utterance of the divine Names can turn either to the metrical repetition of the *dhikr* or to a form of *du'ā'* which links its request with the evocation of each Name and each attribute, and thereby defines it; in this connexion, see the monograph written in the last century by Muḥammad 'Alī Khān al-Bukhārī, *Kitāb minḥat al-sarrā' fī sharḥ al-du'ā'* (ed. Ḥaydarābād, 1337). The *du'ā'* becomes an equivalent of the spiritual impulse towards God.

II.—Questions raised in *kalām* and *falsafa.*

The incantation value and the effectiveness of word and gesture was no doubt the first consideration in the idea of *du'ā'*, and derived from a Semitic understanding of the relation of man to what is holy. But the Hellenistic influence which moulded Muslim thought encouraged *falsafa* on one hand, and the *'ilm al-kalām* ("theology" or, more accurately defensive apology) on the other, to raise the question of the prayer of request and of its efficacity before the Almighty and the Decree of God.

The reply varies according to the school and the writer. Here are three typical examples. (A summary of the principles of *kalām* is given by al-Bādjūrī, *loc. cit.*, among others).

(a). The Mu'tazila deny the usefulness of the prayer of request; in their eyes it would be derogatory to the pure divine transcendence. Man, in fact, being the "creator of his own actions" has no need to ask God to make his enterprises favourable. Human actions themselves bear the weight of their own consequences. Thus when God, in the Ḳur'ān, tells His servants to invoke Him, it is the attitude of adoration that He is demanding; and when He promises to hear their prayers, it is the just reward for a rationally good action that He is guaranteeing.

(b). On the other hand the Ash'arī *kalām*, centred upon the absolute and free will of God, was to restore its traditional value to *du'ā'*. The "prayer for the dead" (*al-ṣalāt 'alā 'l-mayyit*, or *al-djināza*) has the value of a *du'ā'* asking God for mercy, if such be His will. Moreover, the imprecatory aspect of *du'ā'* is not forgotten. The invocation is harmful to those one curses, if the cause is just. "The *du'ā'* of one suffering an injustice is answered (says a *ḥadīth* of Anas), even if it be an infidel". Sometimes the prayer will be answered exactly as it has been formulated and at once, sometimes after a delay for a reason known to God; and sometimes God will grant something different from what was asked, in view of a greater benefit.

The acknowledged virtue of *du'ā'* clearly proves that the Ash'arī denial of free human choice and secondary causes, and the total surrender required with regard to the divine will, in no way constitutes, strictly speaking, a "fatalistic" attitude. Incidentally the Ash'arī manuals pose very clearly the problem of reconciling effective *du'ā'* with absolute divine predetermination (*ḳaḍā'*) or immutable decree (*ḳadar*).

The usual reply makes a distinction between "fixed" predetermination (*ḳaḍā'*) and "suspended" (conditional) predetermination. In the latter case, whether some event will happen or not is decided by God considering the actual fact of the *du'ā'* which thus, in its turn, enters into the conditions determined by divine decree. In the case of "fixed" predetermination, the prayer of request can change nothing in God's will—He will, however, grant His favour to one who implores Him. And this favour will indeed bear on the actual objectof the request, the circumstances of granting the prayer then being taken in a "suspended decree".

(c). Following quite different principles but a similar approach, the *falāsifa* logically include the *du'ā'* in their universal determinism. The subject is treated on several occasions by Ibn Sīnā (*e.g.*, *Nadjāt*, 2nd ed. Cairo 1357/1938, 299-303; *Ma'nā al-ziyāra* and *Risāla fī māhiyyat al-ṣalāt*, ed. A. F. Mehren, Leiden 1894). The effective prayer of request is a result of the co-operation of terrestrial dispositions and celestial causes. The invocation by the *du'ā'* comes as a psychical influx which acts physically upon the phantasms of the celestial Spheres according to all the laws of the macrocosm, as inevitably as man's imagination acts upon his own body. Furthermore, it is these celestial Spheres which in reality gave men the suggestion to pray, this suggestion in turn taking its place in the universal chain of causes. And it can then be said, as a result in fact of the interplay of causes, that the prayer is answered. The *du'ā'*, according to Avicenna, puts man into direct relationship with the celestial Spheres alone. That is why "those prayers particularly which beg for rain and other such things" are found to possess "very great usefulness" (*Nadjāt*, 301; cf. L. Gardet, *La pensée religieuse d'Avicenne*, Paris 1951, 135-7).

These various attempts to provide a rational justification of *du'ā'* testify to its importance in the religious life of Islam. But we must observe that the cosmological interpretation of an Ibn Sīnā does not in any way spring from the most current vision of the world. For the pious Muslim by and large, *du'ā'* effects a relationship between the man at prayer and not the celestial spheres, but God, integrating and often sublimating the familiar conception of the power of the name (*ism*) over the one named (*musammā*).

DUBAYS [see MAZYADĪS].

DUBAYTĪ [see RUBĀ'Ī].

DUBAYY (commonly spelled DUBAI), a port (25° 16′ N., 55° 18′ E.) and shaykhdom on the Trucial Coast of Arabia. The town lies at the head of a winding creek (*khawr*) extending some eight miles inland; ferries ply between Dayra, the market quarter on the north-east bank, and al-Shandagha and Dubayy proper, quarters on the south-west bank. The population of the town, about 47,000, is predominantly Arab with some Iranians, Indians, and Balūčīs (Hay, 114). The Arab inhabitants of the principality comprise members of al-Sūdān, al-Marar, al-Mazārī', Āl Bū Muhayr, al-Hawāmil, al-Ḳumzān, al-Maḥāriba, al-Sabāyis, and Āl Bū Falāḥ, tribal groups considered components of Banī Yās in the Persian Gulf area, as well as members of al-Manāṣīr, primarily a Bedouin tribe. The ruling family, Āl Bū Falāsā, are members of al-Rawāshid and, like the majority of the inhabitants, are Mālikīs.

The frontiers of the shaykhdom are not completely defined. The land boundary between the shaykhdoms of Dubayy and Abū Ẓaby has a coastal terminus between al-Djabal al-'Ālī (sometimes called al-Djubayl) and Khawr Ghanāḍa; the land boundary

between the shaykhdoms of Dubayy and al-Shārika terminates just north-east of Dayra. Two small coastal villages, Umm al-Sukaym and Djumayra, and the larger village of Ḥadjarayn, about 50 miles inland in Wādī Ḥattā and separated from the rest of the principality's territory, acknowledge the overlordship of the Ruler of Dubayy. Some date cultivation is practised, but water is scarce.

Little is known about Dubayy before 1213-4/1799 when it is first mentioned in available sources (Lorimer). Dubayy was considered a dependency of Abū Ẓaby during the first third of the 19th century, with the exception of a period of several years after 1241/1825 when Shaykh Sulṭān b. Ṣaḳr of al-Ḳawāsim, Ruler of al-Shārika, increased his influence over Dubayy by marrying a sister of its governor, Muḥammad b. Hazzāʿ b. Zaʿal (India, *Selections*, xxiv, 317).

Dubayy became an independent principality in 1249/1833 when about 800 members of Āl Bū Falāsā, under the leadership of Maktūm b. Baṭī b. Suhayl, left Abū Ẓaby and took control of the settlement of Dubayy (al-Sālimī, 31). Rivalry between al-Ḳawāsim and Banī Yās for control of the shaykhdom continued throughout the 19th and early 20th centuries, but Dubayy preserved its independence by aligning itself sometimes with al-Shārika, sometimes with Abū Ẓaby, and on occasion with the smaller shaykhdoms of ʿAdjmān and Umm al-Ḳaywayn. Dubayy increased in population and wealth, derived primarily from pearl fishing and entrepôt trade.

Like other Trucial States, Dubayy signed the General Treaty of Peace with Britain in 1235/1820 and the temporary Maritime Truce (later made perpetual) in 1251/1835 (see ABŪ ẒABY). In 1309/1892 the Ruler of Dubayy agreed not to establish relations with any foreign country except Britain without British consent, and in 1340/1922 he agreed not to grant rights to any oil found in his territory except to a person appointed by the British Government. The British Petroleum Exploration Company, Limited (formerly D'Arcy Exploration Company, Limited) holds a two-thirds interest, and Compagnie Française des Pétroles holds one-third interest in an offshore oil concession, while Petroleum Development (Trucial Coast), Limited, an Iraq Petroleum Company affiliate, holds an onshore concession. Until 1381/1961, no oil had been discovered.

The silting up of al-Shārika creek and the decline of Linga [*q.v.*] have contributed to the recent prosperity of Dubayy. It exports pearls (a declining industry) and dried fish; it imports foodstuffs, textiles, and light machinery. A coastal route connects Dubayy with al-Shārika, nine miles to the north, and with Abū Ẓaby town, about 80 miles to the south; desert tracks lead inland to al-Buraymī and to Muscat.

The administrative agencies of the shaykhdom have recently expanded and now include a Municipal Council, a Customs Administration, Courts, and Departments of Education, Health, Land Registration, and Water Supply. The town has a hospital, four schools for boys and two for girls, telegraph and telephone communications, regular mail service, and a small airport. The headquarters of the British Political Agent for all of the Trucial States except Abū Ẓaby was transferred from al-Shārika to Dubayy in 1374/1954. The present (1962) Ruler of Dubayy is Shaykh Rāshid b. Saʿīd b. Maktūm.

AL-**DUBB** [see NUDJŪM].

DUBDŪ (modern spelling Debdou; usual pron.: Dəbdu, ethn. *dəbdūbī*, pl. *dbādba*), a small town in eastern Morocco, at an altitude of 1,100 m., "at the foot of the right flank of the valley" of the Oued Dubdū "which rises in a perpendicular cliff to a height of 80 m. above the valley"; on a plateau nearby stands the fortress (*ḳaṣba* [*ḳaṣaba*]) protected by a fosse on the side facing the mountain; on the left side of the valley lies a suburb named Mṣəllā. A dependency of the *ʿamāla* (under the administration of the French Protectorate in the region) of Oujda, it is the centre of the tribe of the Ahl Dubdū (numbering 6,599 in 1936), but its own population consists of Arabized Berbers, of Arabs and of Jews who, though becoming less and less numerous, still form the majority (in 1936, 917 out of 1,751 inhabitants); the Jews, who live in the central quarter (*məllāḥ*) of the township, are in some cases of Berber origin, and in others are the descendants of Andalusian Jews who emigrated at the time of the Reconquest. This Jewish community of traders and artisans, not to mention agricultural workers, has been reduced since the establishment of the French Protectorate as many of its members have swarmed away to newly created centres in eastern Morocco (Missour in particular), though not without preserving firm links with their native town.

Situated on the route to Taza taken by Saharan tribes, Debdou (where a market is held on Thursdays) has always been a commercial centre of some importance; the fertility of the surrounding districts (vines, fruit trees, wheat, barley, etc.) also make it an agricultural centre.

It is certain that Debdou is a very ancient foundation; and since the 7th/13th century it has never ceased to play a part in the history of Morocco, as it occupies a strategic position between Fās and Tlemcen and was consequently a perpetual source of strife in dynastic struggles. At the time of the partition carried out by ʿAbd al-Hakk (592-614/1197-1218) between the Marīnid tribes, it fell to the lot of the Berber Banū Urtajjən who, given the task of protecting Fās from the designs of the ʿAbd al-Wādids [*q.v.*] of Tlemcen, made it the capital of their fief; it was rewarded by being sacked, in 766/1364-5, by the king of Tlemcen. However in about 833/1430 a chieftain of the Banū Urtajjən succeeded in setting up a small principality at Debdou; its rulers remained independent of the Waṭṭāsids and even conceived the project, in 904/1499, of capturing Taza; the little state of Debdou only disappeared in the reign of the second Saʿdid sovereign, al-Ghālib bi'llāh, who in 970/1563 placed his territory under the authority of a pasha. From this point the history of the town, which is somewhat obscure, was reduced to the level of local conflicts between Arabs and

Berbers. Nevertheless, in the 19th century Debdou still possessed an autonomous administration; the Muslim population were dependents of the *ʿāmil* of Taza who every year sent his *khalīfa* to receive taxes, while the Jews sent their tribute to the pasha of Fās al-Djadīd. At the end of the century after the coming of Mawlāy ʿAbd al-ʿAzīz (1894) and during the revolt of the pretender Bū Ḥmāra [*q.v.*], a Berber named Bū Ḥaṣīra tried to make himself independent, but in 1904 the town and district gave their support to Bū Ḥmāra at the instigation of a Jew named Dūdū b. Ḥayda who was appointed *ḳāʾid* of Debdou, and took advantage of his position to inflict reprisals on his enemies, the Jews of Andalusian origin. Peace was restored by the French occupation which was decided upon in 1911 as a result of the murder of a Frenchman.

Throughout the last centuries, Arab influence and the Arabic language have been dominant to such a degree that Berber is no longer used except in the surrounding mountains. The dialect of the Jews presents some interesting features (see Ch. Pellat, *Nemrod et Abraham, dans le parler arabe des Juifs de Debdou*, in *Hespéris*, 1952, 1-25).

DUBROVNIK [see ragusa].

DŪD al-ḲAZZ [see ḥarīr].

DUDJAYL [see kārūn].

DUFF (Daff, the modern pronunciation, may be traced back to Abū ʿUbayda [d. ca. 210/825]) generic name for any instrument of the tambourine family, although sometimes it is the name for a special type. Islamic tradition says that it was invented by Tubal b. Lamak Masʿūdī, *Murūdj*, viii, 88) whilst other gossip avers that it was first played on the nuptial night of Sulaymān and Bilḳīs (Ewliyā Čelebi, i/2, 226). Al-Mufaḍḍal b. Salama (d. 307-8/920) says that it was of Arab origin (fol. 20) and Ibn Iyās (d. ca. 930/1524) says in his *Badāʾiʿ al-zuhūr* that it was the *duff* that was played by the Israelites before the Golden Calf. Certainly the name can be equated with the Hebrew *toph* and perhaps with the Assyrian *adapa*. Saʿadya the Jew (d. 312/924) translates *toph* by *duff*. We see both the round and the rectangular instrument in ancient Semitic art (Rawlinson, *Five great monarchies*, i, 535; Perrot-Chipiez, *Hist. de l'art*, iii, 451; Heuzey, *Figurines antiques*, pl. vi, 4), and in ancient Egypt (Wilkinson, *Manners and customs of the ancient Egyptians*, i, 443, fig. 220).

The tambourine of Islamic peoples may be divided into seven distinct types: 1. The rectangular form; 2. The simple round form; 3. The round form with snares; 4. The round form with jingling plates; 5. The round form with jingling rings; 6. The round form with small bells; 7. The round form with both snares and jingling implements.

1. The rectangular tambourine of modern times has two heads or skins with "snares" (*awtār*) stretched across the inside of the head or heads. We know from al-Muṭarrizī (d. 610/1213) that the name *duff* was given both to a rectangular and to a round tambourine. As early as the 6th century A.D. we read of the *duff* in the poet Djābir b. Ḥuyayy and this was probably the rectangular instrument. The author of the *Kashf al-humūm* says that the pre-Islamic tambourine (*ṭār djāhilī*) was different from the round Egyptian tambourine (*duff miṣrī*) of his day (fol. 193). Tuways, the first great musician in the days of Islam, played the *duff murabbaʿ* or square tambourine (*Aghānī*, iv, 170). He belonged to the *mukhannathūn* and it was perhaps on that account that the rectangular tambourine was forbidden whilst the round form was allowed (al-Muṭarrizī). At the same time the rectangular instrument was favoured by the *élite* of Medina in the first century of Islam (al-Mufaḍḍal b. Salama, fol. 11). We know also that the Syrians used this type of instrument since it is called *rᵉbhīʿa* (rectangular) in the Syriac version of the O.T. (*Exodus*, xv, 20; *Judith*, iii, 7). To-day this form has fallen into desuetude in Arabia, Syria, Egypt and Persia, but may be found in the Maghrib. For designs see Christianowitsch, 32, pl. 11 where it is called a *daff*, and Höst, 262, Tab., xxxi, 11, where it is called a *bandayr*. Actual specimens are to be found at Brussels, Nrs. 339, 340 (Mahillon, i, 400) and at New York, Nrs. 392, 1316 (*Catalogue*, ii, 82; iv, 50).

2. The simple round form. This was also called the *duff* (al-Muṭarrizī) and it is said that this type, without jingling plates or bells, was considered "lawful" (Ewliyā Čelebi, i/2, 226). Probably, this was the *mazhar* or *mizhar* of pre-Islamic and early Islamic times. It is true that Arabic lexicographers say that the *mizhar* was a lute (*ʿūd*), a definition borne out by Arabic writers on music (*ʿIḳd al-farīd*, iii, 186; al-Mufaḍḍal b. Salama, fol. 27; *Kitāb al-Imtāʿ wa 'l-intifāʿ*, fol. 13v; Masʿūdī, *Murūdj*, viii, 93), but it is extremely doubtful that the *mizhar* or *mazhar* was a lute. The mistake probably arose with an early lexicographer saying that "the *mizhar* was a musical instrument (see the *Miṣbāḥ* of al-Fayyūmī) like the *ʿūd* (lute)" meaning "like the *ʿūd* is a musical instrument". In the 11th century *Glossarium Latino-Arabicum* the *mazhar* (562) or *mizhar* (508) equates with *tinfanum* (= *tympanum*). The type is still to be found under this name in Turkey (Lavignac, 3023) and in Palestine (*ZDPV*, l, 64, plate 8). The *mazhar* of Egypt has jingling rings attached to it.

3. The round form with "snares". This is similar to the preceding but with the addition of "snares" stretched across the inside of the head. We cannot be sure of its name in the early days of Islam but probably it was the *ghirbāl*, so-called because it was round like a sieve. Al-Ṣaghānī (d. ca. 660/1261-2) says that this was the tambourine which was referred to by Muḥammad when he said: "Publish ye the marriage, and beat for it the tambourine (*ghirbāl*)". Other accounts of this *ḥadīth* call this instrument the *duff*. In Algeria of modern times this type of instrument is known as the *bandayr* or *bandīr*, a name borrowed, seemingly, from the Gothic *pandero*, one of the instruments of pre-Moorish Spain mentioned by Isidore of Seville. The *bandayr* is

generally larger than the other types such as the ***duff***, ***mazhar*** and ***ṭār***, although in the *Kashf al-humūm* we read that tambourines were made in various sizes 'from the large *ṭār* (*ṭār kabīr*) to the small *ghirbāl* (*ghirbāl daḳīḳ*)". For the Egyptian instrument see Villoteau (988), and for the Algerian see Christianowitsch (31, pl. 9), Delphin et Guin (37) and Lavignac (2931). In Morocco, according to Höst (261, pl. xxxi, 6), it was called the *ḍīf* (ضيف). Actual specimens may be found at Brussels, Nrs. 308, 309 (Mahillon, i, 393, 400) and at New York, Nr. 452 (*Catalogue*, iii, 50).

4. The round form with jingling plates. This is similar to No. 2 but with the addition of several pairs of jingling plates (*ṣunūdj*) fixed in openings in the shell or body of the instrument. This is the *ṭār*. Although the author of the *Kashf al-humūm* makes the name older than that of the *duff*, yet we have no substantial proof of this. We find the *ṭār* in the Yemen in the 6th/12th century (Kay, *Yaman*, 54) and in the 7th/13th century *Vocabulista in Arabico* it is given as *ṭarr* (= *tinpanum*). The Persian instrument is depicted by Kaempfer undér the name of *daf* (741, fig. 7) and Niebuhr shows an Arabian example which he calls the *duff* (i, pl. 26). Höst (261, pl. xxxi) gives a design of a Moroccan instrument in the 12th/18th century under *tirr* (تِرّ). In Algeria it is called the *ṭār* (Delphin et Guin, 42; cf. *Tadhkirat al-nisyān*, 93; Lavignac, 2844), and a design is given by Christianowitsch (pl. 10). The Egyptian *ṭār* is described and delineated by Villoteau (i, 988) and Lane (chap. xviii), whilst actual examples may be seen at Brussels, Nrs. 312-5 (Mahillon, i, 394-5) and New York, Nrs. 455, 1319, 1359 (*Catalogue*, iii, 51). In Egypt the smaller types were given the name of *riḳḳ* (Villoteau, i, 989), by no means a modern name (*Kashf al-humūm*, fol. 193). There are examples at Brussels, Nrs. 316, 317 (Mahillon, i, 395).

5. The round form with jingling rings. This is a similar instrument to the preceding but with jingling rings (*djalādjil*) fixed in the shell or body instead of jingling plates. In Egypt, in the time of Villoteau (i, 988), it was known as the *mazhar*, but in Persia, a century earlier, Kaempfer calls it the *dāʾira* (741, 8).

6. The round form with small bells. This is the same instrument as the preceding in regard to shape but the jingling apparatus, instead of being fixed in spaces in the shell or body, is attached to the inside of the shell or body. These small bells (*adjirās*), often globular in shape like sonnettes, are sometimes attached to a metal or wooden rod fixed across the inside of the head. This instrument is popular in Persia and Central Asia where it is generally known as the *dāʾira*. An 11th/17th century instrument is shown by Kaempfer (742, 8). For a modern instrument see Lavignac (3076). Apparently *dāʾira* and *duff* became generic names for all types of the tambourine although the former must have been reserved for a round type.

7. The round form with both snares and jingling implements. In the Maghrib this instrument is called the *shakshāk* (Delphin and Guin, 38, 65; Lavignac, 2932, 2944). In some parts, however, this type is called the *ṭabīla*. In Egypt, according to Villoteau, it was the *bandayr*.

If the drum (*ṭabl*) sounds the martial note of Islam, as Doughty once said, the tambourine sounds the social note. It is true that in the *djāhiliyya* the tambourine was in the hands of the matrons and singing-girls (*ḳaynāt*) during the battle, sometimes in company with the reed-pipe (*mizmār*) as with the Jewish tribes (*Aghānī*, ii, 172), but it was also the one outstanding instrument of social life (al-Suyūṭī, *Muzhir*, ii, 236) as many a *ḥadīth* testifies. In artistic music the tambourine has ever been the most important instrument for maintaining the rhythm (*īḳāʿāt*, *uṣūl*, *ḍurūb*).

The *duff* became the Persian *daff* or *dap*, the Kurdish *dafik*, the Albanian and Bosnian *def*, and the Spanish and Portuguese *adufe*. The *dāʾira* is the Caucasian *dahare*, the Serbian and Albanian *daire*, and the *dārā* of India. The *ṭār* survives in the Polish *tur* and the Swahili *atari*. The tambourine was popularized in Europe by the Moors of Spain and was, for a long time, known as the *tambour de Basque*, the latter region being one of the gateways for the infiltration of Moorish civilization. It fell into desuetude in Europe about the 15th century but was revived again in the 17th century when Europe adopted it as part of the Turkish or Janissary music craze.

(H. G. Farmer)

DŪGHLĀT, occasionally Dūḳlāt, a Mongol tribe whose name, according to Abu 'l-Ghāzī (ed. Desmaisons, St. Petersburg 1871, i, 65), derives from the plural of the Mongol word doghólong (-lang) "lame". The tribe appears to have played no part in the early period of the Mongol Empire, though it is supposed always to have supported Čingiz Khān (Rashīd al-Dīn, ed. Berezin in *Trudī vost. otd. Imp. Russk. Arkheol. obshčestva*, vii, 275, xiii/text 47, 52; tr. L. A. Khetagurov, Moscow-Leningrad 1952, i/1, 193). At that time the tribe apparently emigrated in its entirety out of Mongolia; there is at least no Mongol tribe of that name today.

The Dūghlāt did not attain political significance until after the disintegration of the Ilkhān Empire [*q.v.*], from which time Muḥammad Ḥaydar Dūghlāt (Ḥaydar Mīrzā, [*q.v.*]), a member of the tribe, provides information about them in his *Taʾrīkh-i*

Ras̲h̲īdī (ed. N. Elias and E. Denison Ross, London 1895). But his information is not everywhere reliable and, in the few places where the tribe is mentioned in other sources, contradicts these. According to Ḥaydar a member of the Dūg̲h̲lāt, Tūlik or perhaps his younger brother Būlād̲j̲ī (the form Pūlādčī printed in the edition of Abu 'l-G̲h̲āzī, 56 ff., does not appear in the manuscripts), is supposed in 748/1347-8 to have placed K̲h̲ān Tug̲h̲luḳ Temür on the throne at Aḳsū in the Tarim Basin. The latter in turn is supposed to have expressed his gratitude to the Dūg̲h̲lāt by granting them "nine powers" and thus to have stabilized their power in the Tarim Basin. Ḥaydar Dūg̲h̲lāt claims to have seen this document "in the Mongol language and script" in his childhood, but says that it was lost during the reign of S̲h̲aybānī K̲h̲ān, d. 916/1510 [*q.v.*] (*Ta'rīk̲h̲-i Ras̲h̲īdī*, 54 f., 305). But the inaccurate chronology of this historian in the pertinent notices tends to provoke strong doubt as to the genuineness of the document. Between 769/1368 and 794/1392 (?) power in Mog̲h̲olistān (as eastern interior Asia starting at about Semiryeč'e was at that time called) was wielded by Ḳamar al-Dīn Dūg̲h̲lāt (S̲h̲araf al-Dīn Yazdī, *Ẓafar-nāma*, ed. Bibl. Ind., Calcutta 1887-8, i, 78 ff.), a brother of Būlād̲j̲ī according to the *Ta'rīk̲h̲-i Ras̲h̲īdī*. After an early period of co-operation with Tīmūr [*q.v.*], he was forced by the latter, after a long struggle, to flee across the Irtīs̲h̲ into the Altai (Yazdī, i, 494 ff.). Two of his brothers remained in the service of Tīmūr (Yazdī, i, 104 ff., 650), whose sister was married to a member of the Dūg̲h̲lāt.

After 1392 Ḳamar al-Dīn's nephew (?) K̲h̲udāydād, nominally major domo, was in fact the ruler of Mog̲h̲olistān. The Čingizid [*q.v.*] k̲h̲āns whom he put on the throne were nothing but puppets. K̲h̲udāydād demonstrated his readiness to reach a settlement with the Tīmūrids [*q.v.*], ostensibly owing to their common Islamic faith, and met in 828/1425 Ulug̲h̲ Beg [*q.v.*] without battle in Semiryeč'e (ʿAbd al-Razzāḳ Samarḳandī, *Maṭlaʿ al-saʿdayn*, Ms. Leningrad, 157, fol. 230). In view of this agreement the k̲h̲āns of Mog̲h̲olistān had to accept the division of their land among the brothers and sons of K̲h̲udāydād (*Ta'rīk̲h̲-i Ras̲h̲īdī* 100). His eldest son Muḥammad S̲h̲āh was appointed tribal chief (Ulus Begi) by K̲h̲ān Wa'īs (ca. 1418-29) and took up residence in Semiryeč'e (*Ta'rīk̲h̲-i Ras̲h̲īdī* 78). His younger son was driven out of the western Tarim Basin by the Tīmūrids (1416? Samarḳandī in *Notices et extraits* xiv, i, 296) and died even before his father did. His son Sayyid ʿAlī finally retook Kās̲h̲g̲h̲ar and ruled there for 24 years (died 862/1457-8, according to his tomb in Kās̲h̲g̲h̲ar; see *Ta'rīk̲h̲-i Ras̲h̲īdī* 87, 99). He was succeeded by his two sons Sāniz Mīrzā (until 869/1464-5) and Muḥammad Ḥaydar (until 885/1480), both of whom performed great services in the development of the region. Then Abū Bakr Mīrzā, the son of Sāniz, drove his uncle and K̲h̲ān Yūnus of Mog̲h̲olistān out of the western Tarim Basin, after which he took up residence in Yarkend and defended himself in 904-5/1499 against an attack by the k̲h̲āns of Mog̲h̲olistān. Not until 920/1514 was he eliminated by Saʿīd K̲h̲ān (*Ta'rīk̲h̲-i Ras̲h̲īdī* 293).

In addition to the principal line other branches of the Dūg̲h̲lāt repeatedly established small principalities, occasionally at war with the former. Muḥammad Ḥaydar for example, the grandfather of the historian Muḥammad Ḥaydar, fought in alliance with the Čingizid Yūnus and with the Tīmūrid Aḥmad Mīrzā against Abū Bakr Mīrzā (see above). His sons Muḥammad Ḥusain and Sayyid Muḥammad Mīrzā vacillated continuously between the two dynasties and were even from time to time in the service of the Uzbeks. The former was finally killed in Herāt at the command of S̲h̲aybānī [*q v.*] in 914/1508-9. His brother fell victim in 1533 to the hatred of K̲h̲ān ʿAbd al-Ras̲h̲īd of Mog̲h̲olistān, who had come to power in the same year (*Ta'rīk̲h̲-i Ras̲h̲īdī* 106 ff., 305, 450). Muḥammad Ḥusayn's son, the historian Muḥammad Ḥaydar Mīrzā, left in 1541 his position as governor of Ladakh in the service of the ruler of the Tarim Basin to proclaim his independence in Kas̲h̲mīr (see ḤAYDAR MĪRZĀ).

With the elimination of this line and the end of Abū Bakr's (see above) rule in 920/1514, the independence of the Dūg̲h̲lāt in the Tarim Basin came to an end. They continued to support the Čingizids there and wielded considerable power into the 17th century.

A tributary of the "Great Horde" of Ḳazak̲h̲s between the Ili and the Jaxartes bore the name Dulat into the 20th century, obviously derived from Dūg̲h̲lāt. At the end of the 19th century, they included almost 40,000 tents (see N. Aristov, *Zamĕtki ob ėtničeskom sostavĕ Tyurkskik̲h̲ plemĕn i narodnostey*, St. Petersburg 1897, 77).

Bibliography: the sources are mentioned above. Studies include W. Barthold, *Zwölf Vorlesungen über die Geschichte der Türken Mittelasiens*, Berlin 1935, 209-14 (French tr. Paris 1945); idem, *Four studies on the history of Central Asia*, tr. V. Minorsky, i, 1956, 54; R. Grousset, *L'Empire des steppes*, Paris 1939, index; P. P. Ivanov, *Očerki po istorii Sredney Azii* (Outlines of the history of Central Asia), Moscow 1958, i and ii; B. Spuler, in *Handbuch der Orientalistik*, volume v, 5, index. The last two works named contain further detailed bibliography.

(W. BARTHOLD-[B. SPULER])

ḌUḤĀ (AR.), "forenoon", the hour of one of the prayers [see ṢALĀT].

DUKAYN AL-RĀD̲J̲IZ, the name of two poets who were confused by Ibn Ḳutayba (*S̲h̲iʿr*, S̲h̲ākir ed. 592-95) and the authors who copied or utilized him: Ibn ʿAbd Rabbih, *ʿIḳd*, 1346/1928 ed., 202-3; *Ag̲h̲ānī*, viii, 155—Beirut ed., ix, 252-3; C. A. Nallino, *Litt.*, (with a note of correction by M. Nallino).

1. — Dukayn b. Rad̲j̲ā' al-Fuḳaymī (d. 105/723-24); a panegyric in *rad̲j̲az* composed by him on Muṣʿab b. al-Zubayr, and an *urd̲j̲ūza* upon his horse who won a race organized by al-Walīd b. ʿAbd al-Malik (see Yāḳūt, xi, 113-17; Ibn ʿAsākir, v, 274-9), have been preserved.

2. — Dukayn b. Saʿīd al-Dārimī (d. 109/727-28) to whom Ibn Ḳutayba actually dedicated his article entitled Dukayn al-Rād̲j̲iz; see also Ibn ʿAsākir, *ibid.*; Yāḳūt, xi, 117-19. He wrote a panegyric on ʿUmar b. ʿAbd al-ʿAzīz when the latter was made governor of Medina (87/706), which brought him a rich present, formal promises and perhaps the intimacy of ʿUmar. After the latter had risen to the Caliphate (99/717), Dukayn went to visit him, reminded him of their covenant and received a new gift. This Dukayn is said to have written the line: "When a man has not sullied his honour with vile deeds, whatever garment he wears is fine", which appears, however, at the beginning of the famous *Lāmiyya* by al-Samaw'al (F. Bustānī, *al-Mad̲j̲ānī al-ḥadīt̲h̲a*, i, 345).

This poet should not be confused with Dukayn

b. Saʿīd (Saʿd) al-Khathʿamī (al-Muzanī), Companion of the Prophet (see Ibn Ḥadjar, *Iṣāba*, no. 2401).

Bibliography: in the text. (CH. PELLAT)

DUKHĀN [see TÜTÜN].

DUKKĀLA, a confederation of Moroccan tribes which constituted an autonomous administrative region during the French Protectorate. When Morocco attained independence, it was attached to the province of Casablanca, and now forms no more than the al-Djadīda circle (Mazagan). Some sections of the Gharb tribe also have this name.

Al-Bakrī does not mention the Dukkāla, but al-Idrīsī, together with Ibn Khaldūn (*ʿIbar*) and Leo Africanus later, attribute an extensive area to the confederation, comprising roughly the triangle within the rivers Umm al-rabīʿ and Tensift, and the Atlantic coast. The name Dukkāla, moreover, was given to one of the gates of Marrakesh from the early 12th century onwards. Tradition has it that there were 6 tribes in the confederation, the Ragrāga, Hazmīra, Banū Dghūgh, Banū Māgir, Mushtarayya, and Ṣinhādja tribes. The above list explains a contradiction already pointed out by Ibn Khaldūn, whereby the Dukkāla are sometimes considered part of the Maṣāmida [*q.v.*] (the first five tribes certainly were), and at other times part of the Ṣinhādja [*q.v.*]. Both were of Berber descent. Their relationship with another Berber group which is now extinct, the Tāmasnā, is difficult to define. The confederation was not spared the serious events which, under the Almohads, followed the introduction of Arab tribes into Morocco, and later the Ḥāḥa and the Banū Maʿḳil tribes were driven back onto their territory. In the south only the Ragrāga tribe remained intact, after having played an important role historically. The legend of its seven saints found a place in all religious chronicles; on receiving news of the Islamic revelation, all seven went to Mecca and spoke, in Berber, with the Prophet. Their tombs in the Djabal al-Ḥadīd are objects of veneration to the present day. The name Dukkāla no longer has any ethnic significance today; it denotes Arab tribes, or tribes completely under Arab influence. The tribes are sedentary, and although some of them still inhabit tents, it is for practical reasons and not in order to pursue a nomadic existence. The wind blows fair for the economic future of the region if developments based on the Imfout dam, completed in 1950, go according to plan. On relations between the Dukkāla and the Portuguese, see the articles ASFĪ, AZAMMŪR and above all AL-DJADĪDA.

Bibliography: The essential information is given by M. Michaux-Bellaire, *Reg. des Dukkala*, I, in *Villes et Tribus du Maroc*, x, Paris 1932; see also P. Lancre, *Rep. alph. des Conf. de tribus, des tribus de la zone franç. de l'emp. chér.*, Casablanca 1939; H. Terrasse, *Histoire du Maroc*; Ibn Zaydān, *Itḥāf aʿlām al-nās* (5 vols. published 1929-33) and Muḥammad b. Aḥmad al-Kanūnī, *Āsafī* ...., Cairo 1353/1934. (G. DEVERDUN)

DŪLĀB [see NĀʿŪRA].

DULAFIDS, an important tribe in the 3rd/9th century whose holdings formed a special district of their own known as al-Īghārayn (the two fiefs) in al-Djibāl, east of Nihāwand between Hamadān and Iṣfahān. ʿĪsā b. Idrīs laid the basis for the Dulafid fortune by engaging in highway robbery to such an extent that he was able to retire and erect a stronghold at al-Karadj, which his son and successor, al-Ḳāsim b. ʿĪsā al-Idjlī, known as Abū Dulaf, employed as the foundation for the Dulafid dynasty.

Abū Dulaf was a Shīʿī, a highly educated man, a lauded poet, a great general and a competent leader whose integrity was such that although he was a fervent pro-ʿAlid and had led troops against al-Maʾmūn, the latter pardoned him and accepted him at court. (Cf. AL-ḲĀSIM). With his troops he played an active rôle in subduing the revolt of Bābak al-Khurramī (222/836-7) [*q.v.*], and his descendants, known as the Dulafids, served under and on the side of the reigning Caliphs, taking part as loyal supporters in many military enterprises of the Caliphate. Abū Dulaf and his grandson, Aḥmad, especially distinguished themselves as generals under the Caliphs al-Muʿtaṣim and al-Muʿtaḍid respectively. Theirs was an almost completely independent dynasty which existed for some seventy years; their fief was given in perpetuity and the Dulafids paid a fixed yearly tribute to the Caliphs with no other taxes levied. They also coined their own money.

The Dulafid capital, al-Karadj, was a long town built on a height, an important site in the midst of fertile lands which averaged an annual yield amounting to 3,100,000 dirhams. Abū Dulaf had extended the town to an area covering about two leagues with well-built houses of clay brick, two markets and numerous baths.

Upon the death of Abū Dulaf in 225/839-40 the principality was governed in turn by his direct descendants commencing with his son, ʿAbd al-ʿAzīz who, in 252/866 under the Caliph al-Muʿtaḍid, was also governor of al-Rayy (d. 260/873-4), and followed successively by his grandsons, Dulaf (d. 265/878-9), Aḥmad (d. 280/893-4), ʿUmar (d. 283/896-7), and al-Ḥārith, known as Abū Layla, all of whom were loyal to the existing Caliphate.

Al-Ḥārith was accidentally killed in battle in 284/897-8 when, according to Masʿūdī, his horse was felled under him causing the unsheathed sword he was carrying on his shoulder to plunge into him and mortally wound him. With his death the power of the Dulafids and their dynasty came to an end and their lands reverted to the control of the central government.

DULAYM, a large Sunnī tribe in ʿIrāḳ, living on the Euphrates from a point just below Fallūdja to al-Ḳāʾim. They claim origins at Dulaymiyyāt in Nadjd five centuries ago, but these are doubtless mythical and in fact the tribe represents a wide variety of mixed tribal fragments and tribeless peasantry. A few sections are nomadic in the Djazīra, moving to the river only from April to September; but the great majority live, at the humble level of ʿIrāḳī peasantry, by cultivating by water-lift or flow-canal (notably the Ṣaḳlāwiyya) from the Euphrates, and entrust their sheep and camels to specialized grazing parties or sections of their own sub-tribes. The populations of ʿĀna, Rāwa, Ḥadītha and Fallūdja contain certain elements of settled Dulaym. The tribe itself is divided into many sub-tribes and sections, cohesion among which depends upon the personality and inter-relations of the leading shaykhs. Numbers work for the oil company whose pipelines from Kirkūk cross their territory in the Ḥadītha neighbourhood, and others at the Hīt

bitumen deposits. The tribe has a record of bad relations with the Shammar of the Djazīra, and of friendliness with the ʿAnaza in the Syrian desert; but tribal disorder has been slight and rare since 1340/1921, and the Dulaym, thanks largely to leadership by two or more outstanding shaykhs (notably ʿAlī Sulaymān) are among the better behaved major tribes of ʿIrāḳ. In Turkish times their frequent aggressions against travellers on the Baghdād-Aleppo trunk road called for punitive action by Government, notably by Nāẓim Pasha in 1910, and for the building of a line of military posts and khāns in the 12th/19th century. The tribal area was occupied by the British in 1917, and insurgent action in the turbulent year 1920 was limited to one section of the tribe. Since then, settlement and prosperity have increased.

The tribe has given its name to the Dulaym *liwāʾ* (province) of ʿIrāḳ (population in 1947, 193,000) which, with headquarters at Ramādī, contains the *ḳaḍāʾ*s of ʿĀna, Fallūdja and Ramādī.

(S. H. LONGRIGG)

DULDUL, the name of the grey mule of the Prophet, which had been given to him by the Muḳawḳis [*q.v.*], at the same time as the ass called Yaʿfūr/ʿUfayr. After serving as his mount during his campaigns, she survived him and died at Yanbuʿ so old and toothless that in order to feed her the barley had to be put into her mouth. According to the Shīʿī tradition, ʿAlī rode upon her at the battle of the Camel [see AL-DJAMAL] and at Ṣiffīn. As *Duldul* in Arabic means a porcupine, it is possible that she derived her name from her gait, but this is far from certain. For the names of the horses of the Prophet, see G. Levi Della Vida, *Les "livres des chevaux"*, Leiden 1928, 8, 51; for his she-camels al-ʿAḍbāʾ and al-Ḳaṣwāʾ, see al-Djāḥiẓ, *Ḥayawān*, index.

AL-**DULFĪN** [see NUDJŪM].

DULŪK, the name given by the Arab authors to a locality situated, on the borders of Anatolia and Syria, in the upper valley of the Nahr Karzīn, at the foot of the Anti-Taurus (Kurd Dagh), north-west of ʿAyntāb. It was the ancient Doliche, famous for the cult of a Semitic divinity who in the Graeco-Roman period received the name of Zeus Dolichenos. Being at the intersection of the routes from Germanicia, Nicopolis and Zeugma, it had been conquered by ʿIyāḍ b. Ghānim and became one of the fortresses which since the earliest days of Islam had defended the frontier against the Byzantines (cf. the verse of ʿAdī b. al-Rikāʿ in Yāḳūt, ii, 583, and Nöldeke's remark in *ZDMG*, xliv, 700); it belonged to the *djund* of Ḳinnasrīn before being incorporated in the district of the ʿAwāṣim [*q.v.*] organized by Hārūn al-Rashīd. Dulūk also played a part in the Ḥamdānid-Byzantine wars at the time of Sayf al-Dawla and Abū Firās, and was conquered by the Byzantines in 351/962 (Ibn al-Athīr, viii, 404), the year in which Abū Firās [*q.v.*] was captured. The citadel at this time was supplied with water by an important aqueduct, and it was surrounded by rich orchards. Having become during the Crusades the seat of a bishop of the province of Edessa (under the name of Tulupe), it was the theatre for numerous engagements, and when, in 549/1155, the troops of Nūr al-Dīn regained possession of it, shortly after ʿAyntāb [*q.v.*], Dulūk had much declined; its fortress was ruined and there remained no more than a mediocre village.

The old name is preserved in that of the village of Dülük köy, a Turkish village near the Syrian border, and in that of Tell Dülük situated to the south of this locality where there is now a monument erected for a *wālī*.

DŪMAT AL-DJANDAL, an oasis at the head of the Wādī Sirḥān which runs from south-east to north-west, linking central Arabia on one side and the mountains of Ḥawrān and Syria on the other; it is thus situated on the most direct route between Medina and Damascus, being about 15 days' journey on foot from the former and about 7 days or rather more from the latter. The oasis is in a *ghāʾiṭ* "depression" or *khabt* "vast low-lying area", the length of which, according to Yāḳūt, is 5 parasangs or, in modern terms, according to Ḥāfiẓ Wahba, 3 miles, the width half a mile and the depth 500 feet below the level of the desert surrounding it. The morphology of the region has brought about a change in the name of the oasis which, at least since the last century, has become al-Djawf (el-Djōf), "vast depression", "round basin", "flat, spongy floor of a valley or region in which water collects". Yāḳūt, who describes the locality at some length, is unaware of this change in the name.

Dūma (the spelling Dawma is not acceptable) is perhaps an Aramaic word; according to the ancient Arab scholars Ibn al-Kalbī and al-Zadjdjādjī, this term derives from the name of one of the sons of Ismāʿīl (Dūm or Dūmān or Dūmāʾ): incidentally the name Dūmāh also occurs in the Bible (*Genesis*, xxv, 14; *Chronicles*, i, 30) as the name of an Ishmaelite tribe. The Arab writers say that, as the Tihāma no longer provided sufficient grazing for the too numerous Ismāʿīl clan, the son mentioned above emigrated to this region which took its name Dūma from him, and there he built a fortress. In fact, a fortress was already in existence before Islam at Dūmat al-Djandal, and its name Mārid is mentioned in an ancient proverb deriving from a phrase said to have been uttered by al-Zabbāʾ (*tamarrada Mārid wa ʿazza al-Ablaḳ*). The remains of an ancient fortress still survived in the last century, and Euting made a sketch of them in 1883. The fortress was built of stone and in addition there stood around it a wall also of stone; it was on account of these constructions that Dūma was given the additional epithet al-Djandal, a common noun signifying "stone". In the pre-Islamic period the idol Wadd was worshipped there.

Yāḳūt and other Arab geographers tell us that three places bore the name Dūma, one near Damascus (where there is still a Dūma), another near al-Ḥīra,

and the one with which we are concerned, in northern Arabia. This identity of names has given rise to confusion in certain Arab historical sources; and there has been a tendency to ascribe to Dūmat al-Djandal events which took place in the other localities.

The inhabitants of Dūmat al-Djandal were the Banū Kināna, for the greater part of this sub-tribe of the Banū Kalb had, before Islam, spread into the desert of al-Samāwa in northern Arabia, from the plain of Dūmat al-Djandal in the north as far as the two mountains of the Ṭayy (Adja' and Salmā) in the south. This territory had been allotted to them as their pasturages at a general assembly of the Kalb, held in order to put an end to a civil war between two groups (F. Wüstenfeld, *Register*, *s.v.* Kalb b. Wabara; cf. al-Bakrī, *Muʿdjam*, 33 ff.). But in the oasis itself a certain number of the ʿIbād of al-Ḥīra had settled (in Balādhurī, the name appears as "ʿIbād al-Kūfa", but De Goeje corrected it to ʿIbād al-Ḥīra), that is to say a certain number of Christians who lived in that town and who were distinct from the Tanūkh, nomads from the surrounding districts. It may be conjectured that these ʿIbād in the oasis practised trade as well as agriculture, for Dūmat al-Djandal was one of the principal markets of northern Arabia.

Dūmat al-Djandal enjoys a certain fame in the annals of ancient Islam, particularly on account of the three expeditions undertaken by Muḥammad to conquer it; the first, in 5/626, led by the Prophet himself, achieved no results since the inhabitants of the oasis scattered before he arrived; the second, in 6/627-8, commanded by ʿAbd al-Raḥmān b. ʿAwf, brought about the conversion to Islam of the chief al-Aṣbagh (in some sources al-Aṣya, probably an error) b. ʿAmr al-Kalbī; the third was organized by Muḥammad at Tabūk and entrusted to Khālid b. al-Walīd. The latter took possession of the town in the oasis, levied a heavy war indemnity on the population and compelled the chief Ukaydir b. ʿAbd al-Malik al-Kindī al-Sakūnī [*q.v.*] to go to Medina to conclude a treaty with the Prophet; the text of the treaty still survives, possibly with interpolations (al-Balādhurī, *Futūḥ*, 61 ff.; Ibn Saʿd, i, 2, 36 ff.; Yāḳūt, ii, 627; see also M. Ḥamīdallāh, *Wathāʾiḳ*, Nr. 191; Wellhausen, *Skizzen und Vorarbeiten*, iv, 133, n. 3, 404 n. 1; Caetani, *Annali*, 9 A.H. and 45, note 3). The difference in the names of the chiefs with whom the Muslims had to deal in 6 and 9, the difference in origin of these chiefs, one Kalbī the other Kindī, the diversity of certain details in traditions relating to Ukaydir, led De Goeje to raise questions and Caetani to express doubts which appear to be excessive. In reality, various difficulties can be overcome if one distinguishes the Kalb, nomads inhabiting a vast area and having their own chiefs, from the population of the oasis which was sedentary and composed of agricultural workers, merchants and artisans, and had immigrated even before Muḥammad's expeditions, as moreover al-Masʿūdī confirms (*Tanbīh*, 248). In the account relating to Ukaydir it should be noted that, according to al-Balādhurī (*Futūḥ*, 62) and Yāḳūt (ii, 626 ff.), Ukaydir is said to have called his dwelling in ʿIrāḳ Dūma, in remembrance of Dūmat al-Djandal, after leaving the oasis; another tradition also preserved by al-Balādhurī (*ibid.*, 63) and Yāḳūt (ii, 627) relates on the contrary that Ukaydir called the Arabian oasis Dūmat al-Djandal in order to distinguish it from the Dūma near al-Ḥīra from which he came, but the first tradition appears to be the more probable, since there are grounds for maintaining that the name Dūma borne by the oasis is an ancient one.

References to Dūmat al-Djandal occur in certain sources in connexion with the celebrated crossing of the desert made by Khālid b. al-Walīd in 12/633. Having been asked to rejoin the Muslim forces in Syria as soon as possible since they were in danger, Khālid set out, and is said to have attacked Dūmat al-Djandal and killed Ukaydir. De Goeje (*op. cit.*, 15 ff.) considers al-Djandal here to be an interpolation, and supposes that the Dūma referred to by the sources is Dūma of al-Ḥīra; it seems impossible that Khālid could have made such a detour which would have taken him so far out of his way while delaying the accomplishment of his mission. De Goeje's argument is very logical, and it has been accepted by Mednikov (*Palestina*, i, 435 ff.) and Caetani, so that the murder of Ukaydir, if murder it was, would have taken place in ʿIrāḳ. Let us also add that ʿAmr b. al-ʿĀṣ was ordered during the *ridda* to fight the Kalbī Wadīʿa who had revolted with some of the Kalb and entrenched himself at Dūmat al-Djandal, whilst al-Aṣbagh's son had remained faithful to Islam (al-Ṭabarī, i, 1872, 1880); it was perhaps ʿAmr who conquered Dūmat al-Djandal, but it is also possible to attribute this feat to ʿIyāḍ b. Ghanm; in fact, the story goes that an expedition under his command set out from Medina with this objective but ran into difficulties, but it is also related that ʿIyāḍ was governing the oasis in 13/634 (al-Ṭabarī, i, 2136). In the same way, it was at neither Dūmat al-Djandal nor Dūma near al-Ḥīra, but at Dūma near Damascus that, according to De Goeje (*ibid.*, 16 ff.), the fair Laylā, the daughter of al-Djūdī al-Ghassānī and loved by ʿAbd al-Raḥmān b. Abī Bakr, fell into the hands of the Muslims.

On another occasion in the history of Islam, at the time of an incident of great importance, the mention of Dūmat al-Djandal has given rise to argument: the oasis was said to have been chosen at Siffin as the meeting-place for the arbitrators Abū Mūsā al-Ashʿarī [*q.v.*] and ʿAmr b. al-ʿĀṣ [*q.v.*] after their investigation of the dispute between ʿAlī and Muʿāwiya, and it was there that they were to announce their verdict; but some sources place the meeting at Adhruḥ [*q.v.*], and it has been explained *supra*, s.v. ʿALĪ B. ABĪ ṬĀLIB, that in fact there were two meetings, on different dates, one at Dūmat al-Djandal and the other some months later and in very different circumstances, at Adhruḥ (this point being established, the sequence of events becomes clear and the highly complicated question of their chronology becomes soluble). One of the actions which Muʿāwiya took to harass ʿAlī was to dispatch a force to Dūmat al-Djandal in 39/660; ʿAlī succeeded in driving it out, but the inhabitants of the oasis refused to recognize either his authority or Muʿāwiya's. When the centre of the Muslim empire was set up in Syria, under the Umayyads, and in ʿIrāḳ, under the ʿAbbāsids, Dūmat al-Djandal lost all its importance; from then onwards it was no more than an oasis in Arabia inhabited by a poor sparse population of agricultural workers, since trade henceforth followed other routes; the Arab geographers in fact do no more than relate the historical events described above and quote from the verses of ancient poets.

We know that during the last centuries of Ottoman domination in northern Arabia anarchy was general and the situation only improved when the Wahhābis imposed their authority over the country. They also

took possession of Dūmat al-Djandal which belonged to them until the time of Ṭalāl, *amīr* of Shammar, of the Āl Rashīd, for in 1855 it became a dependency of Ḥāyil. In 1909 it was occupied by Nūrī Ibn Shaʿlān, chief of the Ruwalā tribes, in 1920 the *amīr* of Shammar recovered possession of it, and finally ʿAbd al-ʿAzīz Ibn Saʿūd, when he overthrew the amīrate of Shammar, added it to his domains (1921). Immediately afterwards, Transjordania attempted to move her frontier southwards to Nafūd, but Ibn Saʿūd held firm and at the Congress of al-Kuwayt (1923-4) the question was not resolved. Ibn Saʿūd also made incursions into Transjordania, within the framework of his much wider activities against the Ḥidjāz and ʿIrāḳ. The frontier was established by the Ḥadda Agreement between Ibn Saʿūd and Sir G. Clayton (2 November 1925), and the Wādī Sirḥān along with al-Djawf [*q.v.*] and Ḳurayyāt al-Milḥ thenceforward became part of Nadjd (*OM*, i-viii (1922-8), index).

The nomadic or semi-nomadic tribes who inhabit the region between Taymā' in the south as far as Kerak in the north, Nafūd and Wādī Sirḥān in the east are grouped under the collective name of al-Ḥuwayṭāt [*q.v.*]. During the last century several European travellers visited the oasis; an account of their explorations will be found in Hogarth.

DUNAYSIR, mediaeval ruined town of Upper Mesopotamia (within the borders of modern Turkey), situated 20 km. south-west of Mārdīn on a tributary of the Khābūr, the site of which is today marked by the Kurdish village of Koč Ḥiṣār, the *Kosar* of the western chroniclers. A fortress of former times, generally identified with the *Adenystrai* of Dio Cassius, Dunaysir is not noted as an important place in the early years of Islam, and was subsequently never a fortress. Not until the 4th/10th century does its name appear, in a ms. of Ibn Ḥawḳal, as the site of a market. Later, at the beginning of the 7th/13th century, the town of Dunaysir had become a caravan, agricultural and intellectual centre, whose prosperity is reflected in the monuments erected at this time by order of the Artuḳid princes: mosques and *madrasa*, traces of which still remain. Spread over a wide plain, without a wall, beside a watercourse crossed by a stone bridge, it was, says Ibn Djubayr, "surrounded by flower and vegetable gardens", and was a centre of attraction for all inhabitants of the neighbouring regions. A popular fair was held there from Friday to Sunday. Later, Dunaysir declined and became a direct dependency of Mārdīn.

DUNBĀWAND [see DAMĀWAND].

DUNGHUZLUM [see DEÑIZLI].

DUNḲULA [see DONGOLA].

DUNYĀ (Ar.), the feminine of the elative adjective meaning 'nearer, nearest', is used in the Ḳur'ān, often combined with 'life' to mean this world. It had more or less this sense before Islam (Noeldeke, *Muʿallaḳāt des ʿAmr und des Ḥārith*, 49). The heaven of the *dunyā* is the lowest of the seven; *dunyā* is what is contained in the succession of night and day, is overshadowed by the sky and upheld by the earth, is all that the eye can see, the world of the seen (*shahāda*). In the realm of the spirit it includes all that Christians mean by the world and the flesh and it denotes the lot of man, whatever befalls him before death and does not continue with him afterwards. The interests of this world may oppose those of the next so a man may have to deny himself or use temperately part of his *dunyā*, money, food, drink, clothing, houseroom and, some say, life itself. One authority says that love of women is not love of the *dunyā*. Another definition is: every pleasure or desire, even speech with friends, so long as they are not aimed at the service of God. Denial of the *dunyā* means putting less trust in what is in your own power than in what is in the hand of God. All this is only a development of what is said in the Ḳur'ān: Those who buy this world at the price of the hereafter (*sūra* II, 80/86) and, The hereafter is better (*sūra* LXXXVII, 16). The truly religious man will have no desires (Muḥammad b. Muḥammad b. al-Zayyāt, *al-Kawākib al-sayyāra*, 130), and an extreme statement is ascribed to the prophet: Grant to one who loves me and obeys me little wealth and few children and to one who hates me and does not obey me much wealth and many children. At the judgement the *dunyā* will appear as a horrid old hag and will be cast into the fire (Ghazzālī, *Iḥyā' ʿulūm al-Dīn* (1312 A.H.), 3, 54, 148) an idea which contradicts the fundamental thought of Islam.

Without going into legal details, the *dunyā* consists of things allowed and things forbidden. Good Muslims avoided what was forbidden but many carried scruple to excess, *e.g.*, by refusing to eat the food of one who might have made some money by sharp practice in trade or by acting as a government servant. Asceticism was often considered good in itself and some went so far as to say: Entrust your affairs to God and take your rest.

Bibliography: see ĀKHIRA, and in addition: Ibshīhī, *al-Mustaṭraf*, last chapter. (A. S. Tritton)

DURAYD B. AL-ṢIMMA, ancient Arabic poet and leader of the Banū Djusham b. Muʿāwiya, one of the most powerful Bedouin opponents of Muḥammad, born ca. 530. He is a prominent figure of Arabic pre-Islamic antiquity; to later generations,

he was the embodiment of ancient paganism which fought stubbornly against Islam.

His father was Muʿāwiya b. al-Ḥārith, called al-Ṣimma, leader of the Banū Djusham b. Muʿāwiya, who belonged to the group of the Hawāzin tribes, and lived between Mecca and Ṭāʾif. Despite the similarity in their religion, and their economic, political and social ties, there was an ancient rivalry between these two places, which also concerned the Bedouin tribes who lived between Mecca and Ṭāʾif. This antagonism was caused by the contrast between the urban Ḳuraysh, and the predominantly nomadic Hawāzin, the difference of their cultural standing, and their different economic and political conditions. This period of the Ḥidjāz was characterized by the resultant battles. These disturbances are known as the battles of al-Fidjār.

Durayd b. al-Ṣimma did not take part in these battles for personal reasons arising from his links with the Kināna tribes, although he himself had fought earlier on against the Kināna, and although his father had played an important part in the Fidjār war.

He did, on the other hand, play an important part in the battles between Hawāzin and Ghaṭafān, where he lost his two brothers ʿAbd al-Yaghūth and ʿAbd Allāh. It was particularly the death of ʿAbd Allāh which resulted in the renewed enmity and battles, in which the tribe of the Banū Djusham again played a prominent part. It was the duty of Durayd b. al-Ṣimma to avenge his brother's death, and he fulfilled this duty in numerous raids against the Ghaṭafān.

Friendly ties linked him with Banū Sulaym. He also asked for the hand of the young poetess al-Khansāʾ in marriage, but she refused him because of his advanced years, although her relatives would have wished to retain the favour of this influential chief. The al-Khansāʾ episode did not, however, endanger his friendship with her brothers Muʿāwiya and Ṣakhr.

Even in the time when Muḥammad began to spread his teaching among the Bedouin, the old Durayd b. al-Ṣimma played a prominent part. It would even appear that he was responsible for the opposition which the Hawāzin tribes offered the new faith, and that he was also the tool of the intentions of the Thaḳīf tribe from Ṭāʾif. Perhaps he was the instigator of the alliance—which never materialized—between the Hawāzin and the Ḳuraysh.

After Muḥammad had left for his last battle against Mecca, the Hawāzin, the Thaḳīf, and his *khalīfa*s under Mālik b. ʿAwf of the tribe of Naṣr in Ḥunayn, rose in opposition to Muḥammad. The aged Durayd b. al-Ṣimma was brought on a litter, to give the benefit of his experience of battle to the tribes. Just before the battle he had an argument with Mālik b. ʿAwf, concerning the accomodation of women, children, and the cattle of the tribe, all of whom he wanted to get away from the battle-field.

After the defeat of Mecca, Muḥammad went against the Hawāzin. The armies met in Ḥunayn. After an initial success, the Bedouin were beaten and scattered. The faithful gained great booty. Durayd b. al-Ṣimma met with a tragic death in this battle, at the hand of Rabīʿa b. Rufayʿ, of the formerly allied tribe of Sulaym. He died at a great age, about 100 years old.

Al-Aghānī, ix, 2 summarizes the significance of Durayd b. al-Ṣimma by stating that he was a brave *fāris*, a *shāʿir faḥl*. Muḥammad b. Sallām placed him first among those who were considered *shuʿarāʾ* and *fuḥalāʾ*. According to the Arabs, he was the greatest *fāris* poet. Al-Aṣmaʿī in *Fuḥūlat al-shuʿarāʾ*, in *ZDMG* 65, 498, line 20, also regards him highly. In his poems, which may be regarded as typically Bedouin, battle descriptions, expressions of love and friendship, lament, and praise can be found. He has all the advantages and shortcomings of an embodiment of all that is typical of the Arab.

The metres he used most frequently are *wāfir* and *ṭawīl*, and also *basīṭ*, *mutaḳārib*, *radjaz*, *kāmil* and *ramal*.

(K. Petráček)

DURAZZO. [see DRAČ].

DŪRBĀSH (Persian, lit. "be distant"), the mace or club used as an emblem of military dignity; in Persian and Turkish usage the *dūrbāsh* can also be the functionary who carries the mace [see ČAʾŪSH, SARHANG]. The *čūbdār*s described by Niẓām al-Mulk, *Siyāsat-nāme*, ch. xxxix, who seem to have been similar functionaries, carried gold and silver staffs; ʿAwfī, *Djāmiʿ al-ḥikāyāt* (passage cited by M. Fuad Köprülü, *Bizans müesseselerin Osmanlı müesseselerine tesiri hakkında bazı mülâhazalar*, in *Türk Hukuk ve Iktisat Tarihi Mecmuası*, Istanbul 1931, 213; Ital. tr., *Alcune osservazioni ....*, Rome 1953, 57) describes the *dūrbāsh* as wearing silver belts and carrying maces encrusted with gems; Köprülü, *loc. cit.*, attributes the use of the jewelled mace, found also with the Ghaznawids and indeed with the Sāmānids, to an inheritance from the Sāsānid court.

In Muslim India the word is applied to the mace rather than to the functionary. The earliest mention of it appears to be in Amīr Khusraw, *Nuh sipihr*, ii, where the author speaks of the rādjā of Warangal delivering the *dūrbāsh* he had received from the former sultan to Khusraw Khān, general of Ḳuṭb al-Dīn Mubārak Shāh, for its replacement by a *dūrbāsh* from the reigning sultan in ca. 718/1318 (the word here is mistranslated "canopy" in Elliot and Dowson, *History of India ....*, iii, 561); cf. Amīr Khusraw, *Ḳirān al-saʿdayn*, lith. ʿAlīgaṛh, 78-9. According to Ḍiyāʾ al-Dīn Baranī, *Taʾrīkh-i Fīrūz Shāhī*, Bibl. Ind., 136, men would run "before the stirrups of kings" with the *dūrbāsh* on their shoulders. Yaḥyā b. Aḥmad Sirhindī, *Taʾrīkh-i Mubārak Shāhī*, speaks of it as a two-branched ornamented baton (cf. *Ghiyāth al-lughāt*, s.v.; *Farhang-i andjuman ārā-i Nāṣirī*, s.v.), and the *Muʾayyad al-fuḍalāʾ* as spears (*nīzahā*) which are borne before emperors and kings (ms Mullā Fīrūz Library, s.v.). Its use in Mughal times is confirmed by the European travellers; Manucci, *Storia di Mogor*, i, 220, describes the use of the *dūrbāsh* in the escort of Shāhdjahan's daughter Djahānārā, in which 'menservants held sticks of gold or silver in their hands and called out "Out of the way!" '. These menservants are called *gurzbardār*s by the travellers Tavernier and Bernier.

AL-**DURR,** the pearl. The ancient legend of its origin is found at great length in the Arabic authors, first in the *Petrology* (*Steinbuch*, ed. Ruska) of Aristotle, then with variants in the *Rasāʾil Ikhwān al-Ṣafāʾ* and the later cosmographers. According to it, the *aṣṭūrūs* (ʾοστρεῖον) rises from the depths of the sea frequented by ships and goes out to the ocean. The winds there set up a shower of spray and the shells open to receive drops from this; when it has collected a few drops it goes to a secluded spot and exposes the drops morning and evening to the breeze and the gentle heat of the sun until they ripen. It then returns to the depths of the sea where it takes root on the sea-bed and becomes a plant. If the sun or the air reach it at midday or in the night the pearls are destroyed; they are also ruined if they stay too long at the bottom of the sea, just as over-ripe dates lose their beauty and flavour.

Scattered among these fables we find a few real facts and critical observations, for example the statement that the shells, though rough and unclean outside, are smooth and brilliant within, or that the substance composing the pearl is identical with that which lines the interior of the shell, which points to its being produced from the latter. We also find a comparison with the hen's egg or with the child in its mother's womb. Of particular interest is the statement that there is a worm in the pearl, since it is now established that pearls are formed by the oyster when parasitic worms are present.

Masʿūdī gives us the earliest account of the provenance of pearls in various parts of the Indian Ocean and of the pearl-fisheries in the Persian Gulf; in the *Murūdj* he refers to an earlier work of his in which he appears to have drawn upon Yaḥyā b. Māsawayh's book on stones, which was extracted from Tīfāshī. According to him the only pearl-fisheries are on the coast of the sea of Ḥabash at Khārak in the Persian Gulf, at Ḳaṭar, ʿUmān and Sarandīb. The divers live on fish and dates; a slit is made in their necks below the ear through which they can breathe, for they close the nostrils by clasping a piece of tortoiseshell on the nose (or, according to Yaḥyā b. Māsawayh, they place a long reed in the nose and breathe through this). They can remain half an hour below the water. They put cotton-wool steeped in oil in their ears; when under the water they squeeze some of it out so that it becomes quite bright. They paint their legs with a black substance lest they should be devoured by underwater monsters. While under the water they communicate with each other by a kind of barking sound. Ibn Baṭṭūṭa also relates some of these fables, but on the whole his account of the pearl-fisheries is based on his personal observations at Sīrāf. There the Banū Siʾāf dive for pearls in a calm bay. In the months of April and May many boats assemble here with divers and Persian merchants. The diver places the clamp on his nose, ties a rope round himself, and remains one to two hours (!) under water. He finds shells firmly attached between small stones, pulls them off by hand or cuts them off with a special knife, and puts them in a leather bag which he carries hanging round his neck. When he can remain below no longer he shakes the rope; the man in the boat on seeing this pulls him up, takes the shells, opens them, and collects the pearls. The sultan receives five of each haul and the merchants sell the others, but the divers themselves have little profit as they are always in debt to the merchants for advances made to them.

The pearl is the jewel par excellence and is distinguished above other jewels by the fact that it is *ḥaywānī* and not *turābī*. Tīfāshī gives a very full account of the perfections and defects of pearls, etc., while al-Dimashḳī explains how mother-of-pearl (*ʿirḳ al-luʾluʾ* [*q.v.*]) is obtained from the layers composing the pearl shell. Valuable medicinal qualities are of course ascribed to the pearl. They are believed to be particularly effective in cases of palpitation of the heart or in melancholia, they strengthen the nerves, cure headaches, and, if dissolved in water and rubbed on the affected part, mitigate leprosy. They are dissolved with citron juice and vinegar.

The pearl has been prized by Muslim rulers for its value (a brief note on the classification and values of pearls in the Mughal emperor Akbar's treasury in *Āʾīn-i Akbarī*, i, Āʾīn 3) and as a symbol of purity. The name "pearl mosque" (*motī masdjid*) is frequently given in Muslim India to pure white mosques of marble or polished stucco. The ancient Hindū legend of the origin of pearls, that when the sun is in Arcturus (Skt. *svāti*), in October, the rain then falling drops into the open shells and so forms pearls, appears in several Indian Muslim works.

For the rôle of the pearl in book-titles, in poetry and in rhetoric see futher LUʾLUʾ.

DURRĀNĪ, an Afghān tribe known as Abdālī until their name was changed by Aḥmed Shāh Durrānī. (See ABDĀLĪ, AḤMAD SHĀH, AFGHĀNISTĀN). The tribe was moved from Harāt and granted lands in the region of Ḳandahār by Nādir Shāh. At this time they were pastoral nomads but in the later 12th/18th century they began to take up agriculture. Their large financial and economic privileges were continued and extended in the reigns of Aḥmad Shāh and Tīmūr Shāh, when the Durrānī tribe formed the main political and military support of the monarchy. During this period they extended their landholdings in the districts more distant from the town of Ḳandahār, *e.g.*, Zamīndāwar, Nīsh, Tirīn, forcing the original cultivators (Tadjiks, Hazāras, Pārsīwāns, Balōčīs, Kākaṙs, etc.) to work as tenants or labourers, as they continued to do in the regions nearer Ḳandahār. Towards the end of the 18th century, however, and particularly after the transfer of the capital from Ḳandahār to Kābul and the cessation of Afghān expansion, the central government began to reduce the power of the Durrānī chiefs and to increase its revenue by preventing the evasion of liabilities by the Durrānīs. Durrānī resistance to this policy was a contributory cause of the civil wars of the later 18th and early 19th centuries, in which the Durrānīs suffered considerably. Under the Bārakzay Sardārs of Ḳandahār 1233-4/1818 to 1255/1839 and 1259/1843 to 1272/1855

the power of the Durrānī chiefs was further eroded by their virtual exclusion from administration and military employment, and by steadily increasing taxation and the government control of water distribution. This policy was continued after the incorporation of Ḳandahār into the Kabul dominions. Its success always varied inversely to the distance from Ḳandahār.

There is no recent information available about Durrānī clan divisions and it is supposed that these have tended to be obliterated with settlement. There is information about the important period down to the mid-19th century. According to Elphinstone the tribe was nominally divided into two branches (Zīrak and Pandjpāw), although from an early period this division had lost all importance except to indicate the descent of the clans. The clans of the Zīrak branch were the more powerful and wealthy. The Zīrak branch included three important clans, those of Popalzāy, ʿAlīkozāy and Bārakzāy. The Ačakzāys of the northern slopes of the Khʷādja Amrān range in the Quetta-Pishīn district of West Pakistan are a branch of the Bārakzāys, supposedly separated by Aḥmad Shāh. According to Elphinstone the Pandjpāw clans were those of Nūrzāy, ʿAlīzāy, Isḥākzāy, Khugānī, and Makū. There is little information about the last two although they still appeared as distinct entities on the Ḳandahār tax returns as late as 1857. The other Pandjpāw clans lived principally in the more westerly areas—the ʿAlīzāys in the fertile province of Zamīndāwar, where they settled in the early 19th century, the Isḥāḳzāys in Garmsīr on the lower Halmand and the Nūrzāys, who continued to live as nomads later than other clans, in various areas north of Ḳandahār (Nīsh, Tirīn), in Garmsīr and westwards towards Farāh and Harāt. The Zīrak clans lived nearer Ḳandahār, although they tended to spread out to other areas as well, *e.g.*, the Bārakzāys who originally settled in the Arghasān valley, south of Ḳandahār, also were found on the Halmand, and the Popalzāys of the lower Tarnak and Arghasān valleys also moved into Tirīn and the other districts in the hills north of Ḳandahār. The ʿAlīkozāys lived in the Tarnak valley as far as Djaldak on the borders of the Ghilzāy country and also were found westwards as far as the Halmand. The various clans were divided into sub-groups, *e.g.*, the Popalzāys included the royal family of the Sadōzāys and possibly also the Bāmazāys. These sub-groups, like some of the clans themselves, sometimes decayed or amalgamated to form new groups.

DÜRRĪZĀDE, the patronymic of a famous family of Ottoman *ʿulemāʾ* of the 18th-19th centuries, five members of which attained the office of *Shaykh al-Islām* [*q.v.*] on no less than nine different occasions between the years 1734 and 1815. Only these latter can be dealt with here, and details must be confined to the periods of their *meshīkhat* which, unless otherwise stated, was reached by the normal progress through the offices of *ḳāḍī* of Istanbul, *ḳāḍī 'l-ʿasker* of Anadolu and *ḳāḍī 'l-ʿasker* of Rūmeli.

1. DÜRRĪ MEḤMED EFENDI. The son of a certain Ilyās, his date and place of birth are unknown. (The statement in the *Sidjill-i ʿOthmānī* that he was a native of Ankara probably derives from a misreading of the *Dewḥa*). While *ḳāḍī 'l-ʿasker* of Rūmeli for the second time, he was appointed *Shaykh al-Islām* on 3 Djumādā II 1147/31 October 1734 on the death of the incumbent Isḥāḳ Efendi. In Shawwāl 1148/February-March 1736 he was stricken with apoplexy, which in Dhu 'l-Ḥidjdja/April-May of the same year compelled him to retire from office. He died at his home in Üsküdar in 1149/1736-7 and was buried in the cemetery of Ḳaradja Aḥmed. (Ṣubḥī, 63b, 71b).

2. DÜRRĪZĀDE MUṢṬAFĀ EFENDI. The son of the above by the daughter of the former *ḳāḍī 'l-ʿasker* ʿAbd al-Ḳādir Efendi, he was born in 1114/1702-3. After having been *ḳāḍī 'l-ʿasker* of Rūmeli twice, he was appointed *Shaykh al-Islām* on 21 Shawwāl 1169/19 July 1756, but on 28 Djumādā I of the following year (18 February 1757) he was dismissed from office and exiled to Gallipoli. His second occupancy of this office came on 5 Shawwāl 1175/29 April 1762 and lasted until 24 Dhu 'l-Ḳaʿda 1180/23 April 1767; and on 15 Dhu 'l-Ḥidjdja 1187/27 February 1774 he was appointed for a third time. Infirm with old age, he retired on 22 Radjab 1188/28 September 1774 and died the same year on 7 Dhu 'l-Ḥidjdja/8 February 1775. He was married to the daughter of the former *Shaykh al-Islām* Pashmaḳčīzāde ʿAbd Allāh Efendi of a family claiming descent from the Prophet, and his sons by her all enjoy the title of *seyyid*. In 1179/1765-6 he restored the mosque at Yeñi Ḳapī (*Ḥadīḳat ül-djewāmiʿ*, i, 237), and would also appear to have founded a family burial ground outside Edirne Ḳapīsī in the vicinity of the fountain of Laʿlīzāde. A work on *fiḳh* entitled *Dürre-i beyḍā* is ascribed to him (*ʿOthmānlī müellifleri*, i, 308), and his translation of a short Arabic tract is to be found in a manuscript *medjmūʿa* in Topkapı, Emanet Hazinesi, no. 1308. (Wāṣīf, i, 83a, 91a, 210b, 290a; ii, 285a; Djewdet, i, 72, 78).

3. DÜRRĪZĀDE SEYYID MEḤMED ʿAṬĀʾ ALLĀH EFENDI. The second son of the above, he was born in 1142/1729-30. After having twice occupied the post of *ḳāḍī 'l-ʿasker* of Rūmeli, on 17 Djumādā II 1197/20 May 1783 he was appointed *Shaykh al-Islām* and he retained this office until 20 Djumādā I 1199/31 March 1785 when, suspected of complicity with the Grand Vizier Khalīl Ḥāmid Pasha in a conspiracy to depose Sultan ʿAbd al-Ḥamīd I, he was dismissed and sent to Gallipoli with orders to go on the pilgrimage. However, he died here of some dropsical affliction soon after his arrival, and the news of his death reached Istanbul on 6 Radjab 1199/15 May 1785. (Djewdet, ii, 71, 309, 317; İ. H. Uzunçarşılı, in *TM*, v (1935), 251, refers to a rumour that he was poisoned).

4. DÜRRĪZĀDE SEYYID MEḤMED ʿĀRIF EFENDI. The younger brother of the above, he was born in 1153/1740-1 and reached the post of *ḳāḍī 'l-ʿasker* of Rūmeli on 26 Ramaḍān 1198/13 August 1784. On 17 Shawwāl 1199/23 August 1785 he was appointed *Shaykh al-Islām*, but was dismissed from office on 10 Rabīʿ II 1200/10 February 1786 because of his political activities, and after being ordered to go on pilgrimage, he was forced to live in exile in Kütahya. He was permitted to return to Istanbul in 1205/1790-1 when his enemy the *Shaykh al-Islām* Ḥamīdīzāde Muṣṭafā Efendi was discharged from office, and on 22 Dhu 'l-Ḳaʿda 1206/12 July 1792 he was again appointed to the *meshīkhat*. Being held in some way responsible for the state of unpreparedness of Egypt when Napoleon launched his invasion, he was replaced in office on 18 Rabīʿ I 1213/30 August 1798,

and after a few months' exile in Bursa, he returned to Istanbul where he died on 20 Djumādā I 1215/9 October 1800 and was buried at Eğri Kapı. A collection of his *fetwā*s exists in Topkapı Sarayı, Yeniler, no. 4403; and no. 4783 in the same library is a notebook he kept of appointments and dismissals of the *ʿulemā*ʾ for the years 1209-13 (Djewdet, ii, 292, 331, 347; iv, 456; v, 181; vii, 57, 68, 174).

5. Dürrīzāde Seyyid ʿAbd Allāh Efendi. The son of the latter, the date of his birth is not recorded. While *naḳīb ül-eshrāf* and a nominee (*pāyeli*) for the post of *ḳādi 'l-ʿasker* of Rūmeli, on 3 Shawwāl 1223/22 November 1808 he was appointed *Shaykh al-Islām*, remaining in office until 22 Shaʿbān 1225/22 September 1810. His second term in the *meshīkhat* began on 30 Djumādā I 1227/12 June 1812 and lasted until 10 Rabīʿ II 1230/22 March 1815. He died on 3 Djumādā I 1244/11 November 1828 and was buried near his great-grandfather in the cemetery of Ḳaradja Aḥmed (Shānīzāde, i, 146, 399; ii, 114, 239; Luṭfī Efendi, ii, 153; Khiḍr Ilyās, 8).

Bibliography: Details of about forty members of this family who attained positions of varying importance in the learned profession can be traced through the following references to the *Sidjill-i ʿOthmānī*, though the caution must be given that no detail, and in particular dates, can be accepted without verification from another source: i, 336, 399; ii, 338, 396; iii, 146, 242, 267, 363, 396, 476; iv, 75, 444, 586 (Nūr Allāh Efendi), 627. Müstaḳīmzāde Süleymān Saʿd al-Dīn Efendi (with the continuations of Münīb Efendi and Rifʿat Efendi), *Dewḥat ül-meshāʾikh*, litho., Istanbul n.d., 91 (text corrupt), 100, 108, 109, 122. Specimens of the *fetwā*s issued by all the individuals mentioned in the article can be found in the *ʿIlmiyye Sālnāmesi*, Istanbul 1334, 515, 529, 551, 553, 575; I. H. Danişmend, *Izahlı Osmanlı tarihi kronolojisi*, iv, Istanbul 1961, *index*; İ. H. Uzunçarşılı, *Osmanlı tarihi*, iv/2, Ankara 1959, 472, 484, 501, 502; F. E. Karatay, *Topkapı Sarayı Müzesi Kütüphanesi Türkçe yazmalar kataloğu*, 2 vols., Istanbul 1961. The works mentioned in the article are: Meḥmed Ṣubḥī Efendi, *Taʾrīkh*, Istanbul 1198; Aḥmed Wāṣif Efendi, *Taʾrīkh*, 2 vols., Istanbul 1219; Aḥmed Djewdet Pasha, *Taʾrīkh*, 12 vols., Istanbul 1270-1301; Ayvansarāyī Ḥāfiẓ Ḥüseyn Efendi, *Ḥadīḳat ül-djewāmiʿ*, 2 vols., Istanbul 1281; Meḥmed ʿAṭāʾ Allāh Shānīzāde, *Taʾrīkh*, 4 vols., Istanbul 1290-1; Aḥmed Luṭfī Efendi, *Taʾrīkh*, 8 vols., Istanbul 1290-1306; Khiḍr Ilyās Efendi, *Waḳāʾiʿ-i leṭāʾif-i Enderūn*, Istanbul 1276.

(J. R. Walsh)

DÜRRĪZĀDE ʿAbd Allāh Bey or Efendi (1869-1923), one of the last *Shaykh al-Islām*s of the Ottoman Empire, known for his *fetwā*s condemning the Turkish nationalist movement under Muṣṭafā Kemāl (Atatürk). He was born into a wealthy family claiming the title of *seyyid*, most of whose male members belonged to the *ʿilmiyye* class, and five of whom had previously served as *Shaykh al-Islām* [see preceding article]. The son of the last there mentioned, ʿAbd Allāh, was Dürrīzāde Meḥmed Efendi, who rose to the rank of Ḳadīʿasker of Rumeli, and was the father of the ʿAbd Allāh with whom this article is concerned.

ʿAbd Allāh attended secular elementary and intermediate schools, then studied at the Fātiḥ *medrese*, receiving his *idjāzet* from Eginli Khodja Ibrāhīm Haḳḳī Efendi (d. 1894), at the time under-secretary (*müsteshār*) of the Meshīkhat. He received his first appoinment as *müderris* (*ibtidāʾ-i khāridj*) in 1883, and joined the Meshīkhat in 1886, where by 1893 he rose to the rank of *müderris* of the Süleymāniyye. In 1897 he left the *ʿilmiyye* service to rejoin it in 1901 as member of the council for Sharʿī studies (*Medjlis-i Tedḳīḳat-i Sherʿiyye*), and later as ḳādīʿasker of Anatolia. Dismissed after the 1908 revolution, he became an opponent of the Ittiḥād we Teraḳḳī [*q.v.*] movement and devoted himself to civilian pursuits (from which period he became known as «Bey»). After the armistice of 1918 he was placed in charge of a comittee examining religious publications, became under-secretary at the Meshīkhat on 1 February 1920, and *Shaykh al-Islām* in the third cabinet of Dāmād Ferīd [*q.v.*] on 3 April, less than three weeks after the reinforced Allied occupation of Istanbul. In this office he signed on 11 April 1920 four *fetwās*, of which the main one referred to the Kemālists as «certain civil persons [who] have allied and united and chosen for themselves leaders ..., with fraud ... are deceiving ... the loyal Imperial subjects and without authority are rising up to enlist soldiers from the populace; and to this end are imposing, in contravention of the sacred law and against high orders, certain dues and taxes ostensibly on the pretext of feeding and equipping these soldiers but really by reason of [their own] greed for worldly goods ...». Among many other specific accusations it charged these same persons with «treason» and with being «rebels» (*bughāt, bāghīler*), who in accordance with religious law were to be killed (*ḳatl ü ḳitālleri meshrūʿ we farḍ olur*) one at a time or in groups. The briefer subsidiary *fetwās* obliged Muslims to heed the sultan's call to arms against the rebels and threatened eternal punishment for deserters from any such army and earthly penalties for those disobeying orders in this fight against the rebels.

For a brief period ʿAbd Allāh also became acting Minister of Education and, during Dāmād Ferīd's attendance at the Paris Peace Conference, acting Grand Vizier (*ṣadr aʿẓam wekīli*). He was dropped from the cabinet upon its reorganization on 30 July 1920. At the time of the final nationalist victory in September 1922 he left Turkey for Rhodes and then Italy. On 23 March 1923 he left for Mecca where he died on 30 April in the act of performing the pilgrim's prayers at the Kaʿba. Although he died before the signature of the Treaty of Lausanne he was placed on the list of 150 persons (*Yüzellilikler*) excluded from its amnesty provisions.

(Faik Reşit Unat and Dankwart A. Rustow)

al-**DURŪʿ** (Dirʿī), a large Ghāfirī tribe, mainly nomadic and Ibāḍī, of the foothills and steppes of ʿUmān in south-eastern Arabia. From Wādī al-Ṣafā and areas of the Ghāfirī Āl Bū Shāmis (of Nuʿaym) and Banī Ḳitab in al-Ẓāhira, their *dira* extends south-east across the plain (Sayḥ al-Durūʿ) to Wādī Ḥalfīn and the territory of the Hināwī tribe of Āl Wahība. From Ḥamrāʾ al-Durūʿ and other outliers of the mountains of Inner ʿUmān (among which, centering around ʿIzz and Adam, is found the north-west enclave of the Ghāfirī al-Djanaba), it extends south to the broken district of al-Ḥuḳuf

(al-Ḥiḳf ?) and the barren area of Djiddat al-Ḥarāsīs, and south-west to the sands of the Rubʿ al-Khālī [*q.v.*], the low borderland of which (al-Waṭāʾ) includes the *sabkhas* and quicksands of Umm al-Samīm [*q.v.*].

The main tribal centre, *ca.* 15 km. south of ʿIbrī, is the village of Tanʿam. This is the summering place (*maḳīẓ*, pl. *maḳāyiẓ*) of the shaykhly clan, al-Maḥāmīd, and of al-Maḳārida, of whom about 100 settled men care for the date gardens. Al-Maḥāmīd and al-Dabābina have gardens also in al-Sulayf, north-east of Tanʿam and south-east of ʿIbrī, and al-Maḥāmīd also at ʿIbrī. Other groups summer around their gardens at al-Maʿmūr (Maʿmūr of al-Durūʿ), al-Ḥabbī, Fill, Madrī, Bisāh, Yabrīn, Ṭaymisa, and Adam.

Although ʿIbrī is their main trading centre, al-Durūʿ also visit other inland markets including those at Nazwā, Bahlāʾ, and Adam, and occasionally travel as far as Dubayy on the Persian Gulf and al-Khābūra and Muscat on the Gulf of ʿUmān. Their chief vendibles are the following: animals—camels, goats, and sheep; handicrafts—ropes and cordage, mats (*simma*, pl. *samīm*), baskets, etc., made from fibre of the palmetto-like *saʿf* (in ʿUmān called *ghaḍaf*), and sheep's wool rugs, over the quality of which al-Durūʿ vie with Āl Ḥikmān; wood products—charcoal (*ṣakhkhām*), burned mainly of *samr* and *ghāf* from thickets growing along the numerous *wādīs* which traverse the steppe south-westward and southward; minerals—sulphur, from Ḳārat al-Kibrīt, for treating animal mange and for making gunpowder, and salt, from Ḳārat al-Kibrīt, Ḳārat al-Milḥ, and two *mamlaḥas* which lie in *sabkhas* on the eastern margin of Umm al-Samīm.

Of famous ʿUmānī camels al-Durūʿ raise three prize breeds: Banāt ʿUṣayfir, Banāt Khabār, and Banāt Ḥumra. The salt mines are exploited under general supervision of the *shaykhs*, but are not their property. The best salt comes from Ḳārat al-Kibrīt, which is also called Ḳārat al-ʿUraysha. At the sources of the coarser and less pure salt bordering Umm al-Samīm, (where the mining is safer and without the fatalities which occur at the two *ḳāras*), the salt is cut out in blocks, four to a camel-load, the gain from which ranges from one to four Maria Theresa dollars. The price is highest in summer, when mining is very difficult because of the heat and the distance from water, the nearest perennial sources—Muwayh al-Rāka and al-ʿUbayla,—being over a day away by camel.

Because al-Durūʿ ordinarily shun the vast sand desert of the Rubʿ al-Khālī, they have little reason for risking travel across Umm al-Samīm, in the quicksands of which, according to popular accounts, unwary travellers, shepherds, and raiders, and their animals, have been swallowed up. Members of the section of ʿIyāl Kharaṣ of al-Maḥāmīd are said to know safe paths leading north and south of the inner morass, but they themselves rarely cross.

Despite their commercial exploitation of what nature affords them, al-Durūʿ have no professional merchants and are a truly nomadic tribe. They have a reputation for bold and wide raiding, and active participation in tribal wars.

The majority of al-Durūʿ are Ibāḍīs, but the large division of al-Maḳārida and most of the small but ruling clan of al-Maḥāmīd are said to be Sunnīs.

The origin of the tribe is unknown. The similarity in name with Āl Dirʿ, relatives of Āl Saʿūd who formerly lived in Wādī Ḥanīfa and gave their name to the first Saʿūdī capital of al-Dirʿiyya, is probably without significance. A popular tradition of the south says that al-Durūʿ have the same origin as the tribe of al-Manāhīl—from Banī (or Ahl) al-Ẓanna. The frequency of naming from the mother—*fulān b. fulāna*—may be an indication of southern origin.

Of other groups living in the territory of al-Durūʿ the most interesting is that composed of some 40 men of al-ʿIfār [*q.v.*], a tribe originally from the area of Ḥabarūt in western Ẓufār, where the majority still live. Al-ʿIfār are Sunnīs and Hināwīs, but have the privilege of giving safe escort to strangers in Dirʿī and other Ghāfirī areas. Their leaders are accorded considerable respect. Āl (or ʿIyāl) Khumayyis, ranging in Wādī Sayfam and neighbouring valleys between Ḥamrāʾ al-Durūʿ and al-Djabal al-Akhḍar and numbering several hundred males, are said to be of Dirʿī origin, but are now regarded as a separate tribe. Other groups stemming from al-Durūʿ live in al-Sharḳiyya and al-Bāṭina.

The paramount shaykh is called *al-tamīma*. Chiefs of divisions or sections other than those of al-Maḥāmīd may be given the title of *shaykh*, but the usual title is *rashīd* (pl. *rushadāʾ*).

(C. D. MATTHEWS)

DURŪZ (Druzes), sing. *Durzī*, a Syrian people professing an initiatory faith derived from the Ismāʿīliyya [*q.v.*]. They call themselves *Muwaḥḥidūn*, "unitarians", and number (in the mid-twentieth century) almost 200,000, living in various parts of Syria, especially in the mountains of the Lebanon, Anti-Lebanon, and Ḥawrān, chiefly as cultivators and landlords.

The faith originated in the closing years of the reign of al-Ḥākim [*q.v.*], Fāṭimid Caliph of Egypt (386-411/996-1021). According to the Ismāʿīlī Shīʿī faith then officially received in Egypt, al-Ḥākim, as *imām*, was the divinely appointed and authoritative guardian of Islam, holding a position among men which answered to that of the cosmic principle *al-ʿaḳl al-faʿʿāl*, the active intellect, and unquestionable head of the Ismāʿīlī religious hierarchy. Al-Ḥākim proved an eccentric ruler both in his personal life and in his religious policy, which flouted alternately the feelings of Ismāʿīlīs and Sunnīs alike. In his last years he seems to have wished to be regarded as a divine figure, above any rank which official Ismāʿīlism could accord him. A number of Ismāʿīlīs were in fact inclined so to regard him and, evidently with his private permission, set about organizing a following in the expectation of a public acknowledgement of the position.

The first of these men to catch the public eye was al-Darazī [*q.v.*], a non-Arab (like several of the leaders); the whole movement was called al-Daraziyya (or al-Durziyya) on his account. He seems to have interpreted the mood of the Ḥākim-cult circles in terms of a recurrent Ismāʿīlī heterodox attitude which exalted the *taʾwīl* (inner truth) and its representative, the *imām*, over the *tanzīl* (outward revelation) and its representative, the Prophet; so

giving the current *imām*, al-Ḥākim, a supernatural status as embodiment of *al-ʿaḳl al-kullī*, the highest cosmic intellect. But his public activity (408/1017-8) caused disturbances and forced al-Ḥākim to be more cautious. In 410, however, al-Ḥākim gave his support to another leader, Ḥamza b. ʿAlī [*q.v.*] of Sūzan in Īrān, who gave to the Ḥākim cult its definitive Druze form.

Ḥamza had begun his mission in 408/1017 (the first year of the Druze era—the second being 410, when the public mission was renewed) and claimed to have been the only authorized spokesman for al-Ḥākim from the first. In 410, after al-Darazī's death, he tried to rally the whole movement under himself. His doctrine was evidently more original than al-Darazī's. It was, like Ismāʿīlī doctrine generally, a doctrine of cosmic emanation from the One and of return to the One through human gnosis. But it was unique in its special emphasis on the immediate presence of the cosmic One and made correspondingly rather less of the subordinate emanations. Hence Ḥamza called his own followers "unitarians" par excellence.

For Ḥamza, al-Ḥākim was no longer merely *imām*, however highly exalted. Ḥamza himself was the *imām*, the human guide, and therefore *al-ʿaḳl al-kullī*, the first cosmic principle; while al-Ḥākim was the embodiment of the ultimate One, the Godhead who created the Intellect itself and was accordingly Himself beyond name or office, beyond even good or evil. Compared to Him, ʿAlī and the Ismāʿīlī *imāms* as such were secondary figures (though, since the One is ever present even when unrevealed, some of the latter, together with several obscure figures from earlier times, had also been embodiments of the One in their time). In al-Ḥākim, the One was uniquely present openly in history. The contrasting extravagances of his life expressed the workings of the ultimately Powerful, Whose acts could not be called to account, though they always revealed a meaning to His *imām*, the *ʿaḳl*, the cosmic intellect, Ḥamza. Al-Ḥākim was the present *maḳām*, locus, of the Creator; only in knowledge of Him could men purify themselves. Accordingly, Ḥamza's teaching was no longer strictly an extremist Ismāʿīlism, though it made use of extremist Ismāʿīlī conceptions and language; it claimed to be an independent religion superseding both the Sunnī *tanzīl* and the Ismāʿīlī *taʾwīl*.

Ḥamza evidently looked to al-Ḥākim to introduce, by his caliphal power, the messianic culmination of history, forcing all men to discard the various symbolisms of the old revealed religions, including Ismāʿīlism, and to worship the One alone, revealed clearly in al-Ḥākim. In preparation for al-Ḥākim's decisive move, Ḥamza, as *imām*, built up his own organization within the Ḥākim-cult circles to spread the true doctrine. Like al-Ḥākim and Ḥamza himself, the members of this organization embodied cosmic principles. There were five great *ḥudūd*, cosmic ranks, adopted in a modified form from Ismāʿīlī lore: the *ʿAḳl* (Ḥamza—identical with S͟hatnīl, the "true Adam" during the current historical cycle, during which the One is also known as al-Bār); the *Nafs al-Kulliyya*, Universal Soul (Ismāʿīl b. Muḥammad al-Tamīmī); the *Kalima*, the Word (Muḥammad b. Wahb al-Ḳuras͟hī); the Right Wing or the *Sābiḳ*, the Preceder, in Ismāʿīlism identified with the *ʿaḳl* but here demoted (Salāma b. ʿAbd al-Wahhāb); and the Left Wing or the *Tālī*, the Follower, in Ismāʿīlism identified with the *nafs* (Abu 'l-Ḥasan ʿAlī b. Aḥmad al-Samūḳī, called Bahāʾ al-Dīn al-Muḳtanā). Below these five ranks were a number of *dāʿīs*, missionaries; *maʾd͟hūns*, licensed to preach; and *mukāsirs*, persuaders—embodying respectively the cosmic *d͟jidd*, effort; *fatḥ*, opening; and *k͟hayāl*, fantasy. Subordinated to these were the common believers. (In all these ranks what was regarded was not the individual person, the embodiment, but the undying principle of which the embodiment was merely the current veil; in the ordinary person this implied an eternally reincarnated soul). To one or another of these ranks were attributed most of the titles or concepts that figured in the complex Ismāʿīlī system. Despite this hierarchy, however, the immediate presence of the One was kept primary and remained so in later Druzism.

Ranged in opposition to these true *ḥudūd*, and equally the creatures of al-Ḥākim as the ultimate One, were a series of false *ḥudūd*, accounting for the dark side of the cosmos, and embodied likewise in men of al-Ḥākim's time—for instance, in al-Ḥākim's Ismāʿīlī officials, teachers of the misleading doctrines of the old faiths. The eschatological drama was seen as the conflict between Ḥamza as *Ḳāʾim al-zamān*, Master of the Time, with his true *ḥudūd*, who would at last be openly supported by al-Ḥākim, and these false teachers whom al-Ḥākim would openly abandon. The followers of the Ḥākim-cult, whether under al-Darazī or under Ḥamza, seem to have been eager to precipitate events by proclaiming abroad the abolition of all the old faiths, including the *s͟harīʿa* law of Islam and its Ismāʿīlī *bāṭin* interpretation. Despite Ḥamza's relative cautiousness, insults to the established faith were offered publicly, with al-Ḥākim's tacit support, and riots ensued. The innovators, who regarded themselves as emancipated from the *s͟harīʿa*, were accused of every sort of gross immorality. The Ḥākim cult seems to have contributed heavily to the growing political crisis of al-Ḥākim's last years.

When al-Ḥākim disappeared, late in 411/1021, Ḥamza announced that he had withdrawn to test his adherents and would soon return to manifest his full power, placing the sword of victory in Ḥamza's own hands. Soon after, at the end of 411, Ḥamza himself withdrew, to return with al-Ḥākim. The faith then entered into a period corresponding to the little *g͟hayba* of the Twelver S͟hīʿīs, with the *Tālī*, Bahāʾ al-Dīn al-Muḳtanā [*q.v.*], as link between the absent Ḥamza and the faithful.

After al-Ḥākim's disappearance, the Ḥākim cult seems to have gradually ceased activity in Egypt, but to have afforded the ideology for a wave of peasant revolts in Syria. There proselytizing was pursued actively by a number of missionaries, some of whose names have been preserved; the movement gained control of some mountainous areas, where they are said to have torn down the mosques and established their own new system of law. Presumably they dispossessed the old landlords in favour of a free peasantry. In 423/1032 the *amīr* of Antioch, aided by the *amīr* of Aleppo, suppressed a group in the D͟jabal al-Summāḳ which included peasants who had gathered there from the vicinity of Aleppo.

In the midst of the turmoil, al-Muḳtanā at Alexandria (who had been appointed *Tālī* only at the last minute, in 411) tried to maintain Ḥamza's authority and his own. He was evidently in touch with the absent Ḥamza and was preparing for his momentary advent from the Yemen. He encouraged the rebels in the D͟jabal al-Summāḳ after their defeat. His many pastoral letters—some directed not only to Syria but to contacts and converts in all

Ismāʿīlī communities, as far away as Sind—served meanwhile to lay down Druze orthodoxy. He had to struggle against more than one claimant to leadership, of whom Ibn al-Kurdī, aided by one Sikkīn, seems to have been the most prominent; some of these seem to have encouraged a wide moral licence which he condemned. But with the years the general movement faded away and the Syrian peasant revolt seemed hopelessly torn by dissension; at last al-Muḳtanā discharged all his *dāʿīs* and, sometime after 425/1034, himself withdrew from the faithful, as had Ḥamza; though he continued to send out letters as late as 434/1042-3.

Despite al-Muḳtanā's discouragement, his work became the basis of such of the movement as did survive. Later Druzes have supposed it was al-Muḳtanā himself who compiled one hundred and eleven letters, many of them his own, some of them by Ḥamza and by Ismāʿīl al-Tamīmī, and certain pieces by al-Ḥākim, into a canon which has since served as Druze scripture, called *Rasāʾil al-Ḥikma*, the Book of Wisdom. From the time of al-Muḳtana's withdrawal began a period, lasting to the present among the Syrian Druzes, of passive expectation of Ḥamza's and al-Ḥākim's return, which has corresponded to the greater *gh̲ayba* of the Twelver Sh̲īʿīs. Ḥamza's hierarchical organization, including the *dāʿīs* and lesser ranks, fell into disuse and the scriptural canon has served as guide in place of the absent *ḥudūd*. Though al-Muḳtanā had insisted on continuing proselytizing as long as possible, on his withdrawal it ceased and it was taught that thenceforth no further conversion to the unitarian truth could be accepted. (To this ban there have been a few exceptions). The Druzes became a closed community, keeping their doctrines secret, frowning on intermarriage and permitting neither conversion nor apostasy, and governing themselves as far as possible in such mountain fastnesses as they had seized, notably in the Wādī Taym Allāh by Mount Hermon. These converts from the Syrian peasantry, led—according to tradition—by certain families from old Arabian tribes, formed in time a homogeneous people with distinctive physical features and social customs, dominated by their own aristocracy of ruling families. The aristocratic families have been noted equally for their habits of lawless raiding, for their uncompromising hospitality, and for their strict moral discipline which spared, for instance, the women of those they plundered and which was merciless toward unchastity in Druze women. (There is little foundation for the long series of Western speculations which assigned to the Druzes one or another exotic racial source, such as Persia or France).

During this long period of autonomous closed group life there appeared a new system of religious practice strongly contrasting to the hierarchism which had disappeared. We know of a number of writers on the gnostic cosmology and cyclical sacred history implied already by Ḥamza, and commentators on the scriptural canon, but it is not known just when the new system took full form, though this was presumably at least by the time of the great Druze moralist (whose tomb is revered by both Druzes and Christians), ʿAbd Allāh al-Tanūk̲h̲ī [see AL-TANŪK̲H̲Ī, ʿABD ALLĀH], d. 885/1480. By this system the Druze community has been divided into *ʿuḳḳāl* (sing. *ʿāḳil*), "sages" initiated into the truths of the faith, and *d̲j̲uhhāl* (sing. *d̲j̲āhil*), "ignorant", not initiated and yet members of the community. (Those aristocratic notables who are not initiated may be distinguished from the ordinary *d̲j̲uhhāl* in their character of *amīr*). Any adult Druze (man or woman) can be initiated if found worthy after considerable trial, but must thereafter lead a soberly religious life, uttering regular daily prayers, abstaining from all stimulants, from lying, from stealing, from revenge (including raiding in feuds), and so on. The *ʿuḳḳāl* are distinguished by a special dress with white turbans. As long as one is still a *d̲j̲āhil*, he is permitted more personal indulgences, within the code of honour of the Druze community, but he cannot look to spiritual growth; however, if he fails to be initiated in a given lifetime he can expect a renewed opportunity in a future birth.

The more pious or learned of the *ʿuḳḳāl* are accorded special authority in the community as *sh̲ayk̲h̲s*. In addition to what is required of the ordinary *ʿuḳḳāl*, they must be very circumspect morally, not making use of goods of a dubious source, avoiding any excess in their daily behaviour, keeping themselves on good terms with all, and ready to make peace wherever there is a quarrel. In each Druze district some one of these *sh̲ayk̲h̲s*, normally chosen from a given family, is recognized as holding the highest religious authority, as *raʾīs*. The *sh̲ayk̲h̲s* are trained in a special school; they spend much time in copying religious works and especially the scriptural canon, and the more zealous commonly have gone on spiritual retreats in *k̲h̲alwas*, houses of religious retirement, built in unfrequented spots; some have even devoted their whole lives to such retirement. Preferably any *ʿāḳil* should support himself with his hands, but the *sh̲ayk̲h̲s* are a fit object of alms by the *d̲j̲uhhāl*, nevertheless. They are expected to offer spiritual guidance to their *d̲j̲āhil* neighbours, presiding at such occasions as weddings and funerals.

All the *ʿuḳḳāl* attend at least some of the *mad̲j̲lis* services, held on the eve of Friday in starkly simple houses of worship, though *d̲j̲uhhāl* have been admitted to the least secret of these, when moral homilies are read in classical Arabic. The *ʿuḳḳāl* alone are permitted to read the more secret books of the faith and to participate in, or even know about, its secret ritual—which the Druzes have allowed the outside world to suppose involves a metallic figure of a calf in some way, whether as representing the human aspect of al-Ḥākim or possibly the animality of Ḥamza's enemies. (The neighbours of the Druzes have not been slow to accuse them of licentious orgies at their secret services).

Ḥamza and al-Muḳtanā prescribed a sevenfold set of commandments, replacing the Muslim "pillars of the faith", which have become the basis of the moral discipline of the *ʿuḳḳāl* and to some degree of all Druzes. They must above all speak truth among the faithful (or at least keep silent, but never misrepresent), a commandment which includes truth in the theological sense; but lying to unbelievers is permitted in defence of themselves or of the faith. This first commandment covers also any act, such as stealing, which must entail lying. The second commandment is to defend and help one another, and seems to imply carrying arms for the purpose. The other commandments are to renounce all former religions; to dissociate themselves from unbelievers; to recognize the unity of Our Lord (Mawlānā, the general title given al-Ḥākim as the One) in all ages; to be content with whatever he does; and to submit to His orders, particularly as transmitted through his *ḥudūd*. Ḥamza prescribed, in addition, special rules of justice and of personal status to replace the

s͟harīʿa, notably insisting on equality of treatment between husband and wife in marriage; thus divorce was penalized in either partner unless for good cause.

The faith of the *d͟juhhāl* is placed under the general guidance of the *ʿuḳḳāl*, but it is strongly affected by the principle of religious dissimulation—that to protect the secrecy of his faith, a Druze must affect to accept the faith of those in power about him; that is, normally, Sunnī Islām. Druzes have accepted the Ḥanafī legal system, though with modifications such as permission of more unlimited bequests and placing of limitations on divorce. They celebrate the *ʿīd*—though not the Ḥad͟jd͟j nor the Ramaḍān fast; many families use circumcision (or baptism), but attach no religious meaning thereto; at funerals they may use Islamic formulas but the key feature is the blessing of the *s͟hayk͟h*s. Like Syrians of other faiths, they visit the shrines of K͟hiḍr [*q.v.*] and the tombs of the prophets and saints. Nevertheless, even the *d͟juhhāl* know, and may freely speak of, the principle of their unitarianism. They possess a developed doctrine of creation and eschatology, which is founded in the teachings of the *ʿuḳḳāl*. The number of souls in existence is fixed, all souls being reincarnated immediately upon death (unless, having reached perfection, they ascend to the stars); those which believed in Ḥamza's time are always reincarnated as Druzes, either in Syria or in a supposed Druze community in China. The variety of incarnations each soul passes through gives a thorough moral testing. (Some of the *d͟juhhāl* believe in reincarnation of the wicked in lower animals). In the end, when al-Ḥākim and Ḥamza reappear to conquer and establish justice in the whole world, those Druzes who have shown up well will be the rulers of all mankind. The best will then dwell nearest to God—a notion which the *ʿuḳḳāl* understand, like much else, in a spiritual sense.

Bibliography: The Druze canon is available in numerous manuscripts in European, American, and Syrian libraries, as are many other Druze writings. A description and some translation of the canon is included in the fundamental work of Silvestre de Sacy, *Exposé de la religion des Druzes*, 2 vols., Paris 1838 (partial translation, Philipp Wolff, *Die Drusen und ihre Vorläufer*, Leipzig 1845); see also his *Mémoire sur l'origine du culte que les Druzes rendent à la figure d'un veau* in *Mémoires de l'institut royal, classe d'histoire*, iii, 1818, 74 ff. Some Druze pieces are printed and annotated in Silvestre de Sacy's *Chrestomathie arabe*, ii, Paris 1826. Other Druze writings are printed in Christian Seybold, *Die Drusenschrift: Kitâb Alnoqaṭ Waldawâir* (and N.-L. Kirchhain, *Das Buch der Punkte und Kreise*), Leipzig 1902; in Henri Guys, *Théogonie des Druzes*, Paris 1863; in Martin Sprengling, *The Berlin Druze lexicon* in *American Journal of Semitic Languages*, lvi (1939), 388-414, and lvii (1940), 75 ff. (which includes an excellent study of Druze cosmology); in Rudolph Strothmann, *Drusen-Antwort auf Nuṣairī Angriff*, in *Isl.*, xxv (1939), 269-81; in Ernst von Döbeln, *Ein Traktat aus den Schriften der Drusen*, in *Monde Oriental*, iii (1909), 89-126; in J. Khalil and L. Ronzevalle, *al-Risalāt al-Qusṭanṭīniyya*, *MFOB*, iii, Beirut, 1909, 493-534. A common Druze "catechism" has been variously published and translated; see Eichhorn, *Repertorium für morgenländische und biblische Literatur*, xii (1783), or Regnault, *Catéchisme à l'usage des Druses djahels*, in *Bull. de la Société de Géographie* (Paris), vii (1827), 22-30. The most important general study, apart from those mentioned above, is Narcisse Bouron, *Les Druzes, histoire du Liban et de la Montagne haouranaise*, Paris 1930. Useful is Ḥannā Abū-Rās͟hid, *D͟jabal al-Durūz*, Cairo 1925. Henri Guys, *La Nation druze, son histoire, sa religion, ses mœurs, et son état politique*, Paris 1863, is often incautious. Of the many travellers who have written of them, the best is Max von Oppenheim, *Vom Mittelmeer zum Persischen Golf*, Berlin 1899, i, 110 ff. Also interesting is W. B. Seabrook, *Adventures in Arabia*, New York 1927, chap. ix. On modern Druze legal status see F. van den Steen de Jehay, *De la situation légale des sujets ottomans non-musulmans*, Brussels 1906, and J. N. D. Anderson, *Personal law of the Druze community* in *WI* (1952), 1 ff., 83 ff. Especially for listings of manuscripts, see Hans Wehr, *Zu den Schriften Ḥamzas im Drusenkanon* in *ZDMG*, xcvi (1942), 187-207; also A. F. L. Beeston, *An ancient Druze manuscript* in *Bodleian Library Record*, v/6 (October 1956). For further references, especially to travellers' writings, see bibliography in Bouron, and footnotes in Philip K. Hitti, *The origins of the Druze people and religion*, New York 1928 (includes also some translated fragments); omitted from these two are F. Tournebize, *Les Druzes* in *Etudes des pères de la Compagnie de Jésus*, 5 October 1897; B. J. Taylor, *La Syrie, la Palestine, et la Judée*, Paris 1855, 35-40, 76-83; Henri Aucapitaine, *Etude sur les Druzes* in *Nouvelles Annales des Voyages*, VIme série, February 1862; *Magasin pittoresque*, 1841, 367, and 1861, 226. For chroniclers on the earliest period, see Silvestre de Sacy, *Exposé* (Nuwayrī, *Nihāyat al-Arab*; Md. D͟jaʿfarī, *Anhad͟j al-ṭarāʾiḳ*; Severus of Us͟hmūnayn, *Life of Patriarch Zechariah*; Abu 'l-Maḥāsin Ibn Tag͟hrībirdī, *al-Nud͟jūm al-zāhira* [based on Sibṭ Ibn al-D͟jawzī, *Mirʾāt al-zamān*]; and D͟jurd͟jus al-Makīn, *Taʾrīk͟h al-Muslimīn*). The latter is based on Yaḥyā al-Anṭākī, continuation of Eutychius, *Scriptores Arabici*, text, ser. III, vii/2, ed. L. Cheikho, B. Carra de Vaux, H. Zayyat, Beirut 1909, 220 ff.; see also Ibn al-ʿAdīm, *Taʾrīk͟h Ḥalab*, s.a. 423; M. G. S. Hodgson, *Al-Darazī and Ḥamza in the origin of the Druze religion*, in *JAOS*, lxxxii (1962), 5-20. (M. G. S. HODGSON)

(ii) — OTTOMAN PERIOD

When the Ottoman and the Mamlūk armies met in battle at Mard͟j Dābiḳ in 922/1516, the Druzes fought on both sides. The Buḥturids from the west of the country fought on the side of the Mamlūks, while the Maʿnids of S͟hūf supported the Ottomans by allying themselves to G͟hazālī, the *nāʾib* of Damascus. Under the Ottomans, the Druzes were governed by local dynasties, of which the Āl Tanūk͟h, the Maʿnids and the S͟hihābids, and particularly the last two (for whose genealogy see Zambaur, i, 108 ff.) were the most important. At the battle of Mard͟j Dābiḳ the Maʿnids were led by the Amīr Fak͟hr al-Dīn I, who at the crucial point changed sides, abandoning the Mamlūk Ḳānsūh al-G͟hūrī and going over to Sultan Selīm I in Damascus. The Sultan rewarded him with overlordship over the amīrs of Mount Lebanon, the Āl Tanūk͟h dynasty being confined to Ṣaydā and Ṣūr (Blau, *Zur Geschichte Syriens*, in *ZDMG*, viii (1854), 480 ff.). In 951/1544 Maʿnid rule passed to Fak͟hr al-Dīn's son Ḳorḳmaz. Druze attacks against the Ottomans led in 992/1584 to a punitive expedition by Ibrāhīm Pas͟ha, the *wālī* of Egypt. The son of Ḳorḳmaz, the Amīr Fak͟hr al-Dīn

II [*q.v.*] challenged the *wālī* of Tripoli, Sayf-oghlu Yūsuf Pasha. He had some initial successes, but was eventually forced to withdraw to the Mountain, after the defeat of the rebels in 1016/1607 in the battle between Kuyudju Murād Pasha and Djānbulāt-oghlu, the importance of whose family among the Druzes dates from this time. The Druze alliance dissolved as a result of the expeditions led by land by the *wālī* of Damascus, Ḥāfiẓ Pasha, and by sea by the Ḳapudan Pasha Öküz ("The Bull") Meḥmed Pasha between 1018/1609 and 1022/1613. Fakhr al-Dīn allied himself to Florence in 1017/1608 and on 30 Radjab 1022/15 September 1613 he went to Italy to seek help under the alliance, returning to the Djabal in 1027/1618. Maʿnid rule was preserved during his absence, particularly as his spies in Istanbul and Damascus gave preliminary warning of any Ottoman military measures. Although the Ottoman Sultan, by a *fermān* issued in 1034/1625, recognized Fakhr al-Dīn as *Amīr* of the Druzes from Aleppo to Jerusalem (Ḥaydar, i, 715), the latter was subjected to constant pressure from Küčük Aḥmed Pasha, who had been appointed *wālī* of Damascus by Murād IV. In 1044/1634 the Druzes were decisively defeated at Maghārat Djarzīn, the Amīr and three of his children being carried off prisoner to Istanbul, where all but Ḥusayn Bey were executed.

The death of Fakhr al-Dīn marked the end of Maʿnid ascendancy. It was followed by Ḳaysī-Yamanī dissension. Fakhr al-Dīn, like the ruling branch of the Āl Tanūkh before the Maʿnid ascendancy, belonged to the Yamanī clan (known as *aḳlī*, "white" by the Ottomans, the Ḳaysīs being known as "red", *ḳizilli*, cf. Fīndīḳlīlī Meḥmed Āghā, *Taʾrīkh*, Istanbul 1928, i, 215; C.-F. Volney, i, 414, note 1). Amīr Malḥam, who succeeded him in 1045/1635, represented the Ḳaysī clan and was opposed by the Amīr ʿAlī ʿAlam al-Dīn on behalf of the Yamanīs. Dissension gave openings for Ottoman intervention, as in 1061/1651 by the *wālī* of Tripoli, Ḥasan Pasha. In 1064/1654 Amīr Malḥam extended his rule to Ṣafad, by agreement with the *wālī* of Damascus. Malḥam died in 1069/1659 and was succeeded in the Djabal by his son Amīr Aḥmad, the last Maʿnid ruler, who died in 1108/1697 and was succeeded by Shihābids of the Ḳaysī clan. The latter had been protected by Amīr Aḥmad, who had refused to give them up to the *wālī* of Damascus, Köprülü Fāḍil Aḥmed Pasha, in 1070/1660. The *wālī* of Damascus, helped by the *wālī* of Tripoli, thereupon defeated the joint Maʿnid-Shihābid forces at Kasrawān. The two dynasties later fell out, however, with the Maʿnids winning a short-lived victory at al-Fulful in 1076/1666 (Ibn Sabāṭa, Ṣāliḥ b. Yaḥyā, appendix, 237). After the death of Amīr Aḥmad, however, it was the Shihābid *amīr* of Rāsheyā, Bashīr b. Ḥusayn, who was chosen overlord of the Djabal with the agreement of the Ottomans. The Yamanīs tried unsuccessfully to undo Ḳaysī ascendancy: from the court in Istanbul Ḥusayn, the son of Fakhr al-Dīn II, managed, for example, to relegate Bashīr to the position of regent to the 12-year old Ḥaydar, of the family of the *amīrs* of Ḥaṣbeyā, whose local supporters later poisoned Bashīr. But when Ḥaydar became Amīr in his own right he crushed the Yamanīs at the battle of ʿAyn-Dārā which changed the whole feudal picture of the Djabal. Thereafter under the overlordship of the Shihābīs, who tried to prevent Druze-Maronite struggles, the Djānbulāts reigned over Shūf, Abu 'l-Lamaʿ held Matn, while at Shuwayfāt the Arslan family of the Yamanī clan had to share their rule with Talmūḳ Yamanīs. In holding together the Djabal, the Shihābīs had to rely on the support of Ottoman *wālīs*, whose intervention led to the increase in the number of local *shaykhs*, who in turn exterted pressure on the *amīr*. Thus, while the *shaykhs* paid tribute to the *amīr*, it was they who decided in council whether to keep the peace or wage war. Amīr Ḥaydar died in 1144/1732 in the Shihābī capital at Dayr al-Ḳamar, having in 1141/1729 abdicated in favour of his son Malḥam. Under the latter's rule which lasted until 1167/1754, the port of Bayrūt regained the importance which it had enjoyed under Fakhr al-Dīn and became the second Shihābī centre after Dayr al-Ḳamar. Many of Malḥam's children were converted to Roman Catholicism, Christianity in general gaining ground in the Djabal. Malḥam and his successors generally tried to maintain a balance between local Muslims and Christians. Thus, when in 1171/1758 Greek pirates flying the Russian flag attacked Bayrūt and when local Muslims retaliated by attacking the Franciscan monastery in the town, two of the Muslim leaders were hanged at the Amīr's orders.

Malḥam was succeeded by his brothers Aḥmad (the father of the historian Aḥmad al-Shihābī) and Manṣūr, although Nuʿmān Pasha, the Ottoman *wālī* of Ṣaydā, appointed to the amīrate Ḳāsim b. ʿUmar, who, however, had to content himself with the area round Ḥazīr. Ḳāsim died a Christian in 1182/1768, his son Bashīr II also making no secret of his Christian beliefs (Blau, *op. cit.*, 496; Lammens, *La Syrie*, Beirut 1921, ii, 100 ff.). These conversions did not, of course, prevent the majority of Druzes from retaining their faith, a fact which sowed the seed of future trouble. Manṣūr was dismissed in 1184/1770 by Derwīsh Pasha, the *wālī* of Ṣaydā, and replaced by Amīr Yūsuf. In 1185/1771 when the Russian fleet commanded by Alexei Orlov was encouraged by Ẓāhir al-ʿUmar, the rebel ruler of Ṣafad and Acre, to bombard Bayrūt, Mansūr sued for peace against payment of 25,000 piastres, while Amīr Yūsuf asked for Ottoman reinforcements, whereupon ʿUthmān Pasha, the *wālī* of Damascus, despatched Djazzār Aḥmad Pasha who occupied Bayrūt in the name of Amīr Yūsuf. The latter succeeded, however, in ejecting this unwelcome deputy from Bayrūt in 1187/1773 after a four-month siege, in which he was helped by the Russian fleet which he summoned from Cyprus. Nevertheless, Djazzār Aḥmad Pasha continued to exert pressure from Acre and Ṣaydā on the Shihābīs of the Djabal. Payment of a tribute and loyalty to the Ottoman cause in the face of the Napoleonic expedition from Egypt, did not shield Bashīr II from this pressure. Even although Yūsuf Ḍiyā Pasha, the commander of the Ottoman forces against Napoleon, confirmed Bashīr as ruler of the Djabal, Djazzār Aḥmad Pasha had him expelled by forces commanded by Ḥusayn and Saʿd al-Dīn, the sons of the Amīr Yūsuf, whom he wanted to appoint in his place. Bashīr sought refuge with the British admiral Sidney Smith, who took him in his flagship to al-ʿArīsh, returning later to the Djabal, Djazzār Aḥmad Pasha contenting himself this time with keeping one of Bashīr's sons as a hostage. Pressure on the Druzes decreased in 1804 with the death of Djazzār Pasha. In 1810 when the Wahhābīs threatened Damascus, the *wālī* Yūsuf Pasha asked the help of Süleymān Pasha, the *sandjaḳ-beyi* of Acre, who in turn summoned the Druzes to Damascus. The Druzes forced the departure of Yūsuf Pasha and were only with difficulty compelled to retire into the

Ḥawrān by Süleymān Pas̲h̲a's successor, ʿAbd Allāh Pas̲h̲a. Bas̲h̲īr's absence from the Dj̲abal had, however, caused so much resentment that the *wālī* of Damascus and ʿAbd Allāh Pas̲h̲a were forced to allow the *s̲h̲ayk̲h̲s* to summon him back to the Lebanon. Bas̲h̲īr thereafter sided with ʿAbd Allāh Pas̲h̲a, in his revolt against the Ottomans in Acre, whereupon his rival S̲h̲ayk̲h̲ Dj̲ānbulāṭ had ʿAbbās al-S̲h̲ihābī proclaimed *amīr*, while Bas̲h̲īr and his sons had to seek refuge with Muḥammad ʿAlī in Egypt. Before long, however, Bas̲h̲īr was back, defeated Dj̲ānbulāṭ at the battle of Muk̲h̲tāra in 1825 and had him executed. In the following year, an attack on Bayrūt by the fleet of the Greek insurgents led once again to a *pogrom* of local Christians, many of whom emigrated to the Dj̲abal. Muslim feeling against Bas̲h̲īr was also inflamed by the permission given to Melkite Christians to settle in the Dj̲abal. In 1830 Bas̲h̲īr once again helped ʿAbd Allāh Pas̲h̲a, this time to suppress a revolt in Nablūs. He then sided with Muḥammad ʿAlī against the Ottomans and helped the conquests of Ibrāhīm Pas̲h̲a.

(M. C. Şihabeddin Tekindağ)

After the Kütahya agreement of 1833 Bas̲h̲īr did his best to help the Egyptians, securing in return a wide autonomy for the Lebanon. Egyptian rule was at first welcomed, particularly as certain impositions on non-Muslims were abolished, but difficulties arose when Ibrāhīm Pas̲h̲a tried to confiscate firearms and to call up Druzes. In 1835 Ibrāhīm Pas̲h̲a introduced troops into Dayr al-Ḳamar and tried to collect the arms of local Christians but preferred later to suspend his measures in so far as they affected the Druzes. Nevertheless a Druze revolt broke out in 1837 when an attempt was made to call up Druzes in the Ḥawran, who retaliated by assassinating Ibrāhīm Pas̲h̲a's emissaries. The Ottoman Government tried to stir up the Druzes and to supply arms to them, Ibrāhīm Pas̲h̲a retaliating by stirring up the Kurds and by closing Syrian ports to Ottoman shipping. A Druze revolt broke out in Ladj̲ā, but from his palace in Bayt al-Dīn, from where he exercised wide influence over the Maronites, Bas̲h̲īr succeeded in preventing its spreading from the Ḥawrān to the Lebanon, believing as he did that thanks to French support the Egyptians would be finally victorious. A general revolt in the Lebanon, including this time the Maronites, broke out again, however, when Ibrāhīm Pas̲h̲a made another attempt to call in arms and Egyptian forces in Bayrūt found their communications cut. On 14 August 1840 the British naval commander Sir Charles Napier established contact with the rebels, who were supplied with arms after the joint bombardment of Bayrūt the following month by British, Austrian and Ottoman ships. After vainly waiting for help from Ibrāhīm Pas̲h̲a in Dayr al-Ḳamar, Bas̲h̲īr submitted to the Sultan, whose troops were in the process of reconquering Syria as a result of the London agreement. Bas̲h̲īr's personal security was guaranteed, but he was nevertheless deposed in favour of a relative, Bas̲h̲īr Ḳāsim Malḥam. The Egyptian occupation on the one hand disorganized the feudal structure of the Dj̲abal and, on the other, sharpened antagonism between the Druzes and the Maronites. Bas̲h̲īr Ḳāsim's rule lasted for approximately one year and was underpinned by the *Mus̲h̲īr* of Ṣaydā, Selīm Pas̲h̲a, whose seat of government was transferred to Bayrūt and who formed a mixed council of the various communities to advise the *amīr*. Taxation reform (the Egyptians had raised the taxation of the Dj̲abal from 3,650 to 6,500 purses and this was then reduced to 3,500 purses) and the question of compensation led to communal friction, which erupted at Baʿaḳlīn, after which many houses and shops were set on fire at Dayr al-Ḳamar. Relative peace was restored after the Druze adventurer S̲h̲ibāl al-ʿUryān, who was in the service of the *wālī* of Damascus, was forced to return to that city from Zaḥla. These events caused much stir abroad and led to foreign complaints against the Ottoman administration. The Ottomans thereupon deposed Bas̲h̲īr Ḳāsim, and entrusted the administration of the Dj̲abal directly to the *serʿasker* Muṣṭafā Nūrī Pas̲h̲a, who in turn appointed to the amīrate one of his infantry commanders, the *mīrliwā* ʿÖmer Pas̲h̲a. Continued foreign displeasure led to the despatch to Bayrūt of Selīm Bey as an investigator in 1842, but the latter's report that the situation was satisfactory and that the appointment of either a Druze or a Maronite *amīr* was impossible, was disbelieved by foreign ambassadors at the Porte. Meanwhile new incidents were reported, whereupon Esʿad Muk̲h̲liṣ Pas̲h̲a was appointed *mus̲h̲īr* of Ṣaydā, and after his arrival at Bayrūt the *serʿasker*'s mission was declared completed. Esʿad Pas̲h̲a appointed two *ḳāʾim-maḳāms*, the Maronite Ḥaydar from Bayt Abi 'l-Lāmiʿ and the Druze Mīr Aḥmad from Bayt Arslān, and detached the northern districts of Dj̲ubayl from the Dj̲abal, placing them under Tripoli. More serious troubles broke out in 1845, when Esʿad Pas̲h̲a was succeeded by the *wālī* of Aleppo, Wedj̲īhī Pas̲h̲a. Bloody incidents included an attack by the Maronites on the Druzes of Matn as well as Druze attacks on the monasteries of Ābī and Sulīmā which were set on fire. Accusations and counter-accusations followed, the French accusing Wedj̲īhī Pas̲h̲a of being pro-Druze, while the French themselves were being accused of stirring up the Maronites. Another mission was then undertaken by the Foreign Minister S̲h̲ekīb Efendi, who started by demanding that all arms should be handed in, an order which led to resistance and further complications. A further emissary, the *ferīḳ* (divisional general) Emīn Pas̲h̲a was sent to Bayrūt in January 1846. He helped S̲h̲ekīb Efendī in his work of reorganization, returning with him in June 1846. S̲h̲ekīb Efendi's reforms provided for the retention of the two *ḳāʾim-maḳāms*, advised by mixed councils, special deputies (*wekīl*) being elected in villages having a mixed population. The two *ḳāʾim-maḳāms* were to receive a salary of 12,500 piastres a month each, and to be appointed and dismissed directly by the Sultan on the advice of the *mus̲h̲īr* of Ṣaydā. The councils were given judicial as well as administrative and financial powers. Stability was thus established at the beginning of 1847, even although the failure to expel some trouble-making Druze leaders created difficulties. Taxes were apportioned between the two communities, the Maronites being asked to pay 1994 and the Druzes 1506 purses.

Peace was preserved until the *k̲h̲aṭṭ-i humāyūn* of 1856, which by its promise of concessions to non-Muslim subjects led to a more generalized Christian-Muslim rivalry. The first signs of trouble appeared in 1859. In the following year the Druzes and the Maronites clashed openly, whereupon K̲h̲urs̲h̲īd Pas̲h̲a sent troops to the border between the two *ḳaḍās*. This did not prevent the major outbreak of 1860: in May the Druzes attacked and set fire to villages in Matn; in June they were joined by Druzes from the Ḥawrān, led by Ismāʿīl Aṭras̲h̲ (the Dj̲abal Druzes being led mainly by Saʿīd Dj̲ān-

bulāṭ and Khaṭṭār Aḥmad). While the General Council of the province (*Medjlis-i ʿUmūmī*) rejected the *wālī*'s suggestion to send troops, the Druzes overpowered the defenders of Government House at Ḥāṣbēyā, massacring the local Christians: similar outrages were perpetrated at Rāshēyā, Baʿalbak (where local government was overthrown by the Ḥarkūbīn family), Zaḥla and Dayr al-Ḳamar. To crush the insurrection the Ottoman Government dispatched the Foreign Minister Fuʾād Pasha, arming him with emergency powers. His arrival coincided with a massacre of Christians in Damascus by the local mob, reinforced by Druzes and Bedouins. In the meantime Khurshīd Pasha had secured an armistice between Druzes and Maronites, of which Fuʾād Pasha did not approve, on the grounds that it compromised future judicial proceedings, but which he feared to denounce as bloodshed might then be renewed. France intervened directly by landing 5,000 troops and by suggesting the total expulsion of the Druzes from the Djabal. This Fuʾād Pasha succeeded in avoiding by taking firm action against guilty Druze leaders, pursuing and apprehending them, and finally putting them on trial at a court-martial at Mukhtāra, where some of them were sentenced to death. He also took severe punitive action in Damascus and had the *wālī* Aḥmed Pasha sent under escort for trial in Istanbul, Khurshīd Pasha having also been dismissed from Bayrūt. These measures made possible the evacuation of French troops from the Djabal. Under the agreement signed on 9 June 1861, the Djabal was completely detached from the *wilāyet*s of Bayrūt and of Damascus and placed under a Christian *mutaṣarrif*, who was, however, to come from outside the district. The *mutaṣarrif* was to be advised by an agent (*wekīl*) from each community. Administrative councils were also formed at the centre and in seven newly formed *ḳaḍā*s; a mixed police force was also constituted. At the instance of foreign embassies, an Armenian Catholic, Dāwūd Pasha, was appointed *mutaṣarrif*, a post which he retained for five years and in which he was succeeded by a Christian Arab, Franko Pasha. Dāwūd Pasha had many schools opened in Druze as well as in Maronite villages, and the Druzes continued to prosper under his successor. Disorder continued to prevail, however, among the Druzes of the Ḥawrān who were joined by refugees from the Lebanon, so that Djabal Ḥawrān began to be known as Djabal Durūz. Here Druzes came under the ascendancy of the Aṭrash family, as a result of the leading role played by Ismāʿīl al-Aṭrash in the events of 1860. Ismāʿīl's son Ibrāhīm raided Suwayda, the capital of the Djabal Ḥawrān, in 1879. When the *wālī* of Damascus led a punitive expedition against him, the Druzes put up a stiff resistance until an armistice was concluded in 1880. There was more trouble when Ibrāhīm's son Shiblī was imprisoned at Darʿa by the Ottoman authorities, as a result of incidents which were largely economic and social in origin. The Druzes rose up again and Shiblī had to be freed. Shiblī was once again arrested and once again freed by a Druze insurrection in 1893, when in alliance with the Banī Fadjr he led his followers against the Ruwāla tribe. During these troubles many Druze families were banished to Anatolia, but they were later allowed to return, while, at the same time, projects to call up the Druzes for military service were dropped.

In the meantime the Druzes in the Lebanon remained peaceful until 1897 when they complained that Maronite pressure was constantly increasing and when they demanded the formation of a separate *ḳaḍā* for the 10,000 Druzes of Matn, in case the Maronites succeeded in detaching four communes (*nāḥiya*) from the only one existing Muslim *ḳaḍā* at Shūf. After the Young Turkish Revolution of 1908 operations against the Druzes were entrusted to Sāmī Pasha, who proclaimed martial law and then summoned the Druze leaders to Damascus where he had many of them executed. Druze resistance continued, nevertheless, until 1911. Druze demands became irrelevant when, after the beginning of the First World War, the capitulations, and with them Lebanese autonomy, were abolished and Ismāʿīl Ḥaḳḳī Bey was appointed independent mutaṣarrif. During the war, Djemāl Pasha kept some Druze leaders as "guests" in Jerusalem. Also during the war, the Druze leader, Yaḥyā al-Aṭrash, whom Djemāl Pasha accused of complicity with the French (*Khāṭirāt*, Istanbul 1339, 179), died and was succeeded by his son Selīm. Djemāl Pasha praised the services of two members of the Aṭrash family, Nasīb and ʿAbd al-Ghaffār, but a third member, Sulṭān, whose father had been executed by Sāmī Pasha, was opposed to the Ottomans and was the first Druze leader to enter Damascus with the Allied troops on 2 October 1918.

(M. Tayyib Gökbilgin)

DUSHMANZIYĀR [see KĀKAWAYHIDS].

DŪST MUḤAMMAD, the real founder of Bārakzāy rule in Afghānistān, was the 20th son of Pāyinda Khān, chief of the Bārakzāy clan under Tīmūr Shāh. After the execution of Pāyinda Khān in the reign of Zamān Shāh, Dūst Muḥammad was brought up by his Ḳizilbash mother's relatives until he came under the care of the eldest brother, Fatḥ Khān, who held considerable influence under Maḥmūd Shāh. In the second reign of Maḥmūd, Dūst Muḥammad held prominent offices including that of governor of Kūhistān, and he led successful expeditions to suppress rebellions in Kashmīr and Harāt (1816). Following the Harāt expedition Dūst Muḥammad fell into disgrace (allegedly for insulting the wife of a Sadōzāy prince) and he fled to Kashmīr. Whether in revenge for this action or through jealousy of his power, Maḥmūd Shāh and his son Kāmrān then blinded and killed Fatḥ Khān. Dūst Muḥammad raised a force in Kashmīr and captured Kābul, putting up Shāhzāda Sulṭān ʿAlī as nominal ruler. He foiled an attempt by Maḥmūd to dispossess him but he was forced to surrender Kābul to his eldest surviving brother, Muḥammad Aʿẓam Khān, formerly governor of Kashmīr, and he himself became ruler of Ghazna. However, he continued to aspire to power in Kābul, and after the death of Aʿẓam in 1238-9/1823 he defeated his son and successor Ḥabīb Allāh Khān, but Kābul fell to another brother, Sulṭān Muḥammad Khān of Peshāwar. But Dūst Muḥammad retained the support of the Ḳizilbash element in Kābul and eventually Sulṭān Muḥammad gave up the attempt to maintain himself there and in 1241-2/1826 Dūst Muḥammad became ruler. He took the title of Amīr in 1250/1834.

Once established in Kābul Dūst Muḥammad began to extend his power over other areas of Afghānistān, replacing the existing rulers with his own sons. He failed to recover Peshāwar from the Sikhs in 1250/1835 and 1253/1837 and failed to hold it in 1265/1848-9 after it was made over to him as the price of his support for the Sikhs in the second Anglo-Sikh war. Elsewhere he was markedly successful. Before his expulsion from Kābul in 1255/

1839 by the forces of Shāh Shudjā' and the English East India Campany he had extended his power over Djalālābād and Ghazna and by his defeat of Murād Beg of Kunduz in 1254/1838-9 into the area north of the Hindū-kush. Within his dominions he consolidated his authority in Kūhistān, Kunar and among the Hazāra tribes. After his restoration in 1259/1843 he continued this policy. In the north he extended his power over Balkh and Khulm (1266-7/1850), Shibarghān (1271/1854), Maymana and Andkhuy (1271/1855) and Kunduz (1276/1859), although his authority was not entirely unquestioned. In the West he took Ḳandahār (1272/1855) and Harāt (1279/1863). At the same time he increased his power at the expense of the tribal chiefs, principally by developing a regular army to replace the feudal militia, which had been the basis of the Durrānī [*q.v.*] monarchy, and diverting to the support of this army the revenues which had formerly been appropriated by the tribal chiefs. He destroyed the power of the Ghalzāys, murdered, imprisoned or exiled certain prominent tribal chiefs, and held both the Ḳizilbash and the Sunnī elements, who had formerly made Kābul governments so unstable, under firm control. The weakness of his system was that it depended on the continuing co-operation of his sons, whom he employed as governors, a condition which was not met after his death. None the less he established the geographical outlines of modern Afghānistān and laid the foundations of its internal consolidation. More than anyone else he deserves the title of the founder of Afghānistān.

Dūst Muḥammad died in 1279/9 June 1863. He had numerous sons, the most important of whom were the following: Muḥammad Afḍal Khān, Muḥammad A'ẓam Khān and Walī Muḥammad Khān, who were all sons of a Bangash wife from Kurram, and Muḥammad Akbar Khān, (d. 1848, *wazīr* 1843-8, and the leading figure in the disturbances of 1841-2), Ghulām Ḥaydar Khān (d. 1274/1858), Shīr 'Alī Khān (the future *amīr*), Muḥammad Amīn Khān and Muḥammad Sharīf Khān, who were all sons of a Popalzāy wife. It is noteworthy that in choosing a successor Dūst Muḥammad ignored his older sons and chose Akbar, Ghulām Ḥaydar and Shīr 'Alī in that order, they being the sons of a nobler born wife.

DUSTŪR, in modern Arabic constitution. A word of Persian origin, it seems originally to have meant a person exercising authority, whether religious or political, and was later specialized to designate members of the Zoroastrian priesthood. It occurs in *Kalīla wa-Dimna* in the sense of "counsellor", and recurs with the same sense, at a much later date, in the phrase *Dustūr-i mükerrem*, one of the honorific titles of the Grand Vizier in the Ottoman Empire. More commonly, *dustūr* was used in the sense of "rule" or "regulation", and in particular the code of rules and conduct of the guilds and corporations (see FUTUWWA and ṢINF). Borrowed at an early date by Arabic, it acquired in that language a variety of meanings, notably "army pay-list", "model or formulary", "leave", and also, addressed to a human being or to invisible *djinn* [*q.v.*], "permission" (see further Dozy s.v.).

In modern Arabic, by a development from the general meaning of "rule", it has come to mean constitution or constitutional charter, and is now used in this sense in the Arab countries, though not elsewhere, to the exclusion of all other terms. The following articles deal with the development of constitutional law and government in various parts of the Islamic world.

i. — TUNISIA

Until the middle of the 19th century, the despotism of the Bey (*bāy* [*q.v.*]) was tempered only by the momentary power of some members of his entourage who governed as they pleased. The foreign consuls, alarmed by the dangers of the situation, accordingly advised Muḥammad Bey [*q.v.*] to be guided by the provisions of the *khaṭṭ-i humāyūn* [*q.v.*] which had been promulgated in Turkey on 18 February 1856, granting certain guarantees to non-Muslim subjects of the Empire; but the Bey turned a deaf ear, and a grave incident was needed to precipitate the course of events. It was in fact the summary execution in 1857 of a Jewish carter who, after knocking down a Muslim child, was said to have hurled insults and blasphemies at the crowd that was threatening him with violence, that aroused the anxiety of the European Powers and made them decide to instruct their consuls to make representations to the Tunisian Government. It was in this way that Muḥammad Bey was led to make a formal announcement, on 9 September 1857, of the principles of the Fundamental Pact (*'Ahd al-amān*; see L. Bercher, *En marge du pacte fondamental*, in *RT*, 1939, 67-86) which repeated in part the *khaṭṭ-i sharīf* of Gülkhāne (26 Sha'bān 1255/3 November 1839; see B. Lewis, *The emergence of modern Turkey*, London 1961, 104-5 and bibl. cited there) and guaranteed complete security to all inhabitants of whatever religion, nationality and race; the equality of all before the law and taxation, as well as freedom to trade and work, were recognized. At the same date the Bey announced his intention of granting the country a constitution. Some partial reforms were actually introduced (notably the setting up of a municipal council [see BALADIYYA]), and preparatory work was in fact started on a draft constitution in which the French Consul, Léon Roches, took part. On 17th September 1860 Muḥammad al-Ṣādiḳ [*q.v.*], who had succeeded his brother Muḥammad on 24 September 1859, himself gave a copy of the constitution drafted in French to Napoleon III in Algiers, and received the Emperor's approval. The constitution, consisting of 13 headings and 114 articles, was promulgated in January 1861 and put into force on 26 April of the same year.

By the terms of this constitution, the hereditary Bey was supreme head of the State and of religion, but he no longer controlled the revenues of the State and was allotted a civil list; moreover he was responsible, as were the ministers whom he had to have at his side, to the Grand Council which consisted of 60 councillors nominated for five years and chosen by the Tunisian Government from the ministers, high officials, senior officers and notables. "The agreement of the Grand Council is indispensable for all the procedures listed below: making new laws; changing a law . . . .; increasing or cutting down . . . expenditure . . .; enlarging the army, its equipment or that of the navy; . . . . interpreting

the law". Thus the Grand Council participated in the preparation of laws which were made valid by the Bey and his ministers. The executive power reverted to the Bey and his ministers, whilst the independence of the judicial power in respect of the legislature and the executives was recognized. The *ḳāʾid*s continued to preside over police courts for the trial of minor offences, courts of first instance were set up and the court of the *sharʿ* [*q.v.*] continued to function for all questions within its competence. A court of appeal was to sit in Tunis and the Grand Council was to act as Supreme Court of Appeal. Finally, the provisions of the Fundamental Pact with regard to the rights of Tunisian and foreign subjects were confirmed and completed.

The establishment of the French Protectorate suspended the operation of the Constitution of 1861. From the earliest years of the 20th century a number of Young Tunisians, the spiritual heirs of the general Khayr al-Dīn [*q.v.*], endeavoured to raise the material, moral and intellectual level of their compatriots, and founded various associations [see DJAMʿIYYA, iv] of a more or less political character. In 1907 was created a Consultative Conference, considered inadequate, and from that time the idea of demanding the grant of a Constitution was in germination. After the war, on 4 June 1920, the Tunisian Liberal Constitutional Party (*al-Ḥizb al-Ḥurr al-Dustūrī al-Tūnusī*) was founded, more commonly known as the Destour Party. The *vade-mecum* of Tunisian nationalism at that time was a collective work, *La Tunisie martyre*, which called for: the election of a deliberative assembly composed of Tunisian and French members elected by universal suffrage; the formation of a government responsible to this assembly; the absolute separation of powers; the access of Tunisians to all administrative posts; the election of municipal councils by universal suffrage; the respect of public liberties. In 1922 the authorities of the Protectorate set up the Great Council, an arbitral commission, councils of caïdat and regional councils [see TUNISIA]; but the conservative class of the nation, who would have been satisfied with gradual reforms, lost ground to a new petty bourgeoisie, on the whole of French and Arab culture, which tried to reach the public in greater depth; a split, the beginnings of which had been apparent in the Destour Party since 1932, came about on 1 March 1934 with the creation of the Neo-Destour (as opposed to the Archaeo-Destour) Party, which called for full and complete independence and organized mass demonstrations to achieve it. The leaders of this movement were exiled, and the second world war silenced the demands for independence. They were renewed immediately after the restoration of peace, and independence was granted to Tunisia by France on 20 March 1956; this was a triumph for the president of the Neo-Destour Party, M. Habib Bourguiba (al-Ḥabīb Abū Ruḳayba), the future President of the Tunisian Republic. (Bibliography on the nationalist movements is copious but scattered among many papers, periodicals, bulletins, etc.; in particular *REI*, *passim*; *OM*, *passim*; also Ch. Khairallah, *Essai d'histoire et de synthèse des mouvements nationalistes tunisiens*, Tunis n.d.; H. Bourguiba, *La Tunisie et la France*, Paris 1954; F. Garas, *Bourguiba et la naissance d'une nation*, Paris 1956; P. E. A. Romeril, *Tunisian nationalism, a bibliographical outline*, in *MEJ*, xiv (1960), 206-15; N. A. Ziadeh, *Origins of nationalism in Tunisia*, Beirut 1962). As early as 29 December 1955 the Bey promulgated a decree permitting the establishment of a National Constituent Assembly, which was elected on 25 March 1956 and drafted a new constitution, promulgated on 25 Dhu 'l-Ḳaʿda 1378/1 June 1959, with 10 headings and 64 articles.

It is laid down in the preamble to this Constitution that the Tunisian peoples, who "have freed themselves from foreign domination thanks to their powerful cohesion and to the struggle they have sustained against tyranny, exploitation and reaction", proclaim that "the republican régime represents the best guarantee of human rights ... and the most efficacious means of ensuring the prosperity of the nation". Part I provides that Tunisia is a Republic whose religion is Islam, that it forms a part of the Greater Maghrib, that its motto is "Liberty, Order, Justice", and that sovereignty belongs to the people. The Tunisian Republic guarantees the dignity of the individual and freedom of conscience, and protects freedom of worship provided that public order is not disturbed (art. 5). All citizens are equal before the law and for purposes of taxation, and enjoy full rights which can be limited only by law (arts. 6-7). Freedom of opinion, of expression, of the press, of publication, of assembly and of association are guaranteed, as well as trade union rights (art. 8). Inviolability of domicile, secrecy of the mails and freedom of movement are assured (arts. 9-10); right of property is guaranteed (art. 14). Part II treats of the legislative power exercised by the National Assembly which is elected for 5 years by universal suffrage, at the same time as the President of the Republic. The right to initiate legislature belongs to the President or to the President and the members of the Assembly (art. 28); the President may enact, in the interval between two ordinary annual sessions of the Assembly, decrees, which must be submitted for ratification by the deputies in the course of the following session (art. 31); in addition, in the case of imminent danger the President may enforce exceptional measures and report them to the Assembly (art. 32). The State budget is voted by the Assembly (art. 35).

Part III is devoted to the executive power exercised by the President of the Republic, who must be a Muslim, aged at least 40 years, of Tunisian father and grandfather and in possession of full civic rights (arts. 37-9). He is elected for 5 years by direct and secret universal suffrage, and is not eligible for re-election for more than three consecutive terms (art. 40). He promulgates the laws and ensures their publication within 15 days in the official newspaper, during which time he has the power of referring a bill back for a second reading before the Assembly; if the bill then receives a two-thirds majority the law is promulgated within a fresh period of 15 days (art. 44). The President decides government policy, and selects the members of the government who are to be responsible to him (art. 43). He nominates holders of civil and military office and is the supreme chief of the armed forces (arts. 45-6). The rest of the chapter deals with foreign relations, the making of treaties, the granting of pardons, and the vacancy of the Presidency.

Part IV, very short, relates to the judicial power. The Constitution assures the independence of the judiciary (art. 53) and sets up a Higher Judicial Council which supervises the application of the guarantees granted to judges (art. 55). Part V institutes a Supreme Court which is to meet to try a charge of high treason brought against a member of the government. Parts VI, VII and VIII treat of the Council of State, which is at once an administrative jurisdiction and an Audit Office, the Economic and Social Council, and municipal and regional

councils. Finally Parts IX and X provide for the conditions for amending the Constitution, initiative for which belongs to the President or to one-third of the members of the Assembly, as well as of interim provisions.

Ganiage, *Les origines du protectorat français en Tunisie (1861-81)*, Paris 1959, 69 ff. (with bibl.); the Journal of Ibn Abi 'l-Ḍiyāf who took part in drafting the Constitution is at present being edited and translated. Constitution of 1959: *ʿAmal*, 29 May 1959; *ʿAlam*, 1 June 1959; *OM*, 1959, 411-5; *MEJ*, xiii (1959), 443-8. (Ed.)

ii. — Turkey

The word *düstūr* (modern Turkish form *düstur*) is used in Turkish in the general senses of principle, precedent, code or register of rules. It was applied in particular to the great series of volumes, containing the texts of new laws, published in Istanbul (and later Ankara) from 1279/1863 onwards. (An earlier volume of new laws, not under this name, had already been issued in 1267/1851.) Three series (*tertīb*) of the *Düstūr* were published, the first covering the years 1839-1908, the second 1908-22, and the third containing the laws of the nationalist régime in Ankara and, after it, of the Turkish Republic, from 1920 onwards (see G. Jäschke, *Türkische Gesetzsammlungen*, in *WI*, N.S. iii (1954) 225-34).

Düstūr has not been used in Turkish with its modern Arabic meaning of constitution, for which the normal terms are *ḳānūn-i esāsī* (basic law) and *meshrūṭiyyet* (conditionality, conditionedness). The former term is applied to the constitution itself, and was replaced during the linguistic reforms in the Republic by *Anayasa*; the latter denotes constitutional government. In what follows a brief sketch is given of constitutional development in Turkey during the 19th and 20th centuries.

The *Sened-i Ittifāḳ*

The modern constitutional history of Turkey is usually dated from the year 1808 when, shortly after the accession of Maḥmūd II, the Grand Vizier Bayraḳdār Muṣṭafā Pasha [*q.v.*] convened a meeting in Istanbul, to which he invited a number of the local rulers and dynasts (see aʿyān and derebey) who at that time enjoyed virtual autonomy in most of the provinces of the Empire. A number of the leading *aʿyān* and *derebeys*, from both Rumelia and Anatolia, came with large retinues and military forces (Ismāʿīl Bey of Serez is said to have come with 12,000 men, Ḳalyondju Muṣṭafā, of Biledjik, with 5000, and others with considerable but unspecified numbers), and camped at various places outside the city; others, though not attending in person, sent agents to represent them. After an interval of discussions and negotiations to prepare the ground, a general consultative meeting (*endjümen-i meshweret-i ʿumūmiyye*) was held, at which the Grand Vizier presided; also present were the *Shaykh al-Islām*, the aghas of the Janissaries and of the sipāhīs, and other dignitaries of the central government, as well as the invited *aʿyān*. The Grand Vizier made a speech in which he described the weaknesses of the Ottoman state and army and set forth a programme of reform. His proposals were unanimously approved, and the meeting resolved that a "deed of agreement" (*sened-i ittifāḳ*) should be drafted, signed and sealed, expressing the points of agreement reached between the parties. Contacts between officials, *aʿyān* and the Sultan followed, and on 17 Shaʿbān 1223/7 October 1807 the final draft of the *sened-i ittifāḳ*, bearing the signatures and seals of the Grand Vizier, the *Shaykh al-Islām*, and other dignitaries, and of the leading *aʿyān*, was sent to the Sultan for ratification. Maḥmūd II, despite his strong objections to the document, found himself obliged to ratify and authenticate it with his imperial signature.

The *sened-i ittifāḳ* consists of a preamble, seven articles, and a conclusion. The preamble, after describing the decline of Ottoman power and the weakness of the Ottoman state, explains that the following articles represent the unanimous agreement of the signatories, reached after several meetings, on the need to strengthen the empire and the faith and on the means of accomplishing this.

Article one begins with what might be called a pledge of homage to the Sultan by the *aʿyān*, who together with the officers of the central government, undertake not to oppose or resist the Sultan, and to come to his help if others oppose him. The signatories pledge themselves collectively to enforce this against offenders, including other parties who have not signed the document. They accept these obligations for themselves during their lifetimes, and for their sons and heirs after them.

Article two is concerned with military matters. Since the main purpose of the meeting and agreements was to restore the military power of the Empire, the signatories undertake to cooperate in the recruitment of troops, and to come to the Sultan's help when required, against both foreign and domestic enemies. They accept joint responsibility for dealing with offenders.

Article three is financial, and records the promise of the signatories to respect and observe the rules and regulations laid down by the government in financial matters. They undertake to show solicitude in collecting and remitting sums due to the government, and to refrain from abuses, for the punishment of which they accept joint responsibility.

Article four establishes the authority and responsibility of the Grand Vizier. The signatories recognize the Grand Vizier as absolute representative (*wekālet-i muṭlaḳa*) of the Sultan, and promise to obey his orders in all matters, as if they came from the Sultan. Other functionaries are to keep within the limits of their own offices and jurisdictions. If they exceed them, the signatories collectively will stand forth as accusers. Similarly, if the Grand Vizier himself acts against the laws of the Empire (*khilāf-i ḳānūn*) or violates this agreement, takes bribes, practises extortion, or commits acts harmful or likely to be harmful to the state (*dewlet-i ʿaliyyeye .. mudirr*), then all the signatories conjointly will stand forth as accusers, and secure the removal of such abuses.

Article five regulates the relations of the *aʿyān* with one another and with the officials of the central government, on a basis of mutual guarantees. If any of the signatories violates the agreement, the rest will be collectively responsible for his punishment. The article guarantees the *aʿyān* in possession of their lands, and confirms the rights of succession of their heirs, who are also to be bound by the agreement. The same guarantees are extended by the *aʿyān* to the lesser *aʿyān* under their jurisdiction; this appears to involve a kind of sub-infeudation. The *aʿyān* undertake not to attack each other's lands, not to oppress their subjects, and in general to deal

justly with the government, the people, and with one another.

Article six deals with the contingency of a further outbreak of disorder in the capital, whether due to a Janissary meeting or other causes. In such an event, the *aʿyān* promise to come at once to Istanbul with their forces, to restore order and the authority of the central government.

Article seven is concerned with the protection of the subjects from extortion and oppression. The *aʿyān* undertake to deal justly with their subjects, and to observe and report on one another.

The significance of the *sened-i ittifāḳ* has been variously assessed. Turkish constitutional historians have seen in it a kind of Magna Carta, an attempt by a baronage and gentry to exact from the Sultan a recognition of their rights and privileges, and thus to limit the authority of the sovereign power. Şerif Mardin takes a diametrically opposite view; according to him, the agreement was planned by officials of central government, for whom the Grand Vizier was no more than a "military figurehead"; it "was aimed at curbing the powers of the local dynasties .. and .. was one of the first steps towards the transformation of the Ottoman Empire into a modern centralized state". The recognition of the independence of the *aʿyān* was merely "a temporary compromise due to the weakness of the central powers" (Mardin, 146-8).

From the historical evidence it would seem clear that the pact was freely negotiated between the Grand Vizier and other dignitaries of the central government on the one hand, and the leading *aʿyān* on the other. Neither side imposed its will on the other, and indeed it is difficult to see how the *aʿyān* could have been compelled, in view of the impressive armed forces that they had brought with them. D̲j̲ewdet remarks that the meeting and agreement were made possible because the *aʿyān* trusted Bayraḳdār Muṣṭafā Pas̲h̲a—though apparently not far enough to come to Istanbul without armies, or to move into the city when they had got there.

One party to the agreement is known to have objected to it—the Sultan, who saw in it a derogation of his sovereignty. According to D̲j̲ewdet he signed it unwillingly, and with the intention of annulling it at the first opportunity. He nourished resentment against the *aʿyān* and even against the drafter of the document, the *Beylikd̲j̲i* ʿIzzet Bey, whom he later found occasion to condemn to death (D̲j̲ewdet, ix, 7-8).

Whatever the historical balance of forces that produced it, the constitutional significance of the *sened-i ittifāḳ* lies in its character as a negotiated contract—an agreement between the Sultan and groups of his servants and subjects, in which the latter appear as independent contracting parties, receiving as well as conceding certain rights and privileges (cf. the comments of D̲j̲ewdet, ix, 6 on the infringement of the Sultan's absolute prerogative). The effective agreement is between the Grand Vizierate and the *aʿyān*; the Sultan merely ratifies it, and is clearly expected to reign rather than to rule.

(The text of the *sened-i ittifāḳ* will be found in S̲h̲ānīzāde, *Taʾrīk̲h̲*, i, 66-78, and D̲j̲ewdet, *Taʾrīk̲h̲*², ix, 278-83. For accounts of the events leading to it, see S̲h̲ānīzāde, i, 61 ff.; D̲j̲ewdet, ix, 2 ff.; A. de Juchereau de Saint-Denys, *Révolutions de Constantinople en 1807 et 1808*, ii, Paris 1819, 200 ff.; J. W. Zinkeisen, *Gesch. des osm. Reiches in Europa*, vii, Gotha 1863, 564 ff.; O. von Schlechta Wssehrd, *Die Revolutionen in Constantinopel in den Jahren 1807 und 1808*, in *SBAk. Wien* (1882), 184-8. The approach to constitutional government

The 'Deed of Agreement' was short-lived. Almost immediately after its signature the Grand Vizier Bayraḳdār Muṣṭafā Pas̲h̲a was overthrown and killed, and in the years that followed Sultan Maḥmūd II subjugated the *aʿyān* and brought what remained of the Empire under the effective control of the central government. The great reforming edicts of 1839 and 1856 have sometimes been described as 'constitutional charters', in that they lay down such general principles as the security of life, honour and property of the subject, fair and public trial of persons accused of crimes, and equality before the law of all Ottoman subjects irrespective of religion. Some of the other reforms of this period may also be said to have a quasi-constitutional character, such as the councils set up by Maḥmūd II and his successors (see MAD̲J̲LIS and TANẒĪMĀT) and especially the Council of State (*S̲h̲ūrā-yi Dèwlet*), founded in 1868. Modelled on the French *Conseil d'État*, this was a court of review in administrative cases; it also had certain consultative functions, and was supposed to prepare the drafts of new laws. Though its members were all appointed and not elected, it has been described as "a kind of rudimentary chamber of deputies". In 1845 the government actually experimented—unsuccessfully—with an assembly of provincial notables in the capital (Luṭfī, *Taʾrīk̲h̲*, viii, 15-17; Ed. Engelhardt, *La Turquie et le Tanzimat*, i, Paris 1882, 76; Lewis, *Emergence*, 110-1); the provincial reorganization law of 1864 provides for elected councils in the provinces.

Despite these developments, the general effect of the Westernization of the apparatus of government was to increase, rather than to limit, the autocratic authority of the central power. The old and well-tried checks on the Sultan's despotism—the entrenched intermediate powers of the army, the *ʿulemāʾ* and the notables—were one by one abrogated or enfeebled, leaving the reinforced sovereign power with nothing but the paper shackles of its own edicts to restrain it; the new laws were too little understood, too feebly supported, too ineptly applied, to have much effect.

The growing autocracy of the state—at times of the Sultan, at others of the ministers acting in his name—did not pass unnoticed. Towards the middle of the 19th century a libertarian movement of political thought began to gain ground (see ḤURRIYYA, ii), deriving its inspiration from European liberal and constitutional ideas, which Muslim writers tried to identify with the older Islamic doctrine of consultation (by the ruler of his counsellors—see MAS̲H̲WARA). In 1839 a Turkish translation appeared of the account by the Egyptian S̲h̲ayk̲h̲ Rāfiʿ Rifāʿa al-Ṭahṭāwī [*q.v.*] of his stay in Paris; this included an annotated translation of the French constitution, with an explanation of the merits of constitutional government. Constitutionalism did not, however, become a political force in Turkey until the eighteen-sixties, when its development was

stimulated by a series of external events. The Tunisian constitution of 1861 (see above) brought the first precedent of a constitution in a Muslim state; the Egyptian legislative assembly of 1866 and the Rumanian constitution of the same year provided examples nearer home. Muṣṭafā Fāḍil Pas̲h̲a [*q.v.*], the brother of the Khedive Ismāʿīl of Egypt, and later the Khedive Ismāʿīl himself, gave encouragement to members of the group of liberal patriots known as the Young Ottomans (see YEÑI ʿOT̲H̲MĀNLÎLAR), some of whom campaigned actively for the introduction of a constitutional régime in Turkey. At first they were strongly opposed by the government, and driven into exile; the Grand Vizier ʿĀlī Pas̲h̲a himself wrote refuting the arguments in favour of such a change (Mardin, 19-20). The death of ʿĀlī Pasha in September 1871, however, and the growing influence of Midḥat Pas̲h̲a [*q.v.*] brought a change in attitude at the centre, while the mounting pressure of external events made a concession to liberal opinion seem desirable. In May 1876 the British Ambassador Sir Henry Elliott reported that "the word 'constitution' was in every mouth". As early as the winter of 1875, Midḥat Pasha told Sir Henry that the object of his group was to install a constitutional regime, with ministers responsible to "a national popular assembly" (Sir Henry Elliott, *Some revolutions and other diplomatic experiences*, London 1922, 228, 231-2). The stages by which the constitution was prepared are still imperfectly known. The first steps seem to have been taken soon after the accession of Murād V, when exploratory discussions were held. The sickness and deposition of Murād delayed matters, but work was resumed after the accession of ʿAbd al-Ḥamīd II, who had promised Midḥat his support for the constitutional cause. A new constitutional commission, this time led by Midḥat himself, was appointed on 19 Ramaḍān 1293/ 8 October 1876 N.S. It consisted initially of the chairman and 22 members, including a number of civil and military pas̲h̲as, a contingent of *ʿulemāʾ*, most if not all of them in government service, and some high officials, several of them Christian. Other persons, including some of the Young Ottomans, were later added to the commission or to its drafting subcommittee. After some delays, and disagreements between the members and with the Sultan, a compromise text was finally adopted, and promulgated by the Sultan. Midḥat Pas̲h̲a, as president of the Council of State, as chairman of the commission, and, since 20 December 1876, as Grand Vizier, had played a predominant rôle in securing this result. (On the preparation and adoption of the constitution, see Bekir Sıtkı Baykal, *93 Meşrutiyeti*, in *Belleten*, vi/21-2 (1942), 45-83; documents in idem, *Birinci Meşrutiyete dair belgeler*, in *Belleten*, xxiv/96 (1960), 601-36; Mithat Cemal Kuntay, *Namık Kemal*, ii/2, Istanbul 1956, 55 ff.; Yu̲. A. Petrosian, "*Novîe Osmanî" i borba za Konstitutsiyu̲ 1876 g. v Turts̲ii*, Moscow 1958; Ş. Mardin, *The genesis* . ., 70-8.)

The Constitution of 1876

The first Ottoman constitution (*ḳānūn-i esāsī*) was promulgated by Sultan ʿAbd al-Ḥamīd on 7 D̲h̲u 'l-Ḥid̲j̲d̲j̲a 1293/23 December 1876 N.S. In form rather more than in content it was a constitutional enactment in the Western style, consisting of twelve sections with 119 articles, and accompanied by an Imperial Rescript (*K̲h̲aṭṭ-i humāyūn*) of promulgation serving as a preamble. In framing their text, the Ottoman draftsmen seem to have been greatly influenced by the Belgian constitution of 1831, both directly and through the Prussian constitutional edict of 1850 which, while owing much to its Belgian model, adapted it in a number of respects to the more authoritarian traditions of Prussia. While the Belgian constitution was promulgated by a constituent assembly representing the sovereign people, the Prussian derived from the goodwill of the king, whose ultimate sovereignty was in no way thereby diminished. The Ottoman constitution also derives from the will of the sovereign who voluntarily renounces the exclusive exercise of some—though by no means all—of his prerogatives, and retains all residual powers. Again like the Prussian constitution, the Ottoman constitution gives perfunctory recognition to the principle of the separation of powers, but unlike the Belgian constitution does not apply it very rigorously.

The first section (articles 1-7) is headed "The Ottoman Empire" (*Memālik-i Dewlet-i ʿOt̲h̲māniyye*); it defines the Empire, names its capital, and lays down the rights and privileges of the Sultan and the imperial dynasty. The Ottoman Sultanate, with which is united the supreme Islamic Caliphate (*k̲h̲ilāfet-i kubrā-yi islāmiyye*) belongs in accordance with ancient custom to the eldest member of the Ottoman dynasty (art. 3). The Sultan, as Caliph, is protector of the Islamic religion (*dīn-i islāmiñ ḥāmīsi*) (art. 4. On the Ottoman claim to the Caliphate see K̲H̲ILĀFA). The Sultan's person is sacrosanct (*muḳaddes*) and he is not responsible (*g̲h̲ayr-i mesʾūl*) (art. 5). Article 7 enumerates some of the Sultan's prerogatives, in a form of words clearly indicating that the list is not intended as a complete definition, and that there is no renunciation of residual powers (. . *ḥuḳūḳ-i muḳaddese-i Pādis̲h̲āhī d̲j̲ümlesindendir*; in the official French translation "S.M. le Sultan compte au nombre de ses droits souverains les prérogatives suivantes . ."). These include, together with such traditional Islamic rights as the striking of coins and mention in the Friday prayer, the appointment and dismissal of ministers, the making of war and peace, the execution (*id̲j̲rā*) of *s̲h̲arīʿa* and state law (*aḥkām-i s̲h̲erʿiyye we ḳānūniyye*), the regulation (*niẓāmnāmeleriñ tanẓīmi*) of public administration, the convocation and prorogation of parliament and, if he thinks it necessary (*lada 'l-iḳtiḍāʾ*—in the official French version "s'il le juge nécessaire") the dissolution of the Chamber of Deputies, on condition that new elections be held (*aʿḍāsî yeñiden intik̲h̲āb olunmak s̲h̲arṭîle*).

The second section (articles 8-26) deals with the public rights (*ḥuḳūḳ-i ʿumūmiyye*) of Ottoman subjects (*tebaʿa*). It defines Ottoman nationality, and affirms the equality of all Ottomans, irrespective of religion, before the law. Though Islam is the state religion, the free exercise of other religions is protected. Article 10 lays down that personal freedom is inviolable (*ḥürriyyet-i s̲h̲ak̲h̲ṣiyye her türlü taʿarruḍdan maṣūndur*), and subsequent articles deal with freedom of worship, the press, association, education etc., together with freedom from arbitrary intrusion, extortion, arrest, or other unlawful violations of person, residence, or property.

The remaining sections deal with the ministers (articles 27-38), officials (39-41), parliament (42-59), the Senate (60-64), the Chamber of Deputies (65-80), the judiciary (81-91), the high courts (92-95), finance (96-107), and provincial administration (108-112). A final section of "miscellaneous provisions" (*mewādd-i s̲h̲ettā*) includes the notorious article 113, giving the imperial government the right to proclaim martial law on the occurrence or expectation of disorders, and giving the Sultan the exclusive right,

after reliable police investigations, to deport persons harmful to the state from Ottoman territory.

The executive power belongs to the Sultan, and is exercised in part through a council of ministers (*medjlis-i wükelā*), presided over by the Grand Vizier, and including the *Shaykh al-Islām*. These two dignitaries are chosen and appointed by the Sultan; the appointment of other ministers is effected by imperial order (*irāde-i shāhāne*). The ministers are individually but not collectively responsible—and to the Sultan. If a government bill is rejected by the Chamber of Deputies, the Sultan can, at his discretion, either change the cabinet or dissolve the Chamber and order new elections.

The legislative power also belongs to the Sultan, but its exercise is shared, on a rather restricted basis, with a Parliament (*medjlis-i ʿumūmī*). This consists of a Senate (*hey'et-i aʿyān*), nominated directly for life by the Sultan, and of a Chamber of Deputies (*hey'et-i mebʿūthān*), elected for four years on the ratio of one deputy for every 50,000 male Ottoman subjects. The Senate must not exceed one third of the numbers of the elected Deputies. The manner of election was fixed by an *irāde* of 28 October 1876, on a basis of restricted franchise and indirect elections. The power to initiate legislation in Parliament belongs to the government; proposals from either chamber must first be submitted through the Grand Vizier to the Sultan, who may, if he thinks fit, instruct the Council of State to draft a bill. To become law, a bill must be passed by both Chambers, and receive the Sultan's assent. Bills rejected by either chamber cannot be reconsidered in the same session.

The judicial power is exercised through two systems of judiciary, the first (*sherʿī*) concerned with the Holy Law of Islam, the second (*niẓāmī*; in the official French translation rendered "civil") with the new laws made by the state. Judges are appointed by *berāt*; they are irremovable (*lā yaʿtazil*) but can resign, or be revoked after a judicial conviction. Article 86 guarantees the freedom of the courts from "any kind of interference".

The effective life of the 1876 constitution was of short duration. The first Ottoman parliament met on 4 Rabīʿ I 1294/19 March 1877 N.S. [= 7 March O.S.], with a Senate of 25 and a Chamber of 120 deputies. Its fifty-sixth and last meeting was held on 16 Djumādā II 1294/28 June 1877 N.S. [= 16 June O.S.]. After further elections, a second Parliament assembled on 13 Dhu 'l-Ḥidjdja 1294/13 December 1877 N.S. [= 1 December O.S.], and soon showed unexpected vigour. On 13 February 1878 the deputies went so far as to demand that three ministers, against whom specific charges had been brought, should appear in the chamber to defend themselves (cf. article 38 of the constitution). The next day the Sultan dissolved the Chamber, and ordered the Deputies to return to their constituencies. In the words of the Proclamation "Since present circumstances are unfavourable to the full discharge of the duties of parliament, and since, according to the constitution, the limitation or curtailment of the period of session of the said parliament in accordance with the needs of the time form part of the sacred Imperial prerogatives, therefore, in accordance with the said law, a high Imperial order has been issued ... that the present sessions of the Senate and Chamber, due to end at the beginning of March ... be closed as from today". Parliament had sat for two sessions, of about five months in all. It did not meet again for thirty years.

The Young Turk period

The Young Turk Revolution of 1908 ushered in what is known to Turkish historians as the 'second constitutional régime' (*ikinci meşrutiyet*). The Constitution had never actually been abrogated—it was indeed regularly reprinted in the imperial year books (*sālnāme*) right through the reign of ʿAbd al-Ḥamīd II; it was, however, tacitly suspended. On 21 July 1908 the Young Turk leaders in Rumelia sent a telegram to the Sultan demanding the immediate restoration of the constitution, and after a brief interlude of hesitation the Sultan gave way. A Rescript (*khaṭṭ-i humāyūn*), dated 4 Radjab 1326/19 July 1908 O.S. [= 1 August N.S.], and addressed to the Grand Vizier Saʿīd Pasha, declared that the country was ready for constitutional government, and that all the provisions of the constitution were effective and in force (. . *kāffe-i aḥkāmī merʿī ül-idjrā* . .). In addition, the Rescript added a number of new provisions, extending the personal liberty of the subject. These prohibit arrest and search except by proper legal procedures, abolish all special and extraordinary courts, and guarantee the security of the mails and the freedom of the press. Article 113, giving the Sultan the right to deport persons dangerous to the state, was unaffected by the Rescript, but was abolished in the following year. Another important change gave the Grand Vizier the right to appoint all ministers other than the Ministers of War and of the Navy who, like the *Shaykh al-Islām*, were to be appointed by the Sultan. The acceptance of these restrictions led to the fall of Saʿīd Pasha; his successor, Kāmil Pasha, secured a new Rescript reserving the nomination of *all* ministers, other than the *Shaykh al-Islām*, to the Grand Vizier.

After the opening of Parliament on 17 December 1908 further constitutional reforms were considered, and a constitutional commission formed to draft proposals. These consisted of a series of amendments to the existing text, modifying some articles, remaking or replacing others. The amendments became law on 21 August 1909, and amounted to a major constitutional reform. Their general effect was to strengthen Parliament and weaken the Throne. Both the Sultan and his nominee, the Grand Vizier, were shorn of much of their authority; and for the first time; the collective responsibility of the cabinet was clearly laid down. The sovereignty of parliament was vigorously affirmed.

These changes were adopted when the Committee of Union and Progress (see ITTIḤĀD WE-TERAḲḲI) were firmly in control of both houses of parliament, but still feared the palace. The weakness of the executive resulting from the reforms soon, however, proved inconvenient for the Unionists themselves, once they were in control of it. In 1911 the government submitted proposals for constitutional changes, increasing the Sultan's authority over parliament. These were vigorously challenged by the opposition in parliament, on the ground that their purpose was to strengthen, not the Sultan, but the Committee of Union and Progress; and in the parliamentary and constitutional crisis that followed parliament was dissolved. It was not until 28 May 1914, when the country was in effect ruled by a Unionist dictatorship, that a new set of constitutional amendments finally became law. Later amendments, in January 1915, March 1916 and April 1918, further increased the power of the Sultan, who was now able to convene, prorogue, prolong or dismiss parliament almost at discretion.

The electoral law, the preparation of which was envisaged in the constitution, was drafted and debated in 1877, but did not become law until after the 1908 revolution. It improved and extended the framework of the *irāde* of 1876, but retained the limited franchise and the system of indirect elections through electoral colleges. Elections under this law were held in 1908, 1912, 1914 and 1919. All but that of 1914 were contested by more than one party; none resulted in a transfer of power. In January 1920 the last Ottoman parliament, elected in the sixth and last general election in the Ottoman Empire, assembled in Istanbul. On 18 March the Chamber prorogued itself; on 11 April it was dissolved by the Sultan. Twelve days later the Grand National Assembly of Turkey held its opening session in Ankara.

(The Turkish text of the 1876 constitution was printed in the *Düstūr*, 1st series, iv, 2-20, and reprinted in the *sālnāmes* of the Empire; later amendments in *Düstūr*, 2nd series, i, 11 ff., 638 ff.; vi, 749; vii, 224 etc.; modern Turkish transcriptions in Gözübüyük and Kili (work cited in bibliography), 23 ff.; official French translation in G. Aristarchi, *Legislation ottomane*, v (*Appendice* .. by D. Nicolaides), Constantinople 1878, 1-25; cf. A. Ubicini, *La constitution ottomane du 7 zilhidjé 1293*, Constantinople 1877; an annotated German version of the constitution, amendments and electoral law in F. von Kraelitz-Greifenhorst, *Die Verfassungsgesetze des Osmanischen Reiches*, Vienna 1919; an English translation of the constitution in E. Hertslet, *The map of Europe* .., iv, London 1891, 2531-40; amendments in H. F. Wright, *The Constitutions of the states at war 1914-1918*, Washington 1919, 589-605. For studies of the constitution and its application see G. Jäschke, *Die Entwicklung des osmanischen Verfassungsstaates von den Anfängen bis zur Gegenwart*, in *WI*, v (1917), 5-56; idem, *Die rechtliche Bedeutung der in den Jahren 1909-1916 vollzogenen Abänderungen des türkischen Staatsgrundgesetzes*, in *WI*, v (1918), 97-152. See also W. Albrecht, *Grundriss des osmanischen Staatsrechts*, Berlin 1905.

The Republic and its antecedents

Almost from the beginning, the Grand National Assembly (*Büyük Millet Medjlisi*) convened in Ankara by the nationalists was concerned with constitutional problems. Its first formally constitutional enactment was the "Law of Fundamental Organizations" (*Teshkīlāt-i esāsiyye ḳānūnu*) of 20 January 1921—in effect the provisional constitution of the new Turkish state that was emerging (*Düstūr*, 3rd series, i, 196; Gözübüyük and Kili, 85-7). The first article proclaims the revolutionary principle that "sovereignty belongs unconditionally to the nation" (*ḥākimiyyet bilā ḳaydü sharṭ milletiñdir*), and that "the system of administration rests on the principle that the nation personally and effectively (*bi 'l-dhāt we bi 'l-fiʿl*) directs its own destinies". The second article declares that "executive power and legislative authority are vested and expressed in the Grand National Assembly, which is the only and real representative of the nation". The third article lays down that "the state of Turkey (*Türkiye dewleti*) is administered by the Grand National Assembly, and its government bears the name of 'the government of the Grand National Assembly'." The remaining articles are concerned with the holding of elections and the conduct of government business (text in *Düstūr*, 3rd series, i, 196; Gözübüyük and Kili, 85-7; English version in D. E. Webster, *The Turkey of Atatürk*, Philadelphia 1939, 97-8). This enactment, with its equally revolutionary references to "the sovereignty of the nation" and "the state of Turkey", marked the first decisive step in the series of legal and constitutional changes that regulated the transformation of Turkey from an Islamic Empire to a secular national state. The next was a resolution adopted by the Assembly on 1 November 1922, after the final victory of the nationalists. It contained only two articles: the first declared that "the Turkish people consider that the form of government in Istanbul resting on the sovereignty of an individual [the Sultanate] had ceased to exist on 16 March 1920 [*i.e.*, two and a half years previously, the day of the British military occupation of Istanbul] and had passed forever into history." The second recognized that the Caliphate belonged to the Ottoman house, but reserved to the Assembly the right to choose and appoint the most suitable Ottoman prince. This attempt to separate the Caliphate from the Sultanate proved a failure, and on 3 March 1924 the Caliphate was abolished and the last Caliph sent into exile.

Meanwhile, however, another radical change had been accomplished. On 29 October 1923, after hours of debate, the Assembly passed a group of six amendments to the constitutional enactment of 1921. Their purpose, said Muṣṭafā Kemāl, was to remove ambiguities and inconsistencies in the political system of the country. The amendments, prepared the previous night, declared that "the form of government of the state of Turkey is a Republic .. the President (*reʾīs-i djumhūr*) is elected by the Grand National Assembly in plenary session from among its own members ... the President is head of the state ... and appoints the Prime Minister ..". The new order was confirmed in the republican constitution, adopted by the Assembly on 20 April 1924 (on republican ideas in Islam see DJUMHŪRIYYA).

The republican constitution retains elements of the enactment of 1921 and even of the reformed Ottoman constitution, but introduces a great deal that is new. The constitution is promulgated by the Assembly, which can amend it by a two-thirds majority (art. 102). The only entrenched clause is article 1, stating that "the Turkish state is a Republic". "No amendment or modification" of this article "can be proposed in any form whatsoever". No article of the constitution can be disregarded or suspended for any reason or under any pretext, and no law may contain provisions contrary to the constitution (Art. 103; the constitution, however, provides no special machinery for testing the constitutionality of laws).

Both the legislative authority and the executive power are vested in the Assembly, representing the sovereign people. The Assembly exercises its legislative power directly, its executive authority through the person of the President, whom it elects, and through a Council of Ministers (articles 4-7). Article 7 also gives the Assembly the right—which it never exercised—to dismiss the Council of Ministers. Judicial authority is exercised by independent courts (art. 8). The Assembly consists of a single chamber, elected once every four years. The Assembly can, however, by a majority vote, decide to hold new elections before the expiration of its term (articles 13, 25). The President of the Republic is elected by the Assembly, by secret ballot and absolute majority, for the duration of one parliament. He is to promulgate laws passed by the Assembly within ten days but may refer them back, within the same period, with a statement of his reasons for doing so.

This right does not extend to the constitutional law or to budgetary laws. If the Assembly again passes a law which has been referred back, the President is obliged to promulgate it. He is responsible to the Assembly in case of high treason, but responsibility arising from decrees promulgated by the President devolves on the Prime Minister and the minister signing the decree (article 41). The Council of Ministers is collectively responsible for the general policy of the government, but each minister is individually responsible for executive matters falling within his jurisdiction, and for the acts of his subordinates (article 46). The Prime Minister is chosen by the President, the other ministers by the Prime Minister. The remaining sections deal with the judiciary, which is free and independent, with "the public rights of the Turks", and with "miscellaneous matters", including provincial administration, officials, finance, and rules relating to the constitution.

The constitution was twice amended in matters of substance before its final abrogation. The first was in April 1928, when article 2 was amended by the deletion of the words "The religion of the Turkish state is Islam", with consequential changes in some other articles, to remove references to religion or holy law. The second was in February 1937, when article 2 was again amended, by the inclusion of the six principles of the Republican People's Party, declaring that the Turkish state is "republican, nationalist, populist, étatist, secular and reformist". Some other small changes were made at the same time. The replacement of the text of the constitution by a 'pure' Turkish version in 1945, and the abandonment of the latter in 1952, are of purely linguistic interest.

General elections under the Law of Fundamental Organizations and the republican constitution were held in 1923, 1927, 1931, 1935, 1939, 1943, 1946, 1950, 1954 and 1957. Of these, only the last four were contested by more than one party; only one, that of 1950, resulted in an opposition victory and a transfer of power, bringing the Democrat Party to power. The political development of Turkey after 1945 gave reality to much that had previously been theoretical in the constitution. While the constitution itself was not touched, changes in the law of associations, the penal code, and the electoral law, accompanied by changes in administrative practice, made possible the creation and functioning of an effective constitutional opposition, which in 1950 became the government. The second electoral victory of the Democrat Party in 1954 was followed by a deterioration. Already before the election, on 7 May 1954, a new Press law was passed, providing heavy penalties for libel against official persons, and for the publication of "false news or information or documents of such a nature as adversely to affect the political or financial prestige of the State or cause a disturbance of the public order". It was no defence to a charge brought under this law to prove the statements were true. After the election two new laws, of 21 June and 5 July, gave the government powers to retire judges after twenty five years' service, and to retire all officials other than judges and members of the armed forces after a period of suspension. At the same time, on 30 June, the electoral law was amended. On 27 June 1956 an amendment to the law of meetings and associations was carried against vigorous opposition in the chamber, placing severe restrictions on the holding of public meetings and demonstrations. In April 1960, during a period of mounting political tension, a parliamentary committee of the government party was formed to investigate the opposition, with legal authority. On 27 May the government was overthrown by a military *coup d'état*.

(On the period of transition from the Ottoman to the Turkish constitutions, see G. Colombe, *Le nouveau texte de la constitution turque*, in *COC*, iv (1946), 771-808; on the two main parties operating in this period see DEMOKRAT PARTİ and DJÜMHŪRIYYET KHALḲ FİRḲASİ).

The second Republic

At the beginning of June 1960 the National Unity Committee which had taken over the government of the country a few days previously resolved, as a matter of urgency, to set up a provisional constitution for the transitional period until a new constitution was established. The new law, prepared with the help of a small group of jurists, was published on 12 June, and entitled "Provisional law for the abolition and amendment of certain articles of constitutional law no. 491 of 20 April 1924" (translation in *COC*, xliii (1960), 266-70). The law begins with a general statement giving the legal and constitutional justification for the army's action in overthrowing the previous régime, which had "violated the constitution ... suppressed individual rights and liberties ... made it impossible for the opposition to function ... and established the dictatorship of a single party". The Turkish army, in conformity with its duty to "safeguard and protect the Turkish homeland and the Turkish Republic established by the constitution", as entrusted to it by article 34 of the army internal service code, took action, in the name of the Turkish nation, to carry out this sacred lawful duty against the former administration ... and to reestablish a state of legality. The army therefore dissolved the Assembly and entrusted

power, provisionally, to the National Unity Comittee.

The law itself consists of 4 sections, with 27 articles. The first of these lays down that the committee "exercises sovereignty in the name of the Turkish nation until the day when it shall transfer power to the Grand National Assembly of Turkey, resulting from general elections to be held as soon as possible after the approval of the new constitution and the new electoral law in conformity with democratic rules". When this happens, the Committee will "lose its juridical existence and be automatically dissolved" (article 8). Until then all the rights and powers given by the constitution to the Assembly will be exercised by the Committee. The Committee will exercise the legislative power directly, the executive power through a council of ministers appointed by the head of state and approved by the Committee (article 3). Article 6 establishes a high court of justice to try the men of the old régime. Article 9 defines the membership of the Committee; article 17 lays down that the chairman of the Committee is at the same time head of state and Prime Minister. The provisional laws adopted by the Committee will remain in force as long as they are not repealed by the Assembly created in accordance with the new constitution (article 17).

The first step towards the new, permanent constitution envisaged in this law was taken immediately after the *coup d'état*. On 28th May Gen. Gürsel, chairman of the Committee, announced in his first press conference that he had appointed a commission of constitutional lawyers to prepare a new constitution. It would provide for a bi-cameral legislature and a constitutional court. On 18 October the commission, after some differences and the dismissal and replacement of two of its members, presented a draft constitution to the National Unity Committee. It was decided not to publish the text, but to refer it to a Constituent Assembly (*Kurucu Meclis*). A committee headed by Prof. Turhan Feyzioğlu was given the task of drafting a constitution for such an Assembly. Their draft was completed on 21 November and finally adopted by the National Unity Committee, after some emendation, on 14 December. It provided for a constituent assembly of two chambers, one of them the National Unity Committee, the other a chamber of representatives (*temsilciler meclisi*) "which will represent the Turkish people in the broadest sense of the word" (article 1). It was to consist of 272 members, some nominated and some elected by various interests and bodies. Elections and nominations took place in December and early January, and the Constituent Assembly met on 6 January 1961. Its members included persons nominated by the head of state and the National Unity Committee, representatives of the provinces, of the Republican People's Party and the Republican National Peasant Party, as well as of such bodies and professions as the universities, the bar, the press, secondary school teachers, trade-unions, trade associations, chambers of commerce and industry, ex-servicemen's organizations, and youth. The ministers in the provisional government were members *ex officio*.

On 9 January the Constituent Assembly elected two committees, one, of 20 members, to deal with the constitution, the other with the electoral law. On 9 March the constitutional commission presented its draft, which was then considered by both the Chamber of Representatives and the National Unity Committee. The latter proposed some changes, and a mixed committee was set up to reconcile their views. It completed its work on 26 May, and on the following day, the first anniversary of the revolution, Gen. Gürsel announced that the draft had been accepted by an overwhelming majority of the Assembly. The text was published in the official gazette of 31 May. On 28 March, the Assembly had already passed a law requiring that the draft constitution be submitted to the nation by a referendum, conducted along lines specified in the law. The referendum was held on 9 July, and resulted in the acceptance of the new constitution; 61% of the voters voted yes, 39% voted no, and some $2^1/_2$ million, out of a total qualified electorate of $12^3/_4$ million, abstained.

The constitution provides for a Grand National Assembly of two chambers, the Senate and National Assembly. The former consists of 15 members nominated by the President, and 150 members elected for a term of six years, one third every two years, by a straight majority vote. The National Assembly, of 450 members, is to be elected every four years by a system of proportional representation. The President is elected by the Grand National Assembly in plenary session from among its own members, by a two-thirds majority, for a term of seven years. He appoints the Prime Minister, who chooses the other ministers. The government is responsible to the Grand National Assembly. A noteworthy innovation is the establishment of a constitutional court (articles 145-52), to review the legality of legislation, with power also to act as a high council for the impeachment of Presidents, ministers and certain high officials "for offences connected with their duties". The constitution contains explicit guarantees of freedom of thought, expression, association and publication, immunity of domicile, and other democratic liberties (section 2, articles 14-34). In addition, it contains a section on social and economic rights, with provision both for the right of the State to plan economic development so as to achieve social justice, and the right of the individual to the ownership and inheritance of property, and to freedom of work and enterprise (section 3, articles 35-53). The right to strike is in principle recognized, within limits to be determined by subsequent legislation. Other clauses in the constitution seek to safeguard the secularist Kemalist reforms from reaction, and the democratic basis of government from a new dictatorship. The constitution was promulgated as law no. 334 of 9 July, in the official gazette of 20 July 1961, and entered into effect immediately. (An official English translation of the constitution was published in Ankara in 1962 and reprinted in *OM*, xliii/l (1963), 1-28, and in *MEJ*, xvi (1962), 215-38, with a commentary by K. K. Key; for an analysis of the constitution, see Ismet Giritli, *Some aspects of the new Turkish constitution*, ibid., 1-17; on the constituent assembly see R. Devereux, *Turkey and the corporative state*, in *SAIS Review*, (Spring 1962), 16-24. A useful summary of constitutional developments in 1960 will be found in *Middle East Record, i, 1960*, London [1962], 452-4. See also surveys of events in *COC*, *OM*, etc.

iii. — Egypt

Exposed to European influence earlier than other Arab lands, Egypt followed an independent course of constitutional development, although her constitutional experiments were by no means entirely unrelated to those of the Ottoman Empire. The first elaborate constitutional charter, it is true, was not promulgated until 1882, but a number of constitutional instruments, providing either for the establishment of representative assemblies or responsible cabinets, had been issued since the beginning of the nineteenth century. Bonaparte, after his capture of Cairo in 1798, issued several orders establishing *dīwāns* (councils), composed of Egyptian and French members. The significance of those *dīwāns*, though they were purely consultative in nature, lies in the recognition of the principle that the people's representatives should be consulted on public affairs. Muḥammad ʿAlī (1805-48) revived Bonaparte's *dīwān* in 1829 in the form of a *Madjlis al-Mashwara*, a consultative council which assisted him in the administration of the country. These councils, lacking the support of public opinion, were of brief duration.

It was not until the reign of the Khedive Ismāʿīl that further constitutional instruments were issued. One of them (1860) created a council of representatives, called *Madjlis Shūrā al-Nuwwāb*; another (1878) established a responsible Cabinet, called *Madjlis al-Nuẓẓār*. Ismāʿīl's immediate purpose in issuing such decrees was not necessarily to introduce constitutional reform, but to resolve financial difficulties, which could lead to foreign intervention and with it to the curbing of the Khedive's powers. On 22 October 1866 Ismāʿīl issued two decrees creating a representative assembly composed of 75 members, elected for a three-year term, called *Madjlis Shūrā al-Nuwwāb* (Chamber of Deputies). One of them embodied a fundamental law (*lāʾiḥa asāsiyya*) made up of 18 articles stating the functions of the Chamber and the procedure for electing it. The other, made up of 61 articles, called the law of internal regulations (*lāʾiḥa niẓāmiyya*, or *niẓāmnāme*), providing rules for the debates and internal procedure of the Chamber. The Khedive retained complete control over the Chamber by his final approval of its decisions. The meetings of the Chamber began on 25 November 1866, but it was suspended in 1879. It resumed its activities during the ʿUrābī Revolt and played a significant role in drawing up an elaborate constitutional instrument. The Chamber, however, proved ineffective and its functions merely consultative, since its resolutions were not binding on the Government.

On 28 August 1878 Ismāʿīl issued another decree dealing with the establishment of a Council of Ministers (*Madjlis al-Nuẓẓār*), by virtue of which he entrusted power in its hands. This executive body, the first in the history of modern Egypt, was responsible, relieving the Khedive of responsibility, with the consequential limitation of his absolute powers. However, the decree was revised by Tawfīḳ Pasha, who succeeded Ismāʿīl in 1879, making the Cabinet responsible to him. Tawfīḳ often held the meetings of the Cabinet under his chairmanship.

Before Tawfīḳ could bring the Cabinet under his full control and abolish the Chamber of Deputies, the latter took the drastic step of drawing up an elaborate constitutional charter. It was during the ʿUrābī revolt that this Chamber, meeting as a National Constituent Assembly in 1882, prepared and promulgated Egypt's first written constitution, called *al-Lāʾiḥa al-Asāsiyya*. The Chamber began to discuss the draft in January 1882; it was promulgated on 7 February 1882.

The Constitution of 1882 provided for the establishment of a parliamentary system and a responsible Cabinet, appointed by the Ḳhedive. The Chamber of Deputies was to be an elective body for a period of five years, its meetings open to the public, and its members inviolable. Its President was to be appointed by the Khedive, chosen from three candidates nominated by the Chamber. The Chamber was to have the right to interrogate the Ministers, ask questions of information, and supervise "the acts of all public functionaries during the session, and through the President of the Chamber they may report to the Ministers concerning all abuses, irregularities or negligences charged against a public official in the exercise of his functions" (Article 20). Legislation could be initiated either by the Cabinet or the Chamber and had to be confirmed and issued by the Khedive. No new taxes were to be imposed without the approval of the Chamber. The budget was to be presented to the Chamber for discussion and approval, except for matters relating to the annual tribute to the Porte and the Public Debt. No treaty or contract between the Government and a foreign country was to be binding until approved by the Chamber, save those relating to matters where sums of money had already been approved in the budget. The Chamber of Deputies was dissolved after the collapse of the ʿUrābī Revolt and the constitution of 1882 was abrogated.

In 1883, a year after the British occupation, Tawfīḳ Pāsha issued an Organic Law reorganizing Egypt's constitutional framework which lasted from the British occupation to World War I. This law provided for the establishment of the following bodies:

First, a Provincial Council, composed of from 3 to 8 members, according to the size of the province, established in each province (*mudīriyya*), presided over by the *mudīr*. The functions of the Council were to deal with purely local matters. The total number of the Provincial Councillors was 70.

Secondly, the Legislative Council, composed of 30 members. Of these, 14 (including the President) were appointed by the Government and 16 elected by the provincial councils from among their members. No law or decree relating to general administrative matters was to be issued without prior submission to the Council, but the Government was under no obligation to carry out the resolutions of the Council. However, if the Council's resolutions were not carried out, the reasons for rejection had to be communicated to the Council. The budget was to be submitted to the Council for discussion, but the Government was not obliged to adopt the views of

the Council, nor could the Council discuss any financial matters touching on Egypt's obligations under an international agreement.

Thirdly, the Legislative Assembly, composed of 82 members, included the six Ministers, the 30 members of the Legislative Council, and 46 delegates elected by the people. Candidates eligible for election had to be not less than 30 years old, able to read and write, and paying direct taxes of not less than 30 Egyptian pounds a year. No new direct taxes could be imposed by the Government without the approval of the Assembly. Moreover, the Assembly was consulted on every public loan and on all public matters relating to canals, railways, lands and land taxes. It also expressed an opinion on other financial, economic and administrative matters. As in the case of the Legislative Council, the Government was under no obligation to adopt the Assembly's views on any question discussed, for the functions of the Legislative Assembly were purely consultative; but the reasons for not adopting them had to be stated. The Assembly met at least once in two years and its meetings were not open to the public. An electoral law was issued on 1 May 1883 and the first elections for the Legislative Assembly were held in November 1883. The Assembly continued to function until World War I.

In 1913, the Assembly's functions and powers were increased under a new law issued in 1913, revising the Organic Law of 1883. The new Legislative Assembly replaced both the Legislative Council and Assembly. This Assembly, composed of 17 nominated members and 66 elected by indirect suffrage, had the power to veto proposals for the increase of direct taxes, but in all other matters its functions remained consultative and deliberative. Its proceedings were open to the public, since criticism had been levelled at its predecessor for holding closed sessions. It could delay legislation, compel Ministers to justify their proposals, interrogate them and call for information. The Legislative Assembly was intended to represent more closely the mass of the Egyptian people, but it could hardly satisfy the political aspirations of the small educated class. It met for a short period during 1914 until its sessions were suspended in 1915, never to be resumed again.

After World War I, Egypt passed quickly from a dependent to an independent status, having achieved remarkable political and social progress. The British occupation was terminated and the country was declared independent on 28 February 1922, subject to four reserved points (relating to the defence of Egypt, security of British imperial communications, protection of foreigners, and the Sudan). The Sultan of Egypt assumed the title of King on 15 March 1922, and a constitutional committee, composed of 32 members, was appointed on 3 April 1922 to draw up a draft constitution. The constitution, though communicated by the Committee to the Government on 21 October 1922, was not promulgated until 19 April 1923. Based on Belgian and Ottoman models, it provided for a monarchy endowed with many powers, which reflected the traditional pattern of administration. The King not only enjoyed the right of selecting and appointing the Prime Minister (and upon the latter's recommendation, the ministers), but also the right to dismiss the Cabinet and dissolve Parliament. He also appointed the President of the Senate and half of the Senators, presumably upon the recommendation of the Cabinet. The Cabinet was fully responsible, for its members were derived from both houses of Parliament and were collectively responsible to the Lower House. Its life was formally dependent on a vote of confidence of the Lower House, but the King could dismiss it by a decree at any moment. Legislative power was vested in Parliament and the King. The Lower House was an elected body on the basis of universal manhood suffrage, but the Senate was half elected and half appointed. Legislation could be initiated in either House, but it had to be confirmed by the King. The latter had the power to return draft laws for reconsideration by Parliament.

From the establishment of the Sultanate (1914) to the Declaration of Independence (1922), Egypt had 8 cabinets; and from the Declaration of Independence to the end of the monarchy, Egypt had 32 cabinets. Thus the average life of a cabinet was less than one year. Parliament met on the whole regularly since the first general election of 1924, although in almost all cases the Lower House was dissolved before it completed its regular term of four years. There had been ten general elections held from 1924 to 1952. These were the elections of 1924, 1925, 1926, 1929, 1931, 1936, 1938, 1942, 1945 and 1950. Only the ninth Parliament completed its term of four years, while the second held only a single meeting.

The constitution of 1923 was partially suspended by a royal decree in 1928 and replaced by another on 22 October 1930. The new constitution made no important change in the structure of government, but restricted the powers of Parliament, especially its right to withdraw confidence in the cabinet, and increased the powers of the executive. It also provided for elections in two stages, regulated by a new Electoral Law issued in 1930. These restrictions prompted opposition parties to attack the new constitution and boycott elections. However, the Government firmly enforced the provisions of the new constitution until 1936.

In 1936 a national coalition government was formed and a treaty of alliance between Britain and Egypt was signed. The nationalists had already demanded the restoration of the constitution of 1923 as a condition for their participation in the treaty negotiation, and the King formally restored it on 22 December 1935. It remained in force until it was abolished by the Revolutionary Government on 10 December 1952. Before the intervention of the army in politics, the parliamentary system had deteriorated, because of the intense competition among political parties, the rise of rival ideological groups, and the failure of the ruling class to make concessions to the rapidly increasing oppressed masses. The inability of civil government to maintain public order invited the army to intervene and put an end to internal conflict and instability.

The Revolutionary Government appointed a constitutional committee, composed of fifty members of various shades of opinion, to draft a new constitution. The new draft constitution, reputed to have included a progressive and truly parliamentary system, was never officially promulgated. Instead a provisional constitutional charter was issued on 10 February 1953, entrusting virtually full power to a Revolutionary Council, to be exercised by its chief, who presided over the Council of Ministers. The monarchy was maintained, but owing to the minority of the deposed King Fārūḳ's successor, its powers were exercised by a Council of Regency. On 18 June 1953 the monarchy was abolished and a republic, headed by Muḥammad Nadjīb (Neguib), was proclaimed. It was not until 16 January 1956 that a

new constitutional charter, which proved to be of short duration, was issued, entrusting full executive powers to the hands of President Djamāl ʿAbd al-Nāṣir. This constitution, embodying several innovations, declared Egypt to be an Arab nation, and introduced the presidential system, replacing the parliamentary form of government. The President was elected by a plebiscite. He possessed the power to appoint a Cabinet responsible to him and to nominate the members of Parliament, subject to the approval of the nation by a popular plebiscite. The constitution was confirmed by a plebiscite on 23 June 1956.

The union between Syria and Egypt in 1958 called for another change in the constitutional framework of the two countries. This union, regarded as the first step toward a more complete Arab unity, was called the United Arab Republic. A provisional constitution of 73 articles was issued on 5 March 1958, providing for a central executive and a central legislature; but all essential local affairs remained in the hands of local executive councils. Before agreement could be reached on its internal constitutional structure, the union was dissolved in October 1961, following Syria's secession.

The name of the United Arab Republic, though applied only to Egypt, was not changed; but Egypt's rulers began to concentrate on the internal social and economic reorganization of the country on a socialistic basis. A National Charter, embodying the principles of nationalism and socialism, became the subject of discussion in a National Convention held during the autumn of 1962; but no new constitutional instrument has yet been issued. After the dissolution of the Union with Syria President ʿAbd al-Nāṣir made several references to the constitution of 1956, which indicated that this constitution was still in force, pending the promulgation of a new constitution. Egypt's rulers are inclined to defer the formulation of a new constitution, pending the emergence of new patterns of government, hoping that the emerging constitutional structure will conform to Arab aspirations to unity. (For the United Arab States, see below, xviii).

(M. Khadduri)

iv. — Īrān

The Persian constitutional movement of the early 20th century was the result of a process which had been going on in Persia, largely silently, throughout the 19th century. Up to this time the basic theories of the state and of life generally were set in the frame of Islam. The intrusion of the West into Persia in the 19th century perhaps more than any other single event led Persian thinkers to question the old theories and bases of the state and to seek some new or additional base for it. The disastrous wars with Russia in the early part of the century concluded by the Treaty of Turkomānčay in 1828 convinced Persians of the need for reform, military and otherwise. Further it was through the various military missions which came to Persia from 1807 onwards that Persians had first become acquainted with modern military and scientific techniques and with the political changes which were taking place in Europe. Mīrzā Ṣāliḥ, the first Persian known to have written an account of British parliamentary institutions, was sent to England in 1815 in pursuance of plans for military reform. He also visited Turkey and Russia. Writing in his diary of the *tanẓīmāt* he castigates obscurantist mullas who opposed them. He gives in his diary what is probably the first account by a Persian of the French revolution. Diplomatic travel also played an important rôle in the dissemination of knowledge of western institutions. Abu 'l-Ḥasan Shīrāzī, who was sent on a mission to England by Fatḥ ʿAlī Shāh, wrote in his *Ḥayrat-nāma* an account of the justice and security which he found in England, comparing it with the tyranny which prevailed in his own country. Nāṣir al-Dīn himself made three journeys to Europe, the first in 1873. The Persian merchant communities, both inside and outside Persia, were another important channel through which modern ideas spread. The Persian press published by members of the Persian communities in Istanbul, Calcutta and elsewhere also did much in the latter part of the 19th century to encourage reform.

The first attempts at administrative, as distinct from military, reform were made by Mīrzā Taḳī Khān Amīr Niẓām, the first prime minister of Nāṣir al-Dīn, but proved largely abortive. He, too, had visited Russia and Turkey and seen the *tanẓīmāt* in operation. The next minister to attempt fundamental reforms was Mīrzā Ḥusayn Khān Sipahsālār Mushīr al-Dawla, who had studied in France, and served in Tiflis, Bombay, and Turkey, where he was Persian minister from 1859 to 1871. He subsequently held various offices in Persia, including that of prime minister. While in Turkey he wrote numerous letters, official and otherwise, in which he discussed, *inter alia*, European politics, civilization, education, the need for reform in Persia, the desirability of a popular assembly, freedom, the rights of the people, and equality before the law. He maintained that foreign intervention in a country was brought about by the backwardness of that country. The main object of both Amīr Niẓām and Mushīr al-Dawla in their advocacy of reform and modernization was to prevent foreign intervention; and in this they were the precursors of the constitutional movement, which, though it was provoked in the first instance by the tyranny and injustice of the régime, was

directed also against the encroachment of foreign powers and the disposal of Persian assets to foreigners.

Pleas for reform were put forward by various writers in the latter half of the 19th century. The most important figure among them in the intellectual awakening of Persia was, perhaps, Malkam Khān Nāẓim al-Dawla, a Persian Armenian of Djulfā (Iṣfahān), educated in Paris, who became minister to the Court of St. James in 1872. He profoundly believed in the need for Persia to westernize and repeatedly emphasised the need for the supremacy of the law. In an essay entitled *Daftar-i tanẓīmāt*, apparently written between 1858 and 1860, he drew attention to the internal woes of Persia, the threat of encroachments upon Persia from St. Petersburg and Calcutta, and the technical advances being made in Europe. He pointed out that the progress which had been made in Europe and the orderly regulation of affairs which prevailed there were not contrary to the *sharīʿa*. After discussing various types of government and stating (perhaps in order not to frighten Nāṣir al-Dīn Shāh) that constitutional government was in no way suitable to Persia, he examines how an orderly regulation of affairs could be established under an absolute monarchy, advocates the separation of the "executive" and the "legislature", and lays down a series of *tanẓīmāt* for the administration of the kingdom. In later essays written after 1882, and especially in the Persian paper *Ḳānūn*, which he founded in London in 1890, Malkam Khān advocates constitutional monarchy for Persia and a national consultative assembly.

Towards the end of the reign of Nāṣir al-Dīn, and under his successor, Muẓaffar al-Dīn, internal conditions in Persia and her position vis-à-vis foreign powers, rapidly deteriorated. The financial state of the government became ever more acute. The abortive Reuter concession was granted in 1872 and subsequently cancelled under pressure from Russia. A secret railway agreement was made in 1887 and followed by the Russo-Persian agreement of 1890, which placed a prohibition on railway construction in Persia for ten years. Popular discontent at misgovernment, the growth of foreign influence, and the squandering of Persia's assets grew; it received open expression in 1890. The occasion was the grant of a monopoly for the sale and export of Persian tobacco and control over its production by a British subject, Major Gerald Talbot. Russian opposition to the Tobacco Régie was immediate, and was soon followed by a movement of popular protest. This was a dual movement, directed on the one hand against internal corruption and misgovernment and on the other against foreign influence; it rapidly became nationalist and Islamic. It owed a good deal to the support of Mīrzā Malkam Khān, who at that time was in London, and Djamāl al-Dīn Afghānī [*q.v.*] and was led by the religious classes. Although it was merely a movement of protest and had no positive programme of reform, nevertheless, it was important in that it showed the religious classes and the people their power once they united; and was, in some measure, a forerunner of the constitutional movement. It was successful in its object; and in January 1892 the tobacco monopoly was rescinded. This victory against the government was not, however, followed by any material lessening of the pressure to which the people were subjected or limitation on the arbitrary rule of the Shah. Those who advocated modernization had still to work cautiously.

The next phase in the struggle against the despotism was marked by the spread of secret or semi-secret societies, which began to be formed by those who were dissatisfied with the existing state of affairs (see DJAMʿIYYA. Persia). Their purpose was to spread the new learning and awaken the people to the evils of the despotism and the benefits of freedom. After the assassination of Nāṣir al-Dīn in 1896 they became more active. Discontent continued to be rife and was heightened by the growing intervention of Russia and the contraction of foreign loans, including one from the Imperial Bank of Persia in 1892 to pay the Tobacco Corporation compensation for the cancellation of their monopoly, and Russian loans in 1900 and 1902. In January 1904 ʿAyn al-Dawla became prime minister. By the end of 1905 conditions were felt to be intolerable. The Shah was in the hands of a corrupt ring of courtiers. He had had recourse to foreign loans, the proceeds of which he had spent on foreign travel and his court. The annual deficit grew. Oppression of every sort was carried out and countenanced by the Prime Minister. Finally discontent came to a head on 19 Ṣafar 1323/26 April 1905 when a group of merchants took *bast* in Shāh ʿAbd al-ʿAẓīm, the immediate cause being dissatisfaction with the Belgian Director of Customs Administration, M. Naus. Muḥammad ʿAlī, who was acting as regent during the absence of his father, Muẓaffar al-Dīn, in Europe, promised that Naus would be dismissed on the Shah's return; and the *bastī*s dispersed. Shortly afterwards, on 3 Rabīʿ I 1323/8 May 1905, an open address to the prime minister, ʿAyn al-Dawla, who was extremely unpopular, was published by one of the leading secret societies. The address, after calling his attention to the decay and disorder of the country's affairs and protesting at the lack of security and the corruption of officials, demanded (i) a code of justice and the creation of a ministry of justice, (ii) a land survey, the delimitation and registration of estates, (iii) a fair adjustment of taxation, (iv) a reform of the army, (v) the laying down of principles for the choice of governors and their rights and the rights of those they governed, (vi) the reform and encouragement of internal trade, (vii) a cleaning up of the customs administration, (viii) an improvement in the supply of foodstuffs and goods, (ix) the adoption of general principles for the foundation of technical schools and the setting up of factories and concerns for the exploitation of minerals, (x) a clarification of the duty of the Ministry of Foreign Affairs, (xi) a reform in the payment of salaries and pensions by the government, and (xii) a limitation of the powers of ministers, ministries, and *mullā*s according to the *sharīʿa*. Various events meanwhile fanned the growing discontent. Eventually a large number of *mullā*s, merchants, and members of the craft guilds took *bast* in Shāh ʿAbd al-ʿAẓīm; and finally Muẓaffar al-Dīn acceded to their demands, which included the dismissal of the governor of Tehrān and M. Naus from the Customs, and the setting up of a Ministry of Justice. In Dhu 'l-Ḳaʿda, 1323/January, 1906, he issued an autograph letter (*dast khaṭṭ*), to ʿAyn al-Dawla, giving orders for the setting up of an *ʿadālat khāna-i dawlatī* for the execution of the decrees of the *sharīʿa* throughout Persia in such a way that all the subjects of the country should be regarded as equal before the law. With this in mind a code (*kitābča*) in accordance with the *sharīʿa* was to be drawn up and put into operation throughout the country. This temporarily satisfied the *bastī*s in

Shāh ʿAbd al-ʿAẓīm; and they returned to the city. No steps, however, were taken to implement the promises given; these had in effect amounted to a promise of equality before the law for the different classes but had in no way limited the absolute power of the Shah. Towards the end of April a petition was presented to the Shah praying him to give effect to his promises. This proved fruitless as also did remonstrances to ʿAyn al-Dawla. Public opinion, stirred up by denunciations of the despotism and tyranny from the *minbar*s of the mosques by Āḳā Sayyid Djamāl and others, and the efforts of secret and semi-secret societies, which attacked the despotism and endeavoured to spread modernist ideas, became increasingly roused. ʿAyn al-Dawla expelled Āḳā Sayyid Djamāl and another preacher, Shaykh Muḥammad, from the city. In the riots which attended the attempted removal of the latter on 28 Rabīʿ II 1324/21 June 1906 a *sayyid* was killed. Further riots ensued and after some days a large number of the religious classes, merchants, artisans and others took refuge in Ḳumm, this exodus being known as the *hidjrat-i kubrā*, 'the great exodus'. Meanwhile the *bāzār*s were closed and about 19 July a number of merchants, members of the guilds, and others took refuge in the British Legation. Their numbers rapidly increased and by the beginning of August had reached 12,000 or 14,000. They demanded the dismissal of ʿAyn al-Dawla, the promulgation of a code of laws, and the recall of the religious leaders from Ḳumm. The Shah did not yield to their demands until the end of the month, when he dismissed ʿAyn al-Dawla.

On 14 Djumādā II/5 August, an imperial rescript was issued to the new *ṣadr-i aʿẓam* ordering the setting up of a national consultative assembly (*madjlis-i shawrā-yi millī*), composed of representatives of the princes, *ʿulamāʾ*, members of the Ḳādjār family, notables, landowners, merchants, and members of the guilds, to consult on matters of state, to give help to the council of ministers in the reforms "which would be made for the happiness of Persia", and, "in complete security and confidence, to submit through the *ṣadr-i aʿẓam* to the Shah their views on the wellbeing of the state and nation, the public welfare, and the needs of all the people of the country, so that these might be embellished by the royal signature and duly put into operation". Regulations for the assembly were to be prepared and signed by the elected representatives and ratified by the Shah, and "by the help of God Most High, the aforesaid consultative assembly, which is the guardian of our justice, will be opened and begin the necessary reforms in the affairs of the kingdom and the execution of the laws of the holy *sharīʿa*". By this time, however, the popular party had been further provoked by the intransigence of the Shah and the court party. Profoundly mistrustful, they demanded a guarantee of the Shah's good faith. Accordingly a second rescript addressed to the *ṣadr-i aʿẓam*, supplementing the rescript of 14 Djumādā II, was issued. This stated: "In completion of our earlier autograph, dated 14 Djumādā II 1324, in which we explicitly ordered and commanded the founding of an assembly of elected representatives of the peoples, in order that the generality of people and [all] the individuals of the nation shall be aware of our full royal care, we again command and lay down that you should set up the aforesaid assembly in accordance with the description explicitly laid down in the former autograph, and, after the election of the members of the assembly, you should draw up the sections and provisions of the regulations of the Islamic consultative assembly in accordance with the approval and signature of the elected representatives, as is worthy of the nation and country and the laws of the holy *sharīʿa*, so that having been submitted to us and adorned by our auspicious signature and in accordance with the aforementioned regulations, this holy intention may take shape and be put into operation". On the issue of this rescript the *bastī*s returned from Ḳumm and the British Legation respectively.

After the official opening of "the House of Parliament" on 28 Djumādā II 1324/19 August 1906 disputes arose between the popular party and the *ṣadr-i aʿẓam* over the ordinances for the assembly which the latter had drawn up. The *bāzār*s were again closed and the people once more prepared to take *bast*. The Shah gave way and on 17 September accepted the proposed ordinance as to the constitution of the assembly, which was to consist of 156 members, 60 from Tehrān and 96 from the provinces, elections to take place every two years and the deputies to be inviolable. The immunity of the deputies was subsequently affirmed in article 12 of the Fundamental Law. The voting in Tehrān was to be direct, in the provinces by colleges of electors. Elections began and on 18 Shaʿbān 1324/7 October 1906 the assembly was opened by Muẓaffar al-Dīn without waiting for the arrival of the provincial deputies. The assembly proceeded to elect the president of the assembly and other officers, and passed on 18 October rules of procedure. On 23 November a proposal for an Anglo-Russian loan was submitted to it by the Minister of Finance; this was rejected and an alternative plan for an internal loan approved a week later. A committee was meanwhile set up to draft the Fundamental Law of the constitution (*ḳānūn-i asāsī*). This was ready by the end of October; but the Shah procrastinated and did not sign it until 14 Dhu 'l-Ḳaʿda 1324/30 December 1906. Subsequently a supplementary Fundamental Law (*Mutammim-i Ḳānūn-i Asāsī*) was passed by the Assembly and ratified on 29 Shaʿbān 1325/7 October 1907 by Muḥammad ʿAlī Shāh, who had meanwhile succeeded Muẓaffar al-Dīn. The Fundamental Law consists of fifty-one articles relating to the constitution and duties of the National Consultative Assembly and the Senate. The Supplementary Fundamental Law contains 107 articles concerning the rights of the Persian people, the powers of the realm, the rights of members of the assembly, the rights of the Persian throne, the powers of ministers, tribunals of justice, public finance, and the army.

Muẓaffar al-Dīn died in January 1907, and with his death the first phase of the constitutional revolution came to an end. The movement, which had begun as a popular demonstration against the deplorable state of the administration and country, foreign loans and concessions which were thought to be leading or contributing to national bankruptcy and foreign control, had thus ended in the grant of a constitution and the setting up of a National Consultative Assembly, a result which had been achieved virtually without bloodshed. It had been a sense of intolerable injustice or tyranny (*ẓulm*) which had eventually provoked the nationalists to action and the aims of the movement had never been clearly formulated. The general aim was simply the establishment of the rule of justice (*ʿadālat*), which, in the tradition of mediaeval Islam, they saw to be the basis of good government, rather than the establishment of constitutional government and

representative institutions. The second phase of the constitutional revolution began with the accession on 8 January 1907 of Muḥammad ʿAlī, who, with his ministers, was from the first bitterly opposed to the constitution. Neither the Assembly nor the ministers had had any experience of constitutional government; they were, moreover, hampered in their conduct of affairs by lack of money and military forces and by the Shah's intrigues against the constitution. The Assembly was determined to prevent fresh foreign loans, and to get rid of the Belgians from the Customs. In these aims it was successful. It also passed various measures of financial reform; and a law for the resumption by the state of all land held as *tiyūl* [*q.v.*]. Numerous political societies or *andjumans* had meanwhile been formed in Tehrān and the provinces to defend the constitution. On 2 May 1907 Mīrzā ʿAlī Aṣghar Khān Amīn al-Sulṭān was appointed Prime Minister and with his appointment the struggle between the Shah and the nationalists was intensified. Disorders, in many cases instigated and fomented by the Shah and the court party, broke out in the provinces. Turkey invaded north-west Persia in August. Russia was suspected, not without reason, of aiding and abetting the Shah against the National Assembly. The belief grew that there was secret collusion between the Shah, Amīn al-Sulṭān, and the Russians to sell the country to Russia. This second phase of the constitutional revolution was to a greater extent than the first phase anti-foreign in the sense that it was primarily concerned to check the growth of foreign control in Persia, especially Russian. On 31 August Amīn al-Sulṭān was murdered by a member of one of the popular *andjumans*. On the same day the Anglo-Russian Convention was signed, which, when it was communicated to the Assembly a month later, aroused profound misgiving. Meanwhile the authority of the central government in the provinces had been reduced to almost nothing. Provincial councils (*andjumanhā-yi ayālatī wa wilāyatī*) had sprung up in many parts of the country; these had destroyed the moral authority of the old régime, and the framework of such elementary administration as had once existed had virtually disappeared. On 7 October 1907 the Shah promulgated the Supplementary Fundamental Law (see below); and on 12 November he visited the Assembly and swore loyalty to the constitution for the fourth time. Nevertheless on 15 December he attempted a *coup d'état*, arresting the prime minister Nāṣir al-Mulk and other ministers. The popular *andjumans* both in the capital and in the provinces rallied to the defence of the Assembly. The Shah was momentarily worsted, but the truce was temporary and hope of reconciliation between the Shah and the nationalists was finally dashed by an attempt made on the Shah's life in February 1908. In the following months tension increased and eventually on 23 June fighting broke out between the royalist forces and the nationalists. The assembly and the neighbourhood were cleared by the Shah's forces. Thirty of the most prominent nationalist leaders were arrested and two of them strangled without trial the following day, 24 June 1908; on 27 June the Shah declared the Assembly dissolved and the constitution abolished as being contrary to Islamic law. Thus ended the second phase of the constitutional revolution, with the temporary closure of the Assembly.

Fighting broke out simultaneously in Tabrīz which, after Tehrān, had been the main centre of the nationalist movement, and the Shah's forces were expelled. Resistance lasted until April 1909 when the siege was raised by the entry of Russian troops to protect foreign life and property. The action of Tabrīz gave the nationalists time to reorganize their forces; and eventually in 1909 a Bakhtiyārī force under Sardār Asʿad and another force from Rasht under the Sipahdār-i Aʿẓam, Muḥammad Wālī Khān, advanced on Tehrān which they entered in July. The Shah fled and took refuge in the Russian Legation. A council was then held which voted his deposition and the succession of his son, Sulṭān Aḥmad, a minor, with a regency. On 9 September the ex-Shah left for Kiev. Elections were subsequently held and on 2 Dhu 'l-Ḳaʿda 1327/5 December 1909 the second legislative session of the National Assembly was opened. The tasks facing the new assembly were such as might have daunted a more experienced body than they. The treasury was empty; the provincial administration was in a state of chaos; and Russian intervention threatened. Cabinet crises were frequent and the Assembly, divided into numerous small groups, was split by dissension. Russian troops, which had been introduced into Northern Persia ostensibly for a temporary occupation to defend foreign life and property, were not withdrawn. The anti-Russian feeling engendered among the nationalists by this and other actions produced a state of friction with Russia which culminated in 1911. In 1910 a proposal for a joint Russo-British loan to Persia was rejected on the grounds that its terms were incompatible with Persian independence. The possibility of the engagement of foreign advisers to reorganize the administration was meanwhile under consideration by Persia; and in 1911 Americans were engaged for the finances and Swedes for the police and gendarmerie. Russia was from the outset displeased at the invitation to the Americans. In May 1911 Mr. Morgan Shuster, an American citizen, engaged on a private contract with Persia as Treasurer-General, reached Tehrān, with a small staff. On 13 June the Assembly passed a law giving him very wide powers. On 17 June the ex-Shah suddenly landed on Persian soil in an abortive attempt to regain the throne. Simultaneously his brother, Sālār al-Dawla, raised the standard of revolt in Kurdistān. Friction meanwhile increased with Russia over the Treasurer-General's independent attitude in working for Persian financial reform and refusal to consult Russian wishes. Finally Russia seized on an incident arising from the confiscation of the estates of Shuʿāʿ al-Salṭana, a younger brother of the ex-Shah, as a punishment for the part he had taken in the latter's rebellion, to demand an apology from the Persian Government; this was followed by a 48 hours' ultimatum on 25 November to dismiss Shuster and Lecoffre, an Englishman of French extraction serving in the Ministry of Finance, from Persian government service, to engage no foreigners without the consent of Russia and Great Britain, and to defray the cost of the military expedition which Russia had sent to Enzelī to enforce this ultimatum. In the event of non-compliance Persia was threatened with an advance of Russian troops from Rasht and an increase in the indemnity. British diplomatic protests at St. Petersburg were overridden and Russia persisted in her demands. The Assembly refused to comply. Russian troops advanced to Ḳazwīn. Skirmishes took place between Persians and Russian troops in Rasht, Enzelī and Tabrīz. Anti-Russian feeling ran high in Tehrān; and finally to avoid disasters by impotent resistance to Russia, the regent, Nāṣir al-

Mulk, and the cabinet forcibly dissolved the obdurate assembly on 3 Muḥarram 1330/24 December 1911. On the following day Shuster was dismissed. The third and final phase of the constitutional revolution thus ended leaving Persia once more in a state of virtual chaos. The constitution remained suspended until 7 July 1914, when the third legislative session was opened.

The later history of the National Consultative Assembly was not dominated, as it had been during the period of the revolution, by the struggle between the despotism and the nationalists. It became accepted as part of the institutions of the country, even if in the Pahlawī period its power was restricted. During the Great War of 1914-8 Persia was a cockpit for the intrigues and operations of the belligerent powers. The resentment entertained by the Persians against Russia and Great Britain as her ally was fanned by German intrigue and the majority of the deputies of the assembly were either neutral or pro-Central Powers. On 15 November 1915 when Russian troops advanced from Ḳazwīn the Assembly broke up, and most of the members evacuated Tehrān with the Turks and Germans and left for Ḳumm. The constitution was, thus, again suspended; the fourth legislative assembly was not convened until 1921; since when, apart from a brief period in 1953 when Dr. Muṣaddiḳ dissolved the assembly, successive assemblies have sat until 1961, when the reigning Shah, Muḥammad Riḍā Pahlawī, dissolved the Assembly and Senate by decree.

The nationalist movement had been supported by many of the leading members of the religious classes; and in the writing of many of those who had advocated reform, and 'the rule of law', the 'law' had been equated with Islam. Deference to this point of view is found in the preamble to the Fundamental Law, which states that the purpose of the National Council to be set up under the *farmān* of 14 Djumādā II 1324/5 August 1906 was "to promote the progress and happiness of our kingdom and people, strengthen the foundations of our government, and give effect to the enactments of the sacred law of His Holiness the Prophet". Article 1 of the Supplementary Fundamental Law further lays down that the official religion of Persia is Islam of the Ithnā ʿasharī sect, which faith the Shah must profess. Article 2 states that "At no time must any legal enactment of the sacred National Consultative Assembly, established by the favour and assistance of His Holiness the Imām of the Age (may God hasten His glad advent), the favour of His Majesty the Shahinshah of Islam (may God immortalize his reign), the care of the Proofs of Islam (may God multiply the likes of them), and the whole people of the Persian nation, be at variance with the sacred principles of Islam, or the laws established by His Holiness the Best of Mankind (on Whom and on Whose household be the blessings of God and His peace)". The same article lays down that a committee of not less than five *mudjtahids* shall be set up "so that they may carefully discuss and consider all matters proposed in the Assembly, and reject and repudiate, wholly or in part, any such proposal which is at variance with the sacred laws of Islam, so that it shall not obtain the title of legality. In such matters the decision of this committee of *ʿulamāʾ* shall be followed and obeyed, and this article shall continue unchanged until the appearance of His Holiness the Proof of the Age (may God hasten His glad advent)". This article became inoperative during the reign of Riḍā Shāh, and up to the time of writing has not been revived. Article 27 of the Supplementary Fundamental Laws states that the judicial power "belongs to the *sharʿī* courts in matters pertaining to the *sharīʿa* (*sharʿiyyāt*) and to civil courts (*maḥākim-i ʿadliyya*) in matters pertaining to customary law (*ʿurfiyyāt*)". This, while contrary to the conception of Islam, was a recognition of existing practice.

The drafters of the constitution, although they made concessions to Islam, were also considerably influenced by the example of Belgian Constitutional Law and French law; and the conceptions underlying the constitution were in many respects fundamentally new to Persia. Thus, Article 26 of the Supplementary Fundamental Law states "that the powers of the realm are all derived from the people"; and the Fundamental Law regulates the employment of those powers. Similarly Article 35 states "sovereignty is a trust, as a divine gift, confided by the people to the Shah" which implies a radical change in the conception of the ruler. The main concern of the drafters was probably to limit the arbitrary nature of the Shah's rule and to give the people some defence against the arbitrary actions of government officials. A number of the articles of the Fundamental Law clearly derive from the unhappy experiences of Persia in the late 19th and early 20th centuries, when the reigning Shah recklessly contracted foreign loans and gave concessions to foreign concerns. Article 24 states "the conclusion of treaties and covenants, the granting of commercial, industrial, agricultural and other concessions, irrespective of whether they be to Persian or foreign subjects, shall be subject to the approval of the National Consultative Assembly, with the exception of treaties, which for reasons of state and the public advantage, must be kept secret". Similarly Article 22 lays down that "any proposal to transfer or sell any portion of the [national] resources, or of the control exercised by the Government or the Throne, or to effect any change in the boundaries and frontiers of the kingdom, shall be subject to the approval of the National Consultative Assembly". Further Article 23 states that "without the approval of the National Consultative Assembly, no concession for the formation of any public company of any sort shall, under any plea soever, be granted by the state". The Assembly has shown itself jealous of the rights accorded to it under these articles, as is shown by its refusal to ratify the oil agreement concluded by Prime Minister Ḳawām and the Russian government in 1949. Articles 25 and 26 respectively lay down that state loans under whatever title, internal or external, and the construction of railroads and roads depend upon the approval of the Assembly. The latter of these two articles was included, presumably because of the experience of the Russo-Persian railway agreement of 12 November 1890, by which the Persian Government engaged for the space of ten years "neither itself to construct a railway in Persian territory, nor to permit nor grant a concession for the construction of railways to a company or other persons". Article 27 of the Supplementary Fundamental Law states that the legislative power is derived from the Shah, the National Consultative Assembly and the Senate, each of which has the right to introduce laws "provided that the continuance thereof be dependent on their not being at variance with the standards of the *sharīʿa*, and on their approval by the two Assemblies (*i.e.*, the National Consultative Assembly and the Senate), and the royal ratification; but the enactment and approval of laws concerning the revenue and

expenditure of the kingdom are among the special functions of the National Consultative Assembly". The executive power, which belongs to the Shah, "is carried out by the ministers and officials of the state in the name of His Imperial Majesty in such manner as the law defines". Article 28, reflecting the influence of Montesquieu, lays down that these three powers shall always be separate from one another, a principle which has been much cherished by Persian constitutionalists. Article 39 states that no Shah can ascend the throne unless, before his coronation, he appeared before the Assembly in the presence of its members and those of the Senate and the Council of Ministers and undertook by oath to defend the independence of Persia, the frontiers of the kingdom, and the rights of the people, to observe the Fundamental Law and promote Shīʿism of the Dja'farī rite. Similarly, by Article 40, a regent cannot enter upon his functions unless he repeats the above oath. Article 44 lays down that "the person of the Shah is exempted from responsibility and in all matters the ministers are responsible to the National Consultative Assembly and the Senate". The appointment and dismissal of ministers, however, lies with the Shah (Art. 46); but not of other officials save where this is explicitly provided by the law (Art. 48). Article 49 states that the issue of decrees and orders for giving effect to the laws is the Shah's right, provided that he shall under no circumstances postpone or suspend the carrying out of such laws. The supreme command of all military forces is vested in the Shah (Art. 50); as also is the declaration of war and conclusion of peace (Art. 51). Article 27 of the Supplementary Fundamental Law and Articles 15, 17 and 47 of the Fundamental Law mention the ratification of laws by the Shah, but he is not explicitly given the right of veto by the constitution. At a joint meeting of the National Consultative Assembly and Senate convened under the additional Article of 1949 (see below) to emend the constitution, Article 49 of the Supplementary Fundamental Law was supplemented to the effect that the Shah, should he consider it necessary that any financial bill having been passed by the National Consultative Assembly should be revised, can refer it back to that body for revision; but if it confirms its former decision by a majority of at least three-quarters of those present in the capital, he must grant his assent. Judges and the public prosecutor are appointed by royal decree (Arts. 80 and 83 of the Supplementary Fundamental Law); but by Article 81 judges are declared irremovable save with their own consent. The Shah was also given certain rights with regard to the Senate, which was to consist of sixty members, to "be chosen from amongst well-informed, discerning, pious, and respected persons of the realm". Thirty were to be nominated by the Shah, fifteen from Tehrān and fifteen from the provinces; and fifteen were to be elected from Tehrān and fifteen from the provinces (Art. 45). Its sessions were to be "complementary to the sessions of the National Consultative Assembly" (Art. 43 of the Fundamental Law). Partly, perhaps, because it was felt that the principle of nomination was undemocratic the Senate was, in fact, never convened until 1950.

In 1921 Riḍā Khān (later Riḍā Shāh Pahlawī) became Minister of War and shortly afterwards the *de facto* ruler of the country. In 1925 a constituent assembly (*madjlis-i mu'assisān*) was convened. On 31 October it declared the rule of the Ḳādjār dynasty terminated and that another Constituent Assembly was to be convened, to make the necessary changes in the laws; and on December 12 a single act suppressed Articles 36 (which had vested the monarchy in Muḥammad ʿAlī Shāh and his heirs), 37, and 38 of the Supplementary Fundamental Law, substituting for these three others. The new Article 36 entrusted the sovereignty of Persia to Riḍā Shāh Pahlawī and his male descendants. Article 37 states "the heir apparent shall be the eldest son of the Shah whose mother shall be of Persian origin. If the Shah has no male issue the heir apparent shall be proposed by him and approved by the National Consultative Assembly provided the said heir shall not belong to the Ḳādjār family. But whenever a son is born to the Shah he will become heir apparent by right". Meanwhile a marriage was about to be arranged between the heir apparent and Princess Fawziyya of Egypt. Presumably with a view to the possibility of issue by this marriage the law of 14 Ābān 1317 defined the expression "of Persian origin" to include a child born of a mother who before the marriage contract with the Shah or the heir apparent should, in accordance with the high interests of the country, on the proposal of the government and the approval by the National Consultative Assembly, have been given, by a *farmān* of the reigning Shah, the quality (*ṣifat*) of a Persian". Princess Fawziyya was in due course declared an honorary Persian. The new Article 38 provided for a regency but excluded members of the Ḳādjār family from holding this office.

No further changes were made in the Constitution by Riḍā Shāh, who kept the National Consultative Assembly in being but reduced it to a mere cypher. In the early years after the Second World War Muḥammad Riḍā Shāh, who had succeeded to the throne in 1941, and his advisers apparently believed that the National Consultative Assembly had become too powerful *vis-à-vis* the executive. In any case, it was decided to convene, for the first time, the Senate and to make certain changes in the Constitution. A Constituent Assembly was duly convened on 21 April 1949. An additional article (*aṣl-i ilḥāḳī*) made provision in certain cases for revision of the Fundamental Law. The drafters of the Fundamental Law and Supplementary Fundamental Law had presumably included no provision of this sort in the Law (except Article 21 of the Fundamental Law, which permits the modification or abrogation of any article regulating the functions of the ministries with the approval of the Assembly), not because they were unaware of the fact that most western constitutions contained such provisions, but because they did not wish to give any opportunity to the court party to alter the constitution. Article 48 of the Fundamental Law, which gave the Senate the right in certain circumstances to dissolve the National Consultative Assembly, as emended by the Constituent Assembly of April 1949 enables the Shah to dissolve the two chambers separately or together, subject to his stating the reason and simultaneously ordering new elections so that the new chamber or chambers may convene within a period of three months; dissolution may not be ordered twice for the same reason. On 9 May 1961 the Shah used the powers thus granted to him and dissolved the National Consultative Assembly.

On 8 May 1957 a joint meeting of the National Assembly and Senate was convened under the additional Article of 1949 to emend the constitution, and in due course Article 4 of the Fundamental Law was revised, raising the number of deputies to the

maximum figure of 200; Article 5 was emended, *inter alia*, to extend the legislative term of the National Consultative Assembly from two years to four. Article 7 concerning the quorum for debates and voting was also emended. Lastly Article 49 of the Supplementary Fundamental Law was supplemented as stated above.

Article 46 of the Fundamental Law lays down that after the constitution of the Senate all proposals must be approved by both Assemblies. Article 34 of the Supplementary Fundamental Law, however, states that "the deliberations of the Senate are ineffective when the National Consultative Assembly is not in session". Proposals may originate in either assembly, except that financial matters "belonged exclusively to the National Consultative Assembly. The decision of the Assembly in respect to the aforesaid proposals, shall be made known to the Senate, so that it in turn may communicate its observations to the National Consultative Assembly, but the latter, after due discussion, is free to accept or reject these observations of the Senate". The responsibility of the National Consultative Assembly for financial matters is reaffirmed by Article 27 of the Supplementary Fundamental Law, which, as stated above, lays down that the enactment and approval of laws concerning the revenue and expenditure of the kingdom are among the special functions of the National Consultative Assembly. Article 27 also lays down that "the explanation and interpretation of the laws is among the special duties of the National Consultative Assembly". The debates of the Assembly are normally public (Art. 13 of the Fundamental Law); though Article 34 makes provision for secret sessions. Bills other than those on financial matters, which originate with the government, must first be laid before the Senate by the responsible ministers or the Prime Minister, and after acceptance there by a majority of votes must then be approved by the National Consultative Assembly; when any measure is proposed by a member of the Assembly it can only be discussed when at least fifteen members shall approve the discussion (Art. 39 of the Fundamental Law); Article 13 of the Rules of Procedure of the National Consultative Assembly and Article 82 of the Rules of Procedure of the Senate lay down that Bills which originate in the Senate or the National Consultative Assembly must be signed by at least fifteen members, except that in certain cases a bill signed by less than fifteen Senators may be voted on after reference to a committee. By Articles 1, 2 and 3 of the Civil Code bills passed by the two houses are published within three days of receiving the royal assent in the Official Gazette and become law ten days thereafter in Tehrān and ten days plus one day for every six *farsakhs* in the provinces, unless special arrangements are laid down in the law itself.

One of the most important functions of the National Consultative Assembly is the fixing and approving of the budget, which power it is accorded by Articles 18 of the Fundamental Law and 96 of the Supplementary Fundamental Law. The Minister of Finance according to Articles 12-17 of the Law for the General Finances (*Ḳānūn-i muḥāsabāt-i ʿumūmī*) of 10 Isfand 1312/1 March 1934 must submit this to the Assembly annually by 1 Day (23-4 December) and they must pass the budget by 15 Isfand (6-7 March). During and after the Second World War this provision was often contravened in that the Assembly refused to pass the budget as a whole and merely authorized the payment of a proportion of the budget at intervals throughout the financial year. Under Articles 101 and 102 of the Supplementary Fundamental Law the National Consultative Assembly is given power to appoint a Financial Commission which shall be "appointed to inspect and analyse the accounts of the Department of Finance and to liquidate the accounts of all debtors and creditors of the Treasury. It is especially deputed to see that no item of expenditure fixed in the Budget exceeds the amount specified, or is changed or altered, and that each item is expended in the proper manner. It shall likewise inspect and analyse the different accounts of all the departments of state, collect the documentary proofs of the expenditure indicated in such accounts, and submit to the National Consultative Assembly a complete statement of the accounts of the kingdom, accompanied by its own observations". Article 94 further states that "no tax shall be established save in accordance with the law;" and Article 99 that "Save in such cases as are explicitly excepted by the law, nothing can on any pretext be demanded from the people save under the categories of state, provincial and municipal taxes". These provisions reflect the anxiety of the drafters of the Constitution to bring order into the financial affairs of the country and to relieve the population of the burden of extraordinary and irregular levies to which they had formerly been subject.

Article 33 of the Supplementary Fundamental Law gives both Assemblies the right to investigate and examine every affair of state. Ministers may be questioned by members of both houses, provided that the speaker gives the responsible minister prior information of the question; an answer must be given within one week. The government and individual ministers may be interpellated by members of both houses, provided a written request is made to the speaker. Article 67 of the Supplementary Fundamental Law states "If the National Consultative Assembly or the Senate shall, by an absolute majority, declare itself dissatisfied with the cabinet, or with one particular minister, that cabinet or minister shall resign their or his ministerial functions".

Ministers may not accept a salaried office other than their own (Art. 68 of the Supplementary Fundamental Law). Their number is to be laid down by law according to the requirement of the time (Art. 62). No one may become a minister unless he is a Muslim by religion, a Persian by birth, and a Persian subject (Art. 58). Sons, brothers, and uncles of the Shah may not become ministers (Art. 59). Ministers are responsible, individually and collectively, to the National Consultative Assembly and the Senate (Article 61) and may be called to account or brought to trial by them (Art. 29 of the Fundamental Law and Arts. 65 and 69 of the Supplementary Fundamental Law). Article 64 states that Ministers cannot divest themselves of their responsibility by pleading verbal or written orders from the Shah. A tendency to do so nevertheless emerged during the reign of Riḍā Shāh and has again appeared in recent years. The internal organization of the Assembly is not based on political parties; the deputies are divided into groups or "fractions". Moreover, since the government is not composed of members of the Assembly there is no clear-cut division into a pro-government party and an opposition. In the second and third legislative sessions the majority of deputies belonged either to the Iʿtidāliyyūn Party or the Democrat Party. An attempt was made in the abortive elections of 1960 to conduct them on a two-party basis, two parties

having been formed under the inspiration of the court, the *Millī* and the *Mardum* parties, whose functions were to be respectively that of His Majesty's Government and His Majesty's Opposition. The experiment was not successful.

The regulations governing the election to the first National Assembly were laid down in the Electoral Law of 20 Radjab 1324/9 September 1906. The electors were divided into six classes: (i) princes and the Ḳādjār tribe, (ii) notables (*aʿyān wa ashrāf*), (iii) *ʿulamāʾ* and students of the religious schools, (iv) merchants, (v) landowners and peasants, and (vi) members of the trade-guilds. Each elector had one vote and could vote in one class only, but the classes were not compelled to elect a deputy from their own class or guild. The persons so elected then assembled in the chief town of the province and elected members for the National Consultative Assembly according to the number specified in the law for each province. In Tehrān elections were direct, the number of deputies to be as follows: Princes and members of the Ḳādjār family, four; *ʿulamāʾ* and students of religious schools, four; merchants, ten; landowners and peasants, ten; and trade-guilds, thirty-two. Women were debarred from being elected and from voting. The minimum age of an elector, who had to be a Persian subject, was to be twenty-five years; and certain minimum property qualifications were also laid down. Deputies were to be elected for two years. Those elected had, *inter alia*, also to be Persian subjects of Persian extraction; be able to read and write Persian; be locally known; not be in government employ; and their age not less than thirty or more than seventy. The law also set up temporary councils to supervise the elections, and laid down regulations for the conduct of the elections, which were to be carried out in each locality on a date specified by the local governor.

This law was superseded by the Electoral Law of 12 Djumādā II 1327/1 July 1909. This fixed the number of deputies at 120; and provided for one representative each of the Shāhsavan, Ḳashḳāʾī, Khamsa (of Fārs), Turkomān, and Bakhtiyārī tribes, and the Armenians, Chaldeans (Nestorian Christians), Zoroastrians, and Jews. The minimum age of electors was reduced to twenty but a property qualification was introduced. Voting was to be secret. Elections were to be in two stages. A necessary qualification for election, except in the case of deputies representing the Christian, Zoroastrian or Jewish communities, was profession of Islam. Princes, *i.e.*, the sons, brothers and uncles of the reigning Shah, were debarred from being deputies. This law was in due course superseded by the Law of 28 Shawwāl 1329/21 November 1911, which fixed the number of deputies at 136, to be elected from eighty-two electoral districts, some of which were, therefore, plural constituencies. This law abolished the property qualification for electors but laid down that they must be local persons or have lived for at least the six months preceding the election in the district in which they would vote. All elections were to be direct. This law forms the basis of later electoral laws, one of which, that of 10 Mihr 1313/2 October 1934, abolished the special tribal constituencies. Further an amendment to Article 4 of the Constitution made in 1957 raised the number of deputies to two hundred (see above). Five months before the legislative period of the National Consultative Assembly comes to an end a *farmān* is issued by the Shah for new elections, after which preliminary measures for the holding of elections including the setting up of supervisory councils in the electoral districts are taken.

The law for the execution of the regulations for the election of the Senate passed by the National Consultative Assembly on 14 Urdībihisht 1328/4 May 1949 laid down *inter alia* that senators were to be elected "by two degrees" by male suffrage. The term of the Senate was fixed by this law at six years (whereas Article 50 of the Fundamental Law had fixed it at two years). The Senate is opened by the Shah as soon as two thirds of the members have assembled in Tehrān. On 23 October 1952 a bill was passed limiting the Senate's term to two years. According to this bill electors must be at least twenty-five years old and have lived in or have dwelt for at least the preceding six months in the constituency where they vote. Members of the armed forces may not vote. Senators must be at least forty years old; they must be Muslims, and live in or be known in the district for which they are elected. They must be chosen from (i) the religious classes of the first rank; (ii) persons who have been deputies for at least three legislative sessions; (iii) persons who have the position of minister, ambassador, governor-general, public prosecutor, head of a tribunal of the Court of Cassation, or had at least twenty years' service in the Ministry of Justice; (iv) retired officers of the rank of field-marshal (*sipahbud*), general (*sarlashkar*), or major-general (*sartīp*); (v) university professors who have held such office for at least ten years; (vi) landowners and merchants who pay at least 500,000 rs. in direct taxes; and (vii) certain classes of attorneys. Senators are precluded from accepting government appointments and must resign if they accept such offices.

The Supplementary Fundamental Law in Articles 90-93 makes provision for the establishment of provincial councils (*andjuman-i ayālatī wa wilāyatī*) to be elected by the people to "exercise complete supervision over all reforms connected with the public interest, always provided that they observe the limitations prescribed by the law". In the early period of the constitution provincial councils were set up in many areas but the practice fell into abeyance after the restoration of the constitution in 1909. Since the Second World War there has been from time to time talk of the setting up of some form of provincial councils.

Those who had prepared the way for constitutional reform in their published works and in the discussions of the secıet societies which preceded the constitutional revolution had emphasized the need for equality before the law. This was provided for in the section of the Supplementary Fundamental Law which concerns the rights of the people (Arts. 8-25). Article 8 lays down that the people shall enjoy equal rights before the law. Article 9 that "All individuals are protected and safeguarded in respect to their lives, property, homes, and honour, from every kind of interference, and none shall molest them save in such way as the laws of the land shall determine". Article 10 lays down that "No one can be summarily arrested, save *flagrante delicto* in the commission of some crime or misdemeanour, except on the written authority of the president of a tribunal of justice given in conformity with the law. Even in such case the accused must immediately, or at latest in the course of the next twenty-four hours, be informed and notified of the nature of his offence". Further, Article 14 provides that "No Persian can be exiled from the country, or prevented from residing in any part thereof, save in such cases as the law may

explicitly determine". It was, perhaps, a major advance that such principles should be clearly formulated and written into the constitution, even though, like various other provisions of the constitution, they should be from time to time ignored.

(A. K. S. LAMBTON)

V. — AFGHĀNISTĀN

The independence of Afghānistān having been recognized by the Treaty of Rāwalpindi (8 August 1919), Amān Allāh concluded agreements with his neighbours and other powers confirming the international status of his country, in the intention of endowing the state with stable and modern institutions, in the first place a Constitution. The first step in this direction was, in 1921, the Law of Fundamental Organizations (*niẓām-nāma-i tashkīlāt-i asāsiyya-i Afghānistān*), which established the general organization of the State (see L. Bouvat, *apud* J. Castagné, *Notes sur la politique extérieure de l'Afghanistan*, in *RMM*, lviii (1921), 26 ff.) and was to serve as the basis of the Fundamental Law which, drawn up under the inspiration of the Turk Ḳadrī Bey, former chief of police in Istanbul who had settled in Kābul in 1921 and died there in 1924, was unanimously approved by the members of a *Lōya Djirga* (Popular Assembly) of the eastern provinces and by the ministers in April 1923; articles 2, 9 and 24 were revised in June-July 1924 by another *Lōya Djirga* including representatives of the entire country.

Drawn up no doubt in Pashto, but published in Persian, this Fundamental Law (*niẓām-nāma-i asāsī-yi dawlat-i ʿaliyya-i Afghānistān*) comprises 73 articles divided as follows: general principles (arts. 1-7), rights of citizens (arts. 8-24), provisions relating to ministers (arts. 25-35) and officials (arts. 36-8), to councils (arts. 39-49), tribunals (arts. 50-5), to the Supreme Court (arts. 56-7), to finance (arts. 58-62), to provincial administration (arts. 63-7), and miscellaneous (arts. 68-73).

Article 1 affirms the independence and unity of the national territory, whose capital is Kābul, according to art. 3 which also provides that all the inhabitants of the country are equal before the government without distinction of religion and sect (art. 8); art. 2 specifies, however, that the religion of Afghānistān is Islam, and that only "the other religions of Hindus and of Jews" living within the territory are protected on condition that public order be not disturbed; it is interesting to note that the *Lōya Djirga*, composed of *ʿulamā'*, *sayyid*s and *shaykh*s and convened in June-July 1924, brought in an amendment to this article providing that the official system should be that of the Ḥanafī school, and, moreover, that Hindus and Jews were compelled to pay the *djizya* [*q.v.*] and to wear the distinguishing emblems (*ʿalāmāt-i mumayyiza*) of *dhimmī*s. Slavery was abolished and individual liberty guaranteed to all citizens (arts. 9-10), the amendment of 1924 adding, however, that they were restricted concerning religious matters. All Afghāns are equal before the *sharīʿa* and the laws of the State (arts. 16-8); torture and similar punishments were abolished, and none could be subjected to a punishment not provided for in the *sharīʿa* or in laws enacted in conformity with the provisions of the latter (art. 24, modified). Freedom of the press (art. 11) is subject to regulation and limited for the foreign press, while freedom of association (art. 12) is recognized only for business, industrial and agricultural concerns. Freedom of education is guaranteed to Afghāns (arts. 14-5), and compulsory elementary education is provided for (art. 68), but foreigners are not authorized to open schools, although systems of instruction connected with the beliefs and rites of the non-Muslim subjects (*dhimmī*s) or protected foreigners (*musta'min*) may be tolerated. Right of ownership (art. 19) and the inviolability of domicile (art. 20) are guaranteed, as well as the secrecy of the mails (art. 73), but the wording of this article could be interpreted restrictively. Citizens may make a complaint against any infringement of the *sharīʿa* or of the laws committed by an official or another person, and may in this case even appeal to the sovereign (art. 13).

H.M. the *Pādshāh* (also called *amīr*, etc.) is the servant and protector of Islam and the sovereign of all subjects of Afghānistān (art. 5); in consideration of his services, a hereditary monarchy is created, the nation agreeing to raise to the sultanate his male heirs in the male line (art. 4). The sovereign's prerogatives are as follows: his name is mentioned in the Friday *khuṭba*, the coinage bears his portrait, he confers decorations, approves laws and announces their effective date, nominates and dismisses ministers, nominates to public office, is responsible for the exercise of the laws, commands the armed forces, declares war and concludes peace, and signs all treaties; he possesses the right of amnesty and pardon (art. 7).

The ministers are responsible to the sovereign (art. 31) and may be arraigned before the Supreme Court (arts. 33-4). They give a public account, at the audience which takes place before the independence festival, of work accomplished during the year (arts. 25-7).

For the details of ministerial organization the Fundamental Law refers to the Law of Fundamental Organizations, which provided for ten ministries including a Council of State and two autonomous administrations (Posts and Telegraphs, and Public Health); the Council of State is in charge of reform, services to the state, and tribunals.

The Fundamental Law makes no provisions for a parliament, but for a Consultative Council of State (*hayʾat-i shūrā-i dawlat*) at Kābul and Councils of Consultation (*madjlis-i mashwara* or *mushāwara*) with representatives of the government in the provinces, at all stages up to district level (art. 39); these latter Councils consist of officials set up by the Law of Fundamental Organizations and elected members in equal number, while the Council with its headquarters at Kābul is composed half of members nominated by the sovereign, the other half being also elected by the people (arts. 40-1). Art. 42 stipulates the functions of these councils: matters submitted to the government representatives are examined and, if necessary, transmitted to the ministry concerned; if the government representatives do not reply, the Councils of Consultation may apply to the Consultative Council who examine the matters and transmit them, with their comments, to the competent ministry.

Laws, in the drafting of which it is necessary to take into consideration the practices, needs and provisions of the *sharīʿa*, are examined by the Consultative Council, sent to the Council of Ministers, and put in operation after they have received the approval of the ministers and the sovereign (art. 46). The Consultative Council studies the budget prepared by the Finance Ministry, as well as foreign contracts and obligations (arts. 48-9).

As regards the judiciary power, the Fundamental Law confines itself to establishing certain guarantees (publicity of proceedings, the rights of the defence, the independence of the judges who are not to allow proceedings to be delayed, arts. 50-3), the competence of tribunals (art. 54) being established by the Law of Fundamental Organizations, which provides for: justices of the peace, tribunals of first instance, courts of appeal and a Court of Cassation. Extraordinary jurisdictions are forbidden (art. 55), but a Supreme Court is instituted for the trial of ministers (arts. 56-7).

Provisions relating to finance (arts. 58-62) and the institution of an Audit Office (art. 61) are followed by details on the administration of the provinces (arts. 63-7). The following articles treat of the revision of the Fundamental Law, which must receive two-thirds of the votes in the National Consultative Council (art. 70), and of the interpretation and drafting of laws (art. 71).

It is obvious that the constitutional work undertaken under the reign of Amān Allāh represented a considerable progress towards the modernization and democratization of the country. The people began to participate modestly in political life by the election of representatives to various councils, whose role was, it is true, merely consultative; on the legislative and executive sides the government and the sovereign exercised a preponderant power, and the judiciary itself, although more independent, was not free from governmental authority, since the Court of Appeal was presided over by the minister of justice and the chief *ḳāḍī* was an *ex officio* member of it. One may notice that this Constitution is not exactly a slavish imitation of western models, and has a certain originality; there is, indeed, no provision for assuring the Islamic nature of the laws, but the duty of conforming to the *sharīʿa* is underlined at several places, and the provisions concerning the Ḥanafī practice are striking; even more striking is the xenophobia and the sort of rigorism which appear in the retention of the *djizya* and the wearing of the *zunnār* imposed on some non-Muslims resident on Afghān territory.

To what extent this Constitution was applied is not exactly known, since many incidents followed in the country's internal affairs. In the summer of 1928 after Amān Allāh's return from a visit to Europe Afghānistān was troubled by a serious movement of revolt on the part of tribes instigated by *mullās* hostile to certain forms of westernization, though not, indeed, to the provisions of the Constitution. The revolt soon spread to the eastern and northern provinces, and Kābul fell into the hands of Baččа-i Saḳaw who proclaimed himself *amīr* and took the name of Ḥabīb Allāh. Amān Allāh having given up resistance and his throne, Nādir Khān, who was related to the royal family, continued the struggle against the usurper and succeeded in recapturing Kābul in October 1929; proclaimed sovereign under the title of Nādir Shāh, he made great efforts to govern the country with wisdom and prudence and, two years later, on 31 October 1931, promulgated a new Constitution (in Pashtō and in Persian: *uṣūl-i asāsī-yi dawlat-i ʿaliyya-i Afghānistān*), which reiterated the greater part of the provisions of the Fundamental Law of 1923, but differed substantially from it by the creation of a Senate (*madjlis-i aʿyān*) and the definitive institution of a National Consultative Assembly (*madjlis-i shūrā-yi millī*), already created by a *Djirga* in August-September 1928, confirmed by another *Djirga* in 1930, and inaugurated by the Shāh in October 1930.

The new Constitution comprises 110 articles (instead of 73) arranged in the following way: general provisions (arts. 1-4), rights and duties of the sovereign (arts. 5-8), rights of citizens (arts. 9-26), organization of the National Consultative Assembly (arts. 27-66), of the Senate (arts. 67-70), of the Councils of Consultation in the provinces (arts. 71-2), rights and duties of ministers (arts. 73-83), and of officials (arts. 84-6), tribunals (arts. 87-94), the Supreme Court (arts. 95-6), finance (arts. 97-101), provincial administration (arts. 102-5), the army (arts. 106-8), and miscellaneous provisions (arts. 109-10).

On the whole the Constitutional matters are

better arranged than in the Fundamental Law of 1923, but many articles are retained almost entirely. The general provisions differ little; however, art. 1 (old art. 2) imposes the obligation on the sovereign to follow the Ḥanafī school, and no longer speaks of *dj̲izya* and the distinguishing emblems of *dh̲immī*s. The wording of art. 5 (old art. 4) is slightly modified: the monarchy is hereditary in the family of Nādir S̲h̲āh, and it is he who nominates his successor; he must now take the oath (art. 6) according to a solemn formula, and a civil list is allotted to him (art. 8). Art. 23 (old art. 11) is more liberal towards the foreign press, although art. 21 (old art. 14) provides that the teaching only of Islamic sciences is free.

The National Consultative Assembly is composed of 106 deputies elected for three years; they must take an oath and enjoy parliamentary immunity. The Assembly is charged with approving laws and regulations, financial laws, grants and concessions of all kinds, the construction of railways, etc. Members of the Senate (arts. 67-70) are nominated by the sovereign; they are a counterbalance to the Assembly in the approval of laws either before or after that body; this Senate was inaugurated in November 1931. The Councils of Consultation persist in the provinces, but they are now elected (art. 71). Provisions regarding ministers are slightly different (arts. 73-83) in that they are chosen by the prime minister with the sovereign's approval, and are responsible to the Assembly and not to the S̲h̲āh; in addition, they no longer have to give public reports on their work. On the judicial side a distinction is made between civil tribunals (*maḥākim-i ʿadliyya*) and religious tribunals (*maḥākim-i s̲h̲arʿiyya*). The Audit Office (art. 100, old art. 61) is not expressly provided for; on the other hand three articles (106-8) are devoted to the army; it is there laid down that foreigners are not admitted to it except in the capacities of surgeons or instructors.

In general the second Afg̲h̲ān Constitution marks a noticeable progress from the former; it appears not only more liberal but also more democratic in that the people have their elected representatives in the assemblies which, indeed, have especially a consultative part to play but participate more intimately in the political life of the nation.

vi. — ʿIRĀḲ

Next to Egypt, ʿIrāḳ may be regarded as the first Arab state to be organized along modern constitutional lines after World War I. Her parliamentary system was consciously modelled, at least in form, after the British system. The draft constitution was prepared (1922-3) by a mixed committee of ʿIrāḳī and British members, drawing its provisions from the constitutions of the Ottoman Empire, Australia, New Zealand and others. The draft was submitted to a Constituent Assembly for approval and, with some minor modifications, was passed and promulgated on 21 March 1925. It was formally called the Organic Law (*al-Ḳānūn al-Asāsī*) of ʿIrāḳ.

The constitution provided for a monarchical system, although the monarchy was instituted before the constitution was drafted. The King was not responsible. He enjoyed wide powers, such as the selection and dismissal of the Prime Minister (the latter power was given to him in the amendment of 1943), he confirmed laws, ordered their promulgation, and supervised their execution. He could also proclaim martial law, order general elections, appoint senators and diplomatic representatives, and convoke Parliament, presumably upon the recommendation of the Cabinet. When Parliament was not in session the King issued decrees with the concurrence of the Cabinet for the maintenance of public order and the expenditure of public money not provided by the budget. These decrees had the force of laws, provided they were not contrary to the provisions of the constitution, and were laid before Parliament at its first session

The Cabinet was made up of the Prime Minister and a number of other ministers (the number was not to exceed seven before the amendment of 1943). All members of the Cabinet were members of Parliament (if a person appointed minister was not already a member of Parliament, he either had to become a member of Parliament within six months or resign). The Cabinet was responsible to the Lower House; if that House passed a vote of no confidence in it, it had to resign.

Legislative power was vested in Parliament and the King. Parliament was composed of two houses—an appointed Senate (*Madj̲lis al-Aʿyān*) whose membership should not exceed one-fourth of the total number of the Lower House, and an elected Chamber of Deputies (*Madj̲lis al-Nuwwāb*). The term of the Lower House was four years, including four ordinary sessions, the duration of each session being six months. Legislation was initiated in Parliament or proposed by the Government (in the case of the annual budget, it was always proposed by the Government). Draft laws, when passed by both Houses, became laws only after being confirmed by the King. The King could confirm or reject legislation, stating reasons for so doing, within a period of three months. Members of Parliament were immune and had the right to interrogate Ministers and ask for information. The meetings of Parliament were open to the public, unless sessions in camera were decided upon by the Government or the members of Parliament (on a request by four senators or ten deputies).

From the establishment of the ʿIrāḳī government in 1921 to the abolition of the monarchy in 1958, ʿIrāḳ had 62 cabinets, including a provisional government in 1920 and the present (April 1963) cabinet. Parliament has met regularly since the general election of 1925. There had been some

fifteen general elections held till the abolition of the Parliamentary system.

The revolution of 14 July 1958, produced by a growing dissatisfaction with the monarchy and the Parliamentary system, abrogated the Constitution of 1925. The newly established Council of Sovereignty, composed of three members, issued a decree establishing a republican regime for ʿIrāḳ and promising the calling of a constituent assembly to draw up a new constitution for the country. In the meantime there is no parliament. Decrees, having the force of laws, are issued by the Cabinet and approved by the Council of Sovereignty. (On the Arab Union, see below, xviii).

vii. — Saʿūdī Arabia

As early as 31 August 1926 the kingdom of the Ḥidjāz provided itself with a "Constitution" comprising 9 sections and 79 articles, but this has few points in common with the constitutions of Arab countries studied in this article. By virtue of this text the Arab State of the Ḥidjāz was "a constitutional Muslim monarchy" (art. 2) in which "all the administration is in the hands of H.M. King ʿAbd al-ʿAzīz I", but the latter is "bound by the laws of the *sharīʿa*" (art. 5). The judicial norms must conform to the Book of God, to the *Sunna* of His Prophet, and the conduct of the Companions and of the early pious generations (art. 6). The king employs at his own expense a viceroy (*nāʾib ʿāmm*) and as many directors and service chiefs as he judges necessary (art. 7). The viceroy represents the supreme authority and is responsible to the king (art. 8). Section III deals with the affairs of the kingdom, which are divided into 6 groups: *sharīʿa* affairs, internal affairs, foreign affairs, financial affairs, public instruction, military affairs (art. 9). *Sharīʿa* affairs include everything which pertains to religious jurisdiction (*al-ḳaḍāʾ al-sharʿī*), the two Holy Cities, *waḳfs*, mosques and all religious establishments (art. 10). As regards internal affairs, art. 14 provides for a commission for the control of the pilgrimage. Arts. 17 ff., on foreign affairs, were modified on 19 December 1930 when the directorate of foreign affairs was transformed into a ministry. Section IV institutes a consultative council (*madjlis shūrā*) nominated by the king (arts. 28 ff.), the administrative councils of Djudda and Medina (art. 32 ff.) which comprise officials and notables nominated by the king, village and tribal councils (art. 41 ff.). A department of audit is provided for (art. 43) as well as a general inspectorate of officials (art. 46 ff.). Section VII deals with employees of the State, section VIII with municipal councils, and the last section with administrative committees of municipalities.

A royal decree of 29 January 1927 raised Nadjd to the status of a kingdom and unified it with the Ḥidjāz. A further royal decree of 18 September 1932 created the kingdom of Saʿūdī Arabia, changing nothing in the previous administration, although art. 6 of this decree provides that the council of ministers shall immediately draft a new constitution; it seems, however, that this provision has remained a dead letter.

In practice the king retained direct control over religious, military and diplomatic affairs, and partially delegated some of his powers to members of his family or his entourage. The consultative council remained purely theoretical, although the assembly of tribal chiefs met yearly at al-Riyāḍ. On 9 October 1953 king ʿAbd al-ʿAzīz Ibn Saʿūd instituted for the first time a true council of ministers presided over by the *amīr* Saʿūd, who ascended the throne on 9 November, after the death of his father. At the time of the first meeting of the council of ministers, 8 March 1954, the king expressed the wish that "the government would manage the affairs of the country taking account of the Ḳurʾānic teachings", and on the following 17 March two royal edicts established the status of this council of ministers and of connected offices; no movement developed towards the drafting of a constitution of a modern type. However, on 30 December 1960, prince Ṭalāl declared that the government of Saʿūdī Arabia had the intention of providing the country with a Constitution and of creating a National Assembly, and two days later Mecca Radio announced that King Saʿūd had promulgated a constitution comprising a preamble and 200 articles; a text was put out by wireless and the press, but on 28 December a communiqué categorically denied this information.

viii. — Yemen

The Imamate of the Yemen produced no written constitution; there exist, however, a number of texts regulating the powers of the *Imām* and the succession to the throne. The *imām* was to be elected by the *ʿulamāʾ* summoned to a consultative assembly, the *Madjlis*, before whom the sovereign was to take the oath. The latter, as spiritual head of the country, was to hold absolute power, but with the aid of a prime minister and other ministers belonging to his family. After the revolution of September 1962, a constitutional document was issued by the revolutionary council (*madjlis al-thawra*) setting forth the aims of the revolution and laying down general principles of government. The former begin with the restoration of the 'true *Sharīʿa*', the abolition of communal discrimination and the equality of all Yemenites before the law, the removal of conflicts between Zaydīs and Shāfiʿīs, followed by a series of national, political and social objectives. The principles, in addition to the usual constitutional assurances, include the statements that the Yemenite people is the source of all authority (art. 3) and that all laws derive their validity from the *Sharīʿa* of Islam, which is the official religion of the state (art. 6). The text of the document was published in *Fatāt al-Djazīra*, Aden, issue of 8 November 1962. (Ed.)

ix. — Syria and Lebanon

Like ʿIrāḳ, Syria and Lebanon began their constitutional life after their separation from the Ottoman Empire after World War I, although some of their leaders had taken an active part in Ottoman constitutional experiments. The first constitutional step undertaken by Syria took place after the capture of Damascus by Amīr Fayṣal in 1918 with the avowed intention of establishing an Arab constitutional state. Fayṣal called a Syrian Congress in 1920, representing the whole of geographical Syria (later known as Greater Syria), including Lebanon and Palestine, on the basis of the Ottoman Electoral Law. This Congress, functioning as a legislative and a constituent assembly, laid down a draft constitution of 148 articles which, though no formal vote was taken, had been accepted in principle. The Congress was still considering the draft when the French army entered Damascus and it adjourned on 19 July 1920, never to meet again.

The constitution provided for a limited monarchy, a bi-cameral legislature, and a responsible Cabinet. Syria (*i.e.*, Greater Syria) was to be an indivisible political entity, but its boundaries were left undefined. The Syrian Government was to be an Arab Government, its capital Damascus, and its religion Islam. The constitution included a Bill of Rights guaranteeing civil liberties and freedom of thought and of religion. Both the Senate and the Chamber of Deputies were to be elected bodies: the deputies by secret ballot in two degrees, and the Senators by the Chamber of Deputies of each province. The administration of the country was to be on a decentralized basis; each province was to have its own local administration with a single legislative body called the Chamber of Deputies. The judiciary was to be independent, with a High Court appointed by the King as the supreme judicial organ.

Syria remained under direct French control from 1920 to 1930 before another constitutional step was taken. While Syria was still in the midst of the revolt of 1925-7, the French came to an understanding with Lebanon and promulgated a constitution in 1926, thus providing a constitutional model for Syria.

Lebanon

The Lebanese constitution provided for a republican régime—the first to be proclaimed in the Arab East in modern times—and a bi-cameral Parliament, to be elected by a two-stage universal manhood suffrage. The Cabinet was to be individually and collectively responsible to Parliament. The President, elected by the two Houses of Parliament in a joint session, was given the right to appoint the Prime Minister and, with a vote of three-quarters of the Senate, to dissolve the Chamber of Deputies. This elaborate structure for a small state called for a revision in 1927, which increased the powers of the President, especially in expediting financial bills; it abolished the Senate and established a unicameral Parliament. The Chamber of Deputies, whose membership was 30, was increased by 15, appointed by the President. The members of the Cabinet were chosen from Parliament, and the members remained individually and collectively responsible to Parliament.

This constitution, continuing to function during the Mandate period, was suspended when war broke out in 1939. It was restored in 1943, when the independence of the country was formally declared, and was purged of the Mandate clauses by an act of Parliament on 8 November 1943. This precipitated a crisis with the French authorities, who maintained that the amendment of the constitution had been carried out before the Mandate was formally terminated, but France finally agreed to the amendment and the Mandate system itself was formally terminated in 1946 at a meeting of the Council of the League of Nations in Geneva.

Syria

The successful step taken in drawing up a constitutional framework for Lebanon prompted the Syrians to come to an understanding with the French on the need for establishing a constitutional government. Elections for a Constituent Assembly were held in 1928. A drafting committee of 27 members was appointed and a draft constitution was ready in August before the Assembly. The draft stipulated that Syria within its "natural boundaries" (*i.e.*, Greater Syria) would be an indivisible political unit and an independent sovereign state, its form of government republican, and the religion of its head Islam. The constitution also provided for a Bill of Rights, in which the principles of liberty, equality, private property, etc. were guaranteed. The head of the executive power was the President of the Republic, elected by Parliament for a period of five years, but he was not eligible for re-election until the lapse of five years from the expiration of his term. The President selected the Prime Minister and appointed the Ministers upon the latter's recommendation. The President was not responsible, since his decisions were countersigned by the Prime Minister and the Ministers concerned. The Cabinet was composed of not more than seven members responsible to Parliament. The Ministers were not all members of Parliament, but they could attend and take part in discussion. Parliament was made up of one House (*Madjlis*, or Chamber of Deputies), which was freely elected every four years. Every male Syrian who had attained his twentieth year was eligible to vote. The constitution provided also for a High Court composed of 15 members chosen from Parliament and from the judges of the courts. The constitution was ordinarily amended by two-thirds of Parliament upon the request of either the Government or Parliament. The draft constitution, ignoring the terms of the Mandate, promted France to inform the Constituent Assembly that certain articles, such as the one dealing with the "natural boundaries" of Syria, which included Lebanon, and others which contradicted France's international obligations, must be revised. Upon the Assembly's refusal, the French dissolved the Assembly in 1928 and promulgated the Constitution in 1930, having revised the articles to which they had objected The Syrians, tacitly accepting the situation, participated in the elections for Parliament in 1932. The first President of the Republic was elected in 1933. However, the Syrians and the French could not agree on a treaty regulating the relations between France and Syria after independence. Thus, when the war broke out in 1939, the French suspended the Constitution and governed the country through a "Council of Directors".

The circumstances of World War II gave Syria an opportunity to achieve independence and resume constitutional life. In 1941, Syria and Lebanon were declared independent and elections for the resumption of parliamentary life were held in 1943, although the legal termination of the Mandate did not take place until 1946. The constitution of 1930, revised by deleting the articles referring to the Mandate, was

restored and a new President was elected. This constitution remained in force until 1948, when a military coup d'état was led by Ḥusnī al-Zaʿīm, who overthrew the Government and suspended the constitution. A new draft constitution, reputed to embody progressive principles, was not promulgated, since Zaʿīm himself was overthrown by the army in August 1949. Elections for a Constituent Assembly were held in a relatively free atmosphere, although the army remained in control of authority. The assembly issued a new draft constitution, prepared by a committee of 33 members under the chairmanship of Nāẓim al-Ḳudsī, on 5 September 1950, and promulgated on the same day by the President of the Republic.

The Constitution of 1950 made no fundamental changes in the form or structure of the government as it existed in the constitution of 1930. Its innovations were to be found in the general articles expressing the hopes of the Syrian people. Syria was declared to be "an indivisible political unity" and to form "a part of the Arab nation". The Bill of Rights, composed of 28 articles, defined in detail the fundamental principles of freedom and the social and economic rights of the citizens. The articles relating to land stated that "a maximum limit for land ownership shall be prescribed by law", but no such law was ever issued until Syria was united with Egypt in 1958. The constitution also provided that "the state shall distribute state lands to peasants to whom land is not available sufficient for their support, against small rents to be repaid in instalments" (Article 22). Labour was regarded as "the most basic factor in social life" and "the right of all citizens". "The state shall provide work to citizens and shall guarantee it by directing and promoting the national economy" (Article 26). Education was also declared a right of every citizen. Elementary education was compulsory and free in all government schools. Secondary and professional education, though not compulsory, was also free in all government schools. Military service was compulsory, and the family, regarded as the basis of society, was to be protected by the state. The state was also to encourage marriage and endeavour to remove the material and social obstacles which hinder it. These principles, then regarded as the most progressive in Arab lands, were overshadowed by Egypt's more radical socialistic measures when Syria joined Egypt in a union in 1958. However, before Syria joined that union, she had yet to experiment with a new constitutional charter, issued under the S̲h̲is̲h̲aklī regime in 1954, by virtue of which the presidential system of government was introduced for the first time in Arab lands. This short-lived constitution was abrogated soon after the collapse of the S̲h̲is̲h̲aklī regime and the Constitution of 1950 was restored. The latter constitution may well be regarded as still (1963) in force after Syria's secession from the United Arab Republic, as Syria's rulers seem to have implied in several public declarations, pending the promulgation of a revised version or perhaps a completely new constitutional charter. (See below, xviii).

(M. Khadduri)

x. — Jordan

Even before his country became independent, Amīr ʿAbd Allāh of Transjordan promulgated a constitution (*ḳānūn asāsī*) on 16 April 1928, providing for a Legislative Assembly (*Mad̲j̲lis Tas̲h̲rīʿī*) and an Executive Council responsible to him. This constitutional charter, though giving the Amīr extensive powers, became the basis of the new constitutional framework when Transjordan became independent. On 15 May 1946 Amīr ʿAbd Allāh was proclaimed King of the Hās̲h̲imite Kingdom of Transjordan, and the constitution of 1928, revised to fit the new independent life of the country in 1946, was replaced by a new constitution on 1 February 1947. This constitution provided for a bi-cameral Parliament and a responsible Cabinet, but the King retained extensive powers, including a veto over legislation. The incorporation of Arab Palestine with Transjordan called for another constitutional change, first in the formal act of incorporation, creating the Hās̲h̲imite Kingdom of Jordan, on 24 April 1950; and then the revision of the constitution, following King ʿAbd Allāh's assassination in 1952. The new constitution provided clearly for the responsibility of the Cabinet to the Chamber of Deputies, the establishment of a Supreme Court, the responsibility of the State for the protection of the right of workers, and compulsory education in primary schools. This constitution was revised several times later, liberalizing its provisions; but in practice the King continued to exercise effective control over the Cabinet and Parliament.

xi. — Indonesia

Little progress towards self-government had been made in Indonesia (or the Netherlands East Indies as it then was) before the Japanese invasion in 1942. In 1918 an advisory *Volksraad* (People's Council) had its first meeting, having been mooted in 1916. It was intended as a safety valve for Indonesian nationalism which had been gaining strength rapidly, especially in view of the special circumstances of the war in Europe, which tied down so much Dutch military power. However, the existence of appointed as well as elected members, the extremely limited franchise and the indirectness of the elections guaranteed that the Europeans formed a majority. In any case, its powers were restricted to the giving to the Govern-

ment, in the person of the Governor-General, of advice which he could ignore.

Reforms in the composition and powers of the *Volksraad* in 1920, 1922, 1925 and 1927 did little to transform the body into an effective legislature. After 1927 it had co-legislative powers with the Governor-General, but he retained a veto. The system of election remained indirect, and the franchise narrow.

When the Japanese sensed that their defeat was inevitable they acted to hasten Indonesian independence. On 1 March 1945 they appointed a joint committee, the majority on which was Indonesian, to discuss plans for independence. Meetings held from 28 May to 1 June and from 10 to 17 July reached general agreement on the basic political principles which should guide the future Indonesian nation. Sukarno, a prominent nationalist leader since the 1920s, and subsequently Indonesia's first President, played a major part in the discussions. It was his speech on 1 June, expounding his *Panča šila* ("five foundations", five basic principles) which made possible a workable measure of compromise between those who wanted a theocratic Islamic state (the Indonesian population is 90% Muslim) and those who, though nominally Muslim themselves, feared extreme Muslim orthodoxy. It is significant that over 90% of the *élite* from whom the leaders of the national movement were drawn had had western as opposed to strictly Islamic educations (Soelaeman Soemardi, *Some aspects of the social origins of the Indonesian political decision-makers*, in *Trans. 3rd World Congr. Sociology*, London 1956).

Sukarno's *panča šila* were: nationalism (*kebangsaan*); internationalism, or humanitarianism (*perikemanusiaan*); democracy, or representation (*kerakjatan*); social justice (*keadilan sosial*); and faith in one God (*ke-Tuhanan*, or *pengakuan ke-Tuhanan Jang Maha-Esa*). His exposition of the principles was subtle and persuasive, reassuring, for example, the strongest supporters of the concept of an Islamic state that their best guarantee of influence was by working through the elective and democratic institutions which were going to be formed. (The text of the speech is to be found in Kemenkerian Penerangan, *Lahirnya Pantjasila*, 2nd Engl. edn. Djakarta 1952). The Djakarta Charter, signed by nine leading nationalists on 22 June 1945, is identical in wording with the Preamble to the 1945 Constitution, with the exception of the words italicized in the following extract: "The Republic is founded upon the belief in God, *with the obligation for those professing the Islamic faith to abide by the laws of Islam, in accordance with the principle of* a righteous and moral humanity . . .". Even this gesture towards Islam had dropped out when the 1945 Constitution appeared.

On 7 August 1945, the Japanese authorized the establishment of an all-Indonesian Independence Preparatory Committee (*Panitya Persiapan Kemerdekaan Indonesia—PPKI*), with Sukarno as Chairman and Hatta as Vice-Chairman, and entrusted with the task of arranging to take over government. When the Japanese surrendered a week later, Sukarno and Hatta proclaimed independence within three days, on 17 August 1945.

At the first meeting of the *PPKI*, on 18 August, Sukarno was elected President and Hatta Vice-President, in accordance with Article III of the Transitional Provisions appended to the 1945 Constitution, and they, with five others, completed work, begun during the last weeks of the Japanese occupation, on this document. Although considered at the time as provisional, it in fact remained in force until the end of 1949, though not without modification, and was restored in the middle of 1959.

The Preamble paraphrases the *panča šila*, the concluding part reading: "We believe in an all-embracing God; in righteous and moral humanity; in the unity of Indonesia. We believe in democracy, wisely guided and led by close contact with the people through consultation, so that there shall result social justice for the whole Indonesian people".

Art. 1 lays down that Indonesia is a unitary state with a republican form of government. Sovereignty lies with the people, and is exercised through a People's Consultative Assembly (*Madjelis Permusjawaratan Rakjat*). Art. 2 stipulates that the Consultative Assembly is to consist of the members of the Chamber of Representatives (*Dewan Perwakilan Rakjat*), together with representatives of regions and groups. It is to meet at least once every five years, and to take its decisions by simple majority vote. Art. 3 entrusts it with the responsibility for enacting the permanent constitution and the main guiding lines of state policy. Art. 4 gives the President the power of Government, to be exercised in accordance with the provisions of the Constitution, and a Vice-President to assist him, and art. 5 empowers him to enact laws in agreement with (*persetudjuan dengan*) the Chamber of Representatives, and to issue ordinances for the proper execution of laws. Art. 6 stipulates that the President is to be an autochthonous Indonesian, and that he and the Vice-President should be elected by the People's Consultative Assembly by a majority vote; art. 7 lays down his term of office at five years, with the possibility of re-election; art. 10 gives him supreme command of the armed forces; art. 11 empowers him to declare war, conclude peace, and to make treaties with foreign powers, all with the sanction of the Chamber of Representatives, while art. 12 gives him the right of proclaiming a state of emergency, the conditions and consequences of which are to be regulated by law.

Art. 16 provides for a Supreme Advisory Council (*Dewan Pertimbangan Agung*), which is obliged to answer questions submitted by the President, and has the right to make proposals to the Government. Art. 17 provides for Ministers of State, whose function it is to take charge of Government Departments, and who are appointed and dismissed by the President.

Arts. 19-22 govern the Chamber of Representatives. It is to assemble at least once a year, and its sanction is required for all laws. If a bill fails to receive this sanction, it is not to be submitted again during the same session. Members of the Chamber have the right to initiate laws; if the President does not ratify these, they are not to be submitted again during the same session of the Chamber. Presidential ordinances during states of emergency require the sanction of the Chamber of Representatives in its next session, and if this is not obtained, the ordinances lapse. Art. 23 governs the financial arrangements. The annual budget is regulated by law. Arts. 24-8 govern the judicature, and guarantee the basic human rights—freedom of speech, equality before the law, and the right to work. The remaining arts. deal with religion, national defence, social welfare, the flag and language, and amendments to the Constitution. The last is effected by a two-thirds majority of the People's Consultative Assembly

when at least two-thirds of its members are in attendance (art. 37).

Four transitional and two additional provisions complete the document. Of these, nos. 2 and 4 of the transitional provisions provide for the perpetuation of arrangements existing at the time the Constitution was drafted until the new ones proposed in it could be brought into being, and arrange for the President, assisted by a National Committee (*Komite Nasional Indonesia Pusat—KNIP*), to exercise the powers of the People's Consultative Assembly, the Chamber of Representatives, and the Supreme Advisory Council until such time as they can be established.

The Constitution reflects a variety of influences. The American Presidential system has obviously been more attractive than the western European parliamentary system, even though the former operates in a federal nation and the latter mainly in unitary ones. Despite the determination of the nationalists to owe as little as possible to the Dutch, several features of the 1945 Constitution are reminiscent of the Constitution of the Kingdom of the Netherlands. The Supreme Advisory Council, for example, is not unlike the Dutch Council of State. The President and the Chamber of Representatives exercise legislative power under the Indonesian Constitution, the King and the States-General under the Dutch. Other influences suggested by commentators include that of the draft Chinese Constitution of 1936 (M. Yamin, *Proklamasi dan Konstitusi Republik Indonesia*, Djakarta and Amsterdam 1952, 139), the constitution of the former Netherlands Indies (J. H. A. Logemann, *Het Staatsrecht van Indonesië*, 's-Gravenhage and Bandung 1954, 34), and the Chinese Organic Law of 1931 (H. Feith, *The decline of constitutional democracy in Indonesia*, Ithaca, N.Y., 1962, 43).

The first Cabinet under the Constitution was appointed by President Sukarno on 31 August 1945. The chosen ministers were responsible to the President and not to the *KNIP*, which had been formed on 29 August. It consisted of the members of the dissolved *PPKI*, plus a further selection of outstanding nationalist leaders, and representatives of the main economic, ethnic, religious and social groups in Indonesia. Its functions were advisory, not legislative.

However, following a meeting of the *KNIP* on 16 October 1945, the Vice-President, Hatta, announced that, pending the formation of the Consultative Assembly and the Chamber of Representatives, the *KNIP* itself was to be vested with legislative powers, and was to participate in the working out of the general orientation of state policy. The functions of the *KNIP* were normally to be assumed by a smaller component of it, known as the Working Committee, whose size permitted of more rapid decision taking. The term "Working Committee" seems to have been taken from the Indian National Congress (G. McT. Kahin (ed.), *Major governments of Asia*, Ithaca, N.Y., 1958, 504 n. 6).

At the instigation of the Working Committee, the President decreed on 14 November 1945 that Ministers should in future be responsible to the *KNIP*. Since the Working Committee met a good deal more frequently than the parent body, in effect Ministers were now responsible to it. The old Cabinet was dismissed, and a new one, under Sjahrir as Premier, formed.

The change was the result of unease, in the first months of the new state, on the part of those nationalists who had served with the anti-Japanese underground, at the power and influence of nationalists who had worked with the Japanese during the war. Sjahrir was a spokesman for this group of ex-resistance nationalists. The consequence of the change was to substitute for a Presidential system a western European type parliamentary one. It is noteworthy that 94% of the cabinet ministers in Indonesia from 1945 to 1955 had been educated in Western schools and universities (Soemardi, *op. cit.*).

In the following four years the President assumed emergency powers on three occasions (29 June to 2 October 1946; 27 June to 3 July 1947; 15 September to 15 December 1948), for the terms of which he exercised full personal control. On the third occasion, however, he did so, not on his own decree, but after an Act passed with the concurrence of the Working Committee and countersigned by the Ministers of Defence, Internal Affairs, and Justice.

Apart from the period before the modification of the Constitution in November 1945, there were two other Presidential Cabinets (29 January 1948 to 4 August 1949; and 4 August to 20 December 1949). In these, the Vice-President was premier, composition was not based on party political bargaining, and "... it was generally considered that a Cabinet so established could not be forced to resign by the Working Committee" (A. K. Pringgodigdo, *The office of President in Indonesia as defined in the three constitutions in theory and practice*, Ithaca, N.Y., 1957, 17).

At the time the *KNIP* was formed, the *PPKI* also decided on the formation of an Indonesian National Party (*Partai National Indonesia*), which was to be the sole Indonesian political organization. However, government announcements of 3 and 14 November 1945 made it clear that all trends of democratic opinion were entitled to political existence and organized expression. Once again the defeat and discrediting of the former Axis powers was probably a consideration.

There were two abortive agreements with the Dutch before Indonesia's independence was finally recognized. The Linggadjati Agreement (signed 25 March 1947) granted the Republic of Indonesia *de facto* recognition in Java, Madura and Sumatra, and provided for a "United States of Indonesia" to be formed with Dutch co-operation. The Renville Agreement (17 January 1948), which was concluded at the instigation of the United Nations, gave the Dutch the temporary right to hold the territory they had seized in the interim, on condition that they would hold plebiscites in these areas to determine the wishes of the inhabitants. The Dutch realized that the overwhelming majority of the people under them would opt for the Republic of Indonesia, so they ignored this condition, and instead set about fostering local states like the ones they had created and sustained in Borneo and the eastern islands. Throughout this period the Dutch worked unceasingly to create a viable federal structure in the areas they controlled, in contrast with their pre-war policy of maintaining a unitary structure in their colony, and rejecting federal proposals (see A. A. Schiller, *The formation of federal Indonesia, 1945-49*, The Hague-Bandung 1955, 14-25 *et passim*).

In mid-1949 delegates of the Dutch-fostered federal states and of the Republic of Indonesia met at an Inter-Indonesia Conference (*Konperensi Inter-Indonesia*), to begin planning the institutions of the state which would take over from the Dutch. In general the proposals which emerged from this, and

from the work of a technical committee set up to complete a draft constitution, were embodied in the 1949 draft Constitution of the Republic of the United States of Indonesia (*RUSI*). This was issued as an Annex to the agreements reached during the Round Table Conference at the Hague (23 August to 2 November 1949), granting Indonesia "unconditionally and irrevocably" sovereignty over the whole territory of the former Netherlands East Indies. The Constitution was entirely the work of the two Indonesian factions, republican and federalist, but the Dutch expressed their approval. It was an unbalanced, and, as it was to transpire almost at once, an unworkable structure that the new Constitution envisaged. Since Indonesia had won unconditional independence, it was not of course in any way binding on her.

The main provisions were as follows. There was to be a President, who would act as Head of State, and had to be "an Indonesian" (art. 69). The President was "inviolable" and his Ministers responsible, jointly for the entire Government policy, and each individually for his part of it (art. 118). The Government consisted of the President and his Ministers by the provisions of art. 68. All Presidential decrees, with the exception of those nominating three cabinet formateurs, required the countersignature of the relevant Minister or Ministers or formateurs (arts. 74 and 119). The President remained in supreme command of the armed forces, but if necessary these were to be placed under the command of a Commander-in-Chief (art. 182). There was no provision for a Vice-President, but the Cabinet had to include a Prime Minister (art. 74).

There was to be a bicameral legislature. The Senate was to have two representatives, appointed by their respective governments, from each of the 16 component states, while there were to be 150 members of the House of Representatives (or more if that number did not include at least the minimum numbers of representatives of minority ethnic groups stipulated) (arts. 80, 81, 100). The first House of Representatives was to be appointed (arts. 109-10), but elections were to be held within a year for an elected House (art. 111). The first House had no power to force the resignation of the Cabinet or individual Ministers (art. 122).

Legislation could originate from the Government, the Senate, or the House of Representatives (art. 128). Provision was made for amendment, delay, questioning, and Ministerial intervention (arts. 105, 120, 128, 129, 132, 134, 136, 138). Emergency laws with the same force as normal legislation could be enacted by the President alone (art. 139), but these had to be submitted to the Chamber within one month of enactment, and if rejected automatically lapsed (art. 140). The Constitution could be amended by two-thirds majorities in both chambers (art. 190).

This Constitution was in operation only from 27 December 1949 to 17 August 1950. Its defects were obvious. The state of Riau, with about 100,000 inhabitants, had the same Senate representation as the Republic of Indonesia, with 300 times the population. In the House of Representatives the Republic had fewer seats than she would have been entitled to if members had been allocated in proportion to population. Nationalists, especially from the Republic, saw it as an attempt by the Dutch to perpetuate their hegemony by tactics of divide and rule.

Sukarno was elected President by the delegates of the 16 component states, in accordance with art. 69, on 16 December 1949, and on 20 December the new Cabinet was sworn in, with Hatta as Prime Minister. In the following months the federal system rapidly fell into decay as member state after member state opted to merge with the Republic of Indonesia. The momentum of the movement was sustained by the known unitary preferences of the President, the Prime Minister, the majority of the Cabinet, and many leaders even of the "federalist" states.

On 19 May 1950, leaders of the Federal Government (acting for the only two remaining Dutch-sponsored states) and leaders of the Republic of Indonesia agreed on the essentials of a new unitary state to replace the existing structure. It was also agreed that Sukarno should be President of the new state. The House of Representatives of *RUSI* and the Working Committee of *KNIP* were to draw up a new Constitution, on the basis of the 1949 document, but incorporating the basic provisions of the Constitution of 1945. For the following two months delegates worked on the detail of a new provisional Constitution, a task completed by 20 July 1950. Once ratified by the respective legislatures, this document was signed for the two parties on 15 August, and came into operation on the fifth anniversary of the proclamation of independence in 1945, 17 August.

It differed in important respects from the federal Constitution which had preceded it. It was unicameral, sovereignty being exercised by the Government and the Chamber of Representatives (art. 1). There was to be a Vice-President, appointed on the first occasion by the President on the recommendation of the Chamber of Representatives (art. 45). The President was specifically given the power to dissolve the Chamber of Representatives (art. 84), which he had lacked under the 1949 dispensations, but this power was circumscribed by the additional provision that his decree of dissolution had also to order the holding of elections for a new Chamber within 30 days. The Presidential supreme authority over the armed forces, reiterated in art. 127, was limited by art. 85 which made it imperative for military decrees to be counter-signed by the responsible Minister.

The Chamber of Representatives in the first place was to be made up of the *RUSI* House and Senate, plus the members of the Working Comittee of *KNIP* and the Supreme Advisory Council (art. 77). Subsequently, at general elections, there was to be one representative for each 300,000 Indonesians (arts. 56-7), and the provisions allowing for a minimum representation of minority ethnic groups (nine Chinese, six Europeans, three Arabs) were retained from the 1949 document.

Generally speaking, the provisions governing the legislative procedure were very much as in the Constitution of 1949, with the necessary modifications to allow for the disappearance of the Senate (arts. 64, 89-92, 94-5). The Chamber of Representatives was not specifically barred from forcing the Cabinet or any member of it to resign. This was generally taken as tacit under-writing of full Cabinet responsibility in the western European manner. The usual guarantees of individual liberties and welfare were incorporated. The Preamble, as with that of 1949, echoed Sukarno's *panča śila*.

The 1950 Constitution was, as originally envisaged, intended to be simply provisional, like its predecessors, pending the election of a Constituent Assembly to devise the permanent Constitution. But in fact it remained in operation until suspended in 1959.

An important source of operational friction lay in the disproportion between the duties of the President according to the Constitution and the personality, calibre and standing of its holder. As Head of State, Sukarno was theoretically confined to the kinds of activities open to a constitutional monarch in western Europe. But he was also undisputed leader of a long and arduous national revolution, invested thereby with tremendous prestige and capable of quite unique command of the loyalty of the mass of the people. It was impossible to keep him out of the political process to the extent that the Constitution assumed. His frequent policy speeches, critical of other parts of the state machine, were often taken as governmental pronouncements, and could seriously embarrass the Cabinet, who need not have been apprised in advance of their contents. If conflict developed between Cabinet and President it was the Cabinet that had to go. The President was in permanent occupation, inviolable by the terms of the Constitution (art. 83), had the power to dissolve the Chamber of Representatives, and was secure in the knowledge that nowhere in the Constitution (unlike that of 1949) was there any definition of "government".

Another serious impediment to the smooth working of the institutions devised was the increasing development of personal strains among the *dramatis personae*. The 1945-9 Government had functioned as well as it had done partly because of the intense pressure to which it was unremittingly subjected. Personal differences were secondary to the overall objective of independence. With the unifying factor of Dutch persecution gone, divergences of viewpoint and incompatibilities revealed themselves.

Another weakness lay in the great number and frequent irresponsibility of the political parties. Before the elections of 1955, of the 236 seats in the Chamber of Representatives, no party ever held more than 52. Party discipline was almost completely lacking. The views of party members in a Cabinet and their colleagues in the national organization often diverged. Parties not represented in the Cabinet did not function as a restrained, constructive, responsibie opposition, but in their actions suggested that habits of obstruction acquired in the long and bitter fight against the Dutch had become ingrained. The Cabinet time and again found itself under the necessity of acting by emergency decree in order to clear arrears of legislation over the heads of the Chamber (which had, of course, to ratify in its next session, but this it usually did).

In this kind of situation, a great deal depended on personalities, their mutual compatibility, and in particular their relations with the one permanent feature of the political landscape—President Sukarno. No cabinet lasted longer than two years, and most a good deal less than that.

It is noteworthy that in his speeches and writings over many years Sukarno had made plain that his view of democracy did not coincide with western parliamentary, or even with American presidential, democracy. In 1949, Sukarno was talking about "Eastern democracy ... Indonesian democracy ... a democracy with leadership" (cited in Feith, *op. cit.*, 38-9). On 10 November 1956, when he saw that not even the elections of the previous year had produced a stable Chamber of Representatives, he first broached his concept of "guided democracy". Early the following year, on 21 February 1957, he made public in greater detail his proposals for radically reforming Indonesian political institutions.

However, Sukarno's major concern in mooting guided democracy was that western democracy, with its counting of heads and statistical majorities, was not in accordance with traditional Indonesian patterns of decision making, expressed in the terms *musjawarah* (deliberation, discussion), *mufakat* (agreement, deliberation), and *gotong rojong* (mutual aid, co-operation). The first implies that the leader should act only after consultation with those led, and that his leadership should consist of guidance rather than dictation. The second has the connotation of decision reached not through majority, but by final arrival at the general will, the greatest attainable degree of consensus. The third emphasizes the co-operative aspects of economic and social life, and is implicitly critical of arrangements which encourage or condone the clash of vested interests, the spirit of competition, and the thrust of individualism.

Sukarno's political role, so circumscribed by the *letter* of the 1950 Constitution, as compared with that of 1945, grew progressively more significant and direct. The essence of his proposals was that the Cabinet should represent a broad cross-section of the parties, including the communists, and that it should work with a National Council, which would include key ministers, and representatives of different interest groups in Indonesian society—trade unions, youth movements, religions, artists, farmers and peasants, journalists, women, veterans of the revolution, foreign-born citizens, Indonesian business circles, the armed forces, and the outer islands. It would be the task of the National Council to advise the President and the Cabinet and to make recommendations.

His suggestions met with resistance, and regional rebellions, which had since Independence fitfully erupted and subsided, now flared. A state of War and Siege was declared, giving recognition to the exercise of civil authority by regional military commanders. As Sukarno was unable to find a politician who could form a Cabinet on his principles, he himself stepped in and established a "National Caretaker Cabinet" under a respected non-party man, Dr. Djuanda Kartawidjaja. Two of the members of the Cabinet were reputed to be sympathetic to the Indonesian Communist Party (*PKI*). The National Council, nominated by the President, further strengthened his hand. Although Djuanda told the Chamber of Representatives that the Cabinet, as before, would continue to be responsible to it, clearly a major change in the role and power of the Presidency had taken place.

In 1958 a revolt in Sumatra offered the most serious challenge yet to Sukarno, and an alternative Cabinet and Government were formed. The legitimate Government succeeded in crushing this revolt, and in the process effectively cleared its path of the individuals and parties hostile to it who had been unwise enough to become implicated. The Army, under the leadership of General Nasution, confirmed its growing authority and influence. The *PKI*, on the other hand, had shown in regional elections in Java that its strength, too, was increasing.

Sukarno now favoured a return to the Constitution of 1945, with its basically presidential pattern. After considerable discussion and pressure, the Cabinet accepted his demand in December 1958. When the elected Consultative Assembly, whose function was the enactment of a permanent Constitution to replace that of 1950, failed to endorse the return to that of 1945, it was dissolved. The President

re-introduced the 1945 Constitution by decree on 5 July 1959.

In March 1960 the elected Chamber of Representatives was dissolved, and an appointed *gotong rojong* (mutual co-operation) one took its place. President Sukarno formed a new Cabinet, with a Chief Minister, Dr. Djuanda, but he himself added the Premiership to his other roles as President, Supreme Commander of the Armed Forces, Chairman of the Supreme Advisory Council (the name by which the National Council came to be styled), and Chairman of the National Planning Council. Parties which could not accept the new circumstances were banned. Civil servants were forbidden to join political parties. The formation of a National Front was announced.

The present (February 1963) Indonesian Constitution is, therefore, the one with which Indonesia embarked in August 1945. The personal primacy of Sukarno has been recognized and endorsed by making of the Presidency the key political institution, wielding executive and legislative power, the former with the assistance of Ministers appointed by and responsible to the President, the latter with the consent of the Chamber of Representatives. The President and Vice-President are responsible to the Consultative Assembly, which elects them, and in which resides the sovereignty of the people. Functional group elements are included in the Chamber of Representatives, the Consultative Assembly, and the Supreme Advisory Council. Ten political parties, including the *PKI*, have been accorded recognition. General elections, due to be held in 1962, were postponed until "after the return of Irian Barat". These would be the first elections under the 1945 Constitution.

xii. — LIBYA

Libya proved to be the first North African country west of Egypt to be emancipated from foreign control and organized, despite her relative backwardness, as a modern constitutional state following World War II.

On 21 November 1949, the General Assembly of the United Nations passed a resolution declaring Libya, comprising the three provinces of Cyrenaica, Tripolitania and Fazzan, to be established as a united and independent state. The resolution provided likewise that Libya should have a constitution to be laid down by her people's representatives, meeting in a national assembly. The General Assembly appointed a United Nations Commissioner, Adrian Pelt, to advise Libya's national assembly in the drawing up of her constitution.

The national assembly met on 25 November 1950 and appointed a constitutional committee composed of 18 members (each province was represented by six members). The actual drafting was entrusted to a working group of six. The national assembly began its debate over the draft as soon as the constitutional committee had completed the first chapter. The assembly formally completed its work on 7 October 1951 and the constitution was promulgated on that day. A draft electoral law, based on several Arab electoral laws, was submitted to the assembly on 21 October and was adopted on 6 November 1951.

The Libyan Constitution provided the innovation of a federal system by virtue of which the three provinces of Cyrenaica, Tripolitania, and Fazzan agreed to join in a union under a single monarchy entrusted to King Idrīs I. This union proved to be a happy compromise, capable of development into a more intimate unity, as the amendment of 1962 demonstrated. Under the federal system, Libya possessed one national (federal) government and three state (provincial) governments. The powers of the national government, such as foreign affairs, defence, and matters relating jointly to the three provinces, were specifically stated; the residuary powers remained in the provinces. The national government is composed of a bi-cameral parliament, a Cabinet responsible to the Lower House, a supreme court to decide the constitutionality of laws, and a federal administrative system. Each state (provincial) government was composed of a *wālī* (governor), an executive council, a legislative assembly, provincial courts, and a provincial administrative system. The *wālī* was responsible to the King and the chief of the executive council was responsible to the provincial legislative assembly. The first amendment to the constitution, enacted in 1962, simplified this elaborate system of government by making the *wālī* responsible to the federal government and abolishing the head of the provincial executive council, making the council responsible to the *wālī*. The progress achieved under the Libyan federal system justified the steps undertaken by the national assembly to provide such an elaborate constitutional framework, without which the three provinces would, perhaps, have been unable to unite into one state, governed by one monarchical system. This system has proved to be fairly stable, for Libya has had only one sovereign since 1951, six Cabinets, and three Parliaments (1952, 1956, 1960). The Lower House proved to be quite vocal in its criticism of governmental measures and was capable of withdrawing confidence in one of the governments (1960), although Libya's parliamentary system, in the absence of a party system, was on the whole subservient to the executive.

xiii. — Sūdān

The convention of 19 January 1899 between Great Britain and Egypt, confirmed by the treaty of 26 August 1936, made the Sudan an Anglo-Egyptian condominium, but the British authorities tended, after the second world war, to lead the country towards autonomy and independence. Negotiations between Britain and Egypt were broken off on 27 January 1947, the Egyptian government making known its desire to submit "the cause of the Nile Valley in its entirety" to the Security Council.

From 1944, however, a Consultative Council of the Northern Sudan comprising 8 members nominated by the governor-general and 18 elected by the provincial councils established in the same year had been instituted. On 9 March 1948 the Consultative Council of the Northern Sudan had adopted an organic law providing for the creation of an Executive Council and a Legislative Assembly; this text, promulgated on 19 June by the governor-general, aroused protests from Egypt and the Sudanese protagonists of the unity of the Nile Valley, who refused to take part, on 15 November 1948, in the elections to the Legislative Assembly; the latter was to have included 52 elected members (for the North), 13 appointed by the provincial councils of the South, and 10 nominated by the governor-general.

In March 1951, at the request of the Assembly which had been constituted, the governor-general charged a commission of 13 members, all Sudanese, with the drafting of a Constitution, which was adopted by the Assembly on 23 April 1952 under the name of "Ordinance on Autonomy". This text was composed of a preamble and 11 chapters containing 103 articles. Chapter III deals with the governor-general and the executive, Chapter V institutes a Senate and a Chamber of Deputies; legislation is dealt with in Chap. VI, finance in Chap. VII; the following deals with the Controller-general, Chap. IX with the judicial power; a judicature administering the *sharīʿa* (art. 79) is maintained under the presidency of the Chief *ķāḍī*; conflicts of jurisdiction are decided by a court of jurisdiction of which the Chief *ķāḍī* and a judge of the High Court of the *sharīʿa* are members (art. 80). Chap. X creates a commission of public administration, while the last section deals with interim provisions.

This text should have become effective on 9 November 1952, but the Egyptian revolution had broken out in the meantime; on 29 October the Egyptian government had, however, published a memorandum recognizing the right of the Sudanese to self-determination, and finally the ordinance on autonomy was promulgated on 21 March 1953 after the signature of the Anglo-Egyptian agreements of 12 February envisaging amendments to be added. The Chamber of Deputies was to consist of 97 elected members, and the Senate of 30 elected and 20 appointed members; elections were therefore arranged for November-December 1953, and on 6 January 1954 the Chamber elected the president of the council who formed the first government.

After a period of transition, independence was officially proclaimed before the Senate and the Chamber of Deputies in joint plenary session on 1 January 1956. On the same date a provisional Constitution was brought into operation comprising 11 chapters and 121 articles; it largely repeats the Ordinance on Autonomy, but Chap. III is completely modified, since it now provides for the election by parliament of a supreme commission of 5 persons which is to be the highest authority in the State (art. 10-1). Chap. IV deals with the executive power of the Prime Minister, appointed by the supreme commission, which also appoints ministers. The Council of Ministers is responsible to parliament (art. 27). The legislative body (Chap. V) continues to consist of the Senate (20 members appointed by the supreme commission, 30 elected) and the Chamber of Representatives. Chap. VI deals with legislative procedure, the following chapter with finance, property, contracts and lawsuits. Chap. VIII provides for the appointment of a Controller-general of accounts by the supreme commission. Chap. IX deals with the judicial power, comprising a civil division and a *sharīʿa* division presided over by the chief *ķāḍī* (art. 93). Art. 95 provides that the *sharīʿa* division shall consist of tribunals and shall exercise the powers provided by the ordinance of 1902 on tribunals of Sudanese Muslim law, and by modificatory laws. Chap. X treats of public offices, and the last chapter contains interim provisions.

On 22 May 1958 both chambers of parliament joined in a Constituent Assembly to examine the definitive form of the Constitution, and in spite of the opposition of the Southerners, appointed 40 members charged with preparing a new draft. The text presented did not obtain the approval of the Southerners since it provided for a unitary and not a federal State, and also because it provided that Islam should be the state religion and Arabic the official language. Finally the Constituent Assembly voted for a motion recommending that the constitutional committee should take note of the demands of the Southerners. It had however, no time to bring its deliberations to a satisfactory conclusion, since on 17 November 1958 a *coup d'état* put the government of the country in the hands of the army. The following day the high command of the armed forces published decrees by the terms of which the Sudan was a democratic republic whose supreme constitutional organ was the high command which delegated its legislative, executive and judiciary powers to General ʿAbbūd. The constitution is suspended.

xiv. — Pākistān

Pakistan, on coming into existence on 15 August 1947, was governed by the Government of India Act 1935, as amended by the Indian Independence Act 1947, which repealed all provisions of the former statute authorizing control from England and the reserved powers of the Governors and Governor-General. The Constituent Assembly, summoned in July 1947, was not only to make new constitutional laws but also to exercise the powers of the Federal Legislature under the Act of 1935. Pakistan com-

menced as a federal state; in addition to the former British Indian territory, within the territory of Pakistan were the princely states of Bahawalpur and Khairpur (Bahāwalpūr, Khayrpūr [*qq.v.*]), the Balūčistān states, and the N.W. Frontier states. The Independence Act had broken the link between these states and the Crown but they executed instruments of accession to Pakistan, surrendering powers over defence, foreign affairs and communications.

Legislative subject-matter was distributed between the centre and the Governor's provinces by three lists, one enumerating matters within the exclusive competence of the Constituent Assembly, another matters exclusively assigned to the provincial legislatures, and a third matters over which power was concurrent, though central legislation would prevail in case of repugnancy, unless assented to by the Governor-General. Administrative power generally covered the same field as legislative power, though most matters on the concurrent list were within the provincial power and the centre could direct a province to act as the instrumentality for execution of its laws and to take prescribed steps for the construction and maintenance of communications. Distribution of powers between the centre and the states was determined by their instruments of accession.

At the centre the Governor-General, though appointed by the Crown, was nominated by the Government. The Governor-General appointed the Provincial Governors. Ministers were appointed by the Governor-General aud Governors; they could hold office for 10 months without being members of the appropriate Assembly. The Governor-General and the Governors could legislate by Ordinance when the appropriate legislature was not in session. The Governor-General could proclaim an emergency, if faced with a threat of war, rebellion, or mass-movement of population, which would have the effect of extending the federal power to all provincial matters; he could also, if he thought the security of Pakistan in danger or the provincial constitution could not be worked, direct the Governor to assume, as his deputy, all the executive and legislative powers of the Province.

The High Court at Lahore, the Chief Court at Karachi and the Judicial Commissioner in N. W. Frontier and Balūčistān were, when Pakistan became independent, the highest tribunals in the provinces in which they were situated. A High Court at Dacca (Dhākā) for East Bengal and a new Federal Court were created. To the powers of the latter under the Government of India Act 1935 were transferred the appellate jurisdiction of the Privy Council by statutes passed in 1949 and 1950.

In 1952 a draft constitution was presented to the Constituent Assembly but discussion was postponed until September 1953 in the hope of reconciling conflicting views regarding it.

Before this constitution could be finalized, the Governor-General dismissed the Constituent Assembly on 25 October 1954 and litigation followed, resulting in this action being upheld. A fresh Constituent Assembly was summoned and first met on 5 July 1955. On 30 September it enacted the Establishment of West Pakistan Act which came into force on 14 October, integrating the territories of the west wing into a single province and amalgamating the High Court of Lahore, the Chief Court of Sind and the judicial commissioners in N. W. Frontier and Balūčistān into a single High Court.

The Constitution of the Islamic Republic of Pakistan came into force on 2 March 1956. It was federal, in so far as relations between the centre and the two provinces were concerned. Legislative and administrative powers were distributed as before, save that the provincial power was to some degree enhanced by the transfer of some powers to the provincial list and by giving the provinces power over matters not enumerated in any list. The centre had exclusive power to impose certain taxes. All other taxing powers were assigned to the provinces, which were also entitled to a share in the proceeds of income tax, purchase tax and some export and excise duties, all imposed by the centre. Grants to provinces were also contemplated. These and the provincial shares in distributable taxes were appropriated on the advice of a National Finance Commission, consisting of the finance ministers of the Federation and the Provinces sitting with other members appointed by the President in consultation with the Governors.

The head of the state was styled "President"; he was to be elected by the members of the central and provincial legislatures; it was necessary that he should be a Muslim and not less than 40 years of age. His term of office was five years and he could not be elected more than twice. He was liable to impeachment by a resolution supported by three-quarters of the members of the National Assembly. The Constitution contemplated that he would generally act on the advice of his ministers. He was obliged to appoint as Prime Minister the person most likely to command the confidence of a majority of the members of the National Assembly. Though he held office at the pleasure of the President, he could not be dismissed unless the President was satisfied that he had lost that confidence. Other ministers were appointed and removed by the President, but any minister who for six consecutive months was not a member of the National Assembly ceased to be a minister. The Prime Minister was obliged to communicate to the President all administrative decisions of the minister, all proposals for legislation and any further information called for by the President, who could insist on a decision by an individual minister being reviewed by the whole cabinet. The purpose was to ensure collective responsibility of the ministers to the National Assembly.

All legislatures were unicameral. The National Assembly was composed of 150 members from each wing and, for the first ten years, five seats in each wing were to be reserved for women. A candidate for election had to be 25 or older and qualified for the franchise, *i.e.*, he had to be a citizen of Pakistan, of sound mind, not subject to any disqualification and resident in the constituency for which he was enrolled. The National Assembly had a maximum life of five years; it was summoned, prorogued and dismissed by the President; two sessions in each year with a maximum of six months between sessions were obligatory. The Assembly elected a speaker and deputy speaker and was empowered to make its own rules of procedure. Ordinary legislation was passed by a simple majority, bills being presented to the President, who could assent, veto or return a bill for reconsideration. The veto could be overruled by a two-thirds majority and the President was obliged to assent to a reconsidered bill, passed by a simple majority, with or without amendment. The initiative in all financial matters was vested in the Executive. No bill or amendment dealing with taxation or appropriation or involving expenditure

from the revenues of the Federation could be moved except on the President's recommendation.

The President could legislate by Ordinance in emergencies, if the National Assembly was not in session; such legislation was subject to the same constitutional limitations as Acts of the National Assembly but would expire six weeks after the commencement of the next session of the National Assembly or earlier if disapproved by the National Assembly.

The powers to declare a national emergency and suspend a provincial constitution were retained but proclamations for that purpose had to be approved by the National Assembly. A new emergency power was created, to proclaim a financial emergency if the President was satisfied that financial stability was endangered; this also required the approval of the National Assembly. The effect of the first two powers was the same as before. The effect of the third was to empower the centre to control financial business in the Provinces.

The pattern of the central executive and legislature was reproduced in the Provinces with slight differences. The Governor occupied a position comparable to the President but was appointed by the President, holding office at his pleasure but normally continuing for five years. It was essential that he should have attained the age of 40 but not that he should be a Muslim. Corresponding to the Prime Minister was a Chief Minister. Each Provincial Assembly had 300 members with 10 extra seats for women for the first 10 years. Nobody could be a member of the National Assembly and a Provincial Assembly.

There was no distribution of judicial power. The Federal Court became the Supreme Court. It had original jurisdiction in disputes between Provinces and between the Federation and a Province. Appeals lay from the High Courts on constitutional matters, in civil cases involving property worth Rs. 15,000 or certified to involve an important legal point and in criminal cases where a sentence of death or transportation for life had been passed in appeal from an acquittal to a High Court or by a High Court in the exercise of its extraordinary original jurisdiction, or when a High Court certified it fit for appeal, or from commitments for contempt. The Supreme Court could also grant special leave to appeal from any order of any judicial or quasi-judicial tribunal other than a court martial. It also had an advisory jurisdiction to give an opinion on any point of law referred to it by the President. The High Courts' previous powers and jurisdiction were continued and they were empowered to issue writs for the protection of a Fundamental Right and "for any other purpose", which, as interpreted, meant in any matter where justice called for action and the petitioner had no adequate alternative remedy. The Supreme Court was also empowered to issue writs but only to protect a Fundamental Right. A Supreme Court Judge was only removable on an address supported by two-thirds of the members voting in the National Assembly; a High Court Judge could be removed on a report of the Supreme Court after enquiry.

A feature of the 1956 Constitution was its chapter on Fundamental Rights, which included a guaranteed legal remedy against any law infringing a Fundamental Right. This chapter demanded equality before the law and prohibited discrimination in respect of access to places of public resort and in appointment to government service on grounds of religion, caste, sex, place of birth or residence. No person could be deprived of life or liberty save by authority of law, and punishment under a retroactive law was forbidden. A person arrested on a criminal charge had a right to be informed of the grounds of his arrest, a right to production before a magistrate within 24 hours and a right to consult and be defended by a pleader of his own choice. A person preventively detained had a right to the grounds of detention, a right to make a representation and, in case of prolonged detention, a right of recourse to an advisory board. Citizens were, subject to conditions, entitled to freedom of speech, assembly, association, movement, residence, religion and freedom to follow a profession and deal with property. Expropriation of agricultural land or any interest in a commercial undertaking, except for public purposes, under a statute providing fair compensation, was forbidden. Religious denominations could maintain religious institutions and provide religious instruction in their educational institutions. No person could be denied admission to an educational institution on grounds of race, religion, caste or place of birth but no student could be obliged to participate in activities connected with any religion but his own.

There was also a chapter of Directive Principles, not enforceable in the courts, but intended to be followed by the executives and legislatures. They enjoined the promotion of social uplift and the promotion of economic well-being. Steps were to be taken to strengthen the bonds between Muslim countries, to promote international peace, to enable Muslims to lead their lives in accordance with Islamic principles, to see that Islamic institutions were properly managed, and to provide facilities for instruction in the religion of Islam.

Another chapter forbade the enactment of any law repugnant to the injuctions of Islam and the revision of the existing law to bring it into conformity with those injunctions. To effect these purposes a Commission was to be appointed to define the injunctions of Islam and to recommend measures for their enforcement, but an Act of the National Assembly would be necessary to implement any recommendation made. Nothing effective appears to have been accomplished in the exercise of these functions.

On 7 October 1958 the Constitution of 1956 was abrogated by the President, who placed the country under martial law. All legislatures were dismissed and political parties dissolved. The President exercised the federal executive and legislative functions, assisted by ministers appointed by him and responsible to him alone. Provincial Governors exercised the powers they would have had under the Constitution of 1956 on the suspension of a provincial constitution, but subject to control by the Martial Law Authorities. At first the distribution of powers was continued but in 1959 all matters on the provincial list were transferred to the concurrent list. The statute law previously in force was continued and protected from attack as repugnant to a Fundamental Right. The acts of the Martial Law Authorities were protected from review by the courts, whose powers, except to the extent indicated, remained intact.

It was not intended that the Martial Law experience was to continue indefinitely. In 1959 the Basic Democracies Order was promulgated, creating a hierarchy of local government boards, town and union committees, district committees and divisional councils. In the lowest tier at least two-thirds of the members were elected by persons formerly entitled to vote at elections to the legislatures, but

the Sub-divisional Officer was chairman of the *thānā* or *taḥṣīl* committee, and in the higher tiers the elected element would be diluted.

In January 1960 the members of local councils elected under the Basic Democracies Order were required to declare by secret ballot whether or not they had confidence in the President. If the majority showed confidence, the President would take steps for the promulgation of a new constitution under which he would be deemed to have been elected President for the first term.

The election having gone in the President's favour, he appointed a commission to make recommendations for the new Constitution. It was promulgated on 1 March 1962. There are at the centre the President, Ministers and a National Assembly and a Governor, Ministers and a Provincial Assembly in each province but it would be difficult to maintain that the Constitution is federal in fact. There is a list of central subjects. All other matters are within the provincial power, but the National Assembly may encroach on the provincial field on the grounds that the security of Pakistan demands it or that uniformity is necessary throughout Pakistan. It is no longer possible to impugn a law as *ultra vires* the enacting legislature, and the rule that, in case of conflict, a central law prevails over a provincial law is of universal application.

After the expiry of Field-Marshal Ayyūb Khān's term of office, the President, who must be a Muslim and have attained 35 years, will be elected by an Electoral College, composed of one Elector chosen by each electoral unit, of which there are 40,000 in each Province. The President's term is five years; he is liable to be impeached for violation of the Constitution or gross misconduct, or removed for incapacity, by a resolution supported by three-quarters of all members of the National Assembly. But any such motion is discouraged by the threat that, if half the members do not support the resolution, those who gave notice of the motion will cease to be members of the Assembly.

The executive capital is Islāmābād and the legislative capital Dacca (Dhākā). Presidential government replaces parliamentary government, for the President appoints the Ministers, and may remove them without assigning reasons; they cease to hold office on a change of President. The original intention was that they should not be members of the National Assembly, but this is no longer compulsory.

The National Assembly, elected by members of the Electoral College, will consist of 156 members, half from each wing, from which three seats will be reserved for women. It has a maximum life of 5 years. It can be summoned not only by the President but also by the Speaker at the request of one-third of all the members. If summoned by the President, it is prorogued by the President; if the Speaker summons it, he prorogues.

The President dismisses the National Assembly, but he may not do so if the unexpired portion of its term is less than 120 days or before a vote on a motion to impeach or remove him. The President ceases to hold office 126 days after the dissolution of the Assembly, unless his successor has earlier entered on his office. In case of disagreement between the President and the National Assembly, the President may refer the matter to the Electoral College. As under the 1956 Constitution, the President may assent to or veto a Bill or return it for reconsideration; if he takes either the second or third course and the Bill is again passed by a two-thirds majority of all members, he may refer the matter to the Electoral College, where he may be overruled by a simple majority of the total membership.

The President retains the power to legislate by Ordinance when the National Assembly is not in session. If the Ordinance is approved by the National Assembly, it is deemed to become an Act of the Assembly; in any other case it expires 180 days after promulgation or 42 days after the Assembly next meets, whichever is less. The President is also empowered to issue a proclamation of general emergency in the same circumstance as previously and it must be laid before the Assembly, which has no power to disapprove. While this proclamation is in force, the President may legislate by Ordinance, whether the Assembly is sitting or not. The Ordinance, must be laid before the Assembly, which has no power to disapprove. If it approves, the Ordinance is deemed to be an Act of the Assembly; in any other case it ceases to have affect when the President withdraws the proclamation.

Under the 1956 Constitution the power of the National Assembly to refuse demands for grants, except to meet expenditure charged on the revenues of Pakistan, was a powerful instrument whereby the legislature could control the executive, but under the 1962 Constitution the Assembly cannot refuse a demand for recurring expenditure, including an increase up to 10% of the expenditure incurred in the previous year.

As before, the pattern of the executive and legislature in a province is similar to that at the centre, but the Governor is appointed by the President and is subject to his directions; he may be removed at any time without reasons being assigned. Provincial ministers hold office at the Governor's pleasure but cannot be removed without the President's concurrence.

Each Provincial Assembly, elected by members of the Electoral College, consists of 150 members, five seats being reserved for women. Its maximum term is five years. In case of conflict with the Governor, he or the Speaker may request a reference to the National Assembly; if the National Assembly decides in favour of the Governor, then and only then can the Governor dismiss the Provincial Assembly. The Governor's powers to legislate by Ordinance can only be exercised when the Provincial Assembly is not in session and, *mutatis mutandis*, resemble the powers of the President.

The Supreme Court no longer has powers to issue writs, and its appellate jurisdiction is limited to appeals from a High Court; while it still may grant special leave to appeal, an appeal only lies as of right against a sentence of death or transportation for life imposed by a High Court, a committal for contempt by such court, or on its certificate that a substantial question of constitutional law is involved. The High Courts have also lost their writ jurisdiction, but, where there is no adequate remedy, they may declare an act of a public authority illegal and direct such authority to act in conformity with law. A High Court may also satisfy itself as to the legality of the custody in which any person is held and the right of an incumbent to hold public office.

The old Fundamental Rights, revised and restated, appear in the guise of Principles of Law Making and the Directive Principles as Principles of Policy, but they are only binding on the consciences of legislators and public officials; no law can be impugned as violative of the Principles of

Law Making and no official act can be declared invalid as violating a Principle of Policy.

One Principle of Law Making is that no law shall be repugnant to Islam, and it is provided that any legislature, the President or a Governor may refer a proposed law to the Advisory Council of Islamic Ideology for opinion as to whether it violates any of the Principles. The members of this Council are appointed by the President, having regard to their understanding and appreciation of Islam and the economic, legal and administrative problems of Pakistan; they hold office for three years. Apart from the function indicated above, they may make recommendations to the Governments on means of encouraging Muslims to live in accordance with Islamic principles. When a question of repugnancy of a proposed law to a Principle of Law Making is referred to the Council by the President or a Governor, he must inform the Assembly of the date on which the advice is expected, but, if the Assembly, the President or the Governor thinks immediate action necessary in the public interest, the law may be enacted before the advice is furnished.

xv. — Mauretania

On 28 September 1958 the Mauretanian people approved the French draft Constitution submitted to referendum, and chose adherence to the *Communauté*; on 28 November of the same year the Territorial Assembly opted for the status of Member State of the *Communauté*, proclaimed the Islamic Republic of Mauretania, and transformed itself into a Constituent Assembly. A committee prepared a draft which was adopted by the Assembly on 22 March 1959. This first Constitution comprised a preamble and 9 chapters, containing 53 articles. In the preamble the Mauretanian people proclaims its attachment to its religion, its traditions, to the rights of man and the principles of democracy. Art. 2 declares that Islam is the religion of the Mauretanian people, but guarantees to everyone freedom of conscience. National sovereignty belongs to the people, who exercise it through their representatives and by way of referendum. Chap. II treats of the government, which is composed of the Prime Minister and other ministers. The Prime Minister decides and carries out the policy of the State, exercises the power of making regulations, ensures the execution of the laws, appoints to offices of the state, negotiates and concludes agreements with the *Communauté* (art. 12), appoints the members of the government and dismisses them (art. 13). Before entering into office members of the government must take an oath according to a formula designed only for Muslims. Chap. III relates to the National Assembly, which holds the legislative power (art. 17) and is elected for five years (art. 18). The deputies enjoy parliamentary immunity (art. 19) and take the oath in a prescribed form, although the text only defines these forms in the case of Muslim deputies (art. 21). Chapter IV deals with the relations between the government and the Assembly; chap. V treats of the constitutional commission, chap. VI with justice: provisionally, the control of justice is in the domain of the competence of the *Communauté* (art. 43), but the civil courts of Muslim law are to conduct enquiries and dispense justice according to this law in all civil and commercial matters. The organization of these courts is to be determined by law. Laws shall be introduced to codify the rules of Muslim law applicable in the Islamic Republic of Mauretania (art. 44). A High Court is provided for by art. 45. Chap. VII deals with territorial entities, which are the district and the parish; chap. VIII provides for the procedure to be followed for the revision of the Constitution, and chap. IX contains interim provisions.

The National Assembly elected on 17 May 1959 took office and prepared a new constitutional text necessitated by the accession of Mauretania to independence. This text was promulgated on 20 May 1961. It consists of a preamble and nine chapters including 61 articles. In comparison with the Constitution of 22 March 1959 it presents noticeable differences especially in the new provisions which relate to the President of the Republic, who is endowed with very extensive powers. He must be of the Muslim religion (art. 10); elected for five years by direct universal suffrage (art. 13), he takes the oath before the National Assembly in a prescribed form (art. 16). As holder of the executive power (art. 12) he decides the general policies of the nation and selects the ministers, who are responsible to him (art. 17); he possesses, moreover, the power of enacting regulations (art. 18), commands the armed forces (art. 20), signs and ratifies treaties (art. 22), and exercises the right of pardon (art. 23). In case of imminent danger he takes the exceptional steps required by the circumstances (art. 25). It is he also who declares a state of war or a state of emergency (art. 42).

Chap. III is devoted to the National Assembly, elected for five years and invested with the legislative power (arts. 26-7). Deputies enjoy parliamentary immunity (art. 29). Chap. IV deals with the relations between the President of the Republic and the Assembly, especially on matters which fall within the orbit of the law (art. 33) and those which refer to the power of regulation (art. 35). The President of the Republic may, with the authority of the Assembly, take measures by decree which are normally within the purview of the law (art. 36). The initiation of laws belongs to the President of the Republic and the members of the Assembly (art. 37). The President promulgates the laws and arranges for their publication in the Official Gazette within 15 days, during which time he has the power to refer back the draft or the proposal to the Assembly for a second reading. According to chap. V, international treaties and agreements can only be ratified by virtue of a law (art. 44). Chap. VI establishes the independence of the judiciary (art. 47), which dispenses justice in the name of the people. The superior council of the magistracy assists the president of the Republic (art. 50). The Supreme Court receives the

declarations of candidates for the presidency of the Republic (art. 13), declares when the Presidency is vacant (art. 24), and decides in case of dispute on the regularity of the election of deputies (art. 28), and scrutinizes the constitutionality of laws (arts. 41, 45); it also scrutinizes the correct functioning of the referendum and publishes its results. Its other powers, its composition, its rules of procedure and the procedure which are applicable before it are fixed by law (art. 51). In the case of high treason the President of the Republic and the ministers may be impeached by the National Assembly and sent before the High Court. Chapter VII concerns parishes, administered by elected councils. The following chapter provides for the procedure of revising the Constitution, and the last contains interim provisions.

xvi. — Kuwayt

On 16 November 1962 the *amīr* of Kuwayt published the first Constitution of the amīrate, voted by a Constituent Assembly who had spent the previous two months examining a draft prepared by specialists. Discussion had been lively, and many articles had been accepted only after long discussion. The discussion which holds most interest for Islamic scholars is that which arose on art. 2, which provides that "the State religion is Islam, and the *sharīʿa* an essential source of legislation"; some members wished to say *the* essential source, and their opponents had to struggle to make them admit the impossibility of applying Islamic law to the letter (which for example provides that the thief is to have his hands cut off) and its incompatability with the needs of a modern State as regards banks, insurance and other financial institutions.

This Constitution thus declares in its first articles that Kuwayt is an independent and sovereign Arab State, that its people are part of the Arab nation, that Islam is the State religion and that the *sharīʿa* is an essential source of legislation, but that all religions are protected provided that they do not disturb public order and morals. Art. 6, which declared that "property, capital and labour are fundamental elements of the social structure of the State" also gave rise to an acrimonious discussion, and the individual right of ownership was finally guaranteed. The nation is the source of all power, and the head of the State is a prince descended from the *amīr* Mubārak Āl Ṣabbāḥ. Freedom of opinion and expression is recognized completely. Art. 31, which stipulates that "no one may be arrested, imprisoned, subjected to search or to house arrest, deprived of his right to choose his residence or to move about freely, except in conformity with the law, and no one may be subjected to torture or any treatment contrary to human dignity", was also fiercely debated, some wishing to allow torture in order to protect society. Art. 43 recognizes the right of citizens to join parties and allows the formation of trade unions. The State aids aged and sick citizens and those incapable of work.

Arts. 54-8, dealing with the head of State, provide for an intermediate stage between presidential rule and parliamentary rule. The *amīr* exercises executive power through the intermediacy of his ministers; with the approval of a third of its members he may dissolve the National Assembly, which is invested with the legislative power. (Ed.)

xvii. — Morocco

The latest of the Constitutions of Muslim countries to come into being is that of Morocco, made public by the king on 18 November 1962 and approved by referendum on 7 December of the same year. It represented the fruition of the "Charter of Public Liberties" which, promulgated on 8 May 1958 by king Muḥammad V, announced the setting up of a constitutional monarchy, and of the "Fundamental Law" issued on 2 June 1961 by his son and successor Ḥasan II, which prepared the way for the promulgation of a Constitution. This consists of a preamble and twelve sections divided into 110 articles.

The preamble declares that the Kingdom of Morocco is a Muslim State the language of which is Arabic, that it constitutes a part of the Great Maghrib, and is an African State.

Section I defines Morocco as "a constitutional, democratic and social monarchy" in which "sovereignty belongs to the nation, which exercises it directly by referendum and indirectly through the medium of constitutional institutions", *i.e.*, the King, Parliament and the government. Article 3 envisages the existence of political parties and declares that "there cannot be a sole party in Morocco". The equality of all Moroccans before the law is assured (art. 5), as well as freedom of worship for all, Islam being, however, the State religion (art. 6). The Constitution accords equal political rights to men and women (art. 8), and guarantees to all citizens freedom of movement, opinion, expression, association, meeting, membership of a trade union and a political party (art. 9) as well as the basic rights, including the right to strike and the right to own property (arts. 14-5).

Section II, devoted to the King, accords him a preponderant place and lays down that his person is inviolable and sacrosanct (art. 23); as the "symbol of the unity of the nation" he bears the title of *amīr al-muʾminīn* and is the guardian of Islam and of the Constitution (art. 19). Succession to the crown is assured to "male descendents in the direct line and by primogeniture" (art. 20); the King presides over all councils of State (arts. 25, 32, 33, 86, 96), appoints to civil and military offices, commands the armed forces (art. 30), accredits ambassadors and ratifies treaties (art. 31), has the right to pardon (art. 34) and possesses four essential prerogatives: he appoints and dismisses the Prime Minister and members of the government (art. 24), has the right to submit to a referendum any bill or draft law after discussion in parliament (arts. 26, 72-4), can dissolve the chamber of representatives (arts. 27, 77, 79), and finally, in case of grave danger, has the right to proclaim a state of emergency (art. 35).

Section III deals with Parliament, which consists of the Chamber of Representatives, elected for four years by direct universal suffrage (art. 44), and the Chamber of Councillors, elected for six years and renewable by halves every three years; two-thirds of this chamber consist of members elected, in each prefecture and province, by a college composed of members of the prefectoral and provincial assemblies and of communal councils, the remaining third being elected by the chambers of agriculture, commerce, industry and handicrafts, and by the trade unions (art. 45). The list of matters reserved for parliamentary legislation is relatively restricted (art. 48), while the range of administrative regulation is extensive (art. 49). The right to initiate laws belongs to the prime minister and to members of parliament (art. 55).

Section IV deals with the government, which is responsible to the King and to the Chamber of Representatives (art. 65); it is responsible for the execution of laws, controls the administration (art. 66), and exercises a regulatory power over matters which are not the concern of the law (art. 68).

Section V regulates the relations between King and Parliament and between the latter and the government. The Chamber of Representatives can overthrow the government either by a motion of no confidence (art. 80) or by a vote of censure (art. 81).

Section VI lays down the principle of the independence of the judicial power and sets up a High Council of Judiciary. According to the provisions of Section VII members of the government can be impeached by the Chamber of Representatives and sent before the High Court of Justice. Section VIII deals with provincial and local government, and Section IX with the Higher Council for national development and planning. Section X treats of the constitutional chamber and the Supreme Court. Section XI provides for the possibility of revising the Constitution, but art. 108 declares that "the monarchic form of the State and the provisions relating to the Muslim religion cannot be the object of any constitutional revision". Finally, Section XII contains transitional provisions.

xviii. — Federal constitutions

The year 1958 was marked by three attempts to create unions or federations of Arab states: on 1 February, the United Arab Republic (*al-Djumhūriyya al-ʿarabiyya al-muttaḥida*) of Egypt and Syria; on 8 March, the United Arab States (*al-Duwal al-ʿarabiyya al-muttaḥida*), of the United Arab Republic (but more particularly the former Egypt) and the Yemen; on 14 February, the Arab Union (*al-Ittiḥād al-ʿarabī*), of ʿIrāḳ and Jordan. All three were ephemeral, but they lasted a sufficiently long time for them to provide themselves with federal constitutions, drafted within a remarkably short time.

Reference has already been made (*supra*, iii, Egypt) to the constitution of the UAR, to which a little must be added here. As early as 5 February 1958 detailed provisions on the future status of the new republic were presented to the Syrian Chamber of Deputies and the National Assembly of Egypt by the heads of the two states; on 21 February the populations of both countries were asked to approve by referendum the creation of the UAR and the choice of Djamāl ʿAbd al-Nāṣir as President of this republic: about 99.99% of the voters replied in the affirmative to both questions; on 5 March the provisional Constitution of the UAR was promulgated, providing for an executive council in each of the two provinces and a central government, in addition to the already elected President. This Constitution reproduced almost verbatim in its 73 articles the essential provisions of the Egyptian Constitution of 16 January 1956. It differed from the latter, however, by not declaring that Islam was the State religion and that Arabic was the official language, and moreover did not specify whether sovereignty belonged to the nation. Certain articles also were modified in a sense generally favourable to the executive power; thus, the representatives to the legislative assembly were not elected by universal suffrage, but nominated by the president of the republic; the rights of the latter concerning the dissolution of the assembly were more extensive than in the Egyptian constitution; the Chief of State not only retained the right of direct government 'in case of necessity' by decrees 'having the force of law', but all the restrictive conditions imposed on him in this respect in the Egyptian constitution disappeared in this provisional constitution; the President was not even obliged, when proclaiming a state of emergency, to refer this to the Assembly. The remaining provisions were in general similar at all points to those of the Egyptian constitution. The Syrian coup d'état of 28 September 1961 made an end of the Union and abolished the federal constitution on 29 September.

The very day after the proclamation of the UAR at Cairo, delegates of Egypt and the Yemen began talks which culminated, on 8 March, in the signature at Damascus of the charter of the United Arab States by the president of the UAR and the crown prince of the Yemen, the *amīr* Sayf al-Islām Badr. By the terms of this charter, which consisted of 32 articles divided into three chapters, each State was to preserve its international personality and its own government; no reference was made to the religion or language of the union. All citizens were to be equal and have equal right of work; they were guaranteed freedom of movement. The unification and co-ordination of external policies, of diplomatic representation, of the armed forces, of economic activities, of the currency and of education were treated in chapter I. A supreme council, composed of the heads of member States, was to be assisted by a Council of the Union composed of an equal number of representatives of the member States. Presidency of this Council of the Union was to be assumed for a year at a time by the member States in turn. The supreme Council was charged with establishing the higher policy of the Union in matters of defence, economy and culture; it was to promulgate the laws, appoint the commander in chief of the armed forces, and draw up the budget of the union; the Council of the Union was to be its permanent organ; it would establish the annual programme, which it would submit for ratification to the Supreme Council. A council of defence, an economic council and a cultural council were also instituted. Chapter III contained general and provisional regulations on the seat of the Council of the Union, the entry into force of the laws, the suppression of diplomatic representation between the member States, and customs regulations. The federation having been broken on 26 December 1961, the constitution lapsed on that date.

As an answer to these regroupings within the Arab world the Hāshimite sovereigns Fayṣal of ʿIrāḳ and Ḥusayn of Jordan announced, on 14 February 1958, the creation of a union between their kingdoms, and on 19 March following, the Constitution of the Arab Union, drawn up by a mixed ʿIrāḳī-Jordanian commission, was promulgated simultaneously at Baghdād and ʿAmmān. It comprised 80 articles in 8 chapters. "Membership of the Union is open to any Arab State desirous of joining", but each State would retain its independent identity and its own system of government; any treaties previously concluded would affect only the States which had signed them. Here again there is no provision on the religion or language of the Union. The seat of government was to be at Baghdād and ʿAmmān alternately; a common emblem was envisaged, but each state was to retain its own flag. Legislative power would belong to the president of the Union (the king of

ʿIrāḳ) and to an Assembly of forty members (20 from each State), who were to be elected for four years by the Chambers of Deputies of ʿIrāḳ and Jordan. Chapter II dealt in some detail with the prerogatives of the President and the role of the Assembly; the following chapter with the executive power, which belonged to the President of the Union assisted by a council of ministers. The President would nominate, dismiss and accept the resignation of the Prime Minister and conclude treaties, and would be the Supreme chief of the army. The ministers were to be collectively and individually responsible to the Assembly of the Union; each ministry had, within a month of its formation, to define its policy in a declaration made to the assembly. In case of urgency, during the interval between sessions of the assembly, the president could promulgate federal decrees having the force of law, provided that he submitted them to the next meeting of the Council of the Union. Chapter IV, which deals with the judicial power, is almost exclusively concerned with the institution of a Supreme Court charged with the task of judging the members of the Assembly and the ministers, of settling any disputes which might arise, of giving its advice on legal questions submitted to it by the Prime Minister, of interpreting the constitution, of determining the constitutionality of laws, and of hearing appeals on sentences of the federal courts. Chapter V deals with the powers of the Union as regards foreign affairs, security, customs, economic questions, and education. The finances of the union (chapter 6) were to be furnished by the member states in defined proportions. The Assembly would discuss the budget, and a Court of Audit was to be instituted. Chapter VII envisages the conditions under which the Constitution could be amended. Finally chapter VIII contains various provisions on the state of emergency, the first assembly, the first budget, the necessity of member States revising their own constitutions to bring them into line with that of the Union.

On 26 March the Jordanian and ʿIrāḳī parliaments ratified the Constitution of the Union. At Baghdād the Chamber of Deputies decided to amend the ʿIrāḳī Constitution of 1925, and was then dissolved to allow the vote on the amendment to be taken by a new assembly; on 10 May the latter voted the amendment, and on 12 May approved the text of the Constitution of the Union. On 18 May the first federal government was formed. On 14 July 1958 the ʿIrāḳī Revolution put an end to the Union and in consequence to the federal Constitution.

Pellat)

Amīrates of southern Arabia. In the course of the year 1958 discussions were undertaken with a view to drafting a constitution of federation of a certain number of Arab principalities of the Aden Protectorate. On 20 June 1958 the general secretariat of the Arab League sent to all member countries a memoir drawing their attention to the British intention to create a federal union of all the southern protectorates, allegedly in order to bring the amīrates and sultanates under the British governor of Aden. The federation was not, however, constituted before 3 February 1959, receiving the allegiance of the following six small states: the amīrate of Bayḥān [see bayḥān al-ḳaṣab], the sultanates of ʿAwdhalī [*q.v.*], Faḍlī [*q.v.*] and Ḍāliʿ ([*q.v.*] in Supplement), the Shaykhdom of Upper ʿAwlaḳī [*q.v.*] and the sultanate of Lower Yāfaʿ [*q.v.*]; at the beginning of April 1959 the sultanate of Lāḥidj [*q.v.*], the amīrate of Lower ʿAwlaḳī and the republic of Dathīna [*q.v.*] asked in their turn to participate. On 29 September 1959 the foundation stone of the capital of the Federation (*al-Ittiḥād*) was even laid, erected at Biʾr Aḥmad by the sultan of Lāḥidj, who began to take an important part; other states also demanded admission, and on 29 October 1961 the British government even transferred to the Federation its powers over the forces of public order.

From 11 February 1959 this Islamic Arab Federation provided itself with an elaborate Constitution consisting of a preamble and ten chapters divided into 47 articles. Chap. III (arts. 5-11) institutes a Supreme Council of the Federal Government which wields the executive power; it is composed of six ministers at the maximum, elected for five years by a Federal Council endowed with legislative power (Chap. IV, arts. 12-9); this Council is composed of six representatives of each member State and legislates by regulation (Chap. V, 20-2). Legislation may be carried out by provisional orders of the Supreme Council when the Federal Council is not in session (arts. 23-6) or by decrees of the Supreme Council when a state of emergency has been declared (arts. 27-8). The following chapters deal with the finances of the Federation (arts. 29-35), federal officials (arts. 36-7), responsibilities and powers of the Federation and of the member States (arts. 38-42), the procedure for revision of the Constitution (art. 43), and end with interim provisions (arts. 44-7).

xix. — Conclusion

The authors who have shared in the composition of the article dustūr have made it their chief endeavour to trace the history of the constitutional movement in the countries concerned and to analyse more or less briefly the promulgated texts. This has the advantage of presenting the reader with a fairly complete synthesis, but also the occasional drawback of obscuring to some extent those points which must be of primary interest to students of Islam, namely the place accorded to Islam in the constitutions of the Muslim countries. We shall therefore set ourselves here to group together the common elements and to note the points of divergence, taking into account only those texts at present (beginning of 1963) in force (or suspended without being replaced), and disregarding constitutions that are too archaic (Saʿūdī Arabia), rigorously secular (Turkey), Soviet, or of a special local character (Lebanon, Indonesia). Thus we shall confine our attention to the constitutions of eight Arabic-speaking states (Egypt, ʿIrāḳ, Jordan, Libya, Morocco, Mauretania, Syria and Tunisia) and three non-Arab Muslim countries (Afghānistān, Īrān and Pākistān).

The chronological order in which these eleven constitutions were promulgated is of no more than secondary interest, for all of them (except that of Afghānistān) can be regarded as recent and on the modern pattern, the oldest (Īrān) having been revised and, so to speak, brought up to date. Both in the monarchies: Afghānistān (with qualifications), Īrān, Jordan, Libya and Morocco, and in the repu-

blics, the uni- or bi-cameral parliamentary system has been universally adopted, though the sovereign or head of state enjoys powers that are generally very extensive and participates actively in the country's political life (we cannot fail to notice, moreover, that at the present moment (January 1963) three out of seven republics—not counting the Sudan—are headed by officers brought to power by the army in order to put an end to the abuses of a misconstrued liberal régime).

To the parliamentarianism of democratic tendency is added the solemn proclamation of the Rights of Man and the principles of liberty and equality, painstakingly included in the texts; the functioning of the institutions is minutely regulated, with the result that these constitutions, while far from being identical, are absolutely comparable to those of the Western countries which have more or less served as their models. The difference lies, on the one hand in the fact that the Eastern Arab countries declare themselves to be "an integral part of the Arab nation" and that Tunisia and Morocco proclaim that they belong to the "Greater Maghrib", on the other hand, and above all, in the provisions relating to Islam which they all contain.

To begin with, Islam is expressly declared to be the state religion in all the constitutions enumerated below, with the exception of that of Syria. Morocco takes the precaution (art. 108) of excluding from any future revision the provisions relating to the Muslim religion, *i.e.*, the second half of art. 6 (which additionally guarantees to all the freedom of worship). It goes without saying that in these countries the head of state could not belong to any religion but Islam; four constitutions make express provision to this effect: those of Syria (art. 3), of Pākistān (art. 10[a]), of Tunisia (art. 37) and of Mauretania (art. 10). Art. 120 of the Egyptian Constitution of 1956 is silent about the religion of the head of state, but there can be no doubt as to the will of the framers of the constitution; in the monarchies it is evident that the sovereign must be a Muslim; in Īrān (art. 1) the state religion is Twelver Shīʿism to which the sovereign must necessarily belong; in Afghānistān (art. 1) the King must belong to the Ḥanafī school; in Morocco the King is Commander of the Faithful (*amīr al-muʾminīn*); in Libya (art. 51) the representative of the throne, regent or member of the regency council, must be a Muslim.

Syria (but see also the Sudan) is thus the only Muslim country not to have declared that Islam is the state religion, but in this regard art. 3 of the constitution voted on 5 September 1950 (retained in that of 22 September 1953) is instructive; in effect, the original draft, which actually made Islam the state religion, has been modified by the Constituent Assembly in the following manner:

1. the religion of the President of the Republic is Islam;
2. Islamic *fiḳh* is the principal source of legislation;
3. freedom of belief is guaranteed. The State respects all revealed religions and assures them complete freedom of worship on condition that they do not disturb the public order;
4. the personal status of the religious communities is safeguarded and respected.

This notion of respect for revealed religions only is unique in the constitutional system of the Muslim countries and has no parallel except in the clause of the Afghān constitution on the protection of Hindus and Jews alone, happily replacing the obligation of the *dhimmīs* to pay the *djizya* and wear distinguishing emblems (see above v). The Syrian constitution has sought to take account of the peculiar conditions prevailing in a country where Christians of every sect and Jews live side by side with Muslims; it shows itself liberal in reserving to the religious communities their personal status, but in a sense less tolerant than the other constitutions which guarantee (theoretically at least) to all religions the freedom of worship, on condition that they do not disturb public order. In restricting this freedom to the revealed religions only, the framers of the Syrian constitution have evidently sought to make a concession to the tenets of the *sharīʿa* [*q.v.*], without perhaps devoting any great attention to the problem posed by the definition of *ahl al-kitāb*; they have made another such concession in manifesting the desire, expressed in the text, of deriving all legislation from Islamic *fiḳh*, without however specifying the *madhhab* followed, and perhaps with the ulterior motive of neglecting this provision, for they must certainly have realized how difficult it is to reconcile the rules of the *sharīʿa* with the exigencies of a modern state.

This harmonization of Islamic law and modern legislation was, in fact, one of the major concerns of the first constitution-makers. The constitution of Afghānistān lays down that the laws must be in accordance with the *sharīʿa*, and the Iranian Fundamental Law goes even further, since art. 2 lays down that a committee of *mudjtahids* shall be named to watch over the "Islamicity" of the laws; in practice this provision does not seem to have been punctiliously applied (see above, Īrān). Indeed, in nearly all the countries which had not been subject to foreign domination and which had been able fairly early to enjoy a constitutional life of their own, the elaboration and promulgation of a constitution represented a victory for the partisans of progress over the conservatives entrenched behind the *sharīʿa*; in the other countries, which have gained their independent status more or less recently, the constitution-makers tried to fight against the *ʿulamāʾ*, who were too much attached to legal rules felt to be out-of-date and incompatible with the harmonious development of a modern State, and have elaborated texts that show a progress in the direction of de-Islamization, despite some concessions of principle to the conservatives. The sole, and logically necessary, exception to this rule is Pākistān, whose very *raison d'être* is precisely to allow Muslims to lead a life in total conformity with the teachings of Islam in a State built on a purely Islamic basis. The experiment was interesting, but we know that it has run up against countless difficulties. The preparation of the first constitution bristled with difficulties, although each successive draft of the project marked a set-back for the claims of the *ʿulamāʾ* and a victory for the modernists (see K. J. Newman, *Essays on the Constitution of Pakistan*, Dacca 1956; A. Chapy, *L'Islam dans la Constitution du Pakistan*, in *Orient*, iii (1957), 120-7). The committee for the scrutiny of laws, on which the *ʿulamāʾ* were to be represented, was finally replaced by a kind of manual which the members of the Assembly were supposed to follow, so as to promulgate only such laws as are in conformity with the prescriptions of Islam. The constitution of 1962 has returned to a consultative council on Islamic ideology; but the members of this council, named by the President, must not only know Islam, but also be aware of the economic, legal and administrative problems which Pākistān has to solve; in other words, the *ʿulamāʾ* are virtually excluded from it. Moreover, this

council is charged with giving its opinion on the "Islamicity" of the laws at the request of the President of the Republic or of a governor; and the Head of State, though he may respect the *ʿulamāʾ*, knows that he can hardly count on them, and does not fail to invite them to become better informed of the requirements of the modern world. Their incapacity has been shown up clearly by the so-called Munīr report, presented by the commission of enquiry into the disturbances in the Pandjāb in 1953 (*Report of the Court of Inquiry constituted under Punjab Act II of 1954 to enquire into Punjab disturbances of 1953*, Lahore 1954, 200-32, especially 218-9), of which W. C. Smith (*Islam in Modern History*, 233) says that it "publicized further the fact that the *ʿulamāʾ*, the traditional leaders of traditional Islam, were not only unfitted to run a modern state, but were deplorably unable under cross-questioning even to give realistic guidance on elementary matters of Islam. The court of inquiry, and subsequently the world, was presented with the sorry spectacle of Muslim divines no two of whom agreed on the definition of a Muslim, and who were yet practically unanimous that all who disagreed should be put to death".

The application of Islamic law may be studied in the article SHARĪʿA (see meanwhile G.-H. Bousquet, *Du droit musulman et de son application effective dans le monde*, Algiers 1949; J. N. D. Anderson, *Islamic law in the modern world*, London 1959), but we must notice here that the general tendency of the constitutions, even in Pākistān, is to institute civil courts charged with giving judgement, in matters of personal status and succession, on the basis of codes established according to the requirements of Islamic law. It is worth emphasizing, then, that of all the modern constitutions that of Jordan is unique, in the judicial sphere, in providing expressly for the maintenance of religious jurisdictions (art. 104) consisting in *sharʿī* courts and in councils for the other religious communities. The competence of these latter councils in matters of personal status and mortmain property is fixed by the law (art. 109), while the *sharʿī* courts are constitutionally declared competent (art. 105) in the following matters: personal status of Muslims; claims for payment of *diya* [*q.v.*] between Muslims or parties consenting to this mode of settlement; questions concerning *wakf* [*q.v.*] property. In other countries the *ḳāḍīs* have been retained, but their existence is more or less precarious.

DUYŪN-I ʿUMŪMIYYE, the Ottoman public debt, more particularly the debt administration set up in 1881. The Ottoman government had made its first attempts to raise money by internal loans in the late 18th and early 19th centuries (see ASHĀM and ḲĀʾIME). The needs and opportunities of the Crimean War brought a new type of loan, floated on the money markets of Europe. The first such foreign loan was raised in London in 1854, the second in the following year. They were for £ 3,000,000 at 6% and £ 5,000,000 at 4% respectively. Between 1854 and 1874 foreign loans were raised almost every year, reaching a nominal total of about £ 200 million. Usually, since Turkey was regarded as a poor risk, the loans were granted on very disadvantageous terms; the money received was for the most part used to cover regular budgetary expenditure, or else spent on projects unconnected with economic development. The end came on 6 October 1875, when the Ottoman government defaulted on its payments of interest and amortization. A period of negotiations followed, and agreement was finally reached between the government and representatives of the European bondholders. This agreement was given legal effect in the so-called Muḥarram Decree, issued on 28 Muḥarram 1299/20 December 1881, setting up an "Administration of the Public Debt" (*Duyūn-i ʿumūmiyye*—in French *Administration de la dette publique ottomane*), directly controlled by and answerable to the foreign creditors. Its primary duty was to ensure the service of the Ottoman public debt, which was consolidated at a total of £ 106,409,920, or £T. 117,050,912, at the prevailing rate of 110 piastres to the pound sterling. For this purpose, the Ottoman government ceded certain revenues to the Council "absolutely and irrevocably . . . until the complete liquidation of the debt". These consisted of the revenues from the salt and tobacco monopolies, stamp-duties, and the taxes on spirits, silk, and fisheries, together known as the *rusūm-i sitte*, six taxes. In addition to these taxes, which it collected directly through its own agents, the Council was to receive tribute from the Balkan principalities, and, if necessary, a share of customs receipts. The executive committee, or Council, consisted of six delegates, representing British and Dutch, French, German, Italian, Austro-Hungarian and Ottoman bondholders, together with a seventh representing a group of priority bonds, most of which were held by the Imperial Ottoman Bank. Already in 1881 the Council had over 3000 revenue collectors at its disposal. By 1911 its total staff stood at 8,931—more than that of the Ottoman Ministry of Finance. The Council of the Debt had become a very powerful body, with far-reaching influence on the financial and economic life of the Ottoman Empire, and even, to an extent that has been variously assessed, on its politics.

The Debt Administration continued to function during the First World War and under the Allied occupation, in spite of the withdrawal of the British, French and Italian delegates during the war and of the German and Austrian delegates after the armistice. The work was carried on under the authority of the remaining delegates, and amounts due to enemy creditors deposited for future payment. It came to an end with the victory of the nationalists under Muṣṭafā Kemāl, and the creation of the republic. The treaty of Lausanne determined the share of the new Turkey in the debt of the defunct Empire. Negotiations followed, and agreements regarding liability and payment were signed in 1928 and 1933. The debt was finally liquidated in 1944.

DŪZAKH [see djahannam].

DŪZME MUṢṬAFĀ [see muṣṭafā düzme].

DWĀRKĀ, a town in the Okhāmanḍal district in the north-west of the Kāṭhiāwāḍ peninsula of Gudjarāt, India, associated in Hindū legend with the god Krishna and hence considered to be of special sanctity by Hindūs. It is known also by the names of Dwārawatī and Djagat, and was notorious for its pirates until the 19th century. Under the name Bāruwī (< *dwārawati*) it is referred to by al-Bīrūnī (*K. Ta'rīkh al-Hind*, tr. E. Sachau, London 1888, ii, 105 ff.).

It was sacked by the Gudjarāt sultan Maḥmūd I "Begdā" in 877/1473 as a reprisal for an attack by pirates on the scholar-merchant Mawlānā Maḥmūd Samarḳandī: the city was plundered, its temples destroyed, and its idols broken (*Firishta*, tr. Briggs, iv, 59-60, and note). It figures again in the Muslim history of Gudjarāt at the time of the pursuit of the deposed sultan, Muẓaffar III, by Mughal imperial troops in 1000-1/1592-3, although the various accounts differ considerably among themselves.

Bibliography: J. Burton-Page, *"Azīz" and the sack of Dvārkā: a seventeenth century Hindī version*, in *BSOAS*, xx (1957), 145-57, with full bibliography and discussion of the second incident. (J. Burton-Page)

DWIN (pronounced Dvin) was formerly an important town in Armenia and was the capital at the time of the Arab domination. The name of the town, to which Asoghik, ii, ch. I, trans. Gelzer and Burckhardt, 47, gives the meaning "hill", is probably, as was shown by Minorsky, *Le nom de Dvin*, in *Rev. des ét. arm.*, x (1930), 119 ff. and *Transcaucasica*, in *JA*, ccxvii/1 (1930), 41 ff., of pre-Iranian origin and said to have been imported by the Armenian Arsacids from their original dwelling-place, the present Turkoman steppe. In the Arab authors it occurs in the forms Dawīn or Duwīn (Yāḳūt, ii, 632; Ibn Khallikān, Būlāḳ ed., i, 105) and Dabīl (Yāḳūt, ii, 548) which is the most usual form. Neither Yāḳūt nor Abu 'l-Fidā' (ii, 2, 150-1), nor the author of the *Mukhtaṣar* of Ibn Ḥawḳal (240; 2nd ed., 337), seems to realise that Dabīl and Dawīn denote one and the same town. The Greek name is sometimes Δόυβιος (Procopius), sometimes τὸ Τίβιον, τὸ Τιβή, τὸ Τιβί (Constantine Porphyrogenitus). The forms Dovin or Tovin, Duin, Douin are found in many European authors.

The town was founded by the Armenian Arsacid king Khusraw II the Young (330-8 A.D.) in a plain, near the river Azat (Garni Čay), a tributary on the left bank of the Araxes, to replace the ancient Artashat (Artaxata), which was situated in the same region of Ararat but a little further south. After the partition of Armenia between the Persians and the Romans in about 387 or 390, Dwin was included in the Persian sector (Persarmenia) and was the capital of Persarmenia after the deposition in 426 of the last Armenian Arsacid.

Besides being the capital and administrative centre, and the residence of the Persian *marzpan* (*marzubān*), Dwin was also, from the 5th century, the seat of the Catholicos: several synods were held there, notably the one in 554 which made a final break with the Greek Church and established the Armenian era, beginning on 1 July 552. But its importance also came from the fact that it was a centre of transit trade between Byzantine Anatolia, Persia and the countries of the Caucasus. Together with Nisibis and Callinicos (Raḳḳa) it was one of the customs-posts where a tithe was levied on the Romans' and Persians' merchandise (Menander in Constantine Porphyrogenitus, *Excerpta de legationibus*, ed. C. de Boor, i, 180 and Güterbock, *Byzanz und Persien*, 75, in W. Heffening, *Das islamische Fremdenrecht*, 109-10).

Dwin was destroyed, Asoghik tells us (ii, ch. III, trans. 84-5), by Heraclius during his famous campaign against Persia. The Arabs, advancing from Mesopotamia which they had already conquered, captured the town on 6 October 640 (the date fixed in Manandean's work); it was pillaged, 12,000 Armenians were massacred and 35,000 were carried off as prisoners. Other invasions followed but did not reach Dwin; on the other hand, the invasion by Ḥabīb b. Maslama, which Arab sources place either in 24-5/645-6 or in 31/651-2, and the historian Sebeos in 652-3, ended in the surrender and capture of Dwin and a treaty, the text of which has been preserved by al-Balādhurī, and in which Ḥabīb granted "the Christians, Zoroastrians and Jews" of Dwin the *amān* and security for their persons, goods, synagogues and churches, in return for payment of *djizya* and *kharādj*. The Armenian authors do not seem to have preserved any recollection of the agreement concluded with Dwin and the other towns (Nakhčawān, Tiflis, Shamkūr) and only mention the general treaty concluded between Theodore Reshtuni and Muʿāwiya. The capture of Dwin did not signify a lasting occupation of the town by the Arabs; for some time it was subjected alternately to Byzantine and Arab domination. The emperor Constans II was able to have a synod held in Dwin in 645 (or 648-9), and even after the agreement between Muʿāwiya and Theodore Reshtuni, this same Constans II penetrated as far as Dwin where he summoned another synod. After this, the town was reoccupied by the Arabs, and then once again by the Byzantine general Maurianos; in 657-8, it was with the help of a new and temporary Byzantine domination that the Catholicos Nerses, who had left Dwin, returned there. Arab sovereignty was only finally established in Dwin and in Armenia when the authority of the new caliph Muʿāwiya was fully affirmed by the Arabs (41/661). Nevertheless, it is from the time of Ḥabīb b. Maslama's expedition that Arab sources mark the start of the administration of Armenia by Muslim governors. Dwin became the residence of these governors, and when, in addition to Armenia, they also had to rule the Djazīra and Ādharbaydjān and were not residing in Dwin, they had a deputy there. Thanks to the establishment of an Arab administration whose main task was the collection of taxes, and of a garrison, an Arab population settled in the town and grew constantly bigger. In fact, according to an observation of Markwart (*Südarmenien*, 115), the Arabs, unlike the Persians, caused whole quarters of the towns to be evacuated for their own use,

transforming them little by little into Arab towns. Dwin was given a governmental palace (*dār al-imāra*), a mosque, a State prison and a mint. The operation of the mint at Dwin is attested from the beginning of the 2nd/8th century, and it was one of the first to function in the caliph's territories. The place of origin, given on the coins as Armīniyya, is Dwin (see Minorsky, *Studies on Caucasian History*, 117 and Kh. Mus͟hegian, *Contribution to the history of monetary circulation in Dwin, according to finds of coins*, in *Bull. Ac. Sc. Armenian S.S.R.*, xi (1956), 84 (in Russian)).

Dwin was the scene of various events of greater or lesser importance during the Arab domination; it seems to have been a period of decadence for the town which was abandoned by part of its Christian population, especially the nobility, until the end of the 3rd/9th century and the establishment of the monarchy. In the Umayyad period, under the reign of ʿAbd al-Malik, the governor ʿAbd Allāh b. Ḥātim b. al-Nuʿmān al-Bāhilī caused the martyrdom at Dwin of a holy man named David and exiled several Armenian princes to Damascus (Asog͟hik, ii, ch. II, tr., 73; see other references in Grousset, *Histoire de l'Arménie*, 309 ff.). His brother ʿAbd al-ʿAzīz who was governor from 86-97/705-15, in the reign of al-Walīd, restored Dwin, fortified it and surrounded it with a ditch, and enlarged the mosque (al-Balād͟hurī, 204; cf. Asog͟hik, ii, ch. IV, tr. 92; G͟hevond, vi, 34-5; Grousset, 314). During the Umayyad period, the Mamikonians were pre-eminent among the great families of the country; with the ʿAbbāsid period the Bagratunis took the lead. However, the rise of the Bagratunis did not affect the position of Dwin which, with Bard͟haʿa, remained one of the two bulwarks of Arab power in Armenia and Arrān, and where the governors and their deputies remained firmly established. In the reign of al-Manṣūr (136-58/754-75) and the rule of Ḥasan b. Ḳaḥṭaba a revolt of Armenian nobles broke out. It began with an attack on a tax-collector by Artavazd Mamikonian who had taken up arms in Dwin under the very eyes of the governor; it was carried further by Mus͟heg͟h Mamikonian who, after seizing Dwin, was defeated and killed in the battle of Bagrevand in 775 (see Grousset, 324 ff.).

During the civil war between al-Amīn and al-Maʾmūn, the Arab *amīr* in command at Manazgerd, al-D͟jaḥḥāf, of the family of the Kaisikkʿ (Ḳaysites), and who was married to an Armenian princess, took possession of Dwin for himself, and his son ʿAbd al-Malik remained there until he was killed by the actual inhabitants of Dwin in 823-4 (Grousset, 345 ff.; Laurent, *L'Arménie*, 322). In the time of the caliph al-Wāt͟hiḳ (227-32/842-7), K͟hālid b. Yazīd b. Mazyad al-S͟haybānī, governor of Armenia, died, possibly by assassination, during an expedition against the rebellious governor of Georgia; his body was brought back and buried in Dwin in 230/844-5 (Laurent, 345). After the assassination of the governor of Armenia Yūsuf b. Abī Saʿīd Muḥammad in Mūs͟h in 237/852, the caliph al-Mutawakkil (232-47/847-61) sent into Armenia Bug͟hā al-S͟harābī who wintered at Dwin and there, as elsewhere, indulged in numerous massacres (Grousset, 355 ff.; Laurent, 120, n. 5 345-6).

After the recognition of Bagratuni As͟hot (As͟hūṭ) as prince of princes (*baṭrīḳ al-baṭāriḳa*) in 862, and then as king in 886 (or 887: Asog͟hik, iii, ch. II, tr. 115; cf. Laurent, 267, 287 ff.; Grousset, 372, 394), Dwin was in theory included in his possession for which he regarded himself as the caliph's vassal; but in fact it was independent of him, and he did not establish his capital there. At the beginning of the reign of As͟hot's son Sembat (Sanbāṭ) the Martyr (890-914), two Muslim amīrs, Mahmat (Muḥammad) and Umay (Umayya), brothers of unknown origin, took up position in Dwin, and Sembat had to struggle for two years to subdue them; he captured them and sent them to the emperor Leo VI. But this situation disturbed the ambitious *amīr* of Ād͟harbayd͟jān, Afs͟hīn Muḥammad b. Abi 'l-Sād͟j, who was in theory still governor of Armenia. In spite of the agreement he had concluded with Sembat, he intervened in Armenia. This was after the terrible earthquake which ravaged Dwin in 280/893 and destroyed the Catholicos's palace (the latter consequently decided to move to Ečmiadzin). Afs͟hīn came and occupied Dwin. War with Sembat followed, in the course of which the wives of both Sembat and his son Mus͟heg͟h were sent as prisoners to Dwin, only being released in 898-9 (see Grousset, 402 ff., 413 ff.). Afs͟hīn was succeeded by his brother Yūsuf who captured Sembat, tortured him to death and exposed his crucified body in Dwin, where many Armenians were martyred. The Catholicos Ter Yohannes fled to Greek territory (Asog͟hik, iii, ch. V, tr. 123); for these events, see Grousset, 435 ff.). In opposition to Sembat's lawful successor As͟hot II, Yūsuf gave his support to his cousin As͟hot son of S͟hapuh whom he established in Dwin and recognized as king. In addition, in the canton of Gog͟ht͟hn, situated on the left bank of the Araxa below Dwin, he set up an Arab *amīr* whose successors were subsequently to play a part in the history of Dwin.

Yūsuf revolted against the caliph and was taken prisoner in 307/919. During his captivity one of his officers, Sbuk (Subuk), governed Ād͟harbayd͟jān and Armenia; he re-established good relations with As͟hot II, whose rival was compelled to give up Dwin, though it did not, however, return to As͟hot's possession. In 921 the emperor Romanus Lecapenus sent an expedition against Dwin under the command of the Domesticos (Demeslikos). According to Asog͟hik (iii, ch. VI, 124), Subuk (Spkhi) drove him back with the aid of As͟hot whom he had called upon for assistance. When Yūsuf returned to Ād͟harbayd͟jān in 310/922, Dwin was at first governed by Naṣr Subukī, *g͟hulām* to Subuk who had just died, and then, after Naṣr's recall, by Bis͟hr (or Bas͟hīr) who started hostilities with As͟hot but was defeated by him. In 314/926 Yūsuf left Ād͟harbayd͟jān, the caliph having entrusted him with the conduct of the war against the Ḳarmaṭians, in the course of which he met his death in the following year. It was at this point, in 315/927-8, that a new Byzantine expedition took place, commanded by the Domesticos John Corcuas, against Dwin which was defended by Naṣr Subukī. It fell: the Greeks, with the help of siege-engines, breached the walls and succeeded in making their way into the town, but were driven out as a result of the assistance given to the defenders by the inhabitants. This is what Ibn al-At͟hīr relates (viii, 129-30). It may be questioned whether, in spite of the differences of names and dates, the two expeditions under discussion were not in fact one and the same.

The dynasty of the Sād͟jids in Ād͟harbayd͟jān came to an end in 317/929, though for a time it was continued by Sād͟jid officers. We then enter a confused period in the history of Dwin. We do not know which *amīr* was in command of Dwin when king Abas (929-53) secured from him the release of the Christian prisoners, nor who was the Muslim personage who,

in about 937, came as far as Dwin and inflicted a defeat on Abas, but was then defeated by king Gagik of Vaspurakan, who compelled the Muslim population of Dwin to pay tribute and give hostages. It is possible that at this time Dwin was more or less subject to the authority of Daysam b. Ibrāhīm al-Kurdī, a temporary ruler of Ādharbaydjān who was thus successor to the Sādjids and heir to their rights over Armenia; we possess a coin of his, struck at Dwin in 330/941-2. But at about that date, Daysam was driven out by Marzubān b. Muḥammad b. Musāfir, of the family of the Kangarids of Ṭarom, who founded the dynasty of the Sallārids or Musāfirids [*q.v.*]. Then, Marzubān having been captured by the Buwayhid Rukn al-Dawla in 337/948-9, Daysam succeeded in reconquering Ādharbaydjān and made himself master of Dwin, expelling two adventurers, Faḍl b. Dja'far al-Ḥamdānī and Ibrāhīm al-Ḍābbī, who had seized the town. But already a new power had appeared at Dwin, that of Muḥammad b. Shaddād, founder of the Kurdish dynasty of the Shaddādids which was to rule over the territory between the Kūr and the Araxes. Muḥammad gained control of Dwin in about 340/951, by what means we do not know. Ibrāhīm b. al-Marzubān, acting in the name of his father who was still held prisoner, tried to drive him out of Dwin; the first attempt failed, and Muḥammad built a fortress at the gates of Dwin. A second attempt by Ibrāhīm compelled Muḥammad to flee, and a Daylamite garrison was installed in Dwin itself. But soon the townspeople recalled Muḥammad who triumphantly resisted an attack by king Ashot III the Charitable of Ani. Marzubān, however, had managed to escape from prison in 341 or 342/952 or 953-4 (for the date, see M. Canard, *Hist. de la dynastie des H'amdanides*, i, 533). He disposed of Daysam in Ādharbaydjān and came to attack Dwin. Muḥammad b. Shaddād, caught between Marzubān's army and the Daylamite garrison still in the town, and deserted by the inhabitants, took refuge in Vaspurakan and then in Byzantine territory where he tried in vain to enlist help to reconquer Dwin. He died in 344/955, leaving three sons, one of whom we shall see again later at Dwin.

From the time of Marzubān's reconquest, Dwin seems to have remained in the hands of the Sallārids, although it does not occur in the list of regions paying tribute to the Sallārid, given by Ibn Ḥawḳal for the year 344, perhaps because it was administered directly by a deputy. Ibrāhīm b. al-Marzubān was deprived of Ādharbaydjān in about 368/979 and died four years later. It is no doubt his son Abu 'l-Haydjā', the Aplhač of Delmastan in Asoghik, iii, ch. xii, whom we find still in possession of Dwin in 982-3, but shortly afterwards the town was taken by the *amīr* of Goghthn, Abū Dulaf al-Shaybānī (Aputluph in Asoghik). In 377/987, Abu 'l-Haydjā' al-Rawwādī al-Kurdī, the Arabo-Kurdish *amīr* of Ādharbaydjān and successor to the Sallārids, took it from him, but Abū Dulaf reconquered the town from Mamlān, successor to Abu 'l-Haydjā'. The Bagratuni king Gagik I (990-1020) overcame the *amīr* of Goghthn, and no doubt took Dwin from him.

However, the sons of Muḥammad b. Shaddād after many adventures had set up an amīrate at Gandja (Djanza), north-west of Bardha'a, in 360/971, the territory having been taken from the Sallārids, and they extended their rule between the Kūr and the Araxes. One of them, Faḍl I (375-422/985-1031), also captured Dwin and took tribute from the Armenians. The date of the capture of Dwin is without doubt 413/1022, for it was then that Faḍl's youngest son Abu 'l-Aswār Shāwur became governor, after which he ruled over the whole block of Shaddādid possessions, with his residence at Gandja, from 440/1049 until 459/1067. For the relations between Abu 'l-Aswār and his Armenian neighbours, see Minorsky, *op. cit.*, 51 ff. It was Abu 'l-Aswār, *amīr* of Dwin, the 'Απλησφάρης of the Byzantines, whom the emperor Constantine Monomachos (1042-54) engaged to attack Gagik II of Ani in order to compel him to give his kingdom to the empire, promising to allow him to have the territories he conquered from Gagik. When Gagik finally abdicated (1045), the emperor wanted Abu 'l-Aswār to restore to him the regions taken from Gagik. He sent an army against Dwin, but it was defeated. Another expedition followed in 1046-7, commanded by the eunuch Constantine and a general of Armenian origin, Kekaumenos, grandfather of the historian Kekaumenos and, according to that writer, formerly "toparch" of Dwin (for the difficulties raised by this point, see Markwart, *Südarmenien*, 562 ff.). A further expedition was dispatched against Abu 'l-Aswār in 1048 or 1049 (rather than in 1055-6, see Minorsky, 55, 59 ff., as opposed to Honigmann, *Ostgrenze*, 182). In both expeditions alike, the Byzantines failed to lay siege to Dwin. However, by this time the Turks were already invading Armenia. When, in 446/1054, Ṭughril Beg arrived in Ādharbaydjān and Arrān, Abu 'l-Aswār submitted to him and, in agreement with the Turks, made a raid on Ani, returning laden with booty. He died in 1067.

Dwin then passed into the hands of a branch of the Shaddādids which settled at Ani, after the capture of that town by Alp Arslān (1064) in 1072. This situation lasted until 552/1105, when a Turkish *amīr* seized the town. It then fell to Tughān Arslān, lord of Bitlis and Arzan and vassal of an Artuḳid. As a result of the struggle between Maḥmūd and Ṭughril, it was recovered by the Shaddādid Faḍlūn III, who died in 1130, but was recaptured at that date by a son of Tughān Arslān. According to Minorsky (*op. cit.*, 131), it was at that moment that Saladin's grandfather Shādī, a Kurd born in a village near Dwin, is said to have left the country and gone to Takrīt. (We know, as Ibn Khallikān relates, i, 105, that Saladin's family were natives of Dwin).

In 557/1162 the Georgians sacked the town and destroyed the mosque. But despite repeated attacks they were not able to gain possession, since the town was taken by the atabeks of Ādharbaydjān who were descended from Eldigüz (Ildegiz, vizier of Sultan Maḥmūd). In 1203 Dwin was captured by the Georgians, from whom it was taken by the Khwārizmshāh Djalāl al-Dīn in 1225. Then came the Mongols, who destroyed the town between 1236 and 1239.

It will be seen from this sketch that, from the end of the 9th century, Dwin suffered ceaselessly from all the repercussions to the upheavals that took place in Ādharbaydjān, that all the powers which had been built up in the neighbouring countries tried to get possession of it on account of its position and commercial importance, and that it was only in the hands of the Armenians in exceptional circumstances, despite the large Armenian population which no doubt formed the majority. However, several of the Muslim overlords were related by marriage to Armenian princely families, for example, even Abu 'l-Aswār, as son-in-law of king Ashot.

The Arab geographers have left us certain descriptions of Dwin. It was, Ibn Ḥawḳal tells us, a larger town than Ardabīl, surrounded by walls,

inhabited by many Christians, and its cathedral mosque stood beside the church, as was the case at Ḥimṣ. Fabrics of goats-hair, called *mirʿizzā*, and wool were woven there; carpets, hangings, cushions, coverlets, mattresses, etc., of what were known as "Armenian" (*armanī*) textiles, dyed vermilion with *kermes* (*ḳirmiz*), patterned silk materials called *buzyūn* comparable and even superior to those from the Byzantine countries. One speciality much prized in Muslim countries was the trouser-lacings (*tikka*, pl. *tikak*). All these products formed the basis of a flourishing export trade. Ibn Ḥawḳal's *Epitome* boasts of the gardens, fruit, and the cultivation of cereals, rice and cotton in the locality of Dwin, the springs and flowing waters; and his account also mentions the destruction of the town by the Georgians. Al-Muḳaddasī says that Dwin is a very cold region, and speaks of its textile products, its gardens, the citadel built of stone and clay, and the markets "in the shape of a cross"; he gives the names of the gates of the town, specifies that the mosque stands high up on an eminence and that in his day the fortress was falling into ruin. According to him, the number of inhabitants, the majority of whom were Christian, was declining. He mentions the rite which was used by the Muslims, that of Abū Ḥanīfa, and says that there was a convent of Ṣūfīs in Dwin.

Excavations have been carried out on the site of Dwin, now occupied by villages. The results will be found in a work of K. Kafadarian, *La ville de Dwin et ses fouilles*, Erevan 1952, in Armenian with a résumé in Russian (see also *BSE*, xiii (1952), 467). In the upper part of the town remains have been found of the governors' palace, built after the earthquake of 893 and, below the ruins, traces of a palace of the same sort but dating from an earlier period. In the centre of the town have been found the remains of the palace of the Catholicos, built in 461 or 485, and also of a church of basilican design with a single nave, dating from the 6th century A.D. But the most important building discovered at Dwin is the cathedral whose complicated history can be retraced: originally a pagan temple with three aisles, built in the 3rd century, converted into a church at the beginning of the 4th century when an apse was added, and in the middle of the 5th century refashioned as a basilica with three aisles, and also possessing an external gallery; then, in the 7th century, with the building of lateral apses and a central cupola resting on four large pillars, it became a cruciform church with a cupola. This great church was destroyed in the earthquake of 893. Remains have also been found of dwellings, workshops for weaving, jewellery etc., cellars, warehouses, tools (ploughshares, iron shovels, etc.), gold and silver articles, pottery, china, architectural fragments decorated with sculptures of secular subjects (grape-gathering) etc. The discoveries have shown that the economic life of Dwin was active particularly from the end of the 3rd/9th century until the 5th/11th century inclusive, that is to say until the rise of the Armenian kingdom.

Bibliography: The history of Dwin is described in detail in Markwart, *Südarmenien und die Tigrisquellen*, see index and in particular 562 ff. (cf. also, by the same author, *Streifzüge*, 404-5), but the outstanding work is V. Minorsky, *Studies on Caucasian history*, London 1952, in which for the first time a study is made of the important historical source of Müneḏjḏjim Bas̲h̲ī, collated with the Armenian sources: see particularly 116 ff., *Vicissitudes of Dwin*; it is upon Minorsky's work that the present article has been based; it has been used in two studies of Ter Łevondian entitled *Dvin under the Sallarids* and *Chronology of Dwin in the 9th and 10th centuries* published in Armenian in the *Bull. Ac. Sc. Armenian S.S.R.* of 1956 and 1957 and of which H. Berberian is now preparing a French translation. For the capture of Dwin by the Arabs, see H. Manandean, *Les invasions arabes en Arménie*, in Armenian, Fr. tr. H. Berberian in *Byzantion*, xviii (1948); the Arab historians for the dates indicated above, the chapter of Balād̲h̲urī entitled *Futūḥ Armīniyya*, ed. Cairo, 202 ff. For the description of Dwin, see Iṣṭak̲h̲rī, 191 ff.; Ibn Ḥawḳal, ed. Kramers, 337, 342-3; Muḳaddasī, 257, 379; Le Strange, 182-4. In addition to their accounts of the conquest, the Arab historians also mention Dwin in connexion with events in Armenia, revolts, etc.: see e.g. Ṭabarī, iii, 1409, 1410, 1414. Details concerning Dwin will be found in Tournebize, *Hist. pol. et rel. de l'Arménie* (index s.v. Tovin); Ghazarian, *Armenien unter der arab. Herrschaft*, reprinted from *Z. für arm. Philologie*, 21 ff., 71; Thopdschian, *Die inneren Zustände von Armenien unter Aschot I*, in *MSOS*, vii/2 (1904), and *Politische und Kirchengeschichte Armeniens unter Aschot I und Sembat I*, in *MSOS*, viii/2 (1905), *passim*; J. Laurent, *L'Arménie entre Byzance et l'Islam ... jusqu'en 886*, Paris 1919, index; idem, *Byzance et les Turcs Seljoucides*, Paris 1913-4, index; R. Vasmer, *Chronologie der arabischen Statthalter in Armenien* (*750-887*), Vienna 1931 and *Zur Chronologie der Ǧastaniden und Sallariden*, in *Islamica*, iii, 170 ff.; Vasiliev, *Byz. et les Arabes. Dynastie macédonienne*, Russian ed., 219, 230, 231; idem, *Justin the First*, Cambridge, Mass. 1950, 357-8; E. Honigmann, *Die Ostgrenze des byz. Reiches von 363 bis 1071*, 19, 29, 158, 174, 167-7, 182; see also De Morgan, *Hist. du peuple arménien* (1919), 105, 116, 118, 123, 134, 135-6, 138, 244. References to the Armenian historians will be found in Grousset, *Histoire de l'Arménie*, Paris 1947, *passim*, and also in the works of Laurent and Minorsky given above. See also G. H. Sarkisian, *Tigranakert* (*Tigranocerta*), *Hist. of the urban communities of ancient Armenia*, Erevan 1960, in Russian, 19, 106, 135. Further to the articles of Ter Łevondian cited above, see idem, *The emirate of Dvin in Armenia in the 9th-10th centuries*, (dissertation of the University of Leningrad, 1958), and *On the question of the origin of the emirate of Dvin in Armenia*, in the volume in honour of I. A. Orbeli, *Researches on the history of the culture of the peoples of the Orient*, Moscow-Leningrad 1960 (in Russian).

(M. CANARD)

DYEING [see SABBĀG̲H̲].

DŽABIĆ, ALI FEHMI, b. Mostar 1853, d. Istanbul 1918, from 1884 *muftī* in Mostar (Herzegovina). The Austro-Hungarian provincial government of Bosnia and Herzegovina re-organized Muslim religious institutions in order to keep them under its control. As early as 1886 the Muslims of Sarajevo aspired to religious autonomy, and the dissatisfaction of the Muslims in Herzegovina, under Džabić's leadership, steadily increased. Džabić sought religious autonomy at the conference of Bosnia-Herzegovina Muslim leaders in Sarajevo in 1893, but he remained in the minority. From the year 1899 onwards, the movement for the religious autonomy of the Muslims in Herzegovina, under Džabić's leadership, entered an acute phase. The movement had linked up with the struggle of the orthodox Serbs for religious autonomy. The Austro-Hungarian authorities persecuted

Džabić's group so that Džabić was removed from his position of *muftī* (1900). In the meantime the movement had also begun to spread in Bosnia, so that the Austro-Hungarian authorities were compelled to enter into negotiations. No agreement was reached, because the Austro-Hungarian authorities were unwilling to accept certain paragraphs in the draft statute which related to the choice of organs of religious administration and to the attestation of the *re'is al-ʿulemā'* on behalf of the *shaykh al-Islām* in Istanbul. In 1902, when Džabić with five of his friends went to Istanbul for consultations, he was forbidden to return to his country, and stayed in Istanbul until his death. He lectured on Arabic language and literature at the university, and contributed to many journals. On the occasion of the annexation of Bosnia and Herzegovina (1908) he wrote a pamphlet in Arabic to the parliamentary deputies of the Arab countries, in which he attacked Austro-Hungarian rule in Bosnia and Herzegovina and the Turkish government because of its indulgence. As a result, he was removed from the university. He made an anthology of poems by the Companions of Muḥammad, which he wanted to publish in three volumes with his commentary, but he published only one of them: *Ḥusn al-ṣaḥāba fī sharḥ ashʿār al-ṣaḥāba*; he also wrote a commentary on Abū Ṭālib's poem in defence of Muḥammad (printed in Istanbul 1327 A.H.).

E

EAST AFRICA [see BAḤR AL-HIND, BAḤR AL-ZANDJ, DAR-ES-SALAAM, ERITREA, GEDI, ḤABASH, KILWA, MALINDI, MOGADISHU, MOMBASA, SOMALI, SWAHILI, TANGANYIKA, ZANDJIBĀR, etc.].

EBÜZZİYA TEVFİK (Ebu 'l-Ḍiyā' Tewfīḳ) (1848-1913), a well-known Ottoman journalist. Born in Istanbul, he had only a sketchy education, and was largely self taught. At the age of sixteen or seventeen he met Nāmiḳ Kemāl, and, through him, Shināsī, and became a frequent caller at the offices of the newspaper *Taṣwīr-i Efkār*, where the literary *avant-garde* used to meet; he claimed to have been the sixth to register as a member of the Society of New Ottomans (*Yeñi ʿOthmanlīlar Djemʿiyyeti*), founded in 1865, but this claim is questionable.

Tewfīḳ started his journalistic career in 1868-9 by writing articles in *Teraḳḳī*. When Shināsī died, Tewfīḳ and Kemāl (who soon gave up his rights in the venture) bought the printing presses on behalf of the Egyptian prince Muṣṭafā Fāḍil Pasha [*q.v.*]. The first three products of the newly-acquired press were a collection of the political writings of Reshīd Pasha, Nāmiḳ Kemāl's *Ṣalāḥ al-Dīn-i Eyyūbī*, and Tewfīḳ's own first work, the play *Edjel-i Ḳaḍā*. In his preface to this play, which was well received, Tewfīḳ defends the realist thesis that a writer must describe the morals and customs of his age without projecting his own personality. Tewfīḳ was also a regular contributor to Kemāl's *ʿIbret*, which appeared in 1872. He then took over the editorship of *Ḥadīḳa*, as from its issue dated 9 November 1872. When the latter was suspended for two months following its 56th issue, he issued the *Sirādj*, for which he had earlier taken out a licence as a precaution. 25 issues of *Sirādj* were published, the venture finally collapsing when Tewfīḳ was exiled to Rhodes in April 1873. It was in Rhodes that Tewfīḳ composed his anthology, *Nümūne-i Edebiyāt-ï ʿOthmāniyye*, and a collection of encyclopaedic articles, entitled *Māhiyāt*, of which the historical portions were later printed in the magazine *Muḥarrir* (vii-viii; 1295/1878). After the accession of Murād on 31 May 1876, Tewfīḳ returned to Istanbul and resumed his journalistic activity which continued under the new reign of ʿAbd al-Ḥamīd. When the latter had Kemāl exiled to Midilli and Ḍiyā' Pasha to Adana, Tewfīḳ sought release from official pressure by making a journey to Vienna in 1877 on publishing business. In 1880 he obtained from the Minister of Education Münīf Pasha the licence to publish the magazine *Medjmūʿa-i Ebu 'l-Ḍiyā'*, which soon became an organ of the *Tanẓīmāt* "progressives". His annual calendars, called first *Rebīʿ-i Maʿrifet*, then *Newsāl-i Maʿrifet*, had a brisk sale. In 1882 he regained control of his printing-press and named it *Maṭbaʿa-i Ebu 'l-Ḍiyā'*. A flood of publications followed, the printing-press producing on an average one fascicule every five days. There included a series of short biographies, entitled *Kütübkhāne-i meshāhīr* and modelled on the French *La vie des hommes illustres*, the hundred or so thicker volumes of the *Kütübkhāne-i Ebu 'l-Ḍiyā'*, modelled this time on the German *Universal Bibliothek* and written either by Tewfīḳ himself or by other *Tanẓīmāt* intellectuals, as well as various magazines. Before long, however, the authorities began to interfere: in 1888 the publication of Nāmiḳ Kemāl's *ʿOthmanlï ta'rīkhi* was stopped after the first fascicule had sold 6,000 copies. When the authorities demanded that pamphlets and magazines should be submitted for censorship before publicaton, Tewfīḳ closed down his *Medjmūʿa-i Ebu 'l-Ḍiyā'*. He was arrested twice, in 1891 when he was Director of the School of Arts and Crafts, and in 1893 when he was a member of the Court of First Instance of the Council of State, each time on trumped-up charges. Book censorship was relaxed in 1897 when Zühdī Pasha became Minister of Education, and Tewfīḳ once again brought out his *Medjmūʿa*, which survived until 1900 when Tewfīḳ was arrested and exiled to Ḳonya, where he stayed for almost nine years, returning only after the Young Turk Revolution as parliamentary deputy for Antalya. In 1909 he brought out the new *Taṣwīr-i Efkār* in which he described himself as an "independent and moderate progressive". He spent the remaining four years of his life in political discussions and polemics both in that newspaper and in the *Medjmūʿa-i Ebu 'l-Ḍiyā'*, which he also republished. The *Taṣwīr-i Efkār* was closed down for a time, but allowed to re-appear on 25 January 1913 when Maḥmūd Shewket Pasha

succeeded Kāmil Pas̲h̲a as Grand Vizier. Tewfīḳ died two days later having just delivered to his newspaper office an article entitled "New Arrests" on the Government's latest measures.

The importance of Ebu 'l-Ḍiyā Tewfīḳ lies not so much in the literary quality of his writings (although he was a good stylist and helped in the development of simple and clear Turkish prose) and not so much in his ideas, which were often confused and contradictory, as in his tireless work as a popularizer, journalist and above all publisher and printer. He himself was proud of having produced the first illustrated printed texts in Turkey. He was also the first to use Kūfic type face. His memoirs about his famous contemporaries are also important and there is much of interest in his *S̲h̲ināsī ile mülāḳāt, Zamānimiz taʾrīk̲h̲ine ʿāʾid k̲h̲āṭirāt, Rid̲j̲āl-i mensiye, Yeñi ʿOt̲h̲manlīlar taʾrīk̲h̲i* and *Kemāl Beyiñ terd̲j̲üme-i ḥāli*, Istanbul 1326/1908), as well as in his autobiographical articles *Rūznāme-i ḥayātimdan baʿḍī ṣaḥāʾif* and *Maḳāme-i tewḳīfiyye* (in *Med̲j̲muʿa-i Ebu 'l-Ḍiyāʾ*, Nos. 109-27).

EDIRNE, Adrianople—a city lying at the confluence of the Tund̲j̲a and Arda with the Merič (Maritsa); the capital of the Ottomans after Bursa (Brusa), and now the administrative centre of the *vilâyet* (province) of the same name and, traditionally, the centre of Turkish (now Eastern) Thrace (Trakya or Pas̲h̲a-eli). Its historical importance derives from the fact that it lies on the main road from Asia Minor to the Balkans, where it is the first important staging point after Istanbul. It guards the eastern entrance to the natural corridor between the Rhodope mountains to the south-west and the Istrand̲j̲a mountains to the north-east. It also dominates traffic down the valleys of the Tund̲j̲a and the Merič and used to be the starting point of important river traffic down the Merič to the Aegean. In later times the main weight of traffic was transferred to the railway passing through Edirne on its way to Istanbul. Edirne is particularly rich in Ottoman architectural monuments. Its importance, diminished by the transfer of the Ottoman capital to Istanbul, received a great blow when the city was captured by the Russians in 1829. Since the Balkan Wars it has been a Turkish frontier city, which fell briefly under Bulgarian occupation in 1913 and was occupied by the Greeks between 1920 and 1922. The population of Edirne, which exceeded 100,000 in the middle of the 19th century, fell to 87,000 at the beginning of the present century (of whom 47,000 are Turks, some 20,000 Greeks, some 15,000 Jews, 4,000 Armenians and 2,000 Bulgarians), then again to 34,528 at the census of 1927 and, finally, to 29,400 in 1945, since when it has been rising. The population is now largely Turkish, with a small Jewish community.

The city is built inside a bend of the Tund̲j̲a, just before its junction with the Merič, on gently rising ground reaching a height of 75 metres on the hillock on which the great Selīmiyye mosque is built, and some 100 metres further to the east. The part of the city built on the lower slopes has often been flooded, sometimes catastrophically. The city consists of two main parts, Ḳalʿe-iči, in the western part of the river curve, the district surrounded by the walls, which have now almost completely disappeared, and rebuilt on a geometric pattern after being devastated by fire at the end of the last century, and Ḳalʿe-dīs̲h̲ī to the east. It is the latter which is the centre of the modern city.

The name of the city is given in old Ottoman sources as Edrinus, Edrune, Edrinaboli, Endriye, as well as Edirne or Edrine, the latter form being used in the *fetḥnāme* sent by Murād I to the Ilk̲h̲ānid sultan Uways K̲h̲ān. Historical documents also use honorific names, such as Dār al-Naṣr wa 'l-Maymana (Abode of Divinely-Aided Victory and of Felicity), Dār al-Salṭana (Abode of the Sultanate) etc.

The city is believed to have been first settled by Thracian tribes, from whom it was captured by the Macedonians and named Oresteia (or Orestias). It was rebuilt by the Emperor Hadrian in the 2nd century and named after him Hadrianopolis, Adrianople. Adrianople witnessed the victory of Constantine over Licinius in 323, the defeat of Valens by the Goths in 378; it was besieged by the Avars in 586, captured by the Bulgars in 914, besieged again by the Pečenegs in 1049 and 1078. At the battle of Adrianople in 1205 the Latin Emperor of Byzantium Baldwin was defeated and captured by the Bulgars who joined with the Greeks in resisting Catholic encroachment. The Byzantine Greeks then held the city against the Bulgarians. Turks from Asia Minor appeared on the scene in 1342-3 when Aydïn-og̲h̲lu Umūr Bey fought as an ally of Cantacuzenus against John Palaeologus, defended Dimetoka [*q.v.*] against the "prince" (*tekfūr*) of Edirne and is said to have killed the latter (see Mükrimin Halil, *Dustūrnāme-i Enverī*, Istanbul 1929, introduction 43-6). In 754/1353 the Ottoman prince Süleymān Pas̲h̲a joined the forces of Cantacuzenus in Edirne after defeating an army of Bulgars and Serbians. Three years before the final conquest of Edirne, the Ottoman Ork̲h̲ān Bey advised Süleymān Pas̲h̲a to keep a close eye on the castle of Edirne. The conquest was accomplished under Murād I by Lālā S̲h̲āhīn Pas̲h̲a, who defeated the *tekfūr* of Edirne at Sāzlī-Dere, to the south-east of the city. The latter then fled secretly by boat from his palace on the banks of the Tund̲j̲a and in Ramaḍān 763/July 1362 the inhabitants of the town surrendered on condition of being allowed to live there freely. Although Murād I left the administration of Edirne to Lālā S̲h̲āhīn Pas̲h̲a, preferring for a time to hold his court at Bursa or Dimetoka, the city of Edirne became almost immediately the forward base of

Ottoman expansion in Europe. It was from Edirne, furthermore that Yïldïrïm Bāyezīd set out to besiege Constantinople. After Bāyezīd's later defeat in the battle of Ankara, the elder prince Süleymān transferred the treasury from Bursa to Edirne where he ascended the throne. He later lost the city to Mūsā Čelebi, who also ruled from Edirne and minted money there in his name. After his defeat and death, Sultan Meḥemmed I spent most of his eight-year rule in Edirne and died there, being buried like his predecessors in Bursa. It was in Edirne in 825/1422 that the Pretender Muṣṭafā was executed after his defeat by Murād II. The latter's reign saw an increase in the prosperity of Edirne and its environs and the building of the town of Uzun-Köprü (D̲j̲isr-i Ergene).

It was at Edirne that Murād II received foreign ambassadors, it is from there that he directed his conquests, and it was also on the island on the Tund̲j̲a that the circumcision-feasts of his sons ʿAlāʾ al-Dīn and Meḥemmed were celebrated with magnificent pomp. His reign witnessed also a mutiny of the Janissaries at Edirne on the pretext of the fire in the city, a mutiny which was pacified by an increase in the soldiers' pay. Murād II died in Edirne and was succeeded by Meḥemmed II who, however, did not return to the city until he decided to lay siege to Constantinople. The plans of the siege were worked out in Edirne and the siege guns tested in its environs. After the conquest Meḥemmed II again held court in Edirne where he organized in the spring of 861/1457 magnificent circumcision celebrations, lasting two months, for the princes Bāyezīd and Muṣṭafā. Selīm I also held court in Edirne, the city being left to the care of princes when the Sultan campaigned. The prosperity of Edirne continued to grow in the 10th/16th century: Süleymān the Magnificent often stayed there, while the city's greatest mosque was built under his successor. The tranquillity of the city was, however, disturbed by mutinies in 994/1586 and 1003/1595. From the time of Aḥmed I, Edirne became famous for its royal hunting parties, royal celebrations and entertainments in and around the city, attaining particular brilliance under Meḥemmed IV (*Avd̲j̲ï* = the Hunter). Later the life of the city began to be affected by the successive defeats suffered by Ottoman arms. In 1115/1703, at the famous "Edirne incident", Muṣṭafā II who held his court in Edirne was deposed in favour of Aḥmed III by malcontents coming from Istanbul. The subsequent decline of the city was hastened by the fire of 1158/1745 in which some 60 quarters were burnt down and by the earthquake of 1164/1751. In 1801 Edirne witnessed a mutiny of Albanian troops against Selīm III's reforms. A second "Edirne incident" occurred in 1806 for the same reasons. On the other hands the abolition of the Janissaries occasioned only minor difficulties in Edirne. In the Russian-Ottoman war of 1828-9 Edirne was occupied by the Russians and this occupation deeply affected the local Muslim population. Muslims started emigrating from Edirne, their place being taken by Christians coming in from the surrounding villages. To raise the Muslims' morale Maḥmūd II visited Edirne for some ten days, ordered a large bridge to be built on the Merič (this, however, was only completed in 1842 in the reign of ʿAbd al-Med̲j̲īd) and had commemorative coins struck. More devastations were caused by the Russian occupation of Edirne in 1878-9, and by the hostilities in the Balkan wars and following the First World War.

Monuments: Of the castle of Edirne, four of whose towers and nine of whose gates we know by name, only one tower, the Sāʿat Ḳulesi (Clock Tower), originally Büyük Ḳule (the Great Tower), remains in existence, the clock itself being a late 19th century addition. Greek inscriptions in the names of John V and Michael Palaeologus have disappeared.

Palaces: 1. Eski Sarāy (the Old Palace). After the conquest of Edirne, Murād I found the *Tekfūr*'s palace in the castle inadequate, and built a new palace outside the castle, where he moved in 767/1365-6. Ewliyā Čelebi says that this was near the Sultan Selīm mosque in the quarter of Ḳavaḳ Meydan(ï) and that it was later used as a barracks for *ʿad̲j̲emī-og̲h̲lan*s. During the Hungarian expeditions of Süleymān the Magnificent the old palace could accommodate 6,000 pages, while accommodation for 40,000 Janissaries was provided near by. Ewliyā Čelebi (iii, 456) says that the palace did not have its own gardens, that it was surrounded by high walls, measuring some 5,000 paces in circumference, that it was rectangular in shape and that it had a gate known as *bāb-ï humāyūn.* Although the importance of the old palace diminished after the building of the Sultan Selīm mosque, it was still used for the education of *ič-og̲h̲lan*s, the palace organization remaining unchanged from before the conquest of Istanbul. In 1086/1675 Sultan Meḥemmed IV allocated the old palace to his daughter K̲h̲adīd̲j̲a who married Muṣāḥib Muṣṭafā Pas̲h̲a, hence the later name of Palace of K̲h̲adīd̲j̲a Sulṭān. In the later 19th century a military lycée was built on the site of the old palace.

2. Sarāy-ï D̲j̲edīd-i ʿĀmire (the New Imperial Palace), built on an island on the Tund̲j̲a and on adjoining meadows by Murād II in 854/1450, partly with marble brought from some ruins near Salonica. Construction of the palace was continued the following year by Meḥemmed II who also had thousands of trees planted on the island, which he joined by a bridge to the main palace buildings to the west. Another bridge, this time between the palace and the main city, was built by Süleymān the Magnificent, under whose direction important additions were made to the palace. More pavilions were added in subsequent reigns until the palace grew to twice its size under Meḥemmed II. At the end of the 11th/17th century it contained 18 pavilions, 8 *mesd̲j̲id*s, 17 large gates, 14 baths and 5 courts. Some six to ten thousand people lived within the confines of the palace. Dissolution was gradual: there were many attempts at restoration in the 18th century, but in 1827 an official survey said that most buildings were either completely in ruins or half-ruined. Much damage was caused to the palace by the Russian occupation of 1829, Russian troops camping in the palace gardens. More attempts at restoration followed, but the second Russian occupation sounded the death knell of the palace. The Ottomans themselves set fire to ammunition dumps in the palace before evacuating the city, and after returning they quarried the remaining buildings for stone.

Mosques: The first Friday prayers were said in Edirne in a converted church inside the castle, known afterwards as the Ḥalabiye, after its first *müderris*, Sirād̲j̲ al-Dīn Muḥammed b. ʿUmar Ḥalabī, a teacher of Meḥemmed the Conqueror, and also as Čelebi D̲j̲āmiʿi. Ruined in an earthquake in the 18th century and later repaired, it survived until the end of the 19th century. Another church in the castle was converted into a mosque under the name of Kilise D̲j̲āmiʿi, but this was pulled down by Meḥemmed II and replaced by one with six

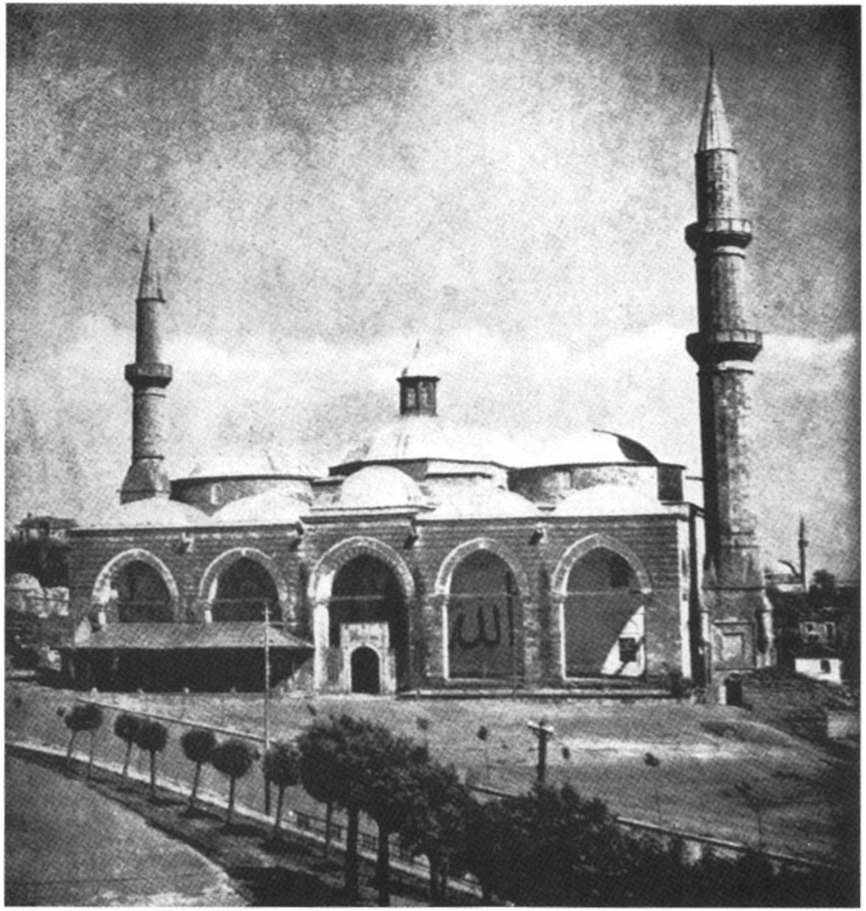
domes which disappeared in the second half of the 18th century. The oldest surviving mosque is that of Yildirim, built in 801/1399, on the foundations of a church ruined in the Fourth Crusade, so that the *miḥrāb* is built into a side wall. During their occupation of 1878 the Russians stripped the inside of the mosque of its tiles and of the two linked marble rings which had given the mosque the name of Küpeli Djāmiʿ (Ear-ring mosque). Another old mosque, the Eski Djāmiʿ (or Old Mosque *par excellence*) was started in 804/1402 by Emīr Süleymān (hence the name of Süleymāniye given it by Meḥemmed I, a name which was later changed into Ulu Djāmiʿ, or Great Mosque, before the present one of Eski Djāmiʿ or Djāmiʿi ʿAtīḳ was finally adopted) and completed in 816/1413 under Meḥemmed I (Pl. X). The interior is square, 9 domes being supported by four columns. An inscription on the western gate, gives the name of the architect as Ḥādjdjī ʿAlaʾ al-Dīn of Ḳonya. A stone from a corner of the Kaʿba was placed at the time of building in the window to the right of the *miḥrāb*, and has been venerated ever since. In the 18th century the mosque suffered in a fire and an earthquake and was restored by Maḥmud I. Another mosque, the Murādiye, was built by Murād II first as a house of Mewlewī dervishes, a smaller *mewlewī-khāne* being built next to it when the main building was turned into a mosque. This mosque is distinguished by the excellent tiles which cover the *miḥrāb* and part of the walls. In the 10th/16th century this mosque, with its almshouse and other adjuncts, was in receipt of very large revenues. Another formerly rich mosque, the Dār al-Ḥadīth (which had at the beginning of the 11th/17th century a revenue of over half a million aspers), was originally a *medrese*, completed in 839/1435. The minaret of this mosque was destroyed in the siege of 1912. Several princes and princesses are buried in a nearby *türbe*.

Another building going back to Murād II is the Üč-sherefeli Djāmiʿ (Three-Balconied Mosque) started in 841/1437-8 and finished in 851/1447-8 (Pl. X). Ewliyā Čelebi says that it was built at the cost of 7,000 purses, being the proceeds of the booty captured at the conquest of Izmir. This mosque has also been known as the Murādiye, Yeni Djāmiʿ (New Mosque) and Djāmiʿ-i Kebīr (Great Mosque). The building is rectangular, a great dome being held up by six columns, there being four medium-sized and four other small domes at the sides of the main one. Four of the columns (at either side of the main gate and the *miḥrāb*) are built into the walls. The *ḥarem* (sacred enclosure, *i.e.*, court-yard), paved with marble, is regarded as the first *ḥarem* of a mosque built by the Ottomans. The cloisters on the four sides of the *ḥarem* are made up of 21 domed vaults, supported by 18 columns. The three-balconied minaret is known as the first Ottoman minaret of this kind. There is also one minaret with two balconies and others with one balcony. Murād II first allocated for the upkeep of this mosque the revenues of the silver mines at Karatova in Serbia. Later Rüstem Pasha transferred these mines to the Treasury, allowing the mosque to draw money instead from the *waḳf* of Bāyezīd II. An important event in the history of the mosque was the public condemnation in it by Fakhr al-Dīn ʿAdjemī of the *ḥurūfī* followers of Faḍl Allāh Tabrīzī, who were believed to enjoy the sympathy of Sultan Meḥemmed the Conqueror. Bāyezīd II built on the banks of the Tundja a mosque, baths, a hospital, a *medrese* and an almshouse (Pl. XI). A chronogram on the mosque gate yields the date 893/1488. The building was financed with the booty captured at Aḳ-Kermān.

The mosque is a simple structure, without arches or pillars, the dome being supported by the four walls. Baths (*tāb-khāne*), surmounted by nine domes and consisting of four rooms each, adjoin on either side and lead onto the two slender minarets. The marble *minbar* of the mosque is particularly elegant. The mosque contains also the first private gallery (*maḥfil*) built in an Edirne mosque; this is supported by porphyry columns, brought probably from the ruins of some temple. The hospital (*dār al-shifāʾ*) built to the west of the mosque is a hexagonal building, six further rooms for the isolation and treatment of patients standing in the hospital gardens (where, Ewliyā Čelebi tells us, the patients were regularly made to listen to music). The *medrese* stands in front of the hospital, while the almshouse and a bakery lie to the east of the mosque. Bāyezīd II had a quay made on the bank of the Tundja, in front of the *miḥrab* of the mosque, and also widened the course of the river. The most beautiful monuments built in Edirne in the 10th/16th century are the work of the architect Sinān. One of these mosques (the Tashlïḳ Djāmiʿi, converted by Sinān from the *zāwiya* of Maḥmūd Pasha) is no longer in existence. Three still stand: the Defterdār Djāmiʿi, the mosque of Shaykhī Čelebi, and finally the mosque of Sultan Selīm (Selīmiye Djāmiʿi), which is the glory of Edirne and the last royal mosque in the city (Pl. XI). Built between 972/1564-5 and 982/1574-5 according to the chronogram on the gate of the *ḥarem*, it cost, Ewliyā Čelebi tells us, 27,760 purses obtained from the booty captured in Cyprus. The great dome of the mosque, which rests on 8 columns, is 6 cubits (*dhirāʿ*) higher than that of Saint Sophia in Istanbul. The *muʾadhdhin*'s gallery under the great dome is supported by 12 marble columns, two metres high; under it there is a small fountain. The mosque library is on the right, and the royal gallery on the left. This *maḥfil*, which rests on four marble pillars, used to be decorated by tiles, which were taken away by the Russians in 1878. The *ḥarem* court-yard is surrounded by cloisters, in which 18 domes are supported by 16 large pillars brought from the Ḳapï-Dagh peninsula and from ruins in Syria (according to Ewliyā Čelebi, also from Athens). Four three-balconied minarets stand at the four corners of the mosque, which have often been repaired. As for the mosque itself, it was repaired after the earthquake of 1752 and also in 1808, 1884 and in recent years. The Sultan Selīm mosque forms an architectural whole with the adjacent *medrese*, *dār al-ḳurrāʾ* (*Ḳurʾān* reciters' quarters), school and clock-house. The *müderris* of the Selīmiye *medrese* was considered the chief *müderris* of the city. The *medrese* was subsequently used as a military detention centre and is now a museum of antiquities, while the *dār al-ḳurrāʾ* houses an ethnographic museum. The library was later enriched by many *waḳf* books, but some valuable books were lost during the Bulgarian occupation.

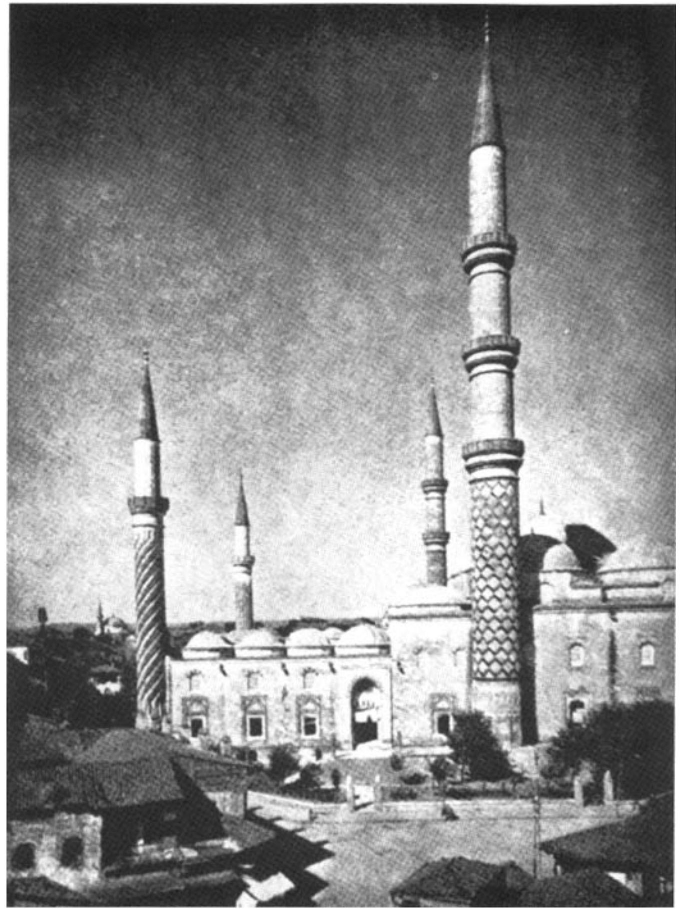
Edirne was an important centre of Islamic learning, which was allowed an independent course, as in Istanbul and Bursa. Apart from those already mentioned, there were important *medreses* in the court-yard of the Uč-sherefeli Djāmiʿ (founded by Murād II) and the Peykler Medresesi, founded in the same place by Meḥemmed II. These *medreses*, built in the classical Ottoman style, are

today ruined, but could still be restored. Many markets were also built in Edirne, largely as a source of revenue for the upkeep of the pious foundations in the city. The first of these is the covered market of Meḥemmed I (14 domes, 4 gates), which was a *waḳf* of the Eski Dj̲āmiʿ. The covered market built by Murād II, known as the Old Market, fell into ruin in the second half of the 11th/17th century. Murād III had a market built by Sinān, and known as Ārasta (73 arches, 124 shops), to provide revenue for the Selīmiye mosque. Sinān also built a market with six gates for Semiz ʿAlī Pas̲h̲a. The city contained also a large number of *k̲h̲āns*. Of these Sinān built the Large and the Small *k̲h̲āns* of Rüstem Pas̲h̲a and also the Tas̲h̲-k̲h̲ān built for Sokollu. Another *k̲h̲ān* which is still in existence is that built in the beginning of the 11th/17th century by Ekmekči-zāde Aḥmed Pas̲h̲a. At the beginning of the 10th/16th century there were in all 16 *k̲h̲ans* and markets in Edirne. Later the number increased, French and English merchants also having their places of work. The trades practised in Edirne included dyeing, tanning, soap-making, distillation of attar of roses, carriage-building etc. Edirne was also famous for its own style of book-binding. The city's water supply was ensured by the K̲h̲āṣṣeki Sulṭān aqueduct built in 937/1530. There were also some 300 public fountains, most of which have now disappeared. Apart from the palace bridges, there were in Edirne four bridges over the Tundj̲a and one over the Merič, the oldest being the bridge of G̲h̲āzī Mīk̲h̲āl, built in 823/1420.



At first the administration of Edirne was in the hands of a *ḳāḍī* and of a *su-bas̲h̲ī* (who was probably the same person as the *āg̲h̲ā* of Janissaries mentioned by Pococke). After the conquest of Istanbul the *bostāndj̲ī-bas̲h̲ī* was made responsible for the administration. The *ḳāḍī* of Edirne, who had a daily allowance of 300 aspers at the beginning of the 10th/16th century, could expect promotion to Istanbul, and had, according to Ewliyā Čelebi, 45 deputies (*nāʾib*). He was appointed and dismissed by the central government. One interesting local official was the Chief Gardener (*ketk̲h̲udā-yī bāg̲h̲bāniyān*), responsible for the care of private gardens and orchards on the banks of the three rivers (Ḥibrī gives their number as 450, suggesting that it had been larger before, *Enīs al-müsāmirīn*, f. 26). The city of Edirne was a crown domain (*k̲h̲āṣṣ*) of the Sultans, producing a revenue of nearly two million aspers at the beginning of the 10th/16th century. Money was sometimes sent from the Edirne Treasury to help meet the requirements of Istanbul. Edirne used also to be the seat of a Greek Orthodox Metropolitan and of a Chief Rabbi.

With more than 50 *zāwiyas* and *tekkes*, Edirne bred many famous dervish *s̲h̲eyk̲h̲s*. Among the most famous were the Mewlewīs Dj̲elāl al-Dīn and Dj̲emāl al-Dīn in the reign of Murād II, and Sezāʾī Ḥasan Dede (d. 1151/1738), considered the second *pīr* of the Guls̲h̲enī *ṭariḳa*. The beauties of Edirne have been described in many poems, including the *Humāyūn-nāme* of ʿAlāʾ al-Dīn ʿAlī and the *Ṭabaḳāt al-mamālik* of Ḳodj̲a Nis̲h̲āndj̲ī. A local poet, K̲h̲ayālī, wrote a poem ending in the refrain *Edrine*, and this has often been imitated. Finally, Edirne is graphically described in Nefʿī's *ḳaṣīda* to the Sultan.



Bibliography: A detailed monograph on Edirne, with a history of the years 760-1043/1359-1633, was written by Ḥibrī [*q.v.*] of Edirne in 1046/1636 under the title *Enīs al-müsāmirīn*; it is still unpublished, but is extracted in Ḥādj̲dj̲ī K̲h̲alīfa's *Rumeli und Bosna*, tr. v. Hammer, Vienna 1812, 1-15, and in the so-called *Chronicle* of Dj̲ewrī (Istanbul 1291-2), cf. Hammer-Purgstall, *GOR*, x, 691 ff., and Babinger, 213; there is a continuation, called *Riyāḍ-i belde-i Edirne*, by Bādī Aḥmed Efendi (1255-1326/1839-1908). Besides the long section in Ewliyā Čelebi, *Seyāḥatnāme*, iii, there are descriptions by European travellers in the 17th and 18th centuries (John Covel, in Th. Bent, *Early voyages and travels in the Levant*, London 1893; Antoine Galland, *Journal*, ed. Ch. Schefer, Paris 1881; E. Chishull, *Travels in Turkey*, London 1747; *Letters of Lady Wortley Montague*, letters 25-34). The decay of the city in the beginning of the 19th century is described by George Keppel, *Narrative of a journey across the Balcans*, London 1831, i, and by Moltke, *Briefe über Zustände und Begebenheiten in der Türkei*[6], 150 ff.; Nicolas de Nicolay, *Navigations* . . ., gives types of the inhabitants in the 10th/16th century. Views and plans of the mosques and other buildings are given by C. Sayger and A. Desarnod, *Album d'un voyage en Turquie en 1829-1830*, Paris n.d., fol., Thomas Allom and Robert Walsh, *Constantinople*, ii, 73, 77, and notably by C. Gurlitt, *Die Bauten Adrianopels*, in *Orientalisches Archiv*, i, p. i and ii (cf. G. Jacob in *Isl.*, iii (1912), 358-68). Works in Turkish include: the *Sālnāmes* of the vilâyet of Edirne; Rifʿat ʿOt̲h̲mān, *Edirne Rehnümâsî*, Edirne 1335/1920; Oktay Aslanapa, *Edirnede Osmanlı devri abideleri*, Istanbul 1949; M. Tayyib Gökbilgin, *XV-XVI asırlarda Edirne ve Paşa livâsı*, Istanbul 1952; idem, "Edirne" in *IA*.

(M. Tayyib Gökbilgin)

EDREMIT, town of western Turkey, situated 8 km. from the head of the Gulf of Edremit (on the site of Homer's Thebe) on the lower slopes of Pas̲h̲a-dag̲h̲ (a spur of Mt. Ida) overlooking the fertile alluvial plain to the south (39° 35′ N., 27° 02′ E.). The ancient Adramyttion was on the coast at Karatas̲h̲ (4 km. west of Burhaniye [formerly Kemer] and 13 km. south-west of Edremit), where remains of quays, etc., are to be found. The evidence of coins indicates that the city was transferred to its present site not (as Kiepert suggested) under the Comnenes but much earlier, perhaps in the 2nd century A.D. (W. Ruge, in Pauly-Wissowa, art. Thebe, col. 1597). Turkish attacks began at the end of the 11th century: in 1093 Adramyttion was entirely destroyed by Tzachas (Čaka), operating from his base at Smyrna, and re-built by Alexius' general Philokales (*Aléxiade*, ed. B. Leib, iii, 143); and towards 1160 Manuel I strengthened its fortifications against the Turkish danger (Nicetas Choniates, Bonn ed., 194). When in 1261 Michael Palaeologus ceded Smyrna to the Genoese, he granted them also extensive privileges in Adramyttion (W. Heyd, *Hist. du commerce du Levant*, i, 429), and early in the next century a Genoese garrison was defending the city against the Turks (Pachymeres, Bonn ed., ii, 558). Soon afterwards Edremit fell into the hands of the Karasī [*q.v.*] dynasty, to be occupied, along with their other territories, by the Ottomans in the reign of Ork̲h̲ān (ʿĀs̲h̲ïḳpas̲h̲azāde, ed. Giese, 41; ʿĀs̲h̲ïḳpas̲h̲azāde's date, 735/1334-5, is too early, by ten years or more). For five centuries Edremit was administered as a *ḳaḍā* of the *sandj̲aḳ* of Karasī (for administrative changes 1841-1923 see *IA*, vi, 334). Now the centre of a *kaza* of the *vilâyet* of Balïkesir, it has a thriving olive-oil industry (population [1950] 12,700).

EDUCATION [see tadrīs, also djāmiʿa, maʿārif, madrasa and tarbiya].

EFE (see zeybek).

EFENDI, an Ottoman title of Greek origin, from αὐθέντης, Lord, Master, (cf. authentic), probably via a Byzantine colloquial vocative form, *afendi* (G. Meyer, *Türkische Studien*, i, in *SBAk. Wien* (1893), 37; K. Foy in *MSOS*, i/2 (1898), 44 n. 3; Psichari, 408). The term was already in use in Turkish Anatolia in the 13th and 14th centuries. Eflākī indicates that the daughter of Djalāl al-Dīn Rūmī was known as Efendipoulo—the master's daughter (Cl. Huart, *Les saints des derviches tourneurs*, Paris 1922, ii, 429; on the later Karaite family name Afendopoulo or Efendipoulo see Z. Ankori, *Karaites in Byzantium*, New York-Jerusalem 1959, 199-200). Ibn Baṭṭūṭa found that the brother of the ruler of Kastamonu was called Efendi (*Voyages*, ii, 345; Eng. trans. Sir Hamilton Gibb, *The travels of Ibn Battuta*, ii, Cambridge 1962, 463). This title was also used under the Ottomans (see, for example, ʿĀshïḳpashazāde, chapter 46, where Ḳara Rüstem addresses the Ḳāḍīʿasker Djandarlï Khalīl as Efendi), and in a number of fermāns issued in Greek from the chancery of Meḥemmed the Conqueror the Sultan himself is called ὁ μέγας αὐθέντης—perhaps the original of Grand Signor (Hammer-Purgstall, *Histoire*, ii, 523; F. Babinger-F. Dölger, *Mehmed's II. frühester Staatsvertrag (1446)*, in *Orientalia Christiana Periodica*, xv (1949), 234; A. Bombaci, *Nuovi firmani greci di Maometto II*, in *BZ*, xlvii (1954), 298-319; cf. Deny, *Sommaire*, 561). From the late 15th century onwards the title Efendi was used of various dignitaries, in Turkish as well as in Greek. In the 16th century there still seem to have been doubts of its propriety. A *fatwā* of Abu 'l-Suʿūd [*q.v.*], cited by Pakalın, considers the origin and meaning of the word, and the propriety of applying it to Muslims or to God. The word, he says, is common to Turkish and Greek (*kefere lughatï*), and means the owner of slaves and slave-girls. It is wrong to call God Efendi; whether one may call a Muslim Efendi is an open question. In fact, the word became increasingly common in Ottoman usage, as a designation of members of the scribal and religious, as opposed to the military classes (cf. čelebi). It was in particular used of certain important functionaries. Thus, the *Reʾis al-küttāb* [*q.v.*] was known as the Reis Efendi, the ḳāḍī of Istanbul as Istanbul Efendisi, and the chief secretary of the janissaries as Yeñi Čeri [*q.v.*] Efendisi; the latter's department was called Efendi Kapïsï or Efendi Dāʾiresi. The chief secretaries of the *dīwān* in Istanbul or of provincial governors-general were known as *dīwān efendisi* (in Egypt *dīwān efendi*—Deny, 111-2. For other efendis in Ottoman Egypt see Gibb-Bowen, i/2, 46-7, 65-6; S. J. Shaw, *The financial and administrative organization and development of Ottoman Egypt 1517-1798*, Princeton 1962, index). At the same time, it remained the practice to speak of the Sultan as *Efendimiz*—our master; in the 19th century an Arabicized form of the same expression—*Efendīnā*—was used in Egypt of Muḥammad ʿAlī and his successors. It was not uncommon for Muslims to speak of the Prophet as *Efendimiz*—our lord, or for Turkish-speaking Christians to use the same expression of Jesus Christ.

During the 19th century the Ottoman government made attempts to regulate the use of *Efendi*, as of other titles and designations, by law. It was given, for example, to princes of the ruling house; to the wives of the Sultans (*kadïn* [*q.v.*] *efendi*); to the *Shaykh al-Islām*, the *ʿUlemāʾ*, and other, non-Muslim, religious heads; to functionaries up to the rank of *Bālā* [*q.v.*] or, in the armed forces, of *biñbashï* [*q.v.*]. In fact, however, it was used, following the personal name, as a form of address or reference for persons possessing a certain standard of literacy, and not styled Bey (see beg) or Pasha; it thus came to be an approximate equivalent of the English Mister or French Monsieur. In the records of the first Ottoman parliament of 1877, the deputies are nearly all designated as Efendi or Bey, and the speaker addresses the house as *Efendiler*—gentlemen. The distinction between *efendi* and *bey* in Turkey finally came to be one between religious and secular, the former term being used primarily for men of religion or of religious education, the latter for military and then also for civilian laymen. The title *efendi* was finally abolished in Turkey, together with other Ottoman ranks and titles, in 1934. In the form *efendim* (also *Beyefendim* and *Hanımefendim*)—sir, madam—it remains in common use as a form of address for both men and women.

In the Arab countries formerly under Ottoman rule, where the title Efendi came into general use in the 19th century, it followed a somewhat different line of development, and came to designate the secular, literate townspeople, usually dressed in European style, as against the lower classes on the one hand, and the men of religion on the other. This was in contrast with the Turkish practice, which tended to apply the title more especially to men of religion. After becoming a rough equivalent of Mr. or Esquire, the title Efendi is now disappearing in the Arab lands, being replaced for the most part by Sayyid.

(B. Lewis)

EFLÂḲ, the Turkish form of the word Wallach, originally applied by Germanic tribes to Latin populations. The Slavs, the Byzantines and, later, the Ottomans used it to denote the Balkan Rumanians and those north of the Danube. It is probable that it lost its ethnic meaning in certain parts of

the peninsula, and was applied simply to a pastoral population. Under the Turks, the Wallachians who were incorporated in the organization of the *voynuḳ* [*q.v.*] provided light cavalry units.

The first mention of Rumanian political institutions south of the Carpathians occurs in the diploma granted by the king of Hungary to the Knights Hospitallers (1247). In 1330, Basarab reigned over the whole territory lying between the Danube and the Carpathians (Ţara Românească) as an independent sovereign, after the victory over the Hungarian king Charles Robert. The dynasty founded by Basarab bore his name, which is of Kuman origin. Under his son Nicolaë Alexandru, the orthodox Rumanian Church was raised to metropolitan status. The first contact of Wallachia with the Ottomans took place in 1368 in the reign of Vladislav (1364-74 or 5). The reign of Mircea the Old (1388-1418) is memorable for a long series of struggles against Bāyezīd I. In 1391 Fīrūz Beg attacked Vidin and crossed the Danube into Wallachia. Enough booty was taken to provide endowments for charitable institutions in Bursa. In 1393 Mircea the Old lost Silistria. In the years that followed, war was waged between Wallachia and the Ottomans, and the monarch was temporarily replaced by a certain Vlad who recognized Ottoman suzerainty and, in 1394, paid tribute for the first time. After the battle of Ankara, Mircea intervened in the struggle between the sons of Bāyezīd I over the succession to the throne. The entry of Wallachia into the Turkish orbit gave rise to two political currents. In the struggle against Islam, some of the Boyars sought aid from the Magyar kingdom, and later from the royal houses of Austria or Russia; but rather than endure the wars which this policy provoked, the others preferred to recognize Ottoman suzerainty. The whole course of Rumanian history was profoundly influenced by this conflict. In the 15th century Vlad the Devil (1436-46) struggled against the Turks, but in the end accepted their authority, thereby provoking a Hungarian campaign in the course of which he met his death. His son Vlad the Impaler (1456-62, 1476) fought against Meḥemmed II without success. In the 16th century Radu dela Afumaţi (1522-9) resisted the Turks but was compelled to recognize their suzerainty and in the end was assassinated by the Boyars. It was only in the closing years of the 16th century that Rumanian resistance became at all effective. Michael the Brave (1593-1601), in alliance with the Christian League, started a campaign against the Ottoman Empire and defied its armies. By making forays south of the Danube he harassed the Turks who were at that time fighting against Austria. Attacked by Sinān Pas̲h̲a (1595), he saved his country with the help of Transylvania and Moldavia. The necessities of war and the hesitant policies of the two countries finally led Michael the Brave to conquer them (1599, 1600). His reign over the three principalities was of short duration. He came into conflict with the interests of the throne of Austria, and also those of Poland and the Ottomans. Michael finally lost his conquests and his life as well, being assassinated on the order of general Basta, Commander in Chief of the Imperial forces. In the 17th century the princes Matei Basarab (1633-54) and Şerban Cantacuzino (1678-88) succeeded in limiting Turkish interventions in the country's affairs. Constantin Brâncoveanu (1688-1714) continued Şerban's policy of keeping a balance between Austria and the Ottomans, but the appearance of Russia did not make his task easier. His relations with Peter the Great made him an object of suspicion to the Turks. Lured to Constantinople, he was there executed. The new prince Stefan Cantacuzino (1714-15) perished in similar circumstances. The Ottomans, no longer having confidence in the Rumanian princes who were so ready to take up arms against them, preferred to choose their rulers from the Greek families of the Phanar who had distinguished themselves in the sultan's service. During this period, the wars waged by the House of Austria, and even more by Russia, against Turkey brought constant bloodshed. Wallachia was occupied by the Austrians and Russians in turn. By the treaty of Küčük Ḳaynard̲j̲a, Russia confirmed her right to intervene with the Porte on behalf of Wallachia and Moldavia. The Phanariot regime came to an end in 1821 as a result of the revolt of Tudor Vladimirescu. Acting at first in agreement with the *Hetaira*, he later turned against the Greeks, the instruments of Ottoman domination. In 1829 the Treaty of Andrianople marked a new stage in the Russian penetration into the Balkans, but it also brought Wallachia complete freedom of trade, the beginning of a period of vigorous economic growth. The country received its first constitution in 1834; and this was replaced by a more liberal fundamental law in the anti-Russian revolutionary outburst of 1848. The Porte, urged on by St. Petersburg, quenched the revolution in blood. The Treaty of Paris (1856) was the origin of the union of Wallachia and Moldavia in a single state under prince Alexandru Ion Cuza (1859). As a result of the Peace of Berlin (1878), Rumania was recognized as an independent state.

The entry of Wallachia into the Ottoman system brought profound changes in its social and economic structure. The country lost the right to maintain commercial relations with other countries, and was compelled to provide Constantinople with a part of its supplies of cereals and live-stock. It must be emphasized that, despite the bonds of suzerainty, the Turks never had the right to establish themselves in Wallachia. This country played an important part in upholding eastern Christianity by large donations to the Orthodox monasteries in the Ottoman empire, as well as by printing religious books. It was at Bucharest that one of the oldest books in the Turkish language was printed in 1701.

EGER [see eğri].

EGERDIR [see eğridir].

EĞIN, now known as Kemāliye, a town in E. Anatolia on the right (west) bank of the Euphrates (Ḳara-Su), 40 kms. from ʿArapkīr [*q.v.*], 130 kms. from El-ʿAzīz and Malaṭya via ʿArapkīr, and 150 kms. from Erzindjān [*q.v.*] (under which it comes administratively as the centre of a *ḳaḍā*) via the station of Ilič on the Sivas [*q.v.*]—Erzurum [*q.v.*] railway. It is near Eğin that the valley of the Euphrates narrows, pressed in by the outposts of the Monzur mountains of Dersim to the east and the Sarī-Čiček mountains to the west. The valley which is situated here, at an altitude of 825 m. above sea level, is overlooked on the eastern side by a precipitous slope rising above it like a wall. The western slope is more gradual, rising like an amphitheatre round a small valley. It is here that Eğin is built at an altitude of from 900 to 1000 metres. A spring higher up, known as Ḳāḍī Gölü, waters the town's gardens, feeds its fountains and turns its mills. It is said that the name Eğin is derived from the Armenian word *agn* (*akn*), meaning "spring", and that the town was founded in the 11th century by a group of Vaspurakan Armenians (see J. Saint Martin, *Mémoire sur l'Arménie*, Paris 1818, i, 189). In ancient times this district was ruled by local lords or changed hands in the wars between Rome and Persia (remains of Roman roads can still be seen). In Islamic times it was for short periods of time autonomous, before the foundation of the Saldjūḳid State and also after that State had become weaker. After the invasion of Tīmūr [*q.v.*], Eğin was annexed to the Ottoman Empire in the reign of Sulṭān Meḥemmed I [*q.v.*]. It was for a long time attached to the *liwā* of ʿArapkīr in the *eyālet* of Sivas [*q.v.*]. In the 19th century it passed into the vilayet of Kharpūt [*q.v.*] and then into that of Maʿmūret ül-ʿAzīz. After the foundation of the Turkish Republic the name of Eğin was changed into Kemāliye after Muṣṭafā Kemāl Pasha (Atatürk). The *ḳaḍā* of Kemāliye formed part successively of the vilayets of El-ʿAzīz, Malaṭya and Erzindjān.

The *Djihān-nümā*, the *Seyāḥatnāme* of Ewliyā Čelebi [*q.v.*] and other 17th century sources mention Eğin as a place of gardens and orchards producing an abundance of fruit. Ewliyā Čelebi says that although Eğin formed a *ḳaḍā* of the *eyālat* of Sivas, its taxes were collected by the *muḥaṣṣil* of Malaṭya. He adds that the castle of Eğin had been surrendered to Sulṭān Meḥemmed I under a treaty and that the 300 Christians living there were immune from taxation. According to him, there were in Eğin some 10,000 well-built houses with earth roofs. Sources in the first half of the 19th century praise the beauty of the town, whose houses were surrounded by greenery. Moltke, who visited Eğin in April 1839, describes it as one of the most beautiful towns in Asia which he had seen, comparable to Amasya [*q.v.*]. Although he found Amasya a more pleasant and original place, he thought Eğin more impressive and beautiful and its river more important. Although Moltke mentions Eğin as a largely Armenian centre, Texier, as well as sources belonging to the second half of the 19th century, state that the Armenians were never in the majority there. According to Texier there were 2,000 Muslim households and only some 700 Armenian households in the town. Towards the end of the 19th century Yorke estimated the population of Eğin at 15,000 and Cuinet at 19,000, of whom some 12,000 were Turks and 7,000 Armenians.

The Muslims of Eğin were engaged in agriculture and particularly in cattle-breeding, as is the case today, while the Armenians were engaged in commerce and crafts. According to Ewliyā Čelebi, the town was famous for its bows, bow-makers occupying most of the bazaar. In more recent times the town produced fine cotton goods, embroidered silks, embroidered head-cloths, handkerchiefs and towels. Moltke mentions that many citizens of Eğin settled in Istanbul, where they found employment as butchers, porters, grocers, builders, merchants and money-changers, returning to their birth-place in their old age and building fine houses there. Some citizens of Eğin reached high rank in the service of the State, including that of Minister. This custom of seeking employment outside their birth-place was also shared by the citizens of ʿArapkīr, as well as by people from neighbouring villages. Some Armenians from Eğin emigrated to America, returning occasionally to their town in their old age. Cuinet writing in 1890 says that while some such Armenians returned rich and made fine houses for themselves their descendants wasted the money they inherited. Local industry declined as a result of European competition and the town lost its prosperity. Eğin was badly affected by the First World War. According to the first results of the 1945 census the population of Eğin amounted to 3,300 while the whole *ḳaḍā*, which covered an area of 1333 sq. kms. and included 34 villages, numbered 16,900 people.

EĞRI (Turk., Eğri; Hung., Eger; Ger., Erlau; Lat. and Ital., Agria), an old Hungarian town, 110 km. to the north-east of Buda, situated close to the massif of Bükk, *i.e.*, to the eastern foot-hills of the Matrá mountains, and on the river Eger, which flows into the Tisza (Theiss). Eğri was subject to Ottoman rule from 1005/1596 to 1099/1687.

The Ottomans, in 959/1552, captured Temesvár and Szolnok (important in the future as a base for

the concentration of the men and supplies needed for the conquest and thereafter for the retention of Eğri) and then laid siege to Eğri itself, but in vain, all their assaults failing before the desperate resistance of the Christian garrison under Stephen Dobó (Ramaḍān-Shawwāl 959/September-October 1552).

Eğri was not in fact to come into Muslim hands until the long war of 1001-15/1593-1606 between the Austrian Habsburgs and the Ottomans. The first years of this war brought such disaster to the Ottoman cause that Sultan Meḥemmed III (1003-12/1595-1603) was induced to take the field in person for the campaign of 1004-5/1596. Near Szalánkemen the Sultan held a council of war, at which the decision was reached to make the capture of Eğri the main objective of the campaign (one of the Christian sources—Decsi, *Commentarii*, 252—notes that the "Begus Szolnokiensis", *i.e.*, the Sandjaḳ Beg of Szolnok, in the spring of 1004/1596 ("sub idem ferme veris initium"), had reconnoitred and raided in force the lands around Eğri—a foretoken of the fate soon to befall the town). The decision of the Sultan and of the council of war rested on two considerations: that possession of Eğri would enable the Ottomans to threaten the narrow corridor of land through which ran the lines of communication between Austria and Transylvania, then in alliance with the Emperor against the Sultan, and that control of Eğri might bring under Ottoman domination the mines located in the mountainous region to the north of the town (cf. Pečewī, ii, 191; Naʿīmā, i, 146; Ḥādjdjī Khalīfa, i, 71; Decsi, *Commentarii*, 267; Hurmuzaki, iii/2, 216. Marsigli, *Danubius Pannonico-Mysicus*, iii/2, Amsterdam 1726, 19 ff. contains a "Mappa Mineralogica", which shows the mines existing in his own time to the north of Eğri). Eğri fell to the Ottomans after a siege of three weeks (28 Muḥarram-19 Ṣafar 1005/21 September-12 October 1596). Once the fortress was in their hands, the Ottomans began to repair forthwith the damage that it had suffered in the course of the siege, but their continued possession of Eğri was in fact ensured to them only by their defeat of the Imperialists in the great battle of Ḥāč Ovasī (Mezö-Keresztes) fought not far from Eğri in Rabīʿ I 1005/October 1596. Eğri, at first a sandjaḳ in the eyālet of Budin (Buda), was later raised to the status of a beglerbeglik comprising (with Eğri itself) six sandjaḳs, amongst them Szegedin and Szolnok (cf. Tischendorf, 69 and also Gökbilgin in *IA*).

The Christians recaptured Eğri in 1099/1687 during the course of the war waged between Austria and the Ottoman Empire from 1094/1683 to 1110/1699. As a result of the campaigns of 1096/1685 and 1097/1686 the Imperialists won Budin and a number of additional fortresses, including Szolnok and Szegedin on the Tisza. Eğri was now more or less isolated. The Ottomans, in order to retain it, would have had to undertake a major—and highly successful— counter-offensive. All prospect of such an offensive ended with the defeat of the Ottoman forces under the command of Süleymān Pasha at the second battle of Mohács in Shawwāl 1098/August 1687. The fall of Eğri had been foreshadowed in the summer of 1097/1686, when the Imperialists, eager to deprive the fortress even of local sources of men and food, compelled the inhabitants of the villages in the region to leave their homes and to settle elsewhere. Eğri withstood the ensuing blockade until Ṣafar 1099/December 1687, the garrison capitulating in that month to the Imperialist general Antonio Caraffa.

EĞRIBOZ (also I~~gh~~ribos/z, Ā~~gh~~ribos/z, Egribos), Turkish name for the island of Euboea and its chief town, the classical Chalkis. Originally the name of the narrow strait separating Chalkis from the mainland, Εὔριπος (vulg. Ἔγριπος) was already by the 12th century currently used for the town; a supposed connexion with the bridge over the strait produced from the acc. [εἰς τὸ]ν Ἔγριπον 'Negroponte', the regular Western name for both town and island. In Byzantine times Euboea formed part of the theme of Hellas. At the partition of the Empire in 1204 it fell to a triarchy of Veronese, but the Venetians, reserving trading rights and appointing a bailo to supervise their settlements, gradually made themselves the effective masters of the island; the town of Negroponte, strongly fortified in 1304, became their principal naval base in the Aegean.

The Turkish danger first appeared with the raids of Umur Pa~~sh~~a of Aydin (see P. Lemerle, *L'émirat d'Aydïn*, 1957), and by the beginning of the Ottoman-Venetian war of 867-83/1463-79 practically all mainland Greece was in Ottoman hands. In ~~Dh~~u 'l-Ḥidjdja 874/June 1470 the fleet under Maḥmūd Pa~~sh~~a [*q.v.*], then Ḳapudan, cast anchor in Vurko Bay, south of the town, while Meḥemmed II with the army advanced overland via Thebes to the mainland shore; the army crossed by a bridge of boats made south of the heavily defended Euripos bridge, and ships were dragged overland to prevent relief approaching from the north. The walls, defended on three sides by the sea and on the fourth by a deep fosse, were finally carried on Thursday 13 Muḥarram 875/12 July 1470, the garrison was massacred and 15,000 prisoners (so Kemālpa~~sh~~azāde) were taken (Western sources on the siege are listed by Miller [see Bibl.], 478; the fullest Turkish account is that of Kemālpa~~sh~~azāde, ed. Ş. Turan, facs. 301-11 = transcription 284-92, with refs. to the other sources; a *fetḥnāme* was published by A. S. Erzi in *Fatih ve Istanbul*, i/3-6 (1954), 300 ff.).

Thereafter until its cession to Greece in 1833 Euboea, with parts of the mainland, was a sandjaḳ belonging to the jurisdiction of the Ḳapudan Pa~~sh~~a, who frequently resided in the town. Ewliyā Čelebi, visiting Euboea in 1081/1670 (*Seyāḥatnāme*, viii, 236-48) describes the strongly-fortified town—it was to resist a siege of over three months during Morosini's campaign of 1688—with 11 Muslim, 1 Jewish and 5 Christian wards, the drawbridge linking it to the Venetian fortress (destroyed when the present swing-bridge was built in 1896) in mid-strait and the second bridge to the mainland, with watermills worked by the freakish currents.

EĞRI DAGH [see aghrî dagh].

EĞRIDIR, earlier spellings Egirdir or Egerdir in Ibn Baṭṭūṭa, ii, 267, and Ibn Faḍl Allāh al-ʿUmarī, *Masālik al-Abṣār*, report on Anatolia, ed. Taeschner, Leipzig 1929, 39 l. 5, (middle of the 14th century), Akridūr, Greek Akrotiri, possibly—though there is no proof for this—from the name Ἀκρωτήριον; a small town in south-western Anatolia on a peninsula at the southern end of the Eğridir lake, which has no visible outlet but which may have a subterranean outlet to the Mediterranean, thus keeping its water fresh. This is the Limnai of antiquity (924 m. (= 3034 ft.) above sea-level, concerning which cf. F. Loewe, *Beobachtungen während einer Durchquerung Zentralanatoliens im Jahre 1927*, in *Geografiska Annaler* 1935); its geographical position is 37° 50′ north, 30° 53′ east, and it is the capital of a *kaza* of the *vilâyet* of Isparta. It has 5,766 inhabitants, the *kaza* has 26,820 (1950), and it is the terminus of the branch line from Dinar (opened 1912). There are two islands, Çan-adası and Yeşil-ada, facing the peninsula on which Eğridir is built. On the second of these (formerly called Nīs [Νησί] Adasî), there was a monastery with some 1000 Turkish-speaking Greeks up to the end of the First World War.

According to W. M. Ramsay, *The historical geography of Asia Minor*, London 1890, 407 and 417, the episcopal see of Prostanna was located in or near Eğridir. It is assumed that the town, together with the region of Isparta, which was conquered by Ḳilîdj-Arslan III (600-1/1204, see Houtsma, *Recueil* etc., iii, 62; iv, 24; H. W. Duda, *Die Seltschukengeschichte des Ibn Bībī*, Copenhagen 1959, 30),

fell into the hands of the Saldjūḳs. After the dissolution of the Rūm Saldjūḳ Empire, Eğridir became the capital of the Turkish principality of the Ḥamīd-oghlu. One of the first rulers of this dynasty, Falak al-Dīn Dündār (at the end of the 13th century), gave the town the name Felekbār or Felekābād (Abu 'l-Fidā', *Taḳwīm*, 379; translation ii, 2, 134). In 783 or 784/towards 1381 A.D., the last Ḥamīd-oghlu, Ḥüseyn Beg, sold his rights to the Ottoman Murād I. Tīmūr conquered both the town and the fortified island Nīs-Adasî on his march through Anatolia (according to Saʿd al-Dīn on 17 Shaʿbān 805/11 March 1403, according to Sharaf al-Dīn on 17 Radjab/10 February). He left them to the Ḳaramānids, whom he had restored, but they, in turn, had to cede them, together with the region of Ḥamīd-eli, to the Ottomans in 1425. It now became a *liwā'* in the *eyālet* of Anadolu. Later on, in the 19th century, Ḥamīd-eli, or Isbarta, as it was temporarily known, became a *sandjaḳ* of the *wilāyet* of Konya.

The most notable building is the citadel, probably built by Keyḳubād I, at the tip of the peninsula of Eğridir. It is separated from the town itself by a wall, and there is an inner wall protecting the innermost part of the citadel, which lies on the tip of the peninsula (where there are further fortifications, including two towers which lean against the rocks). These fortifications, which are now destroyed, were still intact in the 18th century (see *Voyage du Sieur Paul Lucas fait en 1714 ....*, Amsterdam 1720).

There is a mosque, the Ulu Djāmiʿ, with wooden buttresses, near the gate of the citadel in the outer town; its minaret stands on the actual gate of the citadel. Opposite the mosque, there is the Tash Madrasa, a court *madrasa* with an *aywān* and a beautiful Saldjūḳ doorway dated Shawwāl 635/May-June 1238 (*RCEA*, xi, 96, no. 4148); the *aywān* is dated 701/1301-2 (*ibid.*, xiii, 227, no. 5138).

Bibliography: Kâtib Čelebi, *Djihānnümā*, 640; I. H. Uzunçarşılı, *Anadolu beylikleri*, 15; F. Sarre, *Reise in Kleinasien*, 1895, 142 ff.; *IA*, iv, 199-201 (Besim Darkot).

(J. H. Mordtmann-[Fr. Taeschner])

EGYPT [see misr].

EKREM BEY, Redjā'īzāde Maḥmūd (1847-1914), Turkish writer, poet and critic, one of the leading personalities in the victory of the modern school of poetry over traditional *dīwān*-poetry. Born in Vaniköy, a suburb of Istanbul on the Bosphorus, he was the son of Redjā'ī Efendi, director of the Government Press, a poet and scholar of some distinction. He attended various schools until the age of fifteen and, like most of his contemporaries, continued his education as an apprentice clerk in the chancellery of the Foreign Ministry (where he met Nāmıḳ Kemāl) and various other government offices. Subsequently he became a senior official of the Council of State (*Shūrā-yi Dewlet*) and taught literature at the Galatasaray Lycée and the Imperial School of Political Science (*Mülkiye*), two of the few leading institutions where the Turkish intelligentsia and ruling classes were educated, and exercised immense influence on the formation of the literary taste of the young generation. After the restoration of the Constitution in 1908 he became, for a short time, Minister of *Waḳf*s and later Minister of Education in the Kāmil Pasha cabinet, but soon resigned as he disagreed with the policy of massive purges in the civil service. He was made a senator in December 1908 and remained so until his death.

Ekrem Bey began by writing poems in the *dīwān* tradition until he came under the influence of the modernist Tanẓīmāt school, particularly of Nāmıḳ Kemāl and ʿAbd al-Ḥaḳḳ Ḥāmid. Then gradually he developed a personality of his own and influenced even Ḥāmid's later work. His poetry is romantic, often over-sentimental and melancholy bordering sometimes on the *funèbre*, constantly elaborating one of the three themes: nature, love and particularly death, helped in this by tragic circumstances in his life (he lost three children at a young age).

Although himself a poet of limited inspiration and not a very skilful versifier, he sincerely believed in a thorough revolution in the form and content of the Turkish *ars poetica*, and became the pioneer fighter of modern Turkish poetry against the traditionalists headed by Muʿallim Nādjī. He was thus a link between the early modernists (Shināsī, Ziya (Ḍiyā') Pasha, Nāmıḳ Kemāl, ʿAbd al-Ḥaḳḳ Ḥāmid) and radical reformists of the Fikret school. The long and often bitter struggle, continued by the generation of Tewfīḳ Fikret (in the literary magazine *Therwet-i Fünūn* where many young talents gathered first round Ekrem Bey), ended with the triumph of modernism during his lifetime, and Ekrem Bey's rôle in this, perhaps more as a critic and movement-leader than as a poet, is decisive. Hence the name Ustād-ı Ekrem given to him by his students and admirers. The individualism and Art for Art's sake tendency of the *Therwet-i Fünūn* school are also partly to be traced to Ekrem who was not as social- or history-conscious as his predecessors.

Apart from articles and poems published in various reviews of the period and some booklets of minor importance, he is the author of: Verse: (I) *Naghme-i seḥer* (1871) and (II) *Yadghār-ı shebāb* (1873); (III) *Zemzeme* in three parts (1885), the third of which contains his celebrated poem *Yaḳadjıḳda bir mezārlıḳ ʿālemi*, considered his masterpiece; (IV) *Nāčiz* (1886) a collection of verse translations from the French romantics and La Fontaine; (V) *Pejmürde* (1894). Prose: (I) *Müntekhabāt medjmūʿası* (1873) a collection of his early writings, articles and translations, in the tradition of the old flowery style; (II) *Mes Prisons Terdjümesi* (1874), translation from the French of Silvio Pellico's *Le mie prigioni*, equally in the old fashioned ornate prose which was severely criticized by Nāmıḳ Kemāl; (III) *Nidjād Ekrem* (1900), in two volumes, interspersed with verse, some in syllabic metre. Into this book dedicated to his beloved son Nidjād, who died very young, the unhappy father put, in all detail, everything he remembered about him. It is on the whole written in a spontaneous and unadorned style and contains some of his best prose; (IV) *Tefekkür* (1888) contains his later, simpler and more personal prose; (V) *Atala* (1872), a translation, in bombastic and old fashioned style, of Chateaubriand's novel; (VI) *Muḥsin Bey* (1889), a rather mediocre sentimental novel; (VII) *ʿAraba sevdāsı* (1889, published 1896 and 1940), a much appreciated novel of social satire, in the manner of Turkish novels which attack and ridicule the aping of Western customs by snobs (cf. Aḥmed Midḥat's *Felāṭūn Bey ile Rākım Efendi* (1875), Ḥüseyn Raḥmī's *Shıḳ* (1897) and *Shıpsevdi* (1900)); (VIII) *Shemsā* (1896), a short narrative about the life and sudden death of a four year old peasant girl, adopted by the poet's family; (IX) *Taʿlīm-i Edebiyyāt* (1882), a book of *ars poetica* with examples, composed of his lectures at the Mülkiye and first mimeographed in 1879, is his most important work, which revolutionized taste and literary theories and standards of the time. Contrary to tradition he gave in this book

many examples from contemporary writers and poets and made the new school popular among the majority of the educated youth; (X) *Taḳdīr-i elḥān* (1886), literary criticism. Drama: (I) *ʿAfīfe Anjelik* (1870), (II) *Atala* (1872), a theatrical adaptation of the Chateaubriand novel he had already translated; (III) *Wuṣlat* (1874) inspired by Nāmiḳ Kemāl's *Zavāllī Čodjuk*, (IV) *Čok bilen čok yañīlīr*, a comedy adapted from a tale of the *Alf nahār wa-nahār*, published posthumously (1914 and 1941).

ELAZIĞ [see MAʿMŪRAT AL-ʿAZĪZ].

ELBASAN (T. *él-basan* '[fortress] which subdues the land'), town of central Albania (41° 06′ N., 20° 06′ E.) on the site of the ancient Scampis on the Via Egnatia, a strategic position controlling the fertile valley of the Shkumbî (anc. Genysos), which here emerges from the mountains. The fortress, round which the town grew up, was built with great speed at the command of Meḥemmed II while Krujë (Kroya [*q.v.*]) was being unsuccessfully besieged in the summer of 1466, as a base for future operations against Iskandar Beg [*q.v.*]; it resisted a siege in the following spring. At first administered as part of the sandjaḳ of Okhri (Tursun, *TOEM ʿilāwe*, 135), within a few years Elbasan was made the chef-lieu of a separate sandjaḳ of Rumili, having (ca. 926/1520) four ḳaḍās: Elbasan, Čermenika, Ishbat and' Drač (Durazzo). In the later years of the Empire it formed part of the *wilāyet* of Yanya, and finally of Ishkodra.

With the consolidation of the Ottoman hold on N. Albania and the Adriatic coast, the fortress rapidly lost its military importance (it was dismantled in 1832 by Reshīd Pasha and further damaged by earthquake in 1920, so that now only the south side survives); but the town, always and still predominantly Muslim, remained a flourishing trade-centre: Ewliyā describes a prosperous and attractive town (the fortress ungarrisoned), with 18 Muslim and 10 Christian *maḥalle*s, 46 mosques, 11 *tekkes*, 11 *khān*s, and a very frequented market. Now linked by rail with Durazzo and Tirana, it is, after Tirana, the chief town of central Albania, with some 15,000 inhabitants.

ELBISTAN, Abulustayn or Ablistayn in the ancient Arabic writers, Āblistān in the Persian, Ablasta in the Armenian, Plasta in the Byzantine, and Albistān or Elbistān in more recent times: a town in south-eastern Anatolia, 38° 15′ N., 37° 11′ E., at an altitude of 1150 m., on the Sögütlü Dere, one of the sources of the Ceyhan, the Pyramos of antiquity. It is situated in a wide plain which is rich in water and enclosed by high mountains of the eastern Taurus, at the foot of the Shar Daghī (1300 m. = 4265 ft.). It is the capital of a *kaza* in the *vilâyet* of Marash. In 1950, it had 7,477 inhabitants, and the *kaza* had 55,668.

In antiquity, Arabissos (whence the Arabic ʿArabsūs, Afsūs, the early Turkish Yarpuz—later Efsus—and, as capital of the *ḳaḍā'*, Afshin) was the capital of the Elbistan plain, which belonged to the Syrian Marches (Thughūr al-Shām), much fought over by the Muslims and Byzantines. Around 333/944 or 340/951, Arabissos was destroyed by the Ḥamdānid Sayf al-Dawla, but as the supposed place of rest of the Seven Sleepers (*aṣḥāb al-kahf*) it was also revered as a place of pilgrimage by the Muslims (see F. Babinger, *Die Örtlichkeit der Siebenschläferlegende in muslimischer Schau*, in *Anzeiger der phil.-hist. Kl. der Österr. Akademie der Wissenschaften*, Year 1957, no. 6, 1-9). Elbistan, however, developed as the political centre.

In the years between 1097 and 1105, Elbistan (Plastantia) was in the hand of the Crusaders. Subsequently it changed hands several times, belonging in turn to the Crusaders of Antioch, the Dānishmandids of Sīwās and the Saldjūḳids of Konya, finally remaining in the hands of these last in 1201. During the Anatolian (Kayseri) campaign in 675/1277, the Mamlūk Sulṭān al-Ẓāhir Baybars gained a great victory near Elbistan over the Mongol army of the Ilkhān Abāḳā on 10 or 13 Dhu 'l-Ḳaʿda/15 or 18 April. From 740/1339 onwards, Elbistan became the capital of the Turcoman principality of Dhulḳadīr, but in 1400 it was destroyed by Tīmūr, and in 1507 by the Ṣafawid Shāh Ismāʿīl; in 921/1515 Selīm I brought it under Ottoman suzerainty, but it was not incorporated into the Ottoman Empire as an independent (*müsellem*) *ḳaḍā'* in the *liwā'* and *eyālet* of Dhu 'l-ḳadriyye (capital Marʿash) until the time of Sulṭān Süleymān. In 1264/1847, it was assigned to the *sandjaḳ* of Marʿash in the *wilāyet* of Aleppo as an ordinary *ḳaḍā'*.

The most notable monument in Elbistan is the Ulu Djāmiʿ, which, according to an inscription over the gateway, was built in 639/1241 (*RCEA*, xi, 132, no. 4199) by the *amīr* Mubāriz al-Dīn Čawlī, but was later restored in the Ottoman style. On the way to Hurman, the same *amir* built a khān, later destroyed, on whose site now stands the village of Çawlı-Han. On the way to Behisni, there is the ruin of a large khān of the Saldjūḳ *amīr* Ḳamar al-Dīn; there is also a mosque, known as the Himmet-Baba-Djāmiʿ, a small building with one cupola, dating from Ottoman times. It is of special interest because one enters the octagonal *türbe* on the *ḳibla* wall through a door in the *miḥrāb* (reported by K. Erdmann).

ELBURZ [see ALBURZ].

ELCHE [see ALSH].

ELČI, a Turkish word meaning envoy, from *el* or *il*, country, people, or state, with the occupational suffix *či* (= *dji*). In some eastern Turkish texts the word appears to denote the ruler of a land or people; its normal meaning, however, since early times, has been that of envoy or messenger, usually in a diplomatic, sometimes, in mystical literature, in a figurative religious sense. In Ottoman Turkish it became the normal word for an ambassador, together with the more formal Arabic term *sefîr*. From an early date the Ottoman sultans exchanged occasional diplomatic missions, for courtesy or negotiation, with other Muslim rulers (in Anatolia, Egypt, Morocco, Persia, India, Central Asia, etc.) and also sent a number of missions to various European capitals. From the 16th century, in accordance with the growing European practice of continuous diplomacy through resident embassies, European states established permanent missions in Istanbul. The Ottoman government, however, made no attempt to respond to this practice until the end of the 18th century, preferring to rely, for contact with the European powers, on the foreign missions in Istanbul, and on occasional special embassies despatched to one or another European capital for some immediate and limited purpose. It was the custom for such envoys, in addition to their official reports, to write a general account, known as *sefâretnâme*, of their travels and experiences. A number of these accounts have survived in part or in full, and some of them have been published. In 1792 Selîm III decided to establish permanent resident embassies in Europe. The first was opened in London in 1793 (on the reasons for this choice see Djewdet, *Ta'rîkh*², vi, 257-60), and was followed by others in Vienna, Berlin, and Paris. This first experiment gradually petered out, the embassies, left in charge of Greek officials, being finally closed on the outbreak of the Greek War of Independence in 1821. A new start was made in the eighteen-thirties with the opening of permanent embassies in London, Paris and Vienna and a legation in Berlin, and the despatch of envoys extraordinary (*fawk al-ʿâda*) to Tehran and St. Petersburg. These were followed by further resident missions in Europe, Asia (Tehran embassy 1849) and America (Washington legation 1867), and the organization of a foreign ministry. In earlier times envoys were usually chosen from the palace corps of pursuivants (see ČAUSH); later from among the bureaucratic and *ʿulemâʾ* classes. At first there was some uncertainty about grades and ranks; in the 19th century the European terminology of ambassador, minister plenipotentiary, and *chargé d'affaires* for heads of missions, was adopted. The first was rendered *büyük elči* or *sefîr-i kebîr*, the second *orta elči* or simply *sefîr*, the third *maṣlaḥatgüzâr*.

For lists of envoys sent to and from Istanbul until 1774, see Hammer-Purgstall, *GOR*, ix, 303-34 (*Histoire*, xvii, 134-68); Ottoman ambassadors from 1250/1834 onwards are listed in the Ottoman Foreign Office yearbooks (*Sâlnâme-i neẓâret-i khâridjiyye*, 1302 A.H., 178-95, and later editions). On the *sefâretnâmes* see Bursalî Meḥmed Ṭâhir, *ʿOthmânlî müʾellifleri*, iii, 189-90; F. Taeschner in *ZDMG*, lxxvii (1923), 75-8; Babinger, *GOW*, 323-32; B. Lewis, *The Muslim discovery of Europe*, in preparation. See further ĶÂṢID, TERDJÜMÂN, VALAVAČ, and, for a general survey of Muslim diplomacy and diplomatic practice, SAFÎR.

(B. LEWIS)

ELDEM, KHALÎL EDHEM, Turkish archeologist and historian, was born on 24 (?) June 1861 in Istanbul. He was the youngest son of the grand vizier Ibrâhîm Edhem Pasha [*q.v.*]. After completing his primary school course in Istanbul, he continued, from 1876, his secondary education in Berlin, and later studied chemistry and natural sciences in the University of Zurich and at the Polytechnic School of Vienna. In 1885 he received the Ph. D. degree from the University of Berne. Back in Istanbul he was appointed to an office in the Ministry of War and transferred later to the General Staff Administration of the Ottoman Empire. He found his vocation when he was nominated in 1892 as deputy administrator of the Imperial Museum, where his eldest brother ʿOthmân Ḥamdî Bey [*q.v.*] occupied the post of administrator-general. Upon the death of his brother, he was charged on 28 February 1910 with the administration of the Imperial Museum, an important post which he held until his retirement, on 28 February 1931. His ability as administrator and scholar is shown in the organization of the Imperial Museum. He enlarged and classified the collections of the main Archeological Museum and founded in 1918, in a separate building, the Ancient Near Eastern Section of the Museum. He also organized the Topkapı Sarayı [*q.v.*] upon the opening of this palace as a museum under his administration. His publications cover the fields of archaeology, numismatics, sigillography, epigraphy and history (for his bibliography see *Halil Edhem Hâtıra Kitabı*, i, 299-302). His works on sigillography and epigraphy are the first studies in these ancillary disciplines of history published in Turkey. The book entitled *Düwel-i Islâmiyye*, Istanbul 1927, a revised and enlarged translation of S. Lane-Poole's *Mohammedan dynasties*, attests his wide knowledge of Islamic history. His scholarship won him a world-wide reputation: he was a member of national and foreign academies, honorary doctor of the Universities of Basle and Leipzig, and honorary professor of the University of Istanbul. He died 16 November 1938 in Istanbul, being a member of the Turkish Parliament.

ELMA DAGHÎ, name of several ranges of mountains in Anatolia: 1) south-east of Ankara, 2) north-west of Elmalî (2505 m. [= 8,218 ft.]).

(FR. TAESCHNER)

ELMALİ, earlier spelling Elmalu (Turkish = "Appletown"), a small town in south-western Anatolia, 36° 45′ N., 29° 55′ E., altitude 1150 m. (= 3,772 ft.), on a small plain, surrounded by high mountains (Elma Daghī 2505 m. (= 8,218 ft.) in the north, Bey Daghlarī 3086 m. (= 10,124 ft.) in the south-east), in the vicinity of the small lake Kara-Göl. This lake flows into a cave, Elmalī Düdeni. Elmalī is capital of a *kaza* in the *vilâyet* of Antalya, and has 4,967 inhabitants (1950); the *kaza* has 23,993 inhabitants.

Elmalī, in the ancient region of Lycia, is a pretty and neat town with a healthy climate. It has a fairly new bazaar, and a classical Ottoman mosque (the ʿÖmer-Pasha Djāmiʿi) of the year 1016/1607. The mosque itself has one cupola and the entrance-hall has five. Outside, there is a minaret on the right face, and at the back, to the left, a *türbe*. There are fourteen tympana of tiles of quite good quality within the mosque itself, and five more in the entrance hall (reported by K. Erdmann).

Elmalī was the capital of the Turcoman principality of Tekke [*q.v.*], which was acquired in 830/1426-7 by Murād II, and henceforth became a *liwāʾ* of the *eyālet* of Anadolu. The main centre of the *liwāʾ* of Tekke shifted to Anṭālya, and Elmalī became a *ḳaḍāʾ*. In the 19th century, it was a *ḳaḍāʾ* of the *sandjaḳ* of Anṭālya (Adalia) in the *wilāyet* of Konya.

The so-called *Takhtadjī*, woodcutters suspected of being Shīʿīs, have settled in the wooded surroundings of Elmalī and they sell their wood in the town. Some 60 km. (37 m.) south of Elmalī is the harbour of Finike (earlier spelling Fineka, 1,382 inhabitants) which once formed part of the *ḳaḍāʾ* of Elmalī, but today forms a *kaza* of its own. Nearby there are the Lycian graves and one Phoenician inscription.

There are three other villages in Anatolia called Elmalī: one is in the *kaza* of Ordu, in the *vilâyet* of the same name; the second is on the shores of lake Van; and the third in the *kaza* Besni (Behesni) in the *vilâyet* of Malatya.

ELOQUENCE [see balāgha, bayān and faṣāḥa].

ELURĀ. The Elurā (Ellora) caves, near Dawlatābād [*q.v.*], appear in the history of Muslim India only as the scene of the capture of the Gudjarāt princess Deval Devī, the future bride of Khiḍr Khān [*q.v.*], for ʿAlāʾ al-Dīn Khaldjī by Alp Khān, who had given his forces leave to visit the cave temples (Firishta, Lucknow lith., i, 117). These caves were justly famous and were described by some early travellers, *e.g.*, Masʿūdī, iv, 95, copied with much distortion of names by Ḳazwīnī, cf. Gildemeister, *Scriptorum Arabum de rebus Indicis*, text 79, trans. 221; Muslim descriptions of more recent times in Rafīʿ al-Dīn Shīrāzī, *Tadhkirat al-mulūk*, ms. Bombay 196a-198b, and in Muḥammad Sāḳī Mustaʿidd Khān, *Maʾāthir-i ʿĀlamgīrī*, 238; tr. Sarkar, Calcutta 1947, 145. The technique of scarping the solid rock here is strikingly similar to that of the great scarp on which the citadel of Dawlatābād stands. (J. Burton-Page)

ELVIRA [see ilbīra].

ELWEND [see alwand].

EMÂNET [see emīn].

EMÂNET-I MUḲADDESE, a Turkicized Arabic expression meaning sacred trust or deposit, the name given to a collection of relics preserved in the treasury of the Topkapı palace in Istanbul. The most important are a group of objects said to have belonged to the Prophet; they included his cloak (*khirḳa-i sherīf* [*q.v.*]), a prayer-rug, a flag, a bow, a staff, a pair of horseshoes, as well as a tooth, some hairs (see liḥya), and a stone bearing the Prophet's footprint. In addition there are weapons, utensils and garments said to have belonged to the ancient prophets, to the early Caliphs, and to various Companions, a key of the Kaʿba, and Ḳurʾāns said to have been written by the Caliphs ʿUthmān and ʿAlī. Under the Sultans these relics were honoured in the annual ceremony of the *Khirḳa-i saʿādet*, held on 15 Ramaḍān.

Bibliography: For a detailed description, with illustrations, see Tahsin Öz, *Hırka-i Saadet dairesi ve Emanet-i Mukaddese*, Istanbul 1953; on the Muslim attitude to relics in general, see I. Goldziher, *Muh. St.*, ii, 356-68, and the article athar. (Ed.)

EMBALMING [see ḥināṭa].

EMBLEM [see shiʿār].

EMESA [see ḥimṣ].

EMIGRATION [see djāliya, hidjra and muhādjirūn].

EMİN, from Arabic *amīn* [*q.v.*], faithful, trustworthy, an Ottoman administrative title usually translated intendant or commissioner. His function or office was called *emānet*. The primary meaning of *emīn*, in Ottoman official usage, was a salaried officer appointed by or in the name of the Sultan, usually by *berāt*, to administer, supervise or control a department, function or source of revenue. There were thus *emīn*s of various kinds of stores and supplies, of mints, of mines, of customs, customs-houses and other revenues, and of the *taḥrīr* [*q.v.*], the preparation of the registers of land, tenure, population and revenue of the provinces and the distribution of fiefs (see daftar-i khāḳānī and tīmār). In the words of Prof. Inalcık, "the *emānet* of *taḥrīr* required great experience and knowledge, carried great responsibility, and at the same time was susceptible to corruption and abuse; usually influential beys and *ḳāḍī*s were appointed to it". In principle, the *emīn* was a salaried government commissioner, and not a tax-farmer, grantee, or lessee of any kind. His duty might be to represent the government in dealings with such persons, or himself to arrange for the collection of the revenues in question. When concerned with revenues, he was to have no financial interest in the proceeds, which he was required to remit in full to the treasury. The term *emīn* is also used of agents and commissioners appointed by authorities other than the Sultan—by the *ḳāḍī*s, for example, and even by the tax-farmers themselves, who appointed their own agents to look after their interests. At times, by abuse, the *emīn*s themselves appear as tax-farmers.

In the capital, the title *emīn* was borne by a number of high-ranking officers, in charge of certain departments and services. Such for example were the commissioners of the powder magazines (*bārūtkhāne emīni*), of the arsenal (*tersāne* [*q.v.*] *emīni*), and of the *daftar-i khāḳānī* (*defter emīni* or *defter-i khāḳānī emīni*). The highest ranking holders of this title were the four *emīn*s attached to the external services (*bīrūn* [*q.v.*]) of the palace: the city commissioner (*Shehr emīni* [*q.v.*]), concerned with palace

finances and supplies and with the maintenance of palaces and other royal and governmental buildings in the city; the kitchen commissioner (*Maṭbakh emīni*) and barley commissioner (*Arpa emīni*), concerned respectively with food and fodder for the imperial kitchens (see MAṬBAKH) and stables (see IṢṬABL; the commissioner of the mint (*Ḍarbkhāne emīni*), in charge of the mint in the palace grounds (see DĀR AL-ḌARB, ii).

(B. LEWIS)

EMIN, MEHMED, [see YURDAKUL, MEHMED EMIN].

EMĪN PAS̲H̲A (Eduard Carl Oscar Theodor Schnitzer) was born on 28 March 1840 at Oppeln in Prussian Silesia. He graduated in medicine at Berlin in 1864. He entered the Ottoman service as a medical officer in Albania in 1865, and assumed the name of K̲h̲ayr Allāh; later, in the Sudan, he became known as Meḥmed Emīn (Muḥammad Amīn, not al-A.). He went to Egypt in October 1875, whence he proceeded to Khartoum, and (in May 1876) to Lado, the capital of the Equatorial Provinces, where he was appointed medical officer by C. G. Gordon Pas̲h̲a, the then governor. He was entrusted with political missions to Uganda and Unyoro. In June 1878, Gordon, now governor-general of the Egyptian Sudan, appointed him governor of the Equatorial Provinces, henceforward amalgamated as the Equatorial Province (*Mudīriyyat K̲h̲aṭṭ al-Istiwāʾ*). During the first years of his governorship, Emīn continued Gordon's task of extending and pacifying the Egyptian territories in the southern Sudan, and of exploiting their natural resources, the chief of which was ivory. The administrative problems confronting him were enormous, arising from the vast extent and poor communications of his province, the disaffection of the tribes, and his enforced dependence on unreliable and incompetent troops and officials. Many of these were northern Sudanese (Danāḳla) who had originally entered the region in the retinues of predatory traders in ivory and slaves, others were exiles from Egypt. Emīn was indefatigable in touring the province, and made important studies in its natural history. By 1881 he had attained a fair measure of success in establishing administrative order. Reviving prosperity was reflected in increasing revenue; at the start of his governorship, the province had a deficit of £ 30,000; three years later it showed a surplus of £ 1,200. After the outbreak of the Mahdist revolt in 1881, Emīn's position deteriorated. His communications with Khartoum were cut after April 1883. The defeat of an Egyptian expeditionary force at S̲h̲aykān (5 November 1883) was followed by the Mahdist conquest of the Baḥr al-G̲h̲azāl [*q.v.*], the neighbouring province to Emīn's. In May 1884, Emīn received a letter from Karam Allāh Kurḳusāwī, the Mahdist military governor of the Baḥr al-G̲h̲azāl, demanding the surrender of his province. Emīn's officers advised capitulation, and to gain time he sent a delegation to Karam Allāh, and moved his headquarters to Wadelai (Walad Lāy) in April 1885. However, the Mahdist forces withdrew from the Equatorial Province. For over two years, Emīn remained undisturbed, although with diminished and precarious authority. In March 1886, he received a despatch from Nūbār Pas̲h̲a, the Egyptian prime minister, dated 13 S̲h̲aʿbān 1302/27 May 1885, informing him of the abandonment of the Sudan, and authorizing him to withdraw with his men to Zanzibar. Meanwhile projects for relieving Emīn were being mooted in Europe. An expedition was organized and partly financed by a British committee including persons interested in East African commerce. The Egyptian government also subsidized the project. The expedition was headed by H. M. Stanley, who was an agent of Leopold II of the Belgians. Taking the Congo route, Stanley met Emīn by Lake Albert on 29 April 1888. Emīn was most unwilling to leave his post, and Stanley put before him alternative proposals: that he should continue to administer the Equatorial Province on behalf of the Congo Free State, or that he should establish a station by Lake Victoria for the British East Africa Company. Emīn rejected these proposals, and Stanley left to bring up the rest of his expedition. During his absence, mutiny broke out among some of Emīn's troops, who were suspicious of recent developments, and unwilling to go to Egypt. Emīn was held by the mutineers at Dufile. Meanwhile, on 11 June 1888, a Mahdist expeditionary force under ʿUmar Ṣāliḥ had left Omdurman in steamers. This reached Lado on 11 October, and summoned Emīn to surrender. The mutineers resisted the Mahdist forces, and on 16 November Emīn was released. He withdrew to Lake Albert, where he was rejoined in January 1889 by Stanley. In April, Stanley began his march to the coast, unwillingly accompanied by Emīn. Emīn then entered the German service in East Africa. He led an expedition in what is now Tanganyika. Thence he entered the fringes of his old province, to try to attract some of his former followers. With his expedition reduced to desperate straits by smallpox, he endeavoured to reach the Congo, but was murdered by a tribal chief on or shortly after 23 October 1892.

EMIR [see AMĪR].

EMĪR SULṬĀN, Sayyid Shams al-Dīn Meḥemmed b. ʿAlī al-Ḥüseynī al-Bukhārī, popularly known as Emīr Seyyid, or Emīr Sulṭān, the patron saint of Bursa (Brusa). He is supposed to have been a descendant of the 12th Imam, Muḥammad al-Mahdī, and hence a Sayyid. His father, Sayyid ʿAlī, known under the name of Emīr Külāl, was a Ṣūfī in Bukhārā. He himself, born in Bukhārā (in 770/1368), joined the Nūrbakhshiyya branch of the Kubrawiyya in his early youth. Some *menāḳibnāmes* assert that he was a follower of the Imāmiyya.

After his *ḥadjdj*, Emīr Sulṭān spent some time in Medina, and then went to Anatolia via Ḳaramān, Ḥamīd-eli, Kütāhya and Ine-Göl. Finally he reached Bursa, where he dwelt in a cell (*ṣawmaʿa*) and led a life of good works. Within a short time, he gained great fame, gathered disciples around him, and entered into contact with the *ʿulemāʾ* and *shaykhs* of Bursa. He was highly esteemed by Sulṭān Bayazīd I Yïldïrïm, and married his daughter, Khundī Sulṭān, by whom he had three children (a son and two daughters). He was asked to invest the sultan with his sword when the latter went into battle, and his admonitions decided the sultan to refrain from excessive drinking (cf. the anecdote in Ewliyā Čelebi, *Narrative of Travels*, ii, 25 = *Taʾrīkh-i Ṣāf*, i, 32 f.; missing in the edition of *Seyāḥatnāme*, ii, 48); it is also said that Emīr Sulṭān successfully restrained Bāyezīd from the illegal execution of Tīmūr's ambassadors (ʿĀlī, *Künh*, v, 83 f.). Emīr Sulṭān was captured when Bursa was taken by one of Tīmūr's scouting parties in 805/1402, and brought before Tīmūr, who gave him the choice of accompanying him to Samarkand, but Emīr Sulṭān preferred to return to Bursa (Saʿd al-Dīn, i, 188 f.). Legend does not mention this incident; it does, on the other hand, report that the departure of Tīmūr's troops from Bursa was a miracle worked by the saint (Saʿd al-Dīn, ii, 427). When Murād II began his reign in 824/1421, he asked Emīr Sulṭān to invest him with his sword, and the saint is also said to have accelerated the defeat of the 'False Muṣṭafā' (Muṣṭafā Düzme [*q.v.*]), who contested Murād II's right to the throne, by the force of his prayers (ʿĀlī, 195 f.; Leunclavius, *Hist. Mus.*, 493 f.). In the next year, he, and a following of 500 dervishes, took part in the siege of Constantinople. The fall of the city, which he prophesied, did not, however, occur. Kananos, a Byzantine who took part in the siege, gives a detailed and vivid description of the appearance of the Mīr-Sayyid (Μηρσαΐτης Βεχαρ), the 'Patriarch of the Turks', as he calls Emīr Sulṭān (ed. Bonn, 466 ff., 477 f.); the Ottoman historians, on the other hand, do not mention this lack of success. Emīr Sulṭān died in 833/1429 in Bursa, as a result of the plague. Soon afterwards legends told of miracles (*menāḳib*) wrought by the saint.

A splendid mausoleum (which became one of the most visited places of pilgrimage in Turkey) was erected over the grave of Emīr Sulṭān at the eastern end of the town. The mosque attached to it was built in its present form by Selīm III (inscription of 1219/1804).

EMPEDOCLES [see ANBĀDUḲLĪS].

EMRELI (ʿEmrālī, Īmrʿālī or Īmrālī), a semi-sedentary Turkmen tribe which since the 10th/16th century has dwelt in Khurāsān, in the region of Gürgen. Driven back at the end of the 12th/18th century by the Tekkes (Tekins), the tribe emigrated northwards and, in two successive waves, settled down in Khwārizm (region of Hudjaylī on the Amān Ḳūlī canal), the first in 1803-4 and the second in 1827 when they submitted to the Khāns of Khiva. In 1873 (I. Ibragimov, *Nekotorïe zametki o Khivinskikh Turkmenakh i Kirgizakh*, in *Voennïy Sbornik*, xcviii (1874), no. 9, 133-63), they owned nearly 10,000 tents. At the present time the Emrelis inhabit the Ilyalï region, west of Tashawz, between the Yomuds in the south and the Goklens and Čowdors in the north. An isolated settlement exists in the Ashḳābād region (district of Kaakhka).

Since the Russian conquest the Emrelis have been sedentary, and are engaged in agriculture and sheep-rearing.

Detailed information on the history of the tribe in the 19th century is contained in the recent work by Yu. E. Bregel, *Khorezmskie Turkmeni v XIX veke*, Moscow (Acad. of Sc., Institute of Asian Peoples) 1961. (A. Bennigsen)

ENAMEL [see MĪNĀ].

ENDERŪN (pers. Andarūn, "inside"; turk. Enderūn). The term Enderūn (or Enderūn-i Humāyūn) was used to designate the "Inside" Service (as opposed to Bīrūn [*q.v.*], the "Outside" Service) of the Imperial Household of the Ottoman Sulṭān: *i.e.*, to denote the complex of officials engaged in the personal and private service of the Sulṭān—included therein was the system of Palace Schools—and placed under the control of the Chief of the White Eunuchs, the Bāb al-Saʿādet Aghasï (the Agha of the Gate of Felicity—*i.e.*, the gate leading from the second into the third court, proceeding inward, of the Imperial Palace—the Topkapı Sarayı) or, more simply, the Kapï Aghasï (the Agha of the Gate). Further information will be found in the article SARĀY.

ENOS (also INOS/Z), Ottoman name for the classical Ainos, now Enez, town on the Aegean coast of Thrace (40° 43′ N., 26° 03′ E.) on the east bank of the estuary of the Merič ([*q.v.*], anc. Hebros). From classical times until the last century it was a prosperous harbour, on an important trade route from the upper Merič valley and across the isthmus from the Black Sea, with valuable and much-coveted saltpans. With Lesbos (T. Midilli, [*q.v.*]) it passed in 1355 to Francesco Gattilusio, as the dowry of Maria, the sister of John V Palaeologus. On the death of Palamede Gattilusio in 1455, family quarrels and the complaints of neighbouring Muslims that the citizens sheltered runaway slaves (ʿĀshiḳpashazāde, ed. Giese, § 125; Tursun, *TOEM ʿilāwe*, 68) provided Meḥemmed II with the pretext to intervene: at his approach in Ṣafar 860/January 1456 the citizens submitted, and the region was thenceforth a ḳaḍā of the sandjaḳ of Gallipoli. The silting of the river (now barely navigable), the construction of the railway to Dede-aghač [*q.v.*] and the re-drawing of the frontier in 1913 have reduced Enos to a small fishing-village, now 4 km. from the sea among marshy lagoons.

ENWER PASHA, Young Turk soldier and statesman (1881-1922). Enwer was born in the Dīwānyolu quarter of Istanbul, on 22 November 1881, the eldest of six children of Aḥmed bey, then a minor civil servant, and his wife ʿĀʾishe. The family was from Manastir (Bitolj) in Macedonia, and moved there again when Enwer was a boy. After completing his secondary schooling there, Enwer entered the military academy (Mekteb-i Ḥarbiyye) in Istanbul, completing both the regular officers' training course and the advanced general staff course. He graduated second in his class on 5 December 1902 (the first was his close friend and life-long associate Ḥāfiẓ Ismāʿīl Ḥaḳḳī Pasha, 1879-1915; see Muharrem Mazlum [Iskora], *Erkânıharbiye mektebi . . . tarihi*, Istanbul 1930, 246) as a general staff captain and was posted to the Third Army in Macedonia. He spent the next three years in military operations against Macedonian guerrillas. In September 1906, he was assigned with the rank of major to Third Army headquarters in Manastır. There he joined, as member no. 12, the ʿOthmānlī Ittiḥād we Teraḳḳī Djemʿiyyeti, the conspiratorial nucleus of the Young Turk movement, and in the following years helped to spread its organization. When the Istanbul authorities launched an investigation into these secret activities, Enwer, who with a group of soldiers had ambushed one of the investigating officers, deemed it wise to refuse a call for promotion and reassignment to Istanbul; instead, in late June, 1908, he escaped with a group of followers into the Macedonian hills, an example soon followed by *kolaghasî* (senior captain) Aḥmed Niyāzī of Resne and Eyyūb Ṣabrī [Akgöl] of Ohri. Their action proved to be the prelude to the Young Turk revolution of 24 July, 1908. At only 26 years of age, Enwer was widely acclaimed as the foremost hero of revolution and liberty.

While on liaison service with Austrian officers in Macedonia Enwer had studied German and military tactics. In 1909 he was posted as military attaché to Berlin where he deepened his lifelong admiration for German military power and efficiency. In 1909 he briefly returned to Turkey to participate in the action of the Ḥareket Ordusu in suppressing the Istanbul mutiny of 13 April 1909 (the so-called *Otuzbir Mart waḳʿasî*). In the autumn of 1911, he resigned his post in Berlin to volunteer for service in the Libyan war, where he fought with distinction. On 5 June 1912 he earned a double promotion to lieutenant-colonel. In September he also was appointed *mutaṣarrîf* of the sandjaḳ of Benghāzī. Back in Istanbul, he participated actively in the politics of the Society for Union and Progress (Ittiḥād we Teraḳḳī Djemʿiyyeti [*q.v.*]) and at its 1912 congress helped secure the post of secretary general for his friend Ṭalʿat [*q.v.*]. On 23 January 1913 he led a raid on the Sublime Porte by a group of Unionist officers and soldiers who forced at gun point the resignation of the aging Grand Wezīr Kāmil Pasha (through the excessive zeal of one of the group, Muṣṭafā Nedjīb, the war minister Nāẓim Pasha and two other persons were killed). The major aim of the participants in this «Sublime Porte Incident» (*Bāb-i ʿĀlī waḳʿasî*) was the energetic resumption of the First Balkan War after the truce at Čataldja (3 December 1912 to 30 January 1913), but instead the campaign of the late winter of 1913 resulted in the complete evacuation of Macedonia and most of Thrace. The *coup* brought to power a Unionist party cabinet under Maḥmūd Shewket Pasha and its long-range effect was the conversion of the constitutional monarchy of 1908 into a partisan and military dictatorship, with only a semblance of parliamentary institutions, which was to last until the defeat of 1918. In the Second Balkan War Enwer was the chief of staff of the left wing, and as such was in the vanguard of the troops re-entering Edirne on 22 July 1913.

On 4 January 1914 Enwer was promoted two more ranks to brigadier-general and appointed minister of war in the Unionist cabinet of Saʿīd Ḥalīm Pasha, and with the impending outbreak of war on 21 October 1914, deputy commander-in-chief

(under the Sultan's nominal authority). He became a lieutenant-general in 1915 and a general (*birindji ferīḳ*) in 1917. After the accession of Meḥmed VI Waḥīd al-Dīn his title was changed, on 8 August 1918, from deputy commander-in-chief to chief of the General Staff (*erkān-i ḥarbiyye re'īsi*). His nearly five years in the War Office and at General Headquarters were characterized by intensive efforts to increase the efficiency of the armed forces. In his first few months in office, he presided over a purge in which the aging generals of the ʿAbd al-Ḥamīd period, who were held responsible for the disastrous Balkan War defeat, were put on the inactive list and replaced by energetic younger officers. Enwer is credited with introducing the practice of appointing officers to temporary higher rank so as to test their ability. He also personally designed a new military cap (known as the *Enweriyye*) and invented a simplified Arabic script, based on disconnected letters, which, however, found no wide acceptance. On 5 March 1914, Enwer married Emīne Nādjiye Sulṭān, a niece of the reigning monarch.

In the Ottoman diplomatic moves of the spring and summer of 1914, Enwer was the most consistent advocate of a close alliance with Germany and the Central Powers. After fruitless negotiations by Djemāl Pasha in Paris and Ṭalʿat in Bucharest, Enwer on 22 July approached the German Ambassador, Baron von Wangenheim, with the proposal of a secret offensive and defensive alliance. On the Ottoman side the ensuing negotiations were conducted mainly by Enwer himself and the Grand Vizier Saʿīd Ḥalīm Pasha with the knowledge of only a few of their colleagues; they were kept secret from the other ministers and also from the francophile Ottoman Ambassador to Berlin, Maḥmūd Mukhtār Pasha. The result was a defensive alliance against Russia dated 2 August 1914. In the following weeks, Enwer assiduously worked for early Ottoman entry into the World War, although others in the cabinet and General Staff urged caution in view of the German setback on the Marne. The German admiral Souchon, who in mid-August had entered Ottoman waters and service with his ships Goeben and Breslau, received Enwer's authorization on 14 September to sail into the Black Sea with freedom of action against Russia; but Enwer was promptly forced by his cabinet colleagues to countermand these instructions. A compromise solution on 20 September authorized Souchon's sailing but disclaimed Ottoman responsibility for any belligerent acts. By October several cabinet members had been won over to the war faction and on 22 October Enwer once more instructed Souchon: "The Turkish fleet must win maritime supremacy in the Black Sea. Seek out the Russian fleet and attack it without declaration of war" (Mühlmann, *Deutschland und die Türkei*, 102). On 29 October Souchon's Ottoman fleet attacked Russian ports and ships and the Empire was at war with the Allied powers.

Enwer's conduct of the Ottoman War effort was characterized by close co-operation with German strategy and German officers, by a readiness to attack so as to produce, if possible, early and decisive results, and by extensive use of ideological propaganda and of secret guerrilla operations to reinforce the efforts of the field armies. As many as two or three of the six to nine Ottoman armies and army groups were commanded by German generals; most of the rest had Ottoman commanders with German chiefs of staff—this binational command structure being carried through consistently from General Headquarters down to division and even regiment level. Enwer's own chief of staff throughout most of the war was General Walter Bronsart von Schellendorf, replaced in 1918 by General Hans von Seeckt. By late 1916, as many as seven Turkish divisions were assigned to reinforce the fronts in Galicia, in Rumania, and in Macedonia.

Shortly before the Empire's entry into the World War, on 5 August 1914, Enwer ordered the creation of a Special Organization (*Teshkīlāt-i Makhṣūṣa*) under Süleymān ʿAskerī, "a combination ... of secret service and guerrilla organization" (Rustow in *World Politics*, xi, 518), which engaged in irredentist struggles in Macedonia, Libya, the Caucasus, and Iran. Prominent members of the Ittiḥād we Teraḳḳī inner circle, such as Dr. Bahā' al-Dīn Shākir and Midḥat Shükrü [Bleda], formed part of the Organization's political bureau. The proclamations from Enwer's headquarters relied at first mainly on Islamic or Pan-Islamic themes, later increasingly on Pan-Turkish ones. The 1915 offensive against the Suez Canal was known as the "Islamic" strategy. Even when the Arab Revolt in 1916 cut off the Hidjāz railroad, Enwer refused to withdraw the army corps stationed in the Holy City of Medīna. (The commander ʿÖmer Fakhr al-Dīn [Türkkan] Pasha was so thoroughly isolated by the end of the war that he did not learn of the armistice until two and a half months later; he surrendered with 12 battalions on 10 January 1919.) The offensives in Transcaucasia in the wake of the crumbling Czarist armies in 1918 were known as the "Turanic" strategy, although a guerrilla force created there by the Special Organization was called the "Army of Islam".

In December 1914 Enwer took personal command of the Third Army on the Russian front in the Armenian mountains since the previous commander, Ḥasan ʿIzzet Pasha, had proved reluctant to carry out an encirclement manœuvre against the advancing Russians in the Sarïḳamïsh region, which had been planned in advance. As a result of local reconnaissance under Ḥāfiẓ Ḥaḳḳī it was decided to enlarge the pincer movement further—a plan that did not take into account terrain and weather conditions in the steep, icy, and windswept mountains. Hunger and cold destroyed most of the Third Army before it could reach, let alone encircle, the Russian forces; of a total strength of 90,000, casualties have been estimated at 80,000. In mid-January Enwer turned the command of the remaining Third Army units over to Ḥāfiẓ Ḥaḳḳī Pasha and returned to G.H.Q. in Istanbul. Enwer did not again take personal command of battlefield units.

The following years brought some striking Ottoman military successes, notably the defeat of the Allied landing expedition at Gallipoli (April 1915-January 1916) which prevented the loss of the capital, Istanbul, and the opening of communications between the Western Allies and the retreating Russian fronts; the victory at Ḳūt (see below); and the advance against the Russians in 1917-18. Beginning in the spring of 1917, however, vastly outnumbered Ottoman armies retreated steadily before the British offensives in Palestine, Iraq, and Syria. By the autumn of 1918, the military situation had become untenable, and on 14 October, the Grand Vizier Ṭalʿat Pasha resigned with his Unionist cabinet so as to facilitate the impending armistice negotiations. On 2 November 1918, Enwer, Ṭalʿat, Djemāl [*qq.v.*], Dr. Nāẓīm and other prominent Unionists assembled at night in the house of Enwer's aide-de-camp Kāẓīm [Orbay] in Arnavutköy on the

Bosphorus, and boarded a German naval vessel that brought them to Odessa. Although Enwer had plans to go to the Caucasus (Ziya Şakir, 156 f.), he later joined the others in Berlin, where they arrived in December. In Istanbul, court martial proceedings against the fugitive Unionists began 26 November 1918, and on 5 July 1919 resulted in death sentences in absentia for Enwer, Ṭalʿat, Djemāl, and Dr. Nāẓim.

Enwer spent the winter of 1918-9 in Berlin. Since the Entente powers were demanding the extradition of the Young Turks, they lived semi-legally; Enwer himself adopted the name "(Professor) ʿAlī Bey", which he later also used in Russia. Whereas Ṭalʿat and other civilian leaders centered their political activities on Berlin and Munich, Enwer and Djemāl proceeded at different times to Russia and then Central Asia, where they were joined by Enwer's uncle Khalīl (see below) and other former associates in a complex web of political manœuvres. In April 1919, Enwer secured the services of a pilot and airplane and with false Russian identity papers set out for Moscow. When mechanical trouble forced the plane to land in Lithuania, Enwer was detained for several weeks until his friends in Berlin established his identity and secured his release. After several months in Berlin, where he visited the Bolshevik leader Karl Radek in his jail in August 1919, Enwer on second try did make his way to Moscow where he arrived early in 1920. He took up contact with the Soviet Foreign Office, with Lenin, with a Turkish nationalist delegation under Bekir Sāmī which was then in Moscow, and, by correspondence, with Muṣṭafā Kemāl. With the encouragement of the Soviet authorities, he proclaimed the formation of a "Union of Islamic Revolutionary Societies" (Islām Ikhtilāl Djemʿiyyetleri Ittiḥādī) and of an affiliated People's Councils Party (Khalḳ Shūrālar Fīrḳasī), the former intended as a Muslim revolutionary international, the latter as its Turkish affiliate. On 1-9 September 1920 he attended the Soviet-sponsored Congress of the Peoples of the East at Baku with the title of Delegate of the Revolutionaries of Libya, Tunis, Algeria, and Morocco (chosen perhaps because of his war record in Cyrenaica in 1911-2); a Kemālist Turkish delegation under Ibrāhīm Ṭāliʿ [Öngören] also was present.

In October 1920, Enwer was back in Berlin where he lived in a villa in the fashionable Grunewald section. He was confident that the Soviets would support nationalist movements in Turkey and other border states. To this end he asked Khalīl to secure approval from the Soviet Foreign Office for a plan whereby two cavalry divisions, to be formed among Ottoman war prisoners and Muslim residents of the Caucasian region, would, under Enwer's command, join the Anatolian resistance movement. Enwer himself, meanwhile, was trying to purchase arms in Berlin. That he had hopes of taking over the supreme command in Anatolia is indicated by Khalīl's statement to Karakhan, Soviet Deputy Commissar for Foreign Affairs, that "Muṣṭafā Kemāl Pasha would not be in favour of creating divisiveness and is accustomed to obeying you [*i.e.*, Enwer]"—an interpretation rather strikingly at variance with Kemāl's record of near-insubordination to Enwer during the World War. (From Khalīl's letter to Enwer, 4 November 1920, quoted by Cebesoy, 165). Enwer's plans, however, were rejected by Karakhan.

After Ṭalʿat Pasha's assassination (15 March 1921), Enwer was the most prominent surviving Union and Progress leader in exile. At its 1921 annual meetings held in Berlin and Rome, the Union of Islamic Revolutionary Societies adopted a set of resolutions according to which the affiliated People's Councils Party was to be the legatee of the Union and Progress Society in Turkey; the Revolutionary Union itself was to work in close conjunction with the Third International and to secure further Soviet aid for the Nationalist struggle in Anatolia. (See Cebesoy, 224 f., who does not, however, give any exact date for the meetings). In Moscow, Enwer had several conversations with ʿAli Fuʾād [Cebesoy], the newly appointed Kemālist ambassador (their first meeting occurred on 26 February 1921) and with Čičerin, both of whom tried to dissuade him from interfering with the Anatolian movement; a protocol to this effect was drawn up by ʿAlī Fuʾād, Enwer, and Dr. Nāẓim at one of these meetings. On 16 July 1921 Enwer sent a lengthy letter to Muṣṭafā Kemāl complaining of groundless suspicions and assuring Kemāl that he (Enwer) was content to support the Anatolian movement from outside. But the moves of Major Naʿīm Djewād, whom Enwer sent from Russia to Anatolia with quantities of propaganda material for the People's Councils Party and who was arrested by the Kemalists at the Black Sea town of Amasra, indicated that he was pursuing his former plans.

On 30 July, at a time when the Greek offensive toward Ankara was in full progress, Enwer proceeded from Moscow to Batumi where he gathered with other Unionists awaiting an opportunity to enter Anatolia. Close by, the Trabzon Defence of Rights Society was openly supporting Enwer, and in the Ankara Assembly a group of about forty ex-Unionists are said to have been working secretly to replace Kemāl with Enwer. On 5 September, a congress of the "Union and Progress (People's Councils) Party" was held at Batumi which issued an appeal to the Ankara Assembly to abandon its hostility toward the Union and Progress exiles. Meanwhile, however, Kemāl's victory at the Sakarya (2-13 September) consolidated his political position and by November his authority was restored in Trabzon.

Abandoning his Anatolian plans, Enwer left Batumi by way of Tbilisi, Baku, ʿAshḳābād, and Merv, and arrived in Bukhāra in October 1921 accompanied by Kushdjubashīzāde Ḥādjdjī Sāmī of the former Special Organization and others. He seems to have given the impression to Soviet authorities that he would rally Muslims of various parts of Central Asia in a struggle against the British; yet he soon was engaged in efforts to mobilize various Özbek factions into common resistance against Soviet rule and penetration of Türkistān. The major political groupings that he encountered in Özbekistān were (1) the Young Bukhara party under ʿOthmān Khodja, which in a revolution with Soviet support in September 1920 had deposed the Emīr of Bukhārā, ʿAbd al-Saʿīd Mīr ʿĀlim forcing him into exile in Kābul and (2) the tribesmen of the area who were generally loyal to the Emīr, formed armed bands known as Basmadjīs, (*i.e.*, Raiders), and fought both the Republicans and the Soviets. Enwer was welcomed in Bukhārā by ʿOthmān Khodja's representatives, and took up close contact with Aḥmed Zekī Welīdī [Togan], the exiled Bashkir leader, who was then trying to rally various Özbek factions against the Soviets. On 8 November Enwer left Bukhārā with thirty armed followers on the pretext of a hunting trip but actually so as to join the Basmadjīs. He proceeded to Shīrābād and thence eastward

along the Afghān frontier, being joined by local armed groups along the way. In the vicinity of Korgantepe, south-west of Düshenbe (later Stalinābād) he made contact with Ibrāhīm Lakay, known as the Basmadjī leader most staunchly loyal to the Emīr. Lakay, who disapproved of Young Turk revolutionaries as much as he did of Young Bukhārans, interned Enwer and his men for six weeks (1 December 1921 to 15 January 1922). Released through the intervention of another Basmadjī group under Ishan Sulṭān, Enwer assembled more than 200 armed Tadjik tribesmen and invested the Russian garrison at Düshenbe, which evacuated the town on 14 February. On 19 February Enwer was wounded in his arm in an engagement fought in pursuit. Enwer's proclamations of this period were signed "Deputy of the Emīr of Bukhārā, Son-in-Law of the Caliph of the Muslims, *Seyyid* Enwer" (Togan, 449) and his initial success rallied other armed men to his headquarters, while some of his associates went to Afghānistān in quest of further reinforcements. On 15 May he sent an ultimatum to the Russians which he signed as "Commander-in-Chief of the National Armies of Türkistān, Khīwa and Bukhārā" and in which he demanded prompt Russian evacuation of those areas (Togan, 451). But Enwer's forces lost a major engagement at Kāfirān on 28 June. As his troops melted away, he was obliged to join forces with the Basmadjī leader, Dewletmand Bek, at Beldjuwān south-east of Düshenbe.

Enwer was killed on 4 August 1922 (Togan, 452 f.; Baysun, 109-11, gives the date as Friday, 5 August, but that day was a Saturday), by a machine-gun bullet while leading a cavalry counter-charge against a superior Russian force at the near-by village of Čeken. Dewletmand also was killed while coming to his rescue, and both were buried at Čeken by their men on the following day.

Enwer was short of stature and slender of waist, with wide-set fiery eyes and an up-pointed, well-groomed moustache. He had great personal courage, boundless energy, and a keen sense of drama—at times melodrama (cf. C. R. Buxton, *Turkey in Revolution*, London 1909, 16 ff.). Soldiers of an older generation such as Liman or ʿIzzet Pasha [*q.v.*] were likely to see in him a brusque, restless upstart. But among his friends and close associates he instilled profound and lasting loyalty, and the masses idolized him. His financial integrity and sincere patriotism are attested even by his rivals and enemies. Despite the Sarïḳamïsh disaster, his popularity remained unimpaired throughout the World War. In judging his total performance as supreme commander, it should be recalled that only in 1912 the Ottoman Empire had been roundly beaten by four small Balkan states. The transformation of its armies into a fighting instrument that through four fateful years withstood the combined onslaught of Russia, Britain, and their Allies must be regarded above all as the achievement of Enwer and of the German officers with whom he so closely and consistently co-operated.

Enwer's flight in November 1918 was a turning point that did severe and lasting damage to his reputation. His subsequent efforts to redeem himself by resuming a military role in Anatolia—or failing that, in Central Asia—remain the most obscure and controversial part of his career. A full and balanced account of this period must await more complete publication of his correspondance of those years with Khalīl, Djemāl, Ṭalʿat, Muṣṭafā Kemāl, and others.

Several of Enwer's close relatives also attained prominence in Ottoman-Turkish military and political affairs. His father, Aḥmed Bey (1864-1947), rose in the civil service to the position of *sürre emīni* (*i.e.*, official in charge of delivering the Sulṭān's annual gift to Mecca) with the (civilian) rank of pasha.

Khalīl Pasha (Halil Kut) (1881-1957), the son by another marriage of Enwer's paternal grandmother, was a career officer who graduated from the military academy as "distinguished captain" (mümtāz yüzbashï) in 1904. He fought in the Libyan, Balkan and World Wars becoming a Lieutenant-Colonel of the general staff in 1913. In April 1916, with the rank of Brigadier General (mīrliwā) and later Lieutenant General he assumed command of the Sixth Army in ʿIrāq, and in one of the more spectacular Ottoman victories, at Ctesiphon (or Ḳūt al-ʿAmāra), captured General Townshend with an entire British army of 13,000 men. But he had to retreat before a renewed British offensive, abandoning Baghdād in March 1917. In June 1918 he became commander of the Eastern Army Group which undertook the Turkish advance into the Caucasus area and occupied Baku in September.

Following the armistice, he was interned at Batumi but escaped early in 1919 (see *Taṣwīr-i Efkār*, Istanbul, 4 February 1919). After only a few weeks in Istanbul he was again arrested and jailed in the Bekiragha prison on charges of matreatment of Armenians and others during the war. Once again he escaped (8 August 1919) making his way to Anatolia. Tentative plans to have him take a part in military operation in Anatolia (*e.g.*, command of the Izmir front) were abandoned because of the political strain they would have placed on relations between Anatolia and Istanbul. He saw Muṣṭafā Kemāl in Sivas in mid-September 1919 and accepted from him the assignment to try to secure military and financial aid for Anatolia from the Bolsheviki. He made his way to Russia by slow stages, arriving in Baku in December and in Moscow before 24 May 1920. On 1 June he delivered a letter from Kemāl to Čičerin, Soviet Commissar for Foreign Affairs. In negotiations with Čičerin and Karakhan he obtained arms, ammunition, and the equivalent of 100,000 Turkish pounds in gold bullion. (The latter he later delivered in person to Colonel Djāwīd [Erdelhun], division commander in Karaköse). In the winter of 1920-1 he was back in Moscow, where he participated intensively in the political negotiations between Enwer and the Bolsheviks. In February 1921 he was in Trabzon to try to build up the Peoples' Councils Party, Enwer's political organization in Anatolia. In 1922 he was expelled from Trabzon by the Kemalists and went to Berlin. After the nationalist victory he returned to Istanbul. His expulsion from the army, decreed by the Istanbul authorities on 18 February 1920, was set aside; instead he was retired in 1923 and took no further part in political and military affairs. Under the law of 1934 he took the family name of Kut after his victory at Ctesiphon.

Enwer's surviving brothers and sisters after 1934 took the family name Killigil. Nuri Killigil (1890-1949), the second son of Aḥmed Pasha and ʿĀʾishe, also was a career officer. In 1914, with the rank of major, he was assigned to the Special Organization. From 1915 to 1918, with the honorary rank of major general, he served in Libya "where he was organizing a rather successful resistance to Italian penetration of the hinterland" (Allen and Muratoff, 468, who state erroneously, however, that he was Enwer's

half-brother). Toward the end of the World War he was in charge of guerrilla operations of the "Army of Islam" in the Caucasus. He hesitated to heed the Istanbul authorities' call for his return and instead stopped in Erzurūm early in 1919. By January 1920 he was organizing guerrilla forces in Dag͟hestān. Like K͟halīl, he returned eventually to private life in Istanbul. He was killed in an explosion of his munitions factory in Sütlüdje on 2 March 1949.

Enwer's younger sister Mediha Killigil (b. 1899) was married (1919-1963) to Colonel (later General) Kâzim [Orbay], Enwer's aide-de-camp in 1914-18, who in 1961 was the presiding officer of the Turkish Constituent Assembly and subsequently became an appointed senator under the Second Republic. His younger brother Kâmil Killigil (-1962) married Enwer's widow, Nādjiye Sultan, (1898-1957) on 30 October 1923. Enwer was survived by two daughters, of whom the younger, Türkân, was married to Hüveyda Mayatepek, a Turkish career diplomat and currently (May 1963) Ambassador to Copenhagen; and one son, Ali Enver.

Bibliography: Ziya Şakir [Soku], *Yakın tarihin üç büyük adamı: Talât, Enver, Cemal*[2], Istanbul 1944, is a popular and not always accurate account. Kurt Okay, *Enver Pascha, der grosse Freund Deutschlands*, Berlin 1935, combines fact and fiction. The memoirs of Enwer's widow appeared in the Istanbul newspaper *Vatan*, 15 December 1952-21 January 1953.

Jahrhundert*, Darmstadt 1956; Gotthard Jäschke in *WI*, x (1929), 146, n.s. v (1957), 44-52, vi (1961), 185-222, viii (1962), 35-43; Sami Sabit Karaman, *Trabzon ve Kars hatıraları: Millî mücadele ve Enver Paşa*, Izmit 1949; Friedrich von Rabenau, *Seeckt: Aus seinem Leben 1918-1936*, Leipzig 1940, 95, 356 f.; D. A. Rustow in *World Politics*, xi (1959), 513-52; Otto-Ernst Schüddekopf, *Karl Radek in Berlin*, in *Archiv für Sozialgeschichte*, ii (1962), 87-166 (including German translation of Radek's Berlin memoirs entitled *November*, first published in *Krasnaya nov'*, October 1926), esp. 97 (where there is some confusion between Enwer's first and second attempts to get from Berlin to Moscow) and 152 f.; Ahmed Zeki Velîdî Togan, *Bugünkü Türkili (Türkistan) ve yakın mazisi*, Istanbul 1947, 434-53. A copy of Enwer's letter to Mustafa Kemal of 16 July 1920 is in the Türk Inkilâp Tarihi Enstitüsü, Ankara.

I have supplemented the above sources with information obtained in personal interviews kindly granted by General Kâzım Orbay (Ankara, 30 and 31 January 1963) and Bay Ali Enver (Istanbul, 4 February 1963); additional data have been generously supplied by Bay Faik Reşit Unat, Ankara. (D. A. Rustow)

ENWERĪ, Ḥādjdjī Saʿd Allāh Efendi (1733?-1794), minor Ottoman historian. He was born at Trebizond (Trabzon), going to Istanbul as a young man. After completing his studies he found employment with the Sublime Porte.

Enwerī was appointed official historian in 1182/1769 and retained that function, except for four short intervals, under three Sultans, Muṣṭafā III, ʿAbd al-Ḥamīd I and Selīm III. He also undertook additional duties.

From 1184/1771 onwards he was *Tes͟hrīfātdjī*, *Djebedjiler Kātibi*, *Mewḳūfātdjī*, *Büyük Ted͟hkiredji* and, four times, *Anadolu Muḥāsebedjisi*. Four times he either replaced or was replaced by Wāṣif as official historian.

His history, known as *Taʾrīk͟h-i Enwerī*, has never been published. It consists of three volumes, of which the first deals with the military and political events concerning the war against Russia which started in 1182/1769. In his introduction the author explains that "he has avoided an elaborate style, endeavouring not to omit any important events and trying to relate them in a clear and precise language" (MS Istanbul University Library, no. T.Y. 2437, fol. 2^a). Wāṣif altered this volume in some important particulars and then called it the first of his history. Djewdet Pas͟ha made considerable use of Enwerī's second volume, which deals with the period 1167-97/1754-83.

Enwerī also wrote poetry, although his work in this field does not deserve much attention. He could write Arabic and Persian, made the pilgrimage to Mecca and was known as a man of excellent character (v. Djemāl al-Dīn, *Āʾīna-i Ẓurafā*, Istanbul 1314, 57—the author's manuscript is at the Istanbul University Library, no. T.Y. 372, Faṭīn, *Ted͟hkira*, 20).

Bibliography: For the main MSS. of Enwerī, apart from those in the libraries of Istanbul University, Inḳilāb and Topkapîsarayî, see *Istanbul Kütüphaneleri Tarih-Coğrafya Yazmaları Katalogları*, Istanbul 1944, ii, 143-46; Babinger, 320; Meḥmed T͟hüreyyā, *Sidjill-i ʿOt͟hmānī*, Istanbul, 1308, i, 440; Meḥmed Ṭāhir, *ʿOt͟hmānlî Müʾellifleri*, Istanbul 1342, iii, 22; Sadeddin Nüzhet Ergun, *Türk Şairleri*, iii, 1303; Nail Tuman, *Katalog*, author's MS in Ist. Univ. Lib., 271.

ERDEL, ERDĪL or ERDELISTĀN, from the Hungarian Erdély (*erdö elve* = beyond the forest); Ardeal in Rumanian; Siebenbürgen in German; the Latin name Terra Ultrasilvas and later Transsilvania being a translation of the Hungarian—the province of Transylvania which now constitutes the western portion of Rumania. In Ottoman sources the name of Erdel occurs first in the *Rūznāme-i Süleymānī* in the course of a description of the reception into the Ottoman army of King Yanosh of the *wilāyet* of Engurūs (*i.e.*, of the Hungarians), who is described as having been formerly the Bey of Erdel (cf. Ferīdūn Bey, *Munshā'āt*, 2nd ed., Istanbul 1275, ii, 275). The variant Erdelistān occurs also in later sources (Naʿīmā, i, loc. var.; Ewliyā Čelebi, *Seyāḥat-nāme*, i, 181; Muṣṭafā Nūrī Pasha, *Natā'idj al-wuḳūʿāt*, ii, 72). Geographically speaking, Erdel borders on Boghdān (Moldavia) in the east, Eflāḳ (Wallachia) in the south, the Banat (from which it is separated by the Iron Gates—Demir [Temir, etc.]-Ḳapî) in the south-west, and the province of Marmarosh (Maramureș) in the north. Thus delimited, Erdel is a basin surrounded by the Carpathians and the Transylvanian Alps on three sides, and separated from the Hungarian plain by the Érchegység (Rom. Muntii Apuseni) mountains. Ottoman Erdel often exceeded, however, these geographical limits at the expense of neighbouring countries. Erdel can be subdivided into three main areas: the Erdel plain, higher and more broken than the Hungarian plain and crossed by the river Muresh and its tributaries; the country of the Sekels in the east, and, finally, the area of the southern Carpathians.

The first contact of the Ottomans with Erdel occurred in the middle of the 8th/14th century. In 769/1367, Dénes (Dennis), who had become *voyvoda* (prince) of Erdel after being *ban* (lord) of Vidin, fought the Bulgarians supported by Murād I. The first Ottoman campaign against Hungary and, therefore, Erdel is put by ʿĀshiḳpasha-zāde (ed. Giese, 60) in 793/1391. The large raid which occurred in 823/1420 under Meḥemmed I must have been the work of the frontier guards from Vidin. The following year the frontier *bey* of the Danube, encouraged by the *voyvoda* of Eflāḳ, captured and burnt down the city of Brashov. There were other raids in 829/1426 and 836/1432, the latter being led by Evrenos-zāde ʿAlī Bey, acting in conjunction with the *Bey* of Eflāḳ. Turkish historians speak of another raid by ʿAlī Bey (sent by Murād II) in 841/1437 (ʿĀshiḳpasha-zāde, *op. cit.*, 110; Neshrī, *Tewārīkh-i āl-i ʿOthmān*, Welī al-Dīn Efendī MS, no. 2351, f. 177). The following year, the Sultan himself entered the territory of Erdel for the first time, accompanied by Vlad Dracul, the *Bey* of Eflāḳ, and advanced as far as Sibin (Saʿd al-Dīn, i, 321). An interesting account of Ottoman customs and organization has been left by one of the Saxon prisoners taken during this campaign (*Cronica Abconterfayung der Türkei* ..., Augsburg 1531). Resistance against the Ottomans stiffened with the appearance on the scene of Yanku Hunyades (in Hung. Hunyadi János), "the White Knight of Wallachia", who after engaging the Ottomans at Semendere in 841/1437 and near Belgrade in 845/1441, defeated and killed the Ottoman commander Mezīd Bey in 846/1442. The same year Hunyadi, supported this time by Vlad Dracul, defeated in Wallachia Khādim Shihāb al-Dīn Pasha, the *Beylerbeyi* of Rūm-īli (Rumeli) and thus seized the initiative in the Balkans, preserving it until the fateful battle of Varna. Ottoman raids were resumed under Meḥemmed II: there was a raid in 879/1474 against Hunyadi's son, Matthias; a force of 30,000 troops entered Erdel in 884/1479, but was defeated; and there was yet another raid in 898/1493. During the temporary cessation of Ottoman raids which then followed, the Hungarian and Wallachian peasants of Erdel revolted (in 920/1514), but were suppressed by the feudal lords, an important part being played by the *voyvoda* of Erdel, John Zápolyai ("Sapolyayi Yanosh" in Pečewī, i, 108), who, after the battle of Mohácz, proclaimed himself King of Hungary at Istolni Belgrad [*q.v.*] (Hung. Székesfehérvár, Ger. Stuhlweissenburg) in 1526. Challenged, however, by the Archduke Ferdinand of Austria, Zápolyai fled to Poland, sending an ambassador to Istanbul to obtain the Sultan's support. This was granted in change for a recognition of Ottoman suzerainty, Zápolyai swearing allegiance to the Sultan in person during the Vienna campaign (Ferīdūn Bey, ii, 570; ʿĀlī, *Kunh al-akhbār*, Ist. Univ. Lib., no. 5959/32, f. 293). In 936/1530, Meḥmed Pasha, the *sandjaḳ-beyi* of Silistre (Silistria), supported by Vlad, *voyvoda* of Eflāḳ, captured Brashov and handed it over to Zápolyai, who appointed Stephen Báthory *voyvoda* of Erdel.

Ottoman supremacy in Erdel (948/1541-1110/1699): a few days before his death in 1540, Zápolyai secured the Sultan's agreement to the succession of his son John Sigismund (Pečewī, "Simon Yanosh" and "Yanosh Jigmon", i, 228 and 434 *passim*; but in other Ottoman sources he is generally called Istefan), this time against payment of a tribute (*kharādj*). During the Budin campaign, the boy was shown to Süleymān the Magnificent who granted him a *sandjaḳ* in the *wilāyet* of Erdel, with the promise of a kingdom later (cf. ʿĀlī, *Kunh al-akhbār*, f. 277). Ottoman supremacy was confirmed in the treaty of 948/1541, which provides for Ottoman protection against payment of a tribute, which was first fixed at 10,000 ducats, was raised to 15,000 between 983/1575 and 1010/1601, was then remitted for ten years and later still fixed again at 10,000. In the second half of the 11th/17th century it was again raised first to 15,000 and then to 40,000 gold coins (*altîn, altun*). It was also customary to give an annual present (*pîshkesh*) of 10,000 to 60,000 coins. The prince of Erdel was nominated by the local Diet, the Sultan confirming the choice by sending him a caparisoned horse, a standard, a sword and a robe of honour (for the order of precedence as between the prince of Erdel and the *voyvoda*s of Eflāḳ and Boghdān, see *Natā'idj al-wuḳūʿāt*, i, 137). There were also cases of the Porte rejecting a nomination or dismissing a prince, as in 1022/1613 with Gábor Báthory and in 1067/1657 with George Rákóczi II. The princes' foreign policy had to conform to the Porte's wishes, but they were free in their internal affairs. They were represented at the Porte first by special envoys, the first permanent agent (*ḳapu kakhyasî* = *kedkhudāsî* (in Erdel documents *kapitiha*), being appointed in 967/1560. This agent represented both the *Bey* of Erdel and the three local *millet*s (Hungarians, Germans and Sekels, the Wallachians being denied legal existence). His residence was in the Balat quarter of Istanbul, in a street known today as Macarlar Yokușu ("Hunga-

tians' Rise") near the residences of the agents of Boghdān and Eflāķ.

During John Sigismund's minority, the Diet appointed as regent the Croatian Catholic friar George Martinuzzi-Utyeszenicz (Utešenić) (in ʿĀlī, f. 287 "brata", *i.e.*, "brother"), who, however, handed over Erdel to the Habsburgs in 1551. The *beylerbeyi* of Rūm-ili Meḥmed Pasha Sokollu thereupon led an army into Erdel (ʿĀlī, f. 287). Martinuzzi made his peace with the Ottomans, but was then attacked by the Austrian General Castaldo and killed in 1552. A second army was sent to the Banat under Ķara Aḥmed Pasha who captured Temesvár (Timişoara). Castaldo withdrew from Erdel in 1553, the country being for a time ruled by *voyvodas* on behalf of the Habsburgs, until in 1556 the Diet invited back the Queen Mother Isabella and John Sigismund, who, coming from Poland, established their seat of government in the Belgrade of Erdel (Erdel Belgradî, Rum. Alba Julia, Hung. Gyulafehérvár, Ger. Karlsburg). John Sigismund ruled alone from 1559 to 1571 both over Erdel and over the northern districts of Hungary in constant competition with the Habsburgs. Although by the agreement of Satmar in 1564 he recognized Emperor Ferdinand as King of Hungary, peace was not long preserved, John appealing to the Sultan for help (cf. Pečewī, i, 412), and the latter responding by undertaking the Szigetvár expedition in 1566. John's reign witnessed also the revolt of the Sekels and the suppression of their traditional privileges in 1562 and the proclamation of religious toleration in Erdel by the Diet's decisions of 1564 and 1571. His successor Stephen Báthory (1571-6) managed to preserve a precarious balance between the Habsburgs and the Ottomans, by recognizing the Emperor Maximilian as King of Hungary and thus becoming his vassal by the treaty of Speyer in 1571, while continuing payment of tribute to the Porte. In 1576 he was elected King of Poland by the efforts of the Porte and of the Grand Vizier Sokollu Meḥmed Pasha (see Aḥmed Refīķ, *Sokollu Meḥmed Pasha ve Lehistān intikhābātî*, in *TOEM*, 6th year, 664 ff.), Erdel being governed until 1581 by his brother Christopher Báthory and then until 1602 (although with intervals) by his son Sigismund Báthory. The latter wavered in his loyalty to the Porte, entering the Holy League in 1593 and executing the leaders of the pro-Turkish party in 1594 at a time when he pretended to be getting ready to join the Ottoman army under Ķodja Sinān Pasha. He incited the *voyvodas* of Boghdān and Eflāķ against the Ottomans and defeated in 1003/1595 the Ottoman army sent to suppress their rebellion. After the severe defeat suffered by the Imperialist forces at the battle of Mezö-Keresztes in the following year, he withdrew from Erdel, relinquishing the rule to his cousin Cardinal Andreas Báthory, who had been brought up at the Polish court and was, therefore, pro-Ottoman. The latter was, however, defeated by the rebellious *voyvoda* of Eflāķ, Mikhal (Michael), who was in turn killed by the Austrians. The latter then occupied the country, foiling an attempt by Sigismund Báthory to re-establish his rule. In 1603 a Sekel nobleman, Székely Mózes, made an unsuccessful attempt to oust the Austrians with Ottoman support. An Erdel nobleman, Stephen Bocskay, who had fled to the Ottomans (see Naʿīmā, i, 386) was more successful, and by the treaty of Vienna in 1606, the Emperor Rudolf recognized him as prince of Erdel. His death was followed by a period of instability which included the tyrannical rule of Gábor Báthory (1608-13), known in Ottoman sources as "the mad king". The *beylerbeyi* of Kanije, Iskender Pasha, succeeded in deposing him and in getting the diet at Kolojvár to elect in his place Gábor Bethlen, whose rule marks the golden age of the principality of Erdel. His death in 1629 was followed by a short interregnum, his policy of safeguarding local autonomy through co-operation with the Ottomans being re-established by George Rákoczi I (1630-48). In 1046/1636 the Ottomans made an unsuccessful attempt to unseat him in favour of Gábor Bethlen's brother, Stephen Bethlen. George Rákoczi I was succeeded by his son George II (1648-57, 1658, 1659-60), whose unsuccessful attempt to gain the crown of Poland against the wishes of the Porte led eventually to his death, Erdel being occupied by Ottoman troops. One of the prisoners taken by the Ottomans in Kolojvar was the young Hungarian who later embraced Islam and became known as Ibrāhīm Müteferriķa [*q.v.*]. Ottoman supremacy in Erdel was re-established in the Köprülü period, the principality being governed from 1072-3/1662 to 1101/1690 by the Ottoman nominee Michael Apafiy. The fate of Erdel autonomy was, however, sealed when Austria gained the upper hand in her wars with the Ottomans, Michael Apafiy himself allowing Habsburg troops to enter his country. In 1102/1691 the famous *Diploma Leopoldinum* fixed the status of Erdel as a Habsburg crown land, the local Diet being, however, kept in existence. Austrian sovereignty was legally recognized by the treaty of Karlowitz (Karlofča) in 1110/1699. Francis Rákoczi II tried in 1703 to put the clock back: after a local revolution he was chosen prince in 1704, but was defeated in 1710 and fled to France the following year. An attempt was made by the Ottomans to make use of him in their war with Austria in 1127/1715, but, after the treaty of Passarowitz he and his Hungarian companions had to withdraw and were settled at Tekirdagh (Rodosto in Thrace) (cf. Rāshid, iv, v, *passim*; Aḥmed Refīķ, *Memālik-i ʿOthmāniyyede Rakoczi ve tewābiʿi*, Istanbul 1338; M. Tayyib Gökbilgin, *Rakoczi Ferenc II ve tevâbiine dair yeni vesikalar*, in *Belleten*, v/20, 1941). A similarly unsuccessful attempt was made by the Ottomans to make use of the latter's son Jozsef, all Ottoman designs on Erdel being finally abandoned with the peace of Belgrade in 1152/1739.

The main events in the post-Ottoman history of Erdel are the submission of a large number of local Rumanian Orthodox to the Pope (the Union of 1700), the Rumanian peasant rising of 1784, the decision of the Diet in 1848 to merge with Hungary and finally the accession of Erdel to Rumania under the treaty of Trianon in 1920.

EPDJÎSH [see ardjîsh].

ERDJIYAS (or Erdjiyes) **DAGHÎ** (modern spelling Erciyas), the Argaeus Mons of antiquity, referred to by Ḥamd Allāh Mustawfī (*Nuzha*, 98, 181) as Ardjāst-kūh, the highest mountain in Central Anatolia. It is an extinct volcano, with a height of 3,916 m. (= 12,847 ft.), which rises rather suddenly from the surrounding plain of an average height of 1000 m. (= 3,280 ft.). It is some 20 km. (12½ m.) to the south of the town of Kayseri, almost precisely 38° 30′ N., 35° 30′ E., and covers an area of roughly 45 km. (28 m.) from east to west and 35 km. (21½ m.) from north to south. Certain early sources say it was still active in antiquity. Today, the Erciyas-Dağ is completely bare and permanently covered with snow. In it there rises the Deli-Su, which flows into the Kara-Su, a tributary of the Kızıl-Irmak.

A route, in use since antiquity, leads from Kayseri to Everek and Develi in the south, over the pastures of Tekir Yaylası (at a height of 2000 m. (6,561 ft.)) between the eastern slope of the Erciyas Dağ and its eastern neighbour Koç-Dağı (2500 m. (= 8,202 ft.)). The main route to the south, however (also since antiquity), skirts round Erciyas towards the west, leading via Incesu to Niğde and Bor, the ancient Tyana.

Erciyas Dağ was first climbed by W. J. Hamilton (1837), and then again by Tchihatcheff (1848), Tozer (1879), and Cooper (1879). After these, the most important ascent was that of Penther and his group in 1902. There were several ascents after 1905 (those up to 1928 are listed by E. J. Ritter, *Erdjias Dag*, Innsbruck 1931, 135 ff.). The area has recently been used for ski-ing.

Moltke, *Briefe über Zustände und Begebenheiten in der Türkei*, Berlin 1911, especially 330; more recent bibliography of works concerning Erciyas Dağ (since Hamilton), compiled by Besim Darkot in his article *Erciyas-Dağı* in *IA*, iv, 286-8, to which must be added a most important contribution, Gerhart Bartsch, *Das Gebiet des Erciyes Daği und die Stadt Kayseri in Mittel-Anatolien*, in *Jahrbuch der Geographischen Gesellschaft zu Hannover für 1934 und 1935*, Hanover 1935, 87-202. (Fr. Taeschner)

EREĞLI, Turkish adaptation of the place-name Heraclea, given to a number of places in Turkey, of which the most important are:

1) Karadeniz Ereğlisi (Ereğli on the Black Sea), Heraclea Pontica, hence formerly (as in *Djihānnümā*, 653) known as Bendereğli: a small town on the coast of the Black Sea, 41° 17′ N., 31° 25′ E., in the region of the coalfields formerly named after it, but now called after Zonguldak.

The *kaza*, now in the *vilâyet* of Zonguldak, was once in the *sandjak* (or *liwā'*) of Bolu. This used to belong to the *eyālet* of Anadolu, and in the 19th century to the *wilāyet* of Kastamonu. The place has 8,815 inhabitants (1960) and the district 67,661.

Bibliography: Pauly-Wissowa, 8, 433; V. Cuinet, *La Turquie d'Asie*, iv, 512.

2) Konya (formerly Ḳaramān) Ereğlisi, τὸ Ἡρακλέως Κάστρον in Theophanes, i, 482 (ed. de Boor), ἡ τοῦ Ἡρακλέος Κωμόπολις of Michael Attaliata, 136 (ed. Bonn), the Hiraḳla of the Arabs, Erāklīya of Ibn Bībī (transl. Duda, 19, 238 f.), in Turkish occasionally in the more archaic form Hirāḳla or Hiraḳlīya, Reclei or Reachia to the Crusaders (Tomaschek, *Zur historischen Topographie von Kleinasien*, 84, 88, 92), Araclie in Bertrandon de la Broquière (ed. Ch. Schefer, 104 f.): a town in south-western Anatolia, near the central chain of the Taurus, from which rivers flow in a northerly direction into the Ereğli plain. These rivers make the town an oasis of vegetation, but disappear further on into marshy ground. The position of the town is 37° 30′ N., 34° 5′ E. It is the capital of a *kaza* in the *vilâyet* of Konya and has 32,057 inhabitants; the district has 46,324 (1960).

South of Ereğli, where the river emerges from a ravine in the Taurus, near Ivriz, there is a famous late Hittite rock carving, depicting the river-god dispensing corn and grapes, and being worshipped by the king of Tyana (Assyr. Urballa, Hitt. Varpallawa, ca. 730 B. C.), the modern Bor.

In Byzantine times, Ereğli was a frontier fortification on the way from Iconium to Cilicia. It was conquered several times by the Arabs, most notably by Hārūn al-Rashīd in Dhu 'l-Ḳa'da 190/Sept.-Oct. 806 (Ṭabarī, iii, 709 ff. = Theophanes, *loc. cit.*), but remained Byzantine until the Saldjūḳ Turks conquered it (supposedly in 484/1091, see Ewliyā Čelebi, iii, 28). After the collapse of the Rūm-Saldjūḳ empire, the town came under the rule of the Ḳaramānids, and finally, together with the other Ḳaramān regions, it came under Ottoman rule in 871/1466.

The Ulu Djāmi' is a rather remarkable mosque with a flat roof. The *Djihānnümā* claims that it was founded by the Ḳaramān-oghlu Ibrāhīm (but the *Menāsik al-ḥadjdj* attributes its foundation to the Saldjūḳ Ḳilīdj-Arslan). The Türbe Djāmi'i (a small mosque with an estrade built onto it, containing the grave of Shihāb al-Dīn Suhrawardī Maḳtūl which is also mentioned in the *Djihānnümā*) is also worthy of note. There is also a large *khān* in the town, supposed to have been built by Sinān for Rüstem Pasha in the 15th century.

Ereğli was a halt on the pilgrim route, and since 1908 it has become an important station on the Baghdād Railway from Konya.

Taeschner])

ERETNA (Ärätnä, Ärdäni ?), name of a chief of Uyghur origin, who made his fortune in Asia Minor as an heir of the Ilkhānid régime. The name is perhaps to be explained by Sanskrit *ratna* 'jewel',

common among the Oyghur after the spread of Buddhism (communication from L. Bazin); this was of course no bar to the family becoming Muslim, like all the Mongols and Turks in the Ilkhānid state. Eretna, who was probably an officer in the service of Čūbān/Čoban [see ČŪBĀNIDS], settled in Asia Minor as a follower of the latter's son, Tīmūrtāsh, was appointed governor by the Ilkhān Abū Saʿīd, and went into hiding during his master's revolt; after Tīmūrtāsh had been compelled to flee to Egypt, where he was to meet his death (727/1326), Eretna was invested with the succession to the rebel, under the general suzerainty of Ḥasan the Elder, the master of Ādharbāydjān. When, after the disorders which followed the death of Abū Saʿīd, this Ḥasan was defeated by Ḥasan the Younger, son of Tīmūrtāsh, Eretna sought and obtained the protection of the Mamlūk sultan al-Nāṣir Muḥammad (738/1337), and in 744/1343 defeated Ḥasan the Younger who had become master of Ādharbāydjān, which certainly helped his prestige. After this he appears as an independent sovereign over all those territories of central Asia Minor which the Turkoman principalities that arose after the breakdown of the Saldjūḳid-Mongol régime had not divided among themselves; that is, in a more or less stable form, the provinces of Nigde, Aḳsarāy, Ankara, Develi Ḳaraḥiṣār, Derende, Amāsya, Toḳāt, Merzifūn, Samsūn, Erzindjān, Sharḳī Ḳaraḥiṣār, with first Sīwās and later Ḳayseri as capital. He called himself sultan, with the *laḳab* ʿAlāʾ al-Dīn, and struck coins in his own name. He knew Arabic, scholars call him a scholar, and his people, appreciative of an administration which maintained some order in a troubled world, called him, it is said, *Köse Peyghamber*, "the Prophet with the Scanty Beard". He died in 753/1352, leaving his principality to his son Ghiyāth al-Dīn Muḥammad (Meḥmed) who, maintaining the Mamlūk alliance, successfully withstood the revolt of his brother Djaʿfar.

The *begs*, however, were here as everywhere undisciplined, and in 766/1365 Meḥmed fell victim to an attack fomented by them; under his son ʿAlāʾ al-Dīn ʿAlī Beg, who is said to have cared only for pleasure, the *begs* of Amāsya, Toḳāt, Sharḳī Ḳaraḥiṣār, even Sīwās, and especially Tahartan the *beg* of Erzindjān, acted like autonomous or rebel lords, while the Ḳaramānids and the Ottomans stripped the Eretnid principality of its western possessions, and the Aḳ-ḳoyunlu of some of its eastern dependencies. In effect, government was now exercised by the *ḳāḍī* Burhān al-Dīn [*q.v.*], son and grandson of the *ḳāḍīs* of Ḳayseri, who had already been influential under the previous princes. ʿAlī was killed in 782/1380 in a campaign against the rebel *begs*; Burhān al-Dīn, during a struggle by rival claimants, eliminated the young heir Muḥammad (Meḥmed) II, and proclaimed himself sultan directly, thus putting an end to the dynasty.

It is unfortunate that the state of the documentation allows us to form no precise idea of the Eretnid régime. At the most some inferences can be drawn from comparisons between descriptions (Ibn Baṭṭūṭa, al-ʿUmarī) dating from the dawn of the dynasty, and a chronicle (the *Bezm u Rezm*) and travellers' accounts (Schiltberger, Clavijo) of ten or twenty years after its end. The originality of the system of government, the effective reality of which requires examination, lies in the fact that here, from the Mongol régime to the Ottoman conquest, there was no interlude of government by Turkoman dynasties as in all the surrounding territories. The Turkoman element in the central provinces was apparently less strong than the surviving Mongol tribes, and the towns seem to have enjoyed a certain prosperity. The culture of the aristocracy, and commerce also, were perhaps directed more than in the previous period towards the Arabic-speaking Syro-Egyptian domain, without however destroying the interest in Persian culture. The contrasts must not, however, be made too much of; in the Eretnid domain, as in the neighbouring small states, there developed the institution and power of the urban *akhīs*, the influence of the aristocratic (Mewlewī) and popular religious orders, literature in Turkish in the form of translations from Persian (Yūsuf Meddāḥ of Sīwās), learned poetry (that of Burhān al-Dīn, with which in part the Eretnid period must be credited), and popular heroic romances (the second *Dānishmendnāma*, at Toḳāt, an adaptation of a Saldjūḳid original); the few extant specimens of art in the Eretnid regions call for no particular remark. It does not appear that the reign of Burhān al-Dīn, who was himself of Turkish birth, broke with the Eretnid traditions.

Bibliography: The only mediaeval author to give a general résumé of the history of the Eretnid dynasty is Ibn Khaldūn, v, 558 ff., whose information on their relations with the Mamlūks is confirmed by the Mamlūk historians down to al-ʿAynī. On the beginnings of the régime, valuable details are given by Ibn Baṭṭūṭa, ii, 286 ff. (Gibb, ii, 433 ff.), and by Shihāb al-Dīn al-ʿUmarī, ed. Taeschner, 28 *et passim*, and Eflākī, ed. T. Yazıcı, Ankara 1959-61, ii, 978, = tr. Huart, ii, 415 (last chapter), and by the Shāfiʿī *Ṭabaḳāt* of al-Subkī. For the end of the régime, from the point of view of Burhān al-Dīn, see the history of the latter, under the title *Bezm u rezm*, by ʿAzīz b. Ardashīr Astarābādī, [ed. Kilisli Rifat], Istanbul 1928 (analysis and commentary by H. H. Giesecke, *Das Werk des* ..., 1940), and, for the eastern frontier, the history of the Aḳ-Ḳoyunlu expansion composed under the title of *Kitāb-i Diyārbakriyya* by Abū Bakr Tihrānī (2nd half of the 9th/15th century) and recently published by Faruk Sümer (i, Ankara 1962); see also the Persian (Ḥāfiẓ Abrū, etc.) and Ottoman (Münedjdjim Bashī, in the Arabic manuscript text) general histories; there are many mentions of the Eretnids in the historical romance of Shikārī (ed. M. Mes'ud Koman, 1946), devoted to the Ḳaramānids; the Trebizond, Genoese and Armenian sources should also be examined.—A good inventory of the coins appears in the catalogue of the numismatic collections of the Istanbul Museum by Aḥmed Tewḥīd, iv, 346 ff.; the epigraphic material of the Eretnid regions is collected in vol. xv of *RCEA*, based especially on the researches of Ismāʿīl Ḥakkī [Uzunçarşılı] (*Sīwās Shehri*, *Ḳayserī Shehri*, etc.), and Max van Berchem and Khalīl Edhem, *CIA*, iii, 40 ff. For the archaeology see also A. Gabriel, *Monuments turcs d'Anatolie*, 2 vols.—Here as elsewhere there is the possibility of extracting further information from later Ottoman texts, where traces of earlier institutions may be preserved; there are also *waḳfiyyes* which might be published and exploited. Besides the tables of Khalīl Edhem, *Düwel-i Islāmiyye*, and Zambaur, 155, the only modern general exposé is that of I. H. Uzunçarşılı, *Anadolu beylikleri*, chap. xv, based largely on Aḥmed Tewḥīd, *Benī Eretna*, in *TOEM*, v (1330), 13-22, and reappearing in the same author's résumés in *İA* and in *Osmanlı*

tarihi, i; see also Mustafa Akdağ, *Türkiye'nin iktisadî ve içtimaî tarihi*, i, 1959, index; Z. Velidi Togan, *Umumi Türk tarihine giriş*, i, 232-6, 448; Spuler, *Mongolen*, esp. 355, and the works cited above of van Berchem, Khalīl Edhem, Giesecke and Gabriel, and also the histories of literature, to be completed by the recent book of I. Mélikoff, *La geste de Melik Dāniṣmend*, 2 vols. 1960, Preface.

(Cl. Cahen)

ERGANI (Arghanī, sometimes Argani, in European sources Arghana until recent times), centre of a *kaza* in the *vilâyet* of Diyār-Bakr [*q.v.*], called for a time ʿOthmāniyya (Osmaniye), situated on the highroad from Diyār-Bakr to Harput. 18 kms. to the north-west, on the river Tigris, lies the mining town of Erghani-Maʿden(i), which is the centre of a *kaza* of the *vilâyet* of Elazîgh (El-ʿAzīz) called after Erghani. Although the two towns lie apart, they are confused in some sources.

The name ʿOthmāniyya given to Erghani had to be abandoned because it gave rise to confusion with the town of ʿOthmāniyya (Osmaniye) in Djebel Bereket to the east of Adana [*q.v.*]. The town of Erghani is situated at an altitude of 1000 metres on the steep south-east slope, overlooking a deep gully (Hushut Deresi), in a limestone mountain rising to a height of 1526 metres, 10 kilometres from the right bank of the Tigris. Below the town lie fields and gardens, while above on the slope overlooking Erghani lies the old town. A near-by hill is called after Nabī Dhu 'l-Kifl [*q.v.*], who is reported to be buried there. The station of Erghani on the Diyār-Bakr—Malaṭya railway line lies in a valley, 6.5 kms. south of the present town of Erghani.

The town of Erghani, called Argani in Armenian sources, may have inherited the site of Arkania mentioned in cuneiform writings. It is also not impossible that this was also the site of one of the cities of Arsinia mentioned in the Peutinger Table. In Islamic times the fate of Erghani was linked with that of Diyār-Bakr (for history, see diyār-bakr). After the victory of Čaldîran [*q.v.*] won by Selīm I in 920/1514, and through the services of Idrīs Bidlīsī, Erghani became a *sandjak* attached to the *eyālet* of Diyār-Bakr, the district of Diyār-Bakr having been conquered for the Ottomans by Bîyîklî Meḥmed Pasha. Cuinet, writing towards the end of the 19th century, gives the population of the town of Erghani as more than 6,000. It was at that time that the centre of the *sandjak* of Erghani was transferred to the township of Maʿden, in view of the importance of the copper mines there. After the foundation of the Turkish Republic, the *ḳaḍā* of Maʿden was attached to the *wilāyet* of El-ʿAzīz, and that of Erghani (Osmaniye) was left in the *wilāyet* of Diyār-Bakr. The *kaza* of Erghani covers an area of 1595 sq. kms. and includes 68 villages. According to the results of the 1960 census, the population of the district amounted to 28,095 and that of the town of Erghani to 8,542.

The township of Erghani-Maʿden (known now usually simply as Maʿden) is situated on the lower slopes of Miḥrab Daghî overlooking the right bank of the Tigris (Didjla, known here as Erghani-Suyu). Its fortunes have always depended on that of the rich copper vein situated in the vicinity. The existence of the mine was known in ancient times, but it cannot be stated with certainty when it was first exploited. It seems to have been worked in the beginning of the 12th century, since when it was exploited at irregular intervals. Considering that there is no mention of the mine either in Ewliyā Čelebi's *Seyāḥat-nāme* or in the *Djihān-nümā*, exploitation seems to have been interrupted in the middle of the 17th century. At the beginning of the 19th century, the traveller Olivier mentions that part of the ore mined in a place called Hapur was sent to Baghdād. In 1837 Brant states that the local population, which was engaged largely in mining, amounted to 3,500 people. According to Cuinet, at the end of the century the mine was worked by the State, the ore being smelted locally with firewood and refined into black copper and then sent by camel or mule to Tokat where it was further refined into red copper, or exported via Iskenderūn. At the beginning of the 20th century, the fall in the world price of copper, the absence of roads between the mining area and ports of export and the destruction of local forests led to the abandonment of the mine. A resumption of exploitation became possible only after the foundation of the Turkish Republic, when after the completion of the Diyār-Bakr railway in 1935 it became practicable to send coal to the mining area and to export the copper easily. 8,103 tons of copper were produced in 1941. Exploitation has also started of the rich chromium deposits at Ghulemān, north-east of the Erghani copper mine. The *kaza* of (Erghani) Maʿden covers an area of 1,040 sq. kms. and includes 54 villages. According to the results of the 1960 census, there were 19,399 inhabitants of the district and 8,011 of the township.

(Besim Darkot)

ERGENEKON, the name of a plain surrounded by mountains, mentioned in the legend of the origin of the Mongols.

An associated legend in the Chinese Chronicle of Pei-shih (ed. in about 629) explains the origins of the T'u-chüeh as follows. This people lived on the shores of the Western Sea, Hsi-hai. They were massacred by a neighbouring people. Only a young boy survived,

although wounded. A she-wolf who protected and fed him became pregnant by him. She led him through a grotto to a plain surrounded by mountains. There she gave birth to ten boys who were the ancestors of the ten clans. The founder of the A-shih-na clan, who was the most intelligent, became the sovereign of the T'u-chüeh After some generations, under A-hsien-shih, the T'u-chüeh left the interior of the mountains and submitted to the Juan-juan.

Rashīd al-Dīn, and after him Abu 'l-Ghāzī Bahādur Khān, relate the same legend, with certain variations, and attribute it to the Mongols; the Tatars conquered and wiped out the Mongols. Two princes and their wives were the only survivors of the massacre and, following a narrow track, they took refuge in a plain surrounded by mountains, called Ergenekon. There they multiplied and when, four hundred years later, Ergenekon became too small for them, they contrived to make their way out by causing part of a mountain-side to crumble away by means of a huge fire, on the advice of a blacksmith.

The day consequently became a festival and its anniversary was celebrated by the Mongol sovereigns.

ERGİN, OSMAN (ʿOthmān Nūrī) Turkish scholar and publicist, was born in 1883 in Imrin, a village (now a district centre) in the *wilâyet* of Malatya. His father Ḥādjdjī ʿAlī, of a family of humble farmers, tried his fortune in trade and after many journeys, including one in Rumania, settled in Istanbul, where he opened a coffee-house. The little Osman, who had memorized the Ḳur'ān in the village, was brought to Istanbul in 1892 where, after attending various modern schools, he entered the Dār ül-Shafaḳa, a leading private school of high standard, and graduated second of his class in 1901. The same year he was appointed an official in the Municipality of Istanbul. Spurred by a love of learning, for three years he attended, in his spare time, the courses of traditional sciences of a *khodja* at the Shehzāde mosque. This type of training, which he was later bitterly to criticize, did not satisfy him, and he registered at the Faculty of Letters of Istanbul University whence he graduated in 1907 with a first class degree. Osman Ergin continued as a municipal official until his retirement in 1947, rising in his career from a simple clerk to be a *mektūbdju*, the office he held for twenty-two years. He was also a successful teacher and taught until 1956 in various secondary and professional schools of Istanbul, including his own Dār ül-Shafaḳa and the American College for Girls. He died in 1961 in Istanbul.

Osman Ergin had a lively and inquisitive mind and was very erudite. His life-long research in the archives and libraries of Istanbul soon made him a leading authority on the history of municipal and educational institutions of Istanbul. Unbending in his principles, loyal in his friendships, "the *Mektūbdju* Osman Bey" was one of the most remarkable characters among scholars of his generation, liked and respected by everyone.

Apart from his very numerous books on various subjects and his biographical and bibliographical monographs, some still unpublished, he was the author of the following major works:

1) *Medjelle-i Umūr-i Belediyye*, 5 volumes, Istanbul 1330-8, the first of which is a richly documented historical introduction to municipal institutions in Islam and in Turkey, particularly the city of Istanbul, a standard reference book on the subject; the other volumes contain a collection of laws, bye-laws, regulations, Council of State decisions, etc. concerning municipal administration.

2) *Türkiye maarif tarihi*, 5 volumes, Istanbul 1939-43 (a promised sixth volume did not appear). Originally planned as a "History of schools and other educational and scholarly institutions of Istanbul", it was developed later into a history of education in Turkey. This pioneer work, which is a mine of information, remains, in spite of some technical shortcomings, the only comprehensive work of reference on the subject. The history and development of all types of schools in Turkey are elaborately discussed: *medreses*, the palace school, military schools, old and new style technical and professional schools, semi-educational institutions and their auxiliaries in the Ottoman Empire, European types of schools of all grades, private, foreign and minority schools, universities and various institutions of higher education, etc., are amply treated. Special emphasis is given to the detailed and comparative analysis of the evolution of syllabuses in the many types of school. Many of the controversial educational problems arising from social change in Turkey are discussed at length and the book abounds in anecdotes and personal notes which make it extremely interesting reading.

3) *Istanbul şehri rehberi*, Istanbul 1934, is the outcome of his long research preparatory to the first modern census of the city of Istanbul in 1927 (as part of the first general census in Turkey). This is the best detailed topographical study of Istanbul with street names and thirty-eight maps.

4) *Türkiye'de şehirciliğin tarihî inkişafı*, Istanbul 1936, a survey of most of the problems discussed in the *Medjelle-i Umūr-i Belediyye*.

Şehsuvaroğlu, *Osman Ergin'in biyografyası*, in the same publication. (Fahir İz)

ERGIRI (Argiri, Ergeri), Ottoman name of Argyrokastro, Alb. Gjinokastër, principal town of Albanian Epirus (40° 13′ N., 20° 13′ E.) near the foot of the eastern slopes of the Mali Gjerë; overlooking the wide and fertile valley of the Drin, a tributary of the Voyutsa (Vijosë), it controls the route from Valona into Northern Greece. The town, near the site of the ancient Hadrianopolis, probably takes its name from that of an Illyrian tribe. The district came under Ottoman control in the reign of Bāyezīd I. In the *defter* of 835/1431 'Argiri-ḳaṣrī' (its district being called *wilâyet-i Zenebish*, *i.e.*, of the Zenebissi family) appears as the chef-lieu of the sandjaḳ of 'Arvānya'; later (certainly by 912/1506) it formed part of the sandjaḳ of Avlonya; in the last years of the Empire it was again a sandjak, belonging to the *wilâyet* of Yanya. Ewliyā (1670) describes a thriving, solidly-built town, with a predominantly Muslim population. Gjinokastër, now extending into the valley (present pop. ca. 12,000), is dominated by the mediaeval (Venetian?) castle, reconstructed by ʿAlī Pasha of Tepedelen [*q.v.*]; many of its old houses

survive, built in the characteristic fortress-like style which impressed Ewliyā.

(V. L. MÉNAGE)

ERITREA, a territory with a sizeable Muslim population in North-East Africa, bordering on the Red Sea, since 1952 federated with Ethiopia, since 1962 fully integrated in the Ethiopian Empire.

(*i*) Geographically, historically, and ethnically Eritrea has generally formed part of a larger unit which will be treated under AL-ḤABASH. In the following, special emphasis will be placed on such features and Islamic manifestations as are peculiar to Eritrea in the narrow sense. 'Eritrea' (from *Mare Erythraeum*) was so named by the Italians in 1890 to describe their growing possessions (initiated in 1869 by the purchase of the port of Assab [*q.v.*]) on the Red Sea coast, the *Baḥrmeder* ('sea country') or *Mareb Mellash* ('beyond the river Mareb') of the Abyssinians.

In the north and west Eritrea's triangular shape (enclosing nearly 50,000 square miles of extremely variegated country) borders upon the Sudan, in the east on the Red Sea, in the south-east corner upon French Somaliland whence the old frontier with Ethiopia proceeds in a north-westerly direction along the Danḳali [*q.v.*] depression and then following the Mareb-Belesa line. The physical configuration of the country is marked by the vast central mountain massif (6500-8000 feet above sea-level) extending southwards into Ethiopia and surrounded by the torrid plains in the east, west, and north.

(ii) Population: With the exception of the Djabart [*q.v.*], the vast majority of Muslim Eritreans live in those hot regions of the east, west, and north. Their number reaches about half a million in a total population of approx. 1,100,000, among whom the monophysite Christian element wields most of the political power. While the Christians and Djabart, concentrated in the densely populated central highlands, speak Tigrinya (see below), the vast majority of the Muslims, sedentary or nomadic in the sparsely inhabited lowlands, use Tigre (see below) and, to a very limited extent, Arabic. They are the descendants of Bedja [*q.v.*] or other Cushitic tribes and early South-Arabian immigrants. The Banū ʿĀmir [*q.v.*] or Beni Amer are the largest tribal federation, numbering about 60,000 (with an additional 30,000 in the Sudan) and occupying a considerable portion of Western Eritrea. They owe allegiance to a paramount chief, the Diglāl [*q.v.*], and acknowledge the religious leadership of the Mirghani family. In the northern hills the Habab, Ad Tekles, and Ad Temariam form the tribal federation of Bet Asgede. The Ad Shaykh have their encampments between the Habab and the Ad Tekles; they claim descent from a Meccan family, but most of these tribal memories are incapable of proof. The Bilen (or Bogos) in the Keren area consist of two large tribes (Bet Tarke and Bet Takwe). The Saho live along the eastern escarpment and the foothills leading to the tribal confederacy of the Danāḳil who inhabit the vast arid depression behind the Red Sea coast, one of the hottest and most barren regions in the world. The population of the port of Massawa (and to a much lesser extent of Arkiko and Assab) is cosmopolitan and includes tribesmen from the hills, Danāḳil, Sudanese, Arabs, Indians and groups of Turkish descent. The unifying factor is Islam. The people of the barren Dahlak [*q.v.*] islands off the Massawa coast were among the first in East Africa to be converted to Islam, and many tombstones in Kūfic characters bear witness to this early Muslim connexion.

(iii) Eritrea's history is so entwined with that of Ethiopia and South Arabia, on the one hand, and the Sudan, on the other, that it is difficult to disentangle the few independent facets of its past. South Arabian immigrants settled along that part of the western Red Sea coast which is now Eritrea. From here they subsequently penetrated into the interior and established the Aksumite Kingdom which has left so many traces within the soil of Eritrea. Later, Eritrea became the base from which the Aksumite hegemony over a large strip of the coast of south-west Arabia was launched. Here also was the avenue through which contacts, hostile as well as cultural, with Meroe and its civilization flowed. As Ethiopia's traditional maritime province and only outlet to the sea, Eritrea became the spring-board of both Muslim assault, leading to centuries of struggle, and Portuguese rescue from that domination. In the 10th/16th century Massawa and Arkiko were the base from which the Turks attempted their invasion of the Christian plateau (an event perpetuated in the title of the *nāʾib* of Arkiko, the representative of the Ottoman power), and in the nineteenth the Egyptians repeatedly fought to gain a permanent foothold in Eritrea until they were decisively defeated by the Emperor John near Gura (1876). Sir Robert Napier launched his successful campaign against Theodore (1867-8) from the Bay of Zula, and the Italians carved out their Eritrean colony from those parts of the maritime province for which the Shoan Emperor Menelik II (in contrast to his Tigrean predecessor John) was either unable or unwilling to fight. Twice within 40 years the Italians despatched their armies from Eritrea into Ethiopia until they were finally dislodged during the Second World War. From 1941 to 1952 a British Military Administration had charge of Eritrea, a period during which both Muslim and Christian political ambitions first asserted themselves. A plan to do away with Eritrea as an artificial political entity (by incorporating the Muslim West with the Sudan and the Christian centre with Ethiopia) finally came to grief when the United Nations decided (1950) to constitute Eritrea as an autonomous federal unit under the sovereignty of the Ethiopian crown. This uneasy arrangement gradually led to Eritrea's full absorption, for no constitutional safeguards could make the territory economically or politically viable. The large Muslim minority enjoys reasonable religious and political expression in the Christian Empire.

(iv) Languages: Tigrinya and Tigre are both successor languages of Semitic Ethiopic (Geʿez); the former is spoken by the Djabart of the highlands, while the latter is the principal tongue of the Muslims in the western and eastern lowlands and the northern hills. In the Kassala province of the Sudan Tigre is called *al-Khaṣṣiya*. Dialectal distinctions within Tigre have not yet been fully worked out. Tigre cannot boast any written literature and it is

losing some ground in favour of Arabic, which among Muslims and traders enjoys a cachet which Tigre does not possess. The decision of the Eritrean government, in 1952, declaring Tigrinya and Arabic the official languages of Eritrea (although most Tigre-speakers know little or no Arabic) was a political and prestige resolution—not a linguistic judgement. The two main non-Semitic languages spoken by the Muslims of Eritrea are Bedawiye and Bilin.

(v) Religion: Islam has been a force in Eritrea-Abyssinia ever since Muḥammad sent some of his earliest followers to seek refuge with the Negus. Throughout the Middle Ages Muslim pressure from the Red Sea compelled Abyssinians to fight for their own form of Christianity. But in Eritrea as well as Ethiopia, though nearly half the population are Muslims, Islam has not succeeded in piercing the defensive armour of monophysitism and in transforming its essential fabric. On the contrary, the D̲j̲abart have been so completely assimilated to the cultural, linguistic, and national pattern of traditional Abyssinia that their religion seems strangely disembodied. Islam is, however, still making progress among the Cushitic and Nilotic peoples in the lowland areas, but none among the highland population. The universal call of Islam has a special attraction in all those regions where the particularistic and national message of monophysite Christianity has no genuine application.

The Ḳādiriyya became firmly entrenched in the coastal areas of Eritrea, especially at Massawa and its hinterland. But the most influential order in Eritrea is undoubtedly the Mīrg̲h̲aniyya or K̲h̲atmiyya, based on Kassala, which is predominant in the western regions, especially among the Beni Amer, Habab, and other Muslim tribes. According to the last Italian census (1931) the relative strength of the *mad̲h̲āhib* in Eritrea is as follows: Mālikites: 65%; Ḥanafites: 26%; S̲h̲āfiʿites: 9%. While the *s̲h̲arīʿa* is generally subordinate to customary law among many of the tribes, it still prevails in urban areas. The secular government, both European and Ethiopian, has encouraged the development of Muslim civil law and the establishment of *Ḳāḍī*'s courts.

ERIWAN [see REWĀN].

ERMENAK or **ERMENEK**, the ancient Germanikopolis in Isauria (see Pauly-Wissowa, vii, 1258), a small town in southern Anatolia, 36° 35′ N., 32° 50′ E., in the western Taurus mountains, at an altitude of ca. 1200 m. (3937 ft.), above the confluence of two of the source-rivers of the Göksu, the Kalykadnos of antiquity. It is the capital of a *kaza* in the *vilâyet* of Konya, formerly in the *sand̲j̲aḳ* of Ičel in the *wilāyet* of Adana. In 1960, it had 7,536 inhabitants and the district 36,380. Mediaeval Oriental writers put Ermenāk two days' journey south of Lārende (the modern Karaman), and three days' journey east of ʿAlāʾiyya (the modern Alanya). Its grotto with a spring was particularly famous.

Ermenāk originally belonged to the kingdom of Lesser Armenia. It was conquered by the Rūm-Sald̲j̲ūḳ Sulṭān ʿAlāʾ al-Dīn Keyḳubād I in 625/1228. Later it became the seat of the Turcoman dynasty of Ḳaramān. After the collapse of the Rūm-Sald̲j̲ūḳ empire, the Ḳaramānids set out from there to take possession of the southern part, with Lārende (subsequently Ḳaramān) and Konya. Under Meḥemmed II, Ermenāk and the principality of Ḳaramān came under Ottoman rule.

There are some remarkable buildings in Ermenāk, dating from Ḳaramānid times. Of these, the most important is the Ulu D̲j̲āmiʿ, which was built by Maḥmūd Beg b. Ḳaramān in 702/1302-3 (cf. *RCEA*, xiii, Cairo 1944, 239, no. 5154). It is a simple building with three parallel naves, thus built on the plan of the Umayyad mosque in Damascus.

ERSOY [see MEHMET AKIF ERSOY].

ERTOG̲H̲RUL (T. *er* 'male', *tog̲h̲rïl* 'kite').—1. According to tradition, the name of the father of ʿOt̲h̲mān I [*q.v.*], the founder of the Ottoman dynasty; but it appears in no source, Byzantine or Islamic, before the end of the 14th century, when it is mentioned in a letter (authentic?) of Bāyazīd I to Timur (Ferīdūn, *Muns̲h̲aʾāt*², i, 127) and in the *D̲h̲āt al-s̲h̲ifāʾ* (sub anno 699) of al-D̲j̲azarī [*q.v.*]. The traditions presented in the 9th/15th century Ottoman works, largely legendary in tone, fall into two main groups: (a) Ertog̲h̲rul, together with Gündüz Alp and Gök Alp, accompanied Sultan ʿAlāʾ al-Dīn of Konya to Sulṭān Öyüğü (near Eskis̲h̲ehir), performed great feats of arms thereabouts and, after ʿAlāʾ al-Dīn had returned to deal with a Tatar attack, conquered the district around Söğüd [*q.v.*] (Aḥmedī, *Iskender-nāme*, ed. N. S. Banarlı, in *Türkiyat Mecmuası*, vi (1936-9), 113 f. and cf. 75-7): echoes of this tradition are given by Yazïd̲j̲ï-og̲h̲lu ʿAlī (M. T. Houtsma, *Recueil*, iii, 217-8), with the addition of the claim that Ertog̲h̲rul and his associates belonged to the clan of the Ḳayï [*q.v.*]. The related fuller version in S̲h̲ükrüllāh's *Bahd̲j̲at al-tawārīk̲h̲* (ed. Th. Seif, in *MOG*, ii (1923-6), 76-8) adds that Ertog̲h̲rul had come into Rūm from the east with 340 followers after the Mongol invasions and settled first at Ḳarad̲j̲a-dag̲h̲ (south of Ankara), that he captured Ḳarad̲j̲a-ḥiṣār (10 km. south-west of Eskis̲h̲ehir), and died at the age of 93; Ḳaramānī Meḥemmed Pas̲h̲a gives a similar account (tr. M. K̲h̲alīl [Yınanç], *TOEM*, no. 79, 87 f.). In one version of this tradition Gündüz is said to be not the asso-

ciate but the father of Ertoghrul (Ḳ. Meḥemmed Pasha, and cf. Neshrī, ed. Taeschner, i, 21-2, and Enwerī, ed. M. Khalīl, 81). (b) Ertoghrul, Sonkurtegin and Gün-doghdī, the three sons of Süleymānshāh, came to Pasin-ovasī (east of Erzurum) after their father was drowned in the Euphrates near Ḳalʿat Djaʿbar; his brothers returned to the east, but Ertoghrul, remaining with 400 households, was granted by Sultan ʿAlāʾ al-Dīn the region around Söğüd as winter pastures and the hills of Domanīč and Ermeni-beli (to the west) as summer pastures. He died in 687/1288, after ruling his folk for 52 years (Anonymous chronicles, ed. Giese, 5 f. [recension of MS W_3 etc.] = Leunclavius, *Annales*; cf. Urudj, ed. Babinger, 6-7, ʿĀshīḳpashazāde, ed. Giese, § 2). Neshrī succeeds in harmonizing these traditions, adding, on the authority of Mewlānā Ayās (for whom see Tashköprüzāde, *Shaḳāʾiḳ*, tr. Medjdī, 189 f.), the story that Ertoghrul and his followers had rescued ʿAlāʾ al-Dīn in a skirmish with a Mongol force. A *türbe* just outside Söğüd on the Biledjik road (much restored, no early inscription) is revered as that of Ertoghrul (R. Hartmann, *Im neuen Anatolien*, Leipzig 1928, 50, and Tafel 14).

In the later years of the Ottoman Empire, Ertoghrul was the name given to a sandjaḳ of the *wilāyet* of Bursa (V. Cuinet, *La Turquie d'Asie*, iv, 160 ff.).

Bibliography: P. Wittek, *The rise of the Ottoman Empire*, London 1938, 6-13; M. F. Köprülü, *Osmanlı imparatorluğu'nun etnik menşei mes'eleleri*, in *Belleten*, vii (1943), 219-313; *IA*, s.v. Ertuğrul Gâzî, by M. Halil Yınanç (summaries of all the early Ottoman, and of other, accounts); for references to Byzantine sources see G. Moravcsik, *Byzantinoturcica*², ii, 125.

2. The eldest son of Bāyazīd I, born, according to Ismāʿīl Belīgh (*Güldeste*, 40), in 778/1376-7. Appointed governor of a district of Western Anatolia (Sarukhan and Karasī, according to ʿĀshīḳpashazāde, § 59, and hence Neshrī; Aydīn, according to Idrīs, and hence Saʿd al-Dīn, i, 128) after his father's campaign of 792/1389-90, he was killed in 794/1392 in the battle of Kīrk-Dilim near Čorum (for which see ʿAzīz b. Ardashīr, *Bezm ü rezm*, Istanbul 1928, 403-5) and buried by the mosque which he had founded at Bursa (Kâzım Baykal, *Bursa ve anıtları*, Bursa 1950, 107). (V. L. Ménage)

ERTOGHRUL, ii [see BILEDJIK].

ERZEN [see ARZAN].

ERZERUM [see ERZURUM].

ERZINDJAN, modern spelling Erzincan, older forms Arzingan, Arzandjān, a town in eastern Anatolia, 39° 45′ N., 39° 30′ E., on the northern bank of the Karasu (the northern tributary of the Euphrates). It is situated in a fertile plain which is surrounded by high mountain ranges (the Keşiş Dağı, 3,537 m. (11,604 ft.), in the north-east, the Sipikör Dağı, 3,010 m. (9,875 ft.), in the north, and the Mercan Dağı, 3,449 m. (11,315 ft.), which is part of the Monzur range, in the south). It has an altitude of 1200 m. (3,937 ft.), and was once the capital of a *sandjaḳ* in the *wilāyet* of Erzurum. Today it is the capital of the *vilâyet* itself, with the *kaza*s Erzincan, Ilice, Kemah, Kemaliye (Eğin), Refahiye, and Tercan. In 1960, the town had 36,465 inhabitants, the district had 51,721, and the *vilâyet* 243,837. According to Cuinet, Erzincan had 23,000 inhabitants towards the end of the last century. Of these, 15,000 were Muslims. Erzincan has always been an important meeting point for the caravan routes between Sivas and Erzurum. Since 1938, it has been the main station on the railway line between these two towns; it is 337 km. (248 m.) from Sivas, and 245 km. (133 m.) from Erzurum.

According to Armenian sources, Erzincan dates back to before the Christian era, though detailed information does not appear before Saldjūḳ times. The town was in the region over which Muslims and Byzantines fought, and had changed hands several times prior to the battle of Malazkirt (1071). After this, it came under the rule of the Saldjūḳ amīr Mengüdjek, and remained in the hands of his successors until 625/1228, when the Rūm-Saldjūḳ Sulṭan ʿAlāʾ al-Dīn Keyḳubād I forced the last of the Mengüdjekidṣ ʿAlāʾ al-Dīn Dāwūdshāh, to hand it over. Keyḳubād rebuilt the town and its walls (Ḥamdallāh Mustawfī, *Nuzha*, 95, top). On 28 Ramaḍān 627/10 August 1230 the Khʷārizmshāh Djalāl al-Dīn suffered a defeat at the hands of the Rūm-Saldjūḳ ʿAlāʾ al-Dīn Keyḳubād I, an ally of the Ayyūbid al-Ashraf, near Yası-Čimen in the vicinity of Erzincan (*Die Seltschukengeschichte des Ibn Bībī*, transl. H. W. Duda, Copenhagen 1959, 166 ff., in particular 171). In 640/1243, Erzincan was taken by the Mongols, who broke into Anatolia from the direction of Erzurum. Thenceforth it belonged to that part of Anatolia which was administered by the Ilkhānid governors. According to Ibn Baṭṭūṭa (ii, 293 f.; Eng. tr. H.A.R. Gibb, ii, 436 f.), the town was largely populated by Armenians in his day, though there were also some Turkish-speaking Muslims. He also mentions the industriousness of the inhabitants of the town (engaged in textiles and copperwork). There was also a branch of the Akhī [*q.v.*] order.

After the collapse of the Mongol Empire of the Ilkhans, Erzincan first belonged to the *amīr* Eretnā [*q.v.*], then to the ḳāḍī Burhān al-Dīn; subsequently, Bāyazīd I incorporated it into the Ottoman Empire for a short time. After his defeat by Tīmūr near Ankara in 804/1402, the town passed to the Ḳaraḳoyunlu and the Aḳ-ḳoyunlu. There are two funerary monuments in the shape of rams (as they are frequently found in cemeteries of eastern Anatolia) which bear witness to their rule. These have been erected in an attractive way near the main road (concerning this, cf. Strzygowski's work on Armenia, and also Hamit Koşay, *Les statues de béliers et de moutons dans les cimetières historiques de l'Anatolie orientale*, Iᵉʳ Congrès international des arts turcs, Ankara 1959, 58-60). After the victory of Meḥemmed II over Uzun Ḥasan near Tercan (Otluk Beli), the town belonged to local rulers for a time. During Selīm I's campaign against Shāh Ismāʿīl in 920/1514, Erzincan and its district were finally incorporated in the Ottoman Empire as a *liwāʾ* (*sandjaḳ*) of the *eyālet* (later *wilāyet*) of Erzurum. In the 17th century, Erzincan played a part in the Djalālī [*q.v.* in Supplement] rising. During the 19th century it was the seat of a lodge of the reformed Naḳshbandī order, headed by Fehmī Efendi [*q.v.*]. In the First World War, Erzincan was occupied by Russian forces on 24 July 1916, but evacuated again after 18 months, on 26 February 1918.

Erzincan has frequently suffered destruction by earthquakes; the last of these was in 1939. Consequently, nothing remains of its historical buildings. The Ulu Djāmiʿ, which dated from Saldjūḳ times, and the Ḳurshunlu Djāmiʿ and the Tash Khān, which dated from the time of Sultan Süleymān, used to be noteworthy. Thanks to the fertility of the surrounding country, the town has always been able to recover. Today its main exports are horticultural. From a military point of view, it is

a main centre of the defence of Turkey's eastern frontier.

(R. HARTMANN-[FR. TAESCHNER])

ERZURUM. one of the principal cities in eastern Turkey, today the chief town of the province of Erzurum with a population of 91,196 (1960 census).

Situated between the Karasu and Aras valleys which formed the main thoroughfare between Turkey and Īrān for caravans and armies, Erzurum has been an important commercial and military centre in the area since antiquity. It was the ancient Ḳarin, also called Ḳarnoi Ḳal(gh)aḳ in Armenian, from which Ḳālīḳalā or Ḳālī in the Arabic sources (cf. Ibn Ḥawḳal, i, 343; Ibn al-Faḳīh, *Akhbār al-buldān*, Leiden 1885, 295) must have been derived. Under the Romans it was fortified and called Theodosiopolis in 415 A.D. The name of Erzurum comes from *Arzan al-Rūm*, *Arzan-i Rūm* or *Arz-i Rūm* (see the Saldjūḳid coins in I. Ghālib, *Taḳwīm-i meskūkāt-i Seldjūḳiyye*, Istanbul 1309H., nos. 10, 147, 152). Arzan (Erzen) was a nearby commercial centre, the population of which took refuge in Ḳālīḳalā upon its destruction by the Saldjūḳids in 440/1048 or 441/1049 (see ARZAN).

First taken by the Arabs under Caliph 'Uthmān after 33/653, its possession fluctuated between Byzantines and Arabs (Byzantine in 66/686, Arab in 81/700, Byzantine again in 137/754 for a short time and then Arab again until 338/949 when the Byzantines took it, to hold it until the Saldjūḳid conquest). The native Armenian princes in the area played an important part in all these changes. With its strong walls, Ḳālī made a base for the Arabs from which to control the area and organize *ghazā* raids into Byzantine Anatolia. In 153-5/770-2 the local Armenian dynasts organized a large-scale insurrection against the Arabs and came to lay siege to Ḳālī (Ghévond, *Hist. des guerres et des conquêtes des Arabes en Arménie*, trans. Chahnazaryan, Paris 1856, 136-43; Ya'ḳūbī, ii, 447).

Under the Byzantines the chief city of the 'theme' of Theodosiopolis, it withstood the Saldjūḳid onslaught until 473/1080 when Amīr Aḥmad took it, and it was then made the capital of the Turkish principality of the Saltuḳids (see SALTUḲ-OGHLU). In 597/1201 it came under the Saldjūḳids of Anatolia and was made the seat of a *malik*, prince, possessing the province as his appanage. The city under its new name of Arzan-i Rūm became one of the most prosperous commercial centres in Anatolia (cf. Yaḳūt, *Mu'djam al-buldān*, s.v. Arzan) and its important monuments belong to this period: the Ulu-djāmi' built in 575/1179, the Medrese of Khūndī Khātūn (Čifte-mināre) built in 651/1253, and the mausoleums of the Saltuḳids.

In 639/1242 the Mongols under Baydju took it. Remaining a part of Seldjūḳid territory under Mongol suzerainty, the province of Arzan-i Rūm paid a large annual tribute to the Mongol treasury, 222,000 dīnār in 736/1335 (Z. V. Togan, *Mogollar devrinde Anadolu'nun iktisadî vaziyeti*, in *THITM*, i (1931), 22). After the dissolution of the Ilkhānid empire in Īrān, Erzurum was occupied by the rival Mongol amīrs successively, the Čobanid Shaykh Ḥasan in 741/1340, Muḥammad b. Eretna about 761/1360. Then the city became part of the rising Türkmen states in eastern Anatolia, first of the Ḳara-ḳoyunlu [*q.v.*] from 787/1385, and then of the Aḳ-ḳoyunlu [*q.v.*] from 869/1465. Taken by Shāh Ismā'īl from the latter in 908/1502, it was conquered by the Ottoman Sultan Selīm I following his victory at Čāldīrān in 920/1514. It was made in 941/1534 the chief city of a new *Beglerbegilik* comprising the sandjaḳs of Erzurum, Shebīn Ḳara-ḥiṣār, Kīghi, Khînîs, Yuḳarî-Pasin, Malazgird, Tekman, Kîzučan, Ispir, Tortum, Nāmervān and Medjinkerd.

The tax regulations of the time of Uzun Ḥasan [*q.v.*], preserved after the Ottoman conquest, were later in 926/1520 and in 947/1540 modified and replaced by the typical Ottoman *ḳānūn* (cf. Ö. L. Barkan, *Kanunlar*, 63; W. Hinz, *Das Steuerwesen Ostanatoliens im 15. und 16. Jahrhundert*, in *ZDMG*, c (1950), 177-201).

Under the Ottomans the city benefited from the active caravan trade between Īrān and Bursa (for a description of it in 1050/1640 see Ewliyā Čelebi, *Seyāḥatnāme*, ii, Istanbul 1314/1896, 203-19). Erzurum became also the chief Ottoman military base during the wars against Īrān and Georgia in the 10th/16th and 11th/17th centuries. In 1031/1622, upon the murder of 'Othmān II, Abaza Meḥmed Pasha, *beglerbegi* of Erzurum, supported by the population and the Djalālī [*q.v.* in Supplement] groups, rose up against the central government then under Janissary control. Entrenched in Erzurum, Meḥmed defied imperial armies sent against him until Muḥarram 1038/September 1628.

During the Ottoman-Russian wars the Russians occupied Erzurum temporarily in September 1829, in 1878 and in February 1916. On 23 July 1919 the first national congress under Muṣṭafā Kemāl (Atatürk) was held in Erzurum. Today it is the most important city in eastern Turkey with the headquarters of the Third Army and the Atatürk University which was opened on 17 November 1958. The city was linked with the country's railway system in 1939.

ES'AD EFENDI, AḤMED (1153/1740-1230/1814), Ottoman *Shaykh al-Islām*, son of the *Shaykh al-Islām* Meḥemmed Ṣāliḥ Efendi [*q.v.*]. After being *ḳāḍī* successively of Izmir (from 1184/1770), Bursa (from 1192/1778) and Istanbul (1201/1787), he held office for a short time (1204/1790-1206/1791) as *ḳāḍī'asker* of Anadolu. One of the prominent personalities consulted by Selīm III (*q.v.*] on the reforms necessary in state affairs, he made proposals particularly for the

improvement of military efficiency. As a known advocate of reform, he twice held office as *ḳāḍīʿasker* of Rūmeli (from Radjab 1208/February 1794 and Radjab 1213/December 1798), and on 29 Muḥarram 1218/21 May 1803 was made *Shaykh al-Islām*. When in 1221/1806 the attempt was made to apply the *Niẓām-i djedīd* [*q.v.*] in Rūmeli, Esʿad Efendi issued a *fatwā* condemning those who resisted it, but upon the Sultan's abandoning the attempt to enforce reform he was relieved of office at his own request (1 Radjab 1221/14 September 1806). The influence of the *Shaykh al-Islām* ʿAṭāʾullāh Efendi and the *ʿulemāʾ* saved his life during the rebellion of Kabakčî Muṣṭafā [*q.v.*]. When Muṣṭafā Pasha Bayraḳdār [*q.v.*] came to power, Esʿad Efendi was again appointed *Shaykh al-Islām* (22 Djumādā II 1223/15 August 1808) and took part in the discussions which bore fruit in the *Sened-i ittifāḳ* (see art. DUSTŪR, ii). When Muṣṭafā Pasha fell, Esʿad Efendi was again saved by the *ʿulemāʾ*; dismissed on 3 Shawwāl 1223/22 November 1808, he was sent for his own protection to his *arpalîḳ* at Maʿnīsā. He was later permitted to return to Istanbul and died, on 10 Muḥarram 1230/23 December 1814, in his *yalî* at Kanlîdja.

(M. MÜNİR AKTEPE)

ESʿAD EFENDI, MEḤMED (978/1570-1034/1625), Ottoman *Shaykh al-Islām*, was the second son of the celebrated Saʿd al-Dīn [*q.v.*]. Thanks to the influence of his father, he advanced rapidly in the theological career, to become in Muḥarram 1007/August 1598 *ḳāḍī* of Istanbul. During his elder brother Meḥemmed's first period in office as *Shaykh al-Islām* (1010/1601-1011/1603) he was for a time *ḳāḍīʿasker* of Anadolu; and after two short periods as *ḳāḍīʿasker* of Rūmeli he was himself appointed *Shaykh al-Islām* on 5 Djumādā II 1024/2 July 1615 in succession to his brother. During his seven years in office he played a prominent part in the turbulent events of the time, but incurred the enmity of ʿOthmān II ([*q.v.*], ruled 1027/1618-1031/1622) for having procured the accession of Muṣṭafā I upon the death of Aḥmed I in 1026/1617. This enmity, increased by Esʿad Efendi's refusal to issue a *fatwā* sanctioning the execution of ʿOthmān's brother Meḥemmed, was not allayed by the Sultan's marrying Esʿad Efendi's daughter; ʿOthmān took the disposition of theological appointments from the *Shaykh al-Islām* and gave it to his *khodja* ʿÖmer Efendi. When in 1031/1622 ʿOthmān proposed to make the Pilgrimage, Esʿad Efendi declared that it was not obligatory on the Sultan to do so; and on the outbreak of the Janissary mutiny that culminated in the Sultan's murder issued a *fatwā* condemning the Palace-favourites against whom the mutineers had risen. He protested, however, against the recognition of Muṣṭafā I as sultan while ʿOthmān was still alive, and by abstaining from attending ʿOthmān's funeral was deemed to have resigned office. He was re-appointed *Shaykh al-Islām* in Dhu'l-Ḥidjdja 1032/October 1623, but soon fell out with his supporter Kemānkesh ʿAlī Pasha, the Grand Vizier. He died in office, on 14 Shaʿbān 1034/22 May 1625, and was buried at Eyyūb beside his father.

Esʿad Efendi is the author of a translation of the *Gulistān* of Saʿdī, entitled *Gül-i khandān* (printed Istanbul, n.d.), a Persian *dīwān* (Bağdatlı Ismail Paşa, *Keşf-el-zunun zeyli*, Istanbul 1945, i, 489, and other works (for details see *IA*).

(of which the above is an abridgement).

(M. MÜNİR AKTEPE)

ESʿAD EFENDI, MEḤMED (1096/1685-1166/1753), Ottoman *Shaykh al-Islām*, son of the *Shaykh al-Islām* Abū Isḥāḳ Ismāʿīl Efendi and brother of the *Shaykh al-Islām* Isḥāḳ Efendi, after holding various posts as *müderris* was appointed *ḳāḍī* of Selānik and later (Muḥarram 1147/June 1734) of Mecca. As *ḳāḍī* of the army from 1150/1737 he distinguished himself in the operations against Austria and was one of the Ottoman negotiators of the Treaty of Belgrade. Appointed *ḳāḍīʿasker* of Rūmeli for two short periods from Muḥarram 1157/March 1744 and Shawwāl 1159/October 1746, on 24 Radjab 1161/20 July 1748 he became *Shaykh al-Islām*, but was dismissed little more than a year later and banished, first to Sinop and then to Gelibolu. Pardoned in Rabīʿ II 1165/March 1752, he returned to Istanbul but died the next year (10 Shawwāl 1166/9 August 1753).

Esʿad Efendi's son Sherīf Efendi twice held office as *Shaykh al-Islām*, and the poetess Fiṭnat [*q.v.*] was his daughter. He himself was a minor poet and a distinguished musician. His best-known works are (1) *Lahdjat al-lughāt*, a dictionary of Turkish (printed Istanbul 1216), and (2) *Aṭrab al-āthār fī tadhkirat ʿurafāʾ al-adwār* (also called *Tedhkire-i khʷānendegān*), containing the biographies of 100 musicians (poor edition in *Mekteb*, 3rd year, Istanbul 1311, nos. 1-7 and 10). For details of his other works (poems, *tafsīr*) see *IA*.

Bibliography: Sālim, *Tedhkire*, Istanbul 1315, 72-6; Wāṣif, *Taʾrīkh*, Istanbul 1219, i, 17; Sāmī-Shākir-Ṣubḥī, *Taʾrīkh*, Istanbul 1198, 53b, 121b, 160b, 187a, 201b; ʿIzzī, *Taʾrīkh*, Istanbul 1199, 3b, 154b, 175b, 206a, 262a; Aḥmed Rifʿat, *Dawḥat al-mashāʾikh*, Istanbul (lith., n.d.), 86; Sadeddin Nüzhet Ergun, *Türk şairleri*, iii, 1329 ff.; Bursalî Meḥmed Ṭāhir, *ʿOthmānlî müʾellifleri*, i, 238-9; *IA*, s.v. (of which the above is an abridgement).

(M. CAVİD BAYSUN)

ESʿAD EFENDI, MEḤMED (1119/1707-1192/1778), Ottoman *Shaykh al-Islām*, was the son of the *Shaykh al-Islām* Waṣṣāf ʿAbd Allāh Efendi (in office 1168/1755). After rising to be *ḳāḍī* of Galata (1163/1749-50), he was long out of office because of the influence of his father's opponents. He became *ḳāḍīʿasker* of Anadolu in 1182/1768 and of Rūmeli in 1186/1773. Appointed *Shaykh al-Islām* in Shawwāl 1190/December 1776, ill-health brought about his dismissal in Djumādā II 1192/July 1778, and he died a few days later.

Bibliography: Wāṣif, *Ḥaḳāʾiḳ al-akhbār*, Istanbul 1219, i, 199; Djewdet, *Taʾrīkh*, Istanbul 1309, ii, 48, 100; Müstaḳīm-zāde, *Dawḥa-i mashāʾikh-i kibār* (MS); idem, *Tuḥfe-i khaṭṭāṭīn*, Istanbul 1928, 711; Aḥmed Rifʿat, *Dawḥat al-mashāʾikh*, Istanbul (lith., n.d.), 98, 106; *ʿIlmiyye sālnāmesi*, Istanbul 1334, 545-7; *IA*, s.v. (of which the above is an abridgement). (M. MÜNİR AKTEPE)

ESʿAD EFENDI, ṢAḤḤĀFLAR-SHEYKHI-ZĀDE SEYYID **MEḤMED** (1204/1789-1264/1848), Ottoman official historiographer (*waḳʿa-nüwīs*) and scholar, was left in straitened circumstances by his father's accidental death (December 1804) while on his way to take up the duties of *ḳāḍī* of Medina. After holding various clerical posts, in Ṣafar 1241/October 1825 he succeeded Shānī-zāde ʿAṭāʾullāh Efendi [*q.v.*] as *waḳʿa-nüwīs*, a post he held until his death. His work *Üss-i ẓafer* attracted the favour of Maḥmūd II: he was *ḳāḍī* of the army in 1828, then *ḳāḍī* of Üsküdar, and was appointed editor of the official gazette *Taḳwīm al-waḳāʾiʿ* (see art. DJARĪDA, col. 465b) when it first appeared in 1247/1831. In September 1834 he was appointed *ḳāḍī* of Istanbul, and in 1835-6 went as special envoy to Persia, to congratulate Muḥammad Shāh on his accession. A long illness interrupted his career, but after the *Tanẓīmāt* [*q.v.*] he was for two years a member of the *Medjlis-i aḥkām-i ʿadliyye* (Council for Judicial Ordinances), on 6 August 1841 he was appointed *Naḳīb al-ashrāf*, and from 30 May 1843 to 13 October 1844 he was *ḳāḍīʿasker* of Rūmeli. In 1845 he was a member of the commission set up to reform primary education, and in 1846 became a member of the Council for Education (*Medjlis-i maʿārif-i ʿumūmiyye*); appointed its president on 1st January 1848, he died almost immediately afterwards (3 Ṣafar 1264/10 January 1848) and was buried in the garden of the library he had founded in the Yerebatan quarter of Istanbul.

His collection of books, over 4000 in number (3719 of them manuscripts), he deposited in a library which he endowed in 1262/1846: now housed in the Süleymaniye Public Library, they remain one of the most important collections in Turkey. His principal works are: (1) his official history (unpublished) in two volumes, covering the events of the years 1237-41/1821-6: it begins as a continuation of the work of his predecessor as *waḳʿa-nüwīs*, and his drafts for later years were used by his successor, Luṭfī Efendi [*q.v.*] (for the MSS see Babinger, 355; *Istanbul kütüpaneleri tarih-coğrafya yazmaları katalogları*, i/2, Istanbul 1944, 174-6; *IA*, iv, 364b); (2) *Üss-i ẓafer* (chronogram for 1241), an account of the suppression of the Janissaries (the so-called *Waḳʿa-i khayriyye*, see art. YENI ČERI) in 1241/1826; MS Esad Ef. 2071 is said to be the autograph; twice printed in Turkish (Istanbul 1243, 1293), it was translated into French (A. P. Caussin de Perceval, *Précis historique de la destruction . . .*, Paris 1833), Greek, and in part into Russian; (3) *Teshrīfāt-i ḳadīme*, on the court-ceremonial and protocol of the Empire (edition: Istanbul [1287]); (4) *Zībā-i tawārīkh*, an uncompleted translation of the *Mirʾāt al-adwār*, in Persian, of Lārī [*q.v.*] (autograph draft: MS Esad Ef. 2410); (5) *Sefer-nāme-i khayr* (chronogram for 1247), an account of Maḥmūd II's tour of Eastern Thrace (autograph: Istanbul, Eski Eserler Müzesi library, MS Recaizade Ekrem 157); (6) *Āyāt al-khayr*, on Maḥmūd II's tour of the Danube province in 1253; (7) *Bahče-i ṣafā-endūz* (chronogram for 1351), a *tedhkire* of poets living between 1135/1723 and 1251/1836 (autograph draft: MS Esad Ef./Esad Arif Bey 4040); (8) *Munshaʾāt*: two autograph notebooks (MSS Esad Ef. 3847, 3851) contain letters etc. written on various occasions; (9) *Shāhid al-muʾarrikhīn* (chronogram for 1247), a *tedhkire* of writers of chronograms (autograph: Fatih-Millet library, MSS Ali Emiri, tarih, 362-3). Esʿad Efendi left also a large number of poems and various *risāle*s (for details see *IA*, and Bursalı Meḥmed Ṭāhir, *ʿOthmānlı müʾellifleri*, iii, 24-6).

Bibliography: Shānī-zāde ʿAṭāʾullāh, *Taʾrīkh*, Istanbul 1292, iv; Djewdet, *Taʾrīkh*, Istanbul 1309, i and xii; Aḥmed Luṭfī, *Taʾrīkh*, Istanbul 1290-1306, i-vii; *Taʾrīkh-i Luṭfi*, viii, ed. ʿAbd al-Raḥmān Sheref, Istanbul 1328, Rifʿat, *Dawḥat al-nuḳabāʾ*, Istanbul 1283, 57 ff.; Faṭīn, *Tedhkire*, Istanbul 1271, 13; Djemāl al-Dīn, *Āyīne-i ẓurefā*, Istanbul 1314, 79 ff.; Ibnülemīn Maḥmūd Kemāl, *Son ʿaṣīr türk shāʿirleri*, Istanbul 1314, ii, 321 ff.; Sadeddin Nüzhet Ergun, *Türk şairleri*, Istanbul 1944, iii, 1335; *Taḳwīm-i waḳāʾiʿ*, years 1247-64; Babinger, 354-5; U. Heyd, *The Ottoman ʿulemā and westernization in the time of Selīm III and Maḥmūd II*, in *Scripta Hierosolymitana*, ix, *Studies in Islamic history and civilization*, Jerusalem 1961, 63 ff.; *IA*, s.v. (of which the above is an abridgement). (M. MÜNİR AKTEPE)

ESĀME [see YENI ČERI].

ESCHATOLOGY [see ḲIYĀMA].

ESHĀM [see ASHĀM].

ESHKİNDJİ, also *eshkündji*, means in Turkish 'one who rushes, goes on an expedition' (*eshkin* is defined by Maḥmūd Kāshgharī [*Dīwān lughāt al-Türk*, i, 100; = Besim Atalay's T. tr., i, 109] as 'long journey', and *eshkindji* as 'galloping courier'; cf. also *Tanıklariyle tarama sözlüğü*, ed. Türk Dil Kurumu, i-iv, s.v.; the verb *eshmek*, to go on an expedition, was later replaced in Ottoman Turkish by *mülāzemet*, Ar. *mulāzama*).

As a term in the Ottoman army *eshkindji* meant in general a soldier who joined the army on an expedition. Thus *eshkindji* timariots (see TĪMĀR) who joined the army were distinguished from *ḳalʿa-eri* or *mustaḥfiẓ*, those who stayed in the fortresses as garrison (cf. *Sûret-i Defter-i Sancak-i Arvanid*, ed. H. Inalcık, Ankara 1954, 108, 109).

As a special term *eshkindji* designated auxiliary soldiers whose expenses were provided by the people of *reʿāyā* [*q.v.*] status as against *djebelü* equipped by the *ʿaskarī* [*q.v.*]. The obligation was in return for the tax exemptions made on agricultural lands which were considered in principle as under state proprietorship (cf. H. Inalcık, *Stefan Duşan'dan Osmanlı imparatorluğuna*, in *Fuat Köprülü Armağanı*, Istanbul 1953, 134, note 121). In the organizations of *yürük*, *djānbāz*, *yaya*, *müsellem*, *Tatar* and the like, each group of 10, 24, 25, or 30 persons was to furnish the expenses of an *eshkindji* each year. Three or five among them were appointed *eshkindji*s, and the rest *yamaḳ*s, assistants. Each year an *eshkindji* collected in turn, *be-newbet*, a certain sum called *khardjlıḳ* (usually 50 akče per person)from the *yamaḳ*s and joined the Sultan's army on an expedition (under Bāyezīd II *khardjlıḳ* was collected only when an expedition occurred). In return the *eshkindji*s and the *yamaḳ*s were exempted from taxes and dues on their *čiftlik*s [*q.v.*] entirely or partly (cf. *Ḳānūn-nāme Sultan Meḥmeds des Eroberers*, ed. Fr. Kraelitz, in *MOG*, i (1921-2), 25, 28; T. Gökbilgin, *Rumeli'de Yürükler, Tatarlar ve Evlâd-ı Fâtihân*, Istanbul 1957, 244-6). The *voynuḳ*s and *Eflaḳ*s can be considered also as *eshkindji* organizations (cf. H. Inalcık, *ibid.* 241). Even the *doghandji*s [*q.v.*] in some areas, who were organized in the same manner, were to furnish *eshkindji*s.

Another category of *eshkindjis* was provided by the possessors of *wakfs* and *mulks*. Increasingly in need of new troops, Meḥemmed the Conqueror ordered in Ramaḍān 881/December 1476 that the *wakfs* and *mulks* of certain types were to furnish *eshkindjis* for the army (cf. *Fatih devrinde Karaman Eyâleti vakıfları fihristi*, ed. F. N. Uzluk, Ankara 1958, facsimile 3). The measure was applied extensively in the empire, especially in central and northern Anatolia, and resulted in the widespread discontent in the last years of his reign (cf. *IA*, s.v. Mehmed II; Ö. L. Barkan, *Malikâne-Divanî sistemi*, in *THITM*, ii (1932-9), 119-84). It was assumed that such *wakfs* and *mulks*, mostly of pre-Ottoman times, were valid only by the approval of the Ottoman Sultan. In most cases he did not confirm them, on the grounds that they did not meet the conditions required; he then made most of them state-owned lands granted as *tīmār* [*q.v.*] or else required their possessors, in return for the taxes and dues, to equip *eshkindjis* for the army. Such *wakfs* and *mulks* were known as *eshkindjilü*. Under Bāyezīd II, who followed a more tolerant policy, *tīmārs* of this kind too were made *eshkindjilü mulk*. But later records in the defters [see DAFTAR-I KHĀKĀNĪ] show that these were again made *tīmārs*.

An *eshkindji* of the Yürük organization was equipped with a lance, bow and arrows, a sword and a shield, and every ten *eshkindjis* had one horse for joint use and a tent (cf. *Ḳānūnnāme Sultan Mehmeds des Eroberers*, 28).

Eshkindjis from the different groups made up a large part of the Ottoman army in the 9th/15th century, especially under Meḥemmed II. But from the mid 10th/16th century, when the Ottoman army had to consist mainly of infantry with fire-arms, the *eshkindjis* and the various organizations to which they belonged lost their importance and gradually disappeared. (HALİL İNALCIK)

ESHREFOGHLU RŪMĪ [see SUPPLEMENT].

ESKI BABA [see BABA ESKI].

ESKI SARĀY [see SARĀY].

ESKISHEHIR (modern spelling Eskişehir), a town in the western part of Central Anatolia, 39° 47′ N., 30° 33′ E., altitude 792 m. (= 2,597ft.) (railway station) to 810 m. (= 2,657 ft.), on the river Porsuk, a tributary of the Sakarya; it is the capital of a *vilâyet* of 389,129 inhabitants, the district has 56,077, and the town itself 153,190 (all figures for 1960). Eskişehir is famous for its hot springs, and for the meerschaum found nearby (see Reinhardt, in *Pet. Mitt.* 1911, ii, 251 ff.); it is also important as a junction of the Istanbul—Ankara and Istanbul—Konya railways.

Eskişehir has replaced the ancient Dorylaion (Darūliyya of the Arabs), which was situated near the modern Shar-Üyük, 3 km. to the north. In Byzantine times, the wide plain of Dorylaion was the place where the emperor's armies assembled for their eastern campaigns against the Arabs and the Saldjūḳ Turks cf. Ibn Khurradādhbih, 109). In the year 89/708, al-ʿAbbās b. al-Walīd conquered Dorylaion (Ṭabarī, ii, 1197; cf. Theophanes, i, 376, ed. de Boer), and Ḥasan b. Ḳaḥṭaba advanced as far as this point in 162/778 (Ṭabarī, iii, 493; Theophanes, i, 452). Near Dorylaion, on 1 July 1097, the Crusaders won the battle enabling them to pass through the Rūm Saldjūḳ Empire (Konya), but the crusaders under Conrad III suffered such a defeat on 26 October 1147 that further passage through this territory was barred. In 1175 the emperor Manuel Comnenos fortified the town again, after it had been laid waste by the Saldjūḳids, and he drove away the nomadic Yürüks (Kinnamos, 294, 297; Niketas, 236 ff., 246); but only one year later (after the unsuccessful war against Ḳilidj Arslan II) he had to undertake to pull down the fortifications, and it was probably shortly after this that the town finally passed into Saldjūḳ possession.

In the 13th century, Ertoghrul settled in the area of Söğüt near Eskişehir, in the region of Sulṭān Üyügi (Sulṭān Önü) (Neshrī, ed. Unat and Köymen, i, 72). In the apocryphal document (*menshūr*) of ʿAlāʾ al-Dīn b. Farāmarz, of early Shawwāl 688/October 1289, in favour of his son ʿOthmān (Ferīdūn², i, 56), the region of Eskişehir was given to ʿOthmān as a *sandjaḳ* (cf. Leunclavius, *Hist. Mus.*, 125, 126 f.). The fortress of Ḳaradja-Ḥiṣār [*q.v.*] south-west of Eskişehir is considered the first Ottoman conquest (cf. Neshrī, 64).

Later on, Eskişehir became the chef-lieu of the *sandjaḳ* (*liwāʾ*) of Inönü in the *eyālet* of Anadolu, and a halt on the pilgrim route. In the 19th century, it became the capital of a *ḳaḍāʾ* in the *sandjaḳ* of Kütahya, *wilāyet* of Bursa, and according to Cuinet it had 19,023 inhabitants at the turn of this century. During the Greco-Turkish war of 1922, the town was almost completely destroyed, but it was rebuilt as an industrial centre after the war. It has the most important railway repair workshops in Turkey.

The Kurshunlu Djāmiʿ (921/1515) was erected by a certain Muṣṭafā Pasha, and is the most notable building of the town. Beside it there is an extensive *khān*, laid out in two parts (*khān* and *bedestan*). The ʿAlāʾ al-Dīn mosque, which dates from Saldjūḳ times, has been completely renovated; but on the base of its minaret there is an inscription by Djadja Beg of the year 666(?)/1268 (*RCEA*, xii, Cairo 1943, 131, no. 4596) which refers to its erection. In 1927 there was still a small bridge, which apparently dated from Saldjūḳ times, over the Sarı Su, which flows into the Porsuk. This bridge could, however, no longer be found in 1955. It is probable that it was removed when the industrial buildings were extended.

Bibliography: Pauly-Wissowa, v, 1577 f. (concerning Dorylaion); Ewliyā Čelebi, *Seyāḥat-nāme*, iii, 12; Kātib Čelebi, *Djihānnümā*, 641 f.; Meḥemmed Edīb, *Menāsik al-ḥadjdj*, 28 f.; Ch. ESZÉK (ESSEG), until 1919 a town in Hungary (Slavonia) on the right bank of the Drave, not far from its junction with the Danube, and since 1919 in Yugoslavia. The name of the town is in Serbo-Croat Osijek, in Hungarian Eszék and in German Esseg; in Turkish it was written as اوسك (Ösek).

During the first decisive phase of the Turkish-Hungarian wars the town is mentioned for the first time in connexion with events relating to Turkish history. After the Turks had overrun Sirmium (Hung. Szerémség), the then commander of the Hungarian army, Paul Tomori, wanted to bring the Turks to a halt on the Drave. The forces of Sultan Süleymān, however, gained possession of Eszék easily, built a bridge over the Drave, crossed the river and advanced on Mohács (932/1526).

The passage over the Drave near Eszék was, for

a century and a half, an important halting-place for Turkish armies on the march into Hungary.

In the course of his later campaigns (1529, 1532, 1541, 1543) Sultan Süleymān, time and again, caused a bridge of boats to be built nearby (cf. J. Thúry, *Török Történetirók* [Turkish historians], i, 329, 331, 351 and ii, 103, 107). He had a permanent bridge erected over the Drave only on the occasion of his last campaign against Sigeth (Szigetvár) in 974/1566.

As we know from later accounts in particular, the permanent bridge over the Drave itself rested on boats, while its prolongation on the left bank of the Drave spanned a marshland some 8000 paces broad and was laid on piles (Ewliyā Čelebi, vi, 187). On both sides of the bridge there were parapets (*ḳorḳuluḳ*); in the middle, 'lay-bys', *i.e.* towers (*ḳaṣr*), had been constructed, so that here the pedestrian might rest without impeding the flow of traffic. There was room for two waggons side by side on the main road of the bridge. A horseman needed one and a half hours to cross the bridge. In western sources, too, the bridge at Eszék is mentioned as a remarkable piece of construction work. H. Ottendorff (Vienna, Heeres-archiv, Kartenabteilung K. VII, K. I) offers a description similar to the one given above. A portion of his travel narrative *From Buda to Belgrade in the year 1663* has been published in Hungarian translation (*Budáról Belgrádba 1663*, Pécs 1943). There is available a comprehensive study of the bridge: P. Z. Szabó, *Az eszéki hid* [The bridge of Eszék], Majorossy Imre-Múzeum értesítője, Pécs 1941.

Bridgeheads were built on both banks of the river to protect the bridge, on the northern bank beyond the marshland near Dárda and on the southern bank not far from the Drave near Eszék. The defences at Dárda consisted only of palisades; the defences near Eszék were constructed of brick, but were, however, only weakly fortified. The Turks feared no attack on these defences, for they lay 200-300 km. inside the Ottoman frontiers. All the greater, therefore, was their surprise at the onslaught of Nicholas Zrínyi, the poet, who in the winter of 1664, avoiding the Turkish frontier fortresses, pushed forward as far as Eszék and on 1 February set the bridge in flames. It was, however, rebuilt by the Turks. The bridge at Eszék was once more burnt down in 1685 by General Lesley and in 1687 was seized definitively from the Turks by the Imperialists.

From the diffuse information of Ewliyā Čelebi (vi, 178 ff.) the following data can be gathered: Ösek, a voyvodalïḳ in the sandjaḳ of Požega, a *ḳaḍā* with a stipend of 150 aḳče. The defences consist of an inner and an outer fortress (*ič ḳalʿa* and *orta ḥiṣār*); outside the outer fortifications lies the town (*varosh*). Ewliyā Čelebi does not mention the fortress as being an especially strong one; on the other hand he writes appreciatively of the religious buildings (above all the *djāmiʿ*s of Ḳāsim Pasha and Muṣṭafā Pasha) and of the *tekke* and the other *khayrāt* (*medrese*, *sebīl*, and *ḥamām*). He draws particular attention to the much frequented trade fair (*panayir*) held once a year and to the covered market built by Ibrāhīm Pasha of Kanizsa. The speech of the inhabitants, according to Ewliyā Čelebi, was Hungarian, but according to Ottendorff it was Turkish. (L. Fekete)

ESZTERGOM (Gran), a fortress town in Hungary situated on the right bank of the Danube about 80 km. to the north-east of Budapest, in the Turkish period the name and chief town of a sandjaḳ.

The place-name Esztergom is said to be of Frankish origin (osterringun = eastern fortress). The site, named Gran in German, is called Strigonium in Latin, Ostrihom in Slovenian and Esztergom or Esztergon in Hungarian, while in Turkish such forms as استرغون , اوسبترغون , اوسترغوم etc. are known.

Gran, in the time of the Arpad dynasty, was on a number of occasions the royal residence—here the founder of the Hungarian Kingdom, Stephen I (St. Stephen), was born—and it was at the same time the seat of the Archbishop of Hungary (the head of the ten bishoprics established by Stephen I) and from about 1200 A.D. his own exclusive possession.

After the conquest of Buda (948/1541) Gran entered the pages of Turkish history. In order to safeguard Buda, now a frontier fortress, Sultan Süleymān ordered his forces to conquer Gran, which fell into Turkish hands after a siege lasting barely two weeks (950/1543). Detailed Turkish sources on this siege are Djalālzāde Muṣṭafā (translated, from the Vienna Ms., by J. Thúry in *Török Történetirók* [Turkish Historians], Budapest 1896, ii, 244 ff.) and Sinān Čawush (*ibid.*, ii, 325 ff.).

A fruitless attempt was made in 1002/1594 to wrest Gran from the Turks (in this fighting there fell, on the Hungarian side, the distinguished Hungarian lyric poet B. Balassi). The assault on Gran in 1003/1595 was, however, successful; after the food and water of the defenders of the fortress had become exhausted, the Turkish garrison mutinied and the commander of the besieging troops, Nicholas Pálffy (called Miḳlōsh [Hung. Miklós] in Ewliyā Čelebi, vi, 258) was able to gain possession of the fortress by capitulation. The Turks tried on several occasions to win back the fortress; eventually the Grand Vizier Lālā Meḥemmed Pasha, who ten years before "had given over the fortress into the keeping of Miḳlōsh" (Ewliyā Čelebi, vi, 259), recovered it in 1605, likewise by capitulation. The history of these sieges is recorded, on the Turkish side, in Pečewī (ii, 175 ff. and 301 ff.), who was present on both occasions at the negotiations over the two-fold surrender of the fortress, and—leaving out of account some statements of little value—in Ewliyā Čelebi (vi, 257 ff.); and on the Hungarian side, in M. Istvánffy (*Historiarum de Rebus Ungaricis libri xxxiv*, Cologne 1622). More modern studies by J. Thúry and G. Gömöry are in *Hadtörténelmi Közlemények* [Communications on Military History], 1891 and 1892.

Thereafter the Turks remained until 1094/1683 undisturbed in their possession of the fortress. Gran, in the autumn of 1683, passed without serious fighting and by agreement into the hands of the Imperialists; Turkish attempts to reconquer it were unsuccessful. Gran, *i.e.* Esztergom, has in Turkish a proverbial fame (the newspaper *Yeni Sabah*, on 19 April 1956, carried on the front page a picture of a fortress with the superscription "Estergon kalesi" and near it, in a caption, the words referring to the still firmly established Menderes régime: Menderes Estergon kalesidir—"Menderes is [strong as] the fortress of Estergon"), but it is difficult to state on what events connected with Gran this fame is based.

The *muḳāṭaʿa* defters of Gran for some ten years between the dates 973/1565 and 991/1582 are extant (Vienna, Flügel Catalogue, no. 1359); in them are recorded the following topographical names relating to the town of Gran: Ḳalʿa-i Bālā, Ḳalʿa-i Zīr, Iskele-i Bālā, Iskele-i Zīr, Īlīdja, Varosh-i Kebīr and Varosh-i Ṣaghīr (or Varosh-i Buzurg and Varosh-i Küček); these defters, moreover, record the personnel of three Muslim mosques in the upper fortress, in the main town and in the suburb Djiger-

delen as receiving salaries from the state. Ewliyā Čelebi (vi, 271-2), in connexion with his visit to Gran in 1074/1663, offers information about several Muslim places of worship and also tells us in some cases who founded them.

To the fortress of Gran belonged, on the left bank of the Danube, the bridge-head of Djigerdelen, Djigerdelen Parkani ("Liver-piercer", "Liver-piercing Fort"—whence the later Hungarian name of the place: Párkány), the point of departure for the subsequent geographical extension of this sandjak.

According to Ewliyā Čelebi (vi, 273) it was Lālā Meḥemmed Pasha who ordered the building of the outer defence work of Gran on the right bank of the Danube, *i.e.*, of the mountain fort of Szenttamás; he is also said to have given to it the name of Tepedelen, "Head-piercer" (a locality of this name existed in Albania: cf. Tepedelenli ʿAlī Pasha).

There is extant also a Turkish survey of the houses in Gran, dating from about 1570 (Vienna, Krafft Catalogue, ccxc). In this survey Muslims and, in lesser number, Orthodox (Pravoslav) are shown as house-holders; there are no Hungarians amongst them. It seems that Hungarians, at that time, cannot have been living in Gran.

The sandjak of Estergom was established after the conquest of the fortress in 950/1543. At first it consisted essentially of some 30 villages on the right bank of the Danube, but, growing outward from the bridge-head of Djigerdelen on the left bank of the river, it became extended later, thanks to the unwearying expansionist activities of the Sandjak Begs, far to the west and north, so that the chief town of the sandjak, Gran, came to be situated on the inner border of the actual administrative area (other examples exist in Hungary of such an expansion, as, for example, the sandjaks of Szolnok (Ṣolnoḳ), Istulni Belghrad and Szigetvár (Sigeth), in each of which the chief place, after which the sandjak was named, found itself eventually on the inner border of the actual area administered from it). The "financial frontier" and territorial administration thus brought into being did not receive recognition from the Austrians, now growing stronger, or from the Hungarian kingdom, with the result that numerous villages paid taxes to two masters—a situation which, from the end of the 16th century, gave occasion for countless disputes.

Several tax registers (*taḥrīr*) of the sandjak are preserved at Istanbul and one also, dating from 1570, at Berlin (Berlin, Prussian State Library, Pet. II, Nachtr. I). The tax register preserved at Berlin is available in Hungarian (L. Fekete, *Az Esztergomi szandzsák 1570. évi adóösszeirása* [The tax register of the sandjak of Gran for 1570], Budapest 1943). According to this register there belonged to the sandjak 12 "varosh", *i.e.*, towns, 365 villages (*ḳarye*) and 93 abandoned farms, *i.e.*, puszta (*mezraʿa*) with a total of 4206 households (*khāne*). A number of the villages paid taxes to two masters and so it came about that Nikolaus Oláh, the Archbishop of Gran, caused to be built, around 1580 and near the locality known as Nyárhid, with a view to the hindering of the further advance of the Turks, a fortress (Ūjvár, later Érsekújvár, Germ. Neuhäusel), the site of which lay more or less in the centre of the Turkish sandjak. After the capture of Neuhäusel by the Turks in 1074/1663 most of the villages of the sandjak of Gran were incorporated in the then established Beglerbeglik of Neuhäusel/Ūjvár. With the definitive reconquest of Gran by the Imperialists in 1093/1683 the sandjak of Gran fell into dissolution.

EWLIYĀ ČELEBI b. Derwīsh Meḥmed Ẓillī, b. 10 Muḥarram 1020/25 March 1611 in the Unkapan quarter of Istanbul, seems to have died not before the last third of 1095/1684 (cf. *WZKM*, li (1948-52), 226, Anm. 137, and *TM*, xii (1955), 261). For a period of almost forty years (from 1050/1640, perhaps even earlier, to 1087/1676), after he had already started his wanderings in Istanbul in the year 1040/1630-1, he described a series of long journeys within the Ottoman Empire and in the neighbouring lands, undertaken (or allegedly undertaken) sometimes as a private individual, sometimes in an official capacity, either when taken along in the retinue of the Ottoman dignitaries or on his own responsibility, in his work of ten parts generally known as the *Seyāḥatnāme* ("Travels") or according to the Vienna Ms (Flügel, no. 1281) as the *Taʾrīkh-i Seyyāḥ* ("Traveller's chronicle"). For his life and experiences we are dependent solely on his own accounts in the *Seyāḥatnāme*, which are not always trustworthy (see below). His personal name is unknown; Ewliyā is his penname, which he adopted in veneration of his teacher the court-*imām* Ewliyā Meḥmed Efendi. His father was the chief jeweller to the court (*Sarāy-i ʿāmire bashḳuyumdjusu, sar-zargarān*), Derwīsh Meḥmed Ẓillī (cf. i, 218 [here and below the Istanbul edition is referred to; see below]), who died Djumādā II 1058/June-July 1648 (cf. ii, 458), according to Ewliyā's assertion aged 117 (lunar) years; he is said to have taken part in the (last) campaigns of the sultan Süleymān Ḳānūnī and to have served and undertaken works of craftsmanship for the later sultans also (cf. i, 218; iv, 102; vi, 267; x, 298). Ewliyā's father must have been a merry and also a poetically talented man, since on this account he was allowed to enjoy the favour of the court. The family tree which Ewliyā claims on his father's side is contradictory and improbable (cf. i, 424-5; iii, 444; vi, 226; x, 915). His paternal ancestors probably came from Kütahya; the family seems to have removed to Istanbul after the conquest of Constantinople in 857/1453, but to have retained the house in Kütahya and to have had also a house in Bursa, in the Ine Bey quarter, and at Manisa, an estate in Sandıklı, four shops in the Unkapan quarter of Istanbul as well as two houses there, and a vineyard in Kadıköy near Istanbul (cf. i, 471; vi, 146; ix, 81). This gives some idea of Ewliyā's economic circumstances, which—in addition to his shrewdness in making himself useful to the dignitaries—made it possible for him to follow his Wanderlust. Ewliyā's mother was from the Caucasus; she came to the *sarāy* in the time of Sultan Aḥmed I (1012-26/1603-17), and was there married to the court jeweller, Ewliyā's father. Ewliyā says that his

mother was related to Melek Aḥmed Pas̲h̲a (cf. Meḥmed T̲h̲üreyyā, *Sid̲j̲ill-i ʿOt̲h̲mānī*, iv, 509), who was indeed himself of Caucasian origin. Ewliyā's accounts of the degree of this relationship are, however, contradictory; either Ewliyā's and Melek Aḥmed Pas̲h̲a's mothers were sisters, or Ewliyā's mother was the daughter of Melek Aḥmed Pas̲h̲a's mother's sister. Ewliyā was also related on his mother's side, according to his story, to Defterdār-zāde Meḥmed Pas̲h̲a (cf. *Sid̲j̲ill-i ʿOt̲h̲mānī*, iv, 168) and to Ibs̲h̲īr Muṣṭafā Pas̲h̲a (cf. ibid., i, 166; İ. H. Uzunçarşılı, *Osmanlı tarihi*, Ankara 1947 ff., iii/2, 408; cf. *Seyāḥatnāme*, ii, 370, 453; v, 168). Ewliyā declares that he had also one brother and one sister (cf. ix, 81).—After the end of his elementary schooling Ewliyā was for seven years a pupil at the *medrese* of the *S̲h̲ayk̲h̲ al-Islām* Ḥāmid Efendi in Istanbul, and attended a Ḳurʾān school for eleven years where he was trained as a Ḳurʾān reciter (cf. i, 360); he also learnt many manual skills from his father (cf. i, 243, 404; ii, 467; vi, 381). In the *laylat al-ḳadr* of the year 1045/1636 Ewliyā distinguished himself by an especially good recitation of the Ḳurʾān, and through this fortunate circumstance he was presented by the then *silīḥdār* Melek Aḥmed Ag̲h̲a to Sultan Murād IV, on whose command he was admitted to the palace, where he received a more extensive training in calligraphy, music, Arabic grammar, and *tad̲j̲wīd*. He was often summoned to the Sultan's presence on account of his lively disposition, his common-sense, and his skill as a narrator. Shortly before Murād IV's expedition to Bag̲h̲dād (1048/1638) Ewliyā was appointed a *sipāhī* of the Porte (cf. i, 258).

In his ten-volume *Seyāḥatnāme* Ewliyā describes in vol. i: the capital city of Istanbul and its environs; in ii: Bursa, İzmid, Batum, Trabzon, Abk̲h̲āzia, Crete, Erzurum, Ād̲h̲arbāyd̲j̲ān, Georgia, etc.; in iii: Damascus, Syria, Palestine, Urūmiyya, Sivas, Kurdistān, Armenia, Rumelia (Bulgaria, Dobrud̲j̲a), etc.; in iv: Van, Tabriz, Baghdad, Baṣra, etc.; in v: Van, Baṣra, Oczakov, Hungary, Russia, Anatolia, Bursa, the Dardanelles, Adrianople, Moldavia, Transylvania, Bosnia, Dalmatia, Sofia; in vi: Transylvania, Albania, Hungary, Ujvár (Neuhäusel. Here is interpolated the expedition, which is unquestionably only fantasy on Ewliyā's part, of 10,000 Tatars through Austria, Germany and Holland, to the North Sea), Belgrade, Herzegovina, Ragusa (Dubrovnik), Montenegro, Kanizsa, Croatia; in vii: Hungary, Buda, Erlau (here is also described the journey to Vienna, which he undertook in the retinue of the embassy of Ḳara Meḥmed Pas̲h̲a in 1075/1665, and his alleged residence in Vienna; here also a fictitious journey of Ewliyā's in the regions of the "country of the seven kings"—perhaps the seven electorates are meant here—which, however, is not described in greater detail: blank passage in text), Temesvár (Banat, Rum. Timişoara), Transylvania, Wallachia, Moldavia, the Crimea, Ḳazaḳ, South Russia, the Caucasus, Dāg̲h̲estān, Azaḳ; in viii: Azaḳ, Kafa, Bāg̲h̲česarāy (Crimea), Istanbul, Crete, Macedonia, Greece, Athens, the Dodecanese, Peloponnesus, Albania, Valona, Elbaṣan, Ochrida, Adrianople, Istanbul; in ix: (Pilgrimage to Mecca) south-west Anatolia, Smyrna, Ephesus, Rhodes, south Anatolia, Syria, Aleppo, Damascus, Medina, Mecca, Suez; in x: Egypt (with historical excursus), Cairo, Upper Egypt, Sudan, Abyssinia.

Ewliyā seems to have stayed for eight or nine years in Egypt, where he perhaps also completed the last, tenth, part of the *Seyāḥatnāme*. The last date he mentions is 1 D̲j̲umādā I 1087/12 July 1676, although he knows of events which took place in 1093/1682 (cf. x, 1048) and later (cf. biographical details discussed above). He seems to have spent the last year of his life in Istanbul editing his book, which had probably been written down piecemeal at various times and required a final redaction which Ewliyā, as the mss show, never fully accomplished.

Ewliyā Čelebi is an imaginative writer with a marked penchant for the wonderful and the adventurous. He prefers legend to bare historical fact, indulges freely in exaggeration, and at times does not eschew bragging or anecdotes designed for comic effect. His *Seyāḥatnāme* thus appears in the first place as a work of 17th century light literature, which satisfied the need of the Turkish intellectuals of his time for entertainment and instruction, and which, thanks to the use at times of a traditional Turkish narrative technique and of the colloquial Turkish of the 17th century, with occasional borrowings of phrases and turns of expression from the ornate style, was intelligible to a wide circle; this obvious purpose of the work explains Ewliyā's lack of concern for historical truth. He also occasionally describes journeys which he himself manifestly cannot have undertaken. His literary ambition often drives him to record things and occurrences as though he had seen or experienced them himself, whereas a close examination reveals that he knows of them only from hearsay or that he is indebted to literary sources which he does not cite.

In spite of these reservations, the *Seyāḥatnāme* offers a wealth of information on cultural history, folklore and geography, which will be especially valuable once the philological groundwork is done and the necessary criticism of content applied. The charm of the work lies not least in the fact that it reflects the mental approach of the 17th century Ottoman Turkish intellectuals in their attitudes to the non-Muslim Occident, and throws some light on the administration and internal organization of the Ottoman empire of that time.

Cavid Baysun, to whom we owe the most comprehensive study to date of Ewliyā Čelebi's life and work (see below), has declared that one of the most pressing needs is the preparation of a new critical edition of the *Seyāḥatnāme*, and that only this would make possible the effective use of the information that it contains. Baysun's suggestions have been in part taken up in the admirable detailed researches of Meşkûre Eren (see below), limited to the first book of the *Seyāḥatnāme*. On the basis of her findings from the mss, Dr. Eren demonstrates Ewliyā's method of working, and points to the many blank and unfinished passages in the *Seyāḥatnāme*, which suggest that the author intended to expand the work further and to give it a final redaction which he did not however complete; she also proves that Ewliyā made abundant use of literary sources for his descriptions and even for the chronograms which he quotes. Dr. Eren classifies these literary sources (all with reference to book i of the *Seyāḥatnāme*) as: (1) those named and used by Ewliyā; (2) those which Ewliyā has used but not cited. In this group fall: ʿĀlī, *Kunh al-ak̲h̲bār* (cf. Babinger, *GOW*, 126 ff.); Ibrāhīm Pečewī, *Taʾrīk̲h̲* (cf. Babinger, 192 ff.); Newʿīzāde ʿAṭāʾī, *Ḥadāʾiḳ al-ḥaḳāʾiḳ fī takmilat al-S̲h̲aḳāʾiḳ* (cf. Babinger, 171 ff.); Sāʿī, *Tad̲h̲kirat al-bunyān* (cf. Babinger, 137 ff.); ʿAwfī, *D̲j̲awāmiʿ al-ḥikāyāt*, in the Turkish translation of D̲j̲elālzāde Ṣāliḥ (cf. Ms Istanbul

Topkapısaray, Revan Köşkü no. 1085, 693a); Başīrī, *Laṭā'if* (quoted in the *Tedhkire* of Ḳinalīzāde Ḥasan Čelebi, Ms Istanbul, Üniversite Kütüphanesi, T.Y. 2525, 74a); and chronogram verses from various poets cited by Eren (100-14); (3) those which Ewliyā has cited, but not used.

Mss of the *Seyāḥatnāme*.

Istanbul: Pertev Paşa collection nos. 458-62; Topkapısaray, Bağdat Köşkü nos. 300-4; Beşir Ağa nos. 448-52 (copy of 1158 [= 1745]). These mss include all ten books of the work. Also Topkapısaray, Bağdat Köşkü nos. 304 (i, ii), 305 (iii, iv), 306 (ix), 307 (v), 308 (vii, viii); Topkapısaray, Revan Köşkü nos. 366/1457-369/1460 (vi, vii, viii, ix); Hamidiye no. 963 (x); Halis Efendi no. 2750 (i), ibid. 2750 mükerrer (iii, iv); Üniversite Kütüphanesi no. 2371 (i, copy of 1170 [= 1756-7]), 5939 (i, ii, copy of 1155 [= 1742-3]); Yıldız, Tarih Kısmı, no. 48 (x). Vienna: Nationalbibliothek H.O. 193 (iv), cf. G. Flügel, *Die arabischen, persischen und türkischen Handschriften der kaiserlich-königlichen Hofbibliothek zu Wien*, Vienna 1865-7, ii, 433, no. 1281; Cod. mixt 1382 (i). London: Royal Asiatic Society nos. 22-3 (i, ii, iii, iv). Manchester: Univ. Libr., Lindsay collection no. 142 (iii, iv). Basle: R. Tschudi collection (i, ii, iii). Munich: Bayr. Staatsbibliothek (?), Th. Menzel collection (i, ii, iii, iv, v).

Printed versions of the *Seyāḥatnāme*.

Poor edition of extracts from Bk. i, with foreword, under the title of *Müntekhabāt-i Ewliyā Čelebi*, Istanbul 1258 (150 pp.), 1262 (143 pp.); Būlāḳ 1264 (140 pp.); Istanbul, ca. 1890 (104 pp., quarto). Integral edition: i-vi, Istanbul 1314-8 (Iḳdām Press); i-vi under the editorship of Aḥmed Djewdet and Nedjīb ʿĀṣim, vi with Karácson also. The value of this edition is much diminished by misprints, omissions and censored passages. Books vii and viii appeared as a publication of the Türk Ta'rīkh Endjümeni, utilizing several mss, ed. Kilisli Rifʿat Bilge, Istanbul 1928 (Dewlet and Orkhāniyye Presses). Books ix, Istanbul 1935 (Devlet Matbaası), and x, Istanbul 1938 (Devlet Matbaası) were published by the Turkish Ministry of Education, but unfortunately are in the new official Turkish orthography and are hence of limited use. A critical scholarly edition of the complete *Seyāḥatnāme*, in the original Arabic script, of course, is an urgent necessity.

EWRENOS, (Ghāzī Evrenos) makes his appearance in history after the emirate of Ḳarasî had been occupied by the Ottomans (after 735/1334-5), and given by sultan Orkhān as *tīmār* to his eldest son Süleymān Pasha, into whose service came the begs of the *amīrs* of Ḳarasî, Ḥādjdjī Il-Begi, Edje Beg, Ghāzī Fāḍil and Evrenos. According to the genealogical tree of the family, confirmed by a deed of *waḳf* (published by Ö. L. Barkan, in *Vakıflar Dergisi*, ii, Ankara 1942, 342-3), the father of Evrenos is said to have been ʿĪsā Beg, later called *Prangi* because he died in the village of that name; his son had a mausoleum built there and established a *waḳf*. The name of Evrenos can be found listed among the reinforcements sent by Orkhān under the command of his son to Cantacuzenus, to support him in his struggle against John V Palaeologus. But it is particularly from the moment when Süleymān Pasha (d. 759/1359) crossed the Dardanelles that one can follow continuously the history of Ghāzī Evrenos in the accounts of the Ottoman historians. Installed in the fortress of Ḳoñur Ḥiṣārî, near Gallipoli, beside Ḥādjdjī Il-Begi, Evrenos took part with the latter in raids on the region of Dimetoka [*q.v.*] and distinguished himself personally by occupying Keshān and laying waste Ipsala. Henceforward his name was to be associated with the history of the conquest of Rūmeli, where he made himself famous by his raids. After Orkhān's death Evrenos took part, with Ḥādjdjī Il-Begi, in the capture of Edirne by Murād I (763/1362), who next sent him to occupy the towns of Ipsala and Gümüldjina (Komotini) in Thrace, and appointed him *udj-begi* of the conquered territories. He was present at the battle of Sîrp-Ṣîndîghî, and later, in 772/1371, at that of Tchernomen (Čirmen) or of the Maritza, which brought disaster to the Serbs and their allies and opened the gates of Macedonia to the Turks. As a result, Evrenos was sent to conquer Feredjik (Pherrai) in 1372, and then, while the Turks took Kavala, Drama, Zichna, Serres and Karaferya (Yenidje-i Vardar), he himself occupied the regions of Porî (Peritheorion), Iskedje (Xanthi), Maronea (ʿAwret Ḥiṣārî) from which he levied *kharādj* (1373). As a reward, the sultan gave him the region of Serres which he had subjected and of which he became *udj-begi* (in 784/1382 or 787/1385). He then took part in the occupation of Greater Macedonia, capturing Yenidje-i Vardar and Monastir and, under the command of the vizier Čandarlî Khayr al-Dīn Pasha, assisted in the campaign against king Balsha II of Albania, which came to an end with the death of that prince (1385). Evrenos next went on the Pilgrimage, and on his return was granted an important fief by the sultan; the *fermān* bestowed on him by Murād I on this occasion was for a long time erroneously considered to be apocryphal; it has been the subject of various publications (Diez, *Denkwürdigkeiten von Asien*, ii, Berlin 1815, 101-32; cf. Ferīdūn, *Munshaʾāt al-salāṭīn*², i, 87-8). During the last campaign of Murād I, Evrenos was the sultan's adviser. He distinguished himself by occupying Üsküb (Skoplje), and then, before the Kossovo campaign, by crushing the enemy in a pass, thereby allowing the Turkish army to cross the Morava. On his accession Bāyezīd I (1389-1402), by a *berāt* dated Muḥarram 793/December 1390, confirmed Evrenos in the possession of the fief previously granted him by his father. On behalf of the new sultan, Evrenos occupied Vodena and Kitros and led several incursions into Albania. In 1391 he took part in the Morea campaign. In 1396 he was present at the battle of Nicopolis (Niğbolu), where he was head of the *aḳîndjîs*. Afterwards, as a result of the victory of Nicopolis, he made further raids into Albania and took part in the invasions of Hungary and Wallachia, where Bāyezīd sent him to parley with the enemy; next, with Yaʿḳūb Beg, he made his way into the Morea and captured Corinth and the fortress of Argos (1397). He was present at the battle of Ankara and then, during the interregnum, went into the service of Süleymān Čelebi, assisting him in his campaign against the Ḳaramān-oghlu, whom he besieged in Aḳsaray. On Süleymān's death, fearing reprisals from Mūsā Čelebi, he retired to Yenidje-i Vardar and feigned blindness. In the fratricidal struggle between Mūsā and Meḥemmed, Evrenos and the begs of Rūmeli who were discontented with the former took sides with Meḥemmed and helped him to overcome his brother. Evrenos died in 820/1417 at a very great age at Yenidje-i Vardar, which had become his family's residence (Yenidje-i Vardar was called "*Evrenos Beg yöresi*": cf. Ewliyā Čelebī, ix, 47). In the time of Murād I, Evrenos had already become one of the greatest feudatories of the Ottoman empire. The extent of the lands belonging to him had become legendary (ʿĀlī, *Künh*, v, 75; Beauséjour, *Tableau du commerce de la Grèce*, i, 111 ff.). The Ottoman historians also refer to his great generosity; he devoted a large part of his wealth to charitable foundations. Together with the Mīkhāl-oghullarî, the Malḳodj-oghullarî and the Tūrākhān-oghullarî, [*qq.v.*], the descendants of Evrenos constitute the four ancient families of the Ottoman warrior nobility.

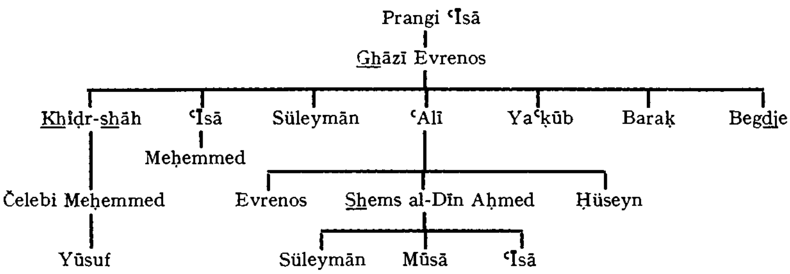
(I. Mélikoff)

EWRENOS OGHULLARÎ. Ghāzī Evrenos had seven sons, whose names are given by the chronicles and the *waḳf* deeds, and several daughters, one of

whom married the Grand Vizier Čandarlî Khalīl Pasha and became the mother of Bāyezīd II's Grand Vizier, Čandarlî Ibrāhīm Pasha. Two of his sons became famous in history, ʿAlī and ʿĪsā. ʿAlī was at first head of the *akîndjîs* under the command of his father, then *sandjak begi*. During the interregnum he adopted the cause of Mūsā Čelebī, and was sent by him to join his father who was living in retirement at Yenidje-i Vardar; but on the advice of Evrenos he went into the service of Meḥemmed Čelebī. When Meḥemmed died, the sons of Evrenos, like the other begs of Rūmeli, joined the cause of the pretender known as Muṣṭafā Düzme [*q.v.*]; but at Ulubād they forsook him and went over to Murād II. They were pardoned, and the sultan confirmed their possession of the fief granted to Evrenos by Murād I. In 833/1430, when Murād II was storming Salonika, ʿAlī Beg won distinction by inciting the assailants with promises of booty. In 838/1434-5 he headed a raid into Albania and returned laden with booty. In 1437 he was sent with the *akîndjîs* to make a reconnaissance raid in Hungary; he came back after a month, loaded with spoils, and advised the sultan to invade the country. In 845/1441 he laid siege to Belgrade, but the *akîndjîs* were defeated by the Hungarians and the Turks had to withdraw. During the revolt of the Albanians under the leadership of George Castriotes Iskender Beg (1443-68) [*q.v.*], he several times commanded the Turkish forces sent against the rebel. In 866/1462 he took part with his two sons Aḥmed and Evrenos in the campaign in Wallachia, in which he was leader of the *akîndjîs*. He died after this date; his tomb is at Yenidje-i Vardar.



His brother ʿĪsā Beg was, like him, leader of the *akîndjîs*. In 826/1423 he was sent on a reconnaissance raid into Albania by Murād II, who was just about to undertake his campaign in Albania and the Morea; he headed several other raids into Albania, one in 841/1438 and another in 846/1442. In 847/1443 he was at the battle of Jalovats which saw the defeat of the Turks by John Hunyadi. During the reign of Meḥemmed II, he took part in the Serbian campaign in 858/1454 and occupied the small fort of Tirebdje. In the following year he was sent into Albania and won a victory over Iskender Beg at Berat. In 867/1463 he was involved in the incidents in the Morea which led to the Turco-Venetian war. In 884/1479, together with ʿAlī and Iskender Mīkhāl-oghlu and Bali Malkodj-oghlu, he led the raid into Transylvania which ended in the massacre of the Turks who, too avid for loot, allowed themselves to be taken unawares and were crushed by the voïvode Stephen Bathori. He died after this date; his tomb is at Yenidje-i Vardar, and also a mosque and an *ʿimāret* founded by him.

The two sons of ʿAlī Evrenos-oghlu, Shems al-Dīn Aḥmed and Evrenos, were present with their father on the campaign in Wallachia in 866/1462; Evrenos was sent on a raid to the frontier of Moldavia; the former, whose name occurs in numerous archive-documents, was in 870/1466 beg of the *sandjak* of Trikkala, and then of Semendria; in 883/1478 he took part in the siege of Shkodra in Albania and was afterwards appointed head of the garrison left in the fort. A year before his death (903/1498), he established a *wakf* of which his son Mūsā was put in trust; his other two sons, ʿĪsā and Süleymān, had died in 893/1488 at the battle of Agha-Čayîrî, against the Mamlūks.

Other descendants of Evrenos are recorded at the beginning of the 9th/16th century, notably Meḥemmed, son of ʿĪsā b. Evrenos, *sandjak-begi* of Elbasan, who captured Durazzo in 907/1502; and Yūsuf, grandson of Khîḍr-Shāh b. Evrenos, who was present on Selīm I's Egyptian campaign. The Evrenos family, who won their fame by their raids in Rūmeli, lost their importance as military leaders after the middle of the 10th/16th century. This family, which played a great part in the rise of the Ottoman empire, remained, throughout the course of history, one of the most prominent by reason both of its territorial possessions and also of the statesmen to which it gave birth.

EYĀLET, from the Arabic *iyāla*, "management, administration, exercise of power" (cf. Turkish translation of Fīrūzābādī's *Ḳāmūs* by ʿĀṣim, Istanbul 1250/1834, iii, 135); in the Ottoman empire the largest administrative division under a *beglerbegi* [*q.v.*], governor-general. In this sense it was officially used after

1000/1591. The assumption that under Murād III the empire was divided up into *eyālet*s (M. d'Ohsson, *Tableau général de l'empire ottoman*, vii, 277) must be an error since the term does not occur in the documents of the period. Instead we always find *beglerbegilik* and *wilāyet* (*wilāya*). *Beglerbegilik* was then the proper term for this administrative division, while *wilāyet* designated any governorship, large or small (cf. *Sûret-i Defter-i Sancâk-i Arvanid*, ed. H. Inalcık, Ankara 1954, index; U. Heyd, *Ottoman documents on Palestine*, Oxford 1960, 50). As a term designating the territory of a *beglerbegilik*, *eyālet* must have been adopted by 1000/1591, while *beglerbegilik* continued to be used rather for the office of a *beglerbegi*.

In early Ottoman history the *beglerbegi* was the commander-in-chief of the provincial forces, in particular timariots, and as such the institution was directly connected with that of the *beglerbegi*, commander-in-chief, found with the Seldjūḳids and Ilkhānids (cf. F. Köprülü, *Bizans müesseselerinin Osmanlı müesseselerine tesiri*, in *THITM*, i (1931), 190-5 [Ital. tr. *Alcune osservazioni*..., Rome 1944]; I. H. Uzunçarşılı, *Osmanlı devleti teşkilâtına medhal*, Istanbul 1941, 59-60, 108). Orkhan during his father's reign, ʿAlāʾ al-Dīn Pasha his brother and Süleymān Pasha his son during Orkhan's reign, were considered as *beglerbegi* (cf. Saʿd al-Dīn, *Tādj al-tawārikh*, i, Istanbul 1279/1862, 69). But Murād I [*q.v.*] made Shāhīn, his *lālā* [*q.v.*], *beglerbegi* (under the Seldjūḳids some *beglerbegis* bore the title of *lālā*, or the synonymous *atabeg*. In a passage in Rūḥī's chronicle *lālā etmek* means to appoint *beglerbegi*), and set out for his historic conquests in Thrace. The conquered lands there were put under Lālā Shāhīn's military responsibility while Ewrenos [*q.v.*] was made *udj* [*q.v.*] *begi* over the irregular *ghāzī* forces on the marches (Neshrī, *Ǧihānnümā*, i, ed. Fr. Taeschner, Leipzig 1951, 54; Orūdj, *Tewārikh-i Āl-i ʿOthmān*, ed. Fr. Babinger, Hanover 1925, 20, 92). Thus the Ottoman *beglerbegi* became *beglerbegi* of Rumeli, and the rivalry between him and the *udj-begi*s became an important factor of Ottoman history down to Meḥemmed II's time (cf. H. Inalcık, *Fatih Devri*, i, Ankara 1954, 57-8). But the *beglerbegi* of Rumeli was still the only *beglerbegi*, the actual commander-in-chief of the Ottoman army. In the period between 787/1385 and 789/1387 the vizier Čandarlî Khayr al-Dīn was made at the same time the commander-in-chief, with the title of *pasha*, of all the forces in Rumeli [*q.v.*] while the Sultan himself had to stay in Anatolia. Thus the growing responsibilities in Rumeli and Anatolia, the two parts of the empire divided by the Straits (of which the Ottomans were not in complete control until the time of Meḥemmed II), led to the creation of the two *beglerbegilik*s of Rumeli and Anadolu (Anatolia), which thereafter formed the backbone of the empire. In 795/1393 when Bāyazīd I had to leave Anatolia for Rumeli he appointed Ḳara Timurtash *beglerbegi* of Anadolu in Ankara (Neshrī, 86). In his father's time Bāyazīd himself had been a governor on this *udj* area in Kütahya. But the *beglerbegi* of Rumeli preserved his position of primacy in the state by being always considered as the first among the *beglerbegi*s, having the exclusive right to sit with the viziers at Dīwān [*q.v.*] meetings etc. (cf. *Ḳānūnnāme-i Āl-i ʿOthmān*, Meḥemmed the Conqueror's code of laws, ed. M. ʿĀrif, suppl. of *TOEM*, 1330/1912, 13; Süleymān I confirmed these prerogatives in Muḥarram 942/July 1535, see Ferīdūn, *Munshaʾāt al-Salāṭīn*, Istanbul 1274, 595; cf. also *Ḳānūn-i Mīr-i Mīrān*, in *MTM*, i (1331), 527). Maḥmūd Pasha under Meḥemmed II and Ibrahīm Pasha under Süleymān I both held the offices of Grand Vizier and *beglerbegi* of Rumeli at the same time.

It appears that further *beglerbegiliks* in Anatolia were founded subsequently according to the traditional pattern.

The farthest *udj wilāyet*s in Anatolia, which became the nuclei of the new *beglerbegilik*s, continued to be assigned to the Ottoman royal princes. The third *beglerbegilik*, that of Rūm in the Amasya-Tokat region, developed from an *udj* under the royal princes whose *lālā*s, responsible for the actual administration, bore the title of *pasha* and *beglerbegi* from Bāyazīd I's time (cf. Ḥ. Ḥüsām el-Dīn, *Amasya taʾrīkhi*, iii, Istanbul 1927, 157-91). Timur's invasion and later on Shāhrukh's threats (cf. article Murad II, in *IA*) made this region vitally important for the Ottomans, and the new conquests in Djanik and Trebizond were incorporated into it. Also put under a royal prince with his *lālā*s after its conquest in 873/1468 (cf. article Mehmed II in *IA*) the '*wilāyet* of Ḳaraman' (cf. *Fatih devrinde Karaman eyâleti vakıfları fihristi*, ed. F. N. Uzluk, Ankara 1958, fac. 2) developed into a *beglerbegilik* later on (in 922/1516 Khüsrew Pasha was the *beglerbegi*). The development of the *udj wilāyet* of Bosna into a *beglerbegilik* in Rumeli took more than a century from 867/1463 to 988/1580 (the process is examined in detail in the monograph by H. Šabanović, *Bosanski Pašaluk*, Sarajevo 1959). With some variation dependent on the particular conditions of the *udj* sandjaḳs and further conquests (cf. L. Fekete, *Osmanlı Türkleri ve Macarlar*, in *Belleten*, xiii/52 (1949), 679-85), the Ottomans maintained the pre-conquest boundaries, especially in the first '*wilāyet*' stage (cf. H. Šabanović, *op. cit.*, 1-95; H. Inalcık, *Sûret-i Defter* . . ., 33, 55, 75). Later on in reorganizing them as *sandjaḳs* [*q.v.*] and *beglerbegiliks* they acted more freely and fixed the boundaries according to the situation.

The conquests under Selīm I were organized first as the *wilāyet* of ʿAlāʾ al-Dawla (conquered in 921/1515), the *wilāyet* of ʿArab which included Syria, Palestine, Egypt and the Ḥidjāz, and the *wilāyet* of Diyār-Bakr (conquered in 923/1517, first survey in 924/1518, cf. Barkan, *Kanunlar*, 145 and article Diyarbekir in *IA*). In an Ottoman record of 926/1520 (cf. Ö. L. Barkan, *H. 933-934 malî yılına ait bir bütçe örneği*, in *Ist. Üniv. Iktisat Fakültesi Mecmuası*, xv/1-4 (1953-4), 303-7) we then find the *wilāyet*s of Rumeli with 30 sandjaḳs, Anadolu with 20 sandjaḳs, Ḳaraman with 8 sandjaḳs, Rūm (Amasya-Tokat) with 5 sandjaḳs, ʿArab with 15 sandjaḳs, Diyār-Bakr with 9 sandjaḳs (the names of the sandjaḳs are given). In addition 28 Kurdish *djemāʿat*s in south-eastern Anatolia were mentioned as *liwā*s (sandjaḳs).

In the first years of the reign of Süleymān I events forced him to reorganize the *wilāyet* of ʿArab into the *beglerbegilik*s of Ḥaleb (Aleppo), Shām (Damascus) and Egypt (cf. Gibb-Bowen, i/1, 200-34; B. Lewis, *Notes and documents from the Turkish Archives*, Jerusalem 1952; S. J. Shaw, *The financial and administrative organization and development of Ottoman Egypt*, Princeton 1962, 1-19). The *wilāyet* of ʿAlāʾ al-Dawla too was put under an Ottoman beglerbegi in 928/1522 (cf. article Dulkadırlılar, in *IA*). In 940/1533 Süleymān I also created the *beglerbegilik* of Djezāʾir (Algeria) with the appointment of Khayr al-Dīn Ḳapudān Pasha [*q.v.*]. The development of the sea *udj* into a *beglerbegilik* was

precipitated by Andrea Doria's capture of Koron and the crusading activities of Charles V in the Mediterranean. In the western reports of about 941/1534 (Ramberti, A. Gritti in A. H. Lybyer, *The government of the Ottoman Empire in the time of Suleiman the Magnificent*, Cambridge, Mass., 1913, 255-61, 270-4) the *beglerbegilik*s in the Ottoman empire are listed as follows: Djezā'ir under the name of the *beglerbegilik* of the sea, Rumeli, Anadolu, Ḳaraman, Amasya-Tokat, ʿAlā' al-Dawla, Diyār Bakr, Shām and Egypt.

Further conquests under Süleymān I gave rise to the new *beglerbegilik*s: Ādharbāydjān and Baghdād in 941/1534, Van in Radjab 955/August 1548, Erzurum in 941/1534, Aḳča-ḳalʿa in Georgia in Shaʿbān 956/September 1549 (cf. Ferīdūn, *op. cit.*, i, 586, 604, 606) in Asia; Budīn in Djumādā II 948/ August 1541, Temeshvar in 959/1552 in Europe (cf. Fekete, *op. cit.*). Thus in appointing *beglerbegis* on the spot immediately after the conquest Süleymān I made an innovation.

In 976/1568 when a large scale expedition was planned in the Volga basin the sandjaḳ of Kefe (Caffa) in the *beglerbegilik* of Rumeli was raised to a *beglerbegilik* (cf. H. Inalcık, *Osmanlı-Rus rekabetinin menşei*, in *Belleten*, xii/46 (1948), 375 = *The origin of the Ottoman-Russian rivalry*..., in *Ann. de l'Un. d'Ankara*, i (1946-7), 75). As, after its conquest, Cyprus had to be protected by large forces, Lefḳosha (Nicosia) was made the centre of a *beglerbegilik* in 979/1571, and, the sandjaḳs of ʿAlā'iyye, Ṭarsūs, Ičel, Sis and Ṭarābulus-Shām (Syrian Tripoli) were attached to it.

Of many *beglerbegilik*s created during the occupation of the Caucasian lands between 986/1578 and 999/1590 (cf. B. Kütükoğlu, *Osmanlı-Iran siyâsî münâsebetleri*, Istanbul 1962) only those of Čıldır and Ḳarṣ (created in 988/1580) remained after the Persian reaction under ʿAbbās I [*q.v.*].

In the list of ʿAyn-i ʿAlī of 1018/1609 (*Ḳawânîn-i Âl-i ʿOthmân*, Istanbul 1280) are mentioned thirty-two *eyālet*s in the empire. Twenty-three of them were regular Ottoman *eyālet*s subjected to the tīmār system. These were: Rumeli, Anadolu, Ḳaraman, Budīn, Temeshvar, Bosna, Djezā'ir-i Baḥr-i Sefīd [*q.v.*], Ḳıbrıs, Dhülḳadriyye (formerly ʿAlā' al-Dawla or Marʿash), Diyārbakr, Rūm (Amasya-Tokat or Sivas), Erzurum, Shām, Ṭarābulus-Shām, Ḥaleb, Raḳḳa, Ḳarṣ, Čıldır, Ṭrabzon, Kefe, Mosul, Van, Shehrizūr. Nine *eyālet*s were with *sālyāne* [*q.v.*], that is to say the tax revenues were not distributed as tīmārs but collected directly for the Sultan's treasury; the *beglerbegi*, soldiers and all the other functionaries were assigned salaries from the annual tax collection of the *eyālet*. The *eyālet*s with *sālyāne* were: Miṣr (Egypt), Baghdād, Yemen, Ḥabesh (Eritrea), Baṣra, Laḥsā, Djezā'ir-i Gharb (Algeria), Ṭarābulus-Gharb (Tripolitania), Tūnus (Tunis). (See further MÜSTETHNĀ EYĀLETLER).

In the list given by Koči Beg about 1640 (*Risâle*, ed. A. K. Aksüt, Istanbul 1939, 99-103) the only difference is the addition of the *eyālet* of Özü which had been created by then primarily with the purpose of stopping the continuing Cossack attacks on the Black Sea coasts. It included the sandjaḳs on the western coasts of the Black Sea and the Danube. In both lists the *eyālet*s of Ḳanizha (Kanizsa) and Egri (Eger) are missing though these were created after their conquest in 1004/1596 (cf. Fekete, *op. cit.*, 681). In Kātib Čelebi's *Djihānnümā* (ed. Ibrāhīm Müteferriḳa, Istanbul 1145/1732, and trans. J. von Hammer, *Rumeli und Bosna*, Vienna 1812) we find the same *eyālet*s with the differences that Marʿash for Dhulḳadriyye, Sivas for Rūm, Ḳonya for Ḳaraman are mentioned, and the *eyālet* of Adana is added.

The term of *eyālet* for *beglerbegilik* appeared by the end of the 10th/16th century. We find it in the previous documents in its general meaning (cf. Ferīdūn, i, 614). Also in the new period the important *eyālet*s were assigned to *beglerbegi*s of the rank of vizier, with three *tugh*s (cf. Gibb-Bowen, i/1, 139-41), who had some authority over the neighbouring *beglerbegi*s of two *tugh*s. Also now the general tendency was to create smaller *beglerbegilik*s which were required to cope with certain military situations. Such was the case with the small *beglerbegilik*s set up in Georgia and Ādharbāydjān after 986/1578. In Syria a fourth *eyālet*, that of Ṣaydā', was created in 1023/ 1614 for the better control of the area (cf. U. Heyd, *op. cit.*, 45-8).

An *eyālet* was composed of sandjaḳs (*liwā*s) under sandjaḳ-begis and, as a sandjaḳ was always the basic administrative unit, the *beglerbegi* himself was at the head of a sandjaḳ called *pasha sandjaghî*. It included certain centrally located towns and districts in each sandjaḳ as his *khāṣṣ* (see TĪMĀR).

The main responsibilities of a *beglerbegi* were summarized in *berāt*s (diplomas) of assignment (see for example the *berāt* of ʿĪsā Beg in Ferīdūn, i, 269; for its date cf. H. Inalcık, *Fatih devri*, Ankara 1954, 77; also see *Ḳānūn-i mīr-i mīrān*, in *MTM*, i, 527-8). Representing the executive power of the sultan on all matters (*umūr-i siyāset*) in the *eyālet* and called in this capacity *wālī* of it, he enforced the *ḳāḍī*'s decisions and the Sultan's orders. He was also entitled to give decisions in the dīwān under him (*beglerbegilik dīwānî*) on matters concerning the persons of *ʿaskerī* [see ʿASKARĪ] status. But the *beglerbegi*s with the rank of vizier had larger and more absolute powers (cf. *MTM*, i, 528). The *beglerbegi*'s main administrative responsibility was to maintain public security, and pursue those who broke the law and opposed the Sultan's orders (for their ceremonial privileges see *MTM*, i, 527-8). It should be emphasized that the *ḳāḍī* and *māl defterdārî* [see DAFTARDĀR] in an *eyālet* were independent of the *beglerbegi*s in their decisions, and, could apply directly to the central government. Also the *agha*s of the Janissary garrisons in the main cities were independent of the *beglerbegi*s, who could never enter the fortresses under the Janissaries' guardianship. These restrictions and frequent changes of their posts were obviously designed to prevent *beglerbegi*s from becoming too independent.

The *Beglerbegilik-eyālet* was essentially based on the *tīmār* system and a *beglerbegi* was responsible primarily for the army of timariot *sipāhī*s in his *eyālet*. Under his command it was the largest military unit in the imperial army. It was the *beglerbegi*'s responsibility to bring it to the Sultan's army in perfect condition. The appointment and promotions of the *sipāhī*s depended on him. He was entitled to grant *tīmār*s up to a certain amount (cf. ʿAyn-i ʿAlī, *op. cit.*, 61-81). Two high officials, the *defter-ketkhüdāsî* and *tīmār-defterdārı* under him, were responsible for these affairs. The copies of the *idjmāl* and *mufaṣṣal defter*s, basic record-books of *tīmār*s drawn up for each sandjaḳ, were sent by the Sultan to the *eyālet*s (H. Inalcık, *Sûret-i Defter*, xxi; Heyd, *op. cit.*, 48).

But in the period of decline when the central authority weakened the whole system deteriorated. In some distant *eyālet*s the Janissaries obtained effective control and constituted ruling castes, as was the case in the North African provinces and Baghdād. In Egypt, however, it was the Mamlūk begs who

finally seized the actual control (cf. Shaw, *op. cit.*, 184-5,316). In the *eyālet*s of Eastern Anatolia the Janissaries' attempt to seize power failed before the violent reaction of the provincial forces and the *Djalālīs* (see Supplement, *s.v.*) under Abaza Meḥmed Pas͟ha [*q.v.*]. But it was the disorganization of the *tīmār* system that brought about fundamental changes in the *eyālet*s. Now an important part of the tax revenues was not distributed as *tīmār*s, but reserved directly for the Sultan's treasury, and farmed out to the tax-farmers; it then became a widespread practice to assign governorships with the governor himself farming the taxes, a practice applied previously in some distant *eyālet*s like Egypt. Thus on his appointment the governor guaranteed to deliver to the treasury a certain amount of money as the province's tax revenue. Also governors in general were encouraged by the Sultan to maintain forces at their own expense. It was principally these developments that prepared the way for the emergence of autonomous *eyālet*s in the 12th/18th century. In the same period local magnates called *aʿyān* [*q.v.*] acquired power in the *eyālet*s, since the governors were actually powerless without their cooperation. Despite the Sultan's efforts to reserve the rank of pas͟ha for his own men, some of these *aʿyān* managed to obtain governorships and even to found real provincial dynasties not only in the remoter provinces but also in Anatolia and Rumeli [see DEREBEY].

In 1227/1812 Maḥmūd II [*q.v.*] opened war against the pas͟has and *aʿyān* of this type to re-establish the authority of the central government in the provinces, and after 1241/1826 reorganized them as *müs͟hīriyyet* (*mus͟hīriyya*) giving the *müs͟hīr*s large powers in military as well as financial affairs with a view to organizing the new army (cf. Luṭfī, *Taʾrīk͟h*, v, 107, 172). With the proclamation of the *Tanẓīmāt* [*q.v.*] in 1255/1839 financial affairs in the *eyālet*s were made the exclusive responsibility of the *muḥaṣṣil*s, and later on important changes under Western influence were introduced in the provincial administration: administrative councils were set up in the provinces sharing the governors' responsibilities, and most of the *eyālet*s were reduced in size (see especially the *sālnāme*s (state year books) published since 1263/1847). The *eyālet* system was finally replaced by that of *wilāyet* [*q.v.*] in 1281/1864.

(HALİL İNALCIK)

EYLŪL [see TAʾRĪK͟H].

EYMIR (EYMÜR), name of an Og͟huz tribe (*boy*). They are mentioned in a legendary account of the pagan Og͟huz as being the only tribe of the Üč-ok group from whom sprang rulers, but the historical references to them so far known go back only to the 10th/16th century, when they formed part of Türkmen confederations in the Ottoman Empire, in Persia, and south-east of the Caspian Sea.

(1) The Eymir of the Ottoman domains were in two main branches, the one living among the Türkmen of Aleppo, the other with the Dulkadirlī confederation (*ulus*). The former consisted, in the reign of Süleymān I, of four clans (*oymak*); later in the 10th/16th century their numbers increased, to form 11 clans. At this period another clan of this branch was found among the Yeni-il tribesfolk south of Sivas. After the second siege of Vienna (1683), the Eymir, like other Türkmen groups, were required to serve in the war with Austria. A little later an unsuccessful attempt was made to settle a large group of the Türkmen of Aleppo, the Eymir among them, in the Ḥamā-Ḥims region; their population is recorded in the 12th/18th century as 500 tents.

The Eymir living among the Dulkadirlī were much more numerous, those of the Marʿas͟h region alone comprising, in the third decade of the 10th/16th century, 49 clans. Like the other groups constituting the Dulkadirlī confederation, these Eymir were half-settled, engaging in agriculture in their winter camping-grounds and growing rice. During the 11th/17th century they became completely settled in the Marʿas͟h-ʿAyntāb region. Some scattered clans of this group were then living in other areas occupied by the Dulkadirlī confederation—in the sandjaḳs of Kars (Kadirli) and Bozok, among the Boz-ulus, and in Persia.

Small communities named Eymürlü and Eymürler were found in the regions of Söğüt, Aydïn and Adana, but they took their name probably not from the tribe but from individuals (Eymir/Imir was a common personal name in the 9th/15th and 10th/16th centuries). 'Eymir' or 'Eymür' is a common village-name in central and western Turkey, particularly around Sivas, whence it appears that this tribe formed an important element among the Turkish immigrants into Anatolia.

(2) The Eymir of Persia belonged to the D͟hu 'l-Ḳadr confederation, dwelling in Fars, which was one of the seven great Ḳïzïl-bas͟h tribes upon which depended the power of the Ṣafawid dynasty. The D͟hu 'l-Ḳadr tribe was a branch of the D͟hu 'l-Ḳadr/Dulkadirlī confederation of Anatolia, from whence it had migrated to Persia.

(3) Eymir were found in the 10th/16th century also among the Sayïn K͟hānlu Türkmen dwelling along the rivers Atrak and Djurdjān north of Astarābād. Upon their submission to S͟hāh ʿAbbās, their chief ʿAlī Yār was appointed governor of Astarābād, with the title of K͟hān; after his death in about 1005/1596, his son Muḥammad Yār succeeded him. A remnant of these Eymir, numbering some 200 households, is still living in this region.

EZRA [see IDRĪS, ʿUZAYR].

F

FĀ', 20th letter of the Arabic alphabet, transcribed *f*; numerical value 80, as in the Syriac (and Canaanite) alphabet [see ABDJAD].

Definition: fricative, labio-dental, unvoiced; according to the Arabic grammatical tradition: *rikhwa*, *shafawiyya* (or *shafahiyya*), *mahmūsa*; *f* is a continuation of a *p* in ancient Semitic and common Semitic. For the phonological oppositions of the phoneme *f*, see J. Cantineau, *Esquisse*, in *BSL* (no. 126), 94, 1°; for the incompatibilities, *ibid.*, 134.

Modifications: some examples exist of the passage of *f* to *th*, as in the doublet: *nukāf* and *nukāth* "tumour on a camel's jaw" (a less frequent passage than the reverse: *th* > *f*); see al-Ḳālī, *Amālī*[2], ii, 34-5, Ibn Djinnī's critique, *Sirr ṣināʿa*, i, 250-1. This passage probably explains the existence of *thumm* "mouth" (nomad) > *təmm* (sedentary), in modern Syro-Lebanese dialects, side by side with *fumm* (the expected form) in central Syria (see A. Barthélemy, *Dict. Ar.-Fr.*, 93 and 622).

(H. FLEISCH)

FABLE [see ḤIKĀYA, ḲIṢṢA, MATHAL].

FAḌĀ'IL [see FAḌĪLA]

FADAK, an ancient small town in the northern Ḥidjāz, near Khaybar and, according to Yāḳūt, two or three days' journey from Medina. This place-name having disappeared, Ḥāfiẓ Wahba in his *Djazīrat al-ʿArab* (Cairo 1956, 15) identified the ancient Fadak with the modern village of al-Ḥuwayyiṭ (pron. Ḥowēyaṭ), situated on the edge of the *ḥarra* of Khaybar. Inhabited, like Khaybar, by a colony of Jewish agriculturists, Fadak produced dates and cereals; handicrafts also flourished, with the weaving of blankets with palm-leaf borders.

Fadak owes its fame in the history of Islam to the fact that it was the object of an agreement and a particular decision by the Prophet, and that it gave rise to a disagreement between Fāṭima [*q.v.*] and the caliph Abū Bakr, the consequences of which were to last more than two centuries. When, in 5/627, Muḥammad took his well-known measures against the Banū Ḳurayẓa [*q.v.*], the Jews of Khaybar and the neighbourhood became alarmed and secretly attempted to form a league in the expectation of an attack; a *ḥayy* of the Banū Saʿd living in the vicinity then offered them help, but Muḥammad sent about a hundred men commanded by ʿAlī against this *ḥayy* in Shaʿbān 6/December 627-January 628; the expedition was reduced to a raid. In the following year, Muḥammad marched against Khaybar, and the Jews of Fadak, frightened by the news of his victories, agreed to hold discussions with a view to concluding an agreement with the Prophet's envoy, Muḥayyiṣa b. Masʿūd al-Anṣārī, even going so far as to propose giving up all their possessions provided that Muḥammad allowed them to depart. An initial agreement was followed by a second pact granted by Muḥammad, sometimes overlooked by the sources (*e.g.* the *K. al-Kharādj*): they were to remain in Fadak while giving up half their lands and half the produce of the oasis; on this point al-Balādhurī (*Futūḥ*, 29) is explicit: *ʿalā niṣf al-arḍ bi-turbatihā* (the emendation suggested in the Glossary, *bi-thamaratihā*, should be rejected). On the subject of the agreement with the Jews of Khaybar, the same author (*Futūḥ*, 23) uses a quite different expression: "*ʿāmalahum* [*Muḥammad*] *ʿalā 'l-shaṭr min al-thamar wa 'l-ḥabb*", that is to say that he concluded an agreement with them for share-cropping, and subsequently confirms this condition in other *khabar*s (*ibid.*, 24, 25, 27; cf. 29; on the difference between the two agreements see also al-Bukhārī, ed. Krehl, iii, 74; Ibn Ḥanbal, *Musnad*, Cairo 1959, i, 58; al-Ṭabarī, i, 1825; Ibn Abi 'l-Ḥadīd, *Sharḥ*, Cairo 1959, vi, 46; al-Ḥalabī, *al-Sīra al-ḥalabiyya*, Alexandria 1280, iii, 172). Unlike the decision reached for Khaybar, where the produce, assigned to the Muslims, was shared annually, Fadak was allocated to Muḥammad (*khāliṣa lahu*), who devoted the revenues from it to needy travellers (*abnā' al-sabīl*) and also for the maintenance of the least rich (*ṣaghīr*) of the Banū Hāshim; the reason invoked to justify this measure was that Fadak had been acquired by treaty (*ṣulḥ*[an]). Two other expeditions of limited importance, in Shaʿbān 7/end of 628-beginning of 629, took place against the tribe of the Banū Murra who in summer lived near Fadak.

It was after the Prophet's death that the disagreement between Fāṭima and Abū Bakr started. Fāṭima maintained that Fadak, like Muḥammad's share of the produce from Khaybar, should come to her as her father's heiress; Abū Bakr, on the other hand, maintained that their attribution should remain exactly as Muhammad had settled it, since it was a question of *ṣadaḳa*s (that is to say public property used for benevolent purposes, like the *zakāt*). The Prophet, he said, had stated that he would have no heirs (*lā nūrathu*); what he left would be *ṣadaḳa* (*mā taraknā, ṣadaḳat*[un]). ʿAlī supported his wife, and this question of inheritance aggravated his opposition to Abū Bakr. The caliph used a fatherly tone in his conversation with Fāṭima, but remained firm; he invited her to produce witnesses to testify to the donation which she claimed to have been made by her father; but, as she could only produce her husband and a woman named Umm Ayman, he considered their evidence inadequate [see SHAHĀDA], nevertheless admitting that an appropriate income must be guaranteed for the Prophet's family. The rejection of Fāṭima's claim appeared to be an injustice in the eyes of the Shīʿa (see *al-Sīra al-ḥalabiyya*, iii, 607-9 for their grounds for this belief and for a criticism of their arguments). After the failure of her claim, Fāṭima was unwilling to meet Abū Bakr again, and it was only after her death, some months after that of the Prophet, that ʿAlī consented to recognise the election of Abū Bakr and renounced the claims to Fadak.

In the time of ʿUmar, the Jews living in the northern Ḥidjāz suffered a very severe blow: the caliph decided to expel them, since by this time the great number of slaves at the disposal of the Muslims allowed them to exploit all the fertile land in Arabia. While the Jews of Khaybar had to leave the oasis and emigrate to Syria without receiving any indemnity, those from Fadak were granted one,

based on the valuation of their property. This fact confirms that the former were regarded simply as usufructuaries, so that the share-cropping agreement with them could thus be broken without compensation, whereas the rights of ownership of the latter to one half of the oasis were recognised. Even after the expulsion of the Jews, ʿUmar used different methods for K͟haybar and for Fadak: to the Muslims who had received from Muḥammad a share in the produce from K͟haybar (or to their heirs), he gave ownership of the land (*raḳabat al-arḍ*, says al-Balād͟hurī, *ibid.*, 26) in proportion; as regards Fadak, he did not change the system, and his immediate successors followed his example. However, this assertion by the majority of the sources is explained by a note which Yāḳūt has preserved for us and Ibn Kat͟hīr has clarified with some details: when the Muslims, thanks to their conquests, had attained widespread prosperity, ʿUmar, guided by his *id͟jtihād*, assigned Fadak to al-ʿAbbās and ʿAlī; these two men quarrelled bitterly, each maintaining his own right of possession, and ʿUmar left them to sort out the matter themselves; it seems that they partitioned the oasis—subsequently, however, there is no further mention of the rights of al-ʿAbbās and his descendants to Fadak—and that one condition had been imposed by ʿUmar, namely that Fadak had to remain a *ṣadaḳa*; consequently, in the caliph's view, ʿAlī and al-ʿAbbās had merely been the administrators of a charitable foundation. It is to be assumed, however, that since the Prophet had used the revenues of Fadak also to meet the needs of his family, ʿAlī, and the ʿAlids after him, put the same interpretation upon the way in which the *ṣadaḳa* should be administered; thus is to be explained their persistence in claiming possession of the oasis, and the promptness with which the caliphs dispossessed them of it as soon as they went into opposition (see below). In later times it was not clearly understood what had happened; the uncertainty of the information is well explained by Yāḳūt, according to whom the disagreement over the question of Fadak sprang from political passions; and further evidence of this is to be found in the *Kitāb al-ʿAbbāsiyya* of al-D͟jāḥiẓ (see Ibn Abi 'l-Ḥadīd, *S͟harḥ Nahd͟j al-balāg͟ha*, iv, 98; *Rasāʾil*, ed. Sandūbī, 300). Ibn Kat͟hīr (*Bidāya*, iv, 203) confirms and explains the above account. According to some *ḥadīt͟hs* (e.g. al-Buk͟hārī, ed. Krehl, ii, 271 f.), ʿUmar assigned to ʿAlī and to al-ʿAbbās the *ṣadaḳa* which the Prophet possessed at Medina, but retained Fadak and K͟haybar. In any case, the change in the situation at Fadak took place after the expulsion of the Jews, for the government then had to look for the most convenient means of exploiting the land thus vacated. It was Muʿāwiya who brought the oasis under private ownership by giving it as an *iḳṭāʿ* to Marwān b. al-Ḥakam; however, he took it away from him during the years when he was in disgrace (from about 48/668 to 54/674), and then others vainly coveted it, since it produced an annual revenue of approximately 10,000 dinars (Ibn Saʿd, v, 286). Marwān, in his turn, gave it to his sons ʿAbd al-ʿAzīz and ʿAbd al-Malik. When ʿUmar II came to the throne, the whole property of Fadak was in his possession, since a share of it had been given him by his father ʿAbd al-ʿAzīz, and he had gained possession of the shares belonging to al-Walīd and Sulaymān, ʿAbd al-Malik's heirs. He was thus able to proclaim in a speech in the mosque that he had restored Fadak to its original purpose, and he also told his hearers that the Prophet had refused to make a gift of Fadak to Fāṭima when she had asked him for it (this shows that he was acquainted with a *ḥadīt͟h* which described this incident). But he entrusted Fadak to Fāṭima's descendants, and it was they who administered it (Ibn al-At͟hīr, ii, 173, states this positively: *fa-waliyahā awlād Fāṭima*; Ibn Saʿd (v, 287) leaves matters vague; the other writers, perhaps being afraid to venture onto dangerous ground, say nothing about it). It is probable that ʿUmar II had re-imposed the solution adopted by ʿUmar I for the Fadak question. It might be supposed that information on this point had been confused and that, instead of two decisions taken by the two ʿUmars, there was in fact only one single decision, taken by one or other of them; but the sources are too specific with regard to the first decision, while the second fits well into the general picture of the measures adopted by ʿUmar II for the purpose of ending the injustices inflicted on the ʿAlids.

This decision did not put an end to the vicissitudes of Fadak. Yazīd b. ʿAbd al-Malik took possession of the oasis, and it was the first of the ʿAbbāsids, al-Saffāḥ, who restored Fadak to Fāṭima's descendants. The change was short-lived, for al-Manṣūr confiscated Fadak after the rebellion of Muḥammad al-Nafs al-Zakiyya [*q.v.*] and Ibrāhīm [*q.v.*]; the oasis reverted to the ʿAlids in the caliphate of al-Mahdī, only to be once again seized by al-Hādī after the revolt of the ʿAlids with its tragic conclusion at al-Fak͟hk͟h [*q.v.*]. Finally, in 210/826, al-Maʾmūn consented that it should be granted to Fāṭima's descendants who had come to make this request in the name of the family; he even caused his decree to be recorded in his *dīwān*s. The long letter which he sent to his *ʿāmil* in Medina, preserved by al-Balād͟hurī, shows us that the caliph imposed his decision while at the same time he attempted to support it by arguments for which, we can see clearly, he brought pressure to bear on the *faḳīh*s (al-Yaʿḳūbī, ii, 573); however, he was so fully cognisant of the weakness of these arguments that, at the beginning of the letter, he boasted of his position in regard to the religion of Allāh, his responsibility as the Prophet's representative, his relationship with him, his fitness for applying the *sunna*, etc. But al-Maʾmūn's third successor, al-Mutawakkil, did not respect his decree and once again devoted Fadak to its original purpose which Abū Bakr had sanctioned; we must conclude that, under the influence of the *ʿulamāʾ*, he renounced the arguments put forward by al-Maʾmūn. Finally, al-Masʿūdī (viii, 303) and Ibn al-At͟hīr (vii, 75) add a further point about the fate of Fadak: they tell us that the caliph al-Muntaṣir, son of al-Mutawakkil, once again restored Fadak to the ʿAlids.

To conclude, the question of Fadak is interesting from the legal point of view (it proves that, from the earliest times of Islam, there was a very precise conception regarding the difference between private and collective property and an awareness of the duties and rights relating to each); it is moreover an example of the difficulties encountered by the rulers who respected the *s͟harīʿa* when, for political motives, they proposed to modify a situation established by the Prophet and his immediate successors.

FAḌĀLA, town and port on the Atlantic coast of Morocco, 25 km. to the north-east of Casablanca, in the lands of the Zanāta tribe. The origin of the name is unknown; the etymology given by Graberg de Hemsö and by Godard (*fayḍ Allāh* = "bounty of God") is obviously fanciful. The name is perhaps to be compared with that of a section of the neighbouring Ziyāyda tribe, the Faḍḍāla. The toponym appears as early as al-Idrīsī and the Genoese and Venetian portulans. It appears that Christian merchants visited the anchorage in the 14th and 15th centuries. —Sīdī Muḥammad b. ʿAbd Allāh in 1186-7/1773, wishing to make Faḍāla a grain depot for the province of Tamasna, granted export privileges to the European merchants, but withdrew them the following year. He then accorded them to the Spanish company of "los cinco gremios mayores", who also held the monopoly of the trade of al-Dār al-Bayḍāʾ. The port was again abandoned in the 19th century. It had only one *ḳaṣaba* which, like the neighbouring *ḳaṣaba* of al-Manṣūriyya, was used as a staging-post on the route from Rabat to Casablanca.

The concession to build a small port was granted in 1914 to the French company Hersent frères. Today the port of Faḍāla, as an auxiliary to that of Casablanca, is principally a petrol port. The tonnage loaded was 90,000 tons in 1955, 36,000 in 1958; the tonnage unloaded was 331,000 tons in 1955, 233,000 in 1958.

The proximity of Casablanca has encouraged the introduction of a fair number of industries, and the population, mostly composed of workers who have migrated from the neighbouring countryside, has increased rapidly: in 1952 it was 25,189, of which 20,880 were Muslim Moroccans, 449 Jewish Moroccans, and 3,860 were foreigners. In 1960 (provisional census reports) it was 35,000, with 31,750 Muslims, 150 Jews and 3,100 foreigners. The town has the status of a municipality. In 1379/1959 its name was changed by decree to al-Muḥammadiyya, in honour of the reigning sovereign, Muḥammad V.

FADDĀN [see misāḥa].

FADHLAKA, sum, total, from the Arabic *fa dhālika*, "and that [is]", placed at the bottom of an addition to introduce the result. Besides its arithmetical use, the term was also employed for the summing up of a petition, report, or other document, as for example for the summarized statements of complaints presented at the *Dīwān-i humāyūn* [*q.v.*]. By extension it acquired the meaning of compendium and is used, in this sense, in the titles of two well-known works on Ottoman history, written in the 17th century by Kātib Čelebi and in the 19th by Aḥmad Wefīḳ Pasha [*qq.v.*]. (Ed.)

FĀḌIL BEY, Ḥüseyn (ca. 1170/1757-1225/1810) also known as Fāḍil-i Enderūnī, Ottoman poet celebrated for his erotic works, was a grandson of Ẓāhir Āl ʿUmar [*q.v.*] of ʿAkkā, who rebelled against the Porte in the seventies of the 18th century. Taken to Istanbul in 1190/1776 by the *ḳapudān pasha* Ghāzī Ḥasan after his grandfather and father had been slain in battle, he was brought up in the Palace. An amatory intrigue led to his expulsion in 1198/1783-4, and for twelve years he led a vagabond life in poverty in Istanbul. *Ḳaṣīde*s addressed to Selīm III and the statesmen of the day imploring their patronage eventually won him employment, but in 1214/1799 he was banished to Rhodes. There he lost his sight, and was permitted to return to Istanbul, where he died in Dhu'l-Ḥidjdja 1225/December 1810. His works are (1) a *dīwān*, printed at Būlāḳ 1258/1842 together with (2) *Defter-i ʿashḳ* ('Journal of love'), a long *methnewī* mainly recounting his love-affairs but with some interesting descriptions of life in the Palace School (see sarāy); (3) *Khūbān-nāme* ('Book of beautiful youths'), a *methnewī* describing the attractions of young men of various nationalities (both from within the Empire and from Europe and the 'New World'!) and (4) *Zenān-nāme* ('Book of women'), a similar work on girls (these two were lithographed at Istanbul in 1838, but the Minister of the Exterior Muṣṭafā Rashīd had the edition confiscated for its indecent subject-matter; new edition 1286/1870; Fazil Bey, *Le livre des femmes* (*Zenan-nameh*), trad. du turc par J. Decourdemanche, Paris 1879); (5) *Čengi-nāme*, a series of stanzas in the tradition of the *Shehr-engīz* [*q.v.*], on the dancing-boys of Istanbul.

Edhem and I. Stchoukine, *Les manuscrits orientaux illustrés de la Bibliothèque de l'Université de Stamboul*, Paris 1933, no. 17; *IA*, iv, 529-31, by Ali Cânib Yöntem. (J. H. Mordtmann*)

Muṣṭafā **FĀḌIL PASHA,** Miṣirli, Ottoman statesman, was born 2 February 1830 in Cairo, the youngest son of Ibrāhīm Pasha and grandson of Muḥammad ʿAlī Pasha, wālī of Egypt. After his education in Cairo, he went in 1262/1846 to Istanbul, where he was attached to the office of the Grand Vizier. He advanced in government service and was nominated vizier in Shaʿbān 1274/March-April 1858. On 19 November 1862 he became Minister of Education and was transferred on 12 January 1863 to the ministry of Finance, a post he held until March 1864, when he resigned. On 5 November 1865 he was appointed president of the *Medjlis-i khazāʾin*, from which he was dismissed on 16 February 1866. Being exiled from the Ottoman Empire, he left Istanbul, 4 April 1866, and went to Paris. His exile was probably due to his criticism of the policy of Fuʾād Pasha [*q.v.*], who favoured Ismāʿīl Pasha, the wālī of Egypt. Ismāʿīl Pasha sought to restrict the succession to the hereditary governorship to his own descendants, thus depriving his brother Muṣṭafā Fāḍil Pasha of his right to succeed. Muṣṭafā Fāḍil Pasha took the leadership of Ottoman liberalism by publishing on 24 March 1867 in the French newspaper *Liberté* a letter addressed to the Sultan ʿAbd al-ʿAzīz, in which he advised the Sultan to accept a Constitution for the Empire (for the text of this letter see *Orient*, no. 5 [1er Trimestre 1958], 29-38). He invited the Young Ottomans [see yeñi ʿothmānlilar] to join him in Europe and helped them in their press campaign against the autocratic government in Turkey. But he profited from the official visit of the Sultan to Western capitals to regain favour and returned on 20 September 1867 to Istanbul. He was nominated, on 25 July 1869, a member of the *Medjlis-i Wālā* and became for the second time, in Muḥārram 1287/April 1870, Minister of Finance. He was dismissed from this post on 18 December. He occupied from October 1871 to January 1872 the ministry of Justice. He died on 2 December 1875 in Istanbul and was buried at Eyyūb, the holy quarter of the city. His remains were moved to Egypt on 25 June 1929. He was an intelligent and able statesman and succeeded in negotiating the sixth foreign loan of the Ottoman Empire in 1863 during his first term as Minister of Finance. The conditions of this loan were reasonable. His ambition caused him to behave in an opportunist way: he used the Young Ottomans as a tool in his intrigues to become wālī of Egypt. He spent unsuccessfully extraordinary sums in this aim. Nevertheless he patronized such writers as Shināsī [*q.v.*] and artists as Zekāʾī Dede [*q.v.*]. He founded in 1870 the first club in Istanbul: this *Endjümen-i Ülfet* lasted just over a year.

(E. Kuran)

FAḌĪLA (Arab., pl. *faḍāʾil*) an excellence or excellent quality, a high degree in (or of) excellence. The plural *faḍāʾil* indicates a definite category of literature, related to but distinct from the so-called "disputes for precedence". *Faḍāʾil* literature exposes the excellences of things, individuals, groups, places, regions and such for the purpose of a *laudatio*. The polemical comparison or dialogue, characteristic of the "disputes for precedence", is lacking.

Faḍāʾil literature, the opposite to which is *mathālib* literature, may be divided into various branches:

Ḳurʾān. *Faḍāʾil* literature takes its point of departure from the Ḳurʾān. The praise of the Ḳurʾān preserves, modified for the conditions of Islam, the custom of the pre-islamic Arabs to boast (*mufākhara*) of the nobility and exalted rank of their tribes (see Goldziher, *Muh. St.* i, 51, 54 ff.). A comparison of its *faḍāʾil* with others, despite the Arab fondness for comparison, was impossible, for the Ḳurʾān, as the direct and unadulterated word of God, was immeasurable, even in polemic against the *Ahl al-Kitāb* (see Goldziher, *ZDMG*, xxxii (1878), 344 ff.; M. Schreiner, *ZDMG*, xlii (1888), 593 f.). An enumeration of its excellences was furthermore to win back to the study of the incomparable holy book those Muslims who had occupied themselves all too exclusively with profane science, such as that of the *maghāzī* and the *amthāl* (see Goldziher, *Muh. St.*, ii, 155; Abū ʿUbayd, *K. al-Amthāl*, beginning). The nucleus of the *faḍāʾil al-Ḳurʾān* consists of sayings derived from the Prophet, his Companions and their descendents (*ṣaḥāba, tābiʿūn* etc.) concerning the excellences of the individual suras and verses and the reward for those who occupy themselves with them. There are also accounts providing information as to when separate revelations were granted to Muḥammad. Questions of Ḳurʾānic readings are treated in special chapters. The oldest preserved *K. Faḍāʾil al-Ḳurʾān* is very likely that of Abū ʿUbayd (died 224/837; see Brockelmann, I, 106, and S I, 166 ff.), see Ahlwardt no. 451; A. Spitaler, in *Documenta Islamica Inedita* (*Festschrift R. Hartmann*), Berlin 1952, 1-24. The list in Ḥādjdjī Khalīfa (under *ʿIlm Faḍāʾil al-Ḳurʾān*) is incomplete (see Yāḳūt, *Irshād*, indexes; Ibn Khayr, *Fihrist*, index; Brockelmann, index). The large collections of traditions, such as Bukhārī's (died 256/870) *Ṣaḥīḥ* (book 66), have a separate chapter on the *Faḍāʾil al-Ḳurʾān*.

Companions of the Prophet. Among others Wahb b. Wahb (d. 200/815) had already written a *K. Faḍāʾil al-Anṣār* (*Irshād*, vii, 233, 7), al-Shāfiʿī (d. 204/820) a *K. Faḍāʾil Ḳuraysh wa 'l-Anṣār* (*Irshād*, vi, 397, 17), and Aḥmad b. Ḥanbal's (d. 241/855) *K. Faḍāʾil al-Ṣaḥāba* has been preserved (Brockelmann, S I, 310, 312). The 62nd chapter of Bukhārī's *Ṣaḥīḥ* contains *faḍāʾil aṣḥāb al-nabī*. The "excellences" of the Companions of the Prophet are for the most part concerned with the experiences which they shared with the Prophet. Historically confirmed traditions, such as that concerning Muhammad's *hidjra* in the company of Abū Bakr, stand beside fantastic prophecies by Muḥammad about the destiny and future of his Companions, and so forth.

Individuals. Al-Madāʾinī (d. 225/840) wrote a book about the *faḍāʾil* of Muḥammad b. al-Ḥanafiyya, Djaʿfar b. Abī Ṭālib and al-Ḥārith b. ʿAbd al-Muṭṭalib (*Irshād*, v, 313, 9 ff.), and al-Ṭabarī (d. 310/923) one about those of Abū Bakr, ʿUmar, al-ʿAbbās

and ʿAlī (*Irshād*, vi, 452, 18f,, 16). Ibn al-ʿUshārī's (d. 441/1029) *K. Faḍāʾil Abī Bakr al-Ṣiddīḳ* has been preserved (Brockelmann, S I, 601); Ibn ʿAsākir (d. 571/1176) dreamed of the *faḍāʾil* of Abū Bakr (for this and others of his various *faḍāʾil* books, see *Irshād*, v, 143 ff.), etc. A work such as that of Ibn al-Djawzī (d. 597/1200) about the *faḍāʾil* of Ḥasan al-Baṣrī (Brockelmann, S I, 917) belongs properly to *manāḳib* [*q.v.*] literature (see also al-Ḳifṭī, *Inbāh*, i, 219; Brockelmann, S III, 1228; Storey, index).

Cities and provinces. Among *faḍāʾil* works those concerning the *faḍāʾil* of particular cities and provinces occupy a special place. H. Ritter (*Über die Bildersprache Niẓāmīs*, Berlin 1927, 20) has already pointed out certain similarities to the *genos epideiktikon*. But the yield of a genuine panegyric of the city, such as G. E. von Grunebaum has sketched (*Zum Lob der Stadt in der arabischen Prosa*, in *Kritik und Dichtkunst*, Wiesbaden 1955, 80-6), is comparatively small, apart from the Islamic West (see below). For these *faḍāʾil* books too consist largely of sayings put into the mouths of Muḥammad and his Companions in which political and regional aims are primarily pursued (see Goldziher, *Muh. St.*, ii, 128 ff.; *al-Aghānī*[1], v, 157, [3]vi, 54 ff.; al-Marzubānī, *al-Muḳtabas*, Ms. Nur. Osm. 3391, fol. 22b ff., 90b). These *ḥadīth*s may be divided into three groups: 1) *Isrāʾīliyyāt*, traditions about the pre-islamic period, in particular about the holy places of prophets, etc., 2) invented *ḥadīth*s which originated in the rivalries between Umayyads, Shīʿīs, ʿAbbāsids etc., or between the Ḥidjāz, Syria and ʿIrāḳ, etc., 3) a few genuine *ḥadīth*s able to withstand even an internal criticism (see Ṣalāḥ al-Dīn al-Munadjdjid's preface to his edition of al-Rabaʿī's (d. 444/1052) *K. Faḍāʾil al-Shām wa-Dimashḳ*, Damascus 1950). The *faḍāʾil* of Baṣra were collected by ʿUmar b. Shabba (d. 264/878) (Ḥādjdjī Khalīfa), those of Kūfa by Ibrāhīm b. Muḥammad (d. 283/896; *Irshād*, i, 295, 13), those of Baghdād by al-Sarakhsī (d. 286/899; Ḥādjdjī Khalīfa). Probably the oldest surviving work of this nature is the *K. Faḍāʾil Miṣr* of ʿUmar b. Muḥammad al-Kindī (d. after 350/961; Brockelmann I, 155; S I, 230; ed. and tr. by J. Østrup, Copenhagen 1896). For a manuscript of an early book about the *Faḍāʾil al-Kūfa* in the Ẓāhiriyya Library, see H. Ritter in *Oriens*, iii (1950), 82 (for the *Faḍāʾil-i Balkh*, see Storey, i, 1296 ff.; also *Irshād*, ii, 143, 9). Quite different is al-Shaḳundī's (d. 629/1231; Brockelmann, S I, 483) *R. fī Faḍl al-Andalus* (tr. E. G. Gómez according to al-Maḳḳarī, *Analectes*, ii, 126-50: *Elogio del Islam Español*, Madrid-Granada 1934, 123). This small *Risāla* represents indeed an *encomium* of Andalusia, freed of the fetters of eastern *ḥadīth* science: the praise of the power of the state (Umayyad caliphs), of knowledge (famous Andalusian scholars), of poetry, of cities such as Seville, Cordova, etc.

Peoples and Tribes. Abū ʿUbayda's (d. ca. 210/825) *K. Faḍāʾil al-Furs* (*Fihrist*, 54, 10; *Irshād*, vii, 170, 5; *Ṣubḥ al-Aʿshā*, iv, 92, 8: read Abū ʿUbayda instead of Abū ʿUbayd; Brockelmann, S I, 167 also to be corrected thus) might owe its origin to the author's inclinations towards the Shuʿūbīyya. For Djāḥiẓ's *K. Faḍāʾil al-Atrāk*, see Ch. Pellat (*Arabica*, iii (1956), 177), and F. Gabrieli (*RSO*, xxxii (1957), 477-483), for his *K. Faḍl al-Furs*, see *Irshād* (vi, 77, 19). Djāḥiẓ's *K. Faḍīlat al-kalām* and *Faḍīlat al-Muʿtazila* (see Pellat in *Arabica*, iii (1956), 163 and 168) do not actually belong to the *faḍāʾil* literature, but rather are similar to the apologetic nature of the *K. Faḍāʾil al-Imām al-Shāfiʿī* by Fakhr al-Dīn al-Rāzī (d. 606/1209; see Brockelmann, S I, 921). Ibn ʿAbd Rabbih (d. 328/940) devoted a special chapter of his *ʿIḳd al-Farīd* (vol. iii, Cairo 1372/1952, 312-418) to the *faḍāʾil al-ʿArab*. Ibn al-Kalbī (d. 204/819) collected the *faḍāʾil* of Ḳays ʿAylān (*Irshād*, vii, 251, 1), and al-Shuʿūbī (ca. 200/815) those of Kināna and Rabīʿa (*Fihrist* 105, 15 ff.; *Irshād*, v, 66, 16 ff.), etc. To what extent anti-Shuʿūbī tendencies play a part in these works, as seems to have been the case with Aḥmad b. Abī Ṭāhir Ṭayfur's (d. 280/893) *K. Faḍl al-ʿArab ʿala ʾl-ʿAdjam* (*Irshād*, i, 155, 6), has not been clarified.

Various. The *faḍāʾil* of the holy months (Ibn Abī Dunyā, d. 281/894, Brockelmann, I, 160, S I, 247, and others) have been the subject of treatises, as have been those of prayers (Aḥmad b. al-Ḥusayn al-Bayhaḳī, d. 458/1066, Brockelmann I, 446 f., S I, 619, and others), of the *basmala* (al-Būnī, d. 622/1225, Brockelmann I, 655, and others), of the *djihād* (Ibn Shaddād, d. 632/1234, Brockelmann, S I, 550, and others), as well as the "excellences" of quite profane things which have been particularly collected: for example, shaving of the head (al-Ṣaymarī, d. 275/888: *Irshād*, vi, 402 and 403), the days of the week (al-Sīrāfī, d. 368/979; poem, *Irshād*, iii, 89, 5-11), the herb basil (Muḥammad b. Aḥmad al-Nūḳātī, d. 382/992; *Irshād*, vi, 324, 16), archery (al-Ḳarrāb, d. 429/1037; Brockelmann, S I, 619; *IC*, xxxiv (1960), 195-218) and coffee (al-Udjhūrī, d. 967/1559; Brockelmann II, 414 no. 9).

FADJĪDJ [see figuig].

FADJR [see ṣalāt].

FADJR-I ĀTĪ [see fedjr-i ātī].

FAḌL, BĀ, a family of *mashāyikh* of Tarīm in Ḥaḍramawt claiming descent from the Saʿd al-ʿashira clan of Madhhidj. The name Bā Faḍl seems to derive from an ancestor called *al-faḳīh* Faḍl b. Muḥammad b. ʿAbd al-Karīm b. Muḥammad, whose genealogy cannot be traced beyond that. They seem to have had supreme authority in religious matters in

Tarīm until superseded by the Bā ʿAlawī *sayyids* around the 9th/15th century. They have long been prominent as *ṣūfī*s and *faḳīh*s, jurists. In the 10-11th/16th-17th centuries one branch existed in Aden. The most famous of this branch, and probably the founder, was Djamāl al-Dīn Muḥammad b. Aḥmad b. ʿAbd Allāh, born in Tarīm, who attained prominence in Aden as teacher and *muftī* and was favoured by Sulṭān ʿĀmir b. ʿAbd al-Wahhāb, the Ṭāhirid ruler of al-Yaman. He died in Aden in 903/1498.

Another branch, known as Bal Ḥādjdj, existed in al-Shiḥr, of which the probable founder was ʿAbd Allāh b. ʿAbd al-Raḥmān b. Abī Bakr (d. 918/1513), the author of a number of manuals on *fiḳh* and ṣūfism some of which gained circulation beyond his land and were commented upon by other authors (cf. Brockelmann II 389 and S II 528). He also acted as arbitrator between the rulers of the region and excercised some public authority. He was succeded by his son Aḥmad, known as *al-shahīd*, the martyr, because he was killed in al-Shiḥr in a battle with the Portuguese in 929/1523. The family might then have moved back to Tarīm, for a brother of Aḥmad *al-shahīd*, Ḥusayn (d. 979/1572), was a prominent *ṣūfī* in Tarīm and had inclinations towards the Shādhilī *ṭarīḳa*. A son of this Ḥusayn, called Zayn al-Dīn (d. 1026/1617), was also a *ṣūfī* and jurist in Tarīm. Another Ḥusayn, a descendent of Aḥmad *al-shahīd*, was born in al-Shiḥr in 1019/1610, travelled as a student to Aden, Zabīd, Mecca and Medina and back to al-Shiḥr and then to India and then back to Mecca, where he settled and traded in coffee and cloth between al-Mukhā and Mecca. He became a prominent and rather controversial *ṣūfī* and wrote some *ṣūfī* poetry. He died in Mecca in 1087/1677.

Of the Tarīm branch Muḥammad b. Ismāʿīl (d. 1006/1597) was a prominent teacher, and Aḥmad b. ʿAbd Allāh b. Sālim, called al-Sūdī (d. 1044/1634) was a linguist and grammarian of some merit.

Shaykh Muḥammad ʿAwaḍ Bā Faḍl (d. ca. 1953) is the author of a book of biographies called *Ṣilat al-ahl fī tarādjim Āl Bā Faḍl*, still in manuscript.

Bibliography: Ibn al-ʿAydarūs, *al-Nūr al-sāfir min akhbār al-ḳarn al-ʿāshir*, Baghdād 1934, 23-6, 44, 98-100, 135-7, 207 f., 344-8; al-Muḥibbī, *Khulāṣat al-athar fī aʿyān al-ḳarn al-ḥādī ʿashar*, Cairo 1869, 4 vols.; F. Wüstenfeld, *Die Çufiten in Süd-Arabien im XI (XVII) Jahrhundert*, Göttingen 1883, 86-90; R. B. Serjeant, *The Saiyids of Ḥaḍramawt*, London 1957, 12, 14; idem, *Historians and historiography of Ḥaḍramawt*, in *BSOAS*, xxv (1962), 256; idem, *The Portuguese off the South Arabian Coast*, Oxford 1963, 52-4. (M. A. Ghūl)

AL-FAḌL B. AḤMAD AL-ISFARĀʾINĪ Abu'l-ʿAbbās, the first *wazīr* of Sulṭan Maḥmūd of Ghazna, was formerly the *ṣāḥib-i barīd* (see barīd) of Marw under the Sāmānids. At the request of Subuktigīn, Amīr Nuḥ b. Manṣūr the Sāmānid sent Faḍl to Nīshāpūr in 385/995 as the *wazīr* of Maḥmūd, who had been appointed to the command of the troops in Khurāsān the previous year. Faḍl managed the affairs of the expanding empire of Sulṭān Maḥmūd with great tact and ability until 404/1013, when he was accused of extorting money from the subjects of the Sultan. Instead of answering the charge when he was called upon to do so, he voluntarily placed himself in the custody of the commander of the fort of Ghazna. The Sultan was annoyed at his conduct and allowed him to remain there. Faḍl died in 404/1013-4, during the absence of Sultan Maḥmūd on one of his Indian expeditions.

E. Bosworth, *The Ghaznavids: their empire in Afghanistan and Eastern Iran, 994-1040*, Edinburgh 1963. (M. Nazim)

AL-FAḌL B. MARWĀN, vizier to the ʿAbbāsid al-Muʿtaṣim, and an ʿIrāḳi of Christian origin. He began his career modestly as a retainer of Harthama, the commander of Hārūn al-Rashīd's guard. Later, as a result of his particular talents, he became a secretary in the Land Tax office under the same caliph and subsequently he retired to ʿIrāḳ to the estates he had acquired during the civil war. It was there, in the region of al-Baradān, that he had an opportunity, during the reign of al-Maʾmūn, to gain the attention of the future al-Muʿtaṣim, who admitted him into his service, took him to Egypt in 212-3/827-8, and then had him put in charge of the Land Tax office. It was he who, acting as the caliph's deputy in Baghdād, had the oath of loyalty to al-Muʿtaṣim administered. Appointed vizier in Ramaḍān 218/September 833, he enjoyed wide powers, maintained a firm control over the treasury and attempted to restrict the sovereign's expenditure. This policy was the main cause of his disgrace, which occurred in Ṣafar 211/February 836, at the moment when the caliph decided to move his residence to Sāmarrā.

Al-Faḍl b. Marwān was the first example of the ʿIrāḳi secretaries of Christian origin who, during the 3rd/9th century, were to become numerous. He was held to have little education in religious knowledge, but to be highly competent in the exploitation of landed property. As an expert in land taxes, he also played a part under the succeeding caliphs, particularly al-Wāthiḳ and al-Mustaʿīn. He died in 250/864, about 90 years old.

Bibliography: Ṭabarī, index; D. Sourdel, *Le vizirat ʿabbāside*, Damascus 1959-60, i, 246-53 and index. (D. Sourdel)

AL-FAḌL B. AL-RABĪʿ, vizier to the ʿAbbāsid caliphs al-Rashīd and al-Amīn, was the son of al-Manṣūr's chamberlain al-Rabīʿ b. Yūnus [*q.v.*]. Born in 138/757-8, he very soon won the esteem of Hārūn al-Rashīd, who in 173/789-90 placed him in charge of the Expenditure Office and then in 179/795-6 made him chamberlain. After the disgrace of the Barāmika [*q.v.*] in 187/803, he succeeded Yaḥyā as vizier, though without being granted such wide powers; his part was confined to keeping check on public expenditure and in presenting letters and petitions (*ʿarḍ*), while another secretary directed the financial administration. On the death of al-Rashīd, which took place at Ṭūs in 193/809, it was al-Faḍl who caused the oath of loyalty to al-Amīn to be taken and who led back to Baghdād the whole of the expeditionary force which had been gathered together by the caliph to fight against the rebel Rāfiʿ b. al-Layth. The second heir al-Maʾmūn, who, under the terms of al-Rashīd's testament, was to govern the province of Khurāsān, held al-Faḍl responsible for this withdrawal of the army and tried in vain to make him reverse his decision. Shortly afterwards, it was the advice given by al-Faḍl which encouraged al-Amīn to deprive his brother of his rights to the succession and to confer them on his own son. This tense situation gave rise to a civil war and ended in the siege of Baghdād and the final triumph of al-Maʾmūn.

During the short reign of al-Amīn (193-8/809-14), al-Faḍl remained as before the caliph's most intimate adviser, playing a particularly important part in the episodes of the struggle with al-Maʾmūn. But he did not exercise any general control over the administration, nor was he responsible for the jurisdiction of the *maẓālim*.

On the arrival of al-Maʾmūn's troops he went into hiding, reappearing when the inhabitants of Baghdād, in revolt against the rule of the caliph in Marw who had chosen an ʿAlid as his heir, brought Ibrāhīm b. al-Mahdī (201/816-7) to power. He subsequently gained al-Maʾmūn's pardon when the latter returned to Baghdād, and died in 207/822-3 or 208/823-4.

Al-Faḍl b. al-Rabīʿ thus seems to have been an intriguer of mediocre personality and limited ability. As chamberlain he succeeded by means of adroit manoeuvres in replacing the Barāmika and, in exalting himself to the highest government office, the vizierate. He then adopted the cause of al-Amīn, a weak character over whom he planned to exert great influence, but he was unsuccessful in meeting the situation created by the forceful opposition of al-Maʾmūn.

Bibliography: Ṭabarī, index; Djahshiyārī, *K. al-Wuzarāʾ*, index; D. Sourdel, *Le vizirat ʿabbāside*, Damascus 1959-60, i, 183-94 and index.

(D. Sourdel)

AL-**FAḌL** B. **SAHL** B. **ZADHĀNFARŪKH**, vizier to the ʿAbbāsid caliph al-Maʾmūn, had originally been in the service of the Barāmika [*q.v.*]. His father, of Iranian origin and Zoroastrian by religion, had been converted to Islam and had entrusted the Barāmika with his two sons, al-Faḍl and al-Ḥasan [*q.v.*]. Al-Faḍl, who immediately attracted attention on account of his intelligence, was taken into the service of Djaʿfar al-Barmakī, then tutor to prince al-Maʾmūn, and took over this position from him after the fall of the Barāmika; it was in the presence of al-Maʾmūn that he is said to have been converted, in 190/806, at a time when the prince was holding power, deputising for his father who had gone to Anatolia.

From the end of the reign of al-Rashīd, al-Faḍl was to demonstrate the influence that he held over al-Maʾmūn's mind and to give his pupil certain advice of great political significance, namely that he should accompany the caliph on the expedition which he had launched in 192/808 in the eastern provinces. On the death of al-Rashīd, which took place at Ṭūs in 193/809, al-Maʾmūn thus found himself in the centre of the province of which, under the terms of his father's will, he became autonomous governor. While his brother on being proclaimed caliph in Baghdād had the whole of the expeditionary force brought back, he himself stayed on in Khurāsān, though not without being exasperated by al-Amīn's decision, which he held to be contrary to the last wishes of the dead sovereign. His adviser al-Faḍl, urging patience, restored his equanimity.

Relations between the two brothers thus being strained and the situation having deteriorated to the point of civil war, al-Faḍl, who had at his command a well-organized intelligence service in ʿIrāḳ, continued to give al-Maʾmūn helpful advice, promising to secure him the caliphate in the near future. In fact al-Maʾmūn was soon to overcome his brother after the siege of Baghdād and to succeed him, without being the first to infringe the will of al-Rashīd, which al-Amīn had violated by putting forward his own son as heir. As soon as the first victory had been gained by al-Maʾmūn's forces over those of al-Amīn, al-Maʾmūn was proclaimed caliph in the eastern provinces (196/812) and al-Faḍl was made officially responsible for civil and military administration in the occupied territories from Hamadhān to Tibet, while at the same time the honorific title of *Dhu 'l-riʾāsatayn* "the man with two commands" was conferred on him, a title which appeared on the coinage either together with or in place of the name al-Faḍl, which was already linked with the sovereign's name. Being both *wazīr* and *amīr*, al-Faḍl directed military expeditions in the countries lying beyond the Oxus and secured the conversion of the king of Kābul whose throne and crown were sent to the caliph and then put on view at the Kaʿba, where al-Rashīd's will and the declarations of the two heirs apparent had been affixed.

Al-Faḍl did not let matters rest with this manoeuvre, which was intended to enhance the prestige of the new caliph. In addition, he defined the main outlines of the new policy of fidelity to the Book and the Sunna, an attitude of pietist reformism such as would rally not only the former adherents of the fallen caliph, who was accused in particular of having violated the most sacred pacts, but also the men of religion who had at that time been won over by Shīʿite propaganda based on the same themes. Al-Faḍl probably came to terms with Muʿtazilite circles, who were influential in al-Maʾmūn's entourage, to encourage the new caliph to act as *imām*, a title which appeared on the coinage. On the other hand, there is nothing to prove that he took part in elaborating the plan conceived by al-Maʾmūn to bequeath the caliphate to an ʿAlid, ʿAlī al-Riḍā, but he was nevertheless associated with this reckless attempt which eventually was to compromise him.

Meanwhile al-Faḍl exercised a dictatorial control which, especially in ʿIrāḳ where the nomination of ʿAlī al-Riḍā provoked an actual revolt, aroused violent opposition, even among elements favourable to the caliph. In certain cases he did not hesitate to dispose of his enemies by violence.

Learning by chance of the situation in ʿIrāḳ, al-Maʾmūn decided to return to Baghdād, and it was in the course of this long journey that his vizier was assassinated, at Sarakhs, in Shaʿbān 202/February 818, by members of the caliphal guard. The caliph had the murderers put to death at once, but persistent rumours, which are echoed by the chroniclers, alleged that al-Maʾmūn himself had been the instigator of the murder.

After the death of al-Faḍl, al-Maʾmūn apparently entrusted the vizierate to his brother al-Ḥasan, who was already governor of ʿIrāḳ. While continuing to be a prominent member of the court, since al-Maʾmūn had married his daughter Būrān [*q.v.*], al-Ḥasan did not in fact exercise his position, and withdrew from political life. Incidentally, it was at this time that the caliph gave up granting too extensive powers to his officials.

In the course of his brief career, al-Faḍl appears to have been a person of unusual energy, highly dictatorial, often violent, but devoid of ambition and as severe to others as he was to himself. He exercised a dominating influence over the mind of al-Maʾmūn, who nevertheless succeeded in releasing himself from his control. It was certainly unjustly that he was accused of wishing to restore the former Iranian rule and of having had ʿAlī al-Riḍā nominated as heir with this intention, but it is unquestionable that he was the most Iranian of the viziers of the ʿAbbāsid caliphs: imbued with very ancient traditions which he set out to promote in

the cultural field, he was particularly in favour of an orientation of policy by the caliph which would have pleased many of the Iranian *mawālī*, and it was no doubt for that reason that he was soon stopped by the Arab and ʿIrāḳī aristocracy.

AL-**FAḌL** B. **YAḤYĀ** AL-**BARMAKĪ**, the eldest son of Yaḥyā al-Barmakī, played an important part during the reign of Hārūn al-Rashīd, in the first years of the domination of the Barāmika [*q.v.*]. As tutor to the crown prince al-Amīn, on whose behalf he caused the customary oath of loyalty to be sworn by the notables, he was particularly distinguished by the benevolence he showed towards the inhabitants of the eastern provinces and by his policy of conciliation with regard to the ʿAlids, perhaps going so far as to support the establishment of an independent Zaydī State in Daylam. His ambiguous attitude won him public execration by the caliph in 183/799 and partly explains the disgrace of the family. Imprisoned at the same time as his father in 187/803, he died at al-Raḳḳa in 193/808, at the age of 45.

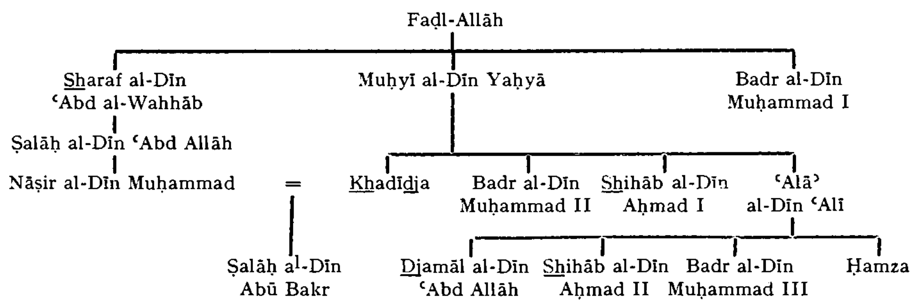
FAḌL ALLĀH, a family of Mamlūk state officials who traced their descent from the Caliph ʿUmar I, hence their *nisba* al-ʿUmarī, al-ʿAdawī al-Ḳurashī. The family received its name from its founder Faḍl Allāh b. Mudjallī b. Daʿdjān, who was living in al-Karak (Transjordan) in 645/1247. Sharaf al-Dīn ʿAbd al-Wahhāb, a son of Faḍl Allāh, held office as *kātib al-sirr* (head of the chancery) in Damascus, and was transferred to the same office in Cairo by the Sultan al-Ashraf Khalīl in 692/1293. ʿAbd al-Wahhāb continued to head the central chancery of the Mamlūk state until 711/1311, when he was transferred back to Damascus. There he died in office in 717/1317.

ʿAbd al-Wahhāb b. Faḍl Allāh was the first member of his family to hold a high position in the Mamlūk civil service. During his lifetime, and for nearly a century after his death, other members of his family distinguished themselves as Mamlūk state officials. Badr al-Dīn Muḥammad I, a younger brother of ʿAbd al-Wahhāb, who died in 706/1306, was a chancery official in Damascus. A still younger brother, Muḥyī al-Dīn Yaḥyā (645-738/1247-1337), began his career in the Damascus chancery under his brother ʿAbd al-Wahhāb, served for a time in Ḥimṣ, then returned to Damascus. Summoned to Cairo in 697/1298 to act for his brother who had fallen ill, he returned to Damascus as *kātib al-sirr*, and remained in that office until he was replaced by his brother in 711/1311. After staying out of office for some years, he re-entered the public service in Damascus as a court clerk (*muwaḳḳiʿ fi ʾl-dast*) and rose again to be *kātib al-sirr* in 727/1327 or 728/1328. In 729/1329 he was appointed to head the central chancery in Cairo, and he died in this office.

Nothing is known about the progeny of Badr al-Dīn Muḥammad I, if he had any. ʿAbd al-Wahhāb's son Ṣalāḥ al-Dīn ʿAbd Allāh (d. 719/1319) served as a Mamlūk *djundī* (soldier), and his grandson Nāṣir al-Dīn Muḥammad b. ʿAbd Allāh (704-64/1304-63) also entered the Mamlūk military service in Damascus and rose to be an *amīr* of 40 (*amīr ṭablakhānā*). Nāṣir al-Dīn Muḥammad sired the undistinguished Abū Bakr. It was the progeny of Muḥyī al-Dīn Yaḥyā which maintained a position of distinction for the family for two more generations.



Of Yaḥyā's three known sons, the most distinguished by far was Shihāb al-Dīn Aḥmad I (700-49/1301-49) [*q.v.*], author of *Masālik al-abṣār fi mamālik al-amṣār* and *al-Taʿrīf bi ʾl-muṣṭalaḥ al-sharīf*, and perhaps the most outstanding of all the Faḍl Allāh. Aḥmad assisted his father in the Cairo chancery, and was later *kātib al-sirr* in Damascus. His brother ʿAlāʾ al-Dīn ʿAlī (712-69/1312-68), who also assisted his father in the Cairo chancery, succeeded his father as *kātib al-sirr* of Cairo (738-42, 743-69/1337-42, 1342-68) and died in that office, to be succeeded in turn by his son Badr al-Dīn Muḥammad III (d. 796/1394). Badr al-Dīn Muḥammad II (710-46/1310-45), a third son of Yaḥyā and brother of Shihāb al-Dīn Aḥmad, also served as *kātib al-sirr* in Cairo (where he replaced his brother ʿAlī for a few months in 1342) and in Damascus (743-6/1342-5).

Apart from Badr al-Dīn Muḥammad III, ʿAlaʾ al-Dīn ʿAlī had three sons. Shihāb al-Dīn Aḥmad II (d. 777/1375) acted as deputy *kātib al-sirr* for his father in Cairo, and died a young man. His brother Djamāl al-Dīn ʿAbd Allāh (d. 821/1418) was an impoverished *djundī*. Equally undistinguished was his brother Ḥamza (d. 796/1394), of whose career nothing is known.

The family of Faḍl Allāh had a family home in Cairo; but they regarded Damascus as their home town, and there had a family cemetery in which most of them were buried.

(K. S. SALIBI)

FAḌL ALLĀH [see RASHĪD al-DĪN].

FAḌL ALLĀH DJAMĀLĪ [see DJAMĀLĪ].

FAḌL ALLĀH ḤURŪFĪ, the founder of the sect, or more properly, the religion of the Ḥurūfīyya [*q.v.*]. The information given about Faḍl Allāh in the histories closest to his period in no way conforms to the information about him given by those who belonged to his sect and were contemporary with him and those who were inspired by his teachings. While the sources are agreed that he lived in the 8th/14th century, the reports that his name was Djalāl al-Dīn, that he was put to death in 804/1401-2, and especially the statement of later sources like the *Riyāḍ al-ʿārifīn* of Riḍā Kulikhān Hidāyat (d. 1288/1872) that he was a native of Meshhed are totally erroneous. A study of the life of Faḍl Allāh should thus be based on the books of those personally connected with him.

One of the most important of these is the *Istiwā-nāma* of Amīr Ghiyāth al-Dīn Muḥammad b. Ḥusayn b. Muḥammad al-Astarābādī, one of the disciples (*khalīfe* [*q.v.*]) of Faḍl Allāh, according to which Faḍl Allāh was born in 740/1339-40, began to spread his doctrines in 788/1386, and was put to death in 796/1394 (Istanbul, Millet Library, MS Ali Emiri farsça 269, f. 1a). These dates are confirmed in one of the Ḥurūfī books. Both these sources, in addition, call Mīrān Shāh, the man who ordered Faḍl Allāh's execution, "Dadjdjāl", record his name as "Mārān Shāh", and give the date of his death as 803/1400 (same library, MS 1052, f. 7a). Abu 'l-Ḥasan, the foremost disciple of Faḍl Allāh and the one who turned his *Djāwidān* into verse in 802/1400, states that Faḍl Allāh was put to death in 796/1393-4 and that Mīrān Shāh was slain seven years later, that is, in 803/1400-1 (Ṣādiḳ Kiyā, *Wāzha-nāme-i Gurgānī*, Tehran 1330, 26. In this source the date of the death of Mīrān Shāh is given as 810/1407-8; cf. the genealogy in Khalīl Edhem, *Düwel-i Islāmiyye*, Istanbul 1345/1927, 429). The *Khāb-nāma* of Sayyid Isḥāḳ (frequently mentioned in the *Istiwā-nāma* as one of the intimates of Faḍl Allāh) states that in 772/1370-1 Faḍl Allāh entered into a period of retirement (*čile*) in Iṣfahān, being then thirty-two years of age (MS Ali Emiri, Farsça 1042, 25a-b). According to this reckoning the date of his birth is 740/1339-40. Sayyid Sharīf, a contemporary of Faḍl Allāh (as one understands from the eulogies in his *Dīwān*, cf. Istanbul University Library, MS Farsça 152, 16a-18b) mentions in his *Risāla-i maʿādiyya* that Faḍl Allāh was a Sayyid and also records his genealogy, according to which there is a line of twenty persons between Faḍl Allāh and ʿAlī (Ist. Univ. Lib., MS Farsça 1043, 51a). The fact that the ninth ancestor in one list, the eight in the other, is Muḥammad al-Yamānī deserves attention in view of the fact that the Yemen is known to have been one of the most important centres of the Bāṭinīs from the latter part of the 3rd/9th century onwards (Muḥammad b. al-Ḥasan al-Daylamī, *Ḳawāʿid ʿaḳāʾid āl Muḥammad*, ed. R. Strothmann: *Die Geheimlehre der Batiniten: Dogmatik des Hauses Muhammad*, Bibliotheca Islamica II, Istanbul 1938, Introduction vi-ix, 24-5, 95, 96).

One also finds scattered throughout both the *Istiwā-nāma* and the *Khāb-nāma* information relating to the life of Faḍl Allāh and the places which he visited. According to the *Istiwā-nāma* (82b), being at one point—the date is not known—in Iṣfahān, he rejected the notion that the human soul becomes non-existent after death and the assertions of the Ḥurūfīs who denied the existence of the after-life. In the *Khāb-nāma* also (10b) he is said to have rejected such a claim in Iṣfahān. Again according to this latter book Faḍl Allāh embraced Ṣūfism at the age of eighteen. He was inspired with the ability to interpret dreams in 756/1355 (19a), in which year he was in a place named Tokdji in Iṣfahān; later he went to Tabrīz, where the Djalāʾirid Sultan Uways b. Ḥasan (d. 776/1374-5), Wazīr Zakariyyā, and Ṣāḥib Ṣadr Shaykh Khwādja accepted his teachings (19a-b). In Tabrīz he married a girl from Astarābād on the recommendation of his disciple Kamāl al-Dīn Hāshimī. He wrote a book on *fiḳh* for ʿIzz al-Dīn Shāh Shudjāʿ (d. 786/1384) (24a). He was again in Iṣfahān in 772/1370-1, at the age of thirty-two, and there went into retreat (35a-b). He also spent some time in Dāmghān (38b) and Bākūye (47a). While in Shamākhī interpreting a dream of Ḳāḍī Bāyazīd, he foretold his own martyrdom (49b). When he left the house of this *ḳāḍī* and was returning to his cell (*hüdjre*), he was arrested on the strength of a decree from Astarābād and taken to the fortress of Alīndjak (50a). He was imprisoned on the order of Mīrān Shāh (55a). Among those believing in him were important men; he even sent a dervish cap (*dervish külāhi*), conveying his blessing, to Sultan Uways (55b-56a). His followers are known as *Darwishān-i ḥalāl-khor ve rāst-gūy* (48a). A *bayt* in the *Tawḥīd-nāma* of ʿAlī al-Aʿlā, called by the Ḥurūfīs "Khalīfat Allāh" and "Waṣī Allāh", states that Faḍl Allāh was born in Astarābād (Ist. Univ. Lib., MS Farsça 1158, 5b.

There exist three chronograms giving the date of the death of Faḍl Allāh-i Ḥurūfī. In one of these his name is recorded as Shihāb al-Dīn Faḍl Allāh and his death as having occurred on a Friday in Dhu 'l-Ḳaʿda 796/October-November 1394, when he was fifty-six years of age (Millet Library, MS Ali Emiri, Farsça 1043, at the beginning). The second chronogram is in a 16th cent. *madjmūʿa* belonging to the book-dealer Raif Yelkenci. Though the chronogrammatic *miṣrāʿ* is known to all Ḥurūfīs and to all those connected in any way with the Ḥurūfīs (see, for example, Aḥmad Rifʿat, *Mirʾāt al-maḳāṣid fī dafʿ al-mafāsid*, Istanbul 1293, lithograph, 133, where there is also the genealogy of Faḍl Allāh, taken from a *risāla*), I have seen the whole of the chronogram only in this *madjmūʿa*. The author of this chronogram is unknown, as is that of the first chronogram. In the first *bayt* Timur is mocked, in the fourth *bayt* the name of Mīrān Shāh is mentioned, and in the fifth *bayt* it is stated that Faḍl Allāh was put to death on "Thursday, the eve of Friday" the sixth of Dhu

'l-Ḳaʿda. In the first poem, which contains seven *bayt*s, it is also stated that he died in Dhu 'l-Ḳaʿda, but on a Friday. It is clear, however, form the specific method of recording the date in the second chronogram, that he was put to death after the afternoon prayer on Thursday, since, according to the custom of the holy law, Friday begins after that time. The year is stated in the sixth and last *bayt* in the form *dhāl u ṣād u wāw*, that is, 796 (according to the conversion-tables, the first day of Dhu 'l-Ḳaʿda 796 corresponds to Friday, 28 August 1394. But the new moon of the month must have been confirmed the day before by observation, in which case the sixth day of Dhu 'l-Ḳaʿda would coincide with Thursday, 3 September 1394). The third chronogram is in a *madjmūʿa* containing the poems of Faḍl Allāh, along with those of Sharīf and ʿAlī al-Aʿlā. In the fourth of the seven *bayt*s in this chronogram it is stated that Faḍl Allāh was fifty-six (*Bīst u čār u sī u du*) when he was put to death. The place of his martyrdom is specified in the last *bayt* as "Alīndja" while the date is conveyed by the phrase *Shahīd-i ʿishḳ-i ū* (Millet Library, MS Kenan Bey, Farsça 186, f. 194b). In a *risāla* of Mīr Fāḍilī is found the note: "The honoured resting-place of that most excellent Prophet (*Ṣāḥib bayān*) is at a town called Alīndja, by Astarābād on the far side of Tabrīz. ʿAlī al-Aʿlā is also buried there, and there is yet another grave. The covering of (Faḍl Allāh's) tomb is black, that of ʿAlī al-Aʿlā's green, and of the other's red" (MS Ali Emiri, Farsça 1039, f. 92b). In his *risāla* entitled *Ṣalāt-nāma* Shaykh Muḥammad, who is known by the name Ishḳurt Dede and who is known to have met some of the disciples of Faḍl Allāh, writes while discussing the rules governing the *ḥadjdj* that during the days of the *Tashrīḳ* sixty-three stones are thrown, twenty-one each day, at the Tower of Mīrān Shāh, opposite the Alīndjak fortress, which is also called Sandjariyye, and that the *Ṭawāf* procession occurs in a place called "*Maḳtal-gāh*"; during the course of this discussion he states that Faḍl Allāh was put to death in Alīndjak and that his grave is there (Millet Library, MS Kenan Bey, Farsça 1043, 35b-36a).

To regard certain numbers as sacred and to assign various meanings to certain letters are ancient, magical practices; examples occur in both the Old and the New Testaments. Similarly various meanings have been assigned from time to time to the letters occurring at the beginning of twenty-nine *sūra*s of the Ḳurʾān. In both the *Dīwān* of Ḥusayn b. Manṣūr al-Ḥallādj (d. 309/922) (see L. Massignon, *Le Dīwān d'al-Hallaj*, *JA* (1931), 63, 83, 94) and his *Kitāb al-Ṭawāsīn* (ed. L. Massignon, Paris 1913, 13-4, 29, 31, 56-60, 63, 65-67) there are frequent references to letters and numbers and to the correspondence of letters to numbers. His statements relative to points, lines, and letters are transmitted in the *Akhbār al-Ḥallādj* (ed. L. Massignon, Paris 1936, 16, 25-6, 59-60, 71, 95-6); and one finds that he even discusses the equator (*khaṭṭ-i istiwāʾ*) (*ibid.*, 53), which is one of the basic elements in the system of Faḍl Allāh. The Bāṭinī belief in these matters is well-known (see for example Nāṣir-i Khusraw, *Khān al-Ikhwān*, ed. Yaḥyā al-Khashshāb, Cairo 1359/1940, 66-7; and also his *Wadjh-i Dīn*, Berlin 1343, 76-7). Even in the *Futūḥāt al-Makkiyya* of Ibn ʿArabī (d. 635/1240) great importance is given to letters, and particular emphasis is laid upon this idea (Būlāḳ 1272, i, 56-92; section 2, 92-101; ch. 5, 112-30; ii, ch. 79, 135-7. For the sections which explain the Bāṭinī ideas in connection with the *Khatm al-awliyāʾ* together with the complete Bāṭinī system, see iv, ch. 557, 215).

Faḍl Allāh was certainly acquainted with the Bāṭinī methods. The *ṭarīḳa* which he joined while young was one which had adopted the Bāṭinī beliefs. He occupied himself with the meanings given to letters and with numerical relationships. Perhaps he also studied Ibn ʿArabī. Conclusions drawn from the Old and New-Testaments in appropriate places in the *Djāwidān* make it clear that he had read these books (Ali Emiri, MS Kenan Bey 920, 144b). From his *Dīwān* it is evident that he knew Arabic, Persian, and his native language, the Gurgān dialect, that he was well-versed in Persian literaure, and that he was capable of composing poetry in the classical style.

That an *ʿIlm al-ḥurūf* was among those branches of knowledge known as *ʿUlūm ghariba* or *ʿUlūm khāfiya* and that it was used for the most part for divination of the occult is well-known (see, for example, *Manāḳib al-ʿarifīn*, begun in 718/1318; ed. Tahsin Yazici, Ankara 1959, 421). Faḍl Allāh thus took over, among other features of Bāṭinī *taʾwīl*, in particular the importance given to letters, and, wherever necessary, the relationships of letters and numbers. He adopted the method of referring all religious commands to the twenty-eight letters of the Arabic alphabet and the thirty-two of the Persian. To the *ʿIlm al-ḥurūf*, which was old and not completely systematized, he gave a form truly original for his period; and, by proclaiming himself Messiah, *Mahdī*, and Manifestation (*maẓhar*) of God, he founded the Ḥurūfī religion. His disciples and those who came later adapted the obligations of ablution, prayer, and the pilgrimage completely to this religion. Although it is reported that Faḍl Allāh rejected the claims of those who denied the existence of the after-life and the continued existence of the soul, it is known that Ḥurūfīs in a number of places like Iṣfahān, Tabrīz, and Geylān considered life to be merely material and denied the continued existence of the soul. In view of this, it seems likely that the rejection of such claims by him and some of his disciples was no more than an instance of *taḳiyya* [*q.v.*], a concealment of their true views, so as not to put off new converts to the religion.

His disciples (*khalīfa*). Sayyid Sharīf, in his *Risāla-i maʿādiyya* (properly entitled *Bayān al-wāḳiʿ*) lists the disciples of Faḍl Allāh, with the note "whom I remember", as follows: Amīr Sayyid ʿAlī, Ḥusayn Kiyā b. Thākib. Madjd al-Dīn, Maḥmūd, Kamāl al-Dīn Hāshimī, Khʷādja Ḥāfiẓ Ḥasan, Shaykh ʿAlī Maghzāyish, Bāyazīd, Tawakkul b. Dārā, Abu 'l-Ḥasan, Sayyid Isḥāḳ, Sayyid Nasīmī, Ḥasan b. Ḥaydar, Ḥusayn Ghāzī, Sulaymān.

Later he records that all of them, four hundred in number, were Sayyids, that they were in Faḍl Allāh's company day and night, and that they went with him wherever he went (51b-52a). 'Sayyid ʿAlī' is the ʿAlī al-Aʿlā who, in the *Istiwā-nāma*, is called *Khalīfat Allāh* and *Waṣī Allāh*, and who is known to have been Faḍl Allāh's favourite disciple (2a, 11a, 29b, 37a). The names of Madjd al-Dīn, Isḥāḳ, and Nasīmī occur in the same book (29a, 37a). One meets in the same *risāla* such names as Darwīsh Bahāʾ al-Dīn, Darwīsh ʿAlī, Muḥammad Nāyinī, ʿĪsā Bitlīsī, Muḥammad Tīr-ger, Tādj al-Dīn, Sayyid Muẓaffar, and Ḥusām al-Dīn Yazddjurdī (12a-b, 37a, 40a-b, 43a-b, 80a). Of these, the names of ʿAlī al-Aʿlā, Nasīmī, and Isḥāḳ are found in the *Ṣalāt-nāma* of Ishḳurt Dede, as are those of the author of the *Maʿādiyya*, Sayyid Sharīf, and Djāwidī. Besides these, the name of Mīr Fāḍilī is mentioned, and he

is reported to have been the disciple (*khalīfa*) of ʿAlī al-Aʿlā. It is also reported that Amīr Ghiyāth al-Dīn was the son of ʿAlī al-Aʿlā's sister, and that, in addition to the *Istiwā-nāma*, he was the author of a *risāla* named *Turāb-nāma* (5a). Djāwidī, in a *risāla* which he wrote in Shawwāl 1000/July-August 1592, reveals that his personal name was ʿAlī (Millet Library, MS Farisi 437). In view of the date in which he wrote his *risāla*, this person must have been connected with one of the disciples of Faḍl Allāh. In the *Muḥarram-nāma* of Sayyid Isḥāḳ one finds the following names: Sayyid Tādj al-Dīn Kehnā-yi Bayhaḳī, one of the intimates of Faḍl Allāh and known to the Ḥurūfīs as *Ṣāḥib Taʾwīl* (see C. Huart, *Textes persans relatifs a la secte des Houroufīs*, Leiden and London 1909, Gibb Memorial Series, 42); Mawlānā Kamāl al-Dīn Hāshimī; ʿAlī Dāmghānī, who, it is reported, had formerly been one of the intimates of Sultan Uways and had been Wālī of Khurāsān; and Pīr Ḥasan Dāmghānī (*ibid.*, 43). Both in this book and in the *Nawm-nāma*, which is attributed to Faḍl Allāh, other names are mentioned in a section devoted to statesmen; but it is impossible to determine definitely the degree of their relationships with Faḍl Allāh (*Wāzha-nāma-i Gurgānī*, 36; examples from the text and translations into Persian, 236-46). Mīr Fāḍilī writes in a *risāla* the names of the disciples ʿAlī al-Aʿlā, Sayyid Abu 'l-Ḥasan, Kamāl al-Dīn Hāshimī Rūmī (*i.e.*, from Anatolia) and Kamāl al-Dīn Hāshimī Iṣfahānī, and says that they are "the four friends of the felicitous one" ("*Ṣāḥib Devletün čār yārīdur*"), thus testifying to a belief that Faḍl Allāh had "four friends" corresponding to the "four friends" of the Prophet Muḥammad (Millet Library, MS Farsça 990, last folio).

The names of the sons, daughters, and grandchildren of Faḍl Allāh are written in a different hand on the last folio of the *Risāla-i maʿādiyya* (61b). Among these is the name of Amīr Nūr Allāh, who was arrested and put to the question along with the author of the *Istiwā-nāma*, Ghiyāth al-Dīn Muḥammad, after the attempt on the life of Shāh Rukh. Among his sons there is one Salām Allāh, who is not to be confused with his elder sister who was appointed by Faḍl Allāh in the last will and testament which he wrote before his arrest as the trustee and guardian for all his children. (Abdülbâki Gölpinarlı, *Fazl-Allāh-ı Hurūfī'nin Waṣiyya-Nāma'sı veya Waṣāyā'sı*, in *Şarkiyat mecmuası*, ii (1958), 54-62. There is a copy of this will also in Millet Library, MS Farsça 1009, 1b-9a, as well as an incomplete copy in the same section of the library, MS 933, 104a-b).

Works. Faḍl Allāh's most famous work is the *Djāwidān-nāma*. From the *Khāb-nāma* one learns that this work became famous after Faḍl Allāh's death (43a). The *Istiwā-nāma* reveals that the *Djāwidān-nāma* begins with the word "*ibtidāʾ*" repeated six times (29b). There is a copy beginning with this word and written in the Gurgān dialect in Millet Library, Farsça, MS Kenan Bey 920. The *Djāwidān-nāma* written in normal Persian and common in both public and private libraries must be a new redaction, separated into sections, and arranged by Faḍl Allāh personally or by one of his disciples, made on the basis of this text. For a copy belonging to the period of Faḍl Allāh but without a colophon see MS Fatih (Süleymaniye) 3728; another copy, written by Darwīsh ʿAlī Sarkhanī in Dhu 'l-Ḥidjdja 845/1442, Millet Library, MS Kenan Bey 1000. MS Ist. Univ. Lib., Farsça 869 (written n 1049/1639) is in the hand of Darwīsh Murtaḍā Baktāshī who translated the second version of the *Djāwidān-Nāma* under the title *Durr-i yatīm*. Among the manuscripts which I gave to the Mevlānā Museum Library in Konya is one written by this same man in the previous year (a rather free and expanded translation). In the *Khāb-nāma* two other works by Faḍl Allāh are mentioned: the *Maḥabbat-nāma* and the *ʿArsh-nāma*. ʿAlī al-Aʿlā also mentions these two works in his *Tawḥīd-nāma* (34b).

Faḍl Allāh also composed poetry, mostly in Persian but some in Arabic, under the *makhlaṣ* Naʿīmī. His poems form a small *dīwān*. In the *medjmūʿa* which contains the chronogram relative to the death of Faḍl Allāh there are thirty-three *ghazals*, seven *ḳitʿas*, nine *rubāʿīs*, four *bayts*, and two *tardjīʿs*. In the *dīwān* in Millet Library, MS Kenan Bey 989, there are seventy-two poems: thirty-six *ghazals*, two *ḳitʿas*, twenty-four *rubāʿīs*, eight *bayts*, and the two *tardjīʿs* in the *madjmūʿa* previously mentioned.

Bibliography: in the article.

(Abdülbâki Gölpinarli)

FAḌL-i ḤAḲḲ al-ʿUmarī, al-Ḥanafī, al-Māturīdī, al-Čishtī (not al-Ḥabashī as misread by Brockelmann, S II, 458), al-Khayrābādī b. Faḍl-i Imām [*q.v.*] was born at Khayrābād [*q.v.*] in 1211/1796-7. Having studied first at home with his father, he later studied *ḥadīth* with Shāh ʿAbd al-Ḳādir al-Dihlawī [*q.v.*] and at the age of thirteen completed his studies. He entered service as a *pishkār* to the Commissioner of Delhi under the East India Company and later served with the Chiefs of Djhadjdjar, Alwar, Tonk and Rāmpur. He was a leading scholar of his day, well-versed in logic, philosophy, belles-lettres, *kalām*, *uṣūl al-fiḳh* and poetics, and a great teacher and logician who attracted students from far and near. He was often seen teaching *al-Ufḳ al-mubīn* of al-Dāmād [*q.v.*], a rather involved text on logic, while engaged in playing chess. On the doctrine of *imtināʿ al-naẓīr* he entered into a lengthy controversy with Muḥammad Ismāʿīl Shahīd [*q.v.*] in refutation of whose teachings he composed a number of treatises. This controversy greatly agitated the people of Dihlī, and even the reigning monarch Bahādur Shāh Ẓafar and the egalitarian poet Ghālib were involved in it. The controversy later took an ugly turn, and he misused his official position by persuading the *kōtwāl* of Delhi, Mīrzā Khānī, a bigoted Shīʿī, to take preventive measures against Ismāʿīl Shahīd, who was prohibited from delivering public sermons in the congregational mosque. He took a leading part in the military uprising of 1857, was charged with high treason, arrested, tried and sentenced to transportation for life. He died in exile in the Andamans (*Kālā Pānī*), where he was interred, in 1862.

Among his works are: (i) *al-Djins al-ghālī fi sharḥ al-Djawhar al-ʿālī* (a treatise on theology); (ii) *al-Hadiyya al-saʿīdiyya fi 'l-ḥikma al-ṭabīʿiyya*, a treatise on physics begun by Faḍl-i Ḥaḳḳ but completed by his son ʿAbd al-Ḥaḳḳ, Kānpur 1283/1866; (iii) *al-Rawḍ al-mudjūd fī taḥḳīḳ ḥaḳīḳat al-wudjūd*; (iv) *al-Ḥāshiya ʿalā Talkhīs al-Shifāʾ*; (v) *al-Ḥāshiya ʿalā al-Ufḳ al-mubīn*; (vi) *al-Ḥāshiya ʿalā Sharḥ Sullam al-ʿulūm* by Ḳāḍī Mubārak Gōpāmawī (Delhi 1899); (vii) *Risāla fi 'l-tashkīk wa fi 'l-māhiyyāt*; (viii) *al-Risāla al-ghadriyya* (or *al-Thawra al-Hindiyya*), a doleful and moving account of the untold sufferings that he underwent in the Andamans as a dangerous political prisoner; published with Urdu transl. and notes as *Bāghī Hindustān* (see Biblio-

graphy); (ix) *al-Risāla fī taḥkīk al-ʿilm wa 'l-maʿlūm*; and (x) *al-Risāla fī taḥkīk al-adjsām*.

(A. S. Bazmee Ansari)

FAḌL-I IMĀM b. Muḥammad Arshad al-ʿUmarī al-Hargāmī, b. Muḥ. Ṣāliḥ b. ʿAbd al-Wādjid b. ʿAbd al-Mādjid b. Ḳāḍī Ṣadr al-Dīn al-Ḥanafī, was a contemporary of Shāh ʿAbd al-ʿAzīz al-Dihlawī, and the first Indian Muslim scholar to have accepted the post of *muftī* and *ṣadr al-ṣudūr* of Delhi under the East India Company, the highest office, equivalent to the modern sub-judge in the Indo-Pakistan sub-continent, which the Company could confer on its native employees. His duties, as *ṣadr al-ṣudūr*, included examining candidates for the posts of *ḳāḍīs*, scrutiny of requests for financial aid or the grant of *amlāk* (fiefs), *aʾimma* lands or *madad maʿāsh* from scholars, divines and needy and learned persons. Born at Khayrābād [*q.v.*], a flourishing centre of learning in the *Purb* (Eastern districts) which Shāhdjahān described as "the Shīrāz of India", in the last quarter of the 12th/18th century he completed his studies with ʿAbd al-Wādjid Kirmānī, a learned scholar of Khayrābād (cf. Raḥmān ʿAlī, *Tadhkira-i ʿulamā-i Hind*, Lucknow 1914, 136). One of his maternal uncles Mullā Abu 'l-Wāʿiẓ Hargāmī was one of the compilers of *al-Fatāwā al-ʿĀlamgīriyya* [*q.v.*]. Specially interested in rational sciences, he devoted his leisure hours to the teaching of logic and philosophy. He was so fond of his pupils that once he strongly upbraided his son Faḍl-i Ḥakk for misbehaving towards a dull student. He seems to have been relieved of his post at Delhi in ca. 1827 when he was succeeded by Ṣadr al-Dīn Āzurda [*q.v.*], one of his pupils. He then entered the service of the chief of Paṭiālā as a minister but soon retired to his hometown where he died in 1244/1829. He left behind three sons of whom Faḍl-i Ḥakk [*q.v.*] gained great distinction.

His works are: (i) *al-Mirkāt al-mīzāniyya* (ed. Dihlī 1886, 1888), a text-book on logic based mainly on *al-Shamsiyya* by Nadjm al-Dīn ʿUmar b. ʿAlī al-Ḳazwīnī (d. 613/1216) and *Tahdhīb al-manṭiḳ* of al-Taftāzānī (d. 729/1389). It was commented upon by his grandson ʿAbd al-Ḥakk b. Faḍl-i Hakk and has since been translated into Urdu; (ii) *Tashḥīdh al-adhhān fī Sharḥ al-Mīzān* (MSS I.O.; Delhi-Arabic no. 1529; Āṣafiyya, ii, 1566); (iii) *Ḥāshiya ʿalā al-Ḥāshiya al-zāhidiyya al-kuṭbiyya* (MS Bankipore no. 2273); (iv) *Ḥāshiya ʿalā al-Ḥāshiya al-zāhidiyya al-djalāliyya* (MS I.O. Delhi-Arabic no. 1513); (v) *Talkhīs al-Shifāʾ* (MSS Aligarh Subḥān-Allāh Collection, no. 80, Rampur, no. 381); (vi) *Āmad-nāma*, a very useful booklet on Persian infinitives for beginners of which chapter v, comprising short biographical notices of some of the leading *ʿulamāʾ* and scholars of Awadh, has been published at Karachi under the title *Tarādjim al-fuḍalāʾ* (1956), with English translation and notes by me; (vii) *Tardjama-i Taʾrīkh-i Yamīnī* (MS Aumer 241).

FAḌLAWAYH, Banū, a Kurdish dynasty which ruled in Shabānkāra [*q.v.*] from 448/1056 to 718/1318-9. Very little is known about them except for the founder of the dynasty Faḍlawayh (in Ibn al-Athīr, x, 48: Faḍlūn) and for members of the family during the Ilkhān period [*q.v.*].

Faḍlawayh, son of the chief ʿAlī b. al-Ḥasan b. Ayyūb of the Kurdish tribe Rāmānī in Shabānkāra, was originally a general (Sipāh-Sālār) under the Buwayhids [*q.v.*] and closely connected with their vizier Ṣāḥib ʿĀdil. When the latter was executed after a change of government, Faḍlawayh eliminated the last Buwayhid in 447/1055 and placed himself under the authority of the Saldjūḳs [*q.v.*]. Later, however, he fell out with Alp Arslan [*q.v.*], was defeated by Niẓām al-Mulk [*q.v.*] and finally taken prisoner and executed in 464/1071.

Reports of the Banū Faḍlawayh until the beginning of the 7th/13th century are vague. After 626/1227-8 Muẓaffar al-Dīn Muḥammad b. al-Mubāriz expanded his rule in the direction of Fārs and the coast opposite Hormuz. He asserted himself against the *atabeg* of Fārs, but fell during a siege of his own capital Īdj by Hulagu [*q.v.*] in 658/1260. Until 664/1266 three rulers followed one another in rapid succession: Ḳuṭb al-Dīn, the brother (according to Zambaur the son) of Muẓaffar al-Dīn (murdered 10 Dhu 'l-Ḥidjdja 659/5 November 1261); Niẓām al-Dīn II Ḥasanwayh who fell in Rabīʿ II 662/February 1264; Nuṣrat al-Dīn Ibrāhīm, the brother of the latter, deposed Rabīʿ II 664/Jan.-Feb. 1266,

after which more peaceful conditions obtained. The brother of the last named, Djalāl al-Dīn Ṭayyibshāh, ruled for sixteen years under Mongol suzerainty until his execution on 10 Djumādā I 681/16 August 1282. His brother Bahā' al-Dīn Ismā'īl died a natural death in 688/1289-90. The cousins who succeeded, Ghiyāth al-Dīn b. Djalāl al-Dīn and Niẓām al-Dīn III b. Bahā' al-Dīn, were quite powerless. In the year following the suppression of a revolt in 712/1312-3 a certain Ardashīr, whose lineage is uncertain, succeeded to power. As early as Dhu 'l-Ḳa'da/February-March 1314 he was eliminated by the founder of the Muẓaffarid dynasty, Mubāriz al-Dīn Muḥammad, and thus the dynasty of the Banū Faḍlawayh came to an end.

(B. SPULER)

FAḌLĪ (commonly written FADHLĪ), a tribal territory now one of the states of the Federation of South Arabia, area about 1600 square miles with an estimated population of 55,000. Its western bounds touch on the Aden Colony and then run northwest bordering on Laḥdj ('Abdalī), Ḥawshabī and Lower Yāfi' territories; in the northeast it is bounded by 'Awdhalī and Dathīna, in the east by the Lower 'Awlaḳī, and on the south by the Arabian Sea. The country consists of two main parts: the lowlands of Abyan in the west, partly desert but containing the only fertile soil, with a mainly settled population; and the steppes and hilly parts in the east, with a mainly tribal population.

The territory was originally a confederation of tribes whose chieftain, a *sulṭān* by title, of the Faḍlī tribe, lived in Shuḳra, the capital and a seaport. After the British occupied Aden the Faḍlī remained hostile to them until in 1865, after the Faḍlīs had attacked a caravan near Aden, the British attacked them by land and sea. In 1888 the Faḍlī *sulṭān* Aḥmad b. Ḥusayn signed a treaty accepting British protection; and in 1944 the Faḍlī *sulṭān* 'Abd Allāh b. 'Uthmān signed a treaty with the British whereby he accepted advice on the administration of his country and the expenditure of his revenue. An executive acted for him in all matters in close cooperation with the British Political Officer in Abyan, and Zandjibār (also written Zandjubār) in Abyan became the administrative seat. In December 1962 Sulṭān 'Abd Allāh b. 'Uthmān was replaced as ruler by his *nā'ib* in Abyan the *de facto* ruler, Sulṭān Aḥmad b. 'Abd Allāh. The *sulṭān* is aided by a State Council, recently constituted, made up of thirteen members representing the tribes, the fishermen, the farmers and the traders. In June 1963 the State Council passed an ordinance providing for the election of 12 members, four from the settled areas in the west and eight from the tribal areas in the east, who, with five *ex officio* members and the members of the existing State Council will make a legislative body. In 1959 the Faḍlī sultanate or state was among the first territories of the Western Aden Protectorate to join in forming the Federation of Arab Amirates of the South, later called the Federation of South Arabia when Aden Colony joined it in 1962. The present Faḍlī Sulṭān is a member of the Federal Supreme Council and holds a Federal ministerial post.

The economy depends chiefly on agriculture, which is centred in the Abyan delta formed by Wādī Banā and Wādī Ḥasan whose irrigation waters are shared by Faḍlī and Lower Yāfi' growers under the control of the joint Abyan Board. The formation of the Board marked the settlement of the long standing dispute between the two territories over the leading channel, *nāzi'a*, which the Faḍlīs had constructed in the last century to divert water to their land from Wādī Banā in Lower Yāfi' territory. Cotton is the main cash crop, with the Faḍlī production in 1963 nearing 5,000 tons. Other products are fruit and vegetables, to supply nearby Aden Colony, crops other than cotton, especially sorghum, and animal husbandry. There is also a fishing industry with good potential. The revenue of the state has reached £ 250,000 a year.

The state has two systems of courts, *sharī'a* and Customary Law (*'urf*); a Justice of the Peace system has also been introduced. There is also a State High Court with powers of appeal and with jurisdiction over some constitutional matters.

Education has progressed recently and there are 20 primary schools including two for girls, the first in the Federation outside Aden Colony.

(M. A. GHŪL)

FAḌLI, MEHMED, better known as ḲARA FAḌLĪ (? -971/1563-4), Turkish poet, born in Istanbul, son of a saddler. Little is known of his early life. He does not seem to have had a regular education, but acquired knowledge in the company of learned people, particularly the poet Dhātī [*q.v.*], whose shop of geomancy had become a sort of a literary club for men of letters, where the old poet helped and encouraged young talents. On Dhātī's suggestion he composed a *ḳaṣīda* on the occasion of the circumcision festivities of prince Meḥmed. When Dhātī had finished reading his poem on the same subject, he introduced to the Sultan, Süleymān the Magnificent, his young disciple who then recited his, which won him the favour of the court. Faḍlī was made *dīwān* secretary to prince Meḥmed and, upon his death, to prince Muṣṭafā. On the latter's tragic end (960/1552) he wrote a long remembered elegy. He then entered the service of the crown prince Selīm who, upon succeeding to the throne, made him his chief secretary with a high fief. The poet died in Kütahya the following year.

Faḍlī was a master of classical formal prose (*inshā'*), but he is better known as a poet. Unlike most poets of the classical age, he does not seem to have collected his poems into a *dīwān* and his known poems are scattered in various *medjmū'as*. Some of his works, mentioned and praised in *tedhkires* (the *mathnawīs Humā we Humāyūn* and *Lehdjet ul-*

esrār, and a collection of stories in prose, *Nakhlistān*) have not come down to us. Apart from his *ḳaṣīdas*, *ghazals*, *muṣammaṭs* and *rubāʿīs*, Faḍlī owes his fame, among minor poets of the 10th/16th century, to his *mathnawī Gül we Bülbül* written in 960/1552-3 and dedicated to prince Muṣṭafā. This is an allegorical romance of the love of the Nightingale for the Rose which, unlike most of its contemporaries, does not follow any particular Persian model. In spite of the fluent and simple style of some passages, the work is on the whole written in an over-elaborated style laden with the conventional *ṣūfī* vocabulary which was in vogue during the period. Hammer's edition and translation of this work (see Bibl.) revived, for a time, the fading interest in this romance.

Fuad Köprülü in *IA*, s.v. Fazli. (FAHİR İZ)

FAGHFŪR or BAGHBŪR, title of the Emperor of China in the Muslim sources. The Sanskrit **bhagaputra* and the Old Iranian **baghaputhra*, with which attempts have been made to connect this compound, are not attested, but a form *bghpwhr* (= **baghpuhr*), signifying etymologically "son of God", is attested in Parthian Pahlavī to designate Jesus, whence Sogdian *baghpūr*, Arabicized as *baghbūr* and *faghfūr*; these forms were felt by the Arab authors as the translation of the Chinese *T'ien tzŭ* "son of heaven" (cf. *Relation de la Chine et de l'Inde*, ed. and tr. J. Sauvaget, Paris 1948, 20; al-Masʿūdī, *Murūdj*, i, 306 (tr. Pellat, § 334); *Fihrist*, 350 (Cairo ed., 491): *baghbūr* = son of heaven, that is to say descended from the heavens; Ibn al-Athīr, vii, 221). The form *faghfūr* (*facfur* in Marco Polo, ed. Yule-Cordier, ii, 145, ed. L. Hambis, Paris 1955, 194, to refer to the last emperor of the Sung dynasty), which has been borrowed by Persian (cf. Ferrand, in *JA*, 1924/1, 243; idem, in *BSOS*, vi (1931), 329-39; S. Lévi, in *JA*, 1934/1, 19), seems to be a more eastern form, although it is attested in al-Masʿūdī (*Murūdj*, ii, 200, = tr. Pellat § 622); it appears notably in the *Ḥudūd al-ʿālam*, 84, and in an Arabic inscription in the cemetery of Zaytūn (Ts'iuan-cheou) dated 723/1323 (cf. G. Arnáiz and M. van Berchem, *Mémoire sur les antiquités musulmanes de Ts'iuan-cheou*, in *T'oung-Pao*, xii, 724). In the Arabic texts it appears less frequently than *baghbūr* (the Arabic dictionaries give the vocalization *bughbūr*), the earliest attestations of which go back at least to the 3rd/9th century (Ibn Khurradādhbih, 16; al-Djāḥiẓ, *Ḥayawān*, vii, 180); later authors use it frequently (al-Masʿūdī, *Fihrist*, Ibn al-Athīr, see above; al-Khwārizmī, *Mafātīḥ*, Cairo 1342, 71, 73; al-Bīrūnī, *Chronology*, 109; *Abrégé des merveilles*, 118; etc.). According to the author of the *Relation de la Chine et de l'Inde* (20), a form *maghbūr* was used, perhaps punningly, by navigators. Al-Masʿūdī, *loc. cit.*, also indicates the title which one gave to the emperor of China when addressing him, and it seems that the reading *Ṭamghāč khān*, "Khān of the Ṭamghāč", must be adopted; this refers to the Chinese (cf. Abu 'l-Fidāʾ, ii/2, 123), *Ṭamghāč* (*Tabghač*) designating the Chinese and China (see P. Pelliot, *Notes on Marco Polo*, i, 274).

The derived forms *faghfūrī* (Persian) and *faghfur* (Turkish) have become synonyms of *čīnī* "Chinese [porcelain]", but later authors who try to explain this word make *faghfūr* a region of China (cf. P. Pelliot, in *T'oung-Pao*, 1931, 458). This term has entered Modern Greek (φάρφουρι) in the sense of "porcelain", and also Slav languages, through the Russian *farfor* (see Berneker, *Slav. etymol. Wörterbuch*, i, 279; Laufer, *Beginnings of porcelain*, 126).

Bibliography: in addition to the references in the text: E. Blochet, *Introduction à l'histoire des Mongols*, GMS XII, 76 n. 1; H. Cordier, in *Mélanges H. Derembourg*, 434; H. Yule and A. C. Burnell, *Hobson-Jobson*², London 1903, s.v. *Faghfur*; G. Ferrand, *Relations de voyages et textes géographiques*, Paris 1913-4, 2; Maspero, *La Chine antique*, Paris 1927, 144; P. Pelliot, *Notes on Marco Polo*, ii, Paris 1963, s.v. *facfur*, devotes a well-developed and documented study to this term. (ED.)

FAGHFŪR, in the sense of 'porcelain' [see ṢĪNĪ].

FAHD (Ar.), (fem. *fahda*, pl. *fuhūd*, *afhād*, *afhud*, *fuhūda*), is the name of the Cheetah (Urdū *čītā* < Sanskrit *čitraka*, "spotted"), *Acinonyx jubatus*, also called "Hunting-leopard and Hunting-cat", (French: "*guépard*", Persian: "*yūz*"), the subspecies *Acin. jub. venaticus* being found from Balūčistān to ʿIrāḳ and Jordan and the subspecies *Acin. jub. hecki* or *guttatus* in northern Africa, from the borders of the Sahara. The noun *fahd*, the form to be preferred to *fahid* which was recommended by al-Ḳalḳashandī (*Ṣubḥ al-aʿshā*, ii, 39 ff.), is connected with the root *FHD* which contains the idea of being "soporific by nature and with a tendency to negligence" in speaking of a man who could thus be compared with the cheetah; it is, however, difficult to know if the animal has taken its name from the earlier root bearing this sense, the cheetah being well-known for its natural sleepiness, or if, on the contrary, the root is derived from the word *fahd* which can equally well be supposed to be an Arabic corruption of the Greco-Latin term πάρδος/*pardus*, "panther".

From remotest antiquity travellers in regions inhabited by cheetahs have not failed to observe this slender wild beast, asleep all day in the shade of a bush, hunting only at dawn or dusk, and, though with the tabby coat of a feline, claiming relationship with the canine family. Modern mammalogists in fact recognize it as a greyhound with the fur of a big cat from the form of the cranium, teeth like those of the canidae, non-retractile claws, its habit of running in strides, each step being a leap of five to six yards, and its peaceful nature; the cheetah does not experience the blind atavistic ferocity shown by the big felines at the sight of blood. It is not therefore surprising that the Mongols, Persians and Hindūs who hunted because they needed food and consequently were close observers of wild animals should at a very early time have had the idea of taming the yards, and making use of its predatory instinct for catching hares and various ungulates with edible flesh; by so doing they gained the services of the swiftest of all quadrupeds, the cheetah having a speed of about eighty miles an hour for a distance of five or six hundred yards. It is probable that the Lakhmid princes, vassals of the Sāsānids, tamed the cheetah in east Syria and ʿIrāḳ, the animal being fairly widespread in those countries; the strain from the Samāwa had the reputation, according to al-Manglī, of being superior to any other in the 14th century.

Although Arab tradition attributes to Kulayb Wāʾil of the Nadjd (second half of the 5th century A.D.) the distinction of first hunting with the cheetah, the animal does not appear to have been commonly

employed in hunting by the Arabs before the Islamic conquests. Pre-Islamic poets, to judge by such of their writings as survive, make no mention of them; instead, it must have been regarded, like the panther, as a dangerous wild animal best avoided. Although extant in the Ḥidjāz and the Yemen, the cheetah was never very numerous in Arabia, its elective biotope hardly going beyond the tropic of Cancer and being pre-eminently the dry Mediterranean steppe of grass- and bush-land found between the 25th and 35th parallels. The absence in ancient Arabic of any "collective noun" in *mafʿala* among derivatives from the root *FHD* may to some measure corroborate, if not the ignorance of the Bedouins of pre-Islamic Arabia in respect of the cheetah, at least their confusion of this animal with the panther Leopard, *Panthera pardus*, (*namir, nimr, arḳaṭ*). This confusion, incidentally, has been perpetuated unfailingly even up to our own time in the works of many western writers since the introduction by the Crusaders in the 14th century of the cheetah to the courts of Sicily and Italy, and subsequently from there to the courts of France, Germany and England. The French name "guépard", after the names "gapard" and "chat-pard" derived from the Italian "gatto-pardo", has only lately, and correctly, been substituted for the incorrect mediaeval old-French appellations "lyépard", "leupart", "léopard", "léopard-chasseur", just as the anglicized term "cheetah" has taken the place of the archaic Middle-English forms of "leopart", "leparde", "lebarde", "libbard", and "hunting-leopard". Many also continue to make a serious error in confusing the cheetah with the Ounce or "Mountain Panther", also called "Snow-leopard", *Felis uncia*, a species of panther confined to the high mountains of central Asia, which only certain Mongolo-Altaic clans ventured to tame for hunting cervidae, and without any great success. The word Ounce, used for "Lonce" (from the Low Latin *lyncea*, lynx), applied to the "Snow-Leopard" revealed the confusion existing between the panther and the lynx which is called in French "Loup-cervier", *i.e.*, Stag-eating wolf, and was in fact trained. Moreover it is an actual fact that the orthodox Muslim has never included a panther of any species, any more than the tiger (*babr* pl. *bubūr*) or lion, in the list of "beasts of prey" (*al-djawāriḥ*) recognised as "lawful instruments" of hunting (*ālāt al-ṣayd*); justifying this position of the Islamic law, Usāma b. Munḳidh, the illustrious Syrian hunter-knight of the 6th/12th century, was certainly the first to expound with precision the well-known anatomical distinctions between the cheetah and the panther, especially in the structure of the cranium, and to insist upon the ineradicable brutality of the second (see *K. al-Iʿtibār*, 111-2). In this connexion, it is to be regretted that L. Mercier (74-5), misled by erroneous sources of later date, failed to realize that the *yūz* of the Persians was actually the cheetah, and not an "unidentified" panther.

However that may be, it was not until the Muslim expansion towards the north-east took place in the 1st/7th century that the Arabs could be seen to have familiarized themselves with this new auxiliary in their hunting expeditions, afterwards taking to it with passionate enthusiasm. Their interest in the cheetah was to be revealed by their concise aphorisms in which the animal served as an example for some of its characteristic features; they said, among other things, "sleepier than a cheetah" (*anwam^u min fahd*), "heavier-headed than the cheetah" (*athḳal^u raʾs^an min al-fahd*), "a better purveyor than a cheetah" (*aksab^u min fahd*), "quicker off the mark than a cheetah" (*athwab^u min fahd*), "angrier than a cheetah" (*aghdab^u min fahd*); all these axioms are to be found in collections devoted to this literary genre, such as that of al-Maydānī (d. 518/1124).

To be of service in hare and gazelle hunting, the cheetah has to receive a certain training and, for this reason, the Muslims ranked it, like the greyhound and the sporting-bird [see BAYZARA] as one of the "credited carnivora" (*al-ḍawārī*) the use of which in hunting was recognized as lawful on the strength of the Ḳurʾānic ruling (V, 6/4): ". . Reply [to them]: lawful for you are foodstuffs good to eat and any [game] that, at your wish, is captured by beasts of prey which you have trained as you do dogs, according to the method which Allāh has taught you, after you have spoken the name of Allāh over it . . .". It is in imposing this necessary condition of training, (*idjāba, ḍarāwa/ḍarāʾa, taʿlīm, taʾdīb*), and in considering the "bleeding bite" (*ʿaḳr*) made by the beast of prey at the take as a ritual slaughter (*dhabḥ, tadhkiya*) of the victim, that the doctors of the Law also admit certain other carnivora (*kāsib*, pl. *kawāsib*) whose training for hunting is identical with that of the cheetah.

First comes the Lynx Caracal (*ʿanāḳ al-arḍ, ʿunfuṭ, ghundjul, ʿundjul, ḳundjul, fundjul, ḥundjul, ḥandjal, furānik al-asad, shīb, bawwāḳ*; Ḥidjāz: *tumayla*; Sudan: *umm rīshāt*; Maghrib: *(a)bū sbūla, ūdān/awdān* for *ādhān*; Persian *siyāh-gūsh*; Turkish *ḳaraḳulaḳ* whence "caracal"); the number of its names is proof that the Caracal was well-known in the countries of Islam, all the more since this large russet-coloured cat, with "ears tufted with black", less heavy to carry than the cheetah and less exacting in its requirements, in addition to its aptitude for "fur hunting" (*ṣayd li 'l-wabar*) was equally adept with feathered creatures (*ṣayd li 'l-rīsh*), partridges, wild geese, bustards and cranes. After the cheetah and the caracal, they trained, with equal success, the Jungle Cat (Fr. *Lynx des marais, i.e.*, Marsh lynx), *Felis chaus* (*tuffa, tufah, tifā, tifāwa*) as well as the Serval or Tiger-Cat, *Leptailurus serval* (*washak, wishk, wishk, kiṭṭ-namir*); as for the Ferret, *Mustela putorius furo* (*ibn ʿirs, nims*), it was used on rare occasions to flush game from dense coverts and for digging out fox, badger (*zabzab*) and porcupine (*ḍirbān*) (Kushādjim, 227-8; Ibn Munḳidh, 213).

Under the Umayyad dynasty, the cheetah became an indispensable element in the caliphs' diversions; in Yazīd b. Muʿāwiya (680-3) the passion for "hunting with cheetahs" was quite as fervent as his love of hawking, so much so that he was traditionally the first (of the Muslims) to carry on his crupper the noble animal which the ordinary people, with their grey-hounds, looked upon as impossible to tame (*dhū shakīma*). To name all the caliphs and distinguished personages in Islam who kept packs of cheetahs would be lengthy and of little value, since very few of them failed to respond to the powerful fascination exerted by the swift and inexorable hunt to the death as seen in the cheetah's headlong attack. The ʿAbbāsids, following the example of their illustrious general Abū Muslim al-Khurāsānī (718-55), and later the Fāṭimids and the Mamlūks, took such a great interest in this proud beast, forcibly tamed by man, that they delighted in making it take part in their official processions; it may even be thought that they looked upon it as an external mark of their prestige and opulence. The vast expense entailed by the upkeep of a hunt with cheetahs, for which

a paid staff of experts was essential, precluded all but the rich from the privilege of this luxurious diversion; the less affluent contented themselves with flying and coursing sports. It is however surprising to note that the Maghrib and Muslim Spain took no interest in the cheetah and never trained it; no reference to it occurs in any of the great number of documents, both Arabic and European, from which we draw our knowledge of Western Islam. The cheetah is known throughout the pre-Saharan zone of the Maghrib, from Tunisia to the Moroccan borders, although it is becoming rare there, and the nomads of the region have always regarded it simply as a permanent danger to their flocks (see L. Lavauden, *Les vertébrés du Sahara*, Tunis 1926, 39-40; idem, *Les grands animaux de chasse de l'Afrique française*, in *Faune des Colonies françaises*, Paris 1934, no. 30, 366-7; idem, *La chasse et la faune cynégétique en Tunisie*, Tunis 1920, 9-10). The Touaregs for their part are pleased, when they capture the beast, either to sell it to Europeans or else to make beautiful saddle-cloths and food-bags (*mizwad*, pl. *mazāwid*) from its skin, but they have never thought of training it; they are, however, aware of its elegance and power, often giving its name (in Tamashaḳ *amayas*) to their children as a first-name (H. Lhote, *La chasse chez les Touaregs*, Paris 1951, 129-30).

In contrast to the indifference shown by the Muslim West towards hunting with cheetahs, the East for its part has until our own time kept this ancient practice very much alive in ʿIrāḳ, Īrān and India; Persian tradition ascribes it to Chosroes Anūshirwān (531-79 A.D.), but in fact it goes back to remotest antiquity. The renowned poet Firdawsī is somewhat nearer the truth when, in his *Shāh Nāma* he names Tahmūras, prince of the legendary dynasty of the Pishdādians, as the inventor of the training of beasts of prey, in these lines: *Siyāh-gūsh o yūz dar miyān bargozīd / Bā čāra biāwūrdash az dasht o kūh* ("He [Tahmūras] chooses from them [the wild beasts] the Caracal and the Cheetah. By artifice he took them from the desert and the mountains").

Muslim writers in the Middle Ages, naturalists like al-Ḳazwīnī (599-682/1203-83) in his *K. ʿAdjāʾib al-makhlūḳāt* and al-Damīrī (742-807/1341-1405) in his *K. Ḥayāt al-ḥayawān*, encyclopaedists like al-Djāḥiẓ (d. 255/868) in his *K. al-Ḥayawān* and al-Ḳalḳashandī (d. 821/1418, *op. cit. supra*), philologists like the Andalusian Ibn Sīda in his *K. al-Mukhaṣṣaṣ*, all spoke of the cheetah, not as connoisseurs but as recorders of the sayings of the Ancients; in this way they perpetuated certain naive and fabulous beliefs which originated in part in the imagination of the Greeks. From the beginning of the Umayyad dynasty a team of anonymous translators, possibly bilingual Ghassānids, had put into Arabic some of Aristotle's writings, in particular his "History of the animals". Al-Djāḥiẓ made use of this work, and tried to complete it; on occasion he in his turn repeated the old fallacies which had been accepted without verification; people will never cease to believe, for example, that the cheetah is a hybrid from the union of a female panther and a lion. Still more typical is the case of the variety of Aconite (*Doronicum pardalianches*) which Greek hunters ground to a paste and used as a poison for wild animals (see Aristotle, *History of Animals*, new Fr. trans. J. Tricot, Paris 1957, ii, 600 [Eng. tr. of *Works*, edd. J. A. Smith and W. D. Ross, iv, 612a]; Xenophon, *Cynegeticus*, Fr. trans. E. Talbot, Paris 1873, i, chap. VI, 338 [Loeb ed. of *Scripta minora*, 1956, 440-1]) and which, from a literal translation of its Greek name "pardalianches" *i.e.*, "that chokes the panther" (which is the actual "Wolf's-bane", with the same meaning; cf. Old-French: "étrangle-loup", "tue-loup"), is called in Arabic *khāniḳ al-fuhūd* or *khāniḳ al-namir*; then, by metonymy, this name has been extended, in al-Djāḥiẓ and those who repeated what he wrote (see *K. al-Ḥayawān*, iv, 228), to mean the effects of poisoning induced by this plant and considered as a malady peculiar to wild carnivores.

In the last resort we have to turn to writers on hunting to find more realistic information about the cheetah's nature, capture and training. Of the numerous Arabic treatises on venery and falconry recorded by lexicographers, very few have survived [see BAYZARA]; the oldest which has come down to us seems, at present, to be the *K. al-Maṣāyid wa 'l-maṭārid*, attributed to the poet Kushādjim (d. 961 or 971): in reality, this is no more than a work at second-hand which, thanks to the compiler, contains long fragments from a much earlier, possibly Umayyad, work; and the treatises in Old-French of "Moamin and Ghatrif" (see the excellent critical edition by H. Tjerneld, Stockholm-Paris 1945) are a complete translation. However that may be, the *K. al-Maṣāyid wa 'l-maṭārid* (very careless edition by A. Ṭalas, Baghdād 1954) contains in the *Bāb al-fahd* (183-201) a useful documentation on the animal's treatment. This chapter is reproduced word for word in the *K. al-Bayzara* (ed. Kurd ʿAlī, Damascus 1953), the work of the hawker (al-Ḥasan b. al-Ḥusayn?) of the Fāṭimid caliph al-ʿAzīz bi'llāh (975-96); however, the anonymous author, in the *Bāb ṣayd al-fahd* (118 ff.), puts forward his own personal remarks which are not lacking in interest. As for Usāma b. Munḳidh (d. 1188), he recalls his childhood days when at his father's house there was a she-cheetah of unusual docility, living in freedom (*musayyaba*) and on perfectly good terms with the fowls and the numerous tame gazelles belonging to the house, although when hunting she displayed a relentless ferocity towards her quarry. From his "Hunting memories" it emerges that he himself took almost no interest in this method of hunting. It was a very different matter with al-Manglī, a famous Mamlūk hunter, who in his treatise dated 773/1371 gives us the fruit of his great experience in the matter of cheetahs; it is certainly the most thorough study on this subject in Arabic that we possess. The works of al-Ashʿari (848/1444) and al-Fākihī (d. 948/1541) of which L. Mercier made use (mss. Paris, B.N., no. 2831 and 2834) are merely repetitions of the earlier writings.

In the light of these texts it is easy to formulate an exact idea of the difficulties which mediaeval Islamic huntsmen had to overcome before being able to experience to the full the excitement engendered by the cheetah's "career" (*ṭalḳ*, pl. *aṭlāḳ*). First it was necessary to find an animal in the prime of life (*musinn*), for the cheetah does not breed in captivity and the cheetah's whelp (*ʿawbar, hawbar*), if deprived of the tutelage of its wild parents, never acquires by itself the instinct of rapine. In fact, the master of a hunt with cheetahs was no more than a spectator on the spot, watching the exploits of the beasts in his menagerie, all the work and the results being the responsibility of the "cheetah-keeper" (*fahhād*, Fr. *guépardier*), a difficult and very restricted occupation for which the rewards had to be lavish. The cheetah-keeper had, in fact, to be "trailer" (*dhānib*), tamer (*rāʾiḍ*, pl. *ruwwāḍ*) and trainer (*mudarr^{in}*, *mudr^{in}*).

Certain tribes had specialized in this activity, like the Banū Ḳurra and the Banū Sulaym in Egypt, and made a profit from selling the animals they captured. The tactics most usually employed in catching the animal that was required, a female for preference, were "to recognize it by its footprints" (*ḥifẓ al-āthār*), to "stalk its lair" (*taḳrīb al-ʿarīn*) with two or three men on horseback, in the heat of the day, to "start it" and to "trail its slot" (*nadjāsha*) slowly, without pressing it too hard; soon the indolent creature lies down to resume its interrupted nap, but is started once again. This manoeuvre is repeated three or four times until the animal is forced by fatigue to "wait steady" (*muḳāwama*) and to "face" (*muʿāraḍa*) its pursuers, if it is not falling asleep from exhaustion. One of the trackers (*nadjdjāshūn*) then dismounts, throws his burnous over it with a rapid and deft movement to blind it by covering it, and immobilizes the animal by holding down its flank with the whole weight of his body. It is at this moment that the cheetah-keeper has to employ all his skill to slip a halter (*maras*) under the garment round the animal's neck and to bind its jaws with a solid "muzzle" (*kimāma, sayr*) while an assistant securely ties together its forelegs and hindlegs two by two, above the pasterns in order not to bruise the muscles, wrapping its feet in pieces of cloth to avoid any injury from the claws; for greater safety its forequarters and hindquarters are made fast to two posts. The animal is left for some time in this painful position; and so fatigue, grief, terror and hunger soon get the better of its savagery. In addition to these natural aids to taming the cheetah-keeper also makes use of the human eye's mastery over the beast's, staring at it at frequent intervals and for longer and longer periods; when the animal closes its eyes or turns away its head, it is humbled and no further reaction of ferocity is to be feared from it. The hobbles from the posts are gradually loosened until the cheetah can raise itself on its fore quarters and can accept from the tamer's hand some pieces of cheese and then meat. With each morsel that is offered the cheetah-keeper utters a cry, as it were inviting his pupil to respond; this is the real start of the "reclaiming" (*idjāba, istidjāba*). In this connexion, Muslim authors have not failed to stress the similarity of the procedures for reclaiming the goshawk and training the cheetah, as well as the technical terminology relating to both; incidentally al-Manglī states: "... *idjābat al-fahd ka-idjābat al-bāzī* ...", "the cheetah's reclamation is like that of the goshawk ...". After about ten days the prisoner's fetters (*withāḳ*, pl. *wuthuḳ*) are replaced by hobbles (*ʿiḳāl*, pl. *ʿuḳul*) binding together the four feet in pairs, following the method used for camels and beasts of burden. Henceforward the cheetah can stand upright and stretch itself; everyone speaks to it, its keeper watches over it ceaselessly and feeds it, but only sparingly so that it still remains hungry (*tadjwīʿ*); at this point it is possible to think about transporting it to its future domicile.

The Indians use a different technique for catching cheetahs; they spread nets round the edges of trees on whose trunks can be seen marks of scratching, where the animal has abraded its claws; sooner or later it is caught in the nets. On the other hand it is difficult to believe the statement, taken from the Greeks, that the cheetah allows itself to be approached without difficulty when it is made to hear a "beautiful voice" (*ṣawt ḥasan*); but it is possible, in spite of everything, that like many wild animals it is responsive to music and singing.

To convey the cheetah to the room set aside for it by its owner is a delicate operation to which the cheetah-keeper devotes particular care: he has to avoid any accident which might impair the animal's fine condition. To do this, he puts it into a "strait-jacket" (*wiʿāʾ, ghirāra, kays*), a large bag, allowing it to pass its head through the opening and, to prevent it being frightened by anything nearby, he accustoms it to wear on its head a hood (*kumma*), a leather visor shaped like a baby's bonnet and tying under the chin; two porters then suffice to carry it safely to its destination when thus "hooded" (*mughaṭṭā 'l-wadjh*).

On reaching its new home the cheetah, like sporting-birds, has to receive some "manning" (*uns, ilf*), training that will make it lose its savageness (*tadjrīd*) completely. For this purpose the cheetah-keeper, leaving the hobbles on its feet, tethers it outside a house facing on to a busy street; the din, the constant movement and the teasing by the children soon result in making it absolutely harmless. They even go so far as to make it walk through the markets, held firmly on a lead and carefully surrounded. In the evening it is taken to its room, a dark stable where it is fastened to a long chain (*midjarr*) which leaves its movements entirely free. For the first nights an ostler (*sāʾis*) watches it by the light of a lamp and prevents it from sleeping in order not to interrupt the process of training; it is only later that it is given a thick carpet (*ṭinfisa*) to sleep on.

All this time and for the rest of its life it receives food only from the hand of its keeper, for it is by means of the daily feed (*ṭuʿm*) that he begins the education (*tahdīʾ*) of his pupil. The art is not in teaching it to hunt, for it already has the instinct to do so, but instead in accustoming it to jump and ride pillion (*irtidāf*) on its trainer's horse at any speed. The Indians avoid this difficult initiation by conveying their cheetahs to the hunting-grounds in small, individual vehicles, shaped like cages and drawn by horses or oxen.

To train it to ride pillion the cheetah-master installs in his pupil's room a wooden vaulting-horse (*mithāl al-dābba*) or a small platform (*dakka, markab*) on trestles of adjustable height, and then having fastened a solid leather collar (*ḳilāda*), fitted with a ring with swivel-pin (*midwar*), round the cheetah's neck, he releases it from the chain and holds it by the leash with one hand; with the other he shakes the bowl with rings (*ḳasʿa*) from which the animal feeds and places it on the raised platform, to start with a cubit and a half above the ground. Repeating this manœuvre several times, he ends by ostentatiously throwing a piece of raw meat into the bowl standing on the platform, at the same time inviting the animal to jump up by pulling lightly at the leash. Egged on by hunger, the cheetah quickly understands that the rattle of rings on the bowl is the announcement of something good for it to eat and that it has to go up onto the platform to get it. In this way the copper or bronze bowl, with rings attached, now continually plays the part of the cheetah's "reclaim", like the sporting-bird's lure. For this same purpose the Indians use a large iron ladle which is easier to handle on horseback than a bowl. By repeating this routine several times a day, each time increasing the height by several centimetres, the keeper accustoms the animal, in less than ten days, to come and look for its food at a height of more than three cubits above the ground, the average height of the crupper on a saddled

horse; he does not fail, each time, to give it confidence by patting its flanks. Finally he replaces the platform by a table suspended from the ceiling, like the old breadshelf of former times, and puts on it not only the bowl but also the cheetah's carpet, thereby compelling it to balance itself on an unsteady seat where it is rocked about in exactly the same way as on its trainer's crupper.

Again, it is by using the bowl that the keeper starts teaching the cheetah to mount. He selects a calm, good-natured horse and gets an ostler to hold the bridle; he then goes to fetch the cheetah and brings it on a leash close to the horse; to begin with, he is careful to hood the cheetah before taking it outside, to prevent it being at all alarmed by the sight of the horse. As soon as he is in the saddle he pulls the leash with one hand and with the other makes a clinking sound with the bowl which is placed behind him on the pillion (*rifāda*) or "crupper-seat", fixed to the cantle of the saddle. The animal is attracted and nimbly jumps up to eat the meat in the bowl; intent on its food, it pays no attention to the movement of the seat, the rider having meanwhile made his mount start to move. Patient and frequent repetitions of this manoeuvre quite soon allow the cheetah-keeper to ride at a trot, and then at a gallop, without disturbing his passenger which, being "well-credited" (*rabīb*), sits firmly on its pillion, untied except for its slip which is knotted to the saddle-bow.

The "slipping on live" (*irsāl ʿalā 'l-ṣayd*) of the cheetah is fairly rapid: some train-deer (*kasīra*, pl. *kasāʾir*), hares or gazelle fawns (*k͟hiś͟hf*, pl. *k͟hus͟hūf*) which are easy to catch and are slaughtered under the cheetah's feet so that it may lap the blood, quickly bring out its hunting instincts. The skilful cheetah-keeper can even ensure that his beast only "sets upon" the gazelle bucks (*faḥl*, pl. *fuḥūl*), the does (*ʿanz*, pl. *ʿunūz*) in venery in East and West alike being always left free for breeding; whenever a doe is seized, the cheetah is deprived of its "right" by being immediately removed from its take, whilst it is allowed to "take its pleasure" (*is͟hbāʿ*) on the bucks it has caught.

When a cheetah is judged to be "well-tried" (*muḥkam*), three ways of hunting are possible. The first, a princely prerogative, is "hunting at force" (*al-mukābara, al-muwād͟jaha*): the huntsmen, having reconnoitred the herd (*sirb*) from a distance, dislodge a buck and run it down until the "finish"; at the same time the cheetah is cast on the exhausted quarry and lays it low without difficulty or fatigue. These tactics entail long rides at random and require great endurance from riders and mounts alike. The second way is greatly relished for the thrilling spectacle that it offers, for it depends on the action of the cheetah alone: it is "stalking" (*al-dasīs*); the cheetah which has been unhooded (*maks͟hūf al-wad͟jh*) "reconnoitres" (*tas͟hawwuf*) from a distance the gazelle as it is browsing and, at a sign from its keeper who has put it down on the ground, it sets off to try to take its quarry by surprise without being betrayed by its scent. The huntsmen take cover in order to see without being seen, and tremble with delight at the cheetah's manoeuvres as, having made its way upwind (*mustaḳbil al-rīḥ*), it steals on and creeps up (*daʾalān, tasallul*) to the quarry, crouches down, remaining stock-still at the first alarm, and starts off again, one foot after another, taking advantage of every undulation of the ground, and so comes up quite close to the gazelle without having put it on its guard; the final charge is a matter of only a few seconds. As for the third way, it is by far the most commonly used by cheetah-keepers and gentlemen farmers (*dihḳān*, pl. *dahāḳīn*) for the small amount of difficulty and fatigue that it entails: it is "trailing" (*al-mud͟hānaba, al-id͟hnāb*); the huntsmen recognize a herd by its footprints and trail it upwind as far as its cover without alerting it. The cheetah, unhooded and "cast on the fur" unawares, is able to lay low several beasts before they have time to escape.

Whichever method of attack is adopted in the course of hunting, the cheetah-keeper cannot call for more than five or six "careers" (*ṭalḳ*, pl. *aṭlāḳ*) from his cheetah since it makes the maximum effort in each career and thus rapidly becomes exhausted; for the same reason, it is only allowed to hunt on alternate days. Furthermore the cheetah-keeper must always cut the quarry's throat while the cheetah is still lying on it (*tamahhud*), biting it hard in the nape of the neck or the throat, and must let it lap the blood caught in the bowl in order to remove it from its quarry and to take away the body. Nor will he neglect to hood the cheetah again as soon as it has remounted the pillion, so that it is not tempted to dash off after some game not intended for it, since it is only lawful to eat the flesh of a wild beast caught in this manner if the cheetah-keeper has pronounced the formula invoking the name of Allāh (*tasmiya*) at the moment when the beast of prey is deliberately let slip (*irsāl bi 'l-niyya*). The cheetah, being subject to laws of nature, becomes vexed and angry when it misses its quarry and turns a deaf ear when its master calls it in; only the clinking of its bowl makes it decide to go back. Although sensitive to reprimands, it is doubtful if this animal goes so far as to learn a lesson, as the legend has it, from a rebuke addressed in its presence but vicariously, to a dog that is in fact blameless.

The excitement of watching coursing with the cheetah has not escaped the inspiration of those Muslim poets who were responsive to subjects provided by the chase (*ṭaradiyyāt*). Some accomplished masters of the *urd͟jūza* have left superb descriptions of the animal and its lightning charges, stressing the beauty of its tabby coat (*mudannar*), the terrifying aspect given by its "tear-streaks" (*al-madmaʿānⁱ*) or "moustaches" (*al-sufʿatānⁱ*, *al-s͟hāhidānⁱ*), the two dark stripes like two *alif*s, stretching from the eyes to the corners of the mouth, its suppleness when creeping, its unparalleled speed and irresistible assault. Of the writings devoted to the cheetah, which are rarer than those describing hounds and sporting-birds, only those by poets of the ʿAbbāsid period have survived; we need note only such famous names as Abū Nuwās, al-Faḍl al-Raḳās͟hī the rival of Abū Nuwās, Ibn al-Muʿtazz, al-Nās͟hiʾ, Ibn Abī Karīma the contemporary of al-D͟jāḥiẓ, Ibn al-Muʿad͟hd͟hal and Ibn al-Ḥusayn al-Ḥāfiẓ. The sport of hunting with cheetahs having remained a diversion for the rich in Islam, it is not surprising to find that only the court poets of caliphs and wealthy patrons have celebrated it in verse; popular poetry and Bedouin songs have scarcely touched on the subject.

Sāsānid Persia gave the cheetah a certain place in its works of art; miniaturists represented it either realistically or else symbolically, by pair affronted or addorsed, on either side of the "tree of life" (*hōm*). The West eagerly borrowed this last motif in the illuminations of the main Middle Ages, as we see in a frontispiece of the IXth century Evangeliary of Lothair (Latin ms. Paris, B.N., no. 226, f° 75v°,

according to A. Michel, *Histoire de l'Art*, Paris 1905, I, 1st part, 400-4). The cheetah is also to be seen as an element of animal decoration in ceramics, tapestries, drawings, carving and jewellery; in the Bucharest Museum there are two openwork cloisonné vessels which were discovered in ancient Petrossa and are therefore known as the "Petrossa treasure"; each handle on these vases is made in the form of a cheetah supporting the vessel, the body made of gold and studded with garnets and turquoises (see A. Michel, *op. cit.*, 413-4). Throughout Islam, the dominating influence of Sāsānid inspiration in the minor arts swept through all the Muslim territories and remained effective for several centuries; thus one frequently finds the "cheetah motif" in the works of art in metal or stone left by the artists of Fāṭimid Egypt and Muslim Spain. In this connexion one may wonder if the historians of Muslim art have occasionally been mistaken in regard to some of these decorations with animal figures, and have identified as lions what the artist intended as cheetahs. Finally, we may note that despite the renown it enjoyed among the great in the East, the cheetah never attained the heraldic eminence in Mamlūk heraldry that it reached in the Christian West during the Middle Ages.

FAḤL or Fiḥl, an ancient town in Transjordania situated 12 km. south-east of Baysān [*q.v.*], was known in earliest antiquity, at the time of el-Amarna, under the name *Biḫḫil*, corresponding to a semitic *p ḥ l.* Macedonian colonists settled there in about 310 B.C., giving it the name of the Macedonian town of Pella, which resembled the native name. After the Roman conquest, Pella was one of the towns of the Decapolis, and the Christians took refuge there during the disturbances which followed the destruction of Jerusalem. Later it belonged to the Second Palestine and was the seat of a bishopric. About six months after the battle of Adjnādayn [*q.v.*], in Dhu 'l-Ḳaʿda 13/January 635, it was near Faḥl that the Muslim armies attacked the Byzantines who had mustered to the east of the Jordan and cut the dikes at Baysān in order to turn the district into a marsh; during the battle, known as the "battle of Faḥl" or "battle of the marsh (*yawm al-radagha*)", the Arab invaders succeeded in crossing the Jordan and taking the town.

In the 3rd/9th century the population of Faḥl, according to al-Yaʿḳūbī, was still half Greek and the town, which formed part of the province of al-Urdunn, seems then to have declined rapidly, for the writers of the 4th/10th century do not mention it. Today the name Faḥl merely denotes a collection of ruins, mostly Roman and Byzantine.

FAHRASA, the name given in Muslim Spain to kinds of catalogues in which scholars enumerated, in one form or another, their masters and the subjects or works studied under their direction. The word *fahrasa* is an Arabicization of the Persian *fihrist* by means of a double vocalization -*a*- and the closing of the final *tāʾ*, a fairly frequent modification. In al-Andalus, it is completely synonymous with *barnāmadj*, which is also Persian, while in the east it corresponds with *thabat, mashīkha* (*mashyakha*) or *muʿdjam* (this last word is also used in the west). In the east, the best known of these works is *al-Muʿdjam al-mufahras* of Ibn Ḥadjar al-ʿAsḳalānī (d. 852/1449), still in manuscript (see Brockelmann, S II, 73), who adopts the same classification as Ibn Khayr (see *infra*). In the west, the *fahrasas* appear to be more numerous (Ibn Khayr and al-Ruʿaynī [see below] give quite a long list) and some still survive; three of them have already been published: a. Ibn Khayr al-Ishbīlī (502-70/1108-76 [*q.v.*]), *Fahrasat mā rawāh ʿan shuyūkhih min al-dawāwīn al-muṣannaf fī ḍurūb al-ʿilm wa-anwāʿ al-maʿārif*: *Index librorum de diversis scientiarum ordinibus quos a magistris didicit*, ed. J. Ribera Tarragó, *BAH*, ix-x, Saragossa 1894-5. — b. Ibn Abi 'l-Rabīʿ (599-688/1203-89; see Brockelmann, S I, 547), *Barnāmadj*, ed. ʿAbd al-ʿAzīz al-Ahwānī, in *RIMA*, i/2 (1955), 252-71. — c. al-Ruʿaynī al-Ishbīlī (592-666/1195-1268), *Barnāmadj* or *K. al-Īrād li-nubdhat al-mustafād min al-riwāya wa'l-isnād bi-liḳāʾ ḥamalat al-ʿilm fi 'l-bilād ʿalā ṭarīḳ al-iḳtiṣār wa'l-iḳtiṣād*, ed. Ibrāhīm Shabbūḥ, Damascus 1361/1962.

ʿAbd al-ʿAzīz al-Ahwānī has examined the mss. still extant and incorporated the results of his research in an extremely well documented article, *Kutub barāmidj al-ʿulamāʾ fi 'l-Andalus*, in *RIMA*, i/I (1955), 91-120. According to this writer, it is possible to distinguish four categories of *fahrasa* or *barnāmadj*: — 1. Catalogue of writings, classified according to the branch of study to which they belong. Ibn Khayr observes the following order: Ḳurʾānic studies, *ḥadīth*, *siyar* and genealogy, *fiḳh*, grammar, lexicography, *adab*, poetry; he does no more than give the names of his masters, without any further observations. To this category belongs the *Barnāmadj* of Ibn Masʿūd al-Khushanī (d. 544/1149) of which only a few pages survive (al-Ahwānī, 99). — 2. A list of masters, with a note of the works studied under their direction. The *Ghunya* of *ḳāḍī* ʿIyāḍ (476-544/1083-1149 [*q.v.*]) who adopts an alphabetical classification, belongs to this category,

as does the *Fahrasa* of Ibn ʿAṭiyya al-Muḥāribī (d. 541/1146; see Pons Boigues, *Ensayo bio-bibliográfico sobre los historiadores y geógrafos arábigo-españoles*, Madrid 1898, 207; Brockelmann, S I, 732; ms. Escorial 1733; he recounts the biography of his father and his other masters; al-Ahwānī, 101-2), and the *Barnāmadj* of al-Ruʿaynī who classifies his masters according to the subjects in which they specialized: Ḳurʾān, *ḥadīth*, grammar, *adab*, poetry. — 3. A combination of the two classifications, as in the *Barnāmadj* of Ibn Abi ʾl-Rabīʿ (see *supra*) and that of Muḥammad b. Djābir al-Wādiyāshī (d. 749/1348; see Brockelmann, S II, 371, and correct the date and place [Tunis instead of Granada] of his death; ms. Escorial 1726), who first gives the names and biographies of his masters, then the list of subjects and works studied under their direction. — 4. The addition of personal observations, narratives etc. by the author to the above lists.

This genre, which appears to be a particular speciality of the Andalusians, should be associated with the transmission of *ḥadīth*, and indeed it was the traditionists and *fuḳahāʾ* who considered it helpful to leave for posterity a list of their masters (or to entrust it to one of their disciples, as in the case of Ibn Abi ʾl-Rabīʿ), sometimes not without indicating the *isnād* of the *ḥadīth* learnt under their direction. But a well composed *fahrasa* such as that of Ibn Khayr possesses an interest of quite a different sort by revealing what studies could be undertaken by a young scholar at some given period, and by providing an inventory of the works favoured by cultivated circles (cf. H. Pérès, *Poésie andalouse*, 28 ff.).

FAḤṢ al-BALLŪṬ, "Plain of the oaktrees" or, more accurately, "of the acorns" (*ballūṭ*) whose present name Los Pedroches is applied to the wide valley situated to the south-west of Oreto, three days' journey north of Cordova. It stretches as far as the mountains of Almadén and has always been characterized by the great mass of evergreen oaks covering the mountains and the high plateau. *Pedroche* is synonymous with *pedregal*, the designation of the whole region, and the Latin name *petra*, transcribed into Arabic as *biṭra*, has, with the suffix *che*, given Biṭrawsh. In common with al-Idrīsī, the Muslim geographers praised the quality of the acorns which, according to al-Rāzī, were sweeter than *quantas ha en Espanya*, and added that the local inhabitants cultivated these trees with great care and that in years of poor harvest and famine they lived on the crop, for with this species the acorns can be eaten by human beings, not merely by animals. It was a high, mountainous region, inhabited mostly by Berbers, and the principal town Ghāfiḳ was so called from the name of the Maghribī tribe which had settled there. The castle, strongly fortified and well situated on the road leading from Dār al-baḳār to Toledo via Pedroche, was remarkable for the vigour with which its occupants repulsed the Castilians during the raids they made in the time of Alfonso VII and Alfonso VIII. The old fortress of Ghāfiḳ, towering above a little peninsula like an island, was put to new use in the 15th century and transformed into a barbican, on which was built the castle of Belalcázar; its identification with Ghāfiḳ has been finally established and there are no longer any grounds for uncertainty.

The Kūra of al-Balāliṭa, the plural of ballūṭ, included among its castles, in addition to Ghāfiḳ, Pedroche —Biṭrawsh [*q.v.*]—Sadfura on the Djabal ʿAfūr, Ḥiṣn Hārūn, identified with the castle of Aznaron and the castle of Cuzna, alongside the river which bears its name and the port, later called Puerto Calatraveño. Al-Ghāfiḳī and al-Ballūṭī are the ethnic names of important personages of the district, among them the great *ḳāḍī* of Cordova, Abu ʾl-Ḥakam Mundhir b. Saʿīd, famous for his rectitude and learning in the time of ʿAbd al-Raḥmān III. Abū Ḥafṣ ʿUmar al-Ballūṭī, leader of the émigrés from the outskirts of Cordova who had occupied Alexandria, seized Crete and founded a dynasty which remained there until 309/921.

During the Almoravid period, in 528/1134, the Castilians crossed through the region of the Pedroches and reached the castle of al-Baḳār, where they were routed by Tāshfīn b. ʿAlī and compelled to retreat along the valley of the Guadiato. In the summer of 549/1155 Alfonso VII took Pedroche and Santa Euphemia, but Pedroche was immediately recaptured by the new Almohad governor of Cordova, ʿIbn Īgīt who defeated the count left in command of Pedroche by Alfonso VII, took him prisoner when capturing the castle by storm, and sent him to Marrākush. For a considerable time Ghāfiḳ-Belalcázar remained in the hands of the Almohads for, although we do not know the date when the Faḥṣ al-ballūṭ passed completely into the power of Castile, it is certain that in 580/1184 the caliph Yūsuf b. ʿAbd al-Muʾmin, on his arrival at Seville to start the Santarem campaign, sent his general Muḥammad b. Wānūdīn into exile at Ghāfiḳ, his conduct in action against the Castilians and Portuguese having been somewhat discreditable.

The counts of Sotomayor, when building their castle on the site of the abandoned fortress of Ghāfiḳ, erected a grand tower of extremely picturesque appearance which, standing out prominently in the restricted setting that it commanded, merited the name of Belalcázar; the old name of Ghāfiḳ fell into oblivion, although later it was felt desirable to give it a more Arabic etymology with the tortuous invention of Belalcázar.

FĀʿIL [see ʿilla].

FĀʿIL [see naḥw].

FAIR [see panāyir, sūḳ].

FAITH [see īmān].

FAKHDH, FAKHIDH [see ʿashīra, ḳabīla].

FAKHKH, a locality near Mecca which is now called al-Shuhadaʾ "the Martyrs". A very ancient tradition relates that certain Companions of the Prophet, in particular ʿAbd Allāh the son of the caliph ʿUmar, were buried there. It is in honour of this famous person, regarded as the local saint, that on 14 Ṣafar a ceremony is held there every year, and not because about a hundred ʿAlids and their partisans met their deaths at Fakhkh in a battle (*yawm Fakhkh*) on 8 Dhu ʾl-Ḥidjdja 169/11 June 786.

The latter were, however, the "Martyrs". The battle, which in the time of Snouck Hurgronje was known only to cultivated Meccans but of which the Shīʿa have preserved vivid recollections, was the dramatic conclusion of an ʿAlid revolt which began in Medina and which, though lasting less than forty days, was regarded, because of the final massacre, as the most serious of the revolts after that which culminated in Karbalāʾ. This revolt sprang from more or less long-standing causes in addition to its immediate cause. Al-Yaʿḳūbī tells us that, after the elevation of al-Hādī to the caliphate, there was a renewal of hostilities against the Shīʿa, some of whom went to Medina to complain to the ʿAlids in the town of the persecutions which had been suffered. But so short a time elapsed between that event and the revolt that, even if the information given by this author can be accepted, it is necessary to go further back to find the real causes of the occurrence. The revolt had connexions with that of Muḥammad b. ʿAbd Allāh al-Nafs al-Zakiyya [*q.v.*] and his brother Ibrāhīm [*q.v.*] in 145/762-3, for the ʿAlids who revolted in 169 were closely related to the victims of 145; on the other hand, if we examine word by word the speech which the leader made to his followers, we see that it must have been the culmination of one of those movements of a social character to which the Ṭālibids so often gave their support. For the leader of the movement, the cause and the course of the insurrection, see AL-ḤUSAYN B. ʿALĪ ṢĀḤIB FAKHKH; here we mention only that after resisting for eleven days at Medina Ḥusayn set out with his followers for Mecca, and the clash with the ʿAbbāsid forces took place on the day of the *tarwiya* (8 Dhu 'l-Ḥidjdja 169/11 June 786) at the foot of the mountain of al-Burūd at Fakhkh. Al-Ḥusayn, the *Ṣāḥib Fakhkh* as he is often called, having refused to accept a safe-conduct, fell in battle along with other ʿAlids. For three days their bodies were left unburied, an incident which provided the poets with a moving theme for their elegies. The ʿAlid Idrīs b. ʿAbd Allāh b. al-Ḥasan succeeded in escaping; he took refuge in Egypt, and from there went to the far Maghrib where he founded the state and dynasty of the Idrīsids [*q.v.*].

(L. VECCIA VAGLIERI)

FAKHKHĀR, earthenware vase, pottery, ceramics. Pottery is one of the glories of Islamic art and is produced by practically every country in the Islamic world. Ceramic wares have a place in architecture as inlays or as faïence tiles, and they hold an important place in the field of the applied arts. In order to make a necessarily brief study of this vast subject clear, it would seem appropriate to give some idea of the different techniques employed, before proceeding to the naming of the principal centres of manufacture and the periods of their activity.

The basic material for ceramic wares is baked clay, which is termed silicious or plastic according to the element predominant in its composition. The clay may be left bare, thus retaining a brick-like appearance, or be covered with slip (a much paler and thinner clay), which conceals the true colour. Various kinds of decoration may be applied to a vessel while the clay is still soft. A vase thrown on the wheel may be incised with grooves while still being turned on the wheel, ornamented with reliefs luted on with slip (a thin watery clay), impressed with motives laid side by side in a mould, or stamped with independent dies. A pot dried and fired in the kiln may be glazed by covering it with a glaze fluxed with lead, which gives it a glossy appearance and renders it impermeable; this glaze may be coloured or uncoloured. There are various means available to the potter for enriching his work with polychrome effects. A great number of different coloured glazes may be obtained by combining metallic oxides with a colourless fusible material. Apart from tin oxide which gives white, the palette includes cobalt oxide for blue, copper oxide for green and turquoise blue, and manganese oxide for brown and aubergine purple. The decoration may be painted with a brush on a slip-dressed body and appear under the glaze; this is the method used with silicious wares; or the decoration may be painted on a glaze made opaque with tin oxide; this is the method used with tin-glazed wares (*i.e.*, Majolica and Delft).

Western Asia was the birth place of Islamic pottery. Its ultimate ancestors were undoubtedly the glazed bricks of the Achaemenid palaces, and its more recent forerunners the Parthian and Sāsānid wares. Islamic pottery, however, is not known to us until the beginning of the ʿAbbāsid period (3rd/9th century). It is to the excavations at Sāmarrā, the residence of the caliphs from 223 to 269/838-83, that we owe our earliest and in any way precise knowledge of the wares. They seem already very varied and skilfully executed, so that we are led to believe that there had been earlier developments of which we know nothing. In addition to pottery with or without glaze, incised or stamped, there are three main types of wares represented at Sāmarrā; there is a white earthenware decorated with spots or pseudo-calligraphic motives in cobalt blue, an earthenware decorated in polychrome, obviously inspired by Chinese stonewares of the T'ang period (7th-8th centuries); and finally there is an earthenware known as lustre, characterized by its metallic lights. The decoration of this last type is achieved by means of an ochre mixed with powdered silver, or copper, which separates out in the firing and is deposited as a thin film on the surface of the tin glaze; the colour varies from pale gold to ruby red and the iridescence of these tones varies according to the fall of light. Other analogous and doubtless contemporary pieces have been found at Susa. At Baghdād, or at other centres in the ʿAbbāsid empire, this ware, which in appearance rivalled the vessels in precious metals but was never hit by the same interdiction on the part of strict Muslims, seems to have been an item in the lively export trade across the Islamic world. Thus is it that a number of fragments have been dug up at Madīnat al-Zahrāʾ, the royal city of the caliph of Cordova, thus also that the finest collection to come down to us (nearly 150 tiles sent from

Baghdād or manufactured there) appear in the surround of the *miḥrāb* in the Great Mosque at Ḳayrawān. In Egypt the workshops of Fusṭāṭ were initiated into the technique of lustre decoration, where we shall meet this ware again.

Persia played a remarkable part in the development of ceramic wares at a very early date. She seems to have profited from foreign as well as from pre-Islamic traditions, as is evidenced by the ware called *gabrī*, after the name of "Guebres", adherents of Zoroastrianism, which Islam had not completely stamped out. The ornamentation of this ware, produced by means of larger or smaller scratches in the slip that covers the body under the transparent partly coloured glaze, consists of schematic representations, recalling the ancient culture of Persia, notably of fire altars, as well as figures of men and beasts, birds, lions and dragons depicted in a curiously stylized manner.

Of all the centres of ceramic production in Īrān, the now ruined city of Rayy, in the vicinity of Tehran, seems the most ancient. It was extremely active until the 7th/13th century and, under the name of Rhages, is the best known to collectors. The wares show great diversity of both form and technique. Lustre wares, often of a greenish gold tone, are frequently represented. Apart from tiles, for facing wall surfaces, cut in eight-pointed stars and in crosses with arms of equal length, Rayy also produced bottles and vases in the form of animals, or ornamented with wild beasts modelled in relief. The predilection displayed by the potters for the representation of living beings, and even their interpretation in the round, is a pronounced characteristic of Persian taste. Inside and on the rims of plates, on the swelling walls of bottles, as well as on wall tiles, mounted soldiers and hunters ride along, rulers and stumpy, doll-faced musicians sit, all bringing to mind the figures depicted in the miniatures of the period. These little figures, standing out against a white or pale blue ground, are dressed in delicately coloured cloths heightened with gold. Inscriptions in golden letters tell of the Iranian legends illustrated in this type of decoration.

Rayy was sacked by Čingiz Khān's Mongols in 624/1227; yet although appallingly impoverished, her potters continued production, using the techniques with which they were familiar. Attributed to them, and regarded as of this period, are a number of pieces decorated in black silhouette against a green ground.

The arrival of the Mongols appears to have some connexion with the establishment of stores that were found in the ruins of Gurgān. The pieces, which were found intact, had been packed in large jars, or had been buried at the time of the invasion. The wares are dateable to the end of the 5th-6th/11th-12th century; some of them might be earlier. They include copper lustre wares with a cream or turquoise ground; there are some, too, that may have been imported from Sava.

Under Mongol domination, the ceramic industry remained vigorous, especially in the Persian area, at Āmul and even more so at Sava and Kashān, as well as in the north-east at Samarḳand. Wares with geometric, floral and highly stylized animal decoration, cut through a slip dressing and tinged with green and manganese purple are believed to have been made at Āmul in the 5th-7th/11th-13th centuries.

In the Mongol period we find new centres of production, such as that at Sulṭānābād, springing up. Chinese influence asserts itself and is favoured by the new rulers of Īrān, who brought in Chinese potters, just as they had introduced miniature painters into the occupied territory. Chinese fashions were to persist into the Ṣafawid period, which followed that of the Mongols. The fabulous beasts of the Far East enliven the wares attributed to Kirmān in the time of Shāh ʿAbbās 995-1037/1587-1628.

The excavations carried out by the Americans before and during the second World War have brought to light the existence of ceramic activity in Nīshāpūr in Transoxiana, which must have achieved its apogee in the 2nd-5th/8th-11th centuries under the Sāmānids. The wares produced seem to be the earliest ones covered with a very thin dull glaze stained lemon yellow, green or brick red; they display a disorderly grouping of geometric motives, pseudo-calligraphic elements, florets, animals and figures, perhaps derived from ancient Persia, enclosed by black lines.

In the wares of Dāghistān to the south-west of the Caspian, and in the dishes, somewhat arbitrarily attributed to the small town of Ḳubāča, we find not only late survivals of Chinese influence, but also characteristics that foreshadow the Turkish pottery of Asia Minor. The painted decoration under the glaze, which is colourless or stained green or blue and is often crackled, consists of stylized flowers, animals, usually in silhouette, or turbaned personages against a floral ground.

Apart from pieces of such forms as vases and dishes, Persia produced an abundance of ceramics for architectural purposes, which make a glittering and colourful addition of great charm to the elegantly proportioned buildings. Combinations of brick and glazed tile, and ceramic insets, formed by setting mosaics in monochrome surfaces, make up geometric, calligraphic and floral decorations that have a place both on the inside and on the outside of architectural structures. On the outside these ceramics encase domes, tall minarets and porches, the colours most frequently occurring being dark and light blue; on the inside one is struck by the faïence *miḥrāb*s, especially those made at Kāshān, with their flat central panels flanked by pilasters and crowned with a Persian arch with straight members.

The settlement of the Saldjūḳ Turks in Asia Minor at first resulted in a considerable spread of Persian art. Ḳonya, which became the capital of the Turkish kingdom of Rūm, and where the sultans established many foundations, had an influx of craftsmen, particularly of potters, from Khurāsān as the consequence of the Mongol invasion of their country. Dating from the 6th/12th and 7th/13th centuries are some fine wall facings for interiors made from bricks glazed on one side, or of tile mosaics, besides polychrome tiles.

The collapse of the sultanate of Ḳonya at the beginning of the 8th/14th century brought the ceramic production of Anatolia to a standstill. But it was to have brilliant revival, thanks to the Ottoman Turks, who in 726/1326 made Bursa their capital. They endowed the city with fine buildings of which ceramic ornament is the most prominent feature, and of which the mosque and the *turba* are the most justly celebrated. Nevertheless Bursa was not the real centre of the industry; this was at Iznik, a town not far from the capital. It was to remain a flourishing centre for two centuries (from the end of the 8th/14th to the end of the 10th/16th century), in the course of which different stages in style and techni-

que are distinguishable. At the beginning of the 10th/16th century Persian influence was still very marked, but at the end of this century, which saw the polychrome wares of Iznik reach their apogee, the potters freed themselves from Iranian tradition and the wares began to acquire specifically Turkish characteristics. The decoration is painted on slip, and to the colours already in use (cobalt blue, turquoise and green from copper), are added a black to outline the coloured areas, and a splendid tomato red in low relief. The composition of the panels, made up from rectangular tiles, is almost entirely based on floral motives. Four flowers traditionally appearing on them are the rose, jasmine, poppy and tulip.

During the 11th/17th century Iznik ceased production and was replaced by Kütahya, which copied the techniques and styles of Iznik but without equalling them in mastery. The posthumous glory of Iznik reached even Istanbul, where the kilns known as Tekfūr came into operation at the beginning of the 12th/18th century.

Attributed to Damascus are some very fine dishes, related to the Anatolian wares, but distinguished from them as much by the colours (lacking tomato red and using manganese purple and a green from chromium oxide), as by the drawing of the designs, which are less naturalistic, less sensitive and which give greater weight to the background.

The skills of the kiln and the crucible are very ancient in Egypt and it is known that making of glass was first practised there. In the lands of the Pharaohs the people also made pottery and understood the use of glaze. If lustre ware was not first invented there, as some people believe, at least it was made there at a very early date in imitation of that of ʿIrāḳ. There are some pieces of lustre very similar to those from Sāmarrā, dated to the 3rd/9th century, that is the period of the Ṭūlūnids, or even earlier. The decoration, drawn very boldly, introduces somewhat uncouth human figures and pseudo-calligraphic elements. These wares underwent a remarkable development in the course of the 5th-6th/11th-12th centuries under the Fāṭimids. The diversity of the pieces, dishes, lamps and figurines, attests, alongside a very free attitude to the orthodox prescriptions concerning images, a striving after that elegance which imbues all the arts of the Fāṭimid era. The surfaces, covered with a fine gold lustre, are enriched by the details within the field of the lustre itself being delicately traced out with a fine point. The repertory of ornament includes four-footed beasts, birds or fish, and also the human figure, the men wearing turbans and the women with their hair hanging down. The crucifix and representations of Christ with a halo lead one to believe in the existence of Coptic craftsmen.

The same period saw the flowering of a ware with carved decoration under a monochrome glaze, especially a greyish green Chinese celadon colour. The quantity of sherds thrown on the refuse heaps by the potters reveals the extent of activity at the kilns at Fusṭāṭ. In the 7th/13th century a new technique appears of painting decoration on the body under the glaze. The glaze, often crackled, is thick and glossy; the decoration, neatly painted with a brush, frequently consists of animals in silhouette in a good tone of black.

In order to complete this short survey of the ceramic art of Egypt, it is fitting to say something of the pottery with *sgraffiato* decoration under a yellowish or green lead glaze. This was primarily a ware for domestic use, bearing inscriptions and blazons of dignitaries at the Mamlūk court for whom it was made. Syria and Palestine produced the same type of ware during the same period.

North Africa, and particularly eastern Barbary, at least until the 6th/12th century, appears to have been an artistic off-shoot of the Near East and Egypt. We have seen that Ḳayrawān got lustre tiles in the 3rd/9th century from Baghdād; ceramic craftsmen recruited locally may have completed the collection. In the 5th/11th century palace in the Ḳalʿa of the Banū Ḥammād (see ḤAMMĀDIDS), a pavement has been found made from lustre tiles, in the forms of stars and crosses, which conform to Persian type, but were very probably of local manufacture. Yet the very large amount of pottery of the Ḥammādids of the Ḳalʿa and that of the Zīrids of Ḳayrawān present characteristics that are highly individual. Apart from architectural elements such as inlays for wall surfaces, *claustra*, and stalactite pendentive elements, and in addition to green glazed wares with incised or stamped decoration, excavations have revealed lead glazed polychromes of wares with painting on slip. The decorations are very diverse and summary in treatment with silhouettes and fillers; there are such motives as triangles, ellipses, strap-work, trellis patterns used as fillers, and figures of men and beasts, which are clearly distinguishable from the more easterly examples. The palette comprises only manganese brown, copper green and, more rarely, a yellow from chromium oxide. Cobalt blue appears rather later, in the 6th/12th century, when it occurs in the polychromes produced at Bougie (Bidjāya), to which city the craftsmen of Ḳayrawān and the Ḳalʿa had to retire as the result of the nomadic Arab invasions. Bougie, a maritime city, benefited in other respects from imports from Andalusia.

Moorish Spain was, indeed, a producer of fine ceramic wares. The excavations at Madīnat al-Zahrāʾ, the caliphate city near Cordova, have yielded a great quantity of pottery with decoration consisting of manganese brown painted lines and copper green for the coloured surfaces. These wares, dating like the city from the 4th/10th century, have parallels among the eastern Barbary examples of an appreciably later date. The Islamic ceramics of Sicily (6th/12th century) suggest further parallels of a similar kind. This appearance of family grouping and the relative homogeneity of the wares of Western Islam raises a problem that warrants some attention.

The excavations of Madīnat al-Zahrāʾ show that Spain was aware in the 4th/10th century of the lustre wares imported from the east; yet the Iberian peninsula had its own centres of production also. Malaga from the 7th/13th to 9th/15th century was just such a centre, at which were produced gold lustre dishes and large jars of the type of which the one known as the "Alhambra Jar" is the most famous.

The noble grace of form of these great pottery jars is echoed in the large vases, with impressed decoration, that seem to have the same origin and may perhaps be attributed to the same period. The paste is left unglazed, or is covered with a green enamel-glaze; the decoration, arranged in registers one above another, comprises blind arcading, calligraphic forms, interlacing elements and sometimes animal forms. The same technique and a similar décor is found in the linings for wells and tanks such as those preserved in Andalusia and also in the Maghrib. A fine collection of these stoutly-made ceramic shafts, by which to draw water, has been

found at Sīdī Bū ʿUthmān to the north of Marrākush and perhaps dating from the 6th/12th century.

At the beginning of the 6th/12th century Moorish Spain and the Maghrib gave ceramics an important rôle in architectural ornament. Glazed earthenware tiles, which we first encountered in Persia and then in eastern Barbary, are associated with the adornment of minarets and make up panels in rooms. The facility of the craftsmen, specialists in *zallīdj* [*q.v.*], in cutting out shapes in monochrome tiles and assembling them to make geometric, calligraphic and floral decorations, is astonishing. They are equally skilled in a kind of ceramic *champlevé*, which consists of chiselling out the glaze with a graving tool, thus leaving the elements of decoration in reserve. Finally there is recourse to a *cloisonné* treatment, called in Spanish *cuerda seca*, which, using similar interlacing geometrical motives, gives from a distance an impression as of inlay work. It is a very ancient technique, not without analogy with the glazed bricks of the Achaemenid palace at Susa. Each surface is enclosed by a black line, which has an important place in the composition and which serves to prevent contiguous colours spilling over into each other. Neither the potters of Sāmarrā nor those of Madīnat al-Zahrāʾ passed over this technique; and it was practised in North Africa in the 5th-6th/11th-12th centuries. The *cuerda seca* and the technique termed *cuenca*, in which the black line is replaced by a thin line incised in the paste to separate the colours, was to become a special skill of the Spanish centres of production, notably of Seville. At the beginning of the 11th/17th century (1019/1610) the Spanish Moors took the technique with them when they were expelled to Tunisia.

Just as the *azulejos* method of wall revetment prolonged the tradition of ceramic inlay, so the *mudejar* period saw the manufactories of Manises take over the making of lustre ware from Malaga. In the same way the green and brown decorated wares of Paterna, in the region of Valencia, seem, in the 8th/14th and 9th/15th centuries, a late legacy of the Andalusian Caliphate.

Ceramic art was still to survive, not without renown, in North Africa. Morocco still has her cutters and assemblers of tile mosaics (*zallīdj*), and the potters of Fez knew, until quite recent times, how to produce vessels with blue or polychrome decoration as well as dishes of an original kind.

Turkish Algeria used to have a remarkable quantity of earthernware tiles, but they were almost entirely imports from Europe.

Tunisia, and especially Tunis, has not wholly forgotten the mediaeval ceramic arts. It is indeed likely that tin-glazed wares have never ceased to be made while there has been a use for them. The last few centuries have seen the production of vases which preserve quite well the older colours, and panels decorated with blind arcading, vases and covers, in which local traditions merge with contributions from the Levant.

FAKHR [see MUFĀKHARA]

FAKHR AL-DAWLA, Abu 'l-Ḥasan ʿAlī b. al-Ḥasan, born in about 341/952, third son of the Buwayhid Rukn al-Dawla [*q.v.*] and of a daughter of the Daylamī chief al-Ḥasan b. Fayzurān, a cousin of Mākān b. Kākī [*q.v.*], received his *laḳab* in 364/975 and was summoned in 365/976, with his brothers ʿAḍud al-Dawla [*q.v.*], the eldest, and Muʾayyid al-Dawla, to his father's sick-bed, in order to agree what share each would receive of their father's possessions, under the suzerainty of ʿAḍud al-Dawla; as his portion, Fakhr al-Dawla received the provinces of Hamadhān and Dīnawar, that is to say the Kurdish Djabal, partly under the autonomous domination of the Kurd Ḥasanwayh, situated around the Iran-Baghdād route. When Rukn al-Dawla died (366/977), Fakhr al-Dawla was not content with these territories and, with the object of depriving Muʾayyid al-Dawla, who remained faithful to ʿAḍud al-Dawla, of his share, consisting of the provinces of Rayy and Iṣfahān, he negotiated with ʿIzz al-Dawla Bakhtiyār [*q.v.*], the opponent of ʿAḍud al-Dawla, with Ḥasanwayh, and finally and most important with Ḳābūs b. Washmagīr [*q.v.*], of the Ziyārid dynasty of Djurdjān, the original rivals of the Buwayhids. After first defeating Bakhtiyār in 366, and then the Ḥamdānids of Moṣul, and after Ḥasanwayh's death, ʿAḍud al-Dawla in 369/979 drove out Fakhr al-Dawla, who finally took refuge with Ḳābūs in Khurāsān, under the protection of the Sāmānid governor Ḥusām al-Dawla Tāsh, while Muʾayyid was invested with his territories. From then onwards, Fakhr al-Dawla's attempts to regain his principality are merely one aspect of the long struggle between the Sāmānids and the Buwayhids; in 371/981 the allied army was defeated by Muʾayyid al-Dawla, and the following campaigns, although more successful, achieved no better results [see ʿAḌUD AL-DAWLA].

On the death of ʿAḍud al-Dawla (372/982), Muʾayyid al-Dawla tried unsuccessfully to initiate a reconciliation with his brother, and died in his turn in 373. His vizier Ibn ʿAbbād [*q.v.*] seems to have calculated that no adequate opposition would be put up against Fak͟hr al-Dawla, now the eldest member of the family, or that the sons of ʿAḍud al-Dawla, the masters of ʿIrāḳ and Fārs, already had viziers of their own and would not retain him (Ibn ʿAbbād) in his present position; he appealed boldly to Fak͟hr al-Dawla, the very man whom hitherto he had always opposed and who, travelling to Rayy with all haste, assumed power without difficulty, while the son of Muʾayyid al-Dawla, the governor of Iṣfahān, submitted to him; naturally enough he retained the all-powerful Ibn ʿAbbād as vizier. Despite the difference in temperament of these princes, this fact ensured a certain continuity in policy, and in particular Fak͟hr al-Dawla, despite the debt he owed to Ḳābūs, retained D̲j̲urd̲j̲ān which Muʾayyid al-Dawla had annexed; in K͟hurāsān, the struggles between Tās͟h, whom he supported and welcomed, and Ibn Simd̲j̲ūr, his successor, allowed him on the other hand to combine gratitude with the continuation of an anti-Sāmānid course of action. However, Muʾayyid al-Dawla had become a vassal, and Fak͟hr al-Dawla, the head of the family, was an independent prince. Within his dominions and on the frontiers he seems to have had a more aggressive policy than his brother, to the cost of the local lords, annexing Kurdish or Daylamī fortresses such as S͟hamīrān (Yāḳūt, iii, 150, according to a letter of Ibn ʿAbbād), but also provoking revolts (Ḥasanwayhid Kurds from the district of Ḳumm in 373/983, Ṭabaristān and Ḳazwīn in 377/987, the prince's maternal cousin Naṣr b. al-Ḥasan b. Fayzurān at Dāmg͟hān in 378). Whether from greed or as a matter of policy, with the object of confiscating his possessions he arrested the commander of Muʾayyid al-Dawla's army, ʿAlī b. Kāma, who died as a result. With Ṣamṣām al-Dawla, his nephew in Bag͟hdād, he maintained good relations but, when this prince had been driven out by another son of ʿAḍud al-Dawla, Bahāʾ al-Dawla, with the help of Badr b. Ḥasanwayh Fak͟hr al-Dawla tried to attack the victor through K͟hūzistān; the inadequacy of the rewards he offered to the troops and unexpected floods disorganized his army, whereupon he withdrew (379/989); and in 384/994 he allied himself with Bahāʾ al-Dawla against Ṣamṣām al-Dawla, the latter in the meanwhile having become master of Fārs and now appearing to him to be the more dangerous. Towards the vizier Ibn ʿAbbād, who had shown some irresolution during the K͟huzistān campaign, Fak͟hr al-Dawla had become somewhat cold, although there was no positive action against him; but when death finally removed him (385) he confiscated his possessions and, as ʿAḍud al-Dawla had done, divided the vizierate between two candidates, selling it to the highest bidder.

From our sources, the personality of Fak͟hr al-Dawla appears less clearly than that of other members of his family. Naturally he maintained his poets, certain of whose works are named in the *Yatīma* of al-T̲h̲aʿālibī, but intellectually he did not have the reputation of certain other Buwayhids or of his own vizier. In his administration he was considered avaricious, and at his death left behind a considerable fortune, augmented by his confiscations; his refusal to increase the pay and *iḳṭāʿ*s of his forces may have been based on sound reasons, but in fact this decision was not consistent with his over-ruling ambition. In general, his internal administration must have resembled his predecessor's, since it was directed by the same man, Ibn ʿAbbād; but we do not possess any documents from his period comparable with those which we have for the preceding reign. We know that the methods of adjudication of fiscal districts, in use at Rayy, helped to make Ibn ʿAbbād unpopular when he tried to introduce them in K͟huzistān; there can be no doubt as to the general vigilance and regularity of the administration under this vizier, and certain minor innovations made by him are recorded in the *Taʾrīkh-i Ḳumm*, written in the days of Fak͟hr al-Dawla, and later the *Siyāsat-nāma* of Niẓām al-Mulk, chap. 41. The geographer al-Muḳaddasī, who also wrote during this reign (see especially 399-400), gives an impression of the prosperity of the country; apart from a mosque, Rayy is also indebted to him for a new citadel (perhaps Tabarak) (Yāḳūt, iii, 855).

Fak͟hr al-Dawla died in S͟haʿbān 387/August 997 and, it is said, the Treasury key being in the possession of his son who was absent, there were no funds available to provide for a decent burial. Some weeks after his death Ḳābūs returned to D̲j̲urd̲j̲ān.

Spuler and G. Wiet. (CL. CAHEN)

FAK͟HR AL-DĪN, name of two Lebanese amīrs of the Druze house of Maʿn [*q.v.*]. Fak͟hr al-Dīn I, amīr of the S͟hūf (north-east of Sidon) at the time of the Ottoman conquest of Syria, was among the chieftains who offered submission to the conquering Sultan Selīm I in Damascus in 922/1516. The Sultan, impressed by his eloquence, is said to have sent him back with the title *amīr al-barr* (lord of the land), recognizing him as overlord of the chieftains of the Druze Mountain (the G͟harb, the D̲j̲urd, and the S͟hūf). Fak͟hr al-Dīn I was assassinated in c. 951/1544 under obscure circumstances on the orders of the Pas͟ha of Damascus, and was succeeded by his son Ḳorḳmaz.

Fak͟hr al-Dīn II, son and successor of Ḳorḳmaz, was born in c. 980/1572, and was only a boy when his father died in 993/1585. In the previous year a convoy bearing the annual tribute from Egypt was ambushed and robbed at the bay of ʿAkkār, to the north of Tripoli; and the enemies of the Maʿns in Lebanon, jealous of their rising power, accused Ḳorḳmaz of responsibility for the misdeed before the Ottomans. Consequently, Ottoman troops attacked and ravaged the S͟hūf, and Ḳorḳmaz died in flight. His fall was followed by civil war in the Druze Mountain between the Ḳaysī faction who supported the Maʿns, and the opposing Yamanīs led by the house of ʿAlam al-Dīn. By 1000/1591 the Ḳaysīs had clearly gained the upper hand, and Fak͟hr al-Dīn II could effectively take over his father's position.

The first aim of the young amīr was vengeance against Yūsuf Sayfā, the powerful Kurdish chieftain of the Tripoli region in northern Lebanon who had been the chief instigator of the Ottoman attack on the S͟hūf in 1585. Shortly after Fak͟hr al-Dīn's

accession, in 1593, Yūsuf Sayfā had considerably expanded his domain by absorbing the Maronite districts of Bsharrī, Batrūn, Djubayl and Kisrawān, and extending his hold southwards to include Beirut. Master of the whole of northern Lebanon and of ʿAkkār, Yūsuf Sayfā became the most powerful figure of the time in Syria, and his territory extended northwards to Lattakia and Ḥamā. However, in his struggle against the Sayfā, Fakhr al-Dīn had for allies the Maronites who, smarting under Sayfā oppression, looked towards the young Druze amīr as a possible deliverer. Fakhr al-Dīn encouraged the Maronites in this attitude, surrounded himself with Maronite advisers, and was soon dreaming of uniting the Druzes and the Maronites of Lebanon under his own dynasty.

Fakhr al-Dīn's first step was to make friends with Murād Pasha of Damascus, paying him a formal visit and obtaining from him possession of the port of Sidon, which he made his capital. While in Damascus Fakhr al-Dīn also started an intrigue against his enemies ʿAlī Ḥarfūsh of Baalbek and Djabal ʿĀmil and Manṣūr Furaykh of the Biḳāʿ, both potential allies of Yūsuf Sayfā. As a result both chieftains were seized and executed by Murād in the following year. Fakhr al-Dīn thereupon invaded and seized the Biḳāʿ, making peace with Mūsā Ḥarfūsh, ʿAlī's successor, who became the Druze amīr's virtual vassal in Baalbek and Djabal ʿĀmil.

Beirut and the coastal plain as far north as Nahr al-Kalb had traditionally been under the control of the Druze Amīrs, and in 1007/1598 Fakhr al-Dīn secured from Damascus the permission to occupy them. He then proceeded to expel Yūsuf Ṣayfā from the territory and to chase him beyond the Nahr al-Kalb. Next he turned his attention to the south, and with the additional wealth accruing from the trade of Sidon and Beirut he purchased the tenure of the Sandjaḳ of Ṣafad which bordered on the Shūf. The fortresses of Arnūn (Beaufort) and Ṣubayba, which belonged to the sandjaḳ, were occupied and restored, securing the Druze Mountain against Beduin attack from the south. Fakhr al-Dīn then crossed Nahr al-Kalb again in 1014/1605, defeated Yūsuf Ṣayfā at Djūniya, and permanently occupied Kisrawān.

Meanwhile, in northern Syria, a Kurdish adventurer called ʿAlī Djānbūlād had made himself master of the Sandjaks of Aleppo, Aʿzāz, and Killīs. His southern boundaries touched the northern boundaries of Yūsuf Ṣayfā; and in 1015/1606 Djānbūlād marched into Sayfā's territory, defeated him near Ḥamā, and advanced towards Tripoli. Anxious to stake a claim to Sayfā's southern territories, Fakhr al-Dīn quickly allied himself with Djānbūlād, and hurried forces to Baalbek to prevent reinforcements sent by Kurd Ḥamza, the commander of the Janissaries in Damascus, from reaching Tripoli. Unable to resist Djānbūlād, Yūsuf Sayfā fled by sea to Palestine, then joined Kurd Ḥamza in Damascus. Djānbūlād meanwhile entered and sacked Tripoli, then advanced with Fakhr al-Dīn against Damascus.

Fakhr al-Dīn's earlier friendship with Murād Pasha, now Grand Vizier, saved him from the fate of Djānbūlād. Defeated in battle by the resolute Naṣūḥ Pāsha of Aleppo, Djānbūlād was executed in 1016/1607. But in that same year Murād Pasha arrived in Aleppo to settle the affairs of Syria in person, and Fakhr al-Dīn managed to effect a quick return to Ottoman grace by sending a delegation to greet the Grand Vizier with a large present of gold. Murād Pasha, accordingly, confirmed Fakhr al-Dīn in the possession of Beirut, Sidon, and Kisrawān, and as a further mark of favour exempted the Shūf from the *ḳishlaḳ*—the forced quartering of Ottoman troops.

Fakhr al-Dīn, however, realized that Murād Pasha would not remain Grand Vizier for ever, and that some other form of support was needed in case of another clash with the Porte. The Tuscans, who had dreams of establishing a Medici kingdom in the Levant, had as early as 1012/1603 approached Fakhr al-Dīn and tried to arouse his interest in the plan. A second approach after 1016/1607 found Fakhr al-Dīn willing to listen; and in 1017/1608 a treaty was concluded whereby, in return for his help in an eventual Tuscan attempt to conquer Damascus and Jerusalem, Fakhr al-Dīn was to receive Tuscan military aid, and the Medici were to use their influence with the Pope so that the Maronite patriarch would support Fakhr al-Dīn against the Sayfā. Indeed, Pope Paul V in 1610 wrote to the Maronite patriarch commending him and his flock to the protection of Fakhr al-Dīn; and in the following year a Maronite bishop was sent to Italy to represent the Druze amīr at the court of Tuscany and at the Holy See.

Murād Pasha died in 1020/1611 and was succeeded by Fakhr al-Dīn's bitter enemy Naṣūḥ Pasha. Meanwhile, the growing relations between Fakhr al-Dīn and Tuscany had greatly increased the suspicions of the Porte. Naṣūḥ Pasha's suspicions were particularly aroused when Fakhr al-Dīn began to employ a standing army of mercenaries (the *sukman*—see SEGBĀN) instead of depending on the usual peasant levies, and when he began to show a keen interest in the sandjaḳs of Nāblus and ʿAdjlūn, in Palestine and Transjordan, which controlled the road to Jerusalem. Attempts to appease the Grand Vizier with gifts proved useless. When Fakhr al-Dīn clashed with Aḥmad Ḥāfiẓ Pasha of Damascus over the two sandjaḳs, Naṣūḥ Pasha mobilized a powerful army for the command of Ḥāfiẓ. Expecting defeat, Fakhr al-Dīn handed over affairs to his brother Yūnus with instructions to move the capital to Dayr al-Ḳamar in the Shūf, and himself took ship from Sidon and fled to Tuscany.

The self-imposed exile of Fakhr al-Dīn was a temporary retreat after a temporary reverse. In 1023/1614 Naṣūḥ Pasha died. Ḥāfiẓ Pasha was shortly after recalled from Damascus, and Yūnus Maʿn made peace with his successor on the payment on a large sum of money and a promise to dismantle the fortresses of Arnūn and Ṣubayba. Fakhr al-Dīn could now return to Lebanon, arriving back at Acre in 1027/1618.

In 1024/1615, during Fakhr al-Dīn's absence, Yūsuf Sayfā had sacked Dayr al-Ḳamar. This gave Fakhr al-Dīn an excuse, upon his return, to ally himself with ʿUmar Pasha of Tripoli, who wanted Sayfā to pay arrears of tribute. Fakhr al-Dīn successfully intervened against Sayfā on behalf of the Pasha, and in return received the districts of Djubayl and Batrūn. A formal peace between the two chieftains was arranged in 1028/1619, Fakhr al-Dīn taking Sayfā's daughter in marriage. In the same year Fakhr al-Dīn procured the tenure of the sandjaḳs of Djabala and Lattakia, which had previously belonged to Sayfā. During the next five years fighting between the amīr and his father-in-law continued, Fakhr al-Dīn meanwhile seizing the districts of Bsharrī and ʿAkkār, until Yūsuf Sayfā died in 1033/1624. Three years later Fakhr al-Dīn completed his triumph by obtaining the governorship of Tripoli for his infant son Ḥusayn, a Sayfā on his mother's side.

In the meantime, Fakhr al-Dīn had also obtained the titles to the sandjaks of Nāblus and ʿAdjlūn, and it was left to him to evict the occupants of these sandjaks. As he campaigned in Palestine for the purpose, Muṣṭafā Pasha of Damascus, incited by Kurd Ḥamza, formed a coalition against the amīr and advanced into the Biḳāʿ in 1032/1623. Fakhr al-Dīn rushed back and met him at ʿAndjar, where Muṣṭafā Pasha was defeated in battle and taken prisoner, then honourably released. During the years that followed this victory Fakhr al-Dīn reached the height of his power; and by 1040/1631 his territory had come to extend westwards to Palmyra, and northwards almost to the borders of Anatolia.

Following 1040/1631, however, troubles began to come upon Fakhr al-Dīn thick and fast. While he campaigned in northern Syria Beduin chieftains revolted against him in Palestine and Transjordan; while in the Shūf the Yamanī ʿAlam al-Gīns, in alliance with the sons of Yūsuf Sayfā, were creating unrest. By 1042/1633 civil war broke out in the Druze Mountain, and Fakhr al-Dīn's firm allies the Ḳaysī Tanūkhs [*q.v.*] were massacred to a man by the ʿAlam al-Dīns. Meanwhile the Ottoman Government, under the vigorous Sultan Murād IV, was becoming concerned about Fakhr al-Dīn's activities in northern Syria and the fortresses that were going up near the Anatolian border. Accordingly, the Grand Vizier Khalīl Pasha instructed Küčük Aḥmad Pasha of Damascus in 1042/1633 to proceed against Fakhr al-Dīn with full support from Istanbul. The amīr's troops, commanded by his son ʿAlī, were defeated at Ṣubayba, and ʿAlī himself was killed. Before the resolute Ottoman attack Fakhr al-Dīn's precariously balanced power collapsed within a few weeks. The amīr himself fled to a cave in the cliffs of Djazzīn, where he was discovered and captured by Küčük Aḥmad, then sent in chains to Istanbul. There Fakhr al-Dīn was executed by strangling in 1045/1635, along with his sons. Only his youngest son, Ḥusayn, was spared, to become a prominent Ottoman courtier and an ambassador of the sultan to India. He was a friend of the historian Shāriḥ al-Manārzāde [*q.v.*], and is cited frequently as a source in those parts of Naʿīmā's history that are based on Shāriḥ al-Manārzāde's lost work. In Lebanon Fakhr al-Dīn was succeeded by his nephew Mulḥim, son of Yūnus.

Fakhr al-Dīn was a rapacious tyrant who weighed his subjects down with taxes, but he was enlightened enough to realize that the better the condition of a people the more they can pay. His policy revolved around the collection of enough revenue to satisfy the rapacity of the Ottoman government and buy the friendship of influential Pashas. Accordingly, to raise the revenue of Lebanon, he introduced a number of innovations to the country, particularly improved agricultural methods, and encouraged commerce. His religious tolerance made him highly popular with his Christian subjects, and was an important factor in promoting the political union between the Maronites and Druzes which was to be of great importance in the subsequent history of Lebanon. Fakhr al-Dīn II, indeed, is regarded by the Lebanese today as the father of modern Lebanon, for it was under his rule that the Druze and Maronite districts of the Mountain became united for the first time, with the adjacent coastlands and the Biḳāʿ, under a single authority.

FAKHR AL-DĪN MUBĀRAKSHĀH, originally known by the short name of Fakhrā and posted at Sonārgāwn in East Bengal as a *Silāḥdār* of Bahrām Khān, the local governor in the time of the Dihlī Sultan Muḥammad b. Tughluḳ. After the governor's death Fakhrā revolted, assumed sovereignty at Sonārgāwn and maintained his position by defeating the imperial forces led by the eastern governors of the Tughluḳ Sulṭān. He established the first independent dynasty in Bengal in 739/1338, conquered up to Čātgāwn in the south and made a bid for Lakhnawtī in the north-west, but failed in the latter venture. From 739/1338 to 750/1349 he ruled undisputedly at Sonārgāwn, issued silver currency and assumed the titles of *Yamīn-i Khalīfat-Allāh* and *Nāṣir-i Amīr al-Muʾminīn*. In 751/1350 he was succeeded at Sonārgāwn by his son Ikhtiyār al-Dīn Ghāzī Shāh, who in 753/1352 lost his kingdom to Shams al-Dīn Ilyās Shāh, the ruler of Lakhnawtī; the latter united the whole of Bengal under his authority. Ibn Baṭṭūṭa visited Sonārgāwn when Fakhr al-Dīn was the ruler. He pays tribute to the king's generosity towards *pīrs*, and speaks of the cheapness of commodities within the kingdom.

(A. H. DANI)

FAKHR AL-DĪN AL-RĀZĪ, Abū ʿAbd Allāh Muḥammad b. ʿUmar b. al-Ḥusayn, one of the most celebrated theologians and exegetists of Islam, born in 543/1149 (or perhaps 544) at Rayy. His father, Ḍiyāʾ al-Dīn Abu 'l-Ḳāsim, was a preacher (*khaṭīb*) in his native town, from whose name comes his son's appellation, Ibn al-Khaṭīb. He was also conversant with *kalām* and, among other works, wrote the *Ghāyat al-marām*, in which he showed himself a warm partisan of al-Ashʿarī. Al-Subkī who gives him a brief review (*Ṭabaḳāt al-Shāfiʿiyya*, iv, 285-6) names among the list of his masters, Abu 'l-Ḳāsim al-Anṣārī, pupil of the Imām al-Ḥaramayn, as well as the author of the *Tahdhīb*. In addition to his father, the young Fakhr al-Dīn had al-Madjd al-Djīlī (al-Djabalī?), whom he followed to Marāgha, as his master in philosophy, and al-Kamāl al-Sumnānī for *fiḳh*.

After finishing studies both literary and religious in Rayy, and, according to al-Ḳiftī, after having failed in some researches into alchemy, Fakhr al-Dīn went to Khwārizm where he was engaged in relentless controversies with the Muʿtazilīs who forced him to leave the country. In Transoxania (*Mā warāʾ al-Nahr*), he encountered the same opposition. Return-

ing to Rayy, he entered into relations with Shihāb al-Dīn al-Ghūrī, Sultan of Ghazna, who heaped money and honours upon him. The same thing occurred later with ʿAlāʾ al-Dīn Khwārizmshāh Muḥammad b. Takash, with whom he lived for some time in Khurāsān. This prince showed him the greatest consideration and caused a *madrasa* to be built for him.

In 580/1184, while on his way to Transoxania in order to reach Bukhārā, he stopped for some time at Sarakhs where he was received with honour by the doctor ʿAbd al-Raḥman b. ʿAbd al-Karīm al-Sarakhsī. As a mark of his gratitude he dedicated to him his commentary on the *Kulliyyāt* of Avicenna's *Canon*. As he did not find the protection on which he had counted in Bukhārā, he went on to Herāt, where the Ghūrid Sultan of Ghazna, Ghiyāth al-Dīn, allowed him to open a school for the general public within the royal palace.

After a certain number of journeys which took him to Samarḳand and as far as India (where perhaps he was sent on a mission), he settled down finally in Herāt where he passed the greater part of his life. He was known there by the title of *shaykh al-Islām*. It is said that at this period, at the height of his glory, more than three hundred of his disciples or followers accompanied him when he moved from one place to another.

He was so poor at the outset of his career that his compatriots in Bukhārā were obliged to make a collection in order to help him when he fell ill there; but later on he came into a vast fortune. He married his two sons to the two daughters of an immensely rich doctor from Rayy and, on this man's death, inherited part of his money.

His lively and penetrating intelligence, his prodigious memory (he is said to have learned the *Shāmil* of al-Djuwaynī by heart in his youth), his methodical and clear mind, caused him to become a teacher celebrated throughout the whole region of Central Asia, from all parts of which people came to consult him on the most diverse questions. He was, moreover, an excellent preacher. Of medium height, well-built, heavy-bearded, endowed with a voice both powerful and warm, he inspired and enflamed his listeners to the point of tears and was himself deeply moved by emotion when he was preaching. His preaching converted many Karrāmīs to Sunnism. Despite his strong grounding in philosophy and numerous controversies he was extremely pious (*kāna min ahl al-dīn wa 'l-taṣawwuf*). In many of his treatises, he ended on a religious note, emphasizing the practical applications that could be made of the subject with which he had dealt. Towards the end of his life, he often meditated upon death and, according to Ibn al-Ṣalāḥ, he reproached himself for having devoted himself so much to the abstract sciences (philosophy and *kalām*) which, as he thought, were not capable of leading to certain truth. He was to write in his "Testament": "I have had experience of all the methods of *kalām* and of all the paths of philosophy, but I have not found in them either satisfaction or comfort to equal that which I have found in reading the Ḳurʾān" (Ibn Abī Uṣaybiʿa, ii, 27).

Al-Rāzī's zeal in the defence of Sunnism was always ardent and caused him to make many bitter enemies. Apart from the Muʿtazilīs, he had to strive with the Karrāmīs, adherents of an anthropomorphic type of exegesis [see KARRĀMIYYA], who did not hesitate to use any calumny to discredit their adversary. In 599/1202, while he was staying at Ferūkūh, an actual riot was set off against him by these last, who accused him of corrupting Islam by preferring to its teaching that of Aristotle, Fārābī and Avicenna. He was also reproached for reporting so much of the arguments of the adversaries of Islam, without being capable of refuting them convincingly.

In 606/1209, seriously ill and feeling the approach of death, he dictated his "Testament" to his disciple, Ibrāhīm b. Abī Bakr al-Iṣfahānī, on Sunday, 21 Muḥarram/26 July. The text of this has been preserved by, among others, al-Subkī and Ibn Abī Uṣaybiʿa. It is a true profession of Sunnī faith and a beautiful example of total resignation to the will of God. He commends his children to the Sultan and asks him, as well as his disciples, to bury him according to all the ordinances of Muslim law on the mountain of Mazdakhan near Herāt. Certain biographers of al-Rāzī have held that he was poisoned by the Karrāmīs. In addition, Ibn al-ʿIbrī (Barhebraeus) and Ibn Abī Uṣaybiʿa pass on a rumour according to which he was buried secretly within his house to prevent the crowd from ill-treating his remains. It is unlikely that either of these reports is true: al-Rāzī's tomb is still venerated at Herāt.

Although he was a convinced follower of al-Ashʿarī, al-Rāzī showed himself, at least in his youthful works, to be an opponent of atomism (cf. *K. al-Mabāḥith al-mashriḳiyya*, ii, 11). It is true that later on (cf. *Mafātīḥ al-ghayb*, z, i, 5 and *K. Lawāmiʿ al-bayyināt*, 229; *K. al-Arbaʿīn fī uṣūl al-dīn*) he seems to have changed his views or at any rate to have shown less severity in his criticism of atomism. He dedicated his *K. al-Djawhar al-fard* (Ibn Abī Uṣaybiʿa, ii, 30) to this subject and al-Ṭūsī gives a short analysis of it in his *Sharḥ al-Ishārāt* (ed. of Istanbul, 4). According to Khwānsārī (*Rawḍāt al-djannāt*, 730), he also criticized Ashʿarī's doctrine of the divine attributes.

His profound knowledge of *falsafa* (he had studied al-Fārābī and composed a commentary on the *Ishārāt* and the *ʿUyūn al-akhbār* of Ibn Sīnā), allowed him to make use of considerable portions of it in his dogmatic synthesis (cf., for example, the greater part of the *Mabāḥith*). But in doing this, he preserved his freedom of mind, criticizing Avicenna strongly, where he did not wish to follow his opinions. Kraus, who was clearly much impressed by the originality of al-Rāzī, thinks that "the reconciliation of philosophy with theology is achieved, in his view, at the level of a Platonistic system which in the last resort derives from the interpretation of the Timaeus" (*Les "Controverses" de Fakhr al-Dīn Rāzī*, in *BIÉ*, xix (1937), 190). He points out Rāzī's frequent references to the *K. al-Muʿtabar* of Abu 'l-Barakāt b. Malka al-Baghdādī (cf., for example, *al-Mabāḥith*, ii, 286, 392, 398, 475, etc.; *Lawāmiʿ al-bayyināt*, 71-3, where a long fragment of al-Baghdādī on *al-ism al-aʿẓam* is quoted; cf. also Khwānsārī, 730).

Finally, Goldziher has shown that while al-Rāzī was an opponent of the Muʿtazilīs, he was nevertheless influenced by them in certain respects, for example concerning the problem of the *ʿiṣma* of the Prophet, and the validity of *āḥād* traditions in theological argument (cf. *Aus der Theologie des Fachr al-Dīn al-Rāzī*, in *Isl.*, iii (1912), 213-47).

For the influence of al-Rāzī's ideas on a mind as uncompromising as that of Ibn Taymiyya, see the remarkable thesis of H. Laoust, *Essai sur les doctrines sociales et politiques de Taḳi-d-dīn Aḥmad b. Taimīya*, Cairo 1939 (cf. index s.v. Rāzī). Ibn Taymiyya made use of al-Rāzī's principal works, the *Muḥaṣṣal*, the *Maʿālim uṣūl al-dīn*, and the *K. al-Arbaʿīn*, and "on

many points he was led to make some concessions to his doctrine of the Prophets. Furthermore, his political sociology remains incomprehensible enough unless we see in it, to some degree, a reaction against the conception of sovereignty and the theory of the Caliphate defended by al-Rāzī. In short, it cannot be denied that Fak̲h̲r al-Dīn al-Rāzī led Ibn Taymiyya on towards a deeper personal understanding of philosophy and heresiography" (85). Ibn Taymiyya himself passed a severe enough judgment on al-Rāzī (cf. *Bug̲h̲yat al-murtād*, Cairo 1329, 107-8).

Works. — The works of Fak̲h̲r al-Dīn al-Rāzī are huge in number; they are encyclopaedic but the great majority of them are concerned with *kalām*, philosophy or exegesis. A list of those works whose manuscripts have come down to us is to be found in Brockelmann (S I, 920-4; I², 666-9) who has subdivided them under thirteen headings: I. History; II. *Fiḳh*; III. Ḳur᾿ān; IV. Dogmatics; V. Philosophy; VI. Astrology; VII. Cheiromancy; VIII. Rhetoric; IX. Encyclopaedia; X. Medicine; XI. Physiognomy; XII. Alchemy; XIII. Mineralogy. ʿAlī Sāmī al-Nas̲h̲s̲h̲ār has endeavoured to collect all the information provided by his biographers with regard to his literary output and has classed his works in the following manner: Ḳur᾿ān (exegesis) (5 works), *Kalām* (40), *Ḥikma* and Philosophy (26), Arabic language and literature (7), *Fiḳh* and *uṣūl al-fiḳh* (5), Medicine (7), Talismans and Geometry (5), History (2) (see the introduction to his edition of al-Rāzī's little treatise, *Iʿtiḳādāt firaḳ al-Muslimīn wa 'l-mus̲h̲rikīn*, Cairo 1356/1938, 26-34). But this list is by no means a critical one. A profound study of al-Rāzī's work still remains to be achieved.

There follows here a list of the main Arabic works of al-Rāzī which exist in print, with a brief glimpse of the contents of each book:

1. — *Asās al-taḳdīs fi ʿilm al-kalām* (Cairo 1354/1935, 197 pp.). This work, dedicated to the Sultan Abū Bakr b. Ayyūb, sets out to study the *via remotionis* applied to the knowledge of God. It consists of four parts: the first studies the proofs that God is incorporeal and does not exist in space; the second shows how to apply the *ta᾿wīl* (interpretation) of ambiguous terms (*mutas̲h̲ābih*) mentioned in the Ḳur᾿ān; the third part establishes the doctrine of the Ancients (*mad̲h̲hab al-salaf*), especially in matters concerning both the clear verses of the Ḳur᾿ān and the obscure ones; finally the fourth part follows up this account, dealing chiefly with those verses which are ambiguous.

2. — *Lawāmiʿ al-bayyināt fi 'l-asmā᾿ wa 'l-ṣifāt* (ed. Amīn al-K̲h̲ānd̲j̲ī, Cairo 1323/1905, 270 pp.), a treatise on the Divine Names, one of the most substantial in Muslim theology. It consists of three parts: the prolegomena (3-73), under the title *mabādi᾿ wa-muḳaddimāt*. In ten chapters, al-Rāzī studies the problems posed by the subject of the name in general, and in the cases where it is applied to God, the nature of name and appellation, the distinction between the name and the attribute, the origin of the Divine Names, their subdivision, etc. Here are to be found excellent developments on the *d̲h̲ikr* (ch. 6) and on prayers of request (ch. 9). The second and longest part (73-259) studies systematically the ninety-nine Divine Names. Al-Rāzī mentions and discusses the various applications of each of them. The chapter dealing with the name of Allāh consists of more than thirty pages. Generally al-Rāzī finishes his exposition with practical spiritual advice. Finally, the third part, entitled *al-lawāḥiḳ wa 'l-mutammimāt* (256-67), gives some precise details on a number of names other than those previously studied.

3. — *S̲h̲arḥ al-Is̲h̲ārāt* (Constantinople 1290/1873, with commentary by al-Ṭūsī). It is a commentary on the physics and metaphysics in the *Kitāb al-Is̲h̲ārāt wa 'l-tanbīhāt* of Ibn Sīnā, that is to say from the beginning of the first *namaṭ* (ed. Froget, 90). Firstly, al-Rāzī reproduces in full a paragraph of Avicenna's text, then comments on it, pointing out carefully the plan which the author follows as well as its several component parts.

4. — *Lubāb al-Is̲h̲ārāt* (Cairo 1326/1908; 2nd ed. Cairo 1355/1936, 136 pp.). A summary of Avicenna's celebrated work, written after the commentary referred to last. It is concerned not with extracts from the work, but with a true digest of Avicenna's thought. Al-Rāzī follows thus each *nahd̲j̲* of the logic and each *namaṭ* of the physics and metaphysics.

5. — *Muḥaṣṣal afkār al-mutaḳaddimīn wa 'l-muta᾿ak̲h̲k̲h̲irīn min al-ʿulamā᾿ wa 'l-ḥukamā᾿ wa 'l-mutakallimīn* (a précis of ideas, scholars, philosophers and *mutakallimūn*, ancient and modern). Although at the beginning al-Rāzī indicates the plan which he intends to follow, in the course of the book's development this design is almost lost. *Kalām*, he says, is divided into four parts which he calls "cornerstones" (*arkān*). He begins immediately with the first, the preliminaries, without mentioning the others which are as follows: 2) being and its several modes; 3) rational theology (*ilāhiyyāt*); 4) the traditional questions (*al-samʿiyyāt*). The preliminaries (1-32) go far beyond those of al-D̲j̲uwaynī (in the *Irs̲h̲ād*) and of al-G̲h̲azālī (in the *Iḳtiṣād*). Three important questions are: a) the first ideas, where al-Rāzī speaks of perception, of judgment, and where he examines the divers theories concerning the innate or acquired character of the judgments; b) the characters of reasoning (*aḥkām al-naẓar*), including the setting out and proving of a dozen "theses"; c) apodeictic proof (*al-dalīl*). It is in the second part that the sections are distinguished with less clarity. Al-Rāzī begins by speaking of the *maʿlūmāt* (things known) where we can distinguish with some difficulty three divisions: 1) characters of existing beings; 2) the non-being (*fi 'l-maʿdūm*); 3) the negation of modes (*aḥwāl*) which are intermediary between being and non-being. Al-Rāzī next divides created beings into necessary and possible and goes on to examine the various arguments concerning these two categories, expounding and discussing in turn the theory of the *mutakallimūn* and that of the *falāsifa*. There follow thirty or so paragraphs whose contents are oddly enough assorted (on cold, softness, weight, movement, death, science, the senses, etc.), badly arranged paragraphs which are meant to link up probably with what immediately follows concerning the kinds and properties of accidents. Next the author studies bodies (*ad̲j̲sām*), their constitution, properties and kinds. Finally, the last section of this part is dedicated to the general characteristics of being, the One and the Many, cause and effect, etc. The two last *rukn*s deal directly with *kalām*. The third study, the *Ilāhiyyāt*, is a demonstration of the existence of the Necessary Being, of its attributes both positive and negative, of its acts, and of the relationship between divine and created acts. Then come some brief lines on the Divine Names. The fourth part, which is exclusively based on "Scripture", comprises four sections: doctrine of the Prophets, eschatology, the "Statutes and Names" (the problem of faith), and finally, the imāmate.

The Cairo edition (the only one in existence; printed at al-Ḥusayniyya, n.d.) has at the bottom of the pages the *Talkhīṣ al-Muḥaṣṣal* of Naṣīr al-Dīn al-Ṭūsī, in which criticism of al-Rāzī is not spared. This commentator remarks that in his time it was the only famous work on dogmatics, but according to him without justification (3). The Cairo edition also contains on the margins the *Maʿālim uṣūl al-dīn* of al-Rāzī. The *Muḥaṣṣal* has been commentated often (see Brockelmann). Horten has made an abridged edition in two volumes (*Die Philosophischen Ansichten von Rāzī und Ṭūsī*, Bonn 1910, and *Die spekulative und positive Theologie des Islams nach Razi und ihre Kritik nach Tusi*, Leipzig 1912), but "their value is diminished, if not indeed made doubtful, by the great number of errors in translation and arbitrary interpretations" (P. Kraus).

6. — *al-Maʿālim fī uṣūl al-dīn.* In his introduction to this work, al-Rāzī writes: "This is a compendium which deals with five kinds of sciences: dogmatics (*ʿilm uṣūl al-dīn*), the methodology of law (*uṣūl al-fiḳh*), *fiḳh*, the principles on which differences of opinion are based (*al-uṣūl al-muʿtabara fi 'l-khilāfiyyāt*), the rules of controversy and of dialectics".

Only the first of these five parts has been printed (on the margin of the *Muḥaṣṣal*, see above, no. 5).

7. — *Mafātīḥ al-ghayb* or *K. al-Tafsīr al-kabīr* (ed. Būlāḳ 1279-89, 6 vols.; Cairo 1310, 8 vols. (reprinted in 1924-27); 1327, 8 vols., with the *Irshād al-ʿaḳl* of Abu 'l-Suʿūd al-ʿImādī on the margin. The most recent and careful edition is that of Muḥammad Muḥyi 'l-Dīn, Cairo 1352/1933, in 32 *djuz'*, each comprising on the average 225 pp.). This is certainly al-Rāzī's most important work. It belongs to the class of commentaries at the same time philosophical and *bi 'l-ra'y*, and al-Rāzī put into this all his knowledge both of philosophy and of religion. Whenever the opportunity presents itself, he takes the opportunity of expounding what he wishes to say in the form of a "question" (*mas'ala*). He often tries to link the verses logically one to anotner, and, according to his habit, sets forth in answer to each question asked the various opinions with their arguments. The work consists of no less than eight volumes in-quarto, each containing about 600 pages of closely printed text. The commentary opens with a great dissertation (forming the whole of the first volume in the new edition) on the *istiʿādha* and then on the *basmala*. Appreciation of this commentary has varied from author to author. Certain detractors of philosophy and of *kalām*, such as Ibn Taymiyya for example, speak with disdain of this commentary on the Ḳur'ān where everything is to be found except a commentary. To this, admirers of al-Rāzī reply that in addition to the commentary on the Ḳur'ān everything else is to be found there (cf. al-Ṣafadī, *Wāfi 'l-wafayāt*, iv, 254). The influence of al-Rāzī's commentary has made itself felt amongst those who would like to modernize certain aspects of traditional exegesis. Thus a modern author, who helped to introduce the concept of "literary style" into the study of the Ḳur'ān, has remarked: "As far as the ideas contained in the Ḳur'ān are concerned, Rāzī is unique ... attitudes which are considered new and daring in the commentary of the *Manār* or in modern works have already been mentioned by Rāzī" (cf. J. Jomiei, *Quelques positions actuelles de l'exégèse coranique en Égypte révélées par une polémique récente*, in *MIDEO*, i (1954), 51).

8. — *al-Munāẓarāt* (the controversies) (ed. Ḥaydarābād 1354/1935). This is a kind of autobiography in which the author reports in detail sixteen controversies which occurred at different places during his travels. Al-Rāzī disputes with Shāfiʿī and Ḥanafī, Ashʿarī and Māturīdī scholars who cannot always be identified by name. The contents of the *Munāẓarāt* are varied. Almost half of the chapters are given up to subtle questions of canon law. Al-Rāzī makes fun here of the juridical work of al-Ghazālī. The rest deals with matters of philosophy and theology, such as the problem of the Divine Attributes, the origin of our perceptions, a refutation of astrology (ninth controversy), etc. In the tenth controversy, he gives interesting details on the sources of the *Milal wa 'l-niḥal* of al-Shahrastānī. This short work has been analysed by Kraus (who seems to have believed that it had never been published): *Les controverses de Fakhr al-Dīn Rāzī*, in *BIÉ*, xix (1937), 187-214. The full title, added by a later hand, is: "The controversies of Fakhr al-Dīn al-Rāzī which took place during his journey to Samarḳand and then to India".

9. — *Iʿtiḳād firaḳ al-Muslimīn wa 'l-Mushrikīn.* In this little treatise, edited in 1938 by ʿAlī Sāmī al-Nashshār, al-Rāzī refers, in a manner very concise but at the same time precise and objective, to the majority of Muslim sects and to a number of the "sects" of the Zoroastrians, Jews and Christians. A special chapter is reserved to the philosophers. Al-Rāzī points out that he is the only one to regard the Ṣūfīs as a sect.

10. — *al-Mabāḥith al-mashriḳiyya* (Ḥaydarābād 1342, 2 vols. of 726 and 550 pp. respectively). This is a work on "metaphysics and physics" (*fi ʿilm al-ilāhiyyāt wa 'l-ṭabīʿiyyāt*) which, however, does not refer at all to the *samʿiyyāt*. The author does not fail to point out that he is the first to have conceived a work of this sort. At the beginning, he explains clearly the plan which he intends to follow in this work which consists of three "books". Knowledge being the more perfect as its object is moie geneial, the author will dedicate the first book to the study of being and its properties, then to its correlative, non-being, then to essence, unity, and multiplicity. Having defined these general principles (*al-umūr al-ʿāmma*), the author studies a certain number of problems connected with them, such as division of being into necessary and possible (12 chapters), eternity and beginning in being (5 chapters). The second book is dedicated to the great divisions of the possible, substance and accident. An introduction studies them in a general manner (15 chapteis), then a first *djumla* consisting of five *funūn* is concerned with accident as follows: 1) quantity; 2) quality; 3) relative categories (*al-maḳūlāt al-nisbiyya*); 4) causes and effects; 5) movement and time (72 chapters). The second *djumla* is concerned with substance as follows: 1) bodies; 2) soul (*ʿilm al-nafs*); 3) intelligence. Finally, the third book (ii, 448-524) deals with "pure metaphysics" (*fi 'l-ilāhiyyāt al-maḥḍa*) and comprises four sections: 1) proof of the existence of the Necessary Being and of its transcendence; 2) its attributes; 3) its acts; 4) prophecy. This work is divided carefully into *funūn*, *abwāb* and *fuṣūl*, which call to mind Avicenna's *Shifā'*. From him, whom he calls simply *al-ra'īs*, and to whom he refers very frequently and sometimes quotes verbally, he borrows much important material, above all drawn from the *Shifā'* (physics, metaphysics, *de Coelo et Mundo*), the *Nadjāt*, and occasionally the *Ishārāt* (cf. ii, 342). He often accepts his data, but he does not hesitate to dispute freely certain of his principles, pointing out, sometimes with astonishment, what he calls contradictions in him. On the

subject of necessary emanation ("from one can come forth only one") and the theory of the active intellect (cf. ii), he disagrees completely with Avicenna. He reports many opinions, usually unfortunately not naming their authors, and discusses them; nevertheless he does refer by name to Aristotle, Plato, al-Fārābī, Empedocles, Galen, and Thābit b. Ḳurra.

11. — *Kitāb al-Firāsa*. This book on physiognomy has been edited (from the three manuscripts of Cambridge, the British Museum, and the Aya Sofya) by Youssouf Mourad (*La physiognomonie arabe et le* Kitāb al-firāsa *de Fakhr al-Dīn al-Rāzī*, Paris 1939), with a long introduction and a French translation, notes and commentary. The work consists of three dissertations (*maḳālāt*). The first deals with the general principles of this science, the second is made up of four sections as follows: 1) the signs of the temperaments; 2) the conditions special to the four ages; 3) the conditions special to the several states; 4) differences of character arising from the differences of countries, hot and cold climates, etc. Finally, the third dissertation is given up to the significance of numbers.

12. — *Kitāb al-Arbaʿīn fī uṣūl al-dīn* (Ḥaydarābād 1353/1934, 500 pp.). This treatise on theology was written by al-Rāzī for his eldest son Muḥammad. The plan of the questions with which it deals is not indicated by the author. It is nevertheless possible to classify the forty questions as follows: A. Beginning of the world in time (q. 1); the non-being is not a thing (q. 2). B. Existence of God (q. 3). C. Attributes of God (q. 4-40): God is eternal (q. 4), unlike everything which exists (q. 5), His essence is identical with His existence (q. 6), He does not exist in space (q. 7 and 8), it is impossible for His essence to enter anything (q. 9), it is impossible that He should be subject to accident (q. 10); He is all-powerful (q. 11), all-knowing (q. 12), possessed of will (q. 13), living (q. 14), He has knowledge and will (q. 15), He is hearing and seeing (q. 16), speaking (q. 17), everlasting (q. 18), visible (q. 19); His essence can be known by man (q. 20); He is one (q. 21), creator of the acts of man (q. 22), and of all which exists (q. 23), He wills all things (q. 24); good and evil are determined by religious Law (q. 25); the actions of God are not caused (q. 26); the existence of atoms (q. 27), reality of the soul (q. 28), existence of the void (q. 29), resurrection (q. 30), prophecy of Muḥammad (q. 31), impeccability of the Prophets (q. 32), comparison of angels and messengers (q. 33), the miracles of the saints (q. 34); reward and punishment (q. 35), non-eternal nature of the punishment of Muslim sinners (q. 36), the intercession of the Prophet (q. 37); whether proofs based on tradition produce certainty (q. 38), the imāmate (q. 39), methodology concerning rational proofs (q. 40). What is so striking in this treatise is the attitude of al-Rāzī towards atomism which here he seems to approve, whereas in the *Mabāḥith al-mashriḳiyya* he refutes it.

FAKHR AL-MULK [see ʿAMMĀR, BANŪ].

FAKHR AL-MULK B. NIẒĀM AL-MULK [see NIẒĀMIDS].

FAKHRĪ (d. *ca.* 1027/1618), a native of Bursa, the most celebrated silhouette-cutter in Turkey. This art (*ṣanʿat-i ḳaṭʿ*) was brought from Persia to Turkey in the 10th/16th century, and to the west in the 11th/17th century, where at first, as in the east, light paper on a dark ground was always used. There are specimens of Fakhrī's work—he cut principally examples of calligraphy, flowers and gardens—in the album prepared for Murād III, now in the Vienna Hofbibliothek; for Aḥmed I he cut out a Gulistān, which did not, however, survive his criticism; Murād IV on the other hand thought very highly of the artist. He is buried in Istanbul near the Edirne gate.

FAKHRĪ, SHAMS AL-DĪN Muḥammad b. Fakhr al-Dīn Saʿīd Iṣfāhānī, an Iranian philologist, author of the *Miʿyār-i Djamālī va-miftāḥ-i Bū Isḥāḳī* ("The bird-trap offered to Djamāl and the key entrusted to Abū Isḥāḳ"), written in Iṣfāhān, after residing in Shīrāz, and dedicated in 745/1344 to Djamāl al-Dīn Abū Isḥāḳ Muḥammad, the last prince of the Indjū dynasty [*q.v.*]. The work consists of four sections: prosody (*ʿarūḍ*), knowledge of rhyme (*ḳawāfī*), rhetorical devices (*badāʾiʿ al-sanāʾiʿ*), a lexicon intermingled with verses in praise of the prince (Persian words arranged according to their final letter: they will be found in recent western dictionaries). Salemann, the editor of this lexicon, also adds a poem of 150 lines of verse, *Marghūb al-ḳulūb* ("Hearts' desire"), moral and mystical in content, its attribution to Fakhrī being questionable (the manuscript of the B.N., Paris, Cat. Blochet no. 158, 3°, used by Salemann, puts it only under the name Shams). In the preface to the *Miʿyār*, writing in a very careful and elaborate style, the author states that in 713/1313, while still a youth, he lived

in Lūristān in the company of writers and scholars and there composed a manual on versification which he dedicated to Nuṣrat al-Dīn Aḥmad, the seventh and last *atabek* of the Lūr-i Buzurg (cf. Gantin, 581); he adds that he was intending to revise this manual and to transform it into a basic work—which he intended to achieve by writing the *Miʿyār* (additional details in Blochet, *Catalogue*, nos. 971 and 2423; Pajūh, *Fihrist*, 432-3).

Blochet, *Catalogue des mss. persans de la Bibliothèque Nationale de Paris*; Pajūh (Muḥammad Taḳī Dānis̲h̲), *Fihrist-i nusk̲h̲ahā-yi k̲h̲aṭṭī-i kitābk̲h̲āna-yi dānis̲h̲kada-yi adabiyyāt* (catalogue of mss. of the Faculty of Letters), *Review of the Faculty of Letters, University of Tehran*, viii/I (1339 p. /1960); Ḥamd Allāh Mustawfī, *Taʾrīk̲h̲-i Guzīda*, the Persian dynasties, ed. and Fr. tr. Jules Gantin, Paris 1903. (H. Massé)

FAḲĪH (a.), plur. *fuḳahāʾ*, in its non-technical meaning denotes anyone possessing knowledge (*fiḳh*) of a thing (syn. *ʿālim*, plur. *ʿulamāʾ* [*q.v.*]). Then, as *fiḳh* passed from denoting any branch of knowledge and became a technical term for the science of religious law (*sharīʿa* [*q.v.*]) and in particular for the science of its derivative details (*furūʿ*), *faḳīh* became the technical term for a specialist in religious law and in particular its *furūʿ*. This development is parallel to that of the term (*iuris*) *prudens* in Roman law. In older terminology, however, *faḳīh* as opposed to *ʿālim* denotes the speculative, systematic lawyer as opposed to the specialist in the traditional elements of religious law. (See on all this the art. fiḳh). A more modest synonym of *faḳīh* is *mutafaḳḳih* "a student of *fiḳh*", whereas a person possessing the highest degree of competence in *fiḳh* is called *mud̲j̲tahid* [see id̲j̲tihād]. In several Arabic dialects the word, in forms like *fiḳī* etc., has come to mean a schoolmaster in a *kuttāb* [*q.v.*] or a professional reciter of the Ḳurʾān.

Bibliography: Lane, s.v.; *LA*, s.v.; Tahānawī, *Dictionary of Technical Terms*, 30-3, 198 ff., 1157; E. W. Lane, *Modern Egyptians*, chap. 2; W. Marçais, *Textes arabes de Tanger*, 415 (with further references). (D. B. Macdonald*)

FAḲĪH, BĀ, a family of Bā ʿAlawī *sayyids* of Tarīm in Ḥaḍramawt descended from Muḥammad b. ʿAlī (d. 862/1458), called *mawlā ʿAydīd* or *ṣāḥib ʿAydīd*, after ʿAydīd, now a suburb of Tarīm, to which he moved from Tarīm. His father, ʿAlī b. Muḥammad (d. 838/1434) was called *ṣāḥib al-ḥawṭa*, after an estate he had near Tarīm which he developed as a plantation and which became a sacrosanct enclosure (*ḥawṭa*). The name Bā Faḳīh apparently refers to *ṣāḥib al-ḥawṭa*'s great-grandfather, al-Faḳīh Aḥmad b. ʿAbd al-Raḥmān b. ʿAlī b. Muḥammad (d. 726/1326), whose great-grandfather was Muḥammad *ṣāḥib Mirbāṭ* (d. 556/1162), after the town of Mirbāṭ, then a prosperous town on the coast of Ẓufār, where he moved from Tarīm and where he later died and was buried. From *ṣāḥib Mirbāṭ* are descended all the Bā ʿAlawī *sayyids* of Ḥaḍramawt.

Muḥammad b. ʿAlī, *mawlā ʿAydīd*, the ancestor of the Bā Faḳīh, is described in *sayyid* literature as a great saint, a description, however, which is lavishly used by *sayyid* writers about their ancestors. His descendants known to us were mainly *ṣūfīs*, teachers and jurists. They are descended through his sons (a) ʿAbd al-Raḥmān, (b) ʿAbd Allāh, (c) ʿAlī, (d) ʿAlawī and (e) Zayn.

Through (a) ʿAbd al-Raḥmān were descended his son Zayn (died in al-S̲h̲iḥr) and the latter's son ʿAbd al-Raḥmān (d. 950/1543). Through (b) ʿAbd Allāh were descended, from his great-grandson Muḥammad, Abū Bakr b. Muḥammad (d. 1005/1596), a prominent teacher and jurist, called *ṣāḥib Ḳaydūn*, after the town near Dawʿan to which he moved and where he died, and his brother Ḥusayn b. Muḥammad (d. 1040/1630) who was *ḳāḍī* in Tarīm and got involved in disputes between members of the influential ʿAydarūs [*q.v.*] family. Ḥusayn had two sons: Aḥmad (d. 1052/1642 in Mecca) and ʿAbd Allāh, who travelled to India in his youth and settled in Kunūr, where he married the daughter of its governor ʿAbd al-Wahhāb and gained public importance, although he mainly occupied himself with teaching. He seems to have studied mathematics while there and to have applied himself to the pursuit of alchemy. He died in Kunūr. A nephew of Abū Bakr and Ḥusayn, called Muḥammad b. ʿUmar b. Muḥammad, settled in Kunūr where he married the daughter of its governor ʿAbd al-Mad̲j̲īd and acquired some prominence, which he retained in the days of ʿAbd al-Mad̲j̲īd's brother and successor ʿAbd al-Wahhāb; but he fell upon bad days after the latter's death and moved to Ḥaydarābād, where he died.

From (c) ʿAlī was descended his great-grandson Aḥmad b. ʿUmar b. ʿAbd al-Raḥmān b. ʿAlī (d. 11th/17th century), whose studies took him to Mecca, Medina and Cairo; then he went back to Tarīm where towards the end of his life he was twice *ḳāḍī*. From (d) ʿAlawī were descended his son Muḥammad b. ʿAlawī (d. 924/1519 in Aden) and his great-grandson ʿAbd al-Raḥmān b. ʿAlawī b. Aḥmad b. ʿAlawī (d. 1047/1637), a prominent *ṣūfī*, jurist and teacher. From (e) Zayn was descended ʿAbd Allāh b. Zayn b. Muḥammad b. ʿAbd al-Raḥmān b. Zayn, a teacher of al-S̲h̲illī, author of *al-Mas̲h̲raʿ al-rawī*, who later moved to India, studying and teaching, until he settled in Bīd̲j̲āpūr, where he died.

A chronicler called Muḥammad b. ʿUmar al-Ṭayyib Bā Faḳīh Bā ʿAlawī al-S̲h̲iḥrī, about whom no biographical details can be traced, was the author of a chronicle commonly referred to as *Tārīk̲h̲ Bā Faḳīh al-S̲h̲iḥrī* (covering the 10th/16th century); cf. R. B. Serjeant in *BSOAS*, xiii (1950), 292-5; xxv (1962), 245 f.

Bibliography: Ibn al-ʿAydarūs, *al-Nūr al-sāfir min ak̲h̲bār al-ḳarn al-ʿās̲h̲ir*, Bag̲h̲dād 1934; Muḥammad b. Abū Bakr al-S̲h̲illī, *al-Mas̲h̲raʿ al-rawī fī manāḳib al-sāda al-kirām āl Abī ʿAlawī*, Cairo 1319/1901; al-Muḥibbī, *K̲h̲ulāṣat al-at̲h̲ar fī aʿyān al-ḳarn al-ḥādī ʿas̲h̲ar*, Cairo 1869, 4 vols.; F. Wüstenfeld, *Die Çufiten in Süd-Arabien im XI (XVII) Jahrhundert*, Göttingen 1883, 57-64; R. B. Serjeant, *Materials for South Arabian history*, in *BSOAS*, xiii (1950), 292-5, and xxv (1962), 245 f.; idem, *The Portuguese off the South Arabian Coast*, Oxford 1963, *passim*. (M. A. Ghūl)

FAḲĪH, BAL, a family of Bā ʿAlawī *sayyids* of Tarīm in Ḥaḍramawt descended from al-Faḳīh Muḥammad b. ʿAbd al-Raḥmān, called *al-asḳaʿ*, a prominent scholar who, after studying in his native Tarīm, Aden, Zabīd, Mecca and Medina, settled in Tarīm, where he died in 917/1512. A kind of historical work by him was used as a source of the *Taʾrīk̲h̲* of Bā Faḳīh al-S̲h̲iḥrī, where it is referred to as *K̲h̲aṭṭ*; cf. R. B. Serjeant in *BSOAS*, xxv (1962), 246. His great ancestor was Muḥammad b. ʿAlī b. Muḥammad

ṣāḥib Mirbāṭ, commonly called *al-ustādh al-aʿẓam wa 'l-faḳīh al-muḳaddam* (d. 653/1255).

The Bal Faḳīh *sayyid*s of whom we know were mainly *ṣūfī*s, and in some cases teachers and jurists as well. They were descended from al-Faḳīh Muḥammad b. ʿAbd al-Raḥmān *al-asḳaʿ* through his three sons (a) ʿAbd Allāh, (b) ʿAbd al-Raḥmān and (c) Aḥmad.

The first son ʿAbd Allāh is also called al-ʿAydarūs and is known as *ṣāḥib al-Shubayka*, after the cemetery in Mecca where he was buried. He was born in Tarīm, which he left for Shiḥr, Aden, Mecca, Medina and Zabīd in search of learning, and then went back to it where he became a prominent teacher. He left it later for Mecca, where he lived the last 14 years of his life and where he died in 974/1567. His son ʿAlī, a *ṣūfī*, died in Mecca in 1021/1612. The latter had two sons, Muḥammad, who attained wealth and public importance in Mecca, where he died in 1066/1656, and ʿAbd Allāh, a *ṣūfī*, who died in Mecca in 1050/1640.

From (b) ʿAbd al-Raḥmān were descended his son Muḥammad (d. 1007/1598) and his two grandsons by his son Ḥusayn, Aḥmad b. Ḥusayn b. ʿAbd al-Raḥmān (d. 1048/1638), who was twice *ḳāḍī* of Tarīm and got involved together with Ḥusayn b. Muḥammad Bā Faḳīh in disputes between members of the influential ʿAydarūs [*q.v.*] family; and Abū Bakr b. Ḥusayn b. ʿAbd al-Raḥmān, who travelled to India where he finally settled in Bādjāpūr enjoying the patronage of its ruler Maḥmūd ʿĀdil Shāh until his death there in 1074/1663.

Of (c) Aḥmad's descendants we know of a grandson called Aḥmad b. ʿAbd al-Raḥmān b. Aḥmad who was born in Tarīm, where he studied and then became a teacher and jurist. He was a contemporary and friend of al-Shillī, author of *al-Mashraʿ al-Rawī*.

Bibliography: as for FAḲĪH, BĀ; add R. B. Serjeant, *The Saiyids of Ḥaḍramawt*, London 1957, 14, 19 and 25. (M. A. GHŪL)

AL-**FĀKIHĪ**, ABŪ ʿABD ALLĀH MUḤAMMAD B. ISḤĀḲ B. AL-ʿABBĀS, 3rd/9th-century historian of Mecca. No information on him was available to later Muslim scholars, or is to us, except what can be learned from his *History of Mecca*, of which the second half is preserved in a single manuscript in Leiden (cod. or. 463). A small portion of the work has been edited by F. Wüstenfeld, *Die Chroniken der Stadt Mekka*, Leipzig 1857-61, ii, 3-51. Al-Fākihī was alive and, it seems, quite young during the judgeship of ʿAbd al-Raḥmān b. Yazīd b. Muḥammad b. Ḥanẓala b. Muḥammad which came to an end in or shortly before 238/852-3 (Wüstenfeld, ii, 43 f.; Wakīʿ, *Akhbār al-Ḳuḍāt*, i, 268 f.); his birth may thus be placed around 225/839, and this agrees with the fact that some of his authorities died in the early 240s. He was in contact with the leading scholars of Mecca. He completed his work between 272/885-86, a date he himself mentions, and the end of 275/April-May 889 when ʿAbd al-ʿAzīz b. ʿAbd Allāh al-Hāshimī, who is referred to as being still alive, died (Wüstenfeld, ii, 12; *Taʾrīkh Baghdād*, x, 451 f.; or, if the passages cited refer to different men, at the latest 279/892). He left a son, Abū Muḥammad ʿAbd Allāh, who is briefly noticed in al-Fāsī, *ʿIḳd*.

His work is referred to as *Akhbār Makka* or (in the Leiden ms.) *Taʾrīkh Makka*, but *Fihrist* 159 calls it *Kitāb Makka wa-akhbārihā fi 'l-Djāhiliyya wa 'l-Islām*. Its size was more than twice that of the earlier *History of Mecca* by al-Azraḳī [*q.v.*]. It shares with the latter the arrangement and, to a large degree, the material but must be considered an independent scholarly achievement. The *isnād*s prove that al-Fākihī collected his material on his own; certain historical statements and descriptions of architectural features and the like not introduced by *isnād*s agree literally with al-Azraḳī and, therefore, may have been taken over from his work without acknowledgement. The fact that al-Fākihī makes no mention of al-Azraḳī and even appears to suppress references to his family may have its reason in some personal enmity between him and the Azraḳīs and their circle, or the latter may have refused him permission to make use of the material in their possession; at any rate, it does not mean that al-Fākihī was out to conceal an alleged improper use of al-Azraḳī's work, which would, anyhow, have been impossible.

FAḲĪR. The word *faḳīr* has four different connotations—etymological, Ḳurʾānic, mystical and popular. Etymologically it means (*a*) one whose backbone is broken (see Ḳurʾān, lxxvii, 25); (*b*) poor or destitute; (*c*) canal, aqueduct or mouth of a canal; (*d*) hollow dug for planting or watering palm-trees. When used in the sense of a pauper its plural form is *fuḳarāʾ*, but when used in the sense of an aqueduct, *fuḳur* is its plural form.

The word *faḳīr* (or *fuḳarāʾ*) occurs 12 times in the Ḳurʾān. It is sometimes used as opposed to *ghanī* (one who is self-sufficient and independent, see xxxv, 16) and is sometimes conjoined with the term *miskīn* to indicate two distinct types of needy persons (ix, 60). According to Imām al-Shāfiʿī, a *faḳīr* is one who neither owns anything nor engages himself in any avocation; a *miskīn*, on the contrary, is one who owns something though it is barely sufficient for his immediate needs. He cites in support of his view the parable of Khiḍr and Moses in which the sailor of a boat is called a *miskīn* (xviii, 79). Imām Abū Ḥanīfa held the other view. According to him a *faḳīr* is one who owns something while a *miskīn* is one who owns nothing. The supporters of this view say that the sailor in the parable was not the owner of the boat but had it on hire. Reconciling all these differences Ibn al-ʿArabī says that these terms are interchangeable and synonymous. According to some commentators the word *fuḳarāʾ* in ii, 273 refers to the *ahl al-ṣuffa* [*q.v.*] who lived in the mosque of the Prophet and devoted all their time to prayers and meditation.

In mystic terminology *faḳīr* means a person who 'lives for the Lord alone'. As Shiblī says: *Al-faḳīr man lā yastaghnī bi-shayʾⁱⁿ dūn Allāh* (a *faḳīr* does not rest content with anything except God.) Total rejection of private property (*ʿadam tamalluk*) and resignation to the will of God (*tawakkul*) were considered essential for a *faḳīr* who aspired for gnosis (*maʿrifa*).

In popular parlance the term *faḳīr* is used for a poor man, a pauper or a beggar. Its use in the English language dates from 1608; see *Oxford English Dictionary*, s.v. Fakir, and H. Yule and A. C. Burnell, *Hobson-Jobson*[2], London 1903, s.v. Fakeer.

FAḲĪR MUḤAMMAD K̲H̲ĀN, an Urdu writer (Faḳīr is a *tak̲h̲alluṣ*, nom de plume). He is chiefly known as the author of a translation of the *Anwār-i Suhaylī* of Ḥusayn Wāʿiẓ Kās̲h̲ifī [*q.v.*], an adaptation in elaborate Persian prose of the stories from *Kalīla wa-Dimna* [*q.v.*]. The title of the Urdu translation by Faḳīr Muḥammad K̲h̲ān, for which he appears to have been helped by the celebrated Urdu poet Mīr Ḥasan (d. 1200/1786), is *Bustān-i ḥikmat* (Garden of wisdom). The first edition is a lithograph, Lucknow 1845. As a lyric poet, Faḳīr belongs to the Lucknow school and to the *silsila* (poetic school) of the famous Nāsik̲h̲ (d. 1254/1838).

(A. Bausani)

FAḲĪRĪ, Kalkandelenli, Turkish poet of the mid-10th/16th century. Very little is known about his life. From the scanty information provided by *ted̲h̲kire*-writers, we learn only that he was from Ḳalḳandelen (Tatova) near Üsküb (Skopje); of a modest family, cheerful and easy-going, he was unambitious and died young, while still a student.

Faḳīrī is the author of a *s̲h̲ehrengīz*, a *sāḳī-nāme* and a number of *g̲h̲azel*s scattered in *med̲j̲mūʿa*s and *naẓīre* collections, all of which are of rather mediocre quality. He owes his reputation to his original *Risāle-i taʿrīfāt* (Book of Definitions) written in 941/1534 in the tradition and style of *s̲h̲ehrengīz*. This is a collection of short descriptions (in 159 *faṣl*s) of various officials, artisans and types of the Ottoman Empire, and one of the rare examples of social satire in Turkish literature. In every "definition" of three couplets, the characteristics of the type are given in a concise, often colourful description, a vivid and informative parade of the famous and infamous.

After the customary introduction in praise of God, the Prophet and the first four Caliphs and homage to the reigning Sultan, Süleymān the Magnificent, Faḳīrī begins his definitions with the highest ranking official, the vizier, and proceeds to other ranks and classes. The vizier is "the aid of religion and the State, he is the orderer of the country". The *ḳāḍīʿasker*s are not liked by the *ḳāḍī*s as "they give life to some by distributing largesse and take the life of others", the *defterdār*s turn some people's business into gold, and dismiss and deceive others, the *bey*s and *ag̲h̲a*s "lead always a pleasant life, they stage stately *dīwān*s where notables foregather; some, by their justice, make the country prosperous, some, by their tyranny, destroy the world".

Further he describes in short but accurate terms the functions of the *solaḳ*, *silīḥdār*, *čāwūs̲h̲*, *ulaḳ*, *yeñičeri*, *mewālī*, etc., and passes critical judgment on members of various professions: *müderris* "the heirs to the science of the Prophet", the "insatiable" *muʿīd*, the "corrupt" *nāʾib*, etc. The joy of the *manṣūb* (the newly-appointed official) and the sorrow of the *maʿzūl* (the dismissed one), the pangs of expectation of the *mülāzim* (the probationary), the difference between the true devout *s̲h̲ayk̲h̲* and the hypocritical false one, the insincere preacher, *wāʿiẓ*, with an eye to profit are concisely portrayed. The parade continues with the *imām*, *müʾed̲h̲d̲h̲in*, *ḥāfiẓ*, *kātib*, the poet, the lover, the gentleman, the beauty, the lady's man, the rival, etc. The arts, crafts and professions are represented by the porter, physician, barber, acrobat, musician, dancer, merchant, tailor, town-crier, cobbler, saddler, butcher, blacksmith, etc. Then come characters: the hypocrite, intriguer, liar, idiot, etc. Further come definitions of some national types: Persian, Arab, Fellāḥ. Faḳīrī's uncomplimentary definition of "Turk" (faṣl 80) "with a fur on his shoulder and a *börk* on his head, ignorant of religion and sect" confirms the fact that in the period of the Empire this term meant "uneducated peasant, country boor" as opposed to the town-dwelling Ottomans (Rūmī), who are "refined and educated, but some think of themselves as writers, some as poets, yet when they gather to talk they do nothing but backbite one another".

Faḳīrī is strongly critical in his definition of *sipāhī*, *ʿazab*, *subas̲h̲i*, *ʿases*, *muḥtesib*, *ketk̲h̲udā*, *ʿummāl*, *mütewelli*, etc., and popular complaints about bribery, abuses, tyranny, cruelty, injustices of the times are reflected in these definitions. An edition of the *Risāle-i taʿrīfāt* is in preparation.

FAʾL, *ṭīra* and *zad̲j̲r* are terms which merge into one another and together correspond to and express adequately the concept of "omen" and of οἰωνός. *Faʾl*, a term peculiar to Arabic and equivalent to the Hebrew *neḥas̲h̲īm* and the Syriac *neḥshē*, originally meant natural omen, cledonism. It appears in very varied forms, ranging from simple sneezing (al-Ibs̲h̲īhī, *Mustaṭraf*, trans. Rat, ii 182), certain peculiarities of persons and things that one encounters (al-Nuwayrī, *Nihāya*, 133 ff., trans. in *Arabica*, viii/1 (1961), 34-7), to the interpretation of the names of persons and things which present themselves spontaneously to the sight, hearing and mind of man. On this last point, the *sīra*, tradition (*ḥadīt̲h̲*) and Muslim chronicles give ample evidence depicting this tendency of the Arab mind to draw omens from all kinds of physical movement, all kinds of chance happenings, from all kinds of words heard and all attitudes observed. "After all, the whole of good manners has grown out of *faʾl*" (Doutté, *Magie et religion*, 364). To this must be added the predominant rôle among all Semites, and the Arabs in particular, of euphemism and antiphrasis (see *infra*).

This tendency of the Arab mind reveals itself clearly in the conduct, practice and recommendations of the Prophet. The *sīra* is full of incidents where the Prophet "drew omens from the names of the regions and tribes through which he travelled on his raids" (Ibn His̲h̲ām, 434). Furthermore, he made a considerable number of changes in proper names, with the double design of effacing all traces of Arab paganism from Muslim terminology (cf. Wellhausen, *Reste*², 8 f.), and even more of removing from any shocking or unsuitable names of followers which he must hear around him, all baleful influences which might emanate from their meanings. It was for this reason that he changed Ḳalīl into Kat̲h̲īr, ʿĀṣī into Muṭīʿ (Ibn al-At̲h̲īr, *Usd*, iv, 232); and thus also that he gave the future Medina the name of Ṭayyiba in place of Yat̲h̲rib, whose root

contained the idea of "calumny" (*Marāṣid al-iṭṭilāʿ*, ed. Juynboll, i, 2). He changed the name of Zayd al-Khayl into Zayd al-Khayr (*Aghānī*[1], xvii, 49). "In the Djāhiliyya, Sulaymān b. Ṣurad was called Yasār (as a euphemism for 'left'); the Prophet called him Sulaymān" (Ibn al-Athīr, *Usd*, ii, 351); "Sahl used to be called Ḥazn but the Prophet renamed him Sahl" (*ibid.* 380; cf. Ibn ʿAbd Rabbih, *ʿIḳd*, i, 226), and so on (cf. *ibid.* ii, 301; al-Bakrī, *Muʿdjam*, ed. Wüstenfeld, 313, 559; Goldziher, in *ZDMG*, li (1897), 256 ff.). "Für Muḥammad wurde ja jedes Nomen, besonders aber jedes Nomen proprium, zum omen" (Fischer in *ZDMG*, lxi (1907), 753, cf. 427). The Prophet was imitated in this respect by his Companions, especially ʿUmar b. al-Khaṭṭāb (cf. Ibn Ḳutayba, *ʿUyūn*, ed. Brockelmann, ii, 148 f.; Ibn ʿAbd Rabbih, *ʿIḳd*, i, 225; al-Ṭabarī, xv, 2609, etc.). On the other hand, omens were not only drawn from the individual's name but also from his appearance. The Prophet wrote to his officials: "When you send me a courier, see that he has a beautiful name and a handsome face" (Ibn Ḳutayba, *l.c.*; Ibn ʿAbd Rabbih, *l.c.*; cf. *Aghānī*[1], ii, 20; xviii, 35). In North Africa, even a man's social position could become a factor from which omens could be drawn; thus to encounter a *sharīf* was a matter of happy omen, while to meet a Jew or a blacksmith was unlucky (Doutté, *op. cit.*, 361). A whole family might be considered as having a baleful influence (cf. the family of Baṣbaṣ, who gave bad advice to the Taghlib, *Ḥamāsa*, 254, l. 5, in Freytag, *Einleitung*, 162). Certain individuals are referred to as *mashʾūm* (cf. al-Djāḥiẓ, *Ḥayawān*, vii, 150 f.); their company augured ill.

Because of this, choice of names was important to parents for their children and to masters for their slaves. With regard to this, the Arabs followed a definite ruling. "Someone asked a Bedouin: 'Why do you give your children the worst of names such as Kalb and Dhiʾb, and to your slaves the best such as Marzūḳ and Rabāḥ?' He replied: 'It is because the names of our children are destined for our enemies, and those of our slaves for ourselves'. He meant to say that the children are a shield against the enemy and arrows in their bosoms; it is for this reason that they give them this kind of name" (al-Diyārbakrī, *Khamīs*, ii, 153; cf. Ibn Durayd, *Ishtiḳāḳ*, ed. Wüstenfeld, 4 f.; Ibn al-Athīr, v, 247; cf. al-Djāḥiẓ, *Ḥayawān*, vi, 65 and i, 158 f., where the author sets out the various motives underlying the choice of names among Arabs).

This process of interpretation was expanded from personal names to the names of precious stones, of fruits and flowers, and even to the words of songs. Thus gold (*dhahab*) means 'departure', onyx (*djazʿ*) sadness and melancholy (al-Tīfāshī, in Reinaud, *Monumens*, i, 14); a lemon (*utrudj*) presages hypocrisy because of the fact that the exterior of the fruit does not resemble the interior (al-Djāḥiẓ, *Ḥayawān*, iii, 142; Ibn ʿAbd Rabbih, *ʿIḳd*, i, 226); the quince (*safardjal*) signifies a journey because its name contains the word *safar* (Ibn ʿAbd Rabbih, *loc. cit.*; cf. *ZDMG*, lxvii (1913), 273 ff., and lxviii (1914), 275 ff.). Lilac (*sūsan*) brings misfortune because its name contains the word *sūʾ* (Ibn ʿAbd Rabbih, *loc. cit.*), and misfortune which will last for a year because its name is made up of *sūʾ* and *sana* (cf. Flügel, *Loosbücher*, 27); basil (*rīḥān*) is at the same time of good and evil omen because on the one hand its name includes the word *rūḥ*, and on the other hand it has a bitter taste, even though it pleases the eye and the nose (al-Djāḥiẓ, *Ḥayawān*, iii, 142). As for the evil presentiments aroused by the contents of a phrase or a song, there are many examples of these in the Arab chronicles (cf. al-Djāḥiẓ, *loc. cit.*, 139; al-Masʿūdī, *Murūdj*, iv, 426 ff.; vii, 269 ff.; al-Ibshīhī, ii, 154). These facts are generally classified under the name of *ṭīra*.

According to Ḥādjdjī Khalīfa, *Kashf*, ed. Flügel, iv, 646 f., *faʾl* is an approval of a man's intentions and thence an encouragement to his carrying them out, while *ṭīra* (or *ṭayara* or *ṭūra*, cf. *Ḳāmūs*, i, 93) is a disapproval and in consequence an obstruction, a postponement until later. This opposition which in the end established itself between two concepts which were originally complementary, seems to have developed from the attitude which Tradition ascribed to the Prophet concerning this predominant variety of *faʾl*. *Ṭīra* (ὄρνις) is in effect a technique whose origin is pastoral and nomadic; Arabia was therefore a very propitious region for its development, as Cicero had already commented: "Arabes (et Phryges et Cilices), quod pastu pecudum maxime utuntur, campos et montes hieme et aestate peragrantes, propterea facilius cantus avium et volatus notaverunt" (*De divinatione*, i, 41; cf. i, 1 and ii, 93-5). Its technical character made it the prerogative of a privileged class of men, which in an organized and developed society enjoyed the status of priesthood. In the short-lived and nomadic civilizations of Bedouin Arabia, the existence of a priestly class which specialized in the interpretation of the flight and cries of birds was as yet hardly perceptible (see KIHĀNA: *ʿāʾif*, *ḥāzī*, *zādjir*). It is only by means of comparison between the brief and obscure data of Islamic literature and those of Semitic antiquity, that it is possible to affirm the religious character of *ṭīra* as it was practised in the Djāhiliyya.

It is from this, it would seem, that the hostility displayed by the Prophet towards *ṭīra* arose, even while he was practising and recommending *faʾl*. This also explains the baleful character which was assigned to it later. In fact, certain examples demonstrate that *ṭīra* could be a good omen. "ʿUbayd Allāh b. Ziyād painted a dog, a ram and a lion in the entrance-hall of his house. He said of them: 'a barking dog, a fighting ram and an angry lion'. He drew a good omen (*fataṭayyara*) from these and this was repeated after him" (*Ḥayawān*, i, 158). And from the same author (*ibid.* 159): "When 'ass', 'dog', 'bull' were names borne by honourable men, the Arabs did not hesitate after this to use them, seeing a good omen in them (*taṭayyur^an^*)". One *ḥadīth* even seems to give *ṭīra* a wider meaning, including *faʾl* itself which is regarded as that part of it which comes true: "*asdaḳ^u^ 'l-ṭīrat^i^ al-faʾl^u^*" (Ibn Ḳutayba, *ʿUyūn*, ii, 146). Another *ḥadīth* includes the subject-matter of *ṭīra* in *faʾl*: "There is nothing in the *hām* (the owl regarded as the spirit of a dead man), but the evil eye is true and birds give true omens (*wa-aṣdaḳa 'l-ṭayr^u^ al-faʾl^a^*)" (Ibn al-Athīr, *Usd*, i, 314 and ii, 78). In the same way, there are examples which give *faʾl* the meaning of evil omen (cf. al-Nuwayrī, *Nihāya*, iii, 138; Ibn Durayd, *Ishtiḳāḳ*, 4).

This confusion reveals the existence of a primitive foundation which was not entirely submerged by the powerful wave of puritanism which swept over Arabia in the first two centuries of the Hidjra.

It appears from all this that *ṭīra*, which was originally no more than the observation and interpretation of the flight, cries and perching activities of certain birds used in divination, became the equivalent of the *male ominari* of the Latins and the βλασφημεῖν and δυσφημεῖν of the Greeks.

From this was derived a whole literature, essen-

tially of poetry and proverbs, created to dissuade man from following the ideas inspired in him by *ṭīra*, and to which all men are subject. The Prophet is reported to have said: "There are three dangers which no-one escapes: *ṭīra*, suspicion and jealousy". When asked what remedy there is for this, he replied: "If (on your way) you think you have seen an evil omen (*taṭayyarta*), do not turn back; if you suspect, do not execute; if you are envious, do not commit an injustice" (Ibn Ḳutayba, *ʿUyūn*, ii, 8; Ibn ʿAbd Rabbih, *ʿIḳd*, i, 226). Quotations from poetry on this subject are very numerous (cf. especially al-Buḥturī, *Ḥamāsa*, ed. Cheikho, nos. 599, 860-7, 1132; al-Bayhaḳī, *Maḥāsin*, 368 and Ps.-Djāḥiẓ, *Maḥāsin*, 68 f.; al-Djāḥiẓ, *Ḥayawān*, iii, 138, 139, 160; Ibn Ḳutayba, *ʿUyūn*, ed. Cairo, ii, 145 f.).

It is worth remarking that when it means presaging evil, *ṭīra* does not strictly apply only to *signa ex avibus* but also to all other kinds of evil omen (cf. Ibn Ḳutayba, *ʿUyūn*, ii, 147; al-Djāḥiẓ, *Ḥayawān*, iii, 140; al-Masʿūdī, *Murūdj*, vi, 426 ff., 433 f., vii, 269 ff.; *Aghānī*, i, 184; al-Ṭabarī, i/3, 1089; etc.).

But the primitive meaning of *ṭīra* seems to be better preserved in *zadjr*, which is often used as its equivalent, although originally this term designated a technique belonging to *ṭīra*. Indeed, if *ṭīra* is the observation and interpretation of the spontaneous flight and cries of birds, *zadjr* consists on the contrary of the deliberate instigation of these flights and cries; it belongs to the category of *auspicia impetrita*, in contrast to *auspicia oblativa*. Apart from the meaning of *zadjara* (to arouse, chase someone with cries, make fly, draw omens, practise divination), Arab tradition still preserves some accounts of the existence of this practice (cf. *Arabica*, viii/1 (1961), 50 f.).

But in the same way as *faʾl* and *ṭīra*, *zadjr* soon began to lose its primitive meaning and specific character and came to stand for evil omen or divination in general. Indeed sometimes there is a kind of *zadjr* which is confused with *kihāna* (cf. al-Nuwayrī, *Nihāya*, iii, 135-9). This leads us to believe that *zadjr* was, as in Assyria and Babylonia, the prerogative of the soothsayer who, especially in Arabia, combined various functions and acted as a guardian of institutions in a nomadic society which lacked the focal points necessary to fix and safeguard them.

Thus in a passage from Ps.-Djāḥiẓ, Arab *zadjr* includes the interpretation of the cooing of doves, the cries of birds, the sudden appearance of an animal crossing from right to left or from left to right, the rustling of leaves, the sigh of the wind and other similar portents (*ʿIrāfa*, ed. Inostrantseff, 23).

Zadjr is also referred to a *ʿiyāfa* [*q.v.*] which applies to various procedures of divination. As for the birds whose flight and cries form the object of *faʾl*, *ṭīra* and *zadjr*, they are of many kinds, but the bird of divination most regarded by the Arabs is the crow (Corvus capensis Lichtenst., Corvus umbrinus Rüppell, and perhaps also Corvus agricola Tristram which exists in Palestine). Nevertheless, these three procedures do not limit themselves to birds, for any animal is capable of furnishing an omen (on the crow and other birds, animals and insects of divination, cf. *Arabica*, viii/1 (1961), 30-58).

The direction of a bird's flight, or an animal's steps, plays a very important part in the application of the three procedures. Technical terms designate the various directions: *sāniḥ* (that which travels from right to left), *bāriḥ* (that which travels from left to right), *djābih* (that which comes from in front), *ḳaʿīd* or *khafīf* (that which comes from behind). As a general rule, the left is of evil omen (al-Tibrīzī, in Abū Tammām, *Ḥamāsa*, ed. Freytag, i, 165), therefore "*al-sāniḥ* is desired by the Arabs and *al-bāriḥ* is dreaded" (al-Masʿūdī, *Murūdj*, iii, 340). Thus it is by way of euphemism that Arabs call the left side *al-yasār* and the left hand *al-yusrā* (comp. the Greek εὐώνυμος), whereas in fact they signify "difficulty" to them, whence comes the name of *al-ʿusrā*, also used for the left hand (cf. al-Djāḥiẓ, *Ḥayawān*, v, 150).

In other respects too, euphemism and antiphrasis play an important part in *faʾl*. "The desire to hear from the mouth of others a word of happy omen, the fear of hearing some unlucky expression, is moreover found in Islam in all ages and all countries" (W. Marçais, *Euphémisme*, 431). A whole vocabulary has been created in order to avoid certain expressions whose meanings suggest evil omens. Hence the blind is called "seeing", *baṣīr* (cf. other euphemisms for blind and ref. in Fischer, in *ZDMG*, lxi (1907), 425 sqq.), smallpox is described as "blessed", *mubārak*, as also are syphilis, plague and insanity (cf. Greek ἱέρα, the Italian *il benedetto*). It is because of *ṭīra*, al-Djāḥiẓ tells us (*Ḥayawān*, iii, 136), that the Arabs call someone who has been bitten by a snake "safe and sound" (*salīm*), call the desert the "refuge" (*mafāza*); it is for the same reason that they name the blind, for *kunya*, Abū Baṣīr and the negro Abu 'l-Bayḍāʾ (white). Such examples are innumerable (cf. W. Marçais and Fischer, *op. cit.*, Wellhausen, *Reste*[2], 200 ff.).

For astrological *faʾl*, see NUDJŪM, and for the *faʾl* by drawing lots, see ḲURʿA. For books of divination, see FĀL-NĀMA.

FĀL-NĀMA, book of divination. In the Muslim East (especially in Iranian and Turkish countries), in order to know if not the future, at least the signs or circumstances that are auspicious for some decision, recourse is still sometimes made to certain procedures (cf. Massé, *Croyances*, ch. XI: divination), among others to two kinds of books: 1. collections of poems (*dīwān* of Ḥāfiẓ); 2. special works (*fāl-nāma*). Consulting the *dīwān*, an act within the reach of everyone, consists in opening the book at random and interpreting the text which first strikes the eye (for details, see Massé, *op. cit.*, 244-5; and in particular E. G. Browne, iii, 315-9; also Binning, i, 220). As for the *fāl-nāma*, some are tables of divination, used in the manner of the above-named *dīwān* (cf. the *sortes Virgilianae*; and for the *dīwān* of Ḥāfiẓ, the description of this table in Browne, iii, 312-5); others are booklets containing quadrangular or circular tables (*dāʾira*), preceded by an explanatory text, in which the divisions of the page (*burdj*) contain letters and words arranged in eastern *abdjad* [*q.v.*] order. The *fāl-nāma* which has always been the most authoritative (taking prece-

dence even over the one attributed to ʿAlī) is that of Djaʿfar which is attributed to the imām Djaʿfar al-Ṣādiḳ ([*q.v.*], see also DJAFR) (cf. D. M. Donaldson, *The Shiʾite religion*, ch. XII). The essence of this booklet is as follows (according to the manuscript in the B.N., Paris, Suppl. persan, no. 77): "*Fāl-nāma* of his holiness the imām Djaʿfar Ṣādiḳ. If anyone wishes to consult the omens, he must make his ablutions, recite the *fātiḥa* once, the sūra of the *Ikhlāṣ* three times, the Ḳuʾrānic Throne verse once, and then place his finger inside the table ..." (fol. 40), while keeping his eyes closed, on one of the page divisions containing the letters (for example, the letter *nūn*); each division of the second table contains one of these letters accompanied by a word (*e.g.*, *nūn* — *al-kayl*); then follows a list of these words, each incorporated in a phrase linking it to a sign of the zodiac (*e.g.*, "*Al-kayl*: your *fāl* is fortunate; but refer to the Ram (*ḥamal*) which will elucidate it", etc.); next comes a list of these signs with reference to the planets (*e.g.*, "Sun: good tidings, O ye who seek *fāl*! God has opened the gates of his clemency for you; He will give you your daily bread, multiply your powers, watch over your concerns; your children shall repay you; it will be propitious for you to build, to buy horses and arms, to marry and to travel; in the event of a parent or friend being absent, imprisoned or ill, you must be patient and perform your almsgiving; then God will certainly provide"; these replies, which are all of the same order, justify the Persian proverb "It is the *fāl* of the imām Djaʿfar which cannot do harm" (Dehkhodā, *Amthāl u-ḥikam*, s.v. *Fāl*, and the following proverbs). Sometimes the first table of the *fāl-nāma* is composed not of letters of the alphabet but of figures; in this case the procedure is as follows (beginning of the *Fāl-nāma* manuscript in the B.N., Paris, Suppl. persan 1872, fol. 62 v°): "Hear ye, this is the *fāl-nāma* which his holiness Djaʿfar Ṣādiḳ has learnt from the august divine Word. Whoever has a transaction, dispute or a certain desire and wishes to know what is good, what is evil and what the outcome, must stand face to face with a partner who must act exactly as he does, and place his hand under his arm; then, bringing out their hands, both must show what number of fingers each has chosen; the man concerned must add up the total, and then consult whichever page division contains this number; he must read the sacred verse of the Ḳuʾrān inscribed in the circular table of the *fāl-nāma*; having thus recognized the good and evil features of his plan, let him not deviate from it" (after which he will proceed as above). Another *fāl-nāma*, less well-known and more literary, the versified answers of which are often of a disturbing precision, is that of Shaykh Bahāʾī (d. 1030/1621; see AL-ʿĀMILĪ); it is composed of 48 tables (12 lines each containing 18 letters selected for their numerical values); at the head of the table is the question set (*e.g.*, "Is this news true or false?"; "what will happen to our invalid?"; etc.), paraphrased in two lines of verse; a letter is selected at random; the letters are counted in sixes from the chosen letter; on reaching the foot of the table the six is made up by adding letters from the first line of the table, then continuing in sixes to the chosen letter; two lists of letters are drawn up (one of even letters, the other of odd) starting with those of the first line of the table; thus one obtains the two hemistichs of a verse whose sense then has to be interpreted (example of a precise answer: "Will this association be favourable for me?—This bond will bring you troubles; flee it as one flees an arrow" (table 27).

In addition to these methods, Chardin and other travellers (cf. Massé, *op. cit.*, 247) noted three others based on dice (this practice has not entirely disappeared): in these cases, recourse is made to a specialist known as *fāl-bīn* or *fāl-gīr* (augur) who shakes and then throws the dice (in Persian, *raml*, divination by dice, practised by the *rammāl*; Arabic words distorted from their original meaning); this *raml* is related to the *sortes* of classical antiquity (cf. Fontenelle, *Histoire des oracles*, ch. XVIII).

The *fāl-nāma* of Djaʿfar was translated into Turkish; also there exists in this language (and in Persian) a series of minor works dealing with divination by the lines of the hand, coffee-grounds, beans and chick-peas, stars, molten lead, omoplatoscopy, omens drawn from the quivering of parts of the body, bruises and wounds.

(H. MASSÉ)

FALAK, Sphere, in particular the Celestial Sphere.

a. Etymology and semantic evolution. The word *falak* (pl. *aflāk*) occurs already in the *Ḳurʾān* with the specific significance "celestial sphere" (xxi, 34 "it is He who has created night and day, the Sun and the Moon, each of which moves in its own sphere"; similarly xxxvi, 40). Etymologically and semantically it has a long history: it can be traced back to Sumerian origins, where the stem *bala* (≷ **pilak*) already has the meaning "to be round" or also "to turn around". In Akk. it appears as *pilakku*, which denotes the whorl of the spindle as well as the double-edged axe (to be distinguished from the single-edged axe, Akk. *pāšu*, *paštu* > Syr. *pustā*, Aram. *passā* > probably Ar. *faʾs*; cf. H. Zimmern, *Akkadische Fremdwörter als Beweis für babylonischen Kultureinfluss*, Leipzig 1914, 12). The double significance is readily explained by the resemblance of the whorl with the head of the double-axe, both being round and pierced so as to be mounted on the spindle, or else on the handle. The Akk. word is found again in Syr. *pelḳā*, "(double-) axe" and, with its other meaning, in Heb. פֶּלֶךְ, "spindle". The original Sumero-Akk. form is best preserved in the Talmudic פילכה, "whorl" (also "spindle") used apparently indiscriminately with פלך and פלכה = Ar. *falaka*, of which the abstract technical term *falak*, "(celestial) sphere" is of course a later derivative. The question may be left open whether also Ar. *falaḳa* and *faladja*, which have both

the meaning "to cleave", are derived from the same stem.

On the other hand, the occurrence of the stem *pl-ek (≷ *pl-et, cf. E. Boisacq, *Dictionnaire étymologique de la langue grecque*[2], Heidelberg and Paris, 1923, 793, s.v. πλέκω) in a great many (Eastern and Western) Indo-European languages, in all cases with the meaning "to plait", "to pleat", "to coil", "to twist", "to fold", etc., strongly supports the assumption of a common origin of the Sumero-Akk. and the Indo-Europ. words, but seems to exclude (with the exception of Gr. πέλεκυς and Skr. *paraçú-ḥ*, see below) the possibility of a direct loan. Thus we have the various genuine Greek words for (hair-) curl, coil and similar round objects: πλεκτή, πλεκτάνη, πλόκος, πλόκαμος, πλέγμα etc., while the representative of the second significance: πέλεκυς, "double-axe", alone clearly betrays its Akk. origin. (Against this, cf. Walther Wüst, *Idg. *p'ĕ'leku—"Axt, Beil". Eine paläographische Studie*, in *Suomalaisen Tiedeakatemian Toimituksia*, Helsinki 1956).

In Greek texts dealing with astronomical subjects, derivatives of πλέκω are not too common, though they do occur occasionally, *e.g.*, *Timaeus* 36 D: ἡ δὲ [ψυχὴ] ἐκ μέσου πρὸς τὸν ἔσχατον οὐρανὸν πάντῃ διαπλακεῖσα κύκλῳ τε αὐτὸν ἔξωθεν περικαλύψουσα, αὐτὴ ἐν αὑτῇ στρεφομένη, though here the idea of roundness inheres in the word στρεφομένη rather than in διαπλακεῖσα ("twisted" or "plaited through"). In the *Myth of Er*, however, (*Republic* X, 616 B-617 D), which adumbrates the later elaborate theory of material spheres revolving inside one another, the word used for the (hollow) whorls, σφόνδυλος (= σπόνδυλος, "vertebra") is of course not derived from the stem *pl-ek, but clearly betrays its kinship with mod. Engl. "spindle", "to spin", etc. Its original meaning, though, is the same: the whorl as the "spinning object" giving momentum to the turning axis (now called "spindle") is evidently primary, and the application of the term to human and animal anatomy, secondary. A glance at the two first cervical vertebrae (σπόνδυλοι) of larger mammals suffices to show that they are the ideal prototype of the pierced whorl. Lat. *vertebra*, Engl. *whorl* (or *whirl*), Ger. *Wirtel* and *Wirbel*, all stress the idea of turning or whirling round (*vertere*, *wirbeln*, etc.); conversely, the Arabic word for the vertebra, *fiḳra*, emphasizes the other characteristic of the object, viz., its being pierced (*mafḳūr* or *mufaḳḳar*).

The Gr. word σφαῖρα, finally, which later (Eudoxus, Aristotle, Ptolemy, etc.) became the generally accepted technical term, equally reflects the idea of "turning round", since it is obviously akin to σπεῖρα (*σπερ-ι̯α), "coiling", "spiral". It is this word which we find generally rendered by the Ar. *falak*.

b. Definitions. *falak* thus corresponds with Gr. σφαῖρα and Lat. *sphaera* or *orbis*, while *dā'ira* can be equated with Gr. κύκλος and Lat. *circulus*. Authors writing in any one of the three languages, however, seldom aim at a perfect consistency in the use of these terms. According to al-Bīrūnī (*Al-Ḳānūn al-Mas'ūdī*, i, Hyderabad-Dn. 1954, 54-5), "*dā'ira* and *falak* are two terms that denote the same thing and are interchangeable; but sometimes *falak* refers to the globe (*kura*), in particular when it is moveable (*mutaḥarrik*); *falak*, thus, does not apply to the motionless [globe]; and it is called "*falak*" only on account of its similarity with the whorl of the rotating spindle (*'alā wadjh al-tashbīh bi-falakat al-mighzal al-dā'ir*)". According to Ibn al-Haytham's *Fī hay'at al-'ālam* (Ms. Kastamonu no. 2298, fol. 6r 11 ff.), the term *falak* "applies to any round quantity of a globular body or surface or of the surface (area) or the circumference of a circle; the body surrounding the world, which turns about the centre (viz., of the Earth), is called in particular *falak*, and this *falak* is divided into many parts, but first and foremost into seven parts, which are spherical bodies (*i.e.*, shells) contiguous with one another in such a way that each one of them surrounds the next one, the concave surface of the surrounding [spherical shell] touching the convex surface of the one surrounded by it. The centre of all of these spheres is the centre of the world, and each one of them individually is also called *falak*".

Of the manifold applications of the term *falak* in Arabic astronomical literature, the following may be mentioned with their Greek and Latin equivalents (cf. C. A. Nallino in *Al-Battānī Op. Astr.*, ii, Milan 1907, 348): *f. al-burūdj* = *minṭaḳat al-b.*, ὁ λοξὸς κύκλος, ὁ διὰ μέσων τῶν ζωδίων κύκλος, *ecliptica*; *f. al-tadwīr* (pl. *aflāk al-tadāwīr*) = ἐπίκυκλος, *epicyclus*; *al-f. al-ḥāmil* (pl. *al-ḥawāmil*) = ὁ φέρων τὸν ἐπίκυκλον ἔκκεντρος, *deferens* (= "*levador*" = mod. Span. *llevador* in the Alphonsine *Libros del Saber*); *al-f. al-khāridj al-markaz* = *f. al-awdj* = ἔκκεντρος, *excentricus*; *al-f. al-mā'il* = ὁ λοξὸς κύκλος (τῆς σελήνης), ὁ ἐγκεκλιμένος (τῶν πλανωμένων), *circulus obliquus* (or *deflectens*); *al-f. al-mumaththal li-f. al-burūdj* = ὁ ὁμόκεντρος τῷ ζωδιακῷ κύκλος, *circulus parecliplicus*; moreover, in spherical astronomy: *f. mu'addil al-nahār* = ὁ ἰσημερινός, *circulus aequinoctialis* (the *celestial* equator, not the *terrestrial*, which is called *khaṭṭ al-istiwā'*); *al-aflāk al-mā'ila 'an f. mu'addil al-nahār* = οἱ παράλληλοι (the circles parallel to the equator); *al-f. al-mustaḳīm* = ἡ ὀρθὴ σφαῖρα, *sphaera recta* (the celestial sphere as appearing to the inhabitants of the equatorial region, where the celestial equator passes through the zenith).

c. History. There can hardly be a doubt that the conception of a universe consisting of concentric spheres, in which the celestial bodies are carried around at various distances from the Earth, is very old. The earliest document susceptible of such an interpretation is a tablet in the Hilprecht Collection at Jena, dating from the Cassite period, but copied probably from a much older original (1st Babylonian Dynasty), see F. Thureau-Dangin, *La tablette astronomique de Nippur*, in *Revue d'Ass.*, xxviii, 85-8. According to O. Neugebauer, *The exact sciences in antiquity*[2], Copenhagen 1957, 100, "This text and a few similar fragments seem to indicate something like a universe of 8 different spheres, beginning with the sphere of the moon. This model obviously belongs to a rather early stage of development of which no traces have been found preserved in the later mathematical astronomy, which seems to operate without any underlying physical model. It must be emphasized, however, that the interpretation of this Nippur text and its parallels is far from secure".

While later Babylonian (Seleucid) astronomy thus no longer shows any trace of such a conception, it reappears, in Greece, in the astronomical and cosmological speculations of Plato (*Myth of Er*, see above, and *Tim.* 36 C-D) and of the late Pythagoreans (Philolaos). The former of these two "models" (the Platonic "whorls") leaves out of account the planets' standstills and retrogradations; the latter, which places the hypothetical "central fire" in the centre of circular motion, is capable of explaining them at least in part, owing to the fact that the Earth, too, is

regarded as a planet revolving about the central fire. The first elaborate geometrical model, operating, for each one of the planets, with a set of homocentric (geocentric) spheres revolving about different poles inside one another, was devised by Eudoxus. His model, improved by Callippus, was wrought into a comprehensive (physical) system by Aristotle (*Methaph.* 8, 1073 b 38-1074 a 17), whose aim was to represent and to explain the celestial motions as a whole, from the fixed stars down to the Moon, by the combination of acting and reacting ("unrolling") spheres. This physical model, because of its incapability to account for the varying brilliancy of the planets (above all Venus and Mars, see Simplicius, *Comm. on De caelo*, ed. Heiberg (Berlin, 1894), 504) was later replaced by a new purely geometrical model, based mainly on two theorems of Apollonius (ca. 200 B.C.), in which an eccentric deferent carries around the centre of an epicycle in the circumference of which the planet revolves. This device, which is the governing principle of planetary motion in Ptolemy's *Almagest*, takes into account only the planes (inclined to one another as well as to the ecliptic) of the deferent and of the epicycle, expressly renouncing any attempt at a physical interpretation. In the *Hypotheses*, however, composed after the completion of the *Almagest*, Ptolemy interprets the circles mentioned as sections through solid globes or spherical shells contiguous with one another in such a way that the outer limit of one planetary sphere coincides, without leaving any void, with the inner limit of the next one, counting from the Earth outwards (see *Hypotheses*, Book II, 6, in *Cl. Ptolemaei Opera* II, *Opera astron. minora*, ed. Heiberg, Leipzig 1907; the text of Book II, preserved only in Arabic, is not complete and contains errors). In II, 4, Ptolemy states that it is not necessary to assume *complete* spheres since it suffices (in accordance with the Creator's principle of economy) to postulate, for each one of the planets, the existence of "sawn pieces" or "disks" (Ar. *mans̲h̲ūrāt*, prob. = Gr. πρίσματα) comprised between two circles parallel to and equidistant from the equator of a sphere, in which the whole complicated mechanism of planetary motion is contained. For this reason, Ptolemy's *Hypotheses*, otherwise called *K. al-Iḳtiṣāṣ*, are often quoted by Islamic authors under the title *K. al-Mans̲h̲ūrāt* (see W. Hartner, *Mediaeval views on cosmic dimensions and Ptolemy's Kitāb al-Mans̲h̲ūrāt*, in *Mélanges Alexandre Koyré*, Paris, to appear in 1963 or 1964).

It is, however, the complete, contiguous, spheres, not the spherical prisms (*mans̲h̲ūrāt*) that prevail in Islamic astronomy, starting at the latest by the time of, and with, al-Farg̲h̲ānī (fl. ca. 830 A.D.), whose *Elements of Astrology* were among the first works translated into Latin and served to transmit the late Greek and Islamic views on the structure and the dimensions of the universe to the Latin Middle Ages (Dante, Regiomontanus, etc.). It was not before the end of the 16th century that Tycho Brahe, on the basis of new observations, demonstrated the untenability of the system of contiguous solid spheres (see W. Hartner, *Tycho Brahe et Albumasar*, in *La science au seizième siècle*, Paris 1960, 135-67).

Hochheim, *Die Astronomie des Ġagmînî*, in *ZDMG*, xlvii (1893), 213-75. (W. Hartner)

FALAḲA (Ar.), Turkish: *falaḳa, falāḳa, falaḳ*; Persian: *falaka, falak*; Byzantine Greek: φάλαγγας; Moroccan: *ḳarma, arma.*

One of the favourite punishments of the masters in the Ḳurʾānic schools (see KUTTĀB) was to give the pupil a bastinado on the soles of the feet, more or less severe according to the offence. (There exist detailed scales; see Ibn Saḥnūn, *op. cit. infra*). One or more assistants (*ʿarīf*) immobilized the victim's feet with the help of an apparatus sometimes called *miḳṭara*, but more often *falaḳa*. It existed in three different forms: 1) a plank with two holes in it, of the pillory type; 2) two poles joined at one end; it was possible to confine the ankles by holding the other end tightly; 3) a single, fairly stout pole with a cord fixed at the two ends; the feet were inserted between the pole and the cord and the pole then turned.

Evidence of the existence of the *falaḳa* in the Arab world dates back to the 4th/10th century, but it is quite possible that it was already in use in the eastern half of the Mediterranean area, perhaps under other names, in times of remote antiquity. While in the East, especially among the Turks, it appears that the *falaḳa* was used as an instrument of torture by all kinds of different authorities, in North Africa its use was confined to the schoolmaster. This usage is still very much alive in the Mag̲h̲rib, not only among Muslims but also in the Talmudic schools.

It is interesting to record that the Byzantines possessed an identical apparatus known by the name of φάλαγγας, the use of which was only forbidden in 1829. It seems to have been in common use in Greek elementary schools, whose methods, curricula and customs in other respects also curiously resemble those of the *kuttāb*.

The etymology of the word clearly poses a problem. An Arabic derivation from the root FLḲ, which means to cleave or split, suggests itself at first. The classical Arabic dictionaries (*LA, TA*, etc,) all give *falaḳ/falaḳa* as meaning *k̲h̲as̲h̲aba*, a piece of squared wood (*i.e.*, not unworked wood).

Certain Greek scholars have also considered a Greek etymology (Μεγάλη Ἑλληνικὴ Ἐγκυκλοπαιδεία, Athens 1933, s.v.). This etymology seems to be ruled out by the fact that there is no evidence either of the object or the word before the time of the Turkish conquest.

On the other hand, the form φάλαγγας, despite its close resemblance to φάλαγξ, as much in form as in meaning, is not the only one in existence. The dialect forms φάλακας, φιάλακας, φάλακα, φέλεκας (gender and number uncertain), which are difficult to connect with φάλαγξ, are also to be found.

It seems then more probable to regard it as a Greek borrowing of a Turco-Arabic word which remained almost unaltered in certain Greek dialects, but which, in the written language, was contaminated by φάλαγξ to give φάλαγγας.

If the word appears, pending further information, well and truly of Arabic origin, it still remains possible to regard it as part of a stock common to divers linguistic communities of the Near East. This possibility should be examined not only from

the Semitic, but also from the Turkish and Iranian angles.

al-**FALAKĪ**, Maḥmūd Pasha, was born in 1230/1815 at al-Ḥiṣṣa (province of al-Gharbiyya), and received his early schooling in Alexandria. He subsequently attended, firstly as a pupil, and then as an officer-instructor, the polytechnic school at Būlāḳ (Muhandiskhāne) founded by Muḥammad ʿAlī. In 1850-1 he was sent to Paris, to specialize in astronomy under Arago. He returned to Cairo in 1859. Afterwards he directed the team which, on the orders of the Khedive Saʿīd, mapped Egypt. He lived long enough to see the whole work almost completed, and the section on Lower Egypt in print. He left many writings in Arabic and French, which are enumerated by his biographers. He represented the Egyptian government at the Geographical Congresses in Paris (1875) and Venice (1881). A high dignitary of Freemasonry, and a member of the Egyptian Institute, he was also a member, and later president, of the Geographical Society in Cairo. For two months Minister of Public Works, but removed from this post as a result of the events of 1882, he was subsequently *Wakīl*, and then Minister of Education (*al-Maʿārif al-ʿumūmiyya*). He died in 1303/November 1885.

FALAKĪ SHIRWĀNĪ. Muḥammad Falakī, poet-astronomer of Shirwān and pupil of Khāḳānī, is the author of a lost *dīwān* of Persian poetry, of which 1512 verses have been recovered and published. Falakī lived 49 years, ca. 501/1108 - ca. 550/1155 and like Abu 'l-ʿAlā' and Khāḳānī was a court-poet of the Shirwānshāh Abu 'l-Haydjā Fakhr al-Dīn Minūčihr II, who succeeded his father Farīdūn I on the throne of Shirwān in 514/1120 and ruled for 37 years until *c.* 551/1156. The statement of his contemporary Khāḳānī, that Falakī's life was short-lived and that Manūčihr II ruled for 30 years is not precise, for one of Falakī's odes can be dated 521/1127, and in another Falakī offers condolences to Manūčihr II when his brother-in-law, ex-king Dimitri of Georgia, died between 549 and 551/ 1154-1156. Nowhere does Falakī mention the death of Manūčihr II; he would have done so, if he had survived Manūčihr II; but he describes how Manūčihr II defeated the Alāns and 'Khazars' (in fact Ḳipčāḳs); how with the help of Mīr Ṭughān Arslān (ruler of Arzan and Bidlīs, d. 532/1138) Manūčihr II took (some part of) Arrān from (Nuṣrat al-Dīn) Arslān Abihī (ruler of Marāgha 530-570/1136-1175); how Manūčihr II built the cities of Kardmān and Saʿdūn; and how Manūčihr II rebuilt (in 532/1138) the flood-destroyed Bāḳilānī dam (Band-i-Bāḳilānī) by removing *lān*, leaving *band bāḳī* = "the dam remained". And as for the flood it "went into what remained" (*dar bāḳī shud*), *i.e.*, went into the chains which remained, for *band* also means chains. Such being Falakī's poetry, "how can I reply to his ode?" confesses the well-known poet ʿIṣmat of Bukhārā. Falakī once suffered imprisonment; otherwise he spent a quiet life with astronomy as his hobby; "because of his proficiency in ten sciences, he knew the mystery of the nine heavens", says Khāḳānī.

FALĀSIFA, pl. of *faylasūf*, formed from the Greek φιλόσοφος. By its origin this word primarily denotes the Greek thinkers. Al-Shahrastānī gives a list of them: the seven Sages who are "the fount of philosophy (*falsafa*) and the beginning of wisdom (*ḥikma*)", then Thales, Anaxagoras, Anaximenes, Empedocles, Pythagoras, Socrates, Plato, Plutarch, Xenophanes, Zeno the elder, Democritus, the philosophers of the Academy, Heraclitus, Epicurus, Homer (the poet whose wisdom inspired Greece for, with the Greeks, poetry preceded philosophy), Hippocrates, Euclid, Ptolemy, Chrysippus and Zeno, Aristotle (whose philosophy is described according to Themistius), Porphyry, Plotinus (*al-shaykh al-yūnānī*), Theophrastus, Proclus and Alexander of Aphrodisias. The doctrines attributed to these thinkers are often incorrect or anachronistic, perhaps under the influence of the systemization of Aristotle and the Eclectics. Then the *falāsifat al-Islām* are named. The list is somewhat long; we may mention al-Kindī, Ḥunayn b. Isḥāḳ, Abu 'l-Faradj al-Mufassir, Thābit b. Ḳurra, al-Nisābūrī, Ibn Miskawayh, al-Fārābī, etc. But, he writes, the true representative of the *falāsifa* (*ʿalāmat al-ḳawm*) is Ibn Sīnā, and it is his philosophy alone that he expounds. From this point of view the Muslim *falāsifa* appeared merely as the successors of the Greeks: "They followed Aristotle in all he thought . . . except for unimportant expressions on which they adopted the views of Plato and the earlier philosophers". This judgment needs to be radically revised.

a). The word *falāsifa* has retained in Arabic the general sense of the Greek equivalent. It is thus synonymous with *ḥukamā'* or *ʿulamā'*. This is the meaning it has in al-Djāḥiẓ (*K. al-Ḥayawān*, introd.) where *falāsifat ʿulamā' al-bashar* is compared with *ḥudhdhāḳ ridjāl al-ra'y*, in a passage in which human reason and skill, which in the signs of nature discern the wisdom of God, are compared with animals' instinct, the immediate expression of this wisdom.

b). If the general idea of wisdom (which occurs both in the Ḳur'ān and in the Greek philosophical tradition) remains attached to the term *falsafa*, there is justification for describing as *falāsifa* those Muslim theologians who gave a place to human reason and *ra'y*. Indeed, from the very start of Muʿtazilī thinking there can be discerned, in the

exposition of problems and in methods of reasoning, a Greek influence, transmitted indirectly by the Christian philosophers of Syria (John of Damascus, Theodore Abū Ḳurra). Later, when the logic of Aristotle (the pre-eminent Master and organizer of this branch of learning in the Arabs' eyes) was known directly, it was utilized by the *mutakallimūn*, but less as an instrument of constructive analysis than as a means of exposition and refutation. In this form it quite soon became general throughout Islam, despite the opposition of the strictly orthodox. An instance of this purely dialectical use of logic can be found in the Ẓāhirī Ibn Ḥazm (5th/11th century) at the beginning of his *Fiṣal*, to refute certain philosophically inspired ideas about the eternity of the world. In the thinking of such As͟hʿarīs as al-Bāḳillānī and al-D̲j̲uwaynī, and especially in al-G̲h̲azālī, despite his opposition to the *falāsifa*, the influence of Greece is even more positive. Al-Bāḳillānī's theory of simple substances (atoms) and accidents, the Muʿtazilī doctrines concerning essence and existence or the knowledge that God has of created things before and after their creation, derive among other things from pure philosophy. Moreover the *falāsifa* properly speaking are acquainted with these theological schools and sometimes refer to them in order to determine their own situation. An absolute distinction between them cannot be made.

c). As for the *falāsifa* in the restricted sense of the word, it is not possible to give a clear-cut, exclusive definition. In general, they are the successors of Neo-Platonism, which is itself an eclecticism in which are combined Platonic, Aristotelian, Stoic, Pythagorean and many other kinds of ideas. This Neo-Platonism had been sufficiently flexible to integrate Alexandrian learning, as P. Duhem has shown. In this multiplicity of influences, that of Aristotle is distinguished by the part played by his logic. Seen from this point of view, *falsafa* was a consequence of the translation of Greek writings, and certain translators were themselves the first *falāsifa*. Orientalists, following Renan, have regarded *falsafa* as a sect, and this is the opinion of Muslims in general. But if there is a common body of doctrine and strong resemblances, the originality of each thinker and the existence of different tendencies must not be denied.

The sources of the *falāsifa* are no doubt essentially Greek—Plato, Aristotle and the commentators, especially Alexander and Themistius. But we must also observe the influence of scientific thought, particularly of Galen, the scholar and philosopher, and also that of an intellectualist mysticism deriving from Plotinus, and combining theological and cosmological ideas of gnostic type, the theology and angelology of Proclus, the *Theology* of the pseudo-Aristotle, doctrines of Hermetic origin. All the gnoses of the Alexandrian period, which even then were tinged with Iranism, find an echo in Arabo-Muslim thought. The Sabaeans, with their astrology that was at once scientific and religious, and with their conception of an intermediate world of spirits (cf. the exposé of al-S̲h̲ahrastānī), played a large part. In this situation, Persian-inspired dualism was able to infiltrate without difficulty, either directly or through the S̲h̲īʿī sects, especially Ismāʿīlism. From the theoretical aspect, it is difficult entirely to isolate from *falsafa* esoteric mystics such as Suhrawardī whose speculative thinking is Peripatetic and who speaks of light as Aristotle speaks of substance. The thinking of the *falāsifa* is thus very complex; Ibn Sīnā, a scholar and the disciple of Galen, a logician and follower of Aristotle, a Neo-Platonist, exponent of a mysticism that gave rise to that of Suhrawardī, illustrates in a single harmonious entity the complexity of *falsafa*.

But this description is only entirely true of the first *falāsifa*, al-Kindī and, in particular, al-Fārābī and Ibn Sīnā. What characterizes them is their belief, deriving from Greek electicism, in the harmony between the "two sages", Plato and Aristotle (cf. the treatise of al-Fārābī on this subject). Reason, the instrument of truth, can produce only a single system. Insofar as the *falāsifa* concentrated on defining and developing this single system which came to them from Greece, they do indeed form a single school or sect. But al-G̲h̲azālī, under the inspiration of al-D̲j̲uwaynī, denounces this mistake: reason is not the supreme arbiter (*ḥakam*); there are as many divergencies (*ik̲h̲tilāf*) between philosophers as between theologians. He thus marks the beginning of a second period which is characterized by a better knowledge of Aristotle's works and exemplified in the West by Ibn Bād̲j̲d̲j̲a and, more particularly, by Ibn Rus̲h̲d upon whom al-G̲h̲azālī was not without influence in spite of their obvious differences, and who reacted against Arab Neo-Platonism. In the East, Fak̲h̲r al-Dīn and Naṣīr al-Dīn al-Ṭūsī returned to Ibn Sīnā's doctrine on various important points, while also integrating elements of As͟hʿarī theology with it, in the case of the former, or of mystical esoterism in the case of the latter.

Finally, side by side with this main stream (Ibn Sīnā, al-G̲h̲azālī, and then Ibn Rus̲h̲d in the West, al-Rāzī in the East), a further, and Neo-Pythagorean, stream must be pointed out, represented by the Ik̲h̲wān al-Ṣafāʾ whose esoteric and mystical character is more clearly marked. They accuse other philosophers or theologians of having only partially observed the rhythms of the universe. It is not consonant with Wisdom that beings should go only in multiples of two (matter and form, substance and accident, etc.), or of three (the three dimensions, the three modes of existence—necessary, possible and impossible, etc.), or of four, five, six, seven (doctrine of the septimanians), etc. The Pythagoreans (*al-ḥukamāʾ al-fīt̲h̲āg̲h̲ūriyyūn*) "accept the right of everything which has a right"; since the number includes everything, measures and balances everything, so their thought takes everthing exactly into account. In their eyes, Pythagoras was a sage adoring the single God; they connected him with the philosophers of Ḥarrān.

How are the *falāsifa* as a whole to be characterized?

a). By their vocabulary. It is composed of *iṣṭilāḥāt*, words that are Arabic or calques from the Greek which have assumed a technical meaning. For the expression of the truth, strictly orthodox theology only allows words of divine origin (texts from the Ḳurʾān and from Tradition). However, a large proportion of this vocabulary has been accepted by the *mutakillimūn*. The distinguishing feature of the *falāsifa* is therefore merely the more systematic and independent use which they make of this conventional vocabulary.

b). By logic. As with Aristotle, logic became a true organon (*āla*). It shows from what known starting-point one can reach a certain unknown point, and by what course. It is based on the study of concepts and categories, judgment, syllogism and induction. This analytical and constructive use of logic to discover the structure of truth is not accepted by strict theologians. Al-G̲h̲azālī, however, recognizes that it has a certain value, although not

absolute. On the other hand the *falāsifa*, indirectly following Aristotle, have taken account, in their studies of concept and judgment, of principles enunciated by the Arab grammarians. With logic can be connected the division of the sciences, inspired by the Greeks but varying according to the authors (Ikhwān al-Ṣafāʾ; al-Fārābī: *Iḥṣāʾ al-ʿulūm*; Ibn Sīnā: *Aḳsām al-ʿulūm al-ʿaḳliyya*). Its basis is the tripartite division into sciences theoretical, practical and creative.

c). By their study of natural science. The *falāsifa* were all scholars, sometimes of originality. They integrated astronomy, physics, chemistry and medicine with their general metaphysics which was the source of their fundamental concepts. Nevertheless a spirit of experiment, not unrelated to the Muslim tendency to attach value to the experience of the senses, is clearly revealed.

d). By metaphysics. Here the divergences between authors are more marked. But for all of them, metaphysics is a theory of being, built up on the distinction between the necessary and the possible (being necessary in itself, being necessary through another or possible) or the eternal and the contingent. The pure being of all matter is at once the intellect, the agent which intellectualizes, and intelligible. The interplay of these ideas explains the constitution of the world. For the Neo-Platonists and Arab Pythagoreans, from the One only one can emerge, that is to say the first intellect. Ibn Rushd does not accept this postulate. The first intellect on the one hand intellectualizes the being necessary in itself, thus producing a second intellect; on the other hand, it intellectualizes its own essence, either as being necessary through another and thereby producing the form or soul of the sphere, or else as being possible in itself and so producing the body of the sphere (*djirm al-falak*). Upon this general principle of emanation, many variations are to be found in the expositions by the different authors. This process continues up to the last intellect, that is to say the active intellect. Beneath it are placed the sentient beings of the sublunary world. The active intellect plays an important part in human knowledge, but upon this point the *falāsifa* differ considerably. Emanation is of a different character for the Ikhwān al-Ṣafāʾ. From the Creator (*al-Bāriʾ*) is emanated Intellect, which is the immediate expression of his powers and virtues (cf. Philo of Alexandria). From the intellect is emanated the universal Soul which at once receives the forms of all beings. From this emanates universal matter, a simple intelligible substance like the foregoing, which eventually receives the forms. The first form received is the corporeal form in the three dimensions which constitute a sort of intelligible scale, and in this way the absolute body (*al-djism al-muṭlaḳ*) is attained, where emanation is halted. After this comes the diversity of sentient objects, the universal bodies of the spheres and the elements, the individual and composite bodies of our world.

e). By theology. The *falāsifa* here are in agreement with the *mutakallimūn* and the problem of the attributes of God. They are close to the Muʿtazila in that they seek not to multiply the divine essence. But they differ in that, for them, God is at once the source of existences and essences. Their central problem is that of divine knowledge. God, knowing Himself sufficiently, knows Himself as the cause of everything that is; of all kinds, of all species, of all possibilities that enter into existence, that is to say possibilities which are necessary by their cause, and finally of all individual beings, not by a knowledge which would vary with them, but through a universal species (*bi-nawʿ kullī*). Providence leads to the necessary universal order. The *falāsifa* have a theory as to the Prophet: in general, he is a man so gifted that the active intellect acts on his imagination (while it acts on the intelligence of the wise man).

f). By psychology and morality. Morality is a practical science: moral natures, virtues and characters exist, whose value one can learn by reason in order to gain from it a system of life that conforms with the good. These values are in relation to the human soul. In regard to the metaphysical nature of the soul, theories are diverse and reflect the uncertainties of Plato and Aristotle. But gnostic beliefs are intermixed with them: in the cosmos, the soul has an itinerary to follow, stages of purification to traverse, to regain its place of origin (cf. *Theology* of Pseudo-Aristotle). The Aristotelians such as Ibn Rushd do not accept these ideas. Moreover, in all the *falāsifa* we find a morality based on the Greek psychology of the three souls or powers (rational, irascible and concupiscible) and on the doctrine of virtue as the golden mean. Thus, in *falsafa* we meet two moralities, juxtaposed and co-existent for some (Ibn Sīnā), the one a humanist morality (Ibn Rushd), the other mystical (Suhrawardī). Both are at variance with strict orthodoxy which regards the revelation of the Law as the single source of knowledge of both ethical and religious values. But, in their classification of the virtues within the Greek philosophical systems, the *falāsifa* introduced a considerable number of Islamized Arab virtues, for example *ḥilm* (cf. Ibn Sīnā, *Risālat al-akhlāḳ*).

Thus the *falāsifa* often break away from orthodox Islam, but thanks to *taʾwīl* they could still believe that they were in harmony with the Ḳurʾān, from which they quoted unfailingly. But they quoted it purely as evidence, without incorporating it in the body of their argumentation. Thus the theologians, so far as they depart from the revealed texts, are opposed to them. This is how Abū Ḥayyān al-Tawḥīdī speaks of the Ikhwān al-Ṣafāʾ (*K. al-Imtāʿ*, 17th Night). According to them, the Law has been profaned by foolish ignorance and confounded by error. It must be purified by philosophy. By harmonizing Greek philosophy and Arab law, perfection is reached. But their *Epistles* are no more than "ramblings" consisting of "scraps strung together in a kind of patch-work". They have "woven a philosophy in secret" out of the science of the stars and spheres, the *Almagest*, the knowledge of the greatness and works of nature, music, logic. Now there is no question of these sciences in the Revelation. The Muslim community is divided into sects, but none of them has had recourse to the *falāsifa*. "What is the relation between religion and philosophy? (*ayna 'l-dīn min al-falsafa*?)", between what is derived from a heavenborn revelation and what is derived from fallible personal opinion? The prophet is superior to the philosopher. As for reason, it does not pertain in its entirety to any one man, but to mankind as a whole. And al-Tawḥīdī proclaims the ambition of philosophers: their wish is, not to cure men of their maladies, the task to which the prophets confine themselves, but rather to preserve the health of those who possess it. They aspire to the most exalted happiness and to a dignity, thanks to which man becomes worthy of the divine life. But in that case what purpose would the Revelation serve?

For al-Ghazālī (*Munḳidh*; *Maḳāṣid*), certain parts

of philosophy are without danger to the faith, provided that good is made of them: these are mathematics and logic. Physics is also admissible, on condition that it is never forgotten that the only causality is that of God. The useful sciences such as medicine are the *ʿulūm al-dunyā*, and ought to be studied, at least by some (*farḍ kifāya*) for the general good, since life in this world contains the germ of the future life and it must not be neglected (cf. *Iḥyāʾ ʿulūm al-dīn*, ch. on Science). Certain sciences are harmful, like magic and the science of talismans (which still come into Ibn Sīnā's classification); they must be rejected. As for the theology of the *falāsifa*, this is frankly bad, since it teaches that bodies are not resurrected, that it is disembodied spirits that are rewarded or punished, and that penalties are spiritual, not bodily. Moreover, the theories of the eternity of the world and of the knowledge of God who knows only the universals are complete heresies (*kufr*). On the other hand, the doctrine which reduces the divine attributes to essence is not *kufr* in the eyes of al-Ghazālī since the Muʿtazila, who cannot be charged with infidelity, adhered to it. Finally, the political theory of the *falāsifa* is taken from the ancient prophets (*salaf al-anbiyāʾ*), a very ancient idea which Philo of Alexandria had already rejected; and their moral philosophy is inspired by the mystics. From the end of the period of antiquity the opinion was widespread that Plato was an initiate and inspired.

For al-Shahrastānī (6th/12th century), philosophers are men of passions (*ahl al-ahwāʾ*), that is to say men who follow their own judgment and who must be distinguished from those who follow a revelation (*arbāb al-diyāna*), to whom they are diametrically opposed (*taḳābul al-taḍādd*). Later, Ibn Taymiyya (7th-8th/13th-14th centuries), in the *K. al-Radd ʿalā 'l-manṭiḳiyyīn*, denounces the uselessness and inconsequence of the logic of the *falāsifa*. Finally we may mention Ibn Khaldūn (8th/14th century) who attacked philosophy in his *Muḳaddima* (*Ibṭāl al-falsafa*). Philosophers think that it is reason, not tradition, which confirms the truth of the foundations of the faith. They proceed by successive abstractions, reach the first intelligibles and then integrate them to establish sciences in the manner of second intelligibles. The soul which, in purifying itself, comes to the sciences, experiences joy and has no need of the illumination of the Law. The soul that is ignorant is in affliction. Such is the meaning of the rewards and punishments of the other world. But this opinion is false: when they relate all beings to the first intellect and find this a satisfactory means of reaching the necessary, they reveal a lack of vision in regard to the actual organization of the divine Creation, which surpasses any representations of it that they give. Existence is too vast for man to be able to embrace it in its entirety.

These criticisms make it possible to place the *falāsifa* in relation to orthodox Muslim ideals. But they give too sharp a definition of outline to *falsafa*. In reality, the philosophers of Islam remain truly Muslim, in touch with the theologians and with the mystical elements which have not tried to break away from the teaching of the Ḳurʾān. As for the legacy of Greece, this was first acquired by the Muslim world as a whole, in spite of the opposition raised by strict orthodoxy. If it appears to be systematized in their doctrines, its influence is far from being limited to the *falāsifa* alone. It is therefore impossible to regard *falsafa* as a sect sharply differentiated from the general cultural and spiritual movement which is the pride of Muslim civilization.

(R. Arnaldez)

FALCONRY [see bayzara, čakïrdji-bashï, doghandjï]

FALLĀḤ [see filāḥa]

FALLĀḤIYA [see dawraḳ]

FALLĀḲ, an Arabic word used particularly in the Beduin dialect form *fəllāg*, pl. *fəllāga* (in the western press principally in the pl., with the spelling: *fellaga, fellagah, fellagha*), and denoting in the first place the brigands and subsequently the rebels who appeared in Tunisia and Algeria.

A connexion with *falaḳa* [*q.v.*] "instrument of torture", of which the etymology is, in any case, obscure (see *Arabica*, 1954/3, 325-36), is certainly to be ruled out. On the other hand, the Arabic root FLḲ (comp. FLDJ, FLḤ, etc.) seems worthy of retention; Tunisian rural and nomadic dialects make use of *fləg* "deflower, violate", *fəlləg* "split, cleave (wood), split in two (skull)", etc. (M. Beaussier, who gives *felleg* "split" as well as the 5th and 7th forms and other derivatives of the root, is acquainted with a *fellāg* in the Algerian South meaning "of which the stone is easily detached (peach)", while G. Boris, *Lexique du parler arabe des Marazig*, Paris 1958, has only recorded the 7th form, and it is to this root that the Tunisians (who have coined a 10th form *stəfləg* "to take to the hills") generally relate the intensifying adjective *fəllāg*). Originally the term was applied to individuals who wished to escape punishment, to deserters, and to fugitive offenders, who eventually formed bands supporting themselves by brigandage. The first lexicographer to have noted *fallāḳ* is E. Bocthor, who may well have created it himself in order to translate the French word *pourfendeur*; H. Wehr, *Wörterbuch*, on the other hand, lists it with the sense of "bandit, highwayman", but this is obviously a recent usage of the Arabic press, which, moreover, finds the term too pejorative to use it as freely as does the European press.

The real popularity of the word, however, dates from the beginning of the first world war, and the uprising brought about by Khalīfa b. ʿAskar [*q.v.*] in southern Tunisia; these rebels were in fact designated by the name of *fellāga*, less perhaps by the Tunisians themselves, than by the French troops. Somewhat forgotten between the wars, the term was resurrected on the occasion of the incidents which occurred in Tunisia between 1952 and 1954: the whole of the western press used it to describe the rebels who, for political reasons, formed armed groups fighting against the French army. When the Algerian rebellion broke out in 1954, the term was quite naturally applied to the outlaws, and then to the combatants of the rebel army. It is thus that a Tunisian colloquialism was borrowed by the French army and then by the French press, subsequently spread into western newspapers and the Algerian dialect of Arabic, and made its appearance in the Arabic press in the classicizing form *fallāḳ*.

(Ch. Pellat)

FALLĀTA, although strictly signifying the Fulānī [*q.v.*], is used in the Nilotic Sudan generally for Muslim immigrants from the western *Bilād al-Sūdān*, and in particular for those from northern Nigeria. The term has largely superseded the older *Takārīr* or *Takārna* (which had a similarly loose application), presumably after the Fulānī conquests under ʿUthmān dan Fodio. The Takārīr/Fallāta immigrants are primarily pilgrims *en route* to Mecca: their first appearance in the Nilotic Sudan can hardly have been before the establishment of

Muslim sultanates in Dār Fūr [*q.v.*] and Waddāī during the 11th/17th century. Many have become domiciled in the territories which now compose the Republic of the Sudan. Takārīr founded a border state in the Ḳallābāt (Sudanese-Abyssinian marches) in the 18th century; its ruler, Shaykh Mīrī, submitted to the Turco-Egyptian governor of Sinnār in 1245/1829-30. A Fallāta settlement exists at the southern end of Djabal Marra in Dār Fūr. Some Fallāta/Takārīr settlers in Dār Fūr and Kurdufān have intermarried with local Baḳḳāra, become arabized, and now constitute tribal sections. More recent immigrants form an important element in the labour-force of the Republic of the Sudan, as domestic servants, and as labourers employed by the tenants of the Gezira (cotton-growing) Scheme; see Saad Ed Din Fawzi, *The Labour Movement in the Sudan*, London 1957, 5-8.

Bibliography: An important account of the Takārīr pilgrims in the early 19th century is given by J. L. Burckhardt, *Travels in Nubia*, London 1819, 406-14; more generally, see under Felláta (and also Takárír) in the Indexes of H. A. MacMichael, *The Tribes of northern and central Kordofan*, Cambridge 1912; and idem, *A History of the Arabs in the Sudan*, Cambridge 1922. (P. M. Holt)

FALLŪDJA, name of two districts (*ṭassūdj*) of ʿIrāḳ, Upper and Lower Fallūdja, which occupied the angle formed by the two arms of the lower Euphrates which flow finally into the Baṭīḥa [*q.v.*], the Euphrates proper to the west (this arm is given various names by the geographers and is now called Shaṭṭ al-Hindiyya) and the nahr Sūrā (now Shaṭṭ al-Ḥilla) to the east.

Bibliography: Suhrāb, *K. ʿAdjāʾib al-aḳālīm al-sabʿa*, ed. H. von Mžik, Leipzig 1930, 124-5; Ṭabarī, index; Balādhurī, *Futūḥ*, 245, 254, 265, 457; Bakrī, index; Yāḳūt, s.v.; Yaʿḳūbī-Wiet, 140; Masʿūdī, *Murūdj*, v, 337; A. Musil, *The middle Euphrates*, 125; Le Strange, 74; Caetani, *Annali*, ii, 942-3, iii, 259-60; M. Canard, *H'amdânides*, 148. (Ed.)

al-**FALLŪDJA**, name of an ancient locality, still existing, of ʿIrāḳ; it is situated on the Euphrates down-stream from al-Anbār [*q.v.*] and near Dimmimā, from where the nahr ʿĪsā branched off towards Baghdād. At al-Fallūdja nowadays the main road from Baghdād crosses the Euphrates.

Bibliography: Muḳaddasī, 115; Suhrāb, 123; Iṣṭakhrī, 84; Ibn Ḥawḳal, 165; Musil, *The middle Euphrates*, 269-71; Le Strange, 66, 68 (distinguishing two villages of the same name, the second at the point where the nahr al-Malik branches off; but there seems to be some confusion here); M. Canard, *H'amdânides*, 147. (Ed.)

FALS (pl. *fulūs*), the designation of the copper or bronze coin current in the early centuries of the Islamic era. The term *fals* for copper coinage, like those of *dīnār* and *dirham* for gold and silver, is of Greek origin, deriving from φόλλις, the name of the Byzantine copper coin. *Fals* denotes any and all copper or bronze coins, regardless of size or weight. The system of varying denominations in which Byzantine copper coinage was originally issued seems already to have disintegrated prior to the Arab conquests. By the time the Arabs arrived in Syria, there was little, if anything, left of the graduated monetary system of copper coinage (cf. Ph. Grierson, *Coinage and Money in the Byzantine Empire*, in *Settimane di studio de centro italiano di studi sull'alto medioevo*, viii, *Moneta e Scambi nell'alto Medioevo*, Spoleto 1961, 437). This point deserves special emphasis, because it explains why the Arabs issued only one standard copper coin without any denominational differentiations. They imitated the system they found prevalent in the former Byzantine territories, and the pattern established in the early years of their rule continued throughout the Umayyad and ʿAbbāsid Caliphates. The glass *fals* weights issued in Egypt during most of the eighth century in denominations of from nine to thirty-six *kharrūbas* may indicate a possible exception. However, the exact use of these glass coin weights is a problem that remains yet to be solved (cf. G. C. Miles, *On the varieties and accuracy of eighth century coin weights*, in the forthcoming memorial volume for Leo A. Mayer).

The copper coins previous to the monetary reform of ʿAbd al-Malik (ca. 77/696) fall into three broad categories.

Arab-Byzantine: Immediately following the conquests the Arabs continued to strike copper coins almost exactly as they found them—religious formulae, obsolete dates and all. These imitations, frequently barbarized, are probably the earliest extant Islamic coins. While the basic Byzantine types were maintained until ʿAbd al-Malik's reform, various modifications of an Arabicizing nature were introduced before that date. Among the most important of these are the addition in the margin of short religious formulae, indication of the mint in Arabic characters, the addition of words such as *baraka*, *ṭayyib*, etc., as well as the occasional mention of the governor or local *ʿāmil* under whose authority the coin was issued. The most interesting departure from the Byzantine style is to be found in the "Standing Caliph" type, on the obverse of which the sword-girt figure of the Caliph dressed in typical Bedouin garb displaces the likeness of the Emperor with his cross, crown and orb, while maintaining a modified form of the reverse Byzantine type. The stance of the Caliph appears to be an attempt to portray him in the posture of leading the prayer service. The fact that all five extant *dīnār*s of this type, as well as most of the *fulūs*, date from the early part of ʿAbd al-Malik's reign, and immediately precede his monetary reforms, is an indication that these coins are to be considered as a transitional type through which the emerging Islamic state was attempting to find an appropriate iconographic form for its coinage (cf. John Walker, *A Catalogue of Muhammadan coins in the British Museum*, ii, London 1956, pp. xxviii-xxxii, 22-43).

Arab-Sāsānian: These copper coins are very rare. They have the regular Sāsānian bust on the obverse, and some modification of the fire altar and attendants on the reverse. (For examples cf. Walker, *Catalogue*, i, 73, 125, 161, 170-2, and G. C. Miles, *Excavation coins from the Persepolis region*, New York 1959).

Byzantine-Pahlavi: This type exists only in copper. These coins represent a unique combination of Byzantine and Sāsānian elements, with the obverse usually following the Byzantine model, and the reverse the Sāsānian one (cf. Walker, *Catalogue*, ii, pp. li-liii, 81-3).

The purely epigraphic, non-pictorial coin which resulted from ʿAbd al-Malik's reforms appeared in copper somewhat later than in gold and silver. The earliest preserved dated epigraphic *fals* is of the year 87/705-6 struck at Damascus. The effect of the reform on the copper coinage was purely epigraphic with no metrological aspects as in the case of gold and silver (cf. Ph. Grierson, *The monetary reforms of*

ʿAbd al-Malik, in *JESHO*, iii, 246-7). Neither the size, weight or epigraphic content of the copper coins was uniform. They all contained some religious formula, and sometimes the mint, date and names of the issuing official or officials.

Unlike the centralized system of copper minting in Byzantium, its emission in Islam was highly proliferated and decentralized. In the period immediately preceding the conquests there were twelve known copper mints in the entire Byzantine Empire, only three of which were in Syria, Egypt and Africa. Under the Umayyads there were fifty-three known copper mints, thirty-three of them in the former Byzantine provinces. The number of mints increases to eighty-three under the ʿAbbāsids, with most of the new mints in the eastern part of the Empire.

Copper coinage was a token currency issued to fill the need for petty commercial transactions, and passed by tale and not by weight. Its emission was left to the discretion of governors and local authorities, without any centralized control. As a result, the *fals* varied greatly in weight, size, and probably value from one district to another. The weight variation was sometimes as much as five grams between contemporary *fulūs* from different mints (*e.g.*, a *fals* from al-Mawṣil dated 157 weighs 10.63 grams, while one of Bag̲h̲dād from the same year weighs 5.42 grams). It is for these reasons that the circulation of the *fals*, unlike that of the *dīnār* or *dirham*, was limited to the near vicinity of its emission.

This may help to explain why small sums of money are so infrequently expressed in the written sources in terms of *fulūs*, but rather in terms of minute weights of gold and silver. Such small sums as 1/144th or 1/288th of a *dīnār* mentioned in the Arabic papyri, or the fractional division of the *dirham* into *ḳīrāṭ*, *dāniḳ* and *ḥabba* have no counterpart in actual gold or silver coins. These are rather monies of account pegged to the fluctuating and diversified value of the *fals*, and were the only standard way to express small sums of money.

The simultaneous circulation of coins in gold, silver and copper implies a fixed and known rate of exchange between them. We possess occasional references to the established ratio between *dīnārs* and *dirhams* and its periodic modifications, but our knowledge of the ratio between these denominations and *fulūs* is poorly documented. That such a ratio existed in Umayyad and ʿAbbāsid times is known from various anecdotes (*e.g.*, Ibn Abī Uṣaybiʿa, *ʿUyūn*, i, 185; Ibn K̲h̲allikān, *Wafayāt*, tr. de Slane, ii, 125), from legal discussions related to the problems of converting *dirhams* into *fulūs* and *vice versa* (cf. material collected by H. Sauvaire, in *JA*, vii/15, 262-6), and from al-Ṭabarī's rendering of the amount in *dirhams* spent on the construction of Bag̲h̲dād into its equivalent in *fulūs* (*Taʾrīk̲h̲*, ed. de Goeje, iii, 326). For Mamlūk Egypt al-Maḳrīzī (*Traité des Famines*, in *JESHO*, v, 68-9), and others (cf. references in Grohmann, *Einführung*, 218) provide us with some information on the *dirham*: *fals* ratio. All these sources indicate a ratio fluctuating between twenty-four and forty-eight *fulūs* to the *dirham*.

During the first half of the 3rd/9th century there was a sudden cessation of copper minting throughout the Islamic world. This scarcity of copper coinage lasted for several centuries. That the absence in our collections of *fulūs* for this period is not a mere coincidence is confirmed by the results of excavations at such important Islamic sites as Rayy, Persepolis (Iṣṭak̲h̲r) and Antioch. From among the large number of copper coins found at these sites only one dates after 207/822. The only exception to this general pattern are the mints of Transoxania. The mints of Buk̲h̲ārā and Samarḳand have a continuous series of copper coins throughout the late ninth and tenth centuries. The absence of copper coinage in western Europe during most of the Middle Ages is ascribed to the self-sufficient nature of the feudal system and to the negligible volume of petty trade, an explanation which is eminently unsuitable for the Islamic world of the 3rd/9th to 6th/12th centuries. An explanation of this phenomenon may be connected with the inflationary trend created by the greatly increased production of silver and gold which occurred at this period, and which would have made the production of copper coins more expensive and less necessary.

The plural form *fulūs* persisted in use as the designation of the autonomous copper coins of Persian localities in the eighteenth and nineteenth centuries (*e.g.*, R. S. Poole, *The coins of the Shāhs of Persia*, London 1887, 212-61). To the present day *fils* designates the petty coin of ʿIrāḳ and Jordan, and the plural *fulūs* (*flūs*) is a general term for money in colloquial Arabic in Egypt, Morocco and elsewhere.

(A. L. UDOVITCH)

FALSAFA, 1. — Origins. — The origins of *falsafa* are purely Greek; the activity of the *falāsifa* [*q.v.*] begins with Arabic translations of the Greek philosophical texts (whether direct or through a Syriac intermediary). Thus *falsafa* appears first as the continuation of φιλοσοφία in Muslim surroundings. But this definition leads at once to a more precise formulation: since strictly orthodox Sunnī Islam has never welcomed philosophic thought, *falsafa* developed from the first especially among thinkers influenced by the sects, and particularly by the S̲h̲īʿa; and this arose from a certain prior sympathy, such sects having absorbed gnostic ideas, some related to Hellenistic types of gnosis, others to Iranian types—for Persia is known in any case to have been an influence on religious and philosophical speculation throughout the Eastern Mediterranean since the Alexandrian epoch.

But it is more difficult to give precise significance to the concept of a Greek legacy; Greek thought is far from unified. Though *falsafa* may be called a continuation of Greek thought there is no perfect continuity, since the Arabic-speaking Muslims were not part of the movement in which φιλοσοφία was developing. They were forced to integrate themselves into it as if foreign bodies: they could not simply follow on; they had to learn everything, from the pre-Socratic teachings to the writings and commentaries of Proclus and John Philoponus. They started therefore from an acquired knowledge of a con-

spectus of Greek thought, comprehensive and abstract, which they envisaged as a separate culture lacking any historical dimension. They were not unaware that thought had a history but this knowledge came almost exclusively from their reading of Aristotle, and in practice, for them, he seems the culmination of this movement; after him, they only see commentators or works written under his direct inspiration. Even Neoplatonism itself is not viewed as an original system but in the light of a generalized Aristotelian influence.

It would be an easy solution of this difficulty to describe *falsafa* as having assumed one particular form of post-classical Greek thought: eclecticism, which had already appeared in the middle period of Stoicism and exercised considerable influence in the development of Neoplatonism. Certainly this school, in spite of its internal diversity, favoured the development of *falsafa* and contributed to the spread of the belief that Greek philosophy was unified. A text such as the *Theology* of the pseudo-Aristotle would confirm this belief. Nevertheless it is difficult to suppose that the *falāsifa* failed to notice the differences, not only between Aristotle and Plato, but also between the commentators, or that they passively took over eclecticism, which is itself a synthesis and in any case necessarily varies from one writer to another. Primitive *falsafa* could not establish itself as a "sect" (to use the term employed by Renan) except insofar as it borrowed from Hellenistic and post-Hellenistic philosophy a common form, a general concept of the world, a comprehensive theory of the spirit, the soul, man and human knowledge, with a technical vocabulary to become the familiar jargon of the schools. In detail, beyond the structural uniformity, each *faylasūf* made his own choice, and the first *falsafa* is much more original than one would suppose if it were described as nothing but Arab Neoplatonism.

2. — Utilization of Greek sources. — Ibn al-Ḳifṭī (568-646/1172-1248), though remote from the beginnings and later than al-G̲h̲azālī, provides some interesting information. He enumerates seven sects of Greek philosophy, adding that the two principal ones are that of Pythagoras and that of Plato and Aristotle. He considers in fact two great sections of Greek philosophy: natural philosophy, which is that of the ancients, exemplified by Pythagoras, Thales of Miletus, the Sabaeans and the Egyptians; and "political" philosophy, which characterizes the moderns, with Socrates, Plato and Aristotle. He explains that this division comes from Aristotle. But he does not separate them absolutely, since he goes so far as to say that Plato achieved the level of Pythagoras in the study of intelligible realities (*fi 'l-umūr al-ʿaḳliyya*) and the level of Socrates in the questions of the constitution of the perfect city (*fī siyāsat al-madīna al-fāḍila*). Thus in the eyes of the Muslims philosophy, culminating in Aristotle, the disciple of Plato, is a synthesis which studies the universe in relation to human life, which views man in the whole and which conceives of the whole as the medium in which man by knowledge and virtue realises his ultimate goal in re-discovering the principle of his being. The philosophy of nature opens out into a mystical cosmology in which the central concept is the Stoic *cosmopolis*. It is comprehensible that in this light Neoplatonism, which embodies all these viewpoints in one system, should have appeared to them as the final formulation of a philosophic ideal in harmony with the religious ideal put forward by a more or less heterodox form of Islam. It is clear that the primary motive for the choice of *falsafa* is religious by nature, since the *falāsifa* always rejected with horror that type of thought also offered by ancient Greece, known as that of the *dahriyya* [*q.v.*], of whom Ibn al-Ḳifṭī also says: "This is a sect of ancient philosophers who deny the Creator, the director of the Universe. They assert that the world has not ceased to be what it is in itself, that it has no creator who made it and freely chose to do so; that the circling motion has no beginning, that man comes from a drop of sperm, and the sperm from man, the plant from the seed and the seed from the plant. The most famous philosopher of this sect is Thales of Miletus; those who follow him are called *zanādiḳa*".

Since Thales was classed among the "physicists" (*ṭabīʿiyyūn*), it is clear that there are in fact two kinds of physicists: those who are purely materialist and rejected, and those who may be taken over by the "metaphysicists" (*ilāhiyyūn*) as Pythagoras is by Plato. It may be argued that Aristotle, in spite of his metaphysics, does not lend himself to use by religious thought: God, νόησις νοήσεως, is not the efficient cause of the world; He is the end, but not the principle. In reply it could be said that the *Ut̲h̲ūlūg̲h̲iyā* intervened here most aptly, "since it seemed to present the theodicy absent from the *Metaphysics*, though itself brief on the divine attributes and silent on the creation" (A. M. Goichon, *La Philosophie d'Avicenne et son influence en Europe médiévale*, Paris 1951, 12). But it should not be forgotten that Porphyry, the disciple of Plotinus, had steeped himself in Aristotelian thought and saw no opposition in it to that of Plato. Equally, the Neoplatonic commentator Simplicius (6th century), educated both in Alexandria and Athens, had already attempted to harmonize the systems of Plato and Aristotle (as al-Fārābī was to do). Now Simplicius, who had emigrated to Persia upon the closure of the School of Athens by Justinian in 529, was well known to the Muslims (cf. Ibn al-Ḳifṭī: art. *Samlis*). Syrianus also (*ibid.*, art. *Sūryānūs*) was as frequently quoted by the specialists; and he, though he did not believe that the two sages of antiquity were in agreement, at least saw the study of Aristotle as a preliminary to the understanding of Plato. The Muslims therefore did not lack precedents authorizing them not to make too great a gulf between the two great masters of Greek thought.

Nevertheless it would appear that the 'Plotinus source', as F. Rosenthal calls it (*Aš-Šayḫ al-Yūnānī and the Arabic Plotinus source*, in *Orientalia*, xxi (1952), xxii (1953), xxiv (1955), played very much a major rôle, together with the *Ut̲h̲ūlūg̲h̲iyā* which is related to it. On this point P. Kraus, *Plotin chez les Arabes, Remarques sur un nouveau fragment de la paraphrase des Ennéades*, in *BIÉ*, xxiii (1940), 41, may also be consulted.

Thus everything combined to give a Neoplatonic form to the meeting of Plato and Aristotle in Muslim thought. P. Duhem (*Le système du monde*, iv, 322) observes that Neoplatonism permitted the conservation in a single harmonious whole of what could be saved of the Aristotelian theory of the universe together with what theology claimed.

At the same time certain elements of the Greek inheritance could not be absorbed with comfort in this synthesis. On the one hand, the whole Gnostic, or, rather, theurgic tradition as it developed from Iamblichus to Proclus, becoming burdened with Egyptian and Hermetic ideas, preoccupied with every religion and every god, developing a fantastic

angelology, was ready to fuse with the mystic concepts of Persia and India and revivify that esoteric cult which is still alive. These tendencies, subjugated to the discipline of *falsafa* by Avicenna, were to flourish freely in the philosophy of *Ishrāḳ*. On the other hand, an Aristotelianism which had remained more faithful to Aristotle, confining itself to the correction of those points where he displayed weaknesses, difficulties, obscurities or incoherence, had never ceased to be represented in the post-Hellenistic period up to the 6th century. Alexander of Aphrodisias (2nd century) tries to explain Aristotle and defend him against the doctrines of other schools. In doing so, he insists on the naturalist aspect of his teaching and professes a nominalism. The universal exists only in human thought; "separated from the intellect which thinks it, it is destroyed." Thus it neither preexists particular things nor is drawn from them; it appears only as a consequence of the experience which thought has of these things: thus the soul is a form of the body and cannot subsist without it. As for the doctrine of the intellect, a distinction must be drawn between the νοῦς φυσικός or ὑλικός (natural or material, which is potential), the νοῦς ἐπίκτητος or καθ' ἕξιν (acquired and possessing the habitus of intelligible thought), and the νοῦς ποιητικός which makes the transition from the potentiality of the former to the habitus of the latter but which does not belong to the human soul, coming to it from outside (θύραθεν). This theory of the intellect was to be the constant subject of consideration in the *falsafa* of every age. But the Aristotelianism of Alexander was especially to characterize the Western philosophers: Ibn Bādjdja (Avempace) and particularly Ibn Rushd (Averroes) and to exercise some influence in the East on the thought of Fakhr al-Dīn al-Rāzī. It is thus associated with a transformation of primitive *falsafa* which takes place in consequence of al-Ghazālī's criticism of the *falāsifa*. We should also refer to Themistius (4th century), a late Peripatetic: he uses Plato, believing him in agreement with Aristotle, but "prefers to the novelties of Neoplatonism that more ancient Platonic-Aristotelian philosophy" (W. Stegemann, *Real Encyclopädie*, art. *Themistios*). He was above all interested in ethics, to which he regarded logic and physics as merely ancillary. This idea passed into *falsafa*. His aim was practical; he wished to render Aristotle more easily accessible, in "paraphrases" in which he gathered together the ideas of the master clearly and concisely. This is why the Muslims turned frequently to him; some indeed adopted his method of exposition by means of paraphrase.

Falsafa, as an encyclopaedic system of knowledge, also owes much to the physician Galen (2nd century). He again is the author of an original and very wide electicism. He made explicit the idea that medicine is founded on a philosophical basis, an idea which was to dominate the activity of the *falāsifa*, who were nearly all savants and physicians. In logic, physics, and metaphysics Galen bases himself on Aristotle, but his eclecticism is touched with Stoic ideas and it is in part through him that Islam made the acquaintance of the Stoa. In psychology, he follows the Platonic teaching of the tripartite division of the soul. Though concentrating on the study of positive reality as accessible to experience, he believes in the existence of God and in Providence, which is manifested in the harmony of the parts of the universe and the bodily organs. Fakhr al-Dīn al-Rāzī depends on him, at the beginning of his commentary on the Ḳur'ān, in order to demonstrate the sympathy of all beings in the universe, from which it follows that the slightest search is linked with every other. Nevertheless, though Galen integrated philosophy with science and thus laid the foundations for a system to be found in every Muslim philosopher, he did not distract *falsafa* from its Neoplatonic preference, for he nourished a philosophical literature "which, starting from the Timaeus of Plato and passing through the commentary of Posidonius on the Timaeus, ended in Neoplatonism" (Ueberweg, *Grundriss der Geschichte der Philosophie des Altertums*, Berlin 1920, 576). At the same time Galen represents above all to the Muslims, if we may believe Ibn al-Ḳifṭī, a physical philosopher (*favlasūf ṭabīʿī*) who understood the method of demonstrative proof (*ʿālim bi-ṭarīḳ al-burhān*) and applied it to all sciences. He concerned himself with the problem of distinguishing causes (the question of the *asbāb al-māsika* to which Ibn al-Ḳifṭī draws attention), an important problem which is equally central in Proclus and over which *falsafa* and *kalām* were to divide.

Another commentator of Aristotle familiar to the Muslims is John Philoponus (Yaḥyā al-Naḥwī). He was a Christian, who contested with Proclus the doctrine of the eternity of the world, basing himself primarily on considerations of physics. In this manner he demonstrated that the scientific spirit, freed from the extremist metaphysics of the Athenian Neoplatonists, could have room for the fundamental dogma of revealed monotheism.

The Greek heritage is therefore a very varied body of doctrines and trends of whose multiplicity the Muslims were not unaware. Thus *falsafa* had to make a choice, and this explains the varied forms it assumed from time to time, reflecting no doubt different philosophical temperaments but also religious attitudes to dogma and theology and to the history of the sects and of *kalām*.

3. — The establishment of *falsafa*. — The influence of translations is of prime importance. But that *falsafa* was born at all is due to the fact that most of the translators were also original thinkers. Original work was often linked to the translation by the intermediary of commentary. Thus Ḳustā b. Lūḳā made use of technical language gleaned from translations to produce individual work, as shown in the *Book of characters* (ed. P. Sbath, in *BIÉ*, xxiii (1940-1)). Ibn al-Nadīm (d. 386/996) appreciated his value as a philosopher. Ḳustā reveals great subtlety in analysis, and a spirit of synthesis which enables him to borrow from the different sciences whatever material he needs to deal with his subject. It is important to note that a thinker like al-Kindī, who is revered by posterity as a philosopher and savant, is also a translator. Moreover, all the great *falāsifa* applied themselves to commentaries on Greek texts. Thus, *falsafa* does not follow from works of translation and commentary; it is born amongst them and continues them; its lexicon (*iṣṭilāḥāt*) was not written as a purely philological exercise unrelated to it; *falsafa* gained definition by an undertaking which combined translations, commentaries, personal reflections and practical examples.

4. — The first period of *falsafa*. — This could be called Avicennan. It takes shape in the East between the 3rd/9th and the 5th/11th centuries, with al-Kindī, al-Fārābī, and Ibn Sīnā (Avicenna). It is a synthesis of Neoplatonic metaphysics, natural science and mysticism: Plotinus enriched by Galen and Proclus.

This first *falsafa* is quite distinct from the *kalām* which preceded it (Muʿtazilī *kalām*); although it takes pleasure in the rediscovery of Ḳurʾānic texts or ideas, it does not make them a starting point, but is presented as a method of research independent of dogma, without, however, rejecting the dogma or ignoring it in its sources. Nevertheless, its problems are not unrelated to those of theology. The Muʿtazila, in order to preserve the absolute transcendence of the divine unity, had distinguished essence from existence in created beings. For them, there was in God no paradigm (*mat̲h̲al*) for the essence of the creature, and creation consisted simply in bestowing existence on essences which were in "a state of nothingness". The creative act was conceived in a positive sense as what causes essences to pass from non-existence to existence (*lam yakun fayakūnu*). God, Whom nothing resembles, was therefore beyond the essence and the existence of creatures here below. The first *falsafa* is based on an ontology which also makes a distinction between essence and existence. But it did not find the idea of creation *ex nihilo* in the Greeks. It preserved the absolute transcendence and unity of God by introducing precisely this distinction between essence and existence in all beings other than the Godhead. For God alone, existence is identical with essence. But for this reason He is the unifying and unique mainspring of the two orders of being. Thus this *falsafa* unites seemingly contradictory concepts of the universe; on the one hand there is a First Principle in whose unity are rooted both the essences and the existences of all beings, and in consequence a continuity is postulated between the Being and beings, which is not interrupted by any creative act; on the other hand, there is an absolute discontinuity between the modes of being of the Principle and of that which proceeds from the Principle. Thus it is possible to speak of a cosmological continuity between the universe and its source (theory of emanation), tending to a form of monism, and of an ontological discontinuity between the necessary and the possible, tending to re-establish the absolute transcendence of God. Furthermore, the possible beings, in whom essence is distinct from existence, are only possible if considered in themselves. But they are necessary if considered in relation to the Principle: granted a Being necessary *on its own account*, everything else is necessary *because of it*. As was to be the case with Spinoza and Hegel, the possible is always real. Hence we return to monism. Is that a reason for considering that this *falsafa* is incoherent? Up to now we have considered only the cosmology and the ontology of the first *falsafa*, which means that this *falsafa* needed to be completed by a third attitude to Being: the mystical. *Falsafa* of the Avicennan type may be analysed as regards its system in the following manner: a first upward movement going from beings to the Being, which seeks an ontological foundation for given reality; this is human intelligence in search of a principle of intelligibility in the universe; then a second, downward movement, an attempt to explain the universe on the basis of a declared principle, which should provide a total explanation of it; these two movements involve only human thought; but in the first, the principle is attained so to speak in perspective, as the limit where conditions of intelligibility converge; thus there may well be some lack of continuity of thought, since it is logically impossible for thought to reach this limit; whilst in the second movement, thought starts from the idea which corresponds in it to this Principle, and tries to produce from it the world from which it came itself; this is a difficult task, since it is beyond the scope of logical deduction, and recourse must be made to images (metaphors of light) through which the continuity which is postulated but not demonstrated can be re-established. Then comes the third movement, which is a second ascent, but this time no longer a simple discursive procedure, since it is by intelligible intuitions of the spiritual realities themselves, already identified, that progress is made. Man first sees himself in his contingency, separated from his Principle, endowed with a precarious existence. But ontology has taught him that his whole being is rooted in God, and cosmology supplies him with a spiritual itinerary, whose postulated continuity will be verified by mystical experience. The last word therefore is with this experience.

A second theme which Greek philosophy had touched on, and which Muʿtazilī *kalām* had studied very closely, is that of the knowledge God has of particular things. The first *falsafa*, in its theory of the possible, considerably simplified the problem posed by the theologians who believed that contingent things could be or not be. However, there still remained the difficulty of the knowledge of the particular as such: God could not make contact with this in itself in its materiality, but only in His universal knowledge of that which is. *Falsafa* was thus obliged to interpret the verses of the Ḳurʾān where God declares that nothing, not even a grain of mustard seed (Ḳurʾān, xxi, 47), escapes Him. This question is, moreover, closely linked with the concept of creation held by the first *falsafa*. There is no doubt that it rejects the dogmatic idea of creation *ex nihilo*, but it aggravates its case by adopting the principle that from the One only the one can proceed, which led it into complicated theories on the successive procession of the Intellects and of their spheres, from the first Intellect onward; this procession plays a part not only in cosmology, but in the theory of knowledge, of prophetic revelation and of mystical experience. In this context must be placed the doctrine of the intellect as agent and its rôle in man's intellection. On this point explanations vary slightly from one philosopher to another. In conclusion we may note that the problem of the immortality of the soul is closely related to this doctrine.

Such are the fundamental themes of the first *falsafa*. Each philosopher of this school, and above all Avicenna, has been the object of varying interpretations, according to whether emphasis was laid on his scientific works, on the relationship of his metaphysics with Western scholasticism, on his fidelity to Greek thought, or on his mystical ideas. In fact, all these points of view must be considered together, not forgetting moreover that *falsafa* penetrates into the Muslim environment and that even if it was rejected by strict orthodoxy it was none the less steeped in Islamic thought considered as a whole; we have seen that it was not ignorant of *kalām*; even in its logic, where the Aristotelian inspiration is clearest (for example in the *S̲h̲ifāʾ* of Avicenna), allusions to the concepts of the Arab grammarians are easily discernible. Finally, *falsafa* interested itself in political problems, not only by preserving Greek works on *politeia*, but in relation to the political, and therefore religious, problems of the Muslim world of that time. The temporal organization of a city has the double purpose of achieving the well-being of men and of preparing them for the

future life. The union of members of the earthly community foreshadows the union of souls with souls, and of souls with God, in the after life. Political theory thus itself embraces mysticism; these ideas are so strong that they will be respected by al-Ghazālī and will reappear in another context as late as Ibn Khaldūn. It may be said that *falsafa* wished to support *sharīʿa*, *fiḳh*, and *aḥkām sulṭāniyya*, and that it is thus opposed to the spirit of the Ḳurʾān. This is true as far as rigorously orthodox Islam is concerned. But *falsafa* developed in more liberal surroundings, where there was a desire for a less legalistic view of religion and for an Islam which would be cultural and universal in character.

5. — The reaction of al-Ghazālī. — If Avicenna is a much discussed figure, al-Ghazālī is discussed much more. Some see him as a reactionary who brought to an end the blossoming of the rational thought of the philosophers, and made supreme a theology which was itself the slave of dogma. For others he clipped the wings of mystical thought by fighting the Bāṭiniyya, whose teachings were in harmony with the great spiritual constructions of *falsafa*. Whatever value one may place on the thought of al-Ghazālī, the historical significance of his work demands recognition. Even if he conceived his religious system only for political ends associated with the passing circumstances of the disturbed period in which he was living, yet he introduced Greek philosophy into the realm of Sunnī thought, through the way he developed Ashʿarism and criticized the *falāsifa*. In *falsafa*, as in esoteric mysticism, he denounced Gnostic trends opposed to the Ḳurʾānic spirit. No doubt he remained a *mutakallim*; it would be an abuse of language to say that he created a Sunnī *falsafa*. He simply allowed *falsafa*, and mysticism too, to detach itself from Shīʿī heterodoxy and to become acclimatized in an orthodox environment.

The principal points of his criticism (which were to be taken up again by Ibn al-Ḳifṭī) may be brought together under three headings: against *falsafa* he maintains (a) the resurrection of the body and the materiality of the rewards and punishments of the after life; (b) the creation of the world in the proper sense and its real contingency; (c) God's knowledge of particular things. As for the other philosophical sciences—mathematics, logic, physics—they are harmless provided that their methods are not generalized rashly and that they are not allowed to exceed their proper limits. The metaphysics of the Greeks and their imitators is on the other hand a privileged place for innovations and impieties since in this field logical reasoning is not infallibly applied. Al-Ghazālī, like his master al-Djuwaynī, was struck by the differences which rule between metaphysicians in spite of their common appeal to reason. There is a level of reality where human reason cannot grasp truth by its own efforts; it needs the help of revelation which alone provides certitude in these questions. These ideas, put forward by Ghazālī in a dogmatic and theological context, reappear in a philosophical context in his successors.

6. — The second period of *falsafa*. — This may be called post-Ghazālī. It is distinguished geographically by having one centre in the East with Fakhr al-Dīn al-Rāzī and another in the West with Avempace (Ibn Bādjdja), Ibn Ṭufayl and Averroes (Ibn Rushd). The period is characterized in part by its diversity, the teachings no longer displaying that unity of approach which the preceding period showed; and in part by the fact that this *falsafa* is much more integrated in the whole intellectual and spiritual culture acquired by Islam over the formative centuries: theology, law, *tafsīr*, mysticism, constitute disciplines which from now on are established and rich in content and influence, whereas the first *falsafa* found itself taking shape at a time when all mental activities were seeking an appropriate way for themselves, and only Muʿtazilism so far had taken up fixed positions.

Of the three who most adorned Western *falsafa*, Avempace displayed the least religious spirit. His *Rule of the solitary* (*Tadbīr al-mutawaḥḥid*) has as its ideal isolation from the mass of mankind in a purely intellectual contemplation of the intelligible. In his *Risālat al-Ittiṣāl* he shows how it is possible to unite with the agent Intellect, by studying the development of the human individual from his embryonic life to the speculative life. This is a philosophical psychology of knowledge.

This "evolutive" aspect of Avempace's thought recurs in Ibn Ṭufayl, where some influence of the Ikhwān al-Ṣafāʾ may also be discerned. The mysticism of Ibn Ṭufayl tries to go further than the purely speculative mysticism of Avempace, being inspired both by Avicenna and al-Ghazālī.

Averroes, in his refutation of the *Tahāfut al-falāsifa*, was led to take up again the problems with which Avicenna's philosophy had faced Sunnī orthodoxy. He replies to al-Ghazālī, not in order to defend Ibn Sīnā but in order to set out his own teaching, more directly inspired by Aristotle and the Peripatetic commentators than the first *falsafa* had been. The meaning of Averroism has been much discussed. Some, with Renan, view him as a pure rationalist. According to L. Gauthier, Ibn Rushd only rejects the kind of theology which encloses itself in the revealed texts and desires to comprehend them dialectically; but he allows literal belief to the uneducated, who react to the rhetoric of images, while philosophers should submit everything to apodictic proof. It appears that this explanation by means of the theory of the three classes of spirit (apodictic, dialectic, rhetorical) does not entirely cover the thought of Averroes. In fact, he was responsive to the warning of al-Ghazālī: rigorous proof is only superior where the object is accessible to human intelligence. When this is not so and obscurities remain, as in the questions of creation, the attributes of God, and the nature of the after life, philosophy has no real privilege, and risks indeed encouraging doubt, while revealed knowledge, though in itself inferior, gains the advantage since it brings assurance. To the fundamental problems of the first *falsafa* as criticised by al-Ghazālī, Averroes replies like a *mutakallim*: he gives up the postulate that from the One nothing but the one can emerge; God moves the world by His *amr* which permits Him to act while remaining unmoved (cf. the unmoved prime mover of Aristotle); God has no will resembling the human will, since He has nothing to desire, having all; but the idea of a voluntary act better represents what creation is than the idea of an involuntary emanation (a viewpoint to be found in al-Rāzī in his commentaries on the divine attribute of life, *ḥayāt*); God does not know particular things in a sentient manner; but the knowledge He has of them resembles the sentient knowledge by which man grasps them rather than our abstract and general knowledge. These few observations suffice to show that Averroes took note of the theological criticisms of al-Ghazālī.

In the East, Fakhr al-Dīn al-Rāzī is an Ashʿarī

like al-Ghazālī, whom he takes for guide, while remaining attached to the thought of Avicenna. He criticizes the Muʿtazila but he borrows from them what he can use. He attacks the extremist sects but without breaking down the bridges to them. Irenic in outlook, in spite of his polemical vigour, he is endowed with great powers of synthesis and it is perhaps in him that the richest, widest and most open system is to be found. He explains Avicenna while correcting him. He achieves a profound union of *kalām* and *falsafa*. Thus, like his adversary al-Ṭūsī, he studies the Muʿtazilī notion of mode (*ḥāl*) in relation to the problem of the divine attributes. For him, philosophical reason may well collect ideas into coherent systems, but it is for revelation to pronounce upon their truth. Finally, the sacred text is a stimulus for philosophical thought. Al-Rāzī therefore clearly differs from Averroes in his approach; he does not limit recourse to dogma and *kalām* to certain difficult cases: with him philosophy and theology are co-extensive and interpenetrating.

7. — The tradition of Avicenna in the philosophy of *ishrāḳ*. — The work of al-Ghazālī was not accepted by the whole of Islam; in particular those circles, of Shīʿī tendencies, who resisted his criticism developed the most mystical aspects of Avicenna's thought in order to produce a union of Avicennian type *falsafa* with a mystical *kalām* of Gnostic inspiration.

Here we must mention the philosophical *corpus* of Abu 'l-Barakāt al-Baghdādī (d. 550/1155), which develops into an angelology. But the great representative of *Ishrāḳ* is al-Suhrawardī (d. 578/1191), who was influenced philosophically by Avicenna but gives an important position to Aristotelian concepts in the exposition of his mystical ideas. On the philosophical plane, it was Naṣīr al-Dīn al-Ṭūsī (d. 672/1273) who was to undertake the Shīʿī defence of Avicenna's thought against al-Rāzī, a defence which is not, however, accompanied by absolute fidelity: the *real* distinction between essence and existence is denied, and one finds in the end an explicit monism in al-Suhrawardī, al-Ṭūsī and Ṣadr al-Dīn al-Shīrāzī (d. 1050/1640). This monist philosophy developed above all in the Iranian areas and is often expressed in Persian. It remained alive and flourishing for a long period.

8. — *Falsafa* as scholasticism. — In spite of the great names which adorn even the last period of *falsafa*, it must be recognized that from now on thinkers are in possession of received ideas and that they develop them in variations which offer interest but without real invention. The union of *falsafa* and *kalām* was completed: the stages of this process are marked by Tustarī, Ḳuṭb al-Dīn al-Rāzī (d. 765/1364) and al-Īdjī (d. 756/1355), for whom *kalām* includes metaphysical questions and logical procedures while offering the greater security of reason founded on tradition. Al-Īdjī appears in this period as the leader of a school whose disciples were to diverge in different directions, some attaching themselves to Ashʿarī orthodoxy, such as al-Djurdjānī (d. 816/1413), others remaining more faithful to Avicenna, like Sayf al-Dīn al-Abharī (8th/14th century), al-Fanārī (d. 886/1481), al-Siyālakūtī (d. 1069/1659). Thus the earlier discussions over the opposition of Avicenna and Ghazālī are taken up again: in these the partisans and continuers of Avicenna are Djamāl al-Dīn al-Ḥillī (d. 726/1326), a leading theologian of the imāmiyya, and Ḳushdjī (d. 749/1348); while those who attacked Avicenna's school in the spirit of Ashʿarī *kalām* and in the tradition of al-Ghazālī included al-Iṣfahānī (d. 749/1348) and al-Taftazānī (d. 791/1389). The "scholastic" character of this *falsafa* is basically what unites it in spite of the diversity of trends. It is clearly indicated by the flourishing of commentaries, no longer on Greek, but on Arabic and Persian works. Thus, al-Djurdjānī writes a commentary on the *Mawāḳif* of al-Īdjī; al-Dawwānī on Suhrawardī and on the *ʿAḳāʾid*, also of al-Īdjī; while al-Fanārī comments on al-Fārābī.

This *falsafa* is also scholastic in its method of exposition, which multiplies divisions and subdivisions. This method was not, of course, new, but it becomes more and more formal.

9. — Supplementary and conclusion. — To enumerate here all the theological philosophers of the last period would be tedious. We ought rather to mention those works of previous centuries which, though philosophical, do not exactly fit into the categories we have outlined. We should first recall that theologians like the Ashʿarīs al-Bāḳillānī and al-Djuwaynī or the Ẓāhirī Ibn Ḥazm, wrote of purely philosophical questions from a point of view which was properly that of *kalām* (*e.g.*, al-Bāḳillānī's theory of causality and atomism). On the other hand, the *Rasāʾil* of the Ikhwān al-Ṣafāʾ deserve mention; these develop Pythagorean ideas, frequently with remarkable originality, on the fringes of the school of Avicenna but in an analogous spirit, in spite of the popularizing character of these writings. Ibn Masarra, who has been studied by Asín Palacios, was influenced by the philosophy of Empedocles and Bāṭinī mysticism (cf. Ibn al-Ḳifṭī, art. *Abidhaḳlīs*).

Further, it should be noted that in order to study not *falsafa* as such but the philosophical ideas current in Islam one should also consider the use of Greek concepts by sages such as ʿAlī b. Rabban al-Ṭabarī and above all Abū Bakr Muḥammad b. Zakariyya al-Rāzī and many others. The corpus of Djābir also, in the analysis of it by P. Kraus, should not be neglected by those seeking to establish the function of Pythagoreanism in the alchemical concepts of Islamic scholars. In another field, the examination of the theories of the grammarians, particularly Ibn Djinnī, would supply very interesting information on the influence of Greek ideas in Arabic grammar. In special philosophical disciplines such as ethics, Ibn Miskawayh should be mentioned, whose thought extensively overlaps pure questions of morals and reflects the life of his age. The literary circle of Baghdād made known to us by Abū Ḥayyān al-Tawḥīdī, is very representative of philosophical culture in the Muslim East of the 4th/10th century.

To sum up, *falsafa* was a focus of reflection on the legacy of Greek thought. It was not at the beginning a matter of Muslim apologetics utilizing Hellenic philosophy to explain and justify the faith. *Falsafa* began as a search by Muslims with Shīʿī leanings for a coherence in their intellectual and spiritual life, that is, the quest for a religious humanism, with all that humanism implies in freedom of spirit. Later it evolved, grew closer to orthodox *kalām* and ended by fusing with it. Only then did *falsafa* begin to burden itself with apologetic elements: *fides quaerens intellectum* or, conversely, faith illuminating and fortifying knowledge. Only the mysticism of *ishrāḳ* retained the primitive humanism of Avicenna (cf. *al-Insān al-kāmil*). In the course of its development, *falsafa* spread Greek ideas in every realm of thought. But it concluded by becoming a school activity. It is perhaps this decline which inspired the disillusioned observations of Ibn Khaldūn on the pernicious effects of education in the Muslim world.

This great thinker of the 8th/14th century, who spared nothing and no-one in his scientific criticism of societies, appears at least in his *Muḳaddima* as the most profoundly rationalist of all Muslim philosophers. The interest in political philosophy which animates the first *falāsifa* reappears in him, but purged of all Neoplatonic metaphysics. Ibn Khaldūn indeed saw in these great systems concepts inspired by the characteristics of social life. In this sense one can say that he destroyed *falsafa* in accomplishing his ideal. For the universality which it assumed for itself, because it claimed to achieve a self-sufficing intelligible, he substituted the actual universality of a positive all-embracing science, the science of human societies.

FAMAGUSTA [see MAGHOSHA].

FAMILY [see ʿĀ'ILA].

FAN [see MIRWĀḤA].

FANĀ' [see BAḲĀ'].

FANAK (pl. *afnāk*; from Pers. *fanak/fanadj*) may refer, at different times and with different authors, to various animals of different orders or families. In the Muslim west *fanak* is commonly applied to the fennec-fox, *Fennecus zerda*, a small wild member of the genus *Vulpes* of the Canidae with very large ears, a pale dun coat, and a spreading bushy tail. The nocturnal habits of this puny carnivore, and its essentially desert distribution from the Sahara to Arabia, have caused it to be practically ignored by Arabic writers, naturalists, encyclopaedists and poets; al-Djāḥiẓ, for example, frankly confesses his ignorance of the real *fanak* (*Ḥayawān*, vi, 32). For a better knowledge of the fennec it is necessary to turn to the desert tribes; one finds, for example, six terms at least in the various dialects of Tamaḥaḳ which refer to this animal (see Ch. de Foucauld, *Dictionnaire Touareg-Français*, Paris 1952, ii, 962, s.v. *akhōrhi*; H. Lhote, *La chasse chez les Touaregs*, Paris 1951, 133). In the eastern countries which do not know the fennec proper of the Sahara fauna, *fanak* is used for the Corsac or Karagan Fox, *Vulpes corsac* (from Turk. *ḳürsāḳ*), found from Turkestan to Mongolia; this little animal when domesticated enjoyed a great vogue as a lady's pet in Europe in the 16th century, when it was known as "adive".

However, neither of these two foxes is meant by the term *fanak* in the imagination of all the authors who have used the word; all mean a member of the Mustelidae whose pelt was greatly esteemed in the luxury fur-trade and which ranked with such fur-bearing animals (*dhawāt al-wabr wa 'l-firā'*) as the ermine (*ḳāḳum*), sable (*sammūr*), Siberian squirrel (*sindjāb*) and otter (*kalb al-mā'*). The skins of the *fanak* were imported, at great expense, from central Europe and Asia (*min arḍ Khwārizm, min bilād al-Ṣaḳāliba*). Although the identification of this animal has troubled many translators, there is no doubt that it must be the mink, *Mustela lutreola*; sufficient proof of this is given by Ibn al-Bayṭār (tr. L. Leclerc, *Traité des simples*, Paris 1877-83, iii, no. 1708), who says of the *fanak* "... this is a species of marten, and its fur is brought from the land of the Slavonians, or from the lands of the Turks and Russians". It is difficult to understand how the *fanak*, worn in cloaks (*farwa*) by the young Andalusian dandies and poets of the 4th-5th/10th-11th centuries, could have been identified with the weasel (see H. Pérès, *La poésie andalouse ... au XIème siècle²*, Paris 1953, 320 and notes) which, common in Spain, has never been used by furriers, its pelt being too small and of mediocre quality; moreover the weasel, *Mustela nivalis*, has never been known in Arabic by any name other than *ibn ʿirs*. Finally, it is of interest to note that the flesh of the *fanak* is recognized, according to al-Damīrī (*Ḥayāt al-ḥayawān*, ii, 225), as legitimate for human consumption among Muslims, which indicates that in the eyes of the legists the *fanak* cannot belong to the Canidae, the canine species, domestic or wild, being absolutely impure, on the authority of many traditions of the Prophet.

FANĀR [see FENER and MANĀR].

AL-**FANĀRĪ** [see FENĀRĪ-ZĀDE].

FANN, the (modern) Arabic name for art. Individual treatment of aspects of the art of Islam will be found in articles under the following headings;

the examples are given as a guide and are not intended to be exhaustive.

1. Techniques, *e.g.*, ARCHITECTURE, BINĀʾ (building), FAKHKHĀR (the potter's craft), FUSAYFISĀʾ (mosaic), ḲĀLĪ (carpets), KHAṬṬ (calligraphy), ḲUMĀSH (textiles), METALWORK, TAṢWĪR (painting), etc.

2. Materials, *e.g.*, ʿĀDJ (ivory), BILLAWR (crystal), DJIṢṢ (plaster), KHAZAF (pottery and ceramics), ʿIRḲ AL-LUʾLUʾ (mother-of-pearl), LIBĀS (costume), etc., as well as description of materials in the articles on techniques.

3. Objects, types of buildings, artistic features, *e.g.*, ḲALAMDĀN (pencases); BĀB (gates), BĀʾOLĪ (step-wells), BURDJ (towers), BUSTĀN (gardens), ḤAMMĀM (baths), ḤIṢN (fortification), ḲANṬARA (bridges), MAḲBARA (tombs), MANĀRA (minarets), MASDJID (mosques), SABĪL (fountains), etc.; ʿAMŪD (capitals), ARABESQUE, ĪWĀN (arcades), MUḲARNAS (stalactites), etc.

4. Artists, *e.g.*, BIHZĀD, MANṢŪR, SINĀN, etc.

5. Music, theatre, etc., *e.g.*, MŪSĪḲĪ; articles on individual musical instruments, *e.g.*, DUFF, ṬANBŪR; CINEMA; MASRAḤIYYA (drama); LAʿB (games).

6. Countries and cities, *passim*.

7. Dynasties, and in some cases individual rulers *passim*. (Ed.)

The idea of a specifically Islamic art can hardly be conceived without preliminary reference to the idea of an Islamic civilization which allows the bringing together, across the apparent contradictions of form, style and material, of monuments widely separated in time and space and objects produced according to widely different techniques. If it be indeed commonly admitted that a new faith and a new spirit may invoke a similar renaissance in the domain of aesthetics, it must as readily be conceded that the perpetuation of certain modes of life and thought, in a society dominated by a rigid legalism of a religious character and faithful until the dawn of the modern era to the principles established in the Middle Ages, has produced a similar fixedness of artistic traditions, as seen in the most diverse natural surroundings from the moment when they were first incorporated in the world of Islam; thus we may group under a common heading, in spite of all the exterior reasons for differentiation, works which derive, over more than thirteen centuries of history, from the most diverse countries and peoples.

In this sense one can speak of the unity of Islamic art, the principal factor of which was without doubt the constitution, in the first centuries of Islam, of that immense empire of the Caliphate, Umayyad and later ʿAbbāsid, which brought together under a single authority many regions formerly independent of one another; it thus provided an environment favouring the elaboration of a primitive "classicism" which was to serve as a point of reference for the later developments, and to bring into being, according to clearly discernible lines of affiliation, local or national flowerings which could not fail to develop individually in the years that followed.

Sprung therefore from the conjunction of several inheritances, in the first rank of which were a Hellenistic heritage from the southern provinces of the Byzantine empire and an Iranian heritage which shortly before had been crystallized under the aegis of the powerful Sāsānid dynasty, this first Islamic art deserves primarily to be described as profoundly eclectic, through its having gathered and mingled without restraint, while the conquerors were willingly susceptible to the atmosphere of the arts around them, structural or decorative elements borrowed from the practices of the conquered countries, with the one proviso that these elements be adapted, in conformity with the observance of certain rules, to the needs of the new Muslim society.

This practice was to be perpetuated in the ensuing periods, and although the first phenomena of absorption and transformation, particularly noticeable in the Near Eastern regions which might be called the heart of the empire, marked Islamic art as such with Syro-Mesopotamian features, it must not be forgotten that other influences, sometimes transmitted throughout the Muslim world, more often integrated in lands on the periphery whence they could have but a weak diffusion—this is exemplified in North Africa or Spain just as in Khurāsān or in India—, continually influenced here and there the traditional modes which had gradually spread from the active capitals of Damascus or Baghdād. The receptivity, demonstrated very early, to trends coming from the East, which brought into ʿIrāḳī sculpture the characteristic rhythms and scrolls of that Asian art known as "Steppic", was thus soon to be surpassed by the facility with which, from the Saldjūḳ era onwards, modifications of taste and feeling directly attributable to the Turkish invaders were to be imposed. Similarly the reception by Persia of a decorative repertoire of Chinese origin, which had been carried across the Mongol empire and was to stimulate the imagination of its miniaturists, was to have as a counterpart that extraordinary perfection of architectural techniques accomplished in 10th/16th century Ottoman Turkey by artists who applied themselves to the school of the Byzantine masters and who were to succeed in equalling, if not surpassing, Byzantine chefs-d'œuvre by erecting the great series of imperial mosques in Istanbul.

One may also understand in this perspective the multiplication of regional styles [see articles on the relevant countries or dynasties] within an art whose faculty of assimilation remains its dominant characteristic and whose various stages develop within varying ethnic groups and as a result of borrowings which are undisguised; these borrowings have, however, in the course of their transmission undergone a subtle transformation which makes it impossible—even in a creative milieu as clearly individualized as that of Īrān, for example—to confuse works anterior to Islam and those which belong, after the lasting triumph of the new religion, to a differently orientated cycle of aesthetic experience.

Indeed, whatever be the type of monuments or objects under consideration, it would appear that the artistic production of Muslim countries has always conformed to a double set of requirements; the one imposed by the material organization of a society in which artistic patronage was bestowed principally by princes and sovereigns, impressing on the art an aulic, sumptuary and dynastic character whereby the taste for richness and brilliant ornament was necessarily developed; the other, and more important, inspired by the particular form of intellectual and religious outlook which came into being in the 7th century with the preaching of Muḥammad and which, far from becoming more tractable, became more and more rigid in its claims to model the life of the Muslim community according to the dictates of the holy law and the opinions of its practitioners, providing the dominant themes of architecture and encouraging the increasingly systematic employment of decoration in accordance with stereotyped formulas, remote from all realism and spontaneity.

Indeed, it is this deliberate impoverishment of plastic imagination, with its aniconic tendency, which most frequently comes to mind when one attempts to define the basic originality of Islamic art, whether the emphasis is put only on the abstract character of the surface ornamentation which it uses in such profusion, or whether this characteristic is more precisely related with the religious prohibitions peculiar to Islamic doctrine or with a system of theologico-philosophic opinions which dwells on the illusory and precarious character of the visible world as contrasted with God Who alone endures. This may be a somewhat simplified view of a very complex problem, all the more since the exclusion of images was not observed with the same rigour in every region or period; to deny this would be to ignore some of the most beautiful Muslim achievements, starting with those of the schools of illuminators who were well able to portray or transpose with delicate touch the scenes which surrounded them. Yet one should not disregard the large share of truth which such an axiom contains.

As a general rule, indeed, artists working in the Muslim milieu have remained unaffected by a concern to reproduce faithfully the forms of the living world, forms which certainly served them as sources of inspiration, but which became relegated to second place through the treatment to which they were subjected: either they were reduced to filling an accessory rôle in larger compositions — an effort is necessary to discover, for example, the medallions with human or animal representations which are on so many objects enmeshed by networks of arabesques, and the miniatures themselves were conceived solely as an appendage to the manuscript page which they were to enrich — or else recourse was had to them merely for the guiding lines of stylizations which were to be repeated, divorced from all direct contact with nature. This is not unrelated to the lack of favour with which work in high relief was regarded, a technique which more than any other was likely to disturb the rigorists by producing from its medium an inanimate copy too close to its original; it is connected also with the growing disregard, which visibly asserts itself, for the feeling for the third dimension: it disappears in the interplay of flat colours with which the surfaces of monuments were covered, as in the productions of the artistic workshops or in the *grisaille* of moulded interlacing work which filled the previously compartmented borders and panels.

Thus it is justifiable to define Islamic art as a whole as an art of decorators and ornamenters, concerned to decorate every surface with a multiplicity of figures springing from their own imagination in accordance with a repertoire of motifs which had long passed to the stage of studio prescriptions, motifs often executed in relief or in shallow patterns which were vibrant with light and shade effects, but to which was frequently added the refinement of notes of colour, obtained from very different media according to the period or the region. This art of the ornamenters thus corresponded to a peculiar regard for agreements and harmonies, founded, not without some aridity, on the observation of rules such as the horror of the void and the continuation of the line, in a climate which produced also the melodic line of Arab music and the cadences of its poetry.

It is also true to say, however, that this precious art was first and foremost a scholarly and intellectual art, which grew from a continual recourse to geometrical design and to complicated calculations, permitting decorative forms which were sometimes of a rudimentary nature to be used effectively. This is admirably illustrated by the use of stalactite corbelling, with straightlined or curvilinear cells [see MUḲARNAS], which were ultimately used in the adornment of domes or semi-domes (for example in the coping of portals) according to extremely complex constructional schemes, and which demanded a very specialized technique from the artisans who carried them out, empirical though this may have been. This is revealed also by the study of the basic lines of so many opulent arabesques [*q.v.*], whose value lies in the convolutions of their stylized vegetal stems which are in other respects rather poor; or by analysis of the innumerable combinations of star-shaped polygons on which are based systems of interlacing which often serve as the starting-point for further stylizations. This is also expressed by the variations developed from the angular or cursive letters of the Arabic script, letters which had the double advantage of offering continually fresh themes to the invention of artists, and of being in themselves shapes with an inherent meaning and embodying the results of a long development [see K͟HAṬṬ]. The growing development of ornamental compositions of this genre, apparently without regard for calligraphic exactitude or legibility, is certainly to be included among the most typical aspects of art in Islamic countries.

It goes without saying, however, that such considerations alone do not suffice to characterize the creative vigour of an art which was not content merely to impress its sign manual on certain modes of aesthetic expression, notably in the field of ornament, but was also able to demonstrate, in the field of architecture, its ability to respond, with new programmes, to the situation resulting from the development of Islam and its establishment in regions where there was an older civilization—regions already so enriched with past monumental glory as to prevent the conquerors from being content with the primitive constructions of Mecca or Medina. In this connexion it is necessary to emphasize once more the importance as a model of what was always the Muslim building *par excellence*—the great mosque or *d̲j̲āmiʿ* [see MASD̲J̲ID], created as a whole to meet the needs of the *k̲h̲uṭba* ceremonial in the Umayyad period, and later reflecting, in a progressive conversion of its various parts to more purely religious purposes, the transformations which the corresponding institutions had similarly undergone. To these transformations of a functional order are to be added also the effects of different architectural fashions, inducing new steps in an evolution which one often underrates by taking account, in archaeological definitions, only of monuments which can truly be called Mediterranean, but which in fact reveals, for anyone who attempts to view Muslim art as a whole, successive adaptations of a structure which was, above all, living.

This is only one example among many, for the origin and the conditions of evolution of other Muslim buildings of a more or less religious character can be viewed in the same light, *e.g.*, the *madrasa* [*q.v.*] with its variants in the *dār al-ḥadīt̲h̲* and the *zāwiya*; the convent illustrated by the forms of the *ribāṭ*, the *k̲h̲ānḳāh* and the *tekke* [*qq.v.*]; and finally the *mas̲h̲had* [*q.v.*] and the *ḳubba* [*q.v.*] or *turba* [*q.v.*], whose particular characteristics, linked with the development of certain hardly orthodox ways of worship, were also influenced by regional funerary customs and by the growing extravagance of gover-

nors or other rich persons in building tombs designed to glorify their memory.

It is no less significant to notice, on a different level, the various interpretations taken, from the beginning of Islam to the present day, by royal palaces [see ḲAṢR], for which there has been a continuous need since the early conquests, and the building of which has been the principal care of each Muslim dynast. Nor are the less grandiose aspects of civil and military architecture to be overlooked, as illustrated by, for example, works of public utility such as waterworks, fountains [see SABĪL], baths [see ḤAMMĀM], warehouses [see ḲAYṢARIYYA] and covered markets [see SŪḲ], simple private houses, or the various types of fortification [see BURDJ, ḤIṢN] represented as much by town walls as by the defence systems of isolated strongholds. Here also one may see the preservation of constant traditions, which it is difficult to separate from the strictly mediaeval historical conditions within which they have been perpetuated, but which nevertheless deserve to be described as Islamic inasmuch as the limits of the geographical region in which they appear correspond exactly with those of the territories characterized by adhesion to Islam.

Bibliography: A complete bibliography is provided by K. A. C. Creswell, *A bibliography of the architecture, arts and crafts of Islam, to 1 Jan. 1960*, London 1962. To general works which have appeared recently on Islamic art (among which must be mentioned G. Marçais, *L'art de l'Islam*, Paris 1946, republished as *L'art musulman*, Paris 1962; G. Wiet, *L'Islam et l'art musulman*, apud R. Huyghe, *L'art et l'homme*, ii, Paris 1958, 133-48, and iii, Paris 1961, 206-9; J. Sourdel-Thomine, *L'art de l'Islam*, in *Encyclopédie de la Pléiade, Histoire de l'art*, i, Paris 1961, 932-1087; E. Kühnel, *Die Kunst des Islam*, Stuttgart 1962) should be added various studies: L. Massignon, *Les méthodes de réalisation artistique des peuples de l'Islam*, in *Syria*, ii (1921); E. Kühnel, *Die Arabeske*, Wiesbaden 1949; idem, *Kunst und Volkstum im Islam*, in *Die Welt des Islams*, N.S., i (1951), 247-82; B. Terrasse, *Classicisme et décadence dans les arts musulmans*, *ibid.*, 71-80; J. Sourdel-Thomine, *Art et société dans le monde de l'Islam*, in *XXIII^e Semaine de Synthèse* (Paris), in the press.

(J. SOURDEL-THOMINE)

FĀO [see AL-FĀʾŪ].

FĀRĀB, a small district on both sides of the middle Jaxartes at the mouth of its tributary, the Aris, which flows from Isfīdjāb. It is also the name of the principal settlement in this district. The older Persian form Pārāb occurs in *Ḥudūd al-ʿālam*, (72, 118 ff., 122), the form Bārāb in Iṣṭakhrī (346) and Muḳaddasī (273; but also Fārāb) as well as in the later Persian sources. The extent of the district in both length and breadth was less than a day's journey (Ibn Ḥawḳal, 390 ff.). According to Masʿūdī (*Tanbīh*, 366) the region was flooded annually at the end of January, and traffic between the settlements was possible only by boat. (In fact the Jaxartes is usually frozen at that season.)

The principal settlement of the district was originally apparently Kadar (Kadir?), with a Friday mosque and lying about half a parasang east of the Jaxartes (Iṣṭakhrī, 346). Near there but of later origin (according to Barthold) was a new centre, called after the district Fārāb, and first mentioned by Muḳaddasī (262, 273). According to the latter it was an extensive fortified city of 70,000 (?) inhabitants (mostly Shāfiʿīs, according to Samʿānī, *GMS*, xx, fol. 415b), with a Friday mosque, a citadel and a marketplace. Kadar and Fārāb fought for pre-eminence in the area. Also worthy of mention in the district of Fārāb is Wasīdj, a small village on the left bank of the river somewhat below the mouth of the Aris and, according to Ibn Ḥawḳal, the birthplace of the philosopher al-Fārābī [*q.v.*], who got his name from the district where he was born.

Fārāb is rarely mentioned in historical sources. In 121/738 for example the prince of Čāč (Tashkent), owing to the pressure of the Arabic provincial government, had to banish to Fārāb an Arab who had taken refuge with him (Ṭabarī, ii, 1694: the only mention of Fārāb by this historian). Islam did not penetrate Fārāb apparently until the Sāmānid period [*q.v.*], after the conquest of Isfīdjāb [*q.v.*] in 225/839-40 (see Balādhurī, *Futūḥ*, 422; Samʿānī, fol. 286b, lines 11-13, s.v. Sāmānī). Wasīdj was mentioned as late as the 12th century as a fortress. For a long time Fārāb lay on the north-east border of Islamic territory, until 349/960 when the neighbouring Turks were also converted to Islam. One of the overland routes which led to the land of the Kimäk Turks had its point of departure in Fārāb (Gardīzī, 83).

According to the common view of the Islamic sources the city of Fārāb corresponds to the later Otrār (for evidence see that article) which, according to Sharaf al-Dīn ʿAlī Yazdī (*Ẓafarnāma*, Calcutta edition, ii, 668), lay two parasangs from the right bank of the Jaxartes. For the further development of the town see OTRĀR. (The ruins of Otrār are in fact about 10 km. from the river).

Bibliography: Le Strange, 484 ff.; Barthold, *Turkestan*, 176-9; *Ḥudūd al-ʿālam*, index, and 358. See also the bibliography to OTRĀR.

(W. BARTHOLD-[B. SPULER])

AL **FĀRĀBĪ**, ABŪ NAṢR MUḤAMMAD B. MUḤAMMAD B. TARKHĀN B. AWZALAGH (UZLUGH?), referred to as Alfarabius or Avennasar in medieval Latin texts. One of the most outstanding and renowned Muslim philosophers, he became known as the "second teacher", the first being Aristotle.

i. — LIFE

Very little is known of al-Fārābī's life. There neither exists an autobiography nor do we have any report by contemporaries. Al-Fārābī was of Turkish origin. He was born in Turkestan at Wasīdj in the district of the city of Fārāb [*q.v.*] and is said to have died at the age of eighty or more in 339/950 in Damascus. His father, described as an officer (*ḳāʾid djaysh*), may have belonged to the Turkish bodyguard of the Caliph, and al-Fārābī may have come to Baghdād with him early in life. He settled down there for many years as a private individual; he did not belong to the society of the court nor was he a member of the secretarial class. For reasons unknown he accepted in 330/942 an invitation of the Shīʿī Ḥamdānid ruler Sayf al-Dawla [*q.v.*] and lived in his entourage, mainly in Aleppo, together with other men of letters, until his death.

His teacher in philosophy was a Christian, the Nestorian Yuḥannā b. Haylān. Al-Fārābī himself

(Ibn Abī Uṣaybiʿa, ii, 135, 8 ff.) and al-Masʿūdī (*Tanbīh*, 122 ff.) connect him ultimately with a branch of the Greek philosophical school of Alexandria, which somehow continued to exist after the Arab conquest; some of its representatives are supposed to have come to Antioch, and the school subsequently spread to Marw and Ḥarrān and from there to Baghdād. Yuḥannā is reported to have come from Marw to Baghdād after 295/908. The possibility that he had taught al-Fārābī in Marw cannot be ruled out. Apart from this, we learn that al-Fārābī was somehow in touch with the great translator and commentator Abū Bishr Mattā b. Yūnus (d. 329/940), a prominent figure in the Baghdād school of Christian Aristotelians, and that he had a great influence on Yaḥyā b. ʿAdī (d. 362/972), its main representative in the next generation. Al-Fārābī's extant philosophical works bear out his dependence on the 10th century syllabus of Christian Aristotelian teaching in Baghdād and the impact of the late Alexandrian interpretation of Greek philosophy on his thought (cf. M. Meyerhof, *Von Alexandrien nach Baghdad*, in *Sitzungsber. d. Preuss. Akd.*, Phil. hist. Klasse, 1930, xxiii).

ii. — THOUGHT

Al-Fārābī was convinced that philosophy had come to an end everywhere else and that it had found a new home and a new life within the world of Islam. He believed that human reason is superior to religious faith, and hence assigned only a secondary place to the different revealed religions which provide, in his view, an approach to truth for non-philosophers through symbols. Philosophical truth is universally valid whereas these symbols vary from nation to nation; they are the work of philosopher-prophets, of whom Muḥammad was one. Al-Fārābī thus went beyond al-Kindī [*q.v.*], who naturalized philosophy as a kind of appropriate handmaiden of revealed truth; on the other hand, he differs from al-Rāzī [*q.v.*] by not condemning the prophets as impostors but allotting, like his master Plato, an important and indispensable function to organized religion. There is some evidence to suggest that al-Fārābī reached this view gradually.

Al-Fārābī set out to explain how Greek philosophy—which had reached him as an almost closed system of truth and an established method of reaching felicity—could provide valid explanations of all the important issues raised in contemporary Islamic discussion. Greek natural theology shows the truth about God as the first cause of emanation, about divine inspiration (*waḥy*) as the outcome of the supreme perfection of the human mind, about the true nature of creation and divine providence as it manifests itself in the hierarchic order of the universe and about immortality, which is by no means granted to every human being. As *magistra vitae*, philosophy gives the right views about the freedom of moral choice and of the good life altogether. The perfect man, the philosopher, ought also to be the sovereign ruler; philosophy alone shows the right path to the urgent reform of the caliphate. Al-Fārābī envisages a perfect city state as well as a perfect nation (*umma*) and a perfect world state.

Apart from building up a philosophical syllabus for different levels of study, al-Fārābī had to rethink the existing Islamic sciences and to give them a new meaning and a new function in his novel theistic philosophy: a grammar adaptable to every language (cf. P. Kraus, *Jābir et la science grecque*, Cairo 1942, 251, n. 2); a dialectical theology (*kalām*) and a jurisprudence (*fiḳh*) restricted to the service of a particular religion, its "legal theology", and using the forms explained in Aristotle's *Topics* and *Sophistici Elenchi* (cf. Gardet-Anawati, *Introduction à la théologie musulmane*, Paris 1948, 102 ff.); the metaphysician is also the true lawgiver, as Plato has shown in his *Laws*, which were translated into Arabic a second time by al-Fārābī's contemporary Yaḥyā b. ʿAdī [see AFLĀṬŪN]. Rhetoric and Poetic provide the best method for bringing home the truth to non-philosophers, *i.e.*, the majority of men, by working on their imagination; no Greek philosopher would ever have envisaged that Rhetoric and Poetic could be applied to Muslim scripture, and to the Muslim creed (cf. R. Walzer, *Greek into Arabic*, Oxford 1962, 129 ff.).

Only a few characteristic tenets of al-Fārābī can be mentioned here. Like many later Greek thinkers, he believed in the ultimate identity of Plato's and Aristotle's views. He based himself on Aristotle, as understood by the Greek commentators of late antiquity, in logic, natural science, psychology, metaphysics (these metaphysics however understood and developed on moderate Neoplatonic lines). In political science he preferred to follow Plato's *Republic* and *Laws*, as understood by middle Platonic thinkers, convinced that Plato's theoretical philosophy had been superseded by Aristotle and the Neoplatonists, but that his analysis of the imperfect states and his solution of the problems of politics remained valid and compatible with the changed political conditions. The Greek antecedents of this particular branch of later Platonism—which also appealed strongly to Ibn Rushd [*q.v.*]—are lost and can be reconstructed only from al-Fārābī and other Arabic writers (cf. R. Walzer, *Aspects of Islamic political thought*, in *Oriens*, 1963).

According to al-Fārābī, the first cause is at the same time the Plotinian one, the eternal creator of an eternal world, and the Aristotelian Divine Mind, a conception which is probably of middle-Platonic origin. Aristotle's νοῦς ποιητικός is for al-Fārābī neither identical with the first cause nor situated within the human soul but has become a transcendental entity mediating between the higher and the sublunar world and the human mind—probably another later Greek interpretation of the difficult Aristotelian chapter *De an.*, III 5. Very remarkable is the theory of imagination and prophecy adopted by al-Fārābī; it may also derive from some otherwise lost Greek original (cf. R. Walzer, *Greek into Arabic*, 206 ff.). Prophecy, though being an indispensable ingredient in man's perfection, is auxiliary to his rational faculty, being confined to the inferior faculty of representation. It is neither described as a state of possession by supernatural powers nor understood as a mystic 'state'. Divine inspiration may be granted to the perfect man who has reached the highest philosophical level together with the highest form of prophecy.

The Christian-Arabic Aristotelian teaching in 4th/10th century Baghdād is the immediate background of al-Fārābī's thought. His proximate ancient sources are within the orbit of the Greek philosophical schools in 6th century Alexandria. To a large extent, he appears to continue a tradition which became extinct during the later centuries of Byzantine civilization and whose original form may now be reconstructed from Arabic versions and imitations only. His particular variation of Neoplatonic metaphysics and his full acknowledgment of the

political aspects of Plato's thought distinguish him from Proclus and his followers. Much more of Porphyry's thought may be preserved in al-Fārābī's work than is apparent to us today. His ultimate roots seem to lie in a pre-Plotinian platonizing tradition.

Al Fārābī's importance for subsequent Islamic philosophers is considerable, and would well deserve to be described in detail. His impact on the writings of 4th/10th century authors such as the Ikhwān al-Ṣafā', al-Masʿūdī, Miskawayh, and Abu 'l-Ḥasan Muḥammad al-Āmirī is undeniable. Ibn Sīnā seems to have known his works intimately and Ibn Rushd follows him in the essentials of his thought. Maimonides appreciated him highly. His political ideas had a belated and lasting success from the 13th century onwards (cf. T. W. Arnold, *The Caliphate*, Oxford 1924, 125 ff.). A few of his treatises became known to the Latin Schoolmen; more were translated into mediaeval Hebrew.

iii. — WORKS

More than one hundred works of varying size are attributed by the Arab bibliographers to al-Fārābī, not all of them genuine. One, the *Risālā* known as *al-Fuṣūṣ fi 'l-ḥikma*, is most probably by Ibn Sīnā (cf. S. Pines, in *REI*, 1951, 121 ff.), and its wrong attribution to al-Fārābī has made it unnecessarily difficult to realise how fundamental the differences between these two most influential Islamic philosophers are, in spite of many obvious similarities.

a. First to be mentioned among the genuine works are the great scholarly commentaries on a number of Aristotle's lecture courses; they continue the tradition of the late Greek schools without a gap (cf. the twenty-two volumes of the *Commentaria in Aristotelem graeca* published by the Berlin Academy); they seem to have been used by Ibn Bādjdja [*q.v.*] and especially by Ibn Rushd [*q.v.*] and have to a large extent been superseded by their commentaries. One of them, on the Περὶ ἑρμηνείας, has just been edited for the first time, with valuable and copious indexes, by W. Kutsch and S. Marrow (Beirut 1960); it is based on a Greek original different both from the 6th century A.D. commentary by Ammonius (*Comm. in Arist. graeca*, iv, 5) and the Greek work used by his Latin contemporary Boethius; all three seem somehow to depend on a lost commentary by Porphyry. We learn about similar commentaries on all the remaining parts of the *Organon*, including the *Rhetorics* (widely, I think, used by Ibn Rushd), on the *Physics* (which al-Fārābī read more than forty times), the *De caelo*, the *Meteorology* and parts of the *Nicomachean Ethics* (depending probably on a lost commentary by Porphyry). There may well have been more. A commentary on Alexander of Aphrodisias' *De anima* is mentioned. A commentary on Porphyry's *Isagoge* attributed to al-Fārābī is in fact by Abu 'l Faradj b. al-Ṭayyib (cf. S. M. Stern, in *BSOAS*, xix (1957), 119 ff.). I assume that Ibn Rushd's *Commentary on Plato's Republic* (ed. E. I. J. Rosenthal, Cambridge 1956) depends on a similar work by al-Fārābī.

b. A number of relatively small introductory monographs 'τοῖς εἰσαγομένοις'.

A. Logic. *Al-tawṭi'a fi 'l manṭiḳ*, ed. M. Türker, with Turkish translation, Ankara 1958; *Introductory sections on logic*, ed. D. M. Dunlop, with English translation, in *IQ*, 1955; ed. M. Türker, with Turkish translation, Ankara 1958; *Paraphrase of Porphyry's Isagoge*, ed. D. M. Dunlop, with English translation, in *I Q*, 1956; *Paraphrase of Aristotle's Categories*, ed. D. M. Dunlop, with English translation, in *I Q*, 1958; *Paraphrase of Aristotle's Prior Analytics*, ed. M. Türker, with Turkish translation, Ankara 1958, with a very interesting opening chapter; English translation prepared by N. Rescher; *Treatise on the canons of the art of poetry*, ed. A. J. Arberry, with English translation, in *RSO*, 1938 (Arabic text reprinted by A. Badawi, Cairo 1953).

B. Physics. *On vacuum*, ed. Necati Lugal and Aydın Sayılı with Turkish and English trans., Ankara 1951 (see further A. Sayılı in *Belleten*, xv/57 (1951), 151-74); *Against Astrology*, ed. F. Dieterici, *Alfarabi's Philosophische Abhandlungen*, Leiden 1890, with German translation, 1892; cf. C. A. Nallino, *Raccolta di scritti*, vi, 1944, 23 ff.; *De Intellectu* (*fi 'l ʿaḳl*), critical edition by M. Bouyges, Beirut 1938; medieval Latin translation ed. E. Gilson (with translation by himself), in *Archives d'histoire doctrinale et littéraire du moyen âge*, iv (1929), 113 ff.

C. Metaphysics. *About the scope of Aristotle's Metaphysics*, ed. F. Dieterici, *op. cit.*, with German translation; *On the One* (*fi 'l-Wāḥid wa 'l-waḥda*), critical edition and English translation by H. Mushtaq (in preparation).

D. Ethics and Politics. *Reminder of the Way of Happiness* (*al-tanbīh ʿalā sabīl al-saʿāda*), ed. Hyderabad 1326/1908; mediaeval Latin translation ed. H. Salman, in *Recherches de théologie ancienne et médiévale*, xii (1940), 33 ff.; *Aphorisms of the statesman* (*Fuṣūl al-madanī*), ed. D. M. Dunlop, with English translation and notes, Cambridge 1961; *Compendium Legum Platonis*, ed. F. Gabrieli, with Latin translation and notes, *Plato Arabus III*, London 1952; *On the best religion* (*fi 'l-milla al-fāḍila*), an important but still unedited treatise.

E. Miscellanea. *Harmony between the views of Plato and Aristotle* (*al-djamʿ bayna ra'yay al-Ḥakīm Aflāṭūn al-ilāhī wa-Arisṭuṭalis*), ed. F. Dieterici, *op. cit.*, with German translation; ed. Nader, Beyrouth 1960. *Answers to questions* (*Djawāb masā'il su'ila ʿanhā*), ed. F. Dieterici, *op. cit.*, with German translation; ed. Hyderabad 1344/1925. *Main questions* (*ʿUyūn al-masā'il*), ed. F. Dieterici, *op. cit.*, with German translation.

The very titles of three not yet traced refutations of philosophical adversaries help to circumscribe Al-Fārābī's position among the philosophers of his time. One is against Galen (Djālīnūs)—known to the Arabs not only as a physician but as a philosopher as well—and rejects Galen's attacks against Aristotle's first cause, most probably in the wake of Alexander of Aphrodisias' refutation of Galen [see DJĀLĪNŪS]. Another is against John Philoponus (again in defence of Aristotle) and, by implication, al-Kindī [*q.v.*], who both adhere to the creation of the world from nothing (cf. R. Walzer, *Greek into Arabic*, 193 ff.). In a third treatise al-Fārābī set out to refute Muḥammad b. Zakariyyā al-Rāzī [*q.v.*], presumably because of his belief in atoms and the creation of the world in time. A treatise against Ibn al-Rawandī may have been concerned with his radical rejection of prophecy altogether (cf. P. Kraus, *Beiträge zur islamischen Ketzergeschichte*, in *RSO*, 1932).

d. There is finally a group of important major works which sum up the results of philosophical research and al-Fārābī's further reaching intentions. They all are concerned with the sovereign position to be given to philosophy within the realm of thinking and with the organization of the perfect society and the philosopher-king. Their right understanding provides, in my view, the key to al-Fārābī's

thought; this, however, is made particularly difficult for us, since he is, from the very outset, determined to let the reader find out the application for himself (cf. the first page of *Plato Arabus III*).

I. *Survey of the Sciences* (*K. Iḥṣā' al-ʿulūm*). Best edition by ʿUthmān Amīn, Cairo 1931-48. Mediaeval Latin translation by Gerard of Cremona, printed by A. Gonzáles Palencia, Madrid 1932 (together with an edition of the Arabic text and a Spanish translation).

II. A work in three books, in contents very similar to III and IV, but perhaps earlier. (1) *On attaining felicity* (*fī taḥṣīl al-saʿāda*), ed. Hyderabad 1345/1926. Critical edition and English translation prepared by M. Mahdi. (2) *On the philosophy of Plato*, ed. with Latin translation and notes by F. Rosenthal and R. Walzer, *Plato Arabus II*, London 1943. New ed. and Eng. trans. prepared by M. Mahdi. (3) *On the philosophy of Aristotle*, ed. M. Mahdi, Beirut 1961. English translation prepared by the same author.

III. *On the principles of the views of the inhabitants of the excellent state* (*fī mabādi' arā' ahl al-madīna al-fāḍila*). Editions by F. Dieterici, Leiden 1895, and A. Nader, Beirut 1959. Ger. trans. (*Der Musterstaat*) F. Dieterici, Leiden 1900; Fr. trans. R. P. Jaussen and others, Cairo 1949; Span. trans. M. Alonso Alonso, in *al-And.*, xxvi-xxvii (1961-62). A critical edition, with English translation and commentary, is being prepared by R. Walzer.

IV. *On political government* (*al-siyāsa al-madaniyya*), a similar survey of the whole of philosophy, written with the same definite political purpose in mind. Edited Hyderabad 1346/1927. Ger. trans. (*Die Staatsleitung*), by F. Dieterici, Leiden 1904. A critical edition and an English translation are being prepared in Chicago.

I. J. Rosenthal, *Political thought in medieval Islam²*, Cambridge 1962, 122 ff.; Saʿīd Zāyid, *al-Fārābī* (Nawābigh al-fikr al-ʿarabī, 31), Cairo 1962; *İA* (art. Fârâbî by Abdülhak Adnan [Adıvar]). (R. WALZER)

FARADJ, AL-MALIK AL-NĀṢIR ZAYN AL-DĪN ABU 'L-SAʿĀDĀT, 26th Mamlūk Sultan of Egypt and second of the Circassians [see ČERKES ii and BURDJIYYA]. The son of Sultan Barḳūḳ [*q.v.*] and a Greek mother, Shīrīn, Faradj was born in Cairo in 791/1389 and succeeded to the Sultanate upon the death of his father on 15 Shawwāl 801/20 June 1399. Owing to his youth Faradj began his reign under the guardianship of two of his father's *amīrs*: Taghrī Birdī al-Bashbughāwī (father of the historian) and Aytimish al-Badjasī, but disagreements among the *amīrs* and their factions soon led to an early proclamation of his majority, in Rabīʿ I 802/November 1399. The first reign of Faradj lasted six years, until he was deposed at Cairo in favour of his younger brother ʿAbd al-ʿAzīz, who took the regnal name al-Malik al-Manṣūr, on 25 Rabīʿ I 808/20 September 1405. Seventy days later, on 5 Djumādā II 808/28 November 1405, Faradj was restored to power for a second reign, which lasted until his deposition at Damascus on 25 Muḥarram 815/7 May 1412. A few weeks later, on 16 Ṣafar 815/28 May 1412, after having been succeeded unwillingly by the ʿAbbāsid Caliph al-Mustaʿīn bi'llāh [*q.v.*], Faradj was publicly humiliated and killed in Damascus.

Neither of the reigns of Faradj represents a particularly constructive period in Mamlūk history, a result of the continual strife of high-ranking *amīrs*, aggravated by the consequences of Barḳūḳ's policy of introducing large numbers of Circassians into Egypt and Syria and of favouring them over the hitherto predominant Turkish mamlūks. Both factions found leaders among the anyway quarrelsome *amīrs*, and the resulting clashes, usually based on rival headquarters in Egypt and Syria, account for most of Faradj's movements in both his reigns, during which he made no less than seven expeditions to Syria. The major protagonists in these internal Mamlūk struggles included the *amīrs* Yashbak al-Shaʿbānī, favoured at first by Faradj and supported by Circassians, and Aytimish al-Badjasī, who led the Turkish faction and was supported by Tanam, viceroy (*nā'ib*) of Damascus. After the defeat and execution of Aytimish by Faradj at Gaza and Damascus (3 Shaʿbān 802/30 March 1400), a fresh conflict broke out between Yashbak and Nawrūz al-Ḥāfiẓī at Cairo, in which the former fell from power and favour. The struggle was further confused by the complicity of the *amīrs* Djakam, Shaykh al-Maḥmūdī, now viceroy of Damascus, Baybars (later atabeg [see ATĀBAK AL-ʿASĀKIR]), and Taghrī Birdī al-Bashbughāwī. On 25 Rabīʿ I 808/20 September 1405, upon report that Faradj had fled in the company of Taghrī Birdī to Syria, it was Yashbak and Baybars who arranged the accession of ʿAbd al-ʿAzīz. After the restoration of Faradj, Djakam and Nawrūz revolted in Syria, the former proclaiming himself Sultan, with the regnal name al-Malik al-ʿĀdil (11 Shawwāl 809/21 March 1407), but was killed soon after in his siege of Āmid. Syria, however, remained in the hands of Nawrūz, who succeeded in winning over Shaykh al-Maḥmūdī, the *amīr* sent by Faradj to replace him. Despite three expeditions against them Faradj was unable to break the power of these two *amīrs*, who defeated him finally at Ladjdjun (Dhu 'l-Ḥidjdja 814/March-April 1412), and forced his deposition at Damascus whither he had fled. After a brief reign of six months by his puppet, the Caliph al-Mustaʿīn, Shaykh himself became Sultan, taking the regnal name al-Mu'ayyad [*q.v.*].

The only exception to the bleak rule of *amīrs*' rivalries in this period is provided by the appearance in Syria of Tīmūr [*q.v.*]. Although Faradj, after some hesitation and refusals of aid to the Djalā'irid and Ottoman rulers against the threat from the East, did make a stand at Damascus against Tīmūr, it would not be true to assert either that the external challenge provoked any real degree of internal consolidation within the Mamlūk Sultanate, or that fear of defeat at the hands of Faradj made Tīmūr turn north to Anatolia and Bāyazīd I rather than south to Egypt, after plundering Damascus (Radjab 803/March 1401). The chronicler Abu 'l-Maḥāsin b. Taghrī Birdī [*q.v.*] does, however, report Tīmūr's respect for the Egyptian army, whose effectiveness he considered reduced

only owing to the youth of the Sultan and the lack of unity among its commanders (*Nudjūm*, vi, 46). The brief encounter between the two rulers at Damascus also provided the occasion for an interesting if inconclusive meeting between Tīmūr and Ibn Khaldūn who, though out of office, had been prevailed upon to accompany Faradj to Syria.

With regard to the rôle of Faradj in Mamlūk history the two Egyptian chroniclers al-Maḳrīzī and Ibn Taghrī Birdī represent diametrically opposed opinions. Whereas the former ascribes to him the ruin of Egypt and Syria because of poor administration, debased coinage, corrupt officials, and oppressive taxation (*Khiṭaṭ*, cited *Nudjūm*, vi, 271-3), the latter gives Faradj a most favourable obituary despite his observation that the Sultan had brought about the financial ruin of his family and indirectly the death of his father (*Nudjūm*, vi, 270-4). In fact the remarks of Ibn Taghrī Birdī must be considered with the greatest care, owing to the involvement of his family's affairs with those of Faradj, who had married a sister of his and, during an acute crisis, appointed his father atabeg (810/1407-8). His son's portrait of Taghrī Birdī as a loyal and self-sacrificing subject of the Sultan may not be inaccurate, but it is bound to have affected the chronicler's view of the recipient of such loyalty and sacrifice. Such observations as are found among the commercial records of Western powers then active in Egypt and Syria would suggest that al-Maḳrīzī's evaluation of Faradj as one addicted to arbitrary fiscal policies and indifferent to the importance of a sound and consistent administration, is not unfounded.

AL-**FARADJ BA'D** AL-**SHIDDA** [see NĀDIRA].

AL-**FARĀFRA**, an oasis in the eastern Libyan desert, in Egypt, situated approximately on lat. 27° N. and long. 28° E., equidistant from the Nile and the Libyan frontier. It is a halting stage between the oases of al-Dākhla 170 km. to the south-west and those of al-Baḥriyya 160 km. to the north-north-east; the routes are motorable only with difficulty. Al-Farāfra is a single village of about 1,000 inhabitants. Its mud huts surround a slightly raised fortification. Village and oasis are situated in a vast plain 70 to 90 m. high, partially covered with sand and surrounded by an immense barren plateau of Lower Eocene limestone extending all round, some 300 m. in height; the depression includes a score of wells and springs, the most abundant of which are 'Ayn al-Bellad and 'Ayn Ebsay. They provide the irrigation for a plantation of palms with a few olive-trees, pomegranates, and some barley, wheat, sorghum and onions. Groups of wild palms mark other areas with water. The inhabitants sell dates and a few olives, and buy in particular grain.

Al-Farāfra is said to be the *T3-iḥw* (land of oxen) of Pharaonic times and the *Trinytheos* of Graeco-Roman antiquity. Al-Bakrī (37) describes the alum and vitriol mines (the latter including iron or copper sulphate) in the vicinity; he extols its importance, and attributes to it a Coptic population. It is now Muslim. It appears to have suffered much in the course of time from the razzias of the nomads of Egypt and Cyrenaica (Barka), and more recently, since 1860, from the seizure of its estates by the Sanūsiyya.

FARĀH, town in south-western Afghānistān, capital of the district (*'alā-ḥukūmat*) of the same name. The town is located on the Farāh river 62° 5′ E. 32° 23′ N., alt. 1738 m.

Farāh is located where trade routes from Harāt, Ḳandahār and Seistān join and the site has been occupied from ancient times. The name of the river is probably found in Avestan Fradaθā (*Yasht*, xix, 67). The town is mentioned by many classical authors under various names; Prophthasia, Propasta, and Phrada (see Bibliography).

Farāh is not mentioned in Arabic works dealing with the conquests, but it is mentioned (as Farah) by the geographers Iṣṭakhrī (247), Ibn Ḥawḳal (420), and al-Muḳaddasī (306). The bridge over the river, and Khāridjīs in the town are both noted. Although the town is mentioned by later geographies (*Ḥudūd al-'ālam*, Yāḳūt, etc.) it never had any historical importance. It was abandoned in the time of the Mongols, rebuilt, and sacked by Nādir Shāh, and today has ca. 15,000 inhabitants.

Bibliography: Classical sources are discussed in Pauly-Wissowa, xx, 738; xxiii, 817. Arabic sources are summarized in Le Strange, 341. On the present town see E. Caspani and E. Cagnacci, *Afghanistan crocevia dell Asia*, Milan 1951, 256. (R. N. Frye)

FARAḤ ANṬŪN, (Anṭūn being the family name; 1874-1922), Arab author and journalist. Trained in a Greek-Orthodox school near Tripoli (now in Lebanon), he migrated to Egypt, and published a journal in Alexandria. He then migrated to the U.S.A. but, following the Turkish revolution of 1908, went back to Egypt and became active in the national movement.

Well versed in French literature (and translations) he was attracted mostly by social-political-ethical and philosophical-religious themes, but he lacked method, system, and consistency. His adherence to Westernism in the spirit of the French Revolution, as well as his lucid exposition, felicity of expression and a ceaseless search for new ideas and the 'latest word' marked him as a representative of enlightenment. He was essentially a gifted eclectic, translator and excerpter, exponent of Western ideas and of their conflicts in his mind. Thus he brought to the Arab reader Renan's ideas on the origins of Christianity and on Ibn Rushd; discussions of Nietzsche and Tolstoy, of socialist theories. A proclivity for polemics caused him to clash with literary and public figures (notably with Muḥ. 'Abduh, on Ibn Rushd).

His *New Jerusalem* (1904) is a novel set in the time of the Arab conquest, and, though it suffers from lengthy ideological monologues, has a place in the history of the novel in Arabic. He was also a playwright.

His influence was considerable and he used to be studied in schools as a classical author, mainly on account of scope and style.

FARAḤĀBĀD, the name of a place in Māzandarān, situated 36° 50′ N., 53° 2′ 38″ E., 17 m. north of Sārī and 26 m. north-west of As͟hraf [*q.v.*], near the mouth of the Tid͟jin (or Tīd͟jān, or Tid͟jīna) river. Formerly known as Ṭāhān, the site was renamed Faraḥābād by S͟hāh ʿAbbās I, who in 1020/1611-2 or 1021/1612-3 ordered the construction of a royal palace there. Around the palace were built residences, gardens, baths, bazaars, mosques and caravanserais. The new town, according to Pietro della Valle, was peopled by S͟hāh ʿAbbās with colonies of different nationalities—including many Christians from Georgia—transplanted from territories overrun by Ṣafawid forces. Faraḥābād was linked to Sārī by S͟hāh ʿAbbās's famous causeway (completed in 1031/1621), and until his death in 1038/1629 S͟hāh ʿAbbās regularly spent the winter either at Faraḥābād or As͟hraf, usually not returning to his capital Iṣfahān until after Naw-rūz. The *Taʾrīk͟h-i ʿĀlam-ārā-yi ʿAbbāsī* uses the terms *dār al-salṭana* and *dār al-mulk* with reference to Faraḥābād; this suggests that it had become virtually a second capital (cf. also *A Chronicle of the Carmelites in Persia*, London 1939, i, 282).

Pietro della Valle, who visited Faraḥābād in 1618, declared that the circuit of the walls was equal to, if not greater than, that of Rome or Constantinople, and that the town contained streets of more than a league in length, and Chardin, who saw it forty years later, stated that the palace housed a vast treasure ot dishes and basins of porcelain or china, cornaline, agate, coral, amber, cups of rock-crystal, and other varieties without number. In 1668, however, Faraḥābād was sacked by the Cossacks under Stenka Razin, and it suffered further destruction during the period of anarchy which followed the collapse of the Ṣafawid dynasty in the 18th century. Hanway, who passed through Faraḥābād in 1744, stated that the place had been abandoned, only a few Persian and Armenian inhabitants remaining there, and Fraser, who was there in 1822, described the ruins as "vastly inferior to those of Ashraf".

At the present day Faraḥābād is only a small village; it gives its name to a district (*bulūk*) of Māzandarān (see Rabino, 119-20).

FARĀʾIḌ (A.), plural of *farīḍa* [see FARḌ], literally "appointed or obligatory portions", is the technical term for the fixed shares in an estate (1/2, 1/4, 1/8, 1/6, 2/3 and 1/16) which are given to certain heirs, who are called *d͟hawu 'l-farāʾiḍ* or *aṣḥāb al-farāʾiḍ*, on the basis of Ḳurʾān, IV, 11-2 and 176. These Ḳurʾānic enactments aim at modifying a system of purely agnatic succession, under which only men can inherit, in favour of the nearest female relatives (including half-brothers on the mother's side), the spouse, and also the father (who is protected against being excluded by existing male descendants). It is rare that the concurrence of several shares leads to the exclusion of near male relatives; this can never happen to the descendants and ascendants. Islamic law, by some consequential extensions and distinctions, has systematically completed the rules given in the Ḳurʾān; it has also provided solutions for those exceptional cases in which the aggregate of the shares amounts to more than one unit, or the mechanical application of the rules would lead to a solution which is considered unjust. For the details of all this see MĪRĀT͟H, ʿAWL and AKDARIYYA.

The rules concerning *farāʾiḍ* are the most typical feature of the Islamic law of inheritance, and are rather complicated in detail; because of their importance the whole of the Islamic law of inheritance is called *ʿilm al-farāʾiḍ*, and it has often been treated in separate works. A person skilled in the science of *farāʾiḍ* is called *fāriḍ* or *faraḍī*.

FARĀʾIḌIYYA, a Muslim sect in Bengal established at the beginning of the 19th century by Ḥād͟jd͟jī S͟harīʿat Allāh. The setting in which the sect was born and developed was eastern Bengal in the period immediately following the British conquest. Peasant life in that State, perhaps more than in other parts of India, was influenced by Hindu customs and practices. At that time the virtual loss of political supremacy by a section of the governing Muslim class, the support which the British sometimes gave to the Hindu elements, the unbridled power of the *zamīndārs* [*q.v.*], rich landed proprietors both Hindu and Muslim, over the peasant masses the majority of whom were Muslim, British "liberalism" which in the end actually increased this power, all these factors helped to form a religio-social reaction which found particular expression in the *farāʾiḍiyya* (local Indo-Persian pronunciation *farāʾiẓiyya*). Ḥād͟jd͟jī S͟harīʿat Allāh was born at an uncertain date in a humble family in the *pargana* of Bandarkhola, a district of Farīdpūr (eastern Bengal); when hardly 18 years old he went to Mecca, where he remained for a long time (about twenty years apparently) and is said to have been the pupil of S͟hayk͟h Ṭāhir al-Sunbul al-Makkī, a S͟hāfiʿī scholar. The date of his return to Bengal varies in the different sources, which give it as 1807, 1822 or 1828, while certain writers affirm that he made two journeys to Mecca, returning home to his country in the interval. If we accept the latest date, it is unquestionable that S͟harīʿat Allāh was in touch with the Wahhābī reformers in Mecca. A specific Wahhābī influence is in no sense indispensable for an understanding of the orientation of S͟harīʿat Allāh's activities in Bengal, which are to be explained above all by the contrast he so vehemently resented between a certain type of Islam in his own country and the "Arab" Islam of the Prophet's native land; *mutatis mutandis*, other Muslim reformers in India (beginning with S͟hāh Walī Allāh of Delhi himself) had had the same experience. On returning to his native country,

S̲h̲arīʿat Allāh launched a reform movement which mainly attracted the lower classes of Muslims in Bengal, and in substance of a legal rather than mystical nature, aiming at the widespread application of the *s̲h̲arīʿa* so often spoken of in Islam, but so laxly applied. The very name of the movement (from *farāʾiḍ* "religious duties") underlines this aspect. To Western observers today, some of the reforms envisaged by S̲h̲arīʿat Allāh might seem to be of little interest; thus, besides various para-Hindu customs, he rejected the celebration, with funerary lamentations and special ceremonies, of the martyrdom of Ḥusayn at Karbalāʾ, the pomp and ceremonial that had been introduced into the very simple, austere rites of Muslim marriage and burial, the offering of fruit and flowers at tombs, etc.; moreover, he prohibited the use of the mystical terms *pīr* and *murīd* ("master" and "disciple"), which at that time conveyed an almost Brahmin-like implication of total devotion of the disciple to his spiritual master, out of keeping with the sturdy Islamic tradition, and instead proposing the two terms *ustād̲h̲* and *s̲h̲āgird* (also Persian, but more "secular"); the initiation ceremony common to the various Muslim confraternities, the *bayʿa*, was also prohibited and replaced by a simple statement of repentance (*tawba*) and a changed life made by the *murīd* (or *s̲h̲āgird*). Another significant precept of S̲h̲arīʿat Allāh was the prohibition of communal prayers on Fridays or feastdays, based on the exclusion of British India from the *dār al-Islām*. But S̲h̲arīʿat Allāh does not seem to have gone so far as to preach the *d̲j̲ihād*, the holy war. His preoccupations, more concretely, were with the wretched condition of the oppressed Bengal peasants (especially as their lack of financial means prevented them from turning to the courts, which in certain cases could have given them justice). He tried to alleviate their miserable state by living among poor peasants as one of them and by making efforts to organize them to escape from the unjust demands of the land-owners, whom he revealed as transgressors of the pure holy law of Islam.

S̲h̲arīʿat Allāh's son Muḥammad Muḥsin, known as Dūdhū Miyān (1819-60), had a more vigorous temperament, a talent for organizing and a natural authority; under his direction the Farāʾiḍiyya became a homogeneous and disciplined organization with Dūdhū Miyān himself at its head; by a curious violation of the founder's precept he was called *pīr*. The territory of eastern Bengal (especially the region of Bāḳargand̲j̲, Dacca, Farīdpūr and Pabna where the sect was most active) was divided into districts entrusted to special agents whose duty it was to make converts and to organize resistance to the rich proprietors. An especially effective and important measure was the prohibition made by Dūdhū Miyān of recourse to the ordinary courts; disputes between the Farāʾiḍiyya themselves had to be settled by him personally. Since in many cases the impossibility of the poor peasants securing justice sprang from their individual lack of resources, as has been said, "collections" were organized in order to indict the *zamīndārs* in the courts in cases of injustice to peasants unable to defend themselves without help. In other words, the Farāʾiḍiyya did not restrict themselves to upholding the beauty of the theoretical principles of "ancient" Islam, like "The earth is God's" (as Dūdhū Miyān in fact used to proclaim), but they had found quite effective ways of putting them into practice. Since the taxes and forced labour imposed by landlords on peasants were illegal from the point of view of the *s̲h̲arīʿa*, Dūdhū Miyān advised landless peasants to leave the privately-owned estates and settle on the *k̲h̲āṣṣ maḥall*, that is, State property, thus avoiding all taxes other than those owed to the government. It is certain that, faced by a movement so efficiently organized, the rich *zamīndārs* and indigo planters united and tried to destroy it. As in similar cases, two methods were used; firstly, they tried violence, both privately and officially (Dūdhū Miyān was even prosecuted on charges, which were more or less proved, of rapine, etc. Numerous disturbances broke out in the areas controlled by the Farāʾiḍiyya and the landowners resorted to barbarous tortures); secondly, on the strength of certain religious juridical statements by the Farāʾiḍiyya, they tried to demonstrate their "heterodoxy" and at the same time, placing the discussions on a theoretical-religious basis, they tried to turn the Farāʾiḍiyya aside from practical action. To a certain extent this second method became effective, while the Farāʾiḍiyya lost the sympathy of some neutral Muslims of the neighbourhood (easily persuaded by the Muslim landowners) on account of the mistakes made by them and by Dūdhū Miyān who, from Bahādurpūr where he generally lived, "excommunicated" by declaring "non-Muslim" those who were not willing to accept all the doctrines of the sect. Disturbances became more and more serious and frequent and, in 1836, the enemies of the Farāʾiḍiyya succeeded in having Dūdhū Miyān sent to prison in ʿAlīpūr. The movement continued to vegetate under the direction of Dūdhū Miyān's sons, who were lacking in energy and whose qualities of organization were very inferior to those of their father. Dūdhū Miyān died in 1860 and was buried in Bahādurpūr, but a subsequent flood has left no trace of his tomb. The sect dwindled, to become one of the very many purely religious communities in India, while its social effectiveness was lost.

Bibliography: Abdul Bari, *The reform movement in Bengal*, in *A history of the freedom movement (being the story of Muslim struggle for the freedom of Hindo-Pakistan, 1707-1947)*, i, Karachi 1957, 542 ff. (with copious bibliography).

(A. Bausani)

FARAS (a.) (pl. *afrās, furūs, fursān*) denotes the Horse (*Equus caballus*), in the sense of saddle-horse; philologists further restrict the meaning of the word to "saddle-horse of the Arabian breed". This original name is applied to both sexes without distinction, and serves as a noun of unity for the collective of the species *k̲h̲ayl* (*Equidae*); hence this term is found in agreement with either gender, the feminine, however, seeming the more usual, in ancient Arabic (see Ch. Pellat, *Sur quelques noms d'animaux en arabe classique*, in *GLECS*, viii, 95-9). The word *faras*, pronounced *fras*, pl. *frāsāt*, with the meaning "thoroughbred horse", has survived in the Bedouin dialects on the borders of the Sahara, whereas the Mag̲h̲rib dialects only really recognise *ḥiṣān* (Tunisia) and *ʿawd* (Algeria, Morocco) to denote the horse (for the etymology of *ʿawd*, see Ph. Marçais, *Document de dialectologie maghrébine*, in *AIEO-Alger*, vi (1947), 206-7). The immense interest taken by the Arabs in their breed of horses, both before and after Islam, and the considerable part which this animal played in Muslim expansion have endowed the language with a great number of terms, many of them qualifying words, to complete all that *faras* left unspecified as to sex, age, origin, external peculiarities and temperament; from it sprang the philology of the

horse which, in amplitude, is in no way inferior to that of the camel. For example, to distinguish the sex, the pure-bred stallion (*faḥl*) will be called *ḥiṣān*, that is to say "one who reserves his seed jealously", and the pedigree brood-mare (*farasa*) will be *ḥidjr*, that is "forbidden to all comers", while the mare of mixed breed will be merely *ramaka*, that is "the offspring of misalliance". The age of an animal is determined by the stage of development of the teeth, as is the present practice; at birth the foal is called *muhr*, then, up to one year of age *filw* (= weaned), up to two years *ḥawlī*, to three *thanī*, to four *rabāʿin*, to five *ḳāriḥ*, after which it becomes *mudhakkīn* for the rest of its life.

The origin of the so-called "Arabian" breed of horses has been the subject, in the written documentation of the Arabs, of a multitude of traditions, from which we must exclude those of a purely religious character as well as works of natural history strongly influenced by Greek thought. Pre-islamic poetry alone can provide some information on this subject, for it represents the least distorting medium for the oldest Arab traditions. Without hoping to find in these archaic poems any precise expositions on the subject, we can nevertheless glean from them the names of celebrated horses and great horsemen which can be tolerably well placed in history, and so reconstruct a chronology in the genealogy of ancient families of Arabian horses. The first of these is said to have sprung up among the Azd in the Yemen and the Taghlib in Baḥrayn, descended from Zād al-Rākib (= "the horseman's viaticum"), a famous stallion given by king Solomon to the Azdī delegation on the occasion of their visit to that illustrious monarch and his celebrated stud (*ḥimā*). Of the same descent was the sire al-Aʿwadj, owned by Ḥudjr, king of Kinda who had emigrated from the Ḥaḍramawt in the 5th century B.C. to the borders of the Syrian desert. The son of this Ḥudjr is none other than the great poet Imruʾ al-Ḳays whose lines giving a description of his steed "with its fine-haired coat" (*mundjarid*) in his classic *Muʿallaḳa* (lines 51 ff.) have remained unequalled, though very often subsequently imitated. Of the seven other families of horses known to tradition, four are also connected with Zād al-Rākib. To one of these strains was attributed the stallion Dāḥis, the fruit of an accidental mating of the noble pure-bred Dhu 'l-ʿuḳḳāl. This degrading origin caused Dāḥis, as the outcome of a race, to become the cause of the famous war of Ghaṭafān which lasted for forty years; consequently his strain soon became extinct since it was thought to bring bad luck. Of the three remaining strains, one is purely Persian and the other two of forgotten origin. The story of Dāḥis demonstrates the importance which the Arabs originally used to attach in the pedigree to the stallion, whilst after Islam the genealogy was traced through the mares; there is here a curious contradiction.

With Islam, a new version of the facts comes to light; we now go back to Ismāʿīl, to whom is attributed the domestication of the horse, the special gift of Allāh, though without omitting the episode of Solomon's stallion. Then we leap over the centuries of the *Djāhiliyya* and start again with an authentic historical event, the breaching of the dam of Maʾrib, in the Yemen, which occurred in the middle of the 6th century A.D., to explain the origin of the Arabian breed. The flooding of the country is said to have driven the horse population into the desert where they became wild; five mares from these wandering herds were seen by the people of Nadjd and captured in a curious manner. Five lines of descent sprang from these five mares and one of their descendants, taken to Syria, in her turn began five thoroughbred strains. From one of these the celebrated mare Kuḥaylat al-ʿAdjūz became the eponym for every pure-blooded creature; the term *kuḥaylān*, with its variations *kaḥlānī*, *kaḥayl*, and *kaḥīl*, even now still denotes the thoroughbred Arab.

In reality, the greatest confusion reigns among the horse-breeders of Arabia and Syria on the matter of these "five strains" (*al-kaḥāʾil al-khams*), in which they take such pride and to which they claim that their own stock is related. Inquiries undertaken in the interests of historical and scientific truth by trustworthy travellers like Niebuhr (1779), Burkhardt (1836), Blunt (1882), von Oppenheim (1900) and in particular Major Upton (1881) (see *Bibl.*) have not succeeded in establishing logical connexions between the statements of the various parties consulted; nor could it be otherwise, as the Bedouins have never kept any written pedigrees and entrust the recollection of their prized lines of descent to memory alone.

After the Ḳurʾānic revelation, the victorious Muslims created a corpus of mythical traditions making the horse the chosen mount of Allāh, of supernatural origin; this was justified by the fact that they owed their victorious expansion to that animal. Together with the angels' winged horses and those of king Solomon, and al-Burāḳ, the Prophet's celestial steed, the charger (*djawād*) of the warrior for the Faith (*al-mudjāhid*) became, on earth, a powerful agent for ensuring the final reward in the hereafter; that explains what solicitude and care the Muslim rider had to devote to his beast, which in times of shortage was often given precedence over his wife and family. Among certain tribes in Morocco, popular superstition even went so far as to make the horse a mascot and bringer of luck. On the other hand, the time has now long passed when the horse received so much attention from its master in Arabia; the indignant testimony of all the investigators (see above) bears this out.

In the countries of the Near East we can still today find pedigrees (*ḥudjdja*) drawn up when there is a sale of horses, in the form of official deeds and attesting the animal's highly aristocratic origins: these are merely the inventions of horse-copers. But, like the mediaeval treatises on hippology, they betray a preoccupation with the classification of horses, according to the purity of their breeding, in four degrees; thus we have—(a) *al-ʿarabī* or *al-ʿatīḳ*, the "thoroughbred", well-proportioned, of moderate size, and with a flat forehead; its parents are noble, and the belief is that the devil will not approach its owner; (b) *al-hadjīn* or *al-shihrī*, the "mixed breed", whose sire is better bred than the dam; (c) *al-muḳrif*, the "approacher", whose dam is of better breeding than the sire; (d) *al-birdhawn*, of common parentage: this is the draught-horse or pack-horse. According to the etymologists, it is from this term that the French have derived the words "*bardot*" or "*bardeau*" to describe the offspring of the union of the she-ass and the horse. The horse, other than the saddle-horse, is still called *kadīsh* (in Persian *ikdīsh*), or *khardjī*, "bastard". A gelding (*khaṣī*) can be a thoroughbred, but its sterility deprives it of all estimation in the eyes of the Muslims, the Prophet having disapproved of castration.

Leaving aside those Arab traditions which do not stand up to historical criticism, the origin of the

Arabian breed of horses has been the subject of extensive research by such discerning historians and mammalogists as Piétrement, Ridgeway, von Oppenheim and S. Reinach (see *Bibl.*), whose conclusions prove irrefutably the very recent character of this breed. Assyria and the Caspian region, long before Arabia, possessed horses very closely resembling the Egyptian and the Barb, and very clearly distinguished from the type of the steppes of central Asia and the Przewalski. Syria first of all became acquainted with this source, which must have been crossed with certain Libyan horses imported during the reigns of David and Solomon, while northern and central Arabia for many centuries remained unaware of the existence of this noble beast. Strabo, writing at the start of the Christian era, testified (*Geography*, XVI, 768, 784) to the absence of the horse from Arabia in his day. It was only later, in the 4th century, that the large migrations of tribes from southern Arabia towards Syria and ʿIrāḳ brought a new reinforcement to the horse population of those countries with the Dongola breed; the Yemen had for some centuries had the benefit of Ethiopian exports from this Egypto-Libyan source. From the contact of the two existing stocks, that of Syria-Palestine in the north and that of Nadjd-Yemen in the south, both of them of Libyan origin, the Arabian type began to become fixed; the nomadic element, and in particular the tribe of ʿAnaza, by their seasonal migrations for pasturage in effect created a permanent link between the two centres. The great Islamic conquests in the 1st and 2nd/7th-8th centuries further increased the infusion of new blood, first Assyrian, later Caspian, into Arab breeding, horses being one of the forms of booty most highly prized by the Muslim warriors. Furthermore, their rapid advance in the west, with the occupation of the Maghrib, made them appreciate the excellence of the Barb horse and Berber cavalry, the inheritors of the reputation of the ancient Numidian cavalry; in them they found an inexhaustible source of supply for remounting their squadrons; in fact, in the view of Ibn Khallikān (*Wafāyāt*, trans. M. G. de Slane, Paris-London 1843-71, iii, 476), we know that, in the twelve thousand Berber cavalry who disembarked in Spain under the command of Ṭāriḳ, there were only twelve Arab horses. The theory of the introduction of the Arab horse into the West by Islam is therefore no longer tenable since, on the contrary, it was on the Barb stock, of Libyan breed and perfectly unified, that the Muslims drew so constantly; they hastened to introduce a number of fine stallions to Arabian studs, and these newcomers succeeded in giving the Arabian type its perfect form. From the 7th/13th century Arabia ceased to be at the head of the Islamic world and became isolated; consequently she no longer received any regenerating assistance from abroad in the matter of breeding, which, for good or ill, took place in enclosed conditions, among the Bedouins of the Nufūd. The important nomadic ʿAnazī breeders, for their part, left the Nadjd for Syria, so condemning the stocks of horses in Arabia to a decline which has inevitably become more and more marked until the present time. Today, only the very largest fortunes derived from oil can bid for the extremely rare pure-bred Arab stallions, and it has to be admitted that this noble race is on the way to extinction.

Having been one of the principal factors in securing the victories of Islam, the horse was the inspiration of many literary works in Arabic in both verse and prose, especially during the first five Muslim centuries. In poetry, there were scarcely any poets who did not try to describe the horse, but always in an occasional way, the *waṣf al-faras* never having constituted a true theme. It is among the great masters of verse that we must seek the most beautiful expressions of this kind, although none of them, not even Abū Tammām, al-Buḥturī, al-Mutanabbī, Ibn al-Muʿtazz and others, abstained from using ready-made metaphors collected together in the pre-islamic *ḳaṣīda*s or from resorting pedantically to rare archaic terms (*gharīb*); in Muslim Spain, the Andalusian poets revealed no greater originality and, like their masters in the East, merely applied themselves to an external description of the animal with all the conventionalism imposed by their concern with philological erudition (see H. Pérès, *La poésie andalouse, en arabe classique, au XIe siècle,*[2] Paris 1953, 235-6). In prose, the number of works dealing with the horse would be well over a hundred had they all survived; there are frequent mentions of titles such as *K. al-Faras*, *K. al-Khayl*, *K. Khalḳ al-faras*, and *K. Ṣifāt al-khayl* in the lexicographers and encyclopaedists devoted to *adab*; Ibn al-Nadīm, in his *Fihrist*, gives quite a long list of them. Of the various manuscripts of this sort preserved in the libraries, very few have been published, in view of their striking similarity in form and substance. In all periods, the chief preoccupation of the writers of these treatises was to reproduce the terminology relating to the horse, very often at the cost of scientific reality. Moreover, the large place given in these works to superstitious interpretations of the physiognomy of the *faras* deprives them of what technical value one might wish to find in them; every anatomical detail, when considered from this angle, implies consequences either good or ill for the animal's owner; in this attitude we can see the mark of the nomad, with his excessive credulity, and similarly in the curious nomenclature of the horse borrowed from the names of desert birds. It is sufficient to consult the classic *K. Ḥilyat al-fursān wa-shiʿār al-shudjʿān* of the Andalusian Ibn Hudhayl, of the 8th/14th century (see Brockelmann, S II, 379 and the excellent translation, with full comments, by L. Mercier under the title *La parure des cavaliers et l'insigne des preux*, Paris 1924) to establish that the Arabs have always relied solely on the external features of the horse to determine its qualities of temperament. Thus their criterion of appreciation was founded on the interpretation of the particular features of the colour of the coat (*lawn*) and the "signs" (*shiyāt*) constituted by the "blaze" (*ghurar*), light patches on the head, the "stockings" (*taḥdjīl*), white markings at the foot of the legs, and the *dawāʾir*, tufts of hairs growing in different directions; other points to be considered are the shape of the "upper parts" (*al-aʿālī, al-samāʾ*), and the "under side" (*al-asāfil, al-arḍ*), and of the "forehand" (*al-maḳādim*) and "hindquarters" (*al-maʾākhir*), the animal's attitude in repose, its walk and trot, its bad habits both natural and acquired, its speed and staying-power. In their writings, these authors have never made a distinction between equitation, hippology and the veterinary art, and these three ideas are fused, in their works, in the synonyms *farāsa*, *furūsa* and *furūsiyya* [*q.v.*]. It is interesting to note that *firāsa*, from the same root, means "physiognomy".

The principles of rearing, teaching and training (*taḍmīr, iḍmār*) specified in these writings and in general use among the Muslims are very often

completely contrary to the nature of the horse and differ sharply from modern scientific methods; the same is true of veterinary treatment, when not taken directly from ancient Greek practice. For equitation, see FURŪSIYYA.

There is another category of works which are fairly numerous, mostly written by non-Arab Muslims, on subjects concerning the horse regarded from the viewpoint of military usefulness; they served as "manuals of instruction" for the use of the warriors of the Caliph's cavalry squadrons [see FURŪSIYYA]. Arabia gradually lost the passion for the race-course, in proportion as the number of horses declined. The other Muslim countries have remained quite interested in racing, but the sport is at present governed by rules imported from the west, and the Anglo-Arab thoroughbred is everywhere supplanting its illustrious ancestor.

To sum up, we may say that the horse reached its apogee, in the Near East, between the 5th and 15th centuries A.D., and that Arab horsemanship was in no respect inferior to that of European chivalry. But the lack of rational methods in breeding, on the one hand, and the replacement of steel by fire-arms on the other, condemned the Arab cavalry to an inevitable decline. Those Bedouins who still ride horses today use only violent and cruel methods to break in an animal that by nature is good-tempered and gifted with rare qualities of intelligence; it must be realised that these horsemen are not and never will be as close to the *faras* as were their mediaeval ancestors. We may add that, but for the judicious and praiseworthy intervention of English horse-lovers and breeders, the breed of the pure-bred Arabian would long since have been extinct.

(F. VIRÉ)

FARASĀN (FARSĀN), a group of islands in the Red Sea opposite Abū ʿArīsh. They are not mentioned in the *Periplus*. In the *Martyrdom of St Arethas* the Φαρσάν islands are said to have contributed seven

hips to the Christian expedition against the Yaman. The name is tribal. According to Hamdānī, the Banū Farasān, though claimed as Ḥimyarī by the Ḥimyarī genealogists, belonged to Taghlib and had once been Christian; there were ruined churches on the islands. They were at war with the Banū Madjid and traded with Abyssinia. They were also found in the Tihāma. The islands had some strategic value in the naval wars of the 16th century. The Egyptians landed there in 912/1506. Albuquerque considered occupying them. The Sharīf Abū Numayy II seized them but was ejected by the Turks. According to Ovington 'Fersham' exported corn to Arabia and the inhabitants were employed by Banians in pearling. Despite Yamanī claims the islands became part of Idrīsī, and later, Saʿūdī territory. Philby found a few troops there. They were visited by Ehrenberg and Hemprich (1825), by Bové (1830-1), and later by oil geologists.

AL-**FARAZDAḲ**, "the lump of dough", properly Tammām b. Ghālib (Abū Firās), famous Arab satirist and panegyrist, died at Baṣra about 110/728 or 112/730.

Born in Yamāma (Eastern Arabia) on a date which is uncertain (probably after 20/640), this poet was descended from the sub-tribe of Mudjāshiʿ, of the Dārim group of the Tamīm. His father, Ghālib [*q.v.*], is said to have played some part, in the Baṣra area, in the conflict between ʿAlī and Muʿāwiya; to this fact must be attributed the later idea that al-Farazdaḳ entertained pro-ʿAlid sympathies which, however, are not very apparent in his works. The talent for verse does not seem to have been widespread in his family; however al-Farazdaḳ, endowed with a prodigious memory and precocious talent, seems very soon to have made himself known in his tribe by laudatory and epigrammatic compositions in the Bedouin style. The accession of the Umayyad dynasty must have been a decisive factor in the career of the young poet, because of the choices to which it limited him. By the bonds of affinity as much as by obligation, al-Farazdaḳ was first led to choose himself protectors in Yamāma, then at Baṣra, amongst people more or less bound to the fortunes of the family ruling in Syria. This attitude is particularly noticeable in the relations he maintained, for example, with the Banū Bakra, who were secretly flirting with the ʿAlids, though supporting the Umayyads.

The satire attributed to al-Farazdaḳ against the caliph Muʿāwiya, contrary to what Nallino maintains, is far from being definitely authentic.

Nevertheless circumstances, fortuitous or contrived, must have affected his behaviour occasionally: it is known, for example, that al-Farazdaḳ, as a result of some rather obscure proceedings, had to flee from ʿIrāḳ and seek refuge in Medina to escape the threat that Ziyād, the governor of Baṣra, laid upon his life (in 49/669). At Medina the poet was welcomed most warmly by the local authorities, and he remained in this town till 56/675-6; he then returned to ʿIrāḳ immediately after the death of Ziyād to attach himself to the latter's son, ʿUbayd Allāh. In 67/686, the panegyrist confirmed his attachment to the Umayyad branch of the Marwānids which was in power, by celebrating prince Bishr, who had come to ʿIrāḳ, and his brother ʿAbd al-ʿAzīz, whose praises he sang in a threnody in 85/704 (*Dīwān*, ed. Ṣāwī, 225 ff.). There is no doubt that under the governorship of al-Ḥadjdjādj [*q.v.*], probably because of the intrigues of his enemy Djarīr, who was in the good graces of this powerful personage, al-Farazdaḳ was more or less in disgrace. Nevertheless he dedicated a number of laudatory poems to al-Ḥadjdjādj and to some members of his family. Perhaps his delicate position in relation to the governor of ʿIrāḳ prevented al-Farazdaḳ from obtaining the protection of the caliph ʿAbd al-Malik and it is to be noted that no ode was addressed by him to this ruler. On the other hand, under Walīd I, al-Farazdaḳ became the official poet of the caliph, as witness numerous panegyrics dedicated to him and to his two sons. Under Sulaymān he enjoyed the same favour. It was otherwise on the accession of ʿUmar II in 99/717, when al-Farazdaḳ was rather in the shade. However, the insurrection of Yazīd b. al-Muhallab gave the poet the chance to recover favour and, under the caliph Yazīd II, he violently attacked the rebel whom he had celebrated several years before, at the time of his power (see the panegyrics to Yazīd II and to Maslama, dated 101/720 and 102/720-1 in *Dīwān*, 262-7 and 201). At this time, al-Farazdaḳ, who was eighty years old, hardly ever left Baṣra. Caught up in the whirlwind of conflicts between the "Yemenī" and Ḳaysī factions, he experienced many difficulties with governors of ʿIrāḳ belonging to one or other of them. Twice he was thrown into prison because of this, but succeeded in getting out thanks to local support.

In his career, struggles against rivals occupied a prominent place. Political attitudes, notably attachment to the "Yemenī" or the Ḳaysī faction, provoked or aggravated these enmities. In the background one can also sense some tribal partisanship. This is the reason for the implacable hostility nursed by al-Farazdaḳ for Djarīr, also a Tamīmī, but of another branch. There is no doubt that the contentions between these two rivals have been a fruitful source for anecdotal literature (as one can ascertain from *Kitāb al-Aghānī*[3], viii, 32-7). Moreover, it is certain that this opposition inspired al-Farazdaḳ—and his enemy likewise—with the poems which most clearly characterize their work. These diatribes should not however, allow us to forget those other relationships, of a different kind, maintained with al-Aḥwaṣ [*q.v.*] at Medina, with the "reader"-grammarian Abū ʿAmr ibn al-ʿAlāʾ [*q.v.*], or with al-Ḥasan al-Baṣrī (cf. *Aghānī*[1], xix, 14).

Al-Farazdaḳ seems to have been too unusual a figure not to have stimulated the imagination of the "logographers" who interested themselves in him. In the biographical facts we have, there often comes to light a tendency to exaggerate the eccentricities of his personality, to accentuate his cowardice, bawdiness, drunkenness, and venality. This harsh approach is in fact of little concern because it does not touch on the essentials. What is important in reality is to discover in al-Farazdaḳ the traits which are of relevance for the panegyrist, the satirist, and the representative of a generation torn between bedouin culture and the new ethics. On these lines might be explained certain traits of his character, his recantations and his final impenitence, all to be found echoed in his poetry.

The greater part of his poetry has survived, because of Tamīmī particularism on the one hand, and also because of the favour al-Farazdaḳ still retained in learned circles in Baṣra. After an oral transmission about which we have few facts, his poetry was equally well received at Kūfa (see *Aghānī*[1], xix, 2, 11 f.) There is no doubt that it is from this time that al-

Farazdaḳ, along with Djarīr and al-Akhṭal [*q.v.*], becomes one of a trio who for several centuries furnished a theme for discussion among the cultivated. In his own lifetime, al-Farazdaḳ did not hesitate to appropriate the verses of his contemporaries (cf. Ibn Sallām, 126 and *Aghānī*[3], ii, 266-7, viii, 96); there is also reason to doubt the authenticity of many of the poems which appear in al-Sukkarī's recension in the 3th/9th century. The *Dīwān*, in Ṣāwī's edition, numbers about 7,630 verses, which is the largest total that is known in the whole of Arabic poetry. His work is presented in the form of fragments or of complete poems of 20 to 30 verses, rarely more. Many poems are in *ḳasīda* form. With al-Farazdaḳ this form had a tripartite structure with a short *nasīb* (*e.g.*, *Dīwān*, ed. Ṣāwī, 7, 8, 74-6, etc.), but usually—and this is remarkable—this elegiac prelude is omitted (so *ibid.*, 84-7, 99 f., 228-33 etc.), and very frequently the *ḳaṣīda* is reduced to the laudatory elements alone (so *ibid.*, 57-9, 63-7, 70-1, 99-101, 309-14, etc.). The thematic sequence in the *ḳaṣīda* with *nasīb* often anticipates the sequence which imposed itself on the "classical" theoreticians (so *ibid.*, 219-24, 302-8 etc.). Too often the threnodic form is difficult to find in this poet, but we have a good specimen in the threnody composed on Bishr (*ibid.*, 268-70). The various types of poem are unequally represented in al-Farazdaḳ. First and foremost come the laudatory themes made up of the traditional sterotypes, among which should be pointed out the traditional theme of the greatness as caliph and the religious value of the Caliph-Imām (so *ibid.*, 63-7, 89-92 lines 12 ff., 219-24 lines 18 ff. etc.). Naturally enough, tribal and personal *fakhr* is frequent in this poet. Like his contemporaries, al-Farazdaḳ treated the epigram in short impromptus or developed it as a thematic element in a *ḳaṣīda*. In this latter case he obtains an effect of contrast with the laudatory elements (so *ibid.*, 115-23 where the glories of the Dārim are contrasted with the "shames" of the Kulayb, Djarīr's tribe). In al-Farazdaḳ, more than in his contemporaries, the satirical genre has a rare vigour and obscenity (*e.g.*, the piece directed against al-Tirimmāḥ, in *Dīwān*, 135-7). The traditional wisdom, poorly represented in the work of this panegyrist and satirist, is of a distressing banality, and the Islamic ethic has in no way enriched in depth a spirit completely impregnated with Bedouin culture. Sometimes, however, the poet seems to have been able to strike a moving tone, in lamenting, for example, the death of a child (so *Dīwān*, 764 and *Aghānī*[1], xix, 12-3). It is worth noting that, dissolute as al-Farazdaḳ is supposed to have been, he did not to all intents and purposes write in the Bacchic genre (cf. Ibn Ḳutayba, 294). Likewise this epicurean hardly felt the need to celebrate his loves, and the ode composed on a gallant adventure confirms this deficiency in his sensibility (*ibid.*, 255-62). Similarly in the fragments, in any case suspect, on his separation from his wife Nawār, the poet is without deep emotion and reduced to repeating banal formulas (see *Aghhānī*[1], xix, 9).

The language and style of the works ascribed to al-Farazdaḳ are of a remarkable homogeneity: very rarely does one find a laboured effect due to the use of rare terms or *hapax legomena*. In this poet as in his contemporaries of the ʿIrāḳī circle, only the five current metres are employed; *radjaz* is employed only sporadically. From this point of view, his work is well worth attention, in the sense that it enables us to assess the prosodic resources available in this epoch to a poet dependent on the Tamīmī tradition. Put beside the poetry of Djarīr, it is thoroughly representative of the poetry of the great nomads of Eastern Arabia at its height, at the very moment when, in contact with the big ʿIrāḳī cities, it was to yield before new influences.

Bibliography: Ibn Sallām, *Ṭabaḳāt*, index; Ibn Ḳutayba, *Shiʿr*, index; *Aghānī*[3], i, 116, 148-9, viii, index and especially 33-8, 44-5, xv, 441-7, and *Aghānī*[1], xix, 1-61; Āmidī, 166 and index; Marzubānī, *Muʿdjam*, ed. Krenkow, 272, 477, 486-7; idem, *Muwashshah*, index; Ibn Khallikān, *Wafayāt*, Cairo 1310, ii, 196-202; Baghdādī, *Khizāna*, Cairo 1347, i, 202-7 (summarizes or quotes Ibn Ḳutayba and *Aghānī*). The ʿIrāḳī anthologists and others have frequently quoted or mentioned al-Farazdaḳ, see esp.: Djāḥiẓ, *Bayān*, index; Ibn Ḳutayba, *ʿUyūn*, index; Ibn ʿAbd Rabbih, *ʿIḳd*, Cairo 1359/1940, index (72 mentions and quotations); Ḳurashī, *Djamhara*, 336-44. Edition of the *Dīwān* by Sukkarī (see *Fihrist*, 158, l. 27-8); for the manuscripts of the *Dīwān*, see Brockelmann, I, 56, S I, 85; Muḥ. b. Ḥabīb, *Naḳāʾiḍ Djarīr wa'l-Farazdaḳ*, ed. Bevan, *passim*; editions of the *Dīwān* by R. Boucher, *Divan de Ferazdaq, récit de Muḥ. b. Ḥabīb*, Paris 1870 (1st part, 270 nos.) and by J. Hell, photolithographic ed., Munich-Leipzig 1900-1 (2nd part); note also other editions, Beirut (n.d. and 1937), Cairo (1293, very defective); another edition by Ṣāwī, *Sharḥ Dīwān al-Farazdaḳ*, Cairo 1354/1936 (782 poems and fragments, amounting to about 7630 verses; besides the fragments and short pieces, it includes about 80 long satires, 94 panegyrics, 24 threnodies, often brief; it is an uncritical and mediocre edition, with glosses often of slight importance; there is no indication how the known mss. were utilised; it seems to reproduce Boucher and Hell, but it has the advantage that it adds the text of the *Naḳāʾiḍ*); a partial French translation by Boucher (Paris 1870-5); and by Hell (Leipzig 1902: trans. of the panegyric to Walīd II), also idem, in *ZDMG*, lix (1905), 595-600 and lx, 1-35; on the Muhallabids, cf. (R. BLACHÈRE)

FARD (adj., can be taken as a subst.), pl. *afrād*, used of the individual, and so with the meanings of *only*, *solitary*, *unique*, *incomparable*; the *half*, that is to say *one* of a pair or couple (pl. *firād*, *Ḳāmūs* root *f.r.d*); and other derivative meanings. The word has been used to denote Allāh, as the single Being who has no parallel: *al-fard fī ṣifāt Allāh* (al-Layth, *Lisān*, iv, 327/iii, 331a), but it does not occur in the Ḳurʾān or in *ḥadīths* as an epithet of Allāh. It is for that reason that al-Azharī (*ibid.*) found fault with this usage. There is every reason for believing that *al-fard* was at that time simply used as an equivalent of *aḥad*, in accordance with the verse *huwa'llāhu aḥad* (Ḳurʾān, CXII, 1) "où se résume le dogme de l'unicité divine", as R. Blachère said (*Le Coran*, Paris 1949, ii, 123). In addition, *al-fard* serves as a technical term in different sciences: (a) in poetry it denotes a line of verse taken in *isolation*

(intact or reduced to a single hemistich); (b) in lexicography, the *afrād* are the words handed down by *one single* lexicographer (see al-Suyūṭī, *Muzhir*[3], i, ch. 5), distinct from *āḥād* (*ibid.*, i, 114, lines 8-12) and *mafārīd* (*ibid.*, ch. 15); (c) in grammar, *al-fard* has been said to signify "the singular" by de Sacy (*Gr. Ar.*[2], i, 149), Fleischer (*Kleinere Schriften*, i, 97), Wright (*Ar. Gr.*[3], i, 52B). This can only be a recent or exceptional meaning of the word, which should be dropped and replaced by the traditional terms *al-wāḥid* or (more often used today) *al-mufrad*; (d) in the science of *ḥadīth*, *fard* is synonymous with *gharīb muṭlak*: a tradition in which the second link of the chain of those who have transmitted it is only represented by a *single tābiʿī*; (e) in astronomy, *al-fard* denotes the star *alpha* in Hydra (*al-shudjāʿ*), and hence the most brilliant (idea of isolation); (f) in arithmetic, *al-ʿadad al-fard* is "the odd number" (from 3 upwards, inclusive), as opposed to *al-ʿadad al-zawdj* "even number" (al-Khwārizmī, *Mafātīḥ al-ʿulūm*, ed. van Vloten, 184), other uses of *fard* in the divisibility of numbers, *ibid.*, 184-5; (g) for theologians and philosophers, *al-fard* denotes the species, as restricted by the bond of individuation.

(H. FLEISCH)

AL-**FARD** [see NUDJŪM]

FARḌ (A.), also *farīḍa*, literally "something which has been apportioned, or made obligatory", and as a technical term, a religious duty or obligation, the omission of which will be punished and the performance of which will be rewarded. It is one of the so-called *al-aḥkām al-khamsa*, the "five qualifications" by which every act of man is qualified in religious law [see AḤKĀM]. A synonym is *wādjib*. The Ḥanafī school makes a distinction between *farḍ* and *wādjib*, applying the first term to those religious duties which are explicitly mentioned in the proof texts (Ḳur'ān and *sunna*) as such, or based on *idjmāʿ*, and the second to those the obligatory character of which has been deduced by reasoning. This distinction is not made by the other schools, and as a norm for action *farḍ* and *wādjib* are equally binding. Islamic law distinguishes the individual duty (*farḍ ʿayn*), such as ritual prayer, fasting, etc., and the collective duty (*farḍ kifāya*), the fulfilment of which by a sufficient number of individuals excuses the other individuals from fulfilling it, such as funeral prayer, holy war, etc.

(TH. W. JUYNBOLL*)

FARGHĀNĀ, Ferghānā, a valley on the middle Jaxartes (Sīr-Daryā), approximately 300 km. long and 70 km. wide, surrounded by parts of the Tian-shan mountains: the Čatkal range (Ar. Djadghal, up to 3,000 m. high) on the north, the Ferghānā mountains (up to 4,000 m.) on the east, and the Alai mountains (up to 6,000 m.) on the south. The only approach (7 km. wide) accessible in all seasons is in the west, at the point where the Jaxartes leaves the valley and where the trade-route (and since 1899 the railway from Samarḳand to Ōsh) enters it. The Farghānā valley covers approximately 23,000 $km.^2$; the irrigated land (9,000 $km.^2$) has increased during the last decades, owing to the constant extension of irrigation. The interior of the area consists of a desert.

The Farghānā valley has always been fairly densely populated since the earliest irruption of Islam, and even in pre-Islamic times, according to Chinese sources. As a consequence, the indigenous population has been able to withstand the Turks, who have pressed in repeatedly ever since early Islamic times; thus the Turks have only settled in one part of the district (cf. the present political distribution below). Since the end of the nineteenth century the Russians have also settled almost exclusively in the towns, leaving the agricultural areas in the hands of the indigenous population.

Evidently Farghānā became known to the Chinese in 128 B.C., from the description of an envoy who had travelled through it. But the connexion of the Chinese accounts with individual areas or persons cannot be established with any certainty. After the spread of the second (western) Kök-Turkish kingdom Farghānā was exposed to Turkish attacks and, after continued fighting between 627 and 649 A.D., came under Turkish dominion. A Turkish prince took up residence in Kāsān (Chinese Kʿo-sai), the capital of that time. After the overthrow of the first west-Turkish kingdom by the Chinese, in 657, the whole district was governed from Kāsān by a Chinese governor. The indigenous Iranian dynasty, whose influence had for some time been weakened by a succession of local princes (as reported by the Chinese envoy Hüan-tsang in 630), was evidently supplanted by a Turkish ruling family, after the elimination of Chinese rule in about 680. In 739 Arslan Khān is mentioned as ruler of Farghānā.

An Arab-Muslim advance into Farghānā, alleged to have taken place in the time of the Caliph ʿUthmān under the leadership of Muḥammad b. Djarīr, who is said to have fallen at Safīd Bulān at the head of 2700 warriors (according to Djamāl Ḳarshī apud Barthold, *Turkestan*, 160), certainly belongs to the realm of legend. The legend formed the basis for a Persian folk-tale (said to have been translated from Arabic) which later spread throughout Central Asia, and was finally translated into Turkish (cf. *Protokolī Turkest. Kružka Lyubiteley Arkheologii*, iv, 149 f.).

In fact the Muslim invasion of Farghānā is connected with the occupation of Transoxania by Ḳutayba b. Muslim [*q.v.*]. He first advanced into the country in 94/712-3 and attempted a revolt from there against the Caliph in 96/715, but was killed by his own soldiers (Ṭabarī, ii, 1256 f., 1275-81; S. G. Klyashtornīy, *Iz istorii bor'bī narodov Sredney Azii protiv arabov* [*Remarks on the history of the struggle of the peoples of Central Asia against the Arabs*], in *Épigrafika Vostoka*, ix (1954), 55-64: this treats mainly of the events of 712). Ḳutayba's grave is still pointed out today close to the village of Djalāl Ḳuduḳ, near Andīdjān (*Protokolī*, iii, 4). This revolt and the battles which followed in Persia in the next decades, finally leading to the downfall of the Umayyads in 749-50, prevented for some time the consolidation of Arab-Islamic rule over Farghānā. The Muslims apparently had to leave the country again and in 103/721-2 the indigenous Sogdian prince was able to recall and resettle in part of his country those Sogdians who had migrated further eastwards to avoid the summons to adopt Islam (Spuler, *Iran*, 37, 254 f.). At that time the local nobility (gentry: *Dihḳāns* [*q.v.*]) played the leading rôle in Farghānā, as in the rest of Transoxania. The local prince also bore this title beside that of Ikhshēdh (cf. IKHSHĪDIDS, and Ol'ga I. Smirnova, *Sogdiyskie monetī kak novīy istočnik dlya istorii Sredney Azii* [*Sogdian coins as a*

new source for the history of Central Asia], in *Sovetskoe Vostokovedenie*, vi (1949), 356-67; further, A. Yu Yakubovskiy [ed.]: *Trudî sogdiysko-tadžikskoy ékspeditsii . . . [Works of the Sogdian-Tādjīk expedition . . .]*, i, Moscow-Leningrad 1950, 224-31; further as sources: al-Balādhurī, *Futūḥ*, 420; al-Ṭabarī, ii, 1442, 2142; *Ḥudūd al-ʿālam*, ed. Minorsky, 115-17, 355; idem in *BSOAS*, xvii/2 (1955), 265).—In the year 121/739 the Arabs were once more able to send a governor to Farghānā (al-Ṭabarī, ii, 1694), but there was still continued opposition to Islam, especially as the permanence of Arab rule had again been put in doubt by the advance of Chinese armies into Western Central Asia as far as Transoxania, between 745 and 751 (cf. Spuler, *Iran*, 302 and the sources and studies given there). An envoy sent to the Caliph al-Manṣūr by the local prince, who had evidently fled to Kāshghar, was held prisoner for a long time owing to his refusal to adopt Islam (Yaʿḳūbī, ii, 645). The Caliphs al-Mahdī, Hārūn al-Rashīd (175-6/791-3) and al-Maʾmūn were also forced to send troops to Farghānā to overcome the opposition to Islam and Arab rule (Yaʿḳūbī, ii, 465 f., 478; Gardēzī, 19; further Spuler, *Iran*, 51 f.). Only the inclusion of Farghānā in the dominions of the Sāmānids [*q.v.*] in approximately 205/820-1, under the administration of the governor Nūḥ b. Asad (d. 227/841-2), opened the last doors to Islam, both in Kāsān (al-Yaʿḳūbī, *Geogr.*, 294, al-Yaʿḳūbī, ii, 478; al-Ṭabarī, ii, 1257), the centre of administration, and Ūrast. The indigenous dynasty had in the meantime disappeared. From then on, the inhabitants of Farghānā supplied soldiers for the guards of the Caliph al-Muʿtaṣim (218-27/833-42: al-Balādhurī, 431; Spuler, *Iran*, 137, 185, fn. 8). They thereby strengthened the influence of the Iranian element in Mesopotamia, which moreover increased continually under the Sāmānids.

Farghānā in the time of the Sāmānids has been amply described by Arab geographers. At that time a change in the economic importance of the several parts of the country appears to have taken place. According to Ibn Khurradādhbih, 30, the road leading into the country from the west crossed the Jaxartes at Khodjand ([*q.v.*]; now Leninābād), and continued to Akhsīkath [*q.v.*], along the right bank, then to Ḳubā, Ōsh and Özkänd (Ūzgand) along the left bank. Al-Iṣṭakhrī, 335, on the other hand considers the road running south of the river to be the main one and lists several populated places along it; only a secondary road led to Akhsīkath at that time. The Farghānā valley then formed the frontier district against the (still unconverted) Turks, who had recently been driven back north-eastwards in several places. There were strong garrisons in Ōsh and some neighbouring forts, used as observation posts against them. Akhsīkath (al-Iṣṭakhrī, 333) was the capital at that time, a position it held as early as the middle of the seventh century, according to Chinese reports and al-Balādhurī (*Futūḥ*, ed. de Goeje, 420). On the other hand Ḳubā is designated as larger, and as the actual capital of the country by al-Muḳaddasī, 272, though its period of prosperity was certainly short.—In the tenth century Farghānā was divided into three provinces and many administrative districts, which are listed by the geographers. They stress the fact that the villages of the country were bigger than elsewhere in Transoxania and occasionally extended as much as a day's journey. Islam (of the Ḥanafī school of law) had asserted itself successfully in the meantime, and convents (*Khānḳāh*) of the Karrāmiyya [*q.v.*] are also mentioned by al-Muḳaddasī, 323. Nothing else is reported about adherents of other religions, such as Christians, Manichaeans and Zoroastrians. Nevertheless an Arabic inscription dating from 433/1041-2 was discovered in the gorge at Wārūkh (in the south), showing a Sassanian and Christian (*rūmī*) date beside the Muslim one (*Protokolî*, viii, 46 f.). A further Arabic inscription (without this peculiarity in the dating) from the year 329/940-1 was found in Ōsh in 1885 (*Otčët Imp. Arkheol. Kommissii za 1882-1888 godî*, p. LXXIII). Buildings from Sāmānid times, on the other hand, have evidently not been preserved.

The mountain ranges surrounding the valley supplied gold, silver and coal (already then used for heating, al-Iṣṭakhrī, 334), and furthermore petroleum, iron, copper, lead, turquoises, sal ammoniac and a medicament called Kū/ïlkān (cf. *BGA*, iv, 344; particulars in Spuler, *Iran*, 387, 389, 399, with sources, especially al-Muḳaddasī, 326; Ibn Ḥawḳal², 384). Turkish slaves, iron and copper, swords and armour as well as textiles were exported from Farghānā and Isfīdjāb (*Ḥudūd al-ʿālam*, 116; Spuler, *Iran*, 407 f.). Judging by the growth in revenue the country's prosperity increased greatly in Sāmānid times. According to Ibn Khurradādhbih, 38, it amounted to 280,000 dirhems; Ibn Ḥawḳal², 470, writing about 130 years later, in 977, puts it already at one million (Spuler, *Iran*, 476).

After the collapse of the Sāmānid state in 389/999, Farghānā came under the dominion of the Ḳarluḳs [*q.v.*] and thus of the ruling dynasty of the Ilig-Khāns or Ḳarakhānids [*q.v.*]. Özkänd [*q.v.*], where twelfth-century buildings and tomb-stones are still preserved, now became the centre of administration. It was there that most coins were minted (often bearing the province name Farghānā as the place of coinage), but other minting-places also occur. The whole of Transoxania was originally administered from Özkänd. After the divisions which soon took place within the Ḳarakhānid dynasty (cf. O. Pritsak, in *Isl.*, xxxi/1 (1953), 17-68), the princes of Farghānā settled in Özkänd, where they withstood a Saldjūḳ advance in the years 482-3/1089-90. In 536/1141 Farghānā came under the dominion of the Gürkhāns [*q.v.*] of the Ḳarakhitāy [*q.v.*], but the indigenous dynasty was still tolerated, as elsewhere within this state. Until 560-74/1165-79, this dynasty seems also to have ruled over Samarḳand, which later again came under the rule of a separate branch of the Ḳarakhānids. From 1212 to 1218 Farghānā was disputed between the Khʷārizmshāh Muḥammad II [*q.v.*] and first the Nayman prince Küčlüg, who had fled westwards, then the Mongols; with the subjection of the prince of Akhsīkath and Kāsān, the province subsequently fell to the Mongols (Ulus of Čaghatāy; cf. the article ČINGIZIDS, above) for whom it was long administered by Maḥmūd and his son Masʿūd Yalavač in the thirteenth century. Local princes in Farghānā were tolerated for a long time; the sheltered position of the valley induced Baraḳ Khān, the Mongol governor, and the Ḳarakhitāy before him, to keep the treasury there (Waṣṣāf, Bombay ed., 67 bottom; Djuwaynī, i, 48). The newly founded town of Andīdjān [*q.v.*] (known to the Arab geographers only as the village Anduḳān) was the capital of the Farghānā valley at the end of the thirteenth century. Marghīnān now also gained in importance.

After the Ulus of Čaghatāy split into two opposing sections in the fourteenth century, both the western kingdom (Transoxania) and the eastern kingdom (then called Mogholistān) contended for Farghānā

at different times, up to the time of Tīmūr. As Farghānā belonged to Mogholistān during the greater part of this struggle, its administration shared certain aspects of the administration of the Tarim valley: the tax districts in both countries were called Určin, not Tūmān (Mongolian *tümen*: unit of ten thousand) as in the rest of Transoxania.

Under the Tīmūrids [*q.v.*] Farghānā mostly belonged to Khurāsān (*i.e.*, to the dominion of Shāhrukh [*q.v.*] and his son Ulugh Beg [*q.v.*]) and from 873-99/1469-94 had its own ruler in ʿUmar Shaykh [*q.v.*], a great-great-grandson of Tīmūr. He was succeeded by his son Bābur, who from Farghānā moved against the intruding Shaybānids [*q.v.*] and advanced as far as Samarkand; but in 909/1504, after eventful battles he saw himself forced to surrender Farghānā, and finally fled altogether to India (for details see BĀBUR). It is to him that we owe a more exact description of Farghānā at a time when power-relationships in Central Asia were undergoing a decisive change, through the fall of the Tīmūrids, the advance of the Shaybānids at the head of the Özbegs [*q.v.*], as well as the establishment of the Shīʿī Ṣafavids [*q.v.*] in Persia. At that time there were nine larger towns in Farghānā, to which Bābur also adds Khodjand. Khokand, the later capital, was only a village at the time. The capital was Andīdjān, which was already completely turkicized. (According to Bābur, it was here that Čaghatay, raised to a literary language by ʿAlī Shīr Nawāʾī, was spoken). Marghinān was then still Iranian.—At the time of Bābur there were numerous orchards and gardens in Farghānā and various kinds of wood used for making quivers, bird-cages and similar articles; also a reddish-white stone, discovered in about 1492 and used for making knife-handles and articles of that kind. Iron and turquoise were obtained from the mines; but Bābur makes no mention of coal-mining or the manufacture of weapons, two formerly important branches of the economy. According to his estimate the country was only sufficiently rich to support an army of 3-4000 men.

After the final expulsion of the Tīmūrids, Farghānā belonged to the Özbeg state of the Shaybānids; Andīdjān was then the seat of a local dynasty and gave its name to the whole valley (cf. Maḥmūd ibn Walī, *Baḥr al-asrār*, MS India Office 575, fol. 102b). After the collapse of the Shaybānid state in 1598-9, several Khodja families divided the country up among themselves. They lived under the nominal dependency of Bukhārā, in Čadak, north of the Jaxartes, and had to submit to a number of arrangements with the Kazakhs and Kirgiz, who repeatedly pressed into the valleys of the mountains surrounding Farghānā. In 1121/1709-10 the Farghānā valley became a separate Özbeg Khānate under Shāhrukh Bī (Mullā Niyāz Muḥammad, *Taʾrikh-i Shāhrukhī*, ed. N. N. Pantusov, Kazan 1885, 21; cf. Ivanov, 178-214). From then until 1876 the Farghānā valley was the centre of the Khānate of Khokand (*q.v.* for details about the name and history of the town).

In 1876 the Khānate was annexed by the Russians and became the centre of the "Farghānā district" (Ferganskaya Oblastʾ), an area of 160,141 km.² (according to Brockhaus-Efron) with 1,560,411 inhabitants (in 1897). The seat of the military government was the town New Margelan, founded by the Russians, called Skobelev from 1907-24, and subsequently Farghānā (pop., 1951, approx. 50,000) and still today the centre of administration of the "Farghānā district" in Uzbekistan (8029 km.² with approximately 720,000 inhabitants [in 1951]). The towns of Khokand and Namangān were, however, considerably larger and of greater economic importance (Khokand had approximately 113,000 inhabitants in 1912, and Namangān 70,000; in 1951, in contrast, approximately 93,000 and 115,000 respectively).

The Russians forthwith raised Farghānā's cotton-production considerably, introduced new American kinds of cotton and made Farghānā (as Central Asia generally) one of their main providers of cotton and silk. The most important source of uranium of the Soviet Union is also situated in the Farghānā valley (especially near Tuya-Muyun); petroleum and coal are also extracted.—The ancient system of irrigation has been expanded and improved and, as the "Farghānā system", it has gained significance for the entire irrigation economy of the USSR: construction of the great Farghānā canal in 1939; Farhat dam on the Jaxartes.—The sudden economic advance caused an inflation which led to a revolt in 1898. From 1916 to 1922 Farghānā was involved in the fighting between the indigenous Turkish Basmači associations and the Russians, and later the Bolsheviks. After the October revolution the Farghānā valley was no longer a single administrative unit. Instead the central and eastern areas—essentially according to the nature of the majority of the population—were handed over to the Uzbekistan republic, and the west to Tādjikistān. The mountains surrounding the Farghānā valley belong for the most part, however, to Kirgizistān: this division demonstrates the result of the gradual advance of Turkish tribes into this area and, since the sixteenth and seventeenth centuries, into the mountains, as well as the retreat of the Iranians. This political organization has had no significance for the development of the valley's economy or system of communication. The knowledge of Russian has increased greatly in the last decades among the indigenous population, but without supplanting the indigenous languages.

AL-**FARGHĀNĪ**, the mediaeval astronomer *Alfraganus*. His full name is Abu 'l-ʿAbbās Aḥmad b. Muḥammad b. Kathīr al-Farghānī, that is to say, a native of Farghāna in Transoxania; not everyone, however, is agreed upon his name: the *Fihrist* only speaks of Muḥammad b. Kathīr, and Abu 'l-Faradj of Aḥmad b. Kathīr, while Ibn al-Ḳifṭī distinguishes between two persons, Muḥammad and Aḥmad b. Muḥammad, in other words father and son; however it is very probable that all the references are to the same personage, an astronomer who lived in the time of the Caliph al-Maʾmūn (d. 833) and until the death of al-Mutawakkil (861), for Abu 'l-Maḥāsin and Ibn Abī Uṣaybiʿa refer to a certain Aḥmad b. Kathīr al-Farghānī who, in 247/861, is said to have been sent by al-Mutawakkil to Fusṭāṭ to supervise the construction of a Nilometer.

His principal work, which still survives in Arabic at Oxford, Paris, Cairo and the library of Princeton University, bears different titles: *Djawāmiʿ ʿilm al-nudjūm wa 'l-ḥarakāt al-samāwiyya*, *Uṣūl ʿilm al-nudjūm*, *al-Madkhal ila ʿilm hayʾat al-aflāk*, and *Kitāb al-fuṣūl al-thalāthīn*. It was translated into Latin by John of Seville and Gerard of Cremona. According to Steinschneider, a translation into Hebrew by Jacob Anatoli also exists at Berlin, Munich, Vienna, Oxford, etc. The Latin translation by John of Seville was printed at Farrara in 1493, Nuremberg in 1537, Paris in 1546, Berkeley (F. J. Carmody) in 1943; the translation by Gerard of Cremona was published by R. Campani (Città di Castello, 1910). From Jacob Anatoli's translation into Hebrew Jacob Christmann made a Latin translation which appeared in 1590 at Frankfurt-am-Main. In 1669, at Amsterdam, Jacob Golius edited the Arabic text with a translation and a copious commentary, under the title: *Muhammedis fil. Ketiri Ferganensis, qui vulgo Alfraganus dicitur, Elementa astronomica, Arabice et Latine.* Apart from this work which, before Regiomontanus, was more widely circulated in the west than that of any other Arabic astronomer, since it was fairly short and easily understood, al-Farghānī also wrote two books on the astrolabe, *al-Kāmil fi 'l-asṭurlāb* and *Fī ṣanʿat al-asṭurlāb* (the Arabic text of which is extant in Berlin and Paris) and certain other works, references to which are given in Brockelmann and Carmody.

AL-**FARGHĀNĪ**, the name of two tenth-century historians, Abū Muḥammad ʿAbd Allāh b. Aḥmad b. Djaʿfar (b. 282/895-6, d. 362/972-3) and his son, Abū Manṣūr Aḥmad b. ʿAbd Allāh (327/939-398/1007). ʿAbd Allāh's great-grandfather had been brought to the ʿIrāḳ from Farghāna and had become a Muslim under al-Muʿtaṣim. ʿAbd Allāh himself was a student of the great Ṭabarī, whose works he transmitted, and he achieved high rank in the army. He went to Egypt where his son, it seems, was born, and he and his family remained there. He wrote a continuation of al-Ṭabarī's historical work, entitled *al-Ṣila* or *al-Mudhayyal*, and his son wrote a further continuation, entitled *Ṣilat al-Ṣila*. Both works are known only from quotations in the works of other historians, though it has been suggested that a papyrus leaf containing the account of a battle from the reign of al-Muḳtadir may derive from the *Ṣila*; they were probably much more widely used than citations under their names indicate. The younger Farghānī also wrote biographies of Kāfūr al-Ikhshīdī and the Fāṭimid al-ʿAzīz, both of which, unfortunately, have been lost along with most of the historical literature written under the Fāṭimids.

Bibliography: *Taʾrīkh Baghdād*, ix, 389; *Taʾrīkh Dimashḳ*, vii, 277; Yāḳūt, *Udabāʾ*, i, 161 f.; Ṣafadī, *Wāfī*, under Aḥmad (who follows Yāḳūt); intro. to Ṭabarī, xx; R. Guest, in *A volume of Oriental studies presented to E. G. Browne*, Cambridge 1922, 173; F. Rosenthal, *A history of Muslim historiography*, Leiden 1952, 73; N. Abbott, *Studies in Arabic literary papyri*, i, Chicago 1957, 109 ff. (F. ROSENTHAL)

FARHĀD PASHA [see FERHĀD PASHA].

FARHĀD WA-**SHĪRĪN**. A. Christensen (*Sassanides*, 469 and index) has collected together the information relating to Shīrīn (Pehlavi *Shīrēn* "the sweet"; cf. Γλυκέρα, Glycera), a Christian favourite of the Sāsānid king of Īrān, Khusraw II Parvīz (Pehlavi *Abharvēz* "the victorious", 590-628). According to Sebeos, she was a native of Khuzistān; Khusraw married her at the beginning of his reign and she maintained her influence over him although inferior in status to Maria the Byzantine whom he had married mainly for reasons of policy; she protected the Christian clergy, probably lived for a time in the palace, the ruins of which still survive at Ḳaṣr-i Shīrīn [*q.v.*], and she did not forsake the king in the last hours immediately before his assassination; their son, Mardānshāh, was put to death when Shēroē, Maria's son, overthrew him and ascended the throne. Legends concerning the love of the king and Shīrīn soon came into being, and some of the details were collected by al-Thaʿālibī (691) and Firdawsī (*Shāh-nāma*, trans. Mohl, vii), in particular Shīrīn's suicide over the body of Khusraw; this romantic episode, together with that of Shīrīn and Farhād (Pehlavi *Frahādh*), became the subject of a series of romances in verse, in Persian, Turkish (see below) and Kurdish (Duda, 3, n. 7 and 8). Moreover Christensen (*Gestes*, 116-9) has noted certain features in the *Persica* of Ctesias in which he sees elements which helped to form the legend of Farhād and Shīrīn—Semiramis creating a garden near Mount Bagistanon (Bīsutūn), having a way cut through the Zagros mountains to allow for the passage of a canal, and having a royal castle built for her own use.

After the occupation of Īrān by the Arabs, the first text in their language to mention Shīrīn and her lovers is the Chronicle of al-Ṭabarī; in its Persian adaptation by Balʿamī, we read: "Shīrīn was loved by Farhād whom Parvīz punished by sending him to the quarries of Bīsutūn" (trans. Zotenberg, ii, 304 and index, s.v. Ferhād, Schīrīn). The Arab geographers mention them; thus Yāḳūt claims to see Shīrīn's image among the sculptures of Ṭāḳ-i Būstān, according to poems which he quotes (*Buldān*, iii, 252-3) and records a narrative (iv, 112; and Barbier de Meynard, *Dictionnaire de la Perse*, 347-8 and 448-9) explaining how the king had a castle

built for her, named Ḳaṣr-i Shīrīn [*q.v.*]. In the Persian language Firdawsī, when writing the history in verse of the reign of Khusraw, tells briefly at the appropriate place of his relations with Shīrīn, though without giving them in his epic the importance which they were later to assume in the eyes of other poets: Parvīz had parted from this childhood friend; meeting her again while hunting, he took her to the palace and decided to marry her, in spite of powerful opposition; then Shīrīn poisoned her rival Maryam whose son Shīrūya was cast into prison; some time afterwards, the troops mutinied, released him and proclaimed him king, while Parvīz was held prisoner in his palace, only accepting food prepared by Shīrīn; the leaders had him stabbed to death. Later, Firdawsī gave reign to his imagination: Shīrīn, on Shīrūya's orders, consented to appear before an assembly of the nobility; she justified herself in respect of all the accusations brought against her, returned to her palace, made her final dispositions, asked Shīrūya for permission to see Khusraw once more, in his tomb, and there she took a violent poison and died at his side.

It was Niẓāmī who, in his *Khusraw wa-Shīrīn* (completed in 576/1180), created the romance of Farhād and Shīrīn, a notable part of this vast poem, from which it can be detached to form a complete work in itself. It would be superfluous to analyse the contents of this and the following poems, which have been studied by H. W. Duda; but a brief analysis of this romance, from which all the others are derived, is indispensable (leaving aside the first part): Shīrīn wishes to construct a canal; Farhād is assigned to her for this purpose and begins work; Shīrīn comes to inspect the project, and they fall in love with each other; Khusraw, being apprised of this, has Farhād brought before him and, finding his passion unshaken, gives him orders to cut a way through Mount Bīsutūn and to renounce his association with Shīrīn; but she comes back to see him; the king has false news of Shīrīn's death given to Farhād who hurls himself from the mountain top and kills himself; the king has been left a widower by the death of Maryam and is on the point of marrying again; Shīrīn lives alone, in despair; but one day, visiting Ḳaṣr-i Shīrīn on the pretext of hunting, the king meets Shīrīn again; after a long discussion, reminiscent of that between Wīs and Rāmīn [see GURGĀNĪ], they are reconciled and marry; the end of the reign and Khusraw's assassination correspond, in essentials, with the records of the historians; after his death Shīrīn, scorning Shīrūya's attentions, kills herself in Khusraw's tomb.

The poet Amīr Khusraw Dihlawī is the author of a *Shīrīn and Khusraw* in which the narration is more lively and the style simpler than in Niẓāmī's romance; his account of the reign and the amorous exploits of Khusraw (apart from the romance with Shīrīn) is different from Niẓāmī's; Farhād is no longer a simple engineer but is a son of the emperor of China, an exile who has become an artist; after his tragic death, Shīrīn takes revenge by having her rival, a favourite of the king, poisoned (just as she poisoned Maryam in the *Shāh-nāma*). ʿĀrifī (who lived in Ādharbāydjān in about 770/1368-9: not to be confused with the author of *Gūy u-čūgān*, d. 853/1449), desiring to use the same theme once again, succeeded merely in producing an involved work with a complicated and protracted plot, even to analyse which would be tedious; in brief, prince Farhād became a sculptor and architect in order to win the hand of a girl named Gulistān; later, when a widower, he met Shīrīn and fell in love with her; then ʿĀrifī follows his predecessors quite closely, until Farhād dies, poisoned by the mother of a young man whom Gulistān had spurned. Hātifī (about 1520) for the most part kept to the traditional account, but he added various episodes: for example, Khusraw had Farhād imprisoned in a pit in the mountains to keep him away from Shīrīn; but when digging a tunnel, Farhād came across a vein of precious stones; he managed to escape and was then recaptured. The inspiration of Waḥshī, in his *Farhād and Shīrīn* (966/1558-9, completed by Wiṣāl, 1265/1848-9), some details of which were taken from Amīr Khusraw Dihlawī, is lyrical rather than narrative: the sentimental incidents are in some respects reminiscent of the inspirations of Western poets of love and chivalry. In the short *Farhād and Shīrīn* (about 400 lines of verse) of ʿUrfī (d. about 1590), which is even more lyrical than the work of Waḥshī, the hymn to the beauty of nature and the meditation on the diverse emotions of love form the essential parts of this poem in which sentiment is personified by Shīrīn, the author refraining from repeating the legend itself which he assumes will already be familiar to the reader. Finally, in 1920 Dhabīh Behrūz published the script of a film "The king of Iran and the Armenian princess".

Bibliography: Faruk K. Timurtaş, *Iran edebiyatında Husrev ü Şirin ve Ferhad ü Şirin yazan şairler*, in *Şarkiyat Mecmuası*, iv (1961), 73-86; A. Christensen, *L'Iran sous les Sassanides*, 1936; H. I. Ph.*, ii, 246 and 247. *Schirin, ein persisches romantisches Gedicht nach Morgenländischen Quellen*, by Hammer-Purgstall, Leipzig 1809, is based on an amalgam of extracts from Niẓāmī, Amīr Khusraw Dihlawī, Hātifī and the Turkish writers Āhī and Shaykhī, freely translated (cf. Duda, *op. cit.*, 12; *Gr. I. Ph.*, ii 242-3 and Rieu, *CPM*, 566b).

(H. MASSÉ)

This theme penetrates very early into Turkish literatures. There exist two very old versions of the poem *Khusraw and Shīrīn*, dating back to the first half of the 8th/14th century : one adapted by Ḳuṭb (ca. 741/1341) in the territories of the Golden Horde (ed. A. Zajączkowski, *Najstarsza wersja Turecka Ḫusräv u Šīrīn Quṭba*, Warsaw 1958), another written by Fakhr al-Dīn Yaʿḳūb in Western Anatolia, in the principality of the Aydîn Oghullarî (ca. 767/1366; Ms: Marburg, Westdeutsche Bibl., Or. Qu. 1069). There is also a fairly close Turkish translation of Niẓāmī's poem by Sheykhī [*q.v.*], made early in the 9th/15th century.

In Eastern Turkish literature the theme was first treated by Nawāʾī, who gave first place to the person of Farhād; Farhād, possessed with love for Shīrīn, pierces a mountain and dies on hearing the false news of Shīrīn's death. Many subsequent Turkish poets elaborated this topic, for example: *Khusraw and Shīrīn*: Aḥmed Riḍwān, Ṣadrī, Ḥayātī, Āhī, Djelīlī; *Farhād and Shīrīn* or *Farhād-nāme*: Ḥarīmī (Prince

Ḳorḳud), Lāmiʿī, Shānī, Nākām, etc. (see Faruk K. Timurtaş, *Türk edebiyatında Husrev ü Şirin ve Ferhad ü Şirin hikâyesi*, in *Ist. Ün. Türk Dili ve Edebiyatı Dergisi*, ix (1959), 65-88).

There exist alsc some versions presenting the story in the form of a dramatic play, *e.g.*, the *Farhād wa Shīrīn* by the Azerbaydjan poet Samed Vurgun (d. 1956) and that by the modern Turkish poet Nazim Hikmet Ran (d. 1963), translated into Russian as "A Legend of Love".

(A. Zajączkowski)

FARHANG [see ḳāmūs and maʿārif].

FARHANGISTĀN [see madjmaʿ].

FARḤĀT, Djarmānūs, Arabic philologist and poet, forerunner of the nineteenth century literary renaissance in the Arab countries, born at Aleppo 20 November 1670, and died there 10 June 1732. He was Maronite archbishop of his native town from 1725 to 1732, but we are not concerned here with his activity as an organizer, which was of the greatest importance to the Maronite church, nor with the majority of his dogmatic and polemic writings and his works of edification and history; he must however be mentioned in the history of Arabic literature as a lexicographer, grammarian and poet.

Aleppo was one of the few Arab towns which after the Ottoman conquest had retained and to a certain extent developed a literary tradition. This tradition had been fortified by certain European influences, particularly among the Arabic-speaking Christians. The establishment of the Maronite college at Rome in 1584 and the presence at Aleppo of a large colony of European merchants played an important part in this; it must not be forgotten that J. Golius (1625-6) and E. Pococke (1630-6) both spent some time there. Some literary activity flourished in all the Christian communities, and the Orthodox patriarch Makāriūs b. al-Zaʿīm al-Ḥalabī (d. 1672) is only one example out of many.

Born of a prosperous Maronite family, the Maṭar, Farḥāt received an excellent education from the Christian and Muslim scholars of Aleppo: Buṭrus al-Tūlawī, a pupil of the Maronite college of Rome (d. 1745; cf Manash in *Machriq*, vi (1903), 769-77; idem, *Mustaṭrafāt*, 7; Cheikho, *Catalogue*, 76-8, no. 270; Masʿad, *Dhikrā*, 9-11), Yaʿḳūb al-Dibsī, a great authority on rhetoric (cf. Cheikho, *op. cit.*, 97, no. 344), and the famous Muslim scholar Shaykh Sulaymān al-Naḥwī al-Ḥalabī. Besides his native languages, Syriac and Arabic, he learnt in his youth Latin and Italian. After having taken monastic vows in 1693, with the name of Djibrāʾīl, he undertook a journey to Jerusalem (cf. *Dīwān*, 131) and then settled in Lebanon where he sat at the feet of the famous Maronite patriarch Iṣṭifān al-Duwayhī (1630-1704). Ordained priest in 1697, he became in 1698 abbot of the monastery of Mart Mūra at Ihdin; in 1711-2, as a result of certain complications (see *Dīwān*, 403, 469), he went on a journey to Rome, which made a deep impression on him (see *Dīwān*, 87, 131, 146, 294, 434, 438, 448), to Spain, Sicily (*op. cit.*, 220, 404) and Malta (*op. cit.*, 229). As archbishop of Aleppo (from 1725) he formed an important collection of manuscripts which still exists (cf. Zaydān, *Taʾrīkh ādāb al-lugha al-ʿarabiyya*, iv, Cairo 1914, 135) and he gathered round him a circle of poets and scholars. Among the friends whom he names in his *Dīwān* the following especially deserve mention: Niḳūlā al-Ṣāʾigh (1692-1756), of Greek descent, who shares with him the glory of being the most popular poet (*Dīwān*, 150; Cheikho in *Machriq*, vi (1903), 97-111, with portrait; idem, *Catalogue*, 131, no. 484; idem, *Shuʿarāʾ*, 503-11); Mikirdīdj al-Kasīḥ, an Armenian by birth (*Dīwān*, 239, 466; Cheikho, *Catalogue*, 195-6, no. 751; idem, *Shuʿarāʾ*, 498-501); the poet Niʿmat Allāh al-Ḥalabī (d. c. 1700; see *Dīwān*, 64; Manash in *Machriq*, v (1902), 396-405; Cheikho, *Catalogue*, 205-6, no. 796; idem, *Shuʿarāʾ*, 396-405); ʿAbd Allāh Zākhir (1680-1748), who applied himself with enthusiasm and success to printing (*Dīwān*, 158; Cheikho, *Catalogue*, 108-9, no. 386; idem, *Shuʿarāʾ*, 501-3; Zaydān, *Taʾrīkh*, iv, 45); the theologian Ilyās b. al-Fakhr (d. c. 1740; see *Dīwān*, 214; Cheikho, *Catalogue*, 39-40, no. 122), etc.

As a philologist, Farḥāt understood above all the need to make available to his fellow countrymen textbooks which would facilitate for them the study of Arabic. In almost all fields—lexicography, grammar, rhetoric—he wrote such textbooks, some of which have remained until recently in common use among Syrian Christians. Although they are based mainly on Arabic tradition, here and there, particularly in grammar, can be detected traces of European influence, especially of the Roman Maronites and of the school of Erpenius. Among his works of lexicography we have *al-Muthallathāt al-durriya* (Ṭāmīsh (Lebanon) 1867, and *Dīwān*, 92-106), an imitation in verse, composed in 1705, of the famous *Muthallathāt* of Ḳuṭrub [*q.v.*], and provided later with a commentary (manuscripts of it are not uncommon: one, of 1712, is in the Asiatic Museum in Leningrad; see v. Rosen, *Les manuscrits ar. de l'Inst. des Langues Or.*, St. Petersburg 1877, 71, no. 156). His dictionary, *Iḥkām bāb al-iʿrāb min lughat al-Aʿrāb*, completed in 1718, is of greater importance; it is based for the most part on the *Ḳāmūs* of al-Fīrūzābādī [*q.v.*], but contains many modern words and terms used by Christian Arabs; the Maronite patron of learning, the emigré Rushayd al-Daḥdāḥ (1813-89), collated five manuscripts of it with the *Ḳāmūs* and published the resulting dictionary under the title *Dictionnaire arabe par Germanos Farhat, maronite, éveque d'Alep. Revu, corrigé et considérablement augmenté sur le manuscrit de l'auteur par Rochaid de Dahdah, scheick maronite*, Marseilles 1849, with portrait of the author (Arabic title: *Iḥkām bāb al-iʿrāb*); as an appendix to the dictionary is printed the treatise *al-Faṣl al-maʿḳūd fī ʿawāmil al-iʿrāb*. Among Farḥāt's grammatical works, the *Baḥth al-maṭālib* (cf. Manash in *Machriq*, iii (1900), 1077-83; Masʿad, *Dhikrā*, 111-2) was particularly successful; written on a very large scale, in 1705, and provided the following year with notes, it was abridged in 1707 by the author himself, and it is this abridged form which has been published in many editions with commentaries by Fāris al-Shidyāḳ [*q.v.*], Malta 1836; by Buṭrus al-Bustānī, Beirut 1854; by Saʿīd al-Shartūnī, Beirut, 1865, 1883, 1891, 1896, 1899, 1913 etc.). As the zealous pupil of Yaʿḳūb al-Dibsī, Farḥāt compiled also a manual of rhetoric and poetics under the title: *Bulūgh al-arab fī ʿilm al-adab* (only in manuscript; see P. Sbath, "*L'arrivée au but*

dans l'art de la littérature": *Ouvrage sur la rhétorique par Germanos Farhat*, in *BIÉ*, xiv (1932) 275-9 with portrait; cf. *Dīwān*, 89; Cheikho, *Catalogue*, 151, no. 6). In the field of prosody two small treatises of his are known: *al-Tadhkira fi 'l-ḳawāfī* (printed with the *Dīwān*, 13-22) and a *Risālat al-fawāʾid fi 'l-ʿarūḍ* (cf. Cheikho, *Catalogue*, 161, no. 7).

Farḥāt is famous not only as a scholar but also as a poet. He himself collected the poems of his *Dīwān* under the title of *al-Tadhkira*, and it is in this form that the *Dīwān* has been published three times (Beirut 1850—lithogr. 1866, 1894—with the commentary of Saʿīd al-Shartūnī, based on three manuscripts; on the last edition cf. C. F. S[eybold], in *Litterarisches Zentralblatt*, 1895, col. 1447). This collection does not contain all his poetic works, many of which were later printed separately (cf. for example Cheikho, *Shuʿarāʾ*, 463-8, and also in *Machriq*, vii (1904), 288, xxiv (1926), 397 and *passim*). His work is interesting from the point of view of literary history as representing a systematic effort to apply the forms of Arabic poetry to specifically Christian themes: the form of the *ghazal* to hymns to the Virgin, the *khamriyyāt* to the Eucharist, etc. Farḥāt was of course not the first to do this: as early as the 8th/14th century we have the *Dīwān* of a certain Sulaymān al-Ghazzī (cf. Cheikho, *Shuʿarāʾ*, 404-24) devoted to the same religious themes, but his name and his works are almost forgotten, and he did not found a school. The Christian element is largely predominant in the *Dīwān* of Farḥāt, although it cannot be denied that he possessed a fairly deep knowledge of Arabic poetry in general; we find in it vigorous polemics directed against Abu 'l-ʿAlāʾ al-Maʿarrī (248, 420, 439), many traces of the influence of Ibn al-Rūmī (257), Ibn al-Fāriḍ (295), al-Suhrawardī (310), an imitation of Avicenna's famous *ḳaṣīda* on the soul (274-7) etc. The form of his poems is in general classical, but he used also different types of *muwashshaḥ*, *takhmīs* and *tasmīṭ*. His language is not always faultless and he has been rightly accused of too free recourse to poetic licence.

The bicentenary of Djarmānūs Farḥāt was celebrated at Aleppo in 1932, and in 1934 a monument was erected to him in the palace of the Maronite archbishop (*Machriq*, xxix (1931), 949; xxxii (1934), 300; cf. also the article by F. A. al-Bustānī in *Machriq*, xxx (1932), 49-53; on the volume published in his honour, cf. *ibid.*, xxxi (1933), 789-90).

Bibliography: G. Manache (Manash), *Historical note on the bishop Djarmānūs Farḥāt* (in Arabic), in *Machriq*, vii (1904), 49-56, 105-11, 210-9 (with portrait); idem, *The works of the bishop Djarmānūs Farḥāt*, *ibid.*, 354-61 (a list of 104 works, of which 37 are original, the rest being the works of other authors annotated, translated and edited by Farḥāt); idem, *al-Mustaṭrafāt fi ḥayāt al-Sayyid Djarmānūs Farḥāt*, 1904; B. FARĪD PASHA [see DĀMĀD FERĪD PASHA].

FARĪD AL-DĪN [see ʿAṬṬĀR].

FARĪD AL-DĪN MASʿŪD "GANDJ-I-SHAKAR", one of the most distinguished of Indian Muslim mystics, was born some time in 571/1175 at Kahtwāl, a town near Multān, in a family which traced its descent from the caliph ʿUmar. His grandfather, Ḳāḍī Shuʿayb, who belonged to a ruling house of Kābul, migrated to India under the stress of the Ghuzz invasions. Shaykh Farīd's first teacher, who exerted a lasting influence on him, was his mother, who kindled that spark of Divine Love in him which later dominated his entire being, and moulded his thought and action. Shaykh Farīd received his education in a *madrasa* attached to the mosque of one Mawlānā Minhādj al-Dīn Tirmidhī at Multān where, later, he met Shaykh Ḳuṭb al-Dīn Bakhtiyār Kākī [*q.v.*], *khalīfa* of Shaykh Muʿīn al-Dīn Čishtī [*q.v.*], and got himself admitted into the Čishtī order. According to Ghawthī Shaṭṭārī, Shaykh Farīd excelled all other saints in his devotions and penitences. At Uččh he performed the *ṣalāt-i maʿkūs* by hanging head downwards in a well, suspended from the boughs of a tree. He observed fasts of all types, the most difficult of them being *Ṣawm-i Dāʾūdī* and *Ṭayy*. He had committed to memory the entire text of the Ḳurʾān and used to recite it once in twenty-four hours. Accounts of his visits to foreign lands by later writers are hardly reliable because no early authority refers to them. Besides Shaykh Ḳuṭb al-Dīn Bakhtiyār Kākī, he received spiritual benedictions from Shaykh Muʿīn al-Dīn Čishtī also. For nearly 20 years he lived and worked at Ḥānsī, in the Ḥiṣār district. Later on he moved to Adjodhan (now called Pāk Pattan on his account) from where his fame spread far and wide. He died at Adjodhan on 5 Muḥarram 664/17 October 1265. During the last 700 years his tomb has been one of the most venerated centres of pilgrimage for the people of the sub-continent. Hindūs, Muslims and Sikhs alike hold him in high esteem. Numerous rulers, including Tīmūr and Akbar, have visited his grave for spiritual blessings. The town of Farīdkōṭ was named after him. He left a big family which spread in the country and many of his descendants (e.g. Shaykh Bahāʾ al-Dīn of Radjabpur, near Amroha, and Shaykh Salīm Čishti of Fateḥpur Sikri) set up important mystic centres.

To Shaykh Farīd belongs the credit of giving an all-India status to the Čishtī *silsila* and training a number of eminent disciples—like Shaykh Djamāl al-Dīn of Hānsī, Shaykh Niẓām al-Dīn Awliyāʾ of Dihlī and Shaykh ʿAlāʾ al-Dīn Ṣābir of Kalyar—who disseminated its teachings far and wide. By establishing close personal contact with people, he transformed the Čishtī order—which was, till then, limited in its sphere of influence—into a powerful movement for the spiritual culture of the masses. He attracted towards Islam many of the Hindū tribes of the Pandjāb. The impact of his teachings is discernible in the sacred book of the Sikhs, the *Guru Granth*, where his sayings are respectfully quoted. His knowledge of *tafsīr*, *ḳirāʾāt* and *fiḳh*, besides his mastery of Arabic grammar, impressed even the specialists. He introduced the *ʿAwārif al-maʿārif* into the mystic syllabus of those days, taught it to his disciples and himself prepared a summary of it.

Since all sorts of people—*djogīs* and *kāfirān-i siyāh posh*, Hindūs and Muslims, villagers and townsfolk—came to him, his *djamāʿat khāna* grew into a veritable centre for cultural intercourse between different social groups. Some of the earliest sentences of *Hinduwī* (the earliest form of Urdū) were uttered in his dwelling. He also helped in the development of some local dialects of the Pandjāb by recommending religious exercises in the Pandjābī language (Shāh Kalīm Allāh, *Kashkōl-i Kalīmī*, Dihlī 1308, 25).

Bibliography: The following three works are the earliest and the most reliable sources for his life: Amīr Ḥasan Sidjzī, *Fawāʾid al-fuʾād*, Lucknow 1302; Ḥamīd Ḳalandar, *Khayr al-madjālis*, ed. Niẓāmī, ʿAlīgarh; Amīr Khurd, *Siyar al-awliyāʾ*, Dihlī 1302. The following collections of *malfūẓāt*—*Fawāʾid al-sālikīn*, *Asrār al-awliyāʾ*, *Rāḥat al-ḳulūb*—are apocryphal (see Nizami, *The life and times of Shaikh Faridu'd-Din Ganj-i Shakar*, ʿAlīgarh 1955, 118-20). Among later sources, the following Persian *tadhkiras* may be mentioned: Sayyid Muḥ. Akbar Ḥusaynī, *Djawāmiʿ al-kalim*, Kānpur 1356, 230-1, 151, etc.; Djamālī, *Siyar al-ʿārifīn*, Dihlī 1311, 31-59; ʿAbd al-Ḥaḳḳ, *Akhbār al-akhhyār*, Dihlī 1309, 51-9; Muḥ. Ghawthī Shaṭṭārī, *Gulzār-i abrār*, As. Soc. Bengal Ms. 259, f. 13-13v; ʿAbd al-Ṣamad, *Akhbār al-aṣfiyāʾ*, Ms. Ethe 64; ʿAbd al-Raḥmān Čishtī, *Mirʾāt al-asrār*, Ms. personal collection; Mīr ʿAlī Akbar Ardistanī, *Madjmaʿ al-awliyāʾ*, Ms. Ethe 645; Allāh Diya Čishtī, *Siyar al-aḳṭāb*, Nawal Kishore 1881, 161-77; ʿAlī Aṣghar Čishtī, *Djawāhir-i Farīdī*, Lahore 1301; Darā Shukoh, *Safīnat al-awliyāʾ*, Nawal Kishore 1900, 96-7; Ghulām Muʿīn al-Dīn ʿAbd Allāh, *Maʿāridj al-wilāyāt*, Ms. personal collection; Muḥ. FARĪḌA [see FARĀʾIḌ, FARḌ].

FARĪDKŌṬ, formerly a small feudatory princely state in the Pandjāb, now merged with the Fīrūzpur Division of the Indian Pandjāb, and lying between 30° 13′ and 30° 50′ N. and 74° 31′ and 75° 5′ E. with an area of 642 sq. miles. Both the State and the principal town of the same name are unimportant. The town, lying in 30° 40′ N. and 74° 49′ E., 20 miles south of Fīrūzpur [*q.v.*], has a fort built by Rādja Mokulsī, a native Rādjpūt chief, in the time of Farīd al-Dīn Gandj-Shakar [*q.v.*], popularly known as Bāwā (Bābā) Farīd, after whom the fort was named Farīdkōṭ (*kōṭ* = fort). The founder was apparently an admirer and devotee of the saint, who was equally popular with the Muslims and the non-Muslims. The former ruling family belonging to the Siddhū-Brār clan of the Djāṭs [*q.v.*], who later embraced Sikhism, occupied the town and the neighbouring territory during the time of Akbar [*q.v.*]. They were, however, involved in several petty quarrels with the surrounding Sikh states belonging to their kinsmen. Offended at the hostility of their neighbours, the ruling family sided with the British during the Sikh Wars, being rewarded with the restoration of certain lost territory. Again during the military uprising of 1857 the ruler, Wazīr Singh, remained loyal and actively assisted the British, receiving a further handsome reward. Farīdkōṭ, along with the other Phulkian States ruled by the Sikh Rādjas of the same common family, was badly disturbed during the communal riots of 1947 which followed in the wake of Partition, and is now without any Muslims, who have all migrated to Pakistan.

FARĪDPUR, head-quarters of a district bearing the same name in East Pakistan. The district was created in 1807 out of the older division of Dacca-Djalālpur. It embraces an area of 2,371 square miles and has a population of 2,709,711 (1951 census). The city (pop. 25,287), which is named after that of the local *pīr* Shaykh Farīd, is situated on an old channel of the Padmā, called the *Marā* (dead) *Padmā*. It is generally identified with the Fatḥābād of the Muslim period. The *Āʾīn-i Akbarī* mentions Sarkār Fatḥābād, and this name is believed to originate from that of Djalāl al-Dīn Fatḥ Shāh, the Bengal Sultan (886-92/1481-6). But Fatḥābād as a mint town is known to have been first started by Djalāl al-Dīn Muḥammad (818-31/1415-35) after his conquest of the Hindū Rādjā of south Bengal. Since then Fatḥābād maintained its integrity, rising to an almost independent status in the time of the Dihlī emperor Akbar under the local *zamīndār* Madjlis Ḳuṭub, who was finally subjugated in about 1013/1609 by Islām Khān, the Mughal *ṣubadār* of Bengal. It is in this district that the Farāʾiḍiyya [*q.v.*] movement was started by Ḥādjdjī Sharīʿat Allāh in the early 19th century, which was of a rural character and hence spread far and wide in the riparian districts of lower Bengal.

FARĪDŪN (Pahlavi, Frēdun; ancient Iranian, Thraētaona), the son of Abtiyān or Abtīn, one of the early kings of Īrān. The most complete text on the subject is the account of his reign by Firdawsī, in verse; some of the sources for it will be found in pre-Islamic texts. §§ 130-8 of the *Yashts* of the Avesta reveal the names of the first kings of Īrān in their original order (the first being Yima [see DJAMSHĪD]), whose conqueror and murderer, Azhī-Dahāka, was overthrown in his turn and put to death by Thraētaona; the latter was rewarded by a share of the aureole of glory (*hvareno*) which, from the throne of Ahura-Mazda, descends upon the heads of saints and heroes, and which as the result of a grave transgression had forsaken Yima (*Yasht* 19); Thraētona the son of Athwya, the priest responsible for preparing the sacred potion known as *haoma*, saved the world from the domination of the monstrous demon Azhī-Dahāka, liberated Arnavāk and Sahavāk (Firdawsī: Arnawāz and Shahrnāz), the daughters of the dead Yima, became king of Īrān and then, in old age, divided his empire between his three sons, one of whom, Iradj, was assassinated by the other two, leaving a daughter; Thraētona married her, with the object of procreating an avenger for his son (J. Darmesteter, *Zend-Avesta*, i, 131, n. 15, sees in this consanguineous union, subsequently transformed by national tradition, an early instance of *khetuk-das*; cf. the same author, *Études iraniennes*, ii, 217 ff., and al-Masʿūdī, *Murūdj*, ii, 145). According to religious tradition, Thraētaona fought against the demons of Māzandarān (national tradition describes him as an expert in magic). In the national tradition, handed down by the *Shāh-nāma* of Firdawsī, Azhī-Dahāka (Persian: Zahhāk) retains only one feature of his monstrous appearance —two serpents which sprang from his shoulders at the kiss of the devil, and which he has to feed by demanding the daily sacrifice of a group of his subjects; one night, in a dream, he sees the young warrior who overthrows him; he consults his soothsayers and learns that Farīdūn will be born and will overthrow him; he orders the execution of the father of Farīdūn, for whom he has a vigorous search made from the time of his birth, though in vain; aided by partisans led by the blacksmith Kāvah, Farīdūn defeats Zahhāk's troops and imprisons him, in a cave on Mount Damāwand [*q.v.*]; being proclaimed king of Īrān, he established justice and peace in the land; three sons were born to him and, in due time, he divided his empire between them; the two eldest, jealous of their younger brother, put him to death—a murder which gave rise to interminable wars; from the union of Iradj and a slave-girl married to a nephew of Farīdūn was born Manučihr who succeeded his father on the throne of Īrān, overthrew and put to death his two uncles whose heads he sent to Farīdūn; the latter ended his life in solitude, mourning his sons, his eyes fixed on their three skulls.—To this narrative, Arab and Iranian authors add little. According to Ibn Isfandyār, (*History of Tabaristan*, trans. E. G. Browne, 15; ed. Iḳbāl, Tehrān, index), Farīdūn was born in the village of Warka, a dependency of Lāridjān; Ibn al-Balkhī (*Fārs-nāma*, ed. Le Strange, index) credits him with a fantastic genealogy (12), the stature and corpulence of a giant, a very wide field of knowledge, the inauguration of the autumn feast of *mihrgān* [*q.v.*], the re-establishment of justice, the use of simples and magic practices to cure illnesses of both humans and animals, the creation of the mule(36); Balʿamī (*Chronique*, trans. Zotenberg, index s.v. Afrīdūn) speaks of Farīdūn's knowledge of astronomy and fancifully attributes the Khʷārizmian Tables to him; al-Thaʿālibī (*Histoire des rois des Perses*, ed.-trans. Zotenberg) relates, according to the Pahlavi *Āyīn-nāmagh* (Book of institutions) that, in his reign, men were classed according to merit and to services performed (15); furthermore, he records sentences and proverbs ascribed to Farīdūn (40); al-Shahrastānī (*Milal*, trans. Haarbrucker, i, 298) credits him with the construction of a pyraeus; al-Bīrūnī (*Chronology*, trans. Sachau, 213 and index s.v. Frēdūn) indirectly attributes to him the introduction of the Sada, a periodic bonfire, whilst Firdawsī connects him with the invention of fire by king Hūshang (*Shāh-nāma*, trans. Mohl, i, 26) and attributes the custom of the *mihrgān* fire to Farīdūn (i, 85).

FARĪDŪN [see FERĪDŪN BEG].

FARĪGHŪNIDS (Āl-i Farīghūn, Banū Farīghūn), ruling dynasty of Gūzgān (Gūzgānān, Gūzgānyān, Arabic al-Djūzdjān [*q.v.*]) in east Khurāsān, now in north-west Afghānistān. In the 4th/10th century they appear among the principal vassals of the Sāmānids [*q.v.*]. The name is perhaps to be connected with that of the legendary Afrīdhūn (Farīdūn), cf. *Ḥudūd al-ʿālam*, § 23, 46, or somewhat more probably with that of Afrīgh (Farīgh), who is said to have ruled in Khʷārizm in pre-Islamic times (see al-Bīrūnī, *Chronology*, 35, transl. 41). There is no evidence, though this remains a possibility, that the Farīghūnids were descended from the pre-Islamic rulers of Gūzgān, the Gūzgān Khudāhs, on whom Ṭabarī has some details (ii, 1206, 1569, 1609-11, 1694, cf. Ibn Khurradādhbih, 40, trans. 29).

The names and number of the Farīghūnid rulers have never been determined with certainty, owing principally to contradictory statements in the text of the *Ta'rīkh-i Yamīnī* of ʿUtbī [*q.v.*], a contemporary authority, who has been followed by the later historians (Ibn al-Athīr, Rashīd al-Dīn, Ibn Khaldūn, etc.). The list as usually given includes:

(a) Aḥmad b. Farīghūn, *amīr* of Gūzgān about 287/900. He was a prince of importance, who according to Narshakhī refused the friendship of the *amīr* of Marw, whereupon the latter turned to Ismāʿīl, the Sāmānid ruler of Transoxiana. Aḥmad b. Farīghūn subsequently did homage to ʿAmr b. Layth, the

Ṣaffārid (Narshakhī, ed. Schefer, 85, transl. R. N. Frye, *History of Bukhara*, Cambridge, Mass., 1954, 87).

(b) Abu 'l-Ḥārith Muḥammad b. Aḥmad b. Farīghūn. He is first mentioned apparently as Abu 'l-Ḥārith b. Farīghūn (in connexion with his secretary Djaʿfar b. Sahl b. al-Marzubān, who was famous for his hospitality and the most popular man in Khurāsān) by al-Iṣṭakhrī (148), and later by Ibn Ḥawkal (ed. De Goeje, 208, ed. Kramers, 292). Al-Iṣṭakhrī wrote according to De Goeje not later than 933 (Barthold, Preface to *Ḥudūd al-ʿālam*, 6, 19), but the date 951 is often given (cf. Minorsky, *Ḥudūd al-ʿālam*, 176). Abu 'l-Ḥārith Muḥammad b. Aḥmad b. Farīghūn evidently gave his daughter in marriage to the young Sāmānid sovereign Nūḥ b. Manṣūr, some time after the latter's accession in 365/976 (Gardīzī, ed. M. Nāẓim, 48), and in 372/982 he received the dedication of the geographical work *Ḥudūd al-ʿālam*, possibly written by another Ibn Farīghūn (see Minorsky in *A Locust's Leg*, 189-96).

After 380/990 Abu 'l-Ḥārith as Sāmānid *amīr* of Gūzgān was ordered to oppose Fāʾiḳ, the *amīr* of Harāt, who was then in rebellion. He assembled a large force and advanced from Gūzgān against Fāʾiḳ, last heard of at al-Tirmidh across the Oxus. Fāʾiḳ sent a cavalry force of 500 men, Turks and Arabs, who routed the army of the Farīghūnid and returned thereafter to Balkh (ʿUtbī-Manīnī, i, 166, cf. Ibn al-Athīr, *sub anno* 383). In 383/993 Nūḥ b. Manṣūr, on the way to chastise rebellious subjects in Khurāsān, crossed the Oxus into Gūzgān and met its governor, the *amīr* Abu 'l-Ḥārith al-Farīghūnī, remaining there till all his forces arrived (ʿUtbī-Manīnī, i, 184). Sabuktakīn [*q.v.*] was at this time in command of the Sāmānid forces, and in 385/995 he and his son Maḥmūd requested Abu 'l-Ḥārith al-Farīghūnī to join them in Harāt, which he did (ʿUtbī-Manīnī, i, 209; Gardīzī, 56). At some time a double marriage alliance united the two families, Maḥmūd marrying a daughter of Abu 'l-Ḥārith and Maḥmūd's sister being given to the son of Abu 'l-Ḥārith, Abū Naṣr (ʿUtbī-Manīnī, ii, 101, cf. Ibn al-Athīr, *sub anno* 401, Ibn Khaldūn, ed. Lebanon 1958, iv, 790). Later, when Sabuktakīn died (387/997) Abu 'l-Ḥārith al-Farīghūnī attempted to mediate between his sons Maḥmūd and Ismāʿīl (ʿUtbī Manīnī, i, 275), and Maḥmūd, when about to march on Ghazna, wrote a letter to inform him (*ibid.*, i, 277). Eventually, towards 389/999, Maḥmūd committed Ismāʿīl to the safe keeping of the governor of Gūzgān, Abu 'l-Ḥārith (*ibid.*, i, 316).

It is somewhat striking that Abu 'l-Ḥārith Muḥammad b. Aḥmad b. Farīghūn is apparently never named by ʿUtbī. In his formal account of the Farīghūnids (ʿUtbī-Manīnī, ii, 101-5) he states that Abu 'l-Ḥārith Aḥmad b. Muḥammad was the father of Abū Naṣr, who in the sequel appears as the head of the family (below, (*c*)). It seems feasible that some time after 372/982 Abu 'l-Ḥārith Muḥammad, who had already enjoyed a career of perhaps as long as 50 years, was succeeded by a son with the same *kunya*, Abu 'l-Ḥārith Aḥmad, who would then be the Farīghūnid who engaged in the various campaigns mentioned by ʿUtbī between 990 and 995. But the texts of the passage vary: Minorsky has already pointed out that in ʿUtbī-Manīnī (ii, 101) Abu 'l-Ḥārith Aḥmad b. Muḥammad is succeeded by his son Abū Naṣr Aḥmad *b. Muḥammad*, which is impossible, from which he concludes that Abu 'l-Ḥārith Aḥmad b. Muḥammad never existed (*Ḥudūd al-ʿālam*, 176), and although in the same passage the Delhi (1847, p. 283) and Lahore (1300/1882, p. 227) editions of ʿUtbī give, as the son of Abu 'l-Ḥārith Aḥmad b. Muḥammad, Abū Naṣr Muḥammad b. Aḥmad b. Muḥammad, no positive conclusion is afforded. Elsewhere ʿUtbī names Abū Naṣr Aḥmad b. Muḥammad al-Farīghūnī (ʿUtbī-Manīnī, ii, 84, also Delhi, 271, Lahore, 218). The successor of b. Abu 'l-Ḥārith Muḥammad b. Aḥmad is usually said to be

(c) Abū Naṣr Aḥmad b. Muḥammad b. Farīghūn. In 389/999, when Maḥmūd destroyed the Sāmānid power in Khurāsān and established himself at Balkh, the local rulers who had previously acknowledged the Sāmānids, submitted to him, including Āl-i Farīghūn, rulers of Gūzgān (ʿUtbī-Manīnī, i, 316, cf. Ibn al-Athīr, *sub anno* 389). Thus when the Īlek Khān crossed the Oxus to attack Maḥmūd, Abū Naṣr al-Farīghūnī the governor of Gūzgān fought in the centre with the Sultan's brother Naṣr against the Ḳara-Khānids at the battle of Čarkhiyān in 398/January 1008 (ʿUtbī-Manīnī, ii, 84, cf. Ibn Khaldūn, iv, 788). Later in the same year, or in the following year, Maḥmūd invaded India. His brother-in-law Abū Naṣr al-Farīghūnī accompanied him, and played a prominent part (ʿUtbī-Manīnī, ii, 98, cf. Ibn Khaldūn, iv, 789). Abū Naṣr had been confirmed in the possession of Gūzgān at his father's death, and continued to enjoy all his rights there till his own death in 401/1010-1 (ʿUtbī-Manīnī, ii, 102, cf. Ibn al-Athīr, *sub anno*, Ibn Khaldūn, iv, 790).

(*d*) Ḥasan b. Farīghūn, once mentioned by Bayhaḳī (*Taʾrīkh*, ed. Morley, 125, cited Minorsky, *Ḥudūd*, 177), apparently did not succeed to, or did not retain, the governorship of Gūzgān, which was ruled from 408/1017-8 as a Ghaznawid fief by Abū Aḥmad Muḥammad b. Maḥmūd (married to a daughter of Abū Naṣr al-Farīghūnī) (ʿUtbī-Manīnī, ii, 236).

Nothing can be gleaned concerning the Farīghūnids from the portion of the *Ṭabaḳāt-i Nāṣirī* of al-Djūzdjānī translated by H. G. Raverty, who in his notes mentions a Maʾmūn b. Muḥammad Farīghūnī, *i.e.*, Maʾmūn b. Muḥammad [*q.v.*] of Khʷārizm. This man is called Farīghūnī also by the late (16th century) writer Ghaffārī (Giffārī) (cf. *Ḥudūd al-ʿālam*, 174; *Čahār maḳāla*, ed. Mīrzā Muḥammad Ḳazwīnī, GMS, 1910, 243), and this is usually reckoned a mistake. It is possible, however, that Maʾmūn b. Muḥammad (whose genealogy is still unknown) belonged to a collateral branch of the family of the Khʷārizm Shāhs whom he dispossessed in 386/996, in which case he might claim descent from the Afrīgh or Farīgh of Khʷārizm mentioned earlier in this article.

In the 10th century under the Farīghūnids Gūzgān appears to have possessed greater importance than at other times in its history. Apart from their political activity, the Farīghūnids were also patrons of learned men and poets, including Badīʿ al-Zamān al-Hamadhānī and Abu 'l-Fatḥ al-Bustī (ʿUtbī-Manīnī, ii, 102-5, cf. Ibn al-Athīr, *sub anno* 401; Ibn Khaldūn, iv, 790) and of course the author of *Ḥudūd al-ʿālam*.

(D. M. DUNLOP)

FĀRIS (A., pl. *fursān* and also *fawāris*, probably for the sake of expressiveness) denotes the rider on horseback, and in principle cannot be applied to the man riding a donkey or mule. The horse was considered in the article FARAS, equitation will be discussed in FURŪSIYYA, and in the present article we shall not dwell on subjects relating to the horse, but rather concentrate on the rider. It will be noticed immediately that, in Arabic, to 'ride a horse' is rendered by *rakiba*, with the result that the active participle *rākib* has the general sense "horseman", while *fāris* has the form of an active participle of *farusa* "to be an expert on horses" and, with the root *f. r. s.* implying an idea of capacity for judging at a single glance and guessing hidden qualities by external inspection [see FIRĀSA], there is a curious semantic convergence which has not received any satisfactory explanation. D. J. Wiseman, consulted on Semitic parallels, writes as follows: "The Hebrew פרש (probably *parraš*) is used of a '(warrior) rider' in 44 passages. I do not agree with S. Mowinckel, *Vetus Testamentum* XII/3 (July 1962), p. 290, that the meaning 'horse' (which is considered probable in 7 passages) should apply in all these passages. The word does not occur in Akkadian (the verb *parāšu* means 'to fly along') where *rākib* (as also in Hebrew) is used of the horseman".

However that may be, during the Djāhiliyya and the first centuries of Islam *fāris* appears in texts with the sense of simple horseman, which in itself indicated membership of a well-to-do class, but also, though the nuance is not always apparent, to denote, in conjunction with the more explicit *baṭal* and *faḥl*, the valiant, the champion, the intrepid warrior, to such an extent that one is sometimes tempted to translate this term by "cavalier", "knight", though not without the risk of leading the reader into error, for during the period in question no social institution existed among the Arabs comparable with the chivalry of mediaeval Europe.

Nevertheless the fact remains that the translation of *fāris* by "knight" is not in itself an error, for chivalry was nascent even in the pre-Islamic period and the first centuries of Islam, and the practices, customs and sentiments of "chivalry" were widely disseminated in at least one section of Arab society; by force of arms, the *fāris* defended first his "country" in the shape of the tribal patrimony, and then his religion; he protected the weak, the widows and orphans either in an entirely disinterested way or to increase his prestige; he addressed verses somewhat in the "courtly" tradition [see NASĪB] to his Lady, eschewed force in dealing with a conquered enemy, was to the highest possible degree conscious of his dignity [see ḤILM], despised riches and was content with provision merely for subsistence, occasionally making use of practices which morality would condemn. In the more or less idealized portrait of the *fursān* we can thus discern the noble features of chivalry, but in this case it is a personal chivalry, so to speak, without any precise code, initiation ceremonies, investiture or accolade.

To be a *fāris*, all that was in fact needed was to own a horse, an attribute which secured for the mounted warrior a rate of pay and share of the booty twice as large as those of the plain foot-soldier [see ʿAṬĀʾ, GHANĪMA], but to rank among the true *fursān* it was necessary to have performed deeds of prowess on the battle-field and, in single combat, to have shown courage above the ordinary. When warring armies came face to face, the *fāris* stepped forward from the ranks and, after certain preliminaries, issued a challenge to the foe: "Is there a champion (*mubāriz*) [ready to prove himself against me]?". In the wars waged by the Arabs, single combats often formed the first phase of the battle; historians give the names of the *fursān* and describe with satisfaction the deeds that they accomplished, a notable feature being that they did not always belong to the military aristocracy and often held only a very subordinate rank; their feats of arms nevertheless won them generous rewards. In battle, the *fāris* remained composed, encouraged his comrades in arms, hastened to the rescue of those who were hard pressed, was ready to give up his mount for an unhorsed officer and to continue the combat on foot, etc. When the army was put to flight, he stayed on until the end to fight a delaying action, once again brought solace to his companions, gave aid to the footsore, and finally sacrificed himself to minimize the results of the defeat. The *fāris* wore a light coat of mail and carried a sabre, a javelin and also a lasso (*wahaḳ*) which, in single combat, was used to unhorse his adversary and make him bite the dust (for later developments, see DJAYSH and ḤARB).

Works of *adab* and history enumerate the *fursān* of the various tribes, some of whom have become proverbial; in particular, there is the saying *afras min Summ al-fursān* "a better *fāris* than Summ al-fursān" [= ʿUtayba b. al-Ḥārith of the Tamīm], *afras min Mulāʿib al-asinna* [= ʿĀmir b. Mālik of the Ḳays], *afras min ʿĀmir* [*b. al-Ṭufayl*], *afras min Bisṭām* [*b. Ḳays al-Shaybānī*], etc. Ḥamza b. ʿAbd al-Muṭṭalib is regarded as the *fāris* par excellence of Ḳuraysh, ʿUmayr b. al-Ḥubāb al-Sulamī as the *fāris* of Islam; ʿAntara is called ʿAntarat *al-fawāris*, etc. Some of these *fursān* have become the heroes of "romances of chivalry" which in Arabic bear the name *Sīra* [see ʿANTAR, BAṬṬĀL, DHU 'L-HIMMA, SĪRA].

(ED.)

FĀRIS B. MUḤAMMAD, alias ḤUSĀM AL-DĪN ABU 'L-SHAWḲ [see ʿANNAZIDS].

FĀRIS AL-SHIDYĀḲ, Lebanese writer, lexicographer, journalist and poet, born at ʿAshḳūt in 1804 (B. al-Bustānī, *Dāʾira*, x, 428; Ṭ. al-Shidyāḳ, *Akhbār al-aʿyān*, 194; Zaydān, *Mashāhīr*, ii, 74; al-Dibs, *al-Djāmiʿ al-mufaṣṣal*, 534; Ṭarrāzī, *Taʾrīkh al-ṣiḥāfa*, i, 96), and not at Beirut (as Brockelmann, II, 505), nor in 1805 (as Masʿad, *Fāris al-Shidyāḳ*, 16; Y. Yazbik, in *al-Makshūf*, no. 172, 8). In 1809 his parents moved to Hadath (15 km. from Beirut, Ḥārat al-Buṭm), where Fāris received his early education, later going on to the seminary of ʿAyn Waraḳa (Kisrwān, Lebanon: see *al-Sāḳ*, 14-7; *Dāʾira*, x, 428; Masʿad, *op. cit.*, 17). As the result of a political clash and the death of his father (in 1820: Masʿad, 17; *al-Sāḳ*, 31-2), he embarked on the profession of his brother Ṭannūs (1791-1861), the copying of manuscripts (*Akhbār*, 193, 197; *al-Sāḳ*, 31-2, 45-8, 68), finding the necessary materials in his father's library. It is in 1830 that there occurred the dramatic event which profoundly affected his life, his character and the direction of

his talents—the passion and martyrdom of his brother Asʿad (1798-1830), who, because of his conversion to Protestantism, was arbitrarily imprisoned and tortured to death by the Maronite Patriarch Yūsuf Ḥubaysh (d. 1845, see *Khabariyyat Asʿad al-Shidyāḳ*, in B. al-Bustānī, *Ḳiṣṣat Asʿad al-Shidyāḳ*, 31-59, 93-104, 106, 109, 120-1). Fāris's conversion to Protestantism is to be dated towards the end of 1825 (Cheikho, *Ādāb*, ii, 79, Ṭarrāzī, *Ṣiḥāfa*, i, 96, and Masʿad, 18, who allege that he was converted in Malta, *i.e.*, between 1834 and 1848, are to be rejected: see *al-Sāḳ*[1], 377-8 and the dispute between Khardjī and Sūḳī; pages 130-2 confirm that he attached himself to the Protestant Evangelical Mission before his departure for Egypt).

His stay in Egypt (1825-34) was marked by his first marriage (his wife, a Maronite born at al-Ṣūlī, was the mother of his two sons Salīm, 1826-1906, and Fāyiz, 1828-56), and by his coming under the influence of men of learning and of letters such as Naṣr Allāh al-Ṭarābulusī (1770-1840) and Shihāb al-Dīn Muḥammad b. Ismāʿīl al-Mālikī (1803-57). He found there an environment conducive to the study of Arabic, of logic, of theology, of *kalām* and of prosody. Winning the favour of Muḥammad ʿAlī, he was appointed Arabic editor of the official gazette, *al-Waḳāʾiʿ al-Miṣriyya*, in place of Rifāʿa al-Ṭahṭāwī [*q.v.*] (see *al-Aʿyān*, 198; *Dāʾira*, x, 428; Masʿad, 18; *Makshūf*, no. 170, 1938, 12; ʿAbbūd, *Ṣaḳr*, 135-6; Dāghir, *Maṣādir*, ii, 472-3).

At the request of the head of the Protestant Evangelical Mission, he moved to Malta, where he spent several years (1834-48: see *Wāsiṭa*, 3) teaching Arabic, writing text-books and correcting manuscripts; he interrupted this austere existence only twice (*al-Sāḳ*, 436, 474-7, 478-82; *Wāsiṭa*, 14; ʿAbbūd, 171), to return secretly to Lebanon in 1837 and to visit England in 1845 (see Najm, *Thesis*, 61).

In 1848 he was invited to London (*Kashf al-mukhabbā*, 67) to assist in the translation of the Bible (*Kanz al-raghāʾib*, i, 168-70); there, divorcing his first wife, he married an Englishwoman, obtained British protection (*Kashf*, 280, on the oath) and lost his third child (*al-Sāḳ*, 613-7). When the translation of the Bible was completed (in less than 20 months), he took up residence in Paris (*ibid.*, 633-41). Two panegyrics, the one addressed to Aḥmad Pasha, Bey of Tunis (*zārat Suʿād*, 1851: see *ZDMG*, v, 249 ff.; H. Pérès, in *al-Makshūf*, no. 314, 2), the other to Sultan ʿAbd al-Madjīd in 1854 (see *al-Sāḳ*, 665-72), were to change the course of his life. He received a warm welcome at Tunis (1857), where he embraced Islam, adopting the personal name Aḥmad and abandoning the patronymic al-Shidyāḳ (see Cheikho, *Ādāb*, ii, 80; *Dāʾira*, x, 429, § 1); his wife and son did likewise (*Dāʾira*, *loc. cit.*). According to Ṭarrāzī he had no part, as has been claimed, in the establishment of *al-Rāʾid al-Tūnisī* (*Ṣiḥāfa*, i, 66).

But it was in Istanbul (end of 1857) that Fāris was to reach the summit of his fame. In favour with the Sultan, who had summoned him officially, and loaded with honours, he established (yet only after many reverses: see *Dīwān*, 24-6, 28-9) the weekly paper *al-Djawāʾib* (2 July 1861 until 1884: the statement of Cheikho, *Ādāb*, ii, 80, Ṭarrāzī, *Ṣiḥāfa*, i, 61, *Dāʾira*, x, 429, § 2, that publication began in 1860 is to be rejected: see *Kanz al-raghāʾib*, vii, 110-1, Masʿad, 21, Najm, *Thesis*, 247-75), thus inaugurating a new era in Arab journalism (ʿAbbūd, *Ṣaḳr*, 157-62 and DJARĪDA).

After a cordial welcome and a brief stay in Cairo (1886), Fāris al-Shidyāḳ returned to Istanbul (26 May 1887: *al-Ahrām*, issue of that day), where he died a few months later, on 20 September 1887, in his summer residence at Kadıköy. The assertion that he finally returned to Catholicism is completely baseless (the hypothesis of Cheikho, *Catal.*, 123, no. 447 and of Yazbik, in *al-Djumhūr*, no. 99 (1938), 8, 104, is to be rejected: see ʿAbbūd, *ibid.*, no. 102, 15, Najm, *Thesis*, 69-73). On Wednesday 5 October 1887 his body was received at Beirut (see Masʿad, 25-42; *Lisān al-ḥāl*, no. 997 (6 October 1887); Āṣaf, *Huwa 'l-Bāḳī*, Cairo 1888) and buried at Ḥāzmiyya (a suburb of Beirut).

Of his numerous works (*Dāʾira*, x, 430, §§ 1-2; Sarkis, §§ 1104-8; Dāghir, *Maṣādir*, ii, 474-6), only the most characteristic will be mentioned here. *K. al-Sāḳ ʿala 'l-Sāḳ fīmā huwa 'l-Fāryāḳ ʿan ayyām wa shuhūr wa aʿwām fī ʿudjm al-ʿArab wa 'l-ʿAdjam* (1st edition Paris 1855, for details see *Kashf al-mukhabbā*, 285, 289; 2nd and 3rd editions Cairo 1919 and 1920) is certainly the most basic, and one of the most distinguished Arabic works of the 19th century. The noun Fāryāḳ is made up from the first syllable of his personal name (Fāris) and the second syllable of his family name (al-Shidyāḳ). In this autobiographical miscellany, packed with memories of childhood and youth, are combined narrative skill, observation, and social, moral and religious criticism.

Al-Wāsiṭa fī maʿrifat aḥwāl Mālṭa (1st ed. Malta 1836, 2nd ed., together with *al-Kashf*, in *al-Djawāʾib*, 1299/1881) is written in the style of the mediaeval Arab travellers; the author recounts the observations made during his stay in Malta, dealing with its physical geography (6-11), demography and climate (11-8, 27), ethnology and sociology (21, 29, 30, 31-44, 55), politics (44-50), philology (23-5, 56-66), art, and notably music, singing (50-4) and architecture (25, churches), illustrated sometimes by statistics and sometimes by comparative analyses.

According to the author, the *Kashf al-mukhabbā ʿan funūn Urubbā* (1st ed. Tunis 1866, 2nd ed. Istanbul 1881) forms the second part of *al-Wāsiṭa*, consisting of his travel-notes in Europe. In it are found recorded historical facts (Napoleon, 260; Joan of Arc, 262; other famous figures, 258), thoughts on civilizations (London: 290-306, 313-36; Paris: 238, 247, specially 271, 276-7) and different systems of government (279 ff.), reflections on religion (189, 256), and some tales in the manner of the *Gūlistān* (285, 289). The digressions and the tales are recounted in a precise and direct style. Apart from a few extravagances, the two works are not without order and clarity.

As a linguist, al-Shidyāḳ is to be remembered for his debates with his chief followers; Y. al-Asīr (1815-90) and I. al-Aḥdab (1826-91) on the one hand, and then N. al-Yāzidjī, his son Ibrāhīm (1847-1906), Buṭrus al-Bustānī (1819-83), Adīb Isḥāḳ (1856-86) on the other (see *al-Djinān*, 1871; *al-Ḍiyāʾ*, iv, 190; Shiblī, *passim* and texts, 62-349; ʿAbbūd, *Ṣaḳr*, 74-84, 162-7). In *al-Djāsūs ʿala 'l-Ḳāmūs* (Istanbul 1299/1881) he points out, in the course of a long introduction (2-90), the shortcomings of the Arabic dictionaries, establishes the reason for this (3-5), and demonstrates the principal errors committed by their various authors (10-45, with biographical notes 22-4, 71-2, 77-9). He then draws up an extended and passionate criticism of al-Fīrūzābādī, and probably al-Bustānī, his imitator, analysing the 24 weaknesses which he finds in al-Fīrūzābādī's *Ḳāmūs* (90-519). In spite of its importance, this work occupies only a secondary position in comparison with *Sirr al-layāl fi 'l-ḳalb wa 'l-ibdāl* (i, Istanbul

1884; vol. ii appears to exist in MS in private hands, see Najm, *Thesis*, 196), in which the author undertakes the study of the verbs and nouns in current use, which he arranges according to their pronunciation in order to demonstrate the links connecting them, their origin and the nuances distinguishing them, as well as of permutation, inversion and synonyms; he also supplies some of the omissions of al-Fīrūzābādī (*Sirr*, 6).

The author of a text-book of grammar (*Ghunyat al-ṭālib*, 1288/1871), he laughed at the extravagant exponents of the subject (*Fāryāḳ*, 68-9, 238) and wrote two text-books of Arabic grammar, in French (with G. Dugat, Paris 1854) and in English (*Practical Arabic grammar*, 2nd ed. London 1866). Drawing on the old lexicons, he undertook the translation of a work on the nature of animals (Malta 1841), assisted in the translation of the Bible, borrowed extensively from Western journals, and composed a trilingual (Persian-Turkish-Arabic) dictionary (Beirut 1876).

Extensive though it is, al-Shidyāḳ's poetical production (*Dīwān* of 22,000 lines: *Mashāhīr*, ii, 82; *Dā'ira*, x, 430; selections published Istanbul 1291/1874; various poems in *al-Sāḳ*, *al-Wāsiṭa*, *Kashf*; see especially *Kanz al-raghā'ib*, iii and introduction to the *Dīwān*) remains on the whole linked with the classical tradition. Besides the quatrains in which he expresses his misfortunes, there are some satirical effusions and some lyrical outbursts (*Kanz*, iii, e.g. 8, 11, 56-7, 80, 85, 87 and *passim*; *Dīwān*, 11, 12, 15, 16, 22, 30, 33, 43, 80, 84, 88, 89). The rest is a more or less servile imitation of the older writers, most of it occasional verse.

The *Kanz al-raghā'ib* (7 vols.), selections from *al-Djawā'ib*, reflects the results of his reading, his travels, his translations and his personal contacts. It is a mixture of ethics, sociology, politics (i and ii), history (v-vii), literature and linguistic discussions, composed of numerous diverse elements and assorted pieces of information which have aroused interest in both Oriental and European circles (*al-Muḳtabas*, vi).

In the religious sphere no faith satisfied him, and he remained a sceptic, a cynic, a realist, a materialist in search of honours and pleasures. Yet he rebelled, and, though joining the pan-Islamic movement, extolled the principles of the French Revolution. In revolt against feudalism and all forms of slavery, a supporter of the equality of man and the emancipation of women, a political and a social critic (*Kanz*, i, 101-3, 226-8; *Kashf*, 128 ff.), yet he lived and wrote in accordance with the behests of the Sultan or the Khedive.

Despite this ambivalence of culture and outlook we can discern in his works some of the features which characterize the writings of his contemporaries, and the seeds of a literature of innovation which blossomed after him. Concerned with the everyday problems of the century, he is the creator of the genre of the Maḳāla, the newspaper article [see MAḲĀLA], and the forerunner, if not actually the first, of the progressive reformers. Conservative and radical, traveller, linguist, man of learning and journalist, this humanist is undoubtedly one of the chief representatives of 19th century Arabic literature.

(A. G. KARAM)

AL-FĀRISĪ, ABŪ ʿALĪ AL-ḤASAN B. ʿALĪ, one of the outstanding grammarians of the 4th/10th century. Born 288/900 at Fasā [*q.v.*], he studied at Baghdād under Ibn al-Sarrādj, al-Zadjdjādj, and others. In 341/952 he joined the court of Sayf al-Dawla at Aleppo, where he consorted with Mutanabbī. He transferred himself to the service of the Būyid Aḍud al-Dawla sometime before the latter's conquest of Baghdād in 319/979 (cf. the story in Yāḳūt, *Irshād*, iii, 11). He died at Baghdād in 377/987. Amongst his numerous pupils were Ibn Djinnī (who attended him for 40 years and became his successor) and his nephew Abu 'l-Ḥusayn al-Fārisī, who became the teacher of ʿAbd al-Ḳāhir al-Djurdjānī. Fārisī was suspected of Muʿtazilism, and indeed commented upon the exegesis of the Muʿtazilī Muḥammad al-Djubbā'ī in a (lost) work called *al-Tatabbuʿ*. Among his other works the chief one s *al-Īḍāḥ fi 'l-naḥw*, an advanced grammar, with a more difficult appendix, *al-Takmila*. The popularity of this work in his time is proved by the numerous MSS preserved and by the five extant commentaries and two *shawāhid* commentaries. A large part is printed in Girgas-Rosen, *Arabskaya Khrestom.*, 378-434. Further works (extant items marked *): *al-Īḍāḥ al-shiʿrī*, perhaps identical with **K. al-shiʿr* or *al-ʿAḍudī*, MS. Berl. 6465 (a part printed in Io. Roediger, *De nominibus verborum arabicis commentatio*, Halle 1870), and with *Sharḥ abyāt al-Īḍāḥ* mentioned *Fihrist* 646; a commentary on al-Zadjdjādj's *Maʿānī al-Ḳur'ān* called **al-Ighfāl* (confused in *Fihrist*); perhaps on the same work (or identical) *Abyāt al-Maʿānī*; a commentary on Ibn Mudjāhid's *al-Ḳirā'āt al-sabʿa* called **al-Ḥudjdja* (*wa 'l-ighfāl*?); *al-Tadhkira*, on difficult verses; **Djawāhir al-naḥw*; *Mukhtaṣar ʿawāmil al-iʿrāb* (called by Ibn Khallikān *al-ʿAwāmil al-mi'a*); *al-Maḳṣūr wa 'l-mamdūd*; *Abyāt al-iʿrāb*; a comm. on Ḳur'ān, V, 8; and a number of collections of **Masā'il*, named after various localities (where Fārisī taught?); it is not clear what was the nature of his *Naḳḍ al-hādhūr* ("The Babbler Confounded").

Bibliography: Brockelmann, I, 116; S. I, 175; Flügel, 110; *Fihrist*, 64; Ibn Khallikān, no. 155; Yāḳūt, *Udabā'*, iii, 9-22; al-Anbārī, *Nuzha*, 387-9; *Ta'rīkh Baghdād*, vii, 275; Ibn al-

Athīr, ix, 36; Ibn Taghrībirdī, 533-4; Ibn al-ʿImād, *Shadharāt*, iv, 88-9; Suyūṭī, *Bughya*, 216.

FĀRISIYYA [see īrān].

al-**FĀRISIYYA**, Djazīrat, island in the Persian Gulf in Lat. 27° 59′ N., Long. 50° 10′ E., about midway between the shores of Saudi Arabia and Iran. Like Djazīrat al-ʿArabiyya, 14 statute miles to the south, al-Fārisiyya is low and less than one square mile in area. The island is administered by Iran which maintains a meteorological station there (although Kuwayt and Saudi Arabia have also advanced claims on it), and the Persian Gulf Lighting Service maintains a navigation light.

(W. E. Mulligan)

FARḲ [see faṣl].

al-**FARḲADĀNi** [see nudjūm].

FARMĀN, basic meanings: 1. Command, 2. (preparation in writing of a command) Edict, Document.

Ancient Persian *framānā* (*fra* = "fore", Greek πρό), modern Persian *farmān* through dropping the ending ā and insertion of a vowel owing to the initial double consonant (still *fra-* in Pahlavi). In the derived verb *farmūdan* the ā of the stem became ū (after the third century: *far-mūdan*, analogous to *āz-mūdan* "to try", *pay-mūdan* "to measure", *nu-mūdan* "to show", etc.).

In Firdawsī *farmān* is found with the following meanings: command, authority, will, wish, permission; and *farmūdan* accordingly: to command, to regulate, to have something done, to say, to announce, as well as "to permit"; in those meanings mentioned first it is construed with (1) the content of the command as direct object, (2) a following infinitive, (3) with *tā* "that", or (4) *ki* "that", and (5) with *ki* introducing direct address. In addition the forms *farmān dādan* (or *kardan*) "to command" and *farmān burdan* "to obey" are also found in Firdawsī. Among composite forms Firdawsī has *farmāndih* "commander", "master", *farmānrawā* "one whose commands are accepted", "commanding", "powerful", and *farmānbar* "servant", "slave", as well as *farmānpadhīr* "submissive", "yielding". In the *Farhang-i Nafīsī* on the other hand nine composite forms occur, which are to a degree identical with those mentioned above and which may be divided into the same two groups according to meaning: *f.-dih*, *f.-rawā*, *f.-farmā*, *f.-godhār* (to command), and *f.-bar*, *f.-bardār*, *f.-padhīr*, *f.-shenū*, *f.-niyūsh* (to obey). There are in Firdawsī isolated examples of the Arabic equivalents of *farmān*: *ḥukm* (sentence, decision, command) and *amr* (command), although the "Command of God" is called *farmān-i yazdān*.

Farmān in the sense of "document" does not, however, occur in Firdawsī, who uses only the three Arabic (!) expressions *raḳam* (sign, script, writing, decree), *manshūr* (diploma, decree, investiture) and *barāt* (diploma, assignment). Firdawsī also uses the word *nishān* only in the sense of "sign", "emblem", "trace", "target", etc., though in the *ʿAtabat al-kataba* (mid 12th century) *nishān* is already a common term for edicts and diplomas in the broadest sense of the word. But *farmān* as a designation for the writing itself came only very slowly into usage and became part of the official language of administration at a very late date. Thus we find in the earlier period *farmān* in the sense of "document" in examples of language which is not quite official, such as the *Siyāsat-nāma* of Niẓām al-Mulk, where *farmān* is employed occasionally as a parallel to *mithāl* (ed. Hubert Darke, Tehrān 1962, 90), clearly designating two different kinds of document, one of which (*farmān*) was issued by the ruler himself, and the other (*mithāl*) by authorities of lower rank (cf. *Isl.*, xxxviii (1962), 195-8). A diploma, which would later be called officially *farmān* or *nishān*, is designated by Niẓām al-Mulk (ed. Darke, 191), still dependent upon Arabic usage, *ʿahd-nāma*, a term which more accurately applies to treaties in a narrower sense. In religious matters of course a treaty is (now) called *ʿaḳd-nāma*. *Farmān* in the strict sense of "document" cannot be unquestionably established before the 15th century, when it occurs as "... *dar farāmīn* (here in the Arabic broken plural) *masṭūr ast*", "... (as is) written in the documents" (Busse, *Untersuchungen*, Document No. 3). Until well into modern times expressions such as *ḥukm*, *manshūr*, *nishān*, etc. are used beside *farmān* with very little difference, occasionally in the combination *ḥukm-i farmān* or *ḥukm-i mithāl*, and it is not always possible to establish without reservation whether by *farmān* the actual command or the writing of it is meant. In this double application of the term *farmān* an echo of an older juridical concept is perceptible, according to which the document was only the writing down of an originally oral (which alone was authoritative) decree. During the Ṣafawid period the edicts of subordinate authorities were called *mithāl* or *raḳam* (pl. *arḳām*), and in the Ḳādjār period the terminology had become consolidated to the extent that *farmān* was reserved for the ruler's edicts, while those of governors were called according to their rank either *raḳam* or *ḥukm* (cf. diplomatic, iii, Persian, 309).

Like rulers' titles the various designations for edict and document are distinguished by epithets: *nishān* (*farmān*, *ḥukm*)*-i humāyūn* "royal edict" (Firdawsī: *dirafsh-i humāyūn* "felicitous, glorious, royal banner"); *aḥkām-i muṭāʿ-i humāyūn* "royal edicts, which are obeyed"; *arḳām wa-aḥkām-i muṭāʿāt*; *farāmīn-i muṭāʿāt lāzim al-iṭāʿat-i humāyūn* "royal edicts which are and must be obeyed"; *ḥukm djahānmuṭāʿ wa-āftāb-shuʿā* "edict, obeyed by the world and shining (like) the sun's rays"; *farmān-i aʿlā khudāʾigani-yi aʿẓamī-yi shāhinshāhī* "most high, lordly, most noble, imperial edict"; *raḳam-i mubārak-i ashraf* "blessed and most honoured edict". In comparison to the elatives are the basic forms *ʿālī* and *sharīf*, which were employed for edicts not originating from the ruler himself in the highly developed nomenclature of the Ḳādjār period, and to some extent even earlier. A formula of benediction likewise follows mention of the edict or command: *aʿlāhu'llāh taʿālā wa-khallada nifādhahu* "May God elevate it and make abiding its effect"; *lā zāla munfadh*^{an} *fi 'l-aḳṭāʿ wa 'l-arbāʿ* "may it be always effective in the regions and quarters of the earth", and other formulae of the kind.

In the *Dispositio*, that part of the document containing the resolution of the ruler, firmly established formulae are employed: (1) Substantive plus *farmūdan*: *ḥukm f.*, *mithāl f.*, *manshūr f.*, *ḥawālat f.* (to make an assignment), *maḥmadat f.* (to proclaim praise); (2) Arabic verbal noun II plus *farmūdan*: *taḳrīr f.*, *tafwīḍ f.*, etc.; (3) Arabic passive participle II plus *farmūdan*: *muḳarrar f.*, etc. In the first group of formulae *farmūdan* can be replaced by *dādan*, in those of the second and third groups by *kardan* or *dāshtan* and *gardānīdan*. Very frequently two formulae are combined: *maḥramat farmūdīm wa-arzānī dāshtīm* "we have shown and conceded favour" (in Firdawsī *arzānī* means "worthy" or "poor"; in Vullers *arzānī dāshtan* is 'dignum putare, tanquam

digno largiri, concedere, conferre'; thus also in Steingass). In the *Dispositio* impersonal formulae are also favoured: *ḥukm ... ba-nafādh andjāmīd* "a ... command has been issued"; *ḥukm ... samt-i iṣdār yaft* "a ... command has found the path of issue"; *ḥukm ... ʿizz-i iṣdār wa-sharaf-i nafādh yaft* "a ... command has found the honour of issue and the esteem of promulgation". Out of these and the equally current formulae with *shud* (*ḥukm shud, muḳarrar shud*) the introductory formulae (*tughra*) developed, which predominated in the early Ṣafawid period for particular kinds of documents: *farmān-i humāyūn shud, farmān-i humāyūn sharaf-i nafādh yaft,* and *ḥukm-i djahānmuṭāʿ shud*, with the later distinction also here between *aʿlā* and *ʿālī* as adjectives for *farmān* and *ḥukm*. The issuing authorities and the rank of the originator can be determined by the various introductory formulae, which to some extent, however, depend upon the content of the document or the addressee. Directly related to the introductory formulae are the seals affixed and parts of the protocol (invocation) sometimes used.

The designations for edict and command can in addition be made more precise for various purposes by a following substantive or adjective, thus: according to content (*nishān-i ṣadārat*, diploma for a *ṣadr*, *manshūr-i taḳlīd* (or *tafwīḍ*), diploma of investiture; *ḥukm-i mudjammalī*, a general edict addressed to everyone); according to the promulgating authority (*mithāl-i dīwān al-ṣadāra*); for an original document or a confirmation (*raḳam-i muthannā, mudjaddad, ḥukm-i imḍā* or *tadjdīd-i nishān*); and for further processing of the document by the authorities (*raḳam-i daftarī* and *bayāḍī*, that is, documents which were registered and those which were not). For seals, script, registration, etc., cf. DIPLOMATIC, iii, Persia.

We also find *Farmān* as the pen-name (*takhalluṣ*) of a poet (cf. Justi, *Iranisches Namenbuch*, s.v.), and in the form *Farmān-farmā* as the nick-name of the Ḳādjār prince Ḥusayn ʿĀlī, the son of Fatḥ ʿĀlī Shāh (d. 1834).

(H. BUSSE)

ii.—Ottoman Empire

Fermān, in Turkish, denotes any order or edict of the Ottoman sultan. In a more limited sense it means a decree of the sultan headed by his cypher (*tughra*) and composed in a certain form which generally differs from that of the *berāt* (*nishān, yasaḳnāme*) and *nāme* [*qq.v.*]. Synonymous terms are, particularly in the early Ottoman Empire, *biti, yarlīgh, mithāl, ḥüdjdjet* (for a certain type), *menshūr, tewḳīʿ* and, in most periods, *emr, ḥükm* (and, in Arabic, *marsūm*). All these terms are usually followed by epithets, such as *sherīf, humāyūn, refīʿ, ʿālī*[-*shān*], *djihān-muṭāʿ*, etc. Imperial princes serving as provincial governors sometimes issued *fermān*s under their own *tughra*s (so far one has been published: *Belleten*, v (1941), 108-9, 126-7). In late Ottoman Egypt an edict of the wālī also used to be called *faramān*.

Preparation. Most *fermān*s were not issued by order of the sultan himself. According to the *ḳānūnnāme* of Meḥemmed II (*TOEM*, 1330, suppl., 16), three high officials were authorized to give orders (*buyuruldī*) to issue a *fermān* in the sultan's name and under his *tughra* : the Grand Vizier on general subjects, the *defterdār*s on fiscal matters and the *ḳāḍī-ʿasker*s on questions of *sharīʿa* law. In many cases they did so after the affair had been discussed and decided upon in the imperial council (*dīwān-i humāyūn* [*q.v.*]) or the Grand Vizier's council (*ikindi dīwānī*), with or without the sultan's subsequent express approval. Later *ḳānūnnāme*s (*e.g.*, *MTM*, i (1331), 500, 523) extended this authority to the Deputy Grand Vizier (*ḳāʾim-maḳām*) during the Grand Vizier's absence from the capital and to viziers appointed commanders-in-chief (*serdār*).

Most *fermān*s were prepared in the imperial chancery (*dīwān-i humāyūn ḳalemi*). A draft made by a junior clerk (see Ferīdūn, *Munshaʾāt al-salāṭīn*[1], i, 20) was corrected and approved by the *mümeyyiz*, the *beylikdji*, the *reʾis al-küttāb* [*q.v.*] (for his *resīd* see *MTM*, i, 516-7) and, exceptionally, the sultan himself. *Fermān*s on fiscal matters, which were prepared in the Finance Department (*māliyye*), passed through other stages (see L. Fekete, *Die Siyāqat-Schrift*, Budapest 1955, i, 68, n. 2). On the fair copy the *tughra* [*q.v.*] was drawn by the *nishāndjī* [*q.v.*] (or the *tughra-kesh*), or by one of the viziers in the dīwān or, in certain cases, the Grand Vizier himself (see *MTM*, i, 499, 509, 515). The right of governors of vizier rank in frontier provinces to affix the sultan's *tughra* to *fermān*s drawn up by them was abolished by the Grand Vizier Kemānkesh Muṣṭafā Pasha (1638-44) (*Taʾrīkh-i Naʿīmā*, 1147, ii, 11). The Grand Vizier and certain other viziers when away from the capital and the Deputy Grand Vizier in Istanbul were often provided with blank papers on which the *tughra* had been drawn beforehand to enable them to issue *fermān*s on the spot.

The completed *fermān* was put in a small bag (*kīse, kese*) and used to be conveyed to its destination either by government couriers (*ulaḳ* [*q.v.*]) or by the permanent representative of the addressee (provincial governors, etc.) in Istanbul (*ḳapī ketkhudāsī*) or the person who had submitted a petition and asked for the decree. The latter is frequently referred to in the document as its 'bearer' (*dārende, ḥāmil, rāfiʿ*, etc.). The persons in whose favour a *fermān* was issued were often explicitly allowed to keep it after it had been shown to its addressee (and copied into the local *ḳāḍī*'s register), so that they could present it in case of a violation of their rights in future.

Internal structure. In its composition, which changed surprisingly little over the centuries, the *fermān* bears much similarity to certain occidental documents. It opens with an *invocatio* (*daʿwet, taḥmīd*) of God, the shortest form of which is *huwa*. Beneath a considerable blank space, a sign of respect, there follows the *tughra*, which, particularly in later periods, is sometimes richly decorated. The text begins with the address (*inscriptio*) which mentions the office, and often also the name and rank, of the addressee preceded by his honorific titles (*elḳāb*) and followed by a short benediction (*duʿā*) (see *TOEM*, 1330, suppl., 30-2; Ferīdūn, *Munshaʾāt*[1], i, 2-13). The addressee is not a private citizen but mostly a

government official in the capital or the provinces, a dependent Christian ruler, and the like. Many *fermāns* are addressed jointly to two or more such persons, others to a class of officials in a certain province, along a given road or in the whole Empire.

Following an introductory formula, such as *tewkīʿ-i refīʿ-i humāyūn wāṣīl olidjaḳ maʿlūm ola ki* ('when the exalted imperial cipher arrives, be it known that . . .'), most *fermāns* then relate the facts that caused the order to be issued (*narratio, iblāgh*). Usually this section is a summary, partly verbatim, of an incoming report or petition.

Thereupon follows the main part of the *fermān*, the *dispositio* (*ḥükm, emr*), which may open with the words *öyle olsa, imdi* (*gerekdir ki*), etc. In many *fermāns* it consists of two parts. The first, ending in *emr édüb, fermānïm* (*ṣādir*) *olmushdïr*, and the like, states the sultan's decision in the form of a short, impersonal order. This clause seems to be the 'documentary commission' which, as mentioned above, was generally written by a high official or the sultan himself in the upper margin of the incoming communication or on a separate piece of paper and was sometimes reproduced verbatim in the *fermān*. The second (or only) part of the *dispositio*, which sets forth the sultan's command to the addressee in greater detail, mostly begins *buyurdum ki*. The space left empty after these words in many *fermāns* was originally reserved for the name of the official who was to convey the document to its destination. In some *fermāns* this space is filled with the much elongated words *ḥükm-i sherīfimle* (*vardïḳda*).

Numerous *fermāns* add a *sanctio* or *comminatio* (*teʾkīd*), which emphasizes the importance of the order, exhorts the addressee to carry it out without delay and threatens him with punishment for any disobedience. The subsequent *corroboratio* refers to the *tughra* (*ʿalāmet-i sherīf*) as attestation to the authenticity of the document. Neither a signature nor, with few exceptions (*e.g.*, in certain fiscal *fermāns*), a seal is affixed. At the end, the (*Hidjra*) date and, mostly in the lower left corner, the place of issue are given. In *fermāns* issued by the Finance Department these were generally added by a special bureau in smaller letters and a different handwriting.

On the back, various annotations may be found, such as *ṣaḥḥ* denoting that the document has been examined and approved, the peculiar signature (*ḳuyruḳlï imḍā*) of the *defterdār*, registration comments, the address, a short reference to the contents, etc.

To give a *fermān* greater weight or confer distinction upon its recipient, the sultan often added a few words in his own hand near the *tughra*. The later standard formula is *mūdjebindje ʿamel oluna*, but sometimes the note is more elaborate (cf. Babinger, *Archiv*, 50; *TM*, vi (1936-9), 228, 234). Such documents are called *khaṭṭ-i humāyūn* or *khaṭṭ-i sherīf* [*q.v.*], a term also used in other meanings (see *IA*, s.v. *Hatt-i Hümâyûn*).

Contents and external form. *Fermāns* deal with a wide range of subjects—administration, military affairs, finance, judicial decisions, etc. Some are communiqués on Ottoman victories, travel permits, safe-conducts, permits for foreign ships to pass through the Straits, courier orders, etc. Many *fermāns* which contained rules of general applicability became 'regulations' (*ḳānūn*) and were incorporated in *ḳānūnnāmes* [*q.v.*], the codes of Ottoman secular law.

Generally, *fermāns* are written in Ottoman Turkish. Exceptions are some early Ottoman *yarlïghs* written, in a different form, in Central Asian Turkish and Uyghūr characters (with interlinear text in Arabic letters) (see R. Rahmeti Arat in *TM*, vi, 285-322 and *Ann. del R. Ist. Sup. Orient. di Napoli*, N.S., i (1940), 25-68). Until the 16th century *fermāns* were also issued in other languages (Greek, Slavonic, Arabic, etc.).

The script used in *fermāns* is some kind of *tewḳīʿ* or *dīwānī*. Frequently gold dust (*altïn rïg*) was sprinkled on the writing before it had dried. Like other Ottoman documents, *fermāns* are usually written on long and relatively narrow sheets of paper with the lines slightly rising towards the left. While a margin is left on the right, the last word in a line is often lengthened to prevent interpolations. Forgers of *fermāns* incurred capital punishment (see Hammer, *GOR*[1], vii, 375; Stephan Gerlach, *Tage-Buch*, Frankfurt a.M. 1674, 376).

The composition and form of the Ottoman *fermān* were certainly influenced by oriental (Saldjūḳ, Mamlūk, etc.) and, possibly, occidental models, but this question has not yet been adequately studied.

Originals and copies. Original *fermāns* are preserved in the archives and libraries of Turkey, other parts of the former Ottoman Empire and many European countries. A number of them have been published (see *Bibl.*). Other *fermāns* have survived in the form of individual copies, often legalized by a *ḳāḍī* (see *MOG*, ii, 138 ff.). Innumerable *fermān* texts, generally without the 'protocol' at the beginning and the end, are found in various registers, such as the *Mühimme Defteri* [*q.v.*], *Shikāyet Defteri, Aḥkām Defteri* and a few others, most of which are kept today in the *Başvekâlet Arşivi* [*q.v.*] in Istanbul. Collections of such copies have been published by Aḥmed Refīḳ (especially for Istanbul), H. T. Dağlıoğlu (for Bursa), D. Šopova (for Macedonia), U. Heyd (for Palestine), İ. H. Uzunçarşılı (for Ottoman history and institutions in general), and others. The registers (*sidjill* [*q.v.*]) of the *sharīʿa* courts also contain a large number of *fermān* copies (see publications by J. Grzegorzewski, H. İnalcık, M. Ç. Uluçay, H. Ongan, J. Kabrda, H. W. Duda-G. D. Galabov, etc.). Finally, many copies of *fermāns*, including early ones, are found in *inshā* works by Ferīdūn and others, collectanea (*medjmūʿa*) and chronicles.

(U. HEYD)

iii.—India.

The authentic texts of many formal written royal orders have survived from the Mug̲h̲al period, in originals located in the archives of former princely states, of the descendents of great merchants or of religious communities. From the references collected in I. H. Qureshi, *The administration of the sultanate of Dehli*, Lahore 1942, 86, it would seem that the procedures of Mug̲h̲al times designed to ensure that *farmāns* were intentional, authentic and effective were founded on long-established Indo-Muslim precedent, though in the absence of extant texts from the sultanate period, many details are lacking.

The formalizing of the discourse of the Mug̲h̲al *pādshāh* into a state document could, the *Āʾīn-i Akbarī* suggests, be stately and elaborate. First, the speech and actions of the *pādshāh* were recorded daily by two *wāḳiʿ-nawīs*, the record being confirmed by the *pādshāh* before a *yād-dās̲h̲t* or memorandum of actual orders was prepared therefrom and countersigned by the *mīr ʿarḍ*, the *parwānčī* and the officer who had placed it before the *pādshāh* for a second approval. *Farmāns*, which were distinguished from *parwānčas* in point of force and generality of application by the attachment of a royal seal, were often, but not always, prepared from a *taʿlīḳa* or abridgment of the *yād-dās̲h̲t*, particularly in the granting of money or of an office entailing the grant of money. Although the *pādshāh* was bound by no invariable rule, *farmāns* were usually issued for appointments as *wakīl*, *wazīr*, *ṣadr*, *mīr bak̲h̲shī* or *nāẓim* or for the grant of a *manṣab*, *d̲j̲āgīr* or *sayūrg̲h̲āl*. They were also sent to tributary princes, to foreign rulers and used to grant privileges to religious communities and trading organisations.

The procedure for a *farmān* appointing to a *d̲j̲āgīr* or *manṣab* involved many checks against inaccuracy, fraud and caprice. The *farmān* was drafted both on the basis of a *sark̲h̲aṭ* or certificate specifying the salary being granted (the details of which were copied in the *bak̲h̲shī*'s department from the *taʿlīḳa*), and on the basis of a *taʿlīḳa-yi tan* or certificate of salary which went to the *dīwān* or finance minister. These preliminary documents went before the *pādshāh* for continuing approval at various stages and were signed and sealed by such officials as the *mīr bak̲h̲shī*, the *mustawfī-i dīwān* and the *ṣāḥib-i tawd̲j̲īh* (accountant in the *bak̲h̲shī*'s department). The *farmān* of grant or appointment called *farmān-i t̲h̲abtī* received the seals of the *bak̲h̲shīs*, the *dīwān* and the *wakīl* before receiving a royal seal. Confidential and important *farmāns*, not involving sums of money, received only a royal seal and were folded and dispatched in such a way that their contents remained private to the recipient. They were called *farmān-i bayāḍī*.

The two most important royal seals were the *uzuk* seal (a 'privy' seal), kept often either by one of the royal ladies or by a trusted official, and a large linear seal (a 'great' seal), the *muhr-i muḳaddas-i kalān*, on which was engraved the name of the *pādshāh* and of his ruling ancestors from Tīmūr. This was particularly but not exclusively used for *farmāns* to foreign rulers and to tributary princes. Besides the seal, a *tug̲h̲ra* or 'sign manual', giving the full name and titles of the *pādshāh* himself, written in *nask̲h̲*, was superscribed.

The *pādshāh* might favour the addressee of a *farmān* by adding his own signature to the seal, or by writing a few lines in his own hand, or by impressing the mark of the royal hand (*pand̲j̲a-yi mubārak*) upon the *farmān*. S̲h̲āh D̲j̲ahān sometimes wrote out the entire *farmān* himself.

FARMING [see FILĀḤA].

FARMING OF TAXES [see BAYT AL-MAL, ḌARĪBA, ILTIZĀM, MUḲĀṬAʿA].

FARMŪL (also Farmul). A town east of G̲h̲azna in Afghanistan near Gardēz. It is mentioned by al-Muḳaddasī (296), and the *Ḥudūd al-ʿālam* (251). The exact location of the town is unknown and it no longer exists. (R. N. Frye)

AL-FARRĀʾ, the sobriquet of the grammarian of al-Kūfa, Abū Zakariyyāʾ Yaḥyā b. Ziyād, who died in 207/822; according to al-Samʿānī, *Ansāb*, f° 420a (quoted by Ibn K̲h̲allikān, ii, 229, l. 34), al-Farrāʾ appears to signify, not "the Furrier" but "one who skins, *i.e.*, scrutinises language". He was born at al-Kūfa in about 144/761, of a family that were natives of Daylam (see Yāḳūt, *Udabāʾ*, xx, 9), and he remained as a dependent of an Arab clan, either the Asad or the Minḳār (see *Fihrist*, 66 and *Taʾrīk̲h̲ Bag̲h̲dād*, xiv, 149); he received an education in *ḥadīt̲h̲* that went back to the well-known traditionists (*Taʾrīk̲h̲ Bag̲h̲dād*, al-Samʿānī, *loc. cit.*); naturally, it is on the subject of his grammatical education that we possess the fullest particulars, but these must, however, be used with discretion; on the authority of the "Kūfan" T̲h̲aʿlab (d. 291/904) [*q.v.*], it has been customary to regard al-Farrāʾ as one of the masters and indeed one of the founders of the "grammatical school of al-Kūfa"; the fact is that al-Farrāʾ holds a place in the list of Kūfans who were influenced by al-Ruʾāsī [*q.v.*] and al-Kisāʾī [*q.v.*] (see anecdotal material in *Fihrist*, 64, l. 16, repeated by al-Anbāri, 65, in which *amyazu* must be read, not *asannu*); in any event, al-Farrāʾ would only have met al-Kisāʾī in Bag̲h̲dād when in his years of maturity, and what is more, it is not admissable to accept that at that time the division between the "School of al-Kūfa" and that of al-Baṣra had already assumed the intensity which it later attained during the grammarians' polemics at the end of the 3rd/9th century and in the following century (cf. Fleisch, 14 and al-Mak̲h̲zūmī, who refer to Weil, *Inṣāf*, Introduction); like his contemporaries,

al-Farrāʾ seems in fact to have made wide use of direct inquiry among Bedouin informants; to some degree he was influenced by Baṣran scholars such as Yūnus al-Thaḳafī, perhaps also al-Aṣmaʿī, Abū Zayd al-Anṣārī and Abū ʿUbayda (cf. Abu ʾl-Ṭayyib al-Lughawi (?) *apud* al-Suyūṭī, *Muzhir*, ii, 403); like most if not all the Kūfans, al-Farrāʾ had an intimate knowledge of the *Book* of Sībawayh (cf. the information going back to al-Djāḥiẓ, in Ibn Khallikān, i, 385, l. 21, where the polygraph says a gift was made to the vizier Ibn al-Zayyāt of a copy of this work, originating from the library of al-Farrāʾ and executed by the latter himself); in fact the problem of the Baṣran influences on al-Farrāʾ remains partly obscure since the evidence is contradictory (cf. Yāḳūt, *Udabāʾ*, xx, 10 and al-Suyūṭī, *Bughya*, 411 and also the summary by al-Makhzūmī, 146 ff.); in any case, he does not seem to have undergone direct influences of master on disciple. By his personality, the austerity of his habits, his disinterestedness, and also as a result of his position in relation to the caliph al-Rashīd (see Zubaydī, 143; Ibn Khallikān, ii, 228, l. 12) and especially al-Maʾmūn who appointed him tutor to his two sons (see *Taʾrīkh Baghdād*, xiv, 150, repeated by al-Anbārī, 130-1), al-Farrāʾ appears to have largely deserved the renown which his erudition had won. His knowledge was encyclopaedic and derived simulnaneously from *ḥadīth*, *fiḳh*, astrology, medicine, the "Days of the Arabs", and, naturally, from grammar (see *Taʾrīkh Baghdād*, xiv, 151, condensed in Yāḳūt, *Udabāʾ*, xx, 11 and al-Anbārī, 132-3); his Muʿtazilī leanings are certain but, according to al-Djāḥiẓ, al-Farrāʾ had no real gift for *kalām* (see Ibn Khallikān, ii, 229, l. 13; cf. Yāḳūt, *loc. cit.*). It is above all as a grammarian of the "School of al-Kūfa" that the reputation of al-Farrāʾ has been perpetuated; his immediate disciples like Salama b. ʿĀṣim, Abū ʿUbayd Ibn Sallām, Muḥammad b. Djahm al-Simmarī were of importance in that respect (cf. *Fihrist*, 67, 71; *Taʾrīkh Baghdād*, xiv, 149; Yāḳūt, xx, 10; Zubaydī, 150); but it is mainly due to Thaʿlab that he came to be recognised as the leader of the "School of al-Kūfa" (cf. *Fihrist*, 74 and *Taʾrīkh Baghdād*, *loc. cit.*); it is worth noting that his authority extended as far as Spain (see Zubaydī, 163 and the statement by his uncle; see also *ibid.*, 278 and al-Suyūṭī, *Bughya*, 213 ff. on what Djūdī of Toledo owes to al-Farrāʾ and the Kūfans).

The writings of al-Farrāʾ are known to us from the list of works given in the *Fihrist*, 67, enumerating 13 titles (cf. *Maʿānī al-Ḳurʾān*, Introd. by the editors, 10-1, who include 17 titles; this initial list serves as the basis for those given by Yāḳūt, Ibn Khallikān, and al-Suyūṭī, *Bughya*, which includes only 11 titles); a number of these works appear to be lost; note also that certain titles appear to apply to chapters of the *Ḥudūd*. His work consists of: (*a*) writings on grammar such as — 1. *K. Mulāzim* (?) (see Yāḳūt, xx, 14; Ibn Khallikān, ii, 229, l. 30; the *Fihrist*, 67, gives a *Ḥadd mulāzamat radjul* (sic) among the chapters of the *Ḥudūd*); — 2. *K. al-Ḥudūd*, "Definitiones grammaticae", thought by some to have been dictated at the instance of al-Maʾmūn, after 204/819 (cf. *Taʾrīkh Baghdād*, xiv, 149) or, more probably, before that date (see Cairo ed., i; cf. al-Makhzūmī, 151); according to the *Fihrist*, 67, we possess the list of 45 chap., but al-Suyūṭī, *Bughya*, gave it as 46 and al-Zubaydī, 150, speaks of 60; the work was imitated by the Kūfan Ibn Saʿdān (d. 231/845; cf. *Fihrist*, 70, l. 5); — 3. *K. Faʿala* (?) *wa-afʿala* (see *Fihrist*, 67); the *K. al-Ḥudūd* contains a chapter with the same title; a small work possibly quoted by al-Suyūṭī, *Muzhir*, ii, 95; — 4. *K. al-Maḳṣūr wa ʾl-mamdūd* (*Fihrist*, 67); quoted by al-Suyūṭī, *Muzhir*, ii, 255 ff. and by Ibn al-Sikkīt, *ibid.*, ii, 106; for the MSS, see Brockelmann, S I, 179; — 5. *K. al-Mudhakkar wa ʾl-muʾannath* (*Fihrist*, 67); the *K. al-Ḥudūd* contains a chapter with the same title; ed. Muṣṭafā Zaraʿī, Beirut/Aleppo 1345 in *Madjmūʿa lughawiyya*; — 6. *K. al-Wāw* (see Yāḳūt, *Udabāʾ*, xx, 14 and Ibn Khallikān, ii, 229). — (*b*) writings on lexicography such as 7. *K. al-Ayyām wa ʾl-layālī* [*wa ʾl-shuhūr*] (al-Suyūṭī, *Muzhir*, i, 219 and ii, 76-7, 158 l. 3, 248: 3 quotations); ed. Ibr. al-Ibyāri, Cairo 1956, 1 vol. in 8°, 64 pp.; perhaps composed on the basis of "current dictations" going back to al-Farrāʾ and certain other Kūfans; — 8. *K. al-Fākhir* (*Fihrist*, 67 and Yāḳūt, xx, 14;not *al-mafākhir* as in Ibn Khallikān, ii, 229, l. 29); for the MSS, see Brockelmann, S I, 179; deals with proverbs; it should be noted that Mufaḍḍal b. Salama, son of al-Farrāʾ's disciple, in his turn also later wrote a work on proverbial sayings with the same title; — 9. *K. al-Nawādir* (*Fihrist*, 67), handed down by Salama and two other disciples of the author (*ibid.*, 88, l. 8; cf. Yāḳūt, xx, 14); note that the Kūfan al-Kisāʾī had himself composed a work on this subject in three versions (*Fihrist*, *loc. cit.*); — 10. *K. Ālāt al-kuttāb* (*Fihrist*, 67); — 11. *K. Mushkil al-lugha* (*Taʾrīkh Baghdād*, xiv, 150; Yāḳūt, xx, 14 and Ibn Khallikān, ii, 229, l. 24, in two editions, the one *major*, the other *minor*); — 12. *K. Yāfiʿ wa-yafaʿa* (?) (Yāḳūt, xx, 14, giving the variant *wa-yāfiʿa*; Ibn Khallikān, ii, 229, l. 31), which comprised 50 f^os^ with the *K. Mulāzim*); — 13. *K. al-Bahāʾ* (so given in Ibn Khallikān, ii, 229; not *al-bahī*, as in *Fihrist*, 67 and in Yāḳūt, xx, 13; the full title in al-Suyūṭī, *Bughya*, 411, is *K. al-Bahāʾ fī mā talḥanu fī-hi ʾl-ʿāmma*); written for ʿAbd Allāh b. Ṭāhir (*Fihrist*, *loc. cit.*); repeated with certain additions by Thaʿlab in his *K. al-Faṣīḥ* (Ibn Khallikān, *loc. cit.*). — (*c*) works on the *Ḳurʾān* such as — 14. *K. al-Maṣādir fi ʾl-Ḳurʾān* (*Fihrist*, 67); — 15. *K. al-Djamʿ waʾl-tathniya fi ʾl-Ḳurʾān* (*ibid.*); — 16. *K. Lughāt al-Ḳurʾān* (*ibid.*, 35, l. 10 and 67); — 17. *K. al-Waḳf wa ʾl-ibtidāʾ fi ʾl-Ḳurʾān* (*ibid.*, 36, l. 2 and 67); — 18. *K. Ikhtilāf ahl al-Kūfa wa ʾl-Baṣra wa ʾl-Shaʾm fi ʾl-maṣāḥif* (Yāḳūt, xx, 13); — 19. *K. Maʿānī al-Ḳurʾān*, written in about 204/819, whether before or after the *K. al-Ḥudūd* (see above), at the request of ʿUmar b. Bukayr the "logograph" and genealogist in the entourage of the vizier al-Ḥasan b. Sahl (*Fihrist*, 67, l. 5 and 107); the well-known copy belonging to Ibn al-Nadīm consisted of four volumes; the work is in process of being edited (i, Cairo 1374/1955) by Aḥmad Nadjatī and Muḥ. Nadjdjār (for the MSS see Introd., 3-6 and Brockelmann, S I, 173); other Kūfans had written works bearing the same title, among them al-Ruʾāsī, al-Kisāʾī and Ḳuṭrub (see *Fihrist*, 34); in the same way, the Baṣran al-Ḥasan al-Akhfash had written a *K. Maʿānī al-Ḳurʾān* which had served as a model for al-Kisāʾī and al-Farrāʾ (see Zubaydī, 71); a refutation by Ibn Durustawayh mentioned in *Fihrist*, 63, l. 16; an abridgement of it was made by al-Dīnawāri (see Zubaydī, 234). The Cairo ed. reproduces the version of Muḥ. b. al-Djahm al-Simmarī, probably following the "current dictations" of al-Farrāʾ (cf. i/1); in places, however, al-Farrāʾ seems to be quoted textually (i, 21, l. 10 and 351, l. 11).

At present we can really only judge al-Farrāʾ by the published part of the *K. Maʿānī al-Ḳurʾān*. The work is highly disappointing and without any general theme, being confined for the most part to argumentation on casual syntax; if here and there certain

interpretations of a Muʿtazilī character are to be observed (as in i, 353: *nūr-īmān*) or lexicographical remarks which are not devoid of subtlety (i, 385 on *fataḥa* "to judge"), on the other hand the comments on the "lectures" are curious rather than convincing (i, 455). Bearing in mind that this work has not come down to us in the form which the master gave to it, we reach the conclusion that al-Farrāʾ mainly owes his importance to the influence which he exerted over his pupils, either through writings received from him or through his personal authority. In general his followers have, without exception, been distinguished by the same grammatical anomalism, of which so many instances are to be found in the *K. Maʿānī al-Ḳurʾān*, based upon respect for usage particularly when aberrant (see the discussions on certain "readings", *op. cit.*, i, 353, 355, 357-8, 363, 375, 460).

Bibliography: *Fihrist*, 30, 34 ff., 36, 41, 63, 66-7, 70, 71, 74, 75, 88, 107; *Taʾrīkh Baghdād*, xiv, 149-55; al-Anbārī, *Nuzha*, 65 ff., 126-37, ed. Samarraʾī (Baghdād 1959), 34, 65-8 (repeating the previous work without acknowledgement); Yāḳūt, *Udabāʾ*, ii, 276-8 = ed. BLACHÈRE)

FARRUKHĀBĀD, name of a town and district in the Uttar Pradesh state of India; situated between the Ganges and the Yamuna (Djamnā) between 26° 46′ and 27° 43′ N. and 78° 8′ and 80° 1′ E., with an area of 1,685 sq. miles. Before the establishment of Pakistan the Muslims were in a majority but many of them later migrated to Pakistan.

While the district can boast of an ancient past, the town itself is of comparatively recent growth, having been founded in 1126/1714 by Muḥammad Khān Bangash (b. *c.* 1076/1665), an Afghan military adventurer belonging to Maʾū-Rashīdābād (now a mere name), a village near Ḳāʾimgandj, where his father ʿAyn Khān was employed as a trooper by one ʿAyn Khān Sarwānī. A dashing soldier, Muḥammad Khān had collected about him a band of Afghan mercenaries. When Farrukh-Siyar [*q.v.*] contested the title to the throne of Dihlī, he joined him and helped him to win the throne by providing a force of 12,000 men on the battle-field of Samūgaṛh (1124/1713), nine miles east of Āgra [*q.v.*]. Soon afterwards Ḳāsim Khān Bangash, father-in-law of Muḥammad Khān, was killed in a clash with the local Rādjpūts, and the king, as a token of gratitude, granted his daughter (Muḥammad Khān's wife) five *maḥālls* by way of blood-money. He also ordered the building of a town, named after him, in memory of the slain Bangash chieftain. Thus was founded the town of Farrukhābād, which soon grew in prosperity: and an Imperial mint was established there at which coins (mostly silver rupees) continued to be minted even for the later Mughal emperors. The coins of ʿĀlamgīr II, Shāh Djahān III and Shāh ʿĀlam II also carry the second name of the town—Aḥmadnagar—derived from Nawwāb Aḥmad Khān, younger son of Muḥammad Khān, who had defeated the forces of Ṣafdar-Djang, the Nawwāb-Wazīr of Awadh, in 1163/1750 and recovered from him his lost patrimony, Farrukhābād, which had been captured by the Awadh forces in 1161/1748. This second name appears for the first time on coins minted at Farrukhābād in 1170/1756. Even after the British occupation of the town in 1191/1777 the Farrukhābād mint continued to function for the East India Company, who used it up to 1835, minting silver rupees in the name of Shāh ʿĀlam II, although he had died years earlier in 1221/1806. These rupees bore the legend (*sikka*) of Shāh ʿĀlam II in Persian and were known as the *Farrukhabadi Sicca* rupee.

The earliest account of the district is that of the Chinese traveller Hiuen Tsiang, who mentions some of its ancient sites including that of Sankīsā. The historic Kanawdj, capital of the empire of Harsha Vardhana in the 7th century A.D., which was plundered and sacked by Maḥmūd of Ghazna in 409/1018, captured by the Ghūrī Sulṭān Shihāb al-Dīn Muḥammad b. Sām in 580/1193, and gave shelter to the fugitive Delhi monarch Maḥmūd Tughluḳ in 805/1402, is also situated in this district. However, the real history of Farrukhābād begins with its foundation early in the 12th/18th century by the first of the Bangash Nawwābs, Muḥammad Khān Karlānī. In addition to being the chief (*raʾīs*) of Farrukhābād and several other *parganas* granted to him by Farrukh-Siyar, Muḥammad Khān was also the governor of the province of Allāhābād for a time and later of that of Mālwa. On his death in 1156/1743 he was succeeded by his eldest son Ḳāʾim Khān, who as a result of the machinations of Ṣafdar-Djang of Awadh, the old enemy of his house, got embroiled with the Rohillas and consequently lost his life in a clash with them in 1161/1748-9 near Badāʾūn. After his death Farrukhābād was annexed to the kingdom of Awadh and ceased to exist as an independent territory. However, the very next year Aḥmad Khān, younger brother of Ḳāʾim Khān, defeated and slew the Awadh governor and recovered his lost patrimony. Ṣafdar-Djang appealed for help to the Marāṫhas, who besieged Aḥmad Khān in the fort of Fatḥgaṛh near Farrukhābād, and successfully beat off his confederates, the Rohillas. Aḥmad Khān suffered a virtual defeat, escaped to the Himalayan jungles and was allowed to return only on ceding a large portion of his territory. He bided his time, however, and by rendering good service to the invaders when Aḥmad Shāh Durrānī fought the Marāṫhas in 1175/1761 on the battle-field of Pānīpat, was able to regain, through Imperial favour, much of his lost possessions. The fortunes of Farrukhābād, however, still hung in the balance and in 1185/1771 the Marāṫhas again made good their loss. Before the dispossessed ailing Nawwāb (Aḥmad Khān) could do anything he died. At this time the state virtually became a vassal of the Awadh *durbār*. In 1191/1777, in response to an appeal by the ruler of Awadh, with whom the Marāṫhas had fallen out, British troops were stationed at Fatḥgaṛh (3 miles from Farrukh-ābād) to guard against Marāṫha inroads, and in 1194/1780 a British Resident was posted there. In 1802, Imdād Ḥusayn Khān Nāṣir Djang (1796-1813), the fifth Nawwāb of Farrukhhābād, virtually ceded the

territory to the British, although he continued to be recognised as a "native prince". His grandson Tadjammul Ḥusayn Khān Ẓafar Djang was addicted to a life of luxury and ease; the Persian-Urdu poet Mīrzā Ghālib makes a very delightful reference to it in one of his Urdu *ghazals*. The last of the line, Tafaḍḍul Ḥusayn Khān, who had succeeded to the title in December 1846, considering the Mutiny an opportune moment to proclaim independence, sided with the mutinous Bengal Army with his 30,000 troops and recovered Farrukhābād, which he held till January 1858. During these seven months the Nawwāb enjoyed the active support of the great rebel leader Bakht Khān [*q.v.*] of the Bareilly Brigade and the Mughal fugitive prince Fīrūz Shāh. After the disturbances had been quelled, the Nawwāb was secured, his territory confiscated and for his complicity in the Mutiny he was exiled to Mecca in 1859.

There are numerous sites of historical importance in the district, but they all belong to the pre-Muslim era. The tombs of the Nawwābs to the west of the town are the only buildings of note of the later Muslim period. These are, however, in a sad state of disrepair and neglect. The tomb of Muḥammad Khān was used as late as 1940 as a godown for storing tobacco (cf. *al-ʿIlm* (Urdū quarterly), Karachi, xii/2 (Jan.-March 1963), 12-3). For a description of the city see *JASB*, xlvii (1878), 276-80.

FARRUKHĀN Gīlān-shāh, *ispahbad* of Ṭabaristān, known as the Great (*buzurg*) and the Virtuous (*dhu 'l-manāḳib*), son of Dābūya, conquered Māzandarān and restored peace to the frontiers. When defeated by the Daylamīs in their revolt, he fled to Āmul and entrenched himself in the castle of Fīrūzābād; he saved himself by the ruse of making his besiegers believe that he had enormous stocks of bread. He gave asylum to the Khāridjīs when they were being pursued by al-Ḥadjdjādj, but fought against them and put their chiefs to death on the approach of an army commanded by Ṣufyān b. Abi 'l-Abrad al-Kalbī. Yazīd b. al-Muhallab, governor of Khurāsān under Sulaymān b. ʿAbd al-Malik, tried in vain to conquer the country and could count himself fortunate to be able to withdraw in return for a sum of money, as compensation for the depredations that had been committed. Farrukhān died a year or two later, after reigning for seventy years. He was the maternal grandfather of al-Manṣūr, the son of the caliph al-Mahdī. His capital was Sārī, which he had rebuilt and embellished. His son Dādh-Mihr succeeded him.

FARRUKHĪ Sīstānī, Abu 'l-Ḥasan ʿAlī b. Djūlūgh, the celebrated Iranian poet, a native of the town of Sīstān (cf. Yāḳūt, s.v.; Ḳazwīnī, *Nuzhat*, s.v.), as he says in a hemistich: "I place (other towns) after Sīstān, because it is my (native) town". The *takhalluṣ* Farrukhī unites the ideas of happiness and physical beauty. His father, Djūlūgh (according to ʿAwfī and Dawlatshāh) or Kūlūgh (according to Adhar and Hidāyat) was in the service of the governor of the province of Sīstān. According to Niẓāmī-i ʿArūḍī, who gives the most reliable information, Farrukhī very soon revealed his talents for poetry and music; being in the service of a *dihḳān* [*q.v.*] and wishing to marry, he asked for an increase in salary which was refused; Niẓāmī relates in detail how two of his most beautiful poems (*Dīwān*, 177 and 331) which he recited in the presence of the *amīr* governor of Ṣāghāniyān (Barthold, *Turkestan*, index s.v.) won him the favour of that prince, Fakhr al-Dawla Abu 'l-Muẓaffar, the last of his line (cf. Niẓāmī-i ʿArūḍi, *Čahār maḳāla*, trans. E. G. Browne, 122-3; ed. Muʿīn, Tehrān, 178-88), and then after 377/987-8, the date of his predecessor's tragic death, he took the place of the poet Daḳīḳī, as he states at the end of the poem (181). In 389/999 Maḥmūd, Abu 'l-Muẓaffar's suzerain, ascended the throne of Ghazna; some time later, Farrukhī became one of the poets attached to his court; singing his poems to his own accompaniment on the lute (*rūd*), he lived in Ghazna for the rest of his life, loaded with honours by sultan Maḥmūd, his brothers and the sultan's first two successors, whose praises he celebrated without fulsomeness, mentioning their bounty in several of his *ḳaṣīdas*; he also wrote poems in honour of leading court dignitaries. On several occasions he accompanied the sultan on his expeditions against India (witness these lines: "Three times was I with you on the immense sea . . .", "the trials and fatigues of the journey from Kanawdj have broken me"). The collected edition of his poems (*dīwān*) contains more than 9,500 lines of verse; while the treatise on rhetoric *Tardjumān al-balāgha*, often attributed to him, is in reality the work of Muḥammad b. ʿUmar al-Radūyānī (end of 5th/11th and beginning of 6th/12th centuries; ed. Ahmed Ateş, Istanbul 1949—important introduction). He died probably in 429/1037-8, while still young, according to the lines of his contemporary Labībī (quoted by Radūyānī): "If Farrukhī died, why did not ʿUnṣurī die? The old man lingered on; the young man went so soon" (*Tardjumān*, 32). His *ḳaṣīdas*, which are panegyrics, are characterized by the ease and vigour of their style; uncomplicated ideas and sentiments are expressed in sober, clear and fluent language which gives his poetry a particular charm. According to Rashīd-i Waṭwāṭ (*Ḥadāʾiḳ al-siḥr*), his talent is reminiscent of that of the Arab poet Abū Firās. His shorter poems (a small number only: *ḳiṭʿa*, *ghazal*, *rubāʿī*) are remarkable for their freshness and spontaneity of feeling, and for the occasionally ironical and pungent subtlety of thought which sometimes transforms a *ḳiṭʿa* into an excellent epigram; in short, the delicacy he shows in the *ghazal* is just as great as the rhetorical force in the *ḳaṣīda*. His mastery was universally acclaimed, and numerous poets imitated his manner.

FARRUKH-SIYAR, Abu 'l-Muẓaffar Muḥammad Muʿīn al-Dīn, the second son of Muḥammad ʿAẓīm (ʿAẓīm al-Shān), the third son of Bahādur Shāh [*q.v.*], reigned as Mughal Emperor from 13 Dhu 'l-Ḥidjdja 1124/10 January 1713 to 7 Rabīʿ II 1131/27 February 1719. Born at Awrangābād in the Deccan, apparently in 1094/1683, in his tenth year he accompanied his father to Āgra, and in 1108/1697 to Bengal, when that province was added to his charge. In 1119/1707, when ʿAẓīm al-Shān was summoned to the court from Bengal by Awrangzīb, Farrukh-Siyar was nominated his father's deputy there, which post he held till his recall by ʿAẓīm al-Shān in 1123/1711. However, during this period he exercised no real power, the affairs of the province being dominated by the *dīwān*, Murshid Ḳulī Khān [*q.v.*].

When Bahādur Shāh died at Lahore on 19 Muḥarram 1124/27 February 1712, Farrukh-Siyar was at Paṭna, having tarried there since the previous rainy season. Following the defeat and death of his father in the contest at Lahore, Farrukh-Siyar proclaimed himself king at Paṭna on 29 Ṣafar 1124/6 March 1712 (the official beginning of the reign), having won over to his side the deputy-governor, Sayyid Ḥusayn ʿAlī Khān Bārha [*q.v.*], with whom he had had many differences earlier. Farrukh-Siyar now marched on Delhi, being joined on the way by the elder Sayyid brother, ʿAbd Allāh Khān, who was the deputy-governor of *ṣūba* Ilāhābād, and by many nobles from the eastern parts. He defeated Djahāndār Shāh [*q.v.*] on 13 Dhu 'l-Ḥidjdja 1124/10 January 1713 after a hard-fought battle at Sāmūgaṛh near Āgra. Farrukh-Siyar's part in the victory was, however, slight, the chief credit undoubtedly belonging to the two Sayyid brothers, who were aided by division and demoralisation in Djahāndār Shāh's camp. ʿAbd Allāh Khān was now appointed the *wazīr*, and Ḥusayn ʿAlī the chief *bakhshī*. Djahāndār Shāh and his *wazīr*, Dhu 'l-Fiḳār Khān were executed by Farrukh-Siyar's order, and many others suffered confiscation of property and imprisonment.

The internal history of Farrukh-Siyar's reign consists of a series of contests between Farrukh-Siyar and his two leading ministers, the Sayyid brothers. The Sayyid brothers were clearly determined not to relinquish voluntarily their offices, which they considered theirs by right, and to dominate the affairs of the state as far as possible. Their claims were resented by the youthful monarch, and even more by his personal favourites who had been accorded important posts at the court. The Sayyids were also accused, not without some justification, of being negligent in matters of administration and of leaving it in the hands of corrupt underlings. Farrukh-Siyar and his favourites gave little proof of capacity to rule, and, moreover, they lacked the courage and resources to challenge the Sayyids openly, and dared not apply to any of the old nobles for fear of exchanging one set of masters for a worse. Farrukh-Siyar, therefore, had recourse to hatching plots against his ministers, and inciting the nobles and elements outside the court against them. As a result, the court became divided into two opposing factions, the administration suffered, and the prestige of the central government was undermined. However, it does not seem correct to identify the court factions as "Mughals" and "Hindustānīs", with the Sayyids acting as the leaders of the latter. A close study shows that the factions were not based on any religious or ethnic groups in the Mughal nobility, personal and family attachments and considerations being the main factor. Taking advantage of dissatisfaction at Farrukh-Siyar's patronage of unworthy favourites, the Sayyids gradually succeeded in winning over to their side or in neutralizing most of the important nobles—Radja Djay Singh Kaččwāha of Āmber remaining a notable exception. Matters rapidly came to a head. In February 1719, Ḥusayn ʿAlī, who had assumed personal charge of the Deccan in May 1715, re-entered Delhi at the head of a large army, which included a force of 15,000 Marāthā horsemen under the command of the Peshwa, Bālādjī Wishwanāth. After a proffered compromise had been rejected by Farrukh-Siyar, he was deposed and blinded on 9 Rabīʿ II 1131/28 February 1719, and a new prince, Rafīʿ al-Dardjāt, was proclaimed. Soon afterwards, in the night of 9 Djumādā II 1131/27-28 April 1719, Farrukh-Siyar was strangled.

The chief importance of Farrukh-Siyar's reign lies in a clear breach with Awrangzīb's policies in a number of spheres. The *djizya* was abolished even while Farrukh-Siyar was in Bihār. After his victory, an effort was made to conciliate the leading Rādjpūt Rādjahs by granting them high *manṣab*s and appointing them to important posts. The marriage of Farrukh-Siyar to the daughter of Mahārādja Adjīt Singh of Djodhpur, which was celebrated with great pomp and ceremony in December 1715, was intended as a symbol of the reconciliation. Under the stress of the factional struggle at the court, the Sayyids also befriended the Djaṭ Rādja, Čūrāman, acquiescing in his usurpation of many areas in the neighbourhood of Āgra, and made far-reaching concessions to the Marāthās, recognising Rādja Shāhū's right to levy *cauth* and *sardeshmukhī*—contributions amounting to 35% of the revenue, in the six *ṣūba*s of the Deccan. Farrukh-Siyar actively opposed the concessions to the Djāṭs and the Marāthās. He also sought, belatedly, to rally the othodox elements to his side by reviving *djizya* in 1129/1717. The impost was again abolished by the Sayyids after his deposition.

Another development, which marked an important phase in the growth of the English East India Company, was the grant to it in 1129/1717 of *farmān*s securing the right to carry on trade free of duties in Bengal, Bihār and Orissa, and at Sūrat and Madras, besides sundry other privileges. There is, however, little justification for the view that these grants were made by Farrukh-Siyar out of gratitude to the English surgeon, Dr. William Hamilton, who had successfully treated him. Dr. Hamilton's services were rewarded by the grant of a robe, a horse, five thousand rupees and other costly gifts. But it was not within the power of Farrukh-Siyar to make grants of the nature desired by the English without the agreement of ʿAbd Allāh Khān, the *wazīr*, whose domination over the affairs of the state was almost complete at this time. The English realized this only when two successive applications made by them through the King's favourite, Khān-i-Dawrān, proved fruitless. Finally, they approached ʿAbd Allāh Khān, and he sanctioned their petition, over-

ruling the objections advanced by the officials of the revenue ministry (*Early annals of the English in Bengal*, ed. C. R. Wilson, ii/1, 235, ii/2, p. xxiv-xxvii, 48-173). ʿAbd Allāh Khān accepted no personal gratification, and his motives in approving the grants can only be guessed at.

Though Farrukh-Siyar possessed none of the qualities of greatness, his deposition and death made him a martyr in popular eyes, and contributed to the subsequent downfall of the Sayyid brothers. He was apparently survived by only one daughter who married the emperor Muḥammad Shāh [*q.v.*] in 1131/1720-1.

Bibliography: Documents as well as contemporary and secondary works for the reign of Farrukh-Siyar are very numerous. For details, see *Later Mughals*, by W. Irvine, ed. J. Sarkar, Calcutta and London 1921; Satish Chandra, *Parties and politics at the Mughal court, 1707-1740*, Aligarh 1959; from detailed personal enquiries I have learnt that no ms. of the type described in the *Oriental College Magazine*, ii/4 (Aug. 1926), p. 58, no. 70, and referred to by Storey (sec. II, no. 767) exists in the Punjab Univ. Lib. See also M. Muʾmin b. Muḥammad Ḳāsim al-Djazāʾirī al-Shīrāzī, *Khizānat al-khayāl*, J.R. Lib., ff. 182a-197a (summarized by A. Mingana, in *Bull. (Satish Chandra)

FĀRS, the arabicized form of Pārs, which itself was derived from Parsa, the Persis of the Greeks. The province of Fārs, which has now become the seventh *Ustān*, extends from long. 50° to 55° E. (Greenwich) and from lat. 27° to 31° 45′ N. Its greatest length, from Linga in the south to Yazdi-khʷāst in the north, is 680 km. while its maximum breadth, from Bandar Dilam in the west to Abādeh in the east is 520 km. The total area of the province, including the islands off the coast, is approximately 200,000 sq. km. In 1951 the estimated population was 1,290,000 (Razmārā and Nawtāsh, *Farhang-i Djughrāfiyā-yi Īrān*, vii, 120). Fārs is bounded on the north-west by the sixth *Ustān* (Khūzistān), on the north-east by the tenth *Ustān* (Iṣfahān, formerly known successively as al-Djibāl [*q.v.*] and ʿIrāḳ ʿAdjamī), on the east by the eighth *Ustān* (Kirmān) and on the west and south-west by the Persian Gulf. The province is divided into 8 *shahristāns* (districts), namely, Shīrāz [*q.v.*], Būshahr [*q.v.*], Lār, Fasā [*q.v.*], Kāzarūn, Djahram, Fīrūzābād [*q.v.*] and Abādah. Much of the province is mountainous, and there are some difficult passes, particularly on the route connecting Shīrāz with Būshahr. Fārs is watered by a number of rivers most of which flow into the Persian Gulf; some, such as the Kurr, flow into lakes on the further side of the watershed.

In the 7th century B. C., Teispes, the son of Achaemenes and king of Anshan, threw off the yoke of the Medes and added Parsa to his realm. In the oldest Achaemenian tablet known, in cuneiform Old Persian, Ariaramnes states: 'This land of the Persians which I possess, provided with good horses and good men, it is the great god Ahuramazda who has given it to me. I am lord of this land' (R. Ghirshman, *Iran*, 1954, 120). It was from Pārs, Herodotus's 'scant and rugged land', that Cyrus the Great (559-530 B.C.) started on his phenomenal career of conquest which culminated in the establishment of the greatest empire of the ancient world. Two centuries later, Pārs, together with the rest of Persia, was overrun by Alexander the Great. Little is known of the province in Seleucid and Parthian times save that it was ruled by a series of *fratarakas* or *fratadaras* (governors). Ardashīr, the son of Pāpak and grandson of Sāsān, was, like Cyrus the Great, a native of Pārs of which he became king in 228 A.D. His grandfather and father had both been tenders of the sacred fire in the temple of Anāhit (Venus) at Iṣṭakhr (A. Christensen, *L'Iran sous les Sassanides*[2], Copenhagen 1944, 86). In 224 A.D. Ardashīr revolted, killed Artavan, the last Arsacid, in battle, and thus threw off the Parthian yoke. In this way the Sasanian dynasty and empire were founded. Not without reason did E. C. Browne (ii, 92) describe Pārs as the 'cradle of Persian greatness'.

In Sāsānian times Pārs was divided into 5 districts, namely, Ardashīr-Khurra, Shāpūr-Khurra, Arradjān, Iṣṭakhr and Dārābgird.

It was during the caliphate of ʿUmar that the Muslim Arabs made their first attempt to conquer Pārs (or Fārs, as they called it), when al-ʿAlāʾ b. al-Ḥaḍramī, the governor of Baḥrayn, sent ʿArfadja b. Harthama al-Bārikī to attack it from the sea, but the enterprise proved unsuccessful. When ʿUthmān b. Abi 'l-ʿĀṣ succeeded ʿAlāʾ b. al-Ḥaḍramī as governor of Baḥrayn, he sent his brother al-Ḥakam to effect the conquest of the province. Al-Ḥakam, after seizing some islands off the coast, landed on the mainland, but was unable to penetrate far into the interior. During the caliphate of ʿUthmān [*q.v.*] the Arabs made a further attempt to overrun Fārs. At Tawwadj (or Tawwaz), near Rīshahr, ʿUthmān b. Abi 'l-Aṣ and his men fought a desperate battle with the Sāsānian forces under the command of the *marzbān* Shahrak; victory at length went to the Arabs after Shahrak and many of his men had fallen (Balādhurī, 386). Simultaneously, another Arab army, under the command of Abū Mūsā al-Ashʿari, set out from Baṣra and invaded Fārs from the west. The two generals, having joined forces, penetrated deeply into Fārs, capturing Shīrāz; in the north the town of Sīnīz (the ruins of which are near Ganāfa (Djannāba)) also fell into their hands. ʿUthmān then detached his forces and captured Dārābgird (which then became arabicized as Dārābdjird), Pasā (Fasā [*q.v.*]) and Shāpūr (Sābūr). In 28/648-9 the army under ʿAbd Allāh b. ʿĀmir besieged and captured the city of Iṣṭakhr; he then marched southwards and took Fīrūzābād [*q.v.*], thus completing the subjugation of Fārs. The land-tax (*kharādj*) was fixed first at 33 million *dirhams*; later, in the reign of al-Mutawak-

kil, it was raised to 35 million. The poll-tax (*djizya*) brought in a revenue of 18 million *dirhams*.

Under the Caliphate Fārs was appreciably larger than it had been before, as the district of Iṣṭakhr was extended north-eastwards to include Yazd and other towns in proximity to the great desert; moreover, in the north the boundary lay between Ḳumīsha and Iṣfahān. After the Mongol conquest, however, these additional territories were detached (Le Strange, 248, 249, 275).

With the decline in the temporal authority of the Caliphate in the 3rd/9th century, Fārs came under the sway of Yaʿḳūb b. Layth, the founder of the Ṣaffārid dynasty. He made Shīrāz his capital city, where his brother ʿAmr b. Layth built the great cathedral mosque on the site of which the present Masdjid-i Djāmiʿ stands. The Buwayhids later obtained possession of Fārs, one of whom, ʿAḍud al-Dawla, extended his power over most of Persia and part of Mesopotamia; one of his notable achievements was the construction of the great barrage over the river Kurr which was called the Band-i Amīr or the Band-i ʿAḍudī after him. The Buwayhids were succeeded as rulers of Fārs by the Saldjūḳs [*q.v.*]; when the power of the latter was on the wane, Sunḳur, the first of the Salghurid Atabegs, gained possession of the province in 543/1148-9 and refused to acknowledge the suzerainty of the Saldjūḳs. The Salghurid Atabegs maintained themselves as rulers of Fārs until that remarkable woman Ābish Khātūn, after ruling for a year, married Mangū Tīmūr, a son of the Il-Khān Hūlāgū Khān, in 667/1268 (Ḥamd Allāh Mustawfī, *Taʾrīkh-i Guzīda*, 509); thenceforward her authority was only nominal.

Mubāriz al-Dīn Muḥammad, the founder of the Muẓaffarid dynasty, added Fārs to his dominions in 754/1353. The Muẓaffarids ruled over Fārs until Mubāriz al-Dīn's grandson Shāh Manṣūr was defeated and killed outside Shīrāz in a fierce encounter with the forces of Tīmūr in 795/1393.

Shah Ismāʿīl I, the first of the Ṣafawid line of rulers, who was enthroned at Tabrīz in Muḥarram 907/July 1501, established his authority in Fārs two years later. Under him and his successors both Fārs and its capital Shīrāz prospered. During the reign of Shāh ʿAbbās I [*q.v.*] Imām Ḳulī Khān, the great Governor-General of Fārs, maintained almost regal state in Shīrāz where, in March 1628, he sumptuously entertained the English envoy, Sir Dodmore Cotton, and his suite (see Sir Thomas Herbert, *Travels in Persia, 1627-1629*, edited by E. Denison Ross, London 1928, 74-83).

Shīrāz, in common with many other places in Fārs, suffered severely in the fighting between the Persian forces under Nadr Ḳulī Beg (Ṭahmāsp Ḳulī Khān, the future Nādir Shāh) and the Ghalzay Afghāns under Ashraf. This fighting ended with the complete defeat and virtual annihilation of the Afghāns in 1730 (see L. Lockhart, *The fall of the Ṣafavi Dynasty and the Afghan occupation of Persia*, Cambridge 1958, 336-9). Fārs suffered again in the disturbances which occurred after the assassination of Nādir Shāh in 1160/1747, but the accession to power of the beneficent Karīm Khān Zand [*q.v.*] who made Shīrāz his capital, soon resulted in a return of peace and prosperity. After Karīm Khān's death in 1193/1779 Fārs suffered once more during the struggle for supremacy between various members of the Zand family and, subsequently, between the gallant Luṭf ʿAlī Khān Zand and his relentless foe Agha Muḥammad Khān Ḳādjār.

In more recent times the history of Fārs has been comparatively uneventful except on the following occasions: In 1250/1834, following upon the death of Fatḥ ʿAlī Shāh, his brother Ḥusayn ʿAlī Mīrzā, the Governor-General of Fārs, had himself enthroned in Shīrāz, but was soon after defeated and forced to relinquish his claims by his nephew Muḥammad Shāh (for details of the battle, which was fought near Ḳumīsha, see Baron de Bode, *Travels in Luristan and Arabistan*, London 1845, i, 61-2; see also Ḥādjdjī Mīrzā Ḥasan 'Fasāʾī', *Fars-Nāma-yi Nāṣirī*, Tehrān 1313/1895-6, 288). Four years later, in consequence of Muḥammad Shāh's insistence on maintaining the siege of Herāt despite protests by Great Britain, that power occupied the island of Kharg, 35 miles north-west of Būshahr, and threatened to declare war on Persia. The Shāh thereupon gave way, and the troops were subsequently withdrawn from Kharg. On 5 Djumādā I 1260/23 May 1844 Sayyid ʿAlī Muḥammad announced in Shīrāz that he was the *Bāb* or 'Gateway' (to the divine Truth), a development which led to very serious disturbances not only in Fārs but throughout the country (see BĀB, BĀBĪS). In 1273-4/1856, when the seizure by Persia of Herāt involved her in war with Great Britain, the latter power again occupied Kharg and then landed a force on the coast of Fārs. This force, after taking Būshahr, advanced some distance inland; the conclusion of peace prevented any further military operations. An interesting event at the present time (1960) is the inauguration of the crude oil loading terminal on Kharg island, where oil-tankers of even the largest size can berth. The crude oil is brought by a pipe-line 99 miles (160 km.) long from the Gač Sarān oilfield on the mainland; for 23 miles (37 km.) of its length this pipe-line is beneath the waters of the Persian Gulf.

(L. LOCKHART)

FARSAKH, Persian measure of distance on a time basis, from the Parthian word **frasakh*, which came into Armenian as *hrasakh*, into Syrian as *parsʰḥā*, to continue in both Arabic and modern Persian as *farsakh*. Beside this, there is also the modern Persian *farsang*, derived from the Middle Persian *frasang*, the Old Persian **parāthanga*, to be found in Herodotus and Xenophon as παρασάγγης. Originally the distance which could be covered on foot in an hour, or 'marching mile', this developed (presumably as early as Sāsānid times) into a standard measure of distance. Herodotus takes the *parasang* to be 30 stadia, though it must be borne in mind that he refers not to the Attic, but to the Babylonian-Persian stadium of 198 m. Thus the Old Persian *parasang* would be a distance of 5.94 km.; this, however, only for the cavalry. The foot-soldiers' *parasang* (or hour's march) was—as Xenophon's data prove—only about 4 km. In Islam, the *farsakh-i sharʿī* was officially fixed at 3 Arab

mīl ('miles'), each of 1000 *bāʿ* ('fathoms'), each of 4 canonical ells (cf. *al-dhirāʿ al-sharʿiyya*), each of 49.875 cm., = 5.985 km. Both terms, *farsakh* and *farsang*, continue to be used in Iran today, but *farsakh* is the more usual. It has now been fixed at precisely 6 km.

FARSH [see ḲĀLĪ].

FĀRSĪ [see ĪRĀN].

AL-**FĀRŪḲ** [see ʿUMAR B. AL-KHAṬṬĀB].

AL-**FĀRŪḲĪ**, ʿAbd al-Bāḳī, an ʿIrāḳī poet and official, born in Mosul in 1204/1790, who traced back his ancestry to ʿUmar b. al-Khaṭṭāb, whence his *nisba* of al-Fārūḳī or al-ʿUmarī. While still very young, he became an assistant of the *wālī* of Mosul and was later appointed governor of the town by Dāwūd Pasha [*q.v.*]; when the Porte decided to restrict the independence which Dāwūd had until then enjoyed in Baghdād, ʿAbd al-Bāḳī at first accompanied his uncle Ḳāsim Pasha, who failed in his mission, and then ʿAlī Riḍā Pasha who made him his deputy; he remained in office in Baghdād until his death, which took place in 1278/1862.

ʿAbd al-Bāḳī composed an *adab* work, *Ahillat al-afkār fī maghānī al-ibtikār* which appears to be lost; a biographical collection, *Nuzhat al-dahr fī tarādjim fuḍalāʾ al-ʿaṣr* (unpublished); a short *dīwān*, religious in character, *al-Bāḳiyyāt al-Ṣāliḥāt* which he published in 1270; another *dīwān*, which also includes pieces not written by himself, published in Cairo in 1316 under the title *al-Tiryāḳ al-fārūḳī min munshaʾāt al-Fārūḳī*.

His secular poetry returns to the classical themes of wine, music, etc., but it also contains certain descriptions of nature or curiosities (*e.g.*, the telegraph) and a number of allusions to contemporary political events. ʿAbd al-Bāḳī's religious poetry is copious but devoid of originality; in particular it includes panegyrics and elegies of the great figures of Islam (the Prophet, ʿAlī, the Ahl al-Bayt, Ibn ʿArabī, etc.).

Bibliography: Dj. Zaydān, *Tarādjim mashāhīr al-Sharḳ*, ii, 193 ff.; L. Cheikho, *La Littérature arabe au XIX siècle*², 1924-6, index; ʿAbbās al-ʿAzzawī, *Taʾrīkh al-ʿIrāḳ bayn iḥtilālayn*, v, Baghdād 1955, 139-40 and index (s.v. ʿAbd al-Bāḳī al-ʿUmarī); M. M. al-Baṣīr, *Nahḍat al-ʿIrāḳ al-adabiyya*, Baghdād 1365/1946, 89-113. (Ch. Pellat)

AL-**FĀRŪḲĪ**, Mullā Maḥmūd b. Muḥammad b. Shāh Muḥammad al-Djawnpūrī, one of the greatest scholars and logicians of India, was born at Djawnpūr [*q.v.*] in 993/1585. This date is, however, doubtful as the Mullā died in 1062/1652 when he was, according to his family tradition, less than forty years of age (cf. *Mullah* [sic] *Mahmood's Determinism and Freewill* (ed. Ali Mahdi Khan), Allahabad 1934, 19-22). He received his early education from his grandfather and later from Ustādh al-Mulk Muḥammad Afḍal b. Ḥamza al-ʿUthmānī al-Djawnpūrī. A brilliant student, he completed his education at the comparatively early age of 17, specializing in logic and philosophy, and then became a teacher in his home-town. His fame soon spread and even reached the Emperor Shāhdjahān, who summoned him to Āgra and ordered his chief minister Saʿd Allāh Khān ʿAllāmī to receive him with full honours on arrival in the city. His name was subsequently included in the list of the Court *ʿulamāʾ* and he was given the *manṣab* of *sih ṣadī* (commander of three-hundred). He invariably accompanied the emperor on his journeys as a member of his *entourage*. On one Imperial visit to Lahore he was severely reprimanded by Mullā Shāh Mīr Badakhshī, the spiritual guide of Shāhdjahān, for having become too much engrossed in worldly affairs, and advised to give up the service of the emperor. Deeply affected, the Mullā resigned and went back to teach in his home-town. His project for an observatory at Āgra with financial help from the state failed to win the support of the chief minister Āṣaf Khān [*q.v.*] and was consequently turned down by the emperor on the ground that money was urgently required for the Balkh campaigns (1055-8/1645-8), which ultimately proved disastrous. Disappointed, he returned to Djawnpūr and engaged himself in academic activities. In the meantime he was invited to Dacca by Shāh Shudjāʿ, second son of Shāhdjahān and the then governor of Bengal, who read with him books on philosophy and logic. This must have happened before 1052/1642, when Mullā Maḥmūd contracted his *bayʿa* with Niʿmat Allāh b. ʿAṭāʾ Allāh al-Fīrūzpūrī and compiled a tract containing the *obiter dicta* and the esoteric prayers of his *shaykh* (cf. Muḥammad Yaḥyā b. Muḥammad Amīn al-ʿAbbāsī al-Allāhābādī, *Wafayāt al-aʿlām*). A great authority on philosophy and rhetoric, he is rated very high as a scholar. He is said to have never uttered a word which he had to withdraw later or contradicted a statement once solemnly made. Contrary to the views of the majority of Sunnī scholars and writers, Shāh ʿAbd al-ʿAzīz al-Dihlawī [*q.v.*], counts him among the veteran Shīʿī theologians (cf. *Tuḥfa Ithnāʿasharī*, Lucknow 1295/1878, ch. iii, 166). His death in 1062/1652 was deeply mourned by his teacher Ustādh al-Mulk Muḥammad Afḍal, who followed his pupil to the grave within forty days. His tomb outside the town still exists and is well known to the inhabitants.

He is the author of: (i) *Al-Shams al-bāzigha*, his *magnum opus*, a commentary on his own philosophical text entitled *al-Ḥikma al-bāligha* (litho. Delhi 1278/1861, Ludhiana 1280/1863, Lucknow 1288/1871). Unlike other works on philosophy, it follows the pattern '*ḳultu aḳūlu*', *i.e.*, 'I said and now I say'. Equally famous glosses on this work are by (a) Mullā Niẓām al-Dīn Sihālī, (b) Ḥamd Allāh Sandīlī, (c) Mullā Ḥasan Lakhnawī, and (d) ʿAbd al-Ḥalīm Anṣārī Farangī = Maḥallī, all being prescribed as final courses of study in religious institutions in India and Pakistan; (ii) *al-Farāʾid fī sharḥ al-Fawāʾid* (ed. Cawnpore 1331/1913), a commentary on ʿAḍud al-Dīn al-Īdjī's *al-Fawāʾid al-Ghiyāthiyya*, a work on rhetoric; (iii) *al-Farāʾid al-Maḥmūdiyya*, his glosses on (ii) above (most probably prepared for Nawwāb Shāʾistah Khān, governor of Bengal, who read them with the author during his stay at Āgra); (iv) *Ḥāshiya ʿala 'l-Ādāb al-Bāḳiyya*, a super-commentary on ʿAbd al-Bāḳī b. Ghawth al-Islām al-Ṣiddīḳī's commentary on Sayyid Sharīf al-Djurdjānī's *al-Risāla al-Sharīfiyya fī ʿilm al-munāẓara* (MS Farangī Maḥall Lib.); (v) *Risāla fī Ithbāt al-hayūlā*, as the name indicates a treatise on *hayūla* (matter), a popular subject with Muslim logicians in India; same as no. (vii) below; (vi) *Risālat Ḥirz al-īmān* (or *Ḥirz al-amānī*) in refutation of *al-Taswiya* by Muḥibb Allāh Allāhābādī; (vii) *Al-Dawḥa al-mayyāda fī taḥḳīḳ al-ṣūra wa 'l-mādda* (litho. 1308/1890); and (viii) *Risāla Djabr u ikhtiyār* (Deter-

minism and Free-will), ed. with Eng. transl. and notes by ʿAlī Mahdī Khān, Allahabad 1934. A treatise on the kinds of women and a *dīwān* of Persian poems is also attributed to him.

FĀRŪḲIDS, the Fārūḳī dynasty (so-called because of claimed descent from the *khalīfa* ʿUmar al-Fārūḳ) established and ruled the semi-independent Muslim principality of Khāndēsh between the rivers Tāptī and Narbadā for two centuries, until, in 1009/1600-1, Akbar captured most of the surviving members of the Fārūḳid family, forced them to become Mughal pensioners, and converted Khāndēsh into the Mughal *ṣūba* of Dāndēsh. The founder of the dynasty, Malik Rādjā (or Rādjā Aḥmad) was probably a younger son of Khʷādja Djahān, *wazīr* to ʿAlāʾ al-Dīn Bahman Shāh the first Bahmanī sultan and his successor Muḥammad I. Becoming *wazīr* in succession to his father, Rādjā Aḥmad was involved (c. 767/1365-6) in a rebellion against Muḥammad I led by the latter's nephew Bahrām Khān Māzandarānī, and fled to Dawlatābād. Thence he made his way to the court of Fīrūz Shāh Tughluḳ of Dihlī, possibly as a member of the embassy from Bahrām Khān which waited on Fīrūz, in an effort to persuade him to intervene, when the latter was engaged in the expedition against Ṭhaṭṭha in the period 767-8/1366-7 (ʿAfīf, *Taʾrīkh-i Fīrūz Shāhī*, Calcutta 1890, 224). (Haig, *The Fārūqī dynasty of Khāndesh* (see *Bibl.*), 114-5, has wrongly placed the Ṭhaṭṭha expedition in 765/1363 and spoken of two embassies from Bahrām Khān to Fīrūz Shāh; the alleged second embassy was in fact from Maʿbar, see ʿAfīf, 261). For services on the hunting field Rādjā Aḥmad was rewarded at his own request with the village of Karwand near Thālnēr by Fīrūz Shāh Tughluḳ. He proceeded there in 772/1370, enlarging his hold locally and increasing the surrounding area under cultivation. (Tradition recorded in the *Āʾīn-i Akbarī* and *Gulzār-i abrār* speaks of an earlier association of the Fārūḳids with the district). Forcing the neighbouring Rāthor Rādjā of Baglāna to submit and raiding Gondwāna, Rādjā Aḥmad acquired resources sufficient to act independently of Dihlī after c. 784/1382. He died in Shaʿbān 801/April 1399. (The above account of the origins of the Fārūḳids has been deduced from Firishta, *Ẓafar al-Wālih* and the *Āʾīn*, sources which are considered to offer different but not wholly contradictory or wholly independent accounts of the same events). The maintenance of the independence of the Fārūḳids depended until Akbar's time upon adroit management of relations with the rulers of the more powerful neighbouring Muslim successor kingdoms to the Dihlī sultanate, namely Mālwa, Gudjarāt, the Bahmanī sultanate and its contiguous heir, Aḥmadnagar. These rulers did not recognize the Fārūḳids as equals; the Gudjarāt, Bahmanī and Aḥmadnagar sources usually refer to the ruler of Asīr and Burhānpur [*q.v.*] as *ḥākim* or *wālī*. Rādjā Aḥmad married a daughter to Hūshang, son of the founder of the Mālwa sultanate, Dilāwar Khān, but Rādjā Aḥmad's successor in eastern Khāndēsh, Naṣīr Khān, was forced to abandon this alliance for the overlordship of Gudjarāt after Hūshang Shāh of Mālwa had proved (820/1417) incapable of protecting him from the Gudjarāt sultan Aḥmad I who had intervened in Khāndēsh to support Naṣīr's brother Ḥasan against the former's attempts to prevent Ḥasan from exercising any authority at Thālnēr. Unreconciled, however, to the supremacy of Gudjarāt, in 833/1429 Naṣīr concluded a marriage alliance between his daughter and ʿAlāʾ al-Dīn Aḥmad, son of Aḥmad Shāh Bahmanī, but this move did not save Khāndesh from being overrun in the following year by Gudjarāt troops, replying to an attack by the Bahmanī and Khāndēsh forces on the Gudjarāt border district of Nandurbār. In 839/1435, disillusioned with the connexion with the Bahmanīs, Naṣīr Khān attacked Berār with the approval of Aḥmad Shāh of Gudjarāt but was twice severely defeated by the Bahmanī general Malik al-Tudjdjār, suffering the plunder of his capital Burhānpur before the threatened intervention of Aḥmad Shāh's forces persuaded Malik al-Tudjdjār to withdraw. Naṣīr Khān died in Rabīʿ I 841/August-September 1437. Naṣīr Khān's immediate successors, ʿĀdil Khān (died Dhu 'l-Ḥidjdja 844/April 1441) and Mubārak Khān (died Djumādā II or Radjab 861/May or June 1457) accepted Gudjarāt's overlordship without apparent stir, but ʿĀdil Khān II (died Rabīʿ I 907/September 1501), successful in forays against the *rādjās* of Gondwāna and Djhārkand and against the predatory Kolīs and Bhīls, delayed paying the customary tribute until, in 904/1498, Maḥmūd Bāyḳarā, advancing to the Tāptī, obliged him to make amends. The story, unlikely as it stands, in the *Burhān-i maʾāthir* (220-5) of the intervention at this time of Aḥmadnagar in Khāndēsh in support of a mythical Maḥmūd Shāh Fārūḳī against Maḥmūd Bāyḳarā, is probably a garbled version of efforts by ʿĀdil Khān II to loosen the ties with Gudjarāt, garbled, as Haig (*op. cit.*, 120) suggests, to disguise the discomfiture of Aḥmad Niẓām Shāh.

Following the death of ʿĀdil Khān II, the political life of Khāndēsh was torn by dynastic rivalries which invited the intervention of the stronger neighbouring powers. First, a struggle occurred between Dāwūd Khān, brother of ʿĀdil Khān, who had succeeded to the throne (though not without first having to overcome opposition by some of the *amīrs*), and an unspecified relation, ʿĀlam Khān Fārūḳī, a *protégé* of the ruler of Aḥmadnagar, Aḥmad Niẓām Shāh. Dāwūd successfully sought aid from Mālwa rather than provide Maḥmud Bāyḳarā with further oppurtunity for intervention in Khāndēsh, and the Aḥmadnagar forces were forced to withdraw (910/1504). Then, the death of Dāwūd Khān (Djumādā I 914/August 1508) precipitated a further open clash between Gudjarāt and Aḥmadnagar over Khāndēsh, with Maḥmūd Bāyḳarā supporting another ʿĀlam

Ḵh̲ān, a descendant of Ḥasan Ḵh̲ān the brother of Naṣīr Ḵh̲ān (see above), against the Niẓām Sh̲āh's Fārūḳī client, the previously-named ʿĀlam Ḵh̲ān. Invading Ḵh̲āndēs̲h̲ in Sh̲aʿbān 914/November-December 1508, Maḥmūd captured Thālnēr and Burhānpur from the forces of the Niẓām Sh̲āh and his supporters and in Dhu 'l-Ḥid̲j̲d̲j̲a 914/April 1509 installed the Gud̲j̲arāt candidate as ʿĀdil Ḵh̲ān III of Ḵh̲āndēs̲h̲. The latter married the daughter of the later Muẓaffar II of Gud̲j̲arāt. ʿĀdil Ḵh̲ān III's son Muḥammad I (*regnabat* Ramaḍān 926/August 1520 to Dhu 'l-Ḳaʿda 943/April 1537 [following the *Mir'āt-i Sikandarī*]) remained faithful to Gud̲j̲arāt, acting in concert with his uncle Bahādur Sh̲āh Gud̲j̲arātī [*q.v.*] against Aḥmadnagar in 935-6/1528-9 and 939/1533, and against Māndū and Čitor in 938-9/1532-3. Bahādur Sh̲āh rewarded him by granting him the title of *s̲h̲āh* and by designating him heir-presumptive to the sultanate of Gud̲j̲arāt. Muḥammad I died, however, before he could consolidate the Fārūḳid claim to succeed Bahādur Sh̲āh in Gud̲j̲arāt.

The reign of Muḥammad I's successor in Ḵh̲āndēs̲h̲, Mubārak Sh̲āh II (died D̲j̲umādā II 974/December 1566) witnessed the first encounter of the Fārūḳids with the Mug̲h̲als. In 962/1562, Akbar's general Pīr Muḥammad followed Bāz Bahādur [*q.v.*] into Ḵh̲āndēs̲h̲ burning and killing before being defeated by a combination of the forces of Mubārak, Bāz Bahādur and Tufāl Ḵh̲ān of Berār and drowned in the Narbadā. In 972/1564, Akbar himself marched to Mālwa and compelled Mubārak to accept Mug̲h̲al overlordship and a marriage alliance. At first Mug̲h̲al overlordship did not prove any more restrictive than that of Gud̲j̲arāt and the Fārūḳids remained free to pursue their rivalries with their neighbours, subject to the obligation to give military and other support to the Mug̲h̲als in their enterprises. In 975-6/1568-9 Mīrān Muḥammad II (died 984/1576) invaded Gud̲j̲arāt to take advantage of the dissensions of its *amīr*s under the puppet Muẓaffar III, but after some initial success was obliged to retire rebuffed. In 982/1574 Muḥammad II in collusion with the sultans of Bīd̲j̲āpur and Golkonda attempted to win Berār, newly annexed by Murtaḍā Niẓām Sh̲āh I, but the forces of the Niẓām Sh̲āh overmatched those of the Fārūḳid ruler and the latter was obliged to buy off a siege of Asīr for 900,000 or 1,000,000 *muẓaffarī*s.

From c. 993/1585, however, with Akbar rounding out his empire in the north, Mug̲h̲al pressure to the south began seriously to be felt and in 994/early 1586, Rād̲j̲ā ʿAlī Ḵh̲ān (or ʿĀdil Sh̲āh IV, killed D̲j̲umādā II 1005/February 1597), the last Fārūḳid with any ability for successful diplomatic manœuvre, was desired to give passage and aid to a Mug̲h̲al army appointed to intervene in Aḥmadnagar. Overtly complaisant, Rād̲j̲ā ʿAlī Ḵh̲ān covertly engaged the support of the Berār forces against which the Mug̲h̲als wished to move, and Mīrzā ʿAzīz Kōka, Ḵh̲ān-i Aʿẓam, Mug̲h̲al governor of Mālwa, retired from the Deccan discomfited. In 999/1591, however, Rād̲j̲ā ʿAlī Ḵh̲ān actively furthered Akbar's policy of aiding Burhān Niẓām Sh̲āh (II) to become ruler of Aḥmadnagar, being mainly responsible for the victory of Rohankhed, D̲j̲umādā II or Rad̲j̲ab 999/April or May, 1591. Rād̲j̲ā ʿAlī Ḵh̲ān now probably assisted indirect Mug̲h̲al intervention in the Deccan in hope of staving off direct Mug̲h̲al intervention, but the death (Sh̲aʿbān 1003/April 1595) of Burhān Niẓām Sh̲āh II, followed by appeals from one of the Aḥmadnagar factions for Mug̲h̲al aid, precipitated the direct Mug̲h̲al military interference which Rād̲j̲ā ʿAlī had tried to head off. Rād̲j̲ā ʿAlī, bending with good grace before the wind, joined Akbar's forces in the siege of Aḥmadnagar (Rabīʿ II to Rad̲j̲ab 1004/December 1595 to March 1596) which ended in the negotiation of the cession of Berār to Akbar. An uneasy peace was soon broken by disputes over the limits of the ceded area and in D̲j̲umādā II 1005/February 1597 Rād̲j̲ā ʿAlī Ḵh̲ān, supporting the Mug̲h̲als against the forces of Aḥmadnagar, Bīd̲j̲āpur and Golkonda, was killed at the battle of Ās̲h̲tī. Unfortunately for friendship between his son and successor Bahādur Sh̲āh and Akbar, Mug̲h̲al troops, in ignorance of his death but from his absence suspecting Rād̲j̲ā ʿAlī Ḵh̲ān's loyalty, plundered his camp, an action which appears to have embittered Bahādur Sh̲āh's attitude towards the Mug̲h̲als and to have led him into a maladroitly-managed opposition to them which Akbar, inbued by contemporary ideas of the duties of locally autonomous princes towards their overlord, was so strongly to resent that he encompassed the fall of the Fārūḳid dynasty by actions which for Vincent Smith, *Akbar the Great Mogul 1542-1605*[1], Oxford 1917, constituted 'perfidy' (281) and 'base personal treachery' (285).

At the beginning of his reign, Bahādur accepted the proposal of Sultan Murād, who was commanding the Mug̲h̲al forces in Berār, for a marriage alliance. But in D̲j̲umādā II-Rad̲j̲ab 1008/January 1600, Bahādur slighted Sultan Dāniyāl, Akbar's youngest son, while on his way to replace Sultan Murād in Berār. Akbar sent Abu 'l-Faḍl to persuade Bahādur to make amends by presenting himself at Akbar's court, but to no avail, and in Ramaḍān 1008/April 1600 Akbar himself arrived at Burhānpur and ordered the siege of Asīr where Bahādur had taken refuge. The fact that Akbar did not have a siege train ready suggests that he had expected Bahādur to submit on terms tantamount to a restoration of the previous Mug̲h̲al-Fārūḳid relationship; Bahādur too, once the Mug̲h̲als began the siege in earnest, thought he could and should still obtain similar terms, while being prepared to use the threat of continued resistance by the fortress if Akbar appeared unwilling. That Akbar cut the diplomatic knot by inveigling Bahādur out of Asīr by a promise to maintain him in his possession of Ḵh̲āndēs̲h̲, provided that Asīr was surrendered, and then detaining him by force, may, it is argued, be explained by Akbar's knowledge that Bahādur intended to prolong the siege as a diplomatic bargaining counter and had instructed the garrison commander accordingly (knowledge gained from the defecting Ḵh̲āndēs̲h̲ *amīr*, Sādāt Ḵh̲ān). Moreover, Akbar desired to deal a further blow at the already waning morale of the garrison by forcing Bahādur Sh̲āh to order it to capitulate, whereupon refusal to obey, despite his secret instructions to ignore such an order, could be interpreted as rebellion against Bahādur Sh̲āh and treated as such. It is possible that Akbar decided not to restore Ḵh̲āndēs̲h̲ to Bahādur after the fall of Asīr (22 Rad̲j̲ab 1009/27 January 1601 N.S.) because he may have thought the continued resistance of the garrison after Bahādur's detention (in D̲j̲umādā II/December 1600) was further evidence that Bahādur was both false and irreconcilable and because he needed the warlike stores of Asīr (and Asīr itself) under immediate Mug̲h̲al control for further unhampered operations in the Dekkan. Furthermore the Fārūḳid practice of imprisoning the other male members of the ruler's family under Ḥabs̲h̲ī guard enabled Akbar, following their capture in Asīr, easily to send the entire dynasty into exile, without

fear of subsequent local opposition finding a focus in a Fārūḳid claimant. (According to *Firishta*, ii, 568, Bahādur died at Āgra in 1033/1623-4).

The extant evidence for the history of the Fārūḳids mainly displays them in their dealings with outside powers and not with their own servants and subjects. From the references given in hagiological literature (*e.g.*, *Gulzār-i abrār*, available to me only in the Urdū translation *Adhkār-i abrār*) it appears that Burhānpur [*q.v.*], the Fārūḳid capital, was a favourite burial place for *ṣūfīs*, and that the Fārūḳids provided *madad-i ma'āsh* lands for the disciples of Shaykh Burhān al-Dīn Gharīb, said to have foretold the foundation of the later Burhānpur and the rule of the Fārūḳids there. The details and the significance of this apparent association between the Fārūḳids and the *mashā'ikh* have yet to be critically established. C. F. Beckingham, *Amba Gešen and Asirgarh*, in *JSS*, ii (1957), 182-8, has noted the parallels between Ethiopian and Khāndēsh custom in keeping imprisoned the male members of the ruling dynasty in an attempt to avoid dynastic quarrels. Ḥabshīs became prominent in Gudjarāt under Bahādur Shāh and his successors and it may be suggested that Ḥabshī prominence in Khāndēsh as *amīrs* and as guardians of imprisoned relatives of the ruler also dates from this period of close association between Bahādur Shāh Gudjarātī and Muḥammad I and of the involvement of Mubārak Shāh II of Khāndēsh in the domestic politics of Gudjarāt under Sultan Aḥmad Shāh III (961-8/1554-61).

The survival of the Fārūḳids as autonomous rulers of a principality weak, compared with its neighbours, in men and resources, may be attributed in part to the geographical situation of Khāndēsh as a marchland occupying the area between the Tāptī and the Narbadā and protected by the difficult terrain of Gondwāna to the east. So long as a balance of power was maintained between Mālwa, Gudjarāt and the Bahmanī sultanate and later Aḥmadnagar, Khāndēsh was free of all but a loose tie with Gudjarāt; but chaos in Gudjarāt after the death of Bahādur Shāh Gudjarātī, the Mughal take-over in Mālwa in the time of Bāz Bahādur, and the growing involvement of Aḥmadnagar in hostilities with Bīdjāpur and Golkonda destroyed the power equilibrium on which Fārūḳid autonomy depended, while a bungling diplomacy made it impossible for the dynasty to lay claim to that honourable mediatized status within the Mughal system which Akbar had been prepared to concede to the Rādjpūt chiefs.

(P. Hardy)

FARW (A.) or Farwa (pl. *firā'*), 'a fur; a garment made of, or trimmed with, fur.' Although *farwa* can mean also a cloak of camel-hair, it is likely that when this term is encountered in ancient poetry it refers to sheepskins with the wool left on (what in Morocco are called *haydūra*), used as carpets, to cover seats, or for protection against the cold; the *farwa* which Abū Bakr had with him and which he spread on the ground in the cave for the Prophet to rest on (al-Bukhārī, v, 82) was presumably a sheepskin. The wearing of costly furs was introduced only after the Arabs had reached a fairly advanced stage of civilization, at which time the name *farrā'*

('furrier'), borne by certain individuals well-known in other connexions, was applied no longer only to the maker of sheepskin cloaks but also to the dealer in costly furs.

The furs most often mentioned are grey squirrel (*sindjāb*), sable (*sammūr*), ermine (*ḳāḳum*), fox (*thaʿlab*), beaver (*ḳunduz* or *ḳundus*, *khazz*), mink [? see FANAK], lynx (*washaḳ*) and weasel (*ibn ʿirs*). The geographers and travellers provide information on the origins of these furs: they came chiefly from the lands of the Bulghar [*q.v.*] of the Volga (Ibn Faḍlān; al-Muḳaddasī, *BGA*, iii, 324-5; Ibn Rusta-Wiet, 159), and of the Burtās [*q.v.*] (al-Masʿūdī, *Murūdj*, ii, 14-5), but also from other regions, including the Slav lands, the Turkish lands in Central and Eastern Asia, and Tibet (*Ḥudūd al-ʿālam*, 92, 94 ff.). Ḳabāla in Adharbāydjān supplied many beaver skins (*Ḥudūd*, 144); Tudela in Spain was famous for its sables (al-Muḳaddasī, *BGA*, iii, 239-40 = *Desc. de l'Occ. Mus.*, Algiers 1950, 51; *Ḥudūd*, 155, cf. ibid., 417). The Bulghars and their neighbours obtained furs from remoter peoples by tribute, trade, and dumb barter (Ibn Faḍlān, ed. Dahān, 129, 135, 145, tr. Canard in *AIÉO Alger*, 1958, 101, 106-7, 115; Marwazī, ed. Minorsky, 20, tr. 32-4; Abū Ḥāmid-Dubler 14, tr. 56-7, comm. 300-3; Abu 'l-Fidā, *Taḳwīm*, ed. Reinaud, i, 284; Ibn Baṭṭūṭa, ii, 400-2 = Gibb, ii, 491-2 etc.). Furs were sent from Bulghar to Khwārizm (al-Muḳaddasī, *BGA*, iii, 324-5), where there were establishments for their manufacture (Yaʿḳūbī-Wiet, 83). Ibn Khurradādhbih (*BGA*, vi, 92, tr. 67, and 151-3, tr. 114 = *Descr. du Maghreb et de l'Europe*, Algiers 1949, 21-3) gives some information on the routes followed by the European Jewish merchants called Rādhāniyya [*q.v.*] and the Russian merchants, who carried their wares, including furs, to Egypt and the lands of the eastern Caliphate. Furs were sent to Spain across Europe, both by sea from the Baltic ports (Ibn Ḥawḳal, ii, 392 on the export of beaver-skins from the Baltic; cf. T. Lewicki in *Isl.*, xxxv, 33) and across the lands of the Slavs and Franks (al-Masʿūdī, *Tanbīh*, 63; French tr., 94). The travellers occasionally mention fur garments which they wore in cold countries: Ibn Faḍlān (tr. M. Canard, in *AIÉO Alger*, 1958, 63-4) wrapped himself in a sheepskin cloak and other furs; Ibn Baṭṭūṭa (ii, 445; tr. Gibb, ii, 514) had with him three fur coats when he left Constantinople; etc.

Al-Masʿūdī (*loc. cit.*) esteemed highly the pelts of black and red foxes which the Burṭās exported to all countries, and particularly to the 'Arab kings', who preferred them to sable, *fanak* and other furs. The Ps.-Djāḥiẓ (in *Arabica*, 1954/2, 157), expressing the view of the dealers, places highest the back of the ermine, together with the squirrel of the Caspian and of Khwārizm; he notes that the black fox of the Caspian is more highly prized than the red and the grey, and considers the sable of China superior to that of the Caspian. This passage indicates that trade in furs must have been fairly brisk, and that the wealthy could acquire them without difficulty; it shows also that rabbit-fur was already being used by dishonest furriers to hide defects in a pelt and that dye was used to increase the value of light-coloured furs. Andalusian authors of works of *ḥisba* battled against the frauds and malpractices engaged in by dealers in furs and pelts who used the skins of sheep and rabbits (see E. Lévi-Provençal, *Séville musulmane*, Paris 1947, 131; R. Arié, in *Hespéris-Tamuda*, 1960/3, 352-3.

In the legal field, furs seem to have occasioned hardly any special regulations; and they posed no legal problem except in connexion with the validity of prayer: indeed both Sunnīs (see, *e.g.*, al-Ḳayrawānī, *Risāla*, ed. and tr. Bercher, 297) and Shīʿīs (see, *e.g.*, the Ismāʿīlī *ḳāḍī* al-Nuʿmān, *K. al-Iḳtiṣār*, ed. Muḥ. Waḥīd Mīrzā, Damascus 1376/1957, 100) permit the wearing of garments made from the skin of prohibited animals or animals not ritually slaughtered, except during the prayer.

On the use of fur in robes of honour and other garments see KHILʿA, LIBĀS. On furs in the Ottoman Empire see SAMMŪR.

(ED.)

FARWĀN (also PARWĀN), ancient town in the Hindū-Ḳush mountains and a modern administrative district of Afghānistān, the capital of which is Charikar.

The modern town of Djabal al-Sirādj (alt. 3751 m.) is located near the site of the ancient Farwān, *ca.* 69° 15′ E., 35° 7′ N. by the Pandjshīr river near its junction with the Ghūrband river.

Farwān may have occupied the ancient site of Alexander's Alexandria of the Caucasus or Alexandria-Kapisa. It was conquered by the Arabs ca. 176/792 (Ibn Rusta, 289) and included in the province of Bamiyān. Coins were struck in Farwān by the Ghaznawid rulers, and it was the centre for silver mining of the Pandjshīr valley. Many geographers mention the town, but it achieved prominence only under Djalāl al-Dīn Khwārizmshāh when he defeated the Mongols there in 618/1221. The site of the battle, however, may be another Farwān (*Ḥudūd al-ʿālam*, 348). The site was the scene of a battle in the first British-Afghān war in 1840, but there is no indication of a settlement. In 1937, with the construction of a textile factory in the new town of Djabal al-Sirādj, the area began a new history.

(R. N. FRYE)

FARWARDĪN [see TAʾRĪKH].

FARYĀB (also FĀRIYĀB and PARYĀB), name of several towns in Iran:

1. A town in northern Afghānistān, now called Dawlatābād, formerly in the province of Djūzdjān. It was conquered by al-Aḥnaf b. Ḳays in 65/685 (al-Balādhurī, 407). Many geographers mention the town as large and flourishing until the Mongol conquest when it was destroyed. It never regained its former importance.

2. A small town in southern Fārs province (Le Strange, 257, 296).

3. A village in Kirmān (Le Strange, 317).

4. A village in Sug͟hd (Barthold, 138; Frye, *The History of Bukhara*, 1954, 152).

Bibliography: Barthold, *Turkestan*, 79; *Ḥudūd al-ʿālam*, 335; Le Strange, 425.

(R. N. Frye)

FĀS (Fès, Fez), a town of Northern Morocco situated at 4° 54′ W., 34° 6′ N. It stands at the north-east extremity of the plain of the Sāʾis, at the exact place where the waters of the eastern side of this plain go down into the valley of Sebou via the valley of the Wādī Fās. It is therefore on the easiest route between the Atlantic coast of Morocco and the central Mag͟hrib. Furthermore, one of the least difficult roads across the Middle Atlas to the south passes by way of Sefrou, 30 kms. south of Fās, and the communications between this last town whether with the Mediterranean coast (Bādis or Vélez) or with the Straits of Gibraltar (Tangier) are relatively easy, too. It might be said that Fās is clearly situated at the point of intersection of two great axes of communication, indicated by the general contours of the country: one axis north-south between the Mediterranean or the Straits of Gibraltar and the Tāfīlālt and so beyond to the negro countries; the other west-east between the Atlantic coast and central Mag͟hrib.

Moreover, the site of Fās is rich in water; apart from the river itself and its tributaries, which it has been easy to canalize and turn to urban use, numerous springs rise from the steep banks of the water-courses, especially from the left bank, which is actually inside the town. In the immediate vicinity there are quarries which provide building stone, sand and lime, while the cedar and oak forests of the Middle Atlas are not far away and offer wood of very good quality. Finally, for considerable distances around, the neighbouring country is favourable to all types of farming. Cereals, vines, olives and various kinds or fruit-trees grow here, while not only sheep and goats but cows also can be raised here.

Nevertheless it seems that no urban centre existed on this privileged site before the Muslim town came into being. Archaeology has not confirmed the vague legendary tradition of the *Rawḍ al-Ḳirṭās*, according to which a very ancient town existed long ago on the site of Fās. It can therefore be regarded as likely that Fās came into being at the end of the 2nd/8th century at the desire of the Idrīsids [*q.v.*]. It has even long been believed, on the strength of the *Rawḍ al-Ḳirṭās*, supported by numerous other authors, that Fās was founded by Idrīs b. Idrīs on I Rabīʿ I, 192/4 January 808. The young king was thought to have then founded his town on the right bank of the Wādī Fās, and a lunar year later to the day, that is to say on 22 December 808, to have founded a second town on the left bank. Intrigued by this double foundation for which no explanation has been given, E. Lévi-Provençal studied the question very thoroughly and showed (*La Fondation de Fès*, in *AIEO Algers*, iv (1938), 23-52), that there existed another tradition less well-known but older on the founding of Fās; this took it back to Idrīs b. ʿAbd Allāh, father of Idrīs b. Idrīs. He is said to have founded the town on the right bank in 172/789 under the name of Madīnat Fās. Death intervened before he had time to develop it and twenty years later his son is believed to have founded a town for himself on the left bank, which was given the name of al-ʿĀliya. This tradition seems much more likely.

In any case, it is certain that for several centuries two cities, barely separated by the trickle of water in the Wādī Fās but frequently ranged against each other in bitter rivalry, co-existed and developed with difficulty, each hindering the other. During the whole time of the Idrīsids, that is to say until the beginning of the 4th/10th century, dynastic quarrels disturbed the life of the double city; then, during the first third of that century, it became one of the stakes in the struggle between the Umayyads of Spain and the Fāṭimids of Ifrīḳiya, which was frequently staged in the north of Morocco. During the thirty years between 980 and 1012, it lived under the protection of the Umayyads and seems then to have enjoyed a certain prosperity. When the Caliphate of Cordova began to be in jeopardy, it came under the authority of the Zenāta Berbers who, far from always agreeing among themselves, revived the ancient rivalries between the twin towns up to the time of the coming of the Almoravids [see al-murābiṭūn].

The traditional date of the conquest of Fās by the Almoravid, Yūsuf b. Tās͟hufīn, is 461/1069, but in a posthumous article (*La fondation de Marrakech*, in *Mél. d'Hist. et d'Archéol. de l'Occ. Mus.*, Algiers 1957, ii, 117-120) E. Lévi-Provençal, following al-Bakrī, showed that the traditional chronology should be treated with caution and that the foundation of Marrākus͟h and consequently the conquest of Fās, which occurred after this, ought probably to be dated a few years later. Whatever the case, the Almoravid conquest marks a very important date in the history of Fās, since Yūsuf b. Tās͟hufīn combined the two towns into one and made it his essential military base in northern Morocco. There is therefore good right to consider the Almoravid conqueror as the second founder of Fās: it was he who did away with the duality which had for so long prejudiced the city's development; it was he also who marked out for it the direction in which it was to develop in the future by building to the west of the two original towns and on the very edge of the plain of the Sāʾis, an important fortress, now disappeared, which stimulated the growth of more new quarters between it and the original ones. The Almoravids were also responsible for the growth in importance of the principal sanctuary of the left bank area, the Ḳarawiyyīn mosque (D̲j̲āmiʿ al-Ḳarawiyyīn [*q.v.*]). This sanctuary had been built of modest size, it seems, in the 4th/10th century. The Almoravid, ʿAlī b. Yūsuf, had it destroyed with the exception of the minaret which still stands (Pl. XV) and in its place built a mosque of vast dimensions, sumptuously ornamented by Andalusian artisans. It is also probable that the principal works in the Wādī Fās, thanks to which the city has possessed a system of running water from a very early date, go back to the Almoravid epoch. Fās lived thus under the Almoravids for almost three-quarters of a century (467?-540/1075?-1145), one of the most prosperous periods of its existence, but a period about which unfortunately we have all too little detailed information.

The Almohad conquest [see al-muwaḥḥidūn] marks a brief pause in the history of Fās. When ʿAbd al-Muʾmin [*q.v.*] attacked it in 540/1145, the city, which had every good reason for remaining faithful to the Almoravids, put up a violent resistance. The Almohad only conquered it after a hard siege, and punished the town by razing the Almoravid *ḳaṣaba* and the city ramparts. But like the Almoravids, the Almohads had need of Fās and the town grew afresh in proportions of which al-Idrīsī's account gives a fair idea. It is a city in full development and at the height of economic progress that he describes

in his work, The fourth Almohad Caliph, al-Nāṣir, even ordered on the very day after the defeat of Las Navas de Tolosa (1212), that the ramparts of Fās should be reconstructed. The general outline of these and a good part of their masonry date from this period (Pl. XIII). Thus the old city of Fās attained the proportions that we now know. Its surrounding wall is pierced by eight huge gates, four on each bank, and it seems certain that empty spaces, gardens and orchards, once existed within this enclosure.

A century later, Fās changed masters anew and came under the authority of the Marīnids [*q.v.*]. Though badly received at first, the new masters succeeded in raising the city's prosperity to a height as yet unknown. Unlike the Almoravids and the Almohads, they did not come from the south but from the east, and Fās was the first large town which they had succeeded in conquering; hence they made it their capital and relegated Marrākush to second place. Because of this the fortunes of Fās were assured for several centuries. The new court lived at first in the *ḳaṣaba* which the Almohads had reconstructed on the site of the ancient Almoravid *ḳaṣaba*, in the district now called Bū Djulūd (probably a popular corruption of Abu 'l-Djunūd). They soon found themselves cramped for space here; hence the Marīnid sovereign Abū Yūsuf (1258-1286) decided to found a royal and administrative town to the west of the ancient one, on the extreme borders of the plain of the Sāʾis, and the foundations were laid out on 3 Shawwāl 674/21 March 1276. This new urban centre was at first named *al-Madīnat al-Bayḍāʾ* (the white city), but has been known for a very long time and still is known as Fās al-Djadīd (New Fās). It consisted essentially of the palace, various administrative buildings, a great mosque to which were added little by little various other sanctuaries, barracks, the homes of various important Marīnid dignitaries, and later, in the 9th/15th century, a special quarter in which the Jews were compelled to live. From the beginning, this town was surrounded by a double city wall, broken by only a few gates. In the 10th/16th century, these were reinforced by a number of bastions capable of supporting cannon.

Thus Fās became again a double urban centre, with a middle-class and commercial town, Fās al-Bālī (Ancient Fās), known locally as 'al-Madīna' (i.e. the 'town' proper) and an administrative and military centre which complemented rather than entered into competition with the first. The description which Leo Africanus gives of Fās at the beginning of the 16th century gives the impression of an active and heavily populated city, so heavily populated indeed that several areas of lightly constructed buildings had been established outside the ramparts, especially to the north-west of the ancient city. It was a commercial and industrial city (notable for its textiles and leather-goods), but also a city of religion and learning, where around the Ḳarawiyyīn Mosque flourished what J. Berque has called 'the School of Fās' (*Ville et Université. Aperçu sur l'histoire de l'École de Fās*, in *Rev. hist. de Droit fr. et étr.*, 1949), and finally a centre of art, thanks to the country palaces built by the Marīnids on the hills which dominate Fās to the north, thanks above all to the colleges (*madrasas*) built mainly in the 8th/14th century by various Marīnid princes around the Ḳarawiyyīn Mosque, the Mosque of the Andalusians in the upper part of the old town, and in Fās al-Djadīd. These colleges are almost all ornamented with good taste and variety and form one of the greatest adornments of Fās. This favourable situation lasted for three centuries during which Fās enjoyed political, economic and intellectual priority throughout Morocco as well as in the western regions of what is now Algeria, and was in economic and cultural relations with the western Sahara as far as the loop of the Niger. In 870-1/1465, the city was the scene of an attempt to restore the Idrīsids, which hung fire; the Waṭṭāsids, successors of the Marīnids, do not seem to have been very hard in their treatment of those concerned, as is shown by the description of Leo Africanus who describes an active and flourishing city.

Nevertheless the Saʿdī [*q.v.*] sharīfs, masters of Marrākush since 931/1524 (R. Le Tourneau, *Les débuts de la dynastie saʿdienne*, Algiers 1954) gradually extended their influence over the rest of Morocco, threatened Fās from 954/1547 on, and thanks to inside intrigues, managed to get hold of it on 28 Dhu 'l-Hidjdja 955/28 January 1549. This change of dynasty was not a good thing for the city, for the Saʿdīs, a southern people, had already made Marrākush their capital. Fās became once again the second city of the Sharīfian empire. At first it accepted this situation very unwillingly and welcomed the Waṭṭāsid pretender, Abū Ḥassūn, when he put the Saʿdīs to flight on 2 Ṣafar 961/7th January 1554 with the help of a small Turkish force which had accompanied him from Algiers. But this venture was not to be successful for long; the Saʿdīs returned in force in Shawwāl 968/September 1554. Abū Ḥassūn, who had been forced to discharge his over-enterprising Turkish allies, was killed in battle beneath the walls of Fās, and the city came back into the possession of the conquerors. These did not long continue to treat the opposition harshly, reinforced its defences, perhaps in order to hold it more strongly, and put in hand works of improvement and embellishment at the Ḳarawiyyīn Mosque. A diminished but still prosperous situation was the lot of Fās in the second half of the 10th/16th century.

When the Sultan Aḥmad al-Manṣūr [*q.v.*] died at Fās on 16 Rabīʿ I 1012/25 August 1603, his sons fought savagely over the succession and brought about a state of anarchy in Morocco which lasted more than sixty years (R. Le Tourneau, *La décadence saʿdienne et l'anarchie marocaine au XVIIᵉ siècle*, in *Ann. de la Fac. des Lettres d'Aix*, xxxii (1958), 187-225). Fās was caught up in this whirlwind of violence, conquered by naked force, and despoiled in various reconquests; very grave internal disputes added to its misfortunes and for more than fifty years it suffered the darkest period of its history. It was an exhausted city of which the ʿAlawid pretender, Mawlāy al-Rāshid, took possession in 1076/1666.

Under the power of this energetic prince, the wounds of Fās began to heal and it began to come to life again with the help of a sovereign who was putting in hand great works of public utility (construction of a bridge over the neighbouring Sebou, of two fortresses to the west of the ancient town, restoration of a bridge over the Wādī Fās, creation of a new *madrasa* in addition to those built by the Marīnids) when he was killed accidentally in 1082/1672. His brother, Mawlāy Ismāʿīl [*q.v.*], who replaced him, was also a remarkable man but he detested Fās; he had a new capital constructed at Meknès and continued to insult and offend the people of Fās throughout his long reign of fifty-five years, to such a degree that the city was becoming depopulated. On the death of Mawlāy Ismāʿīl (1139/1727) matters became even worse; several of his sons

fought over the succession and, just as in the preceding century, Morocco fell back into a grave state of anarchy. Once again, for a period of thirty years, Fās was delivered up to the caprices of ephemeral rulers, among them Mawlāy ʿAbd Allāh who detested its people, and to the pillaging of the soldiery, especially that of the military tribe of Ūdāya. At last, when Sayyidī Muḥammad (1171-1204/1757-1790) succeeded his father, ʿAbd Allāh, Fās was granted a long period of respite, which was disturbed only briefly by the disorders which darkened the end of Mawlāy Sulaymān's reign (1207-1230/1792-1824). Its position as capital was restored and it shared this with Marrākush up to the beginning of the 20th century. Then Mawlāy ʿAbd al-ʿAzīz [*q.v.*], freed from the tutelage of his Vizier, Bā Aḥmad, adopted a policy of modernization which raised a large part of the Moroccan population against him.

In the course of the second half of the 19th century, many Fās merchants had entered into contact with various European or African countries (England, Spain, France, Italy, Germany, French West Africa) and the city was gradually being drawn into international trade. Moreover a number of Europeans and Americans (soldiers, diplomats, clergy, doctors, businessmen) came and settled in the city of Idrīs. The destiny of Fās, like that of the rest of Morocco, was beginning to take a new turn. Furthermore the Sultan Mawlāy al-Ḥasan (1290-1311/1873-1894) [*q.v.*] had undertaken important public works in this city where he normally lived when he was not travelling around the country at the head of his army: he set up a small-arms factory near his palace, the Makīna; he connected by long walls the two urban areas of Fās al-Djadīd and the Madīna, which had remained separated so far, and had a new palace built at Bū Djulūd, on the edge of the Madīna.

From 1901 on, Fās once again faced disturbed conditions; it was threatened in 1903 by the pretender, Bū Ḥmāra [*q.v.*]; then when Mawlāy ʿAbd al-ʿAzīz was forced to abdicate in 1908, Fās put into power a descendant of its founder Idrīs, the Sharīf Muḥammad al-Kattānī; but he did not succeed in raising an army and could not prevent the Sultan proclaimed in Marrākush, Mawlāy ʿAbd al-Ḥafīẓ, from installing himself in the city. Unrest continued, however, and the new sovereign, threatened in his capital by Berber tribes from the Middle Atlas, finally appealed to the French army for help in 1911. A column commanded by General Moinier came and encamped under the walls of Fās, the first time that a European army had been in contact with the city; the troops established themselves south of Fās al-Djadīd, at Dār al-Dubaybagh (colloquial pronunciation: Dār ad-Dbībagh), a country house built by Mawlāy ʿAbd Allāh in the 18th century. On 30 March 1912, in the following year, the Protectorate treaty between France and Morocco was signed in a room of the palace of Bū Djulūd. A few days later (16 and 17 April 1912), Moroccan troops revolted and massacred a number of Europeans, while at the same time others were rescued by the people of Fās. A little later, General Lyautey, the first French Resident-General of Morocco, was besieged in Fās by revolting Berber tribes; the town was set free by a column under General Gouraud (end of May - beginning of June, 1912). From that time on Fās was able to live in peace and organize itself for a new type of life.

A European town soon began to rise on a vast flat area in the region of Dār ad-Dbībagh; it was called Dār ad-Dbībagh in Arabic and the 'Ville Nouvelle' in French. The palace of Bū Djulūd became the seat of the Resident-General, and the Bū Djulūd district began to fill up with many Europeans. Behind the city walls of Mawlāy al-Ḥasan, there arose administrative buildings adapted to their mediaeval style. The merchants of Fās quickly accommodated themselves to the new economic conditions of the country. Very early on, some of them went and established themselves at Casablanca, without however breaking off all contact with their ancestral city. A system of modern education was organized alongside the traditional religious teaching.

Perhaps startled by so many novelties, the city of Fās retired into its shell for a few years, but soon began to take an attitude of discreet opposition to the new régime. The Rif war and the first successes of ʿAbd al-Karīm (1925) raised fear of pillage and hopes of liberation. Little by little, a young people's party turned towards political action hostile to the Protectorate, and led the opposition against the *ẓahīr* on the organization of justice in Berber regions (16 May 1930). In 1937 and 1944, at the time of political crises which ended finally in the demand for independence of 11 January 1944, Fās was the scene of important demonstrations. Nevertheless the political centre of gravity of Morocco was shifting towards Rabat and Casablanca, and Fās played no more than a secondary part in the events which, between 1953 and 1956, led to the proclamation of Morocco's independence. At present, Fās is the capital of a province and ranks as the third city of Morocco after Casablanca and Marrākush.

The city, whose population is 179,400 (census of 1952) of whom 15,800 are Europeans, is made up of four main centres: (1) the Madīna, in which empty spaces have almost disappeared, but where certain areas on the outskirts have been opened to motor traffic; (2) Fās al-Djadīd, itself composed of three elements: a little Muslim town of rather humble people which is called Fās al-Djadīd; the palace and its dependencies; the Jewish quarter or Mellāḥ; (3) the New City (Ville Nouvelle), where many Jews and some Muslim families live; (4) a new Muslim town situated to the north-west of the palace and created since 1950 according to modern standards. Around these urban areas, general areas of lightly constructed buildings have sprung up, inhabited by poor people recently come from the country, and these are generally nicknamed 'bidonvilles'.

Fās is connected with the outer world by excellent roads and by a railway which connects the Atlantic coast and Tangier with Oujda on the Algerian frontier. It has also an aerodrome of moderate importance.

Its economic life is founded above all, just as in the past, on its relations with the neighbouring countryside. Its industry has to a great extent remained traditional (textiles, leather-goods, industries connected with food) and has been only partly modernized; the adaptation of its artisans to modern economic conditions is one of its principal problems. By contrast, its agricultural hinterland has grown considerably into a wide belt around the city. The main business city of Morocco at the beginning of the century, it has been dethroned by Casablanca where, however, a good number of its inhabitants have settled.

Not less than as the economic metropolis, Fās has

long been the intellectual metropolis of Morocco, thanks to its great centre of traditional learning, the Djāmiʿ al-Ḳarawiyyīn. In modern Morocco it seems to be having some difficulty in keeping this priority, since the modern Moroccan University created after independence is situated in Rabat. Fās continues nevertheless to be an important centre both of traditional and modern learning and of intellectual life.

All in all, it seems questionable whether Fās, despite remaining one of the principal cities of Morocco, has succeeded in taking up again the rôle of outstanding importance which it has played so many times in its long history. At the moment, the population seems stationary or has perhaps even slightly diminished since independence, following the departure of many French and Jews. In the political arena it seems to have been overtaken by Rabat, the capital, as well as Casablanca. In brief, events in Morocco since the beginning of the 20th century do not appear to have been favourable to Fās.

Monuments

Under the Idrīsids. — We know of the two places of prayer which formed the origins of the two great sanctuaries of the city only from brief accounts. The mosque of Fāṭima in the quarter of the Ḳarawiyyīn (242/857) and the mosque of the Andalusians in the quarter of the same name (245/859-60) were buildings of medium size, with naves parallel to the *ḳibla* wall, with *ṣaḥn*s planted with trees, and minarets of very modest height.

Some rubble remains of the surrounding wall exist in the quarter of the Karawiyyīn but, in the absence of all traces of doors or towers, these are not sufficient to allow us to plot the main lines of this first rampart.

The settlements founded by the two Idrīs attained urban status only very gradually, and there can have been few monuments built during this period.

Under the Zenāta Emirs. — After a troubled period, the city began to develop a certain amount of artistic activity under the Zenāta Emirs, who were allies and vassals of the Umayyads of Cordova. After a Fāṭimid incursion, the mosque of Fāṭima, from that time on called the Ḳarawiyyīn, and that of the Andalusians became the cathedral-mosques of the two quarters (321/933). The two structures were rebuilt and enlarged under the Maghrāwa Emirs: their naves, still parallel to the wall of the *ḳibla*, were made of rows of horseshoe brick arches; the axial naves were bordered with bastions of stone with a four-leaved plan. The two minarets, built in 349/956, still exist. That of the Ḳarawiyyīn (Pl. XV) was built on the orders and at the expense of Sultan ʿAbd al-Raḥmān III of Cordova. In their proportions and their square plan with staircases surrounding a central newel, the two stone towers resemble the Andalusian type of minaret, but their copings of projecting string-courses and cupolas belong to the Ifrīḳiya type. Andalusian influences were only beginning to be added to the African and oriental elements which had come from Aghlabid Tunisia.

The actions of the Umayyads in the Maghrib were hardly ever concerned with the spread of artistic influence: the ancient *minbar* of the mosque of the Andalusians, detached from a more recent one in the course of a restoration of the sanctuary, bears witness to the persistence of oriental influences. Made in 369/980 at the time of the occupation of Fās by the Zīrid, Buluḳḳīn, this pulpit of turned and carved wood is of a completely Fāṭimid style. When in 375/986 an Umayyad expedition retook the town, they began by destroying this Shīʿī pulpit; but once this pious fury had passed, they saw that the ancient *minbar*, repaired and provided with a new seat-back to the greater glory of orthodoxy, could very well continue to be used, and an artist was found to make the repairs and additions in the original style. This pulpit, after that of Ḳayrawān the oldest of all the *minbar*s which have come down to us, is the only monument which remains as a witness of the struggles between the Fāṭimids and the Umayyads in Morocco.

Thus Fās awakened little by little to artistic life under the prevailing influence of Ḳayrawān, and in the middle of the 4th/10th century had also received some influences from Andalusian sources.

Under the Almoravids. — The period of the Almoravids was a decisive one in the architectural history of Fās. Although the Ṣanhādjī Emirs took Marrākush, the city which they had founded, as their capital, they nevertheless did not forget the great city of the north. Yūsuf b. Tāshufīn united the two quarters of the Ḳarawiyyīn and the Andalusians and at their highest point built the Ḳaṣba (*ḳaṣaba*) of Bū Jlūd (Abu 'l-Djulūd). He was soon to become master of Muslim Spain, the whole of whose artistic resources were put at the service of the African emirs. Hispano-Moorish art, which became the dominant factor in Fās as in Marrākush, eliminated the Ifrīḳiyan influences under which the city had lived up to this time. In becoming attached to the artistic tradition under which it was to continue up to our own times, Fās became an artistic metropolis.

The second Almoravid sultan, ʿAlī b. Yūsuf, gave the Ḳarawiyyīn mosque its present dimensions and form by enlarging it on the *ḳibla* side and on the side of the *ṣaḥn*, and by working over all the earlier parts. The work was executed between 529/1135 and 536/1142. The arrangement of naves parallel to the wall of the chevet was retained, but a higher axial nave leading to the *miḥrāb* was inserted between the ancient

and new naves of the hall of prayer. A row of rich cupolas—above all domes with stalactites—covered it. The Almoravid enlargements were made of glazed or bonded brick, which on the outer wall of the *miḥrāb* formed a very beautiful interlacing design. Inside the building, in the great axial nave, rich sculptured decorations, heightened with colour, had been covered with plaster by the Almohads in the period of their rigorous puritanism. These magnificent ornaments, mainly epigraphic and floral, were uncovered in the course of a restoration of the whole of the building directed by the author of this article. The whole art of Muslim Spain, as it had been elaborated in the 5th/11th century, with its profuse richness, its erudite composition and its nervous elegance, is revealed in this Moroccan mosque.

The al-Ḳarawiyyīn mosque preserves the *minbar* of carved wood and marquetry which was given to it by ʿAlī b. Yūsuf. Second in Morocco only to the one at present in the Kutubiyya at Marrākush, the work of the same ruler, it is one of the most beautiful in all Islam. The great mosque of Fās, long unknown in detail, has become once again the greatest witness to Hispano-Moorish art in the time of the Almoravids.

Under the Almohads. — The Almohads, who kept Marrākush as their capital, were slower to interest themselves in Fās. They gave a cathedral-mosque to the Ḳaṣba of Bū Jlūd. Under Muḥammad al-Nāṣir, the mosque of the Andalusians was reconstructed, with the exception of its minaret. The ancient Zīrid and Amīrid *minbar* was covered, except for its seat-back, with a new sculptured decoration. At the Ḳarawiyyīn, which was given a great ornamental chandelier and a room for ritual ablutions, some works of detail were carried out. But the greatest work of the Almohads was the reconstruction of the great city wall (Pl. XIII) which still to-day surrounds Fās al-Bālī. Bāb Gīsa (Djīsa) and Bāb Maḥrūk, more or less repaired or altered, date for the main part from this period.

During the whole time of the Almohads, Fās was very prosperous, and Andalusian influences continued to prevail there without rival.

Under the Marīnids. — Under the Marīnids, Fās became the capital of Morocco. In 674/1276, a little while after his victory over the last of the Almohads, Abū Yūsuf Yaʿḳūb founded, at a short distance to the west of the old town, a new administrative city, Fās al-Djadīd. Here he built his palaces, which he endowed with a great mosque (Pls. XIV, XVII) and here he installed his guard and the administrative services of the state. Fās al-Djadīd was surrounded by a mighty rampart with inner and outer walls and furnished with monumental gates. Three of these gates, Bāb al-Sammārīn, Bāb al-Bākākīn, and Bāb al-Makhzan still exist to-day, very little altered. The palaces of the Marīnids have been replaced by more modern buildings, but some of their vaulted store-houses are still to be seen there.

Other sanctuaries were built later on at Fās al-Djadīd: the al-Ḥamrāʾ mosque, doubtless in the reign of Abū Saʿīd (710-31/1310-31), the little sanctuary of Lālla Zhar (Zahr, 759/1357) built by Abū ʿInān, and finally the mosque of Lālla Gharība (810/1408), whose minaret alone has been preserved. The great mosque of al-Ḥamrāʾ and Lālla Zhar are beautiful buildings of harmonious proportions and quiet luxury. In 720/1320, Abū Saʿīd had a *madrasa* constructed, which to-day is in a very damaged condition.

The Marīnids did not forget Fās al-Bālī. There they built several small mosques such as the Sharābliyyīn and Abu 'l-Ḥasan, whose sanctuaries have been rebuilt but which still preserve some carved wood from this period and, even more important, their graceful minarets. All the Marīnid minarets of Fās al-Djadīd and Fās al-Bālī consist of square towers with turrets. Their façades are decorated with interlaced designs in brick enclosing backgrounds of mosaic faïence. Other *azulejos* in the form of polygonal stars cover the wide string-course at the top of the tower. They are perfect examples of the classic type of Hispano-Moorish minaret.

But the old town was indebted above all to the Marīnids for the glorious beauty of the *madrasas* of this period. These are students' colleges arranged around luxurious court-yards at the back of which are situated halls of prayer. As early as 670/1271, the founder of the dynasty, Abū Yūsuf Yaʿḳūb, built the *madrasa* of the Ṣaffārīn. The Ṣahrīdj (720/1321), (Pl. XVIII), Ṣbaʿiyyīn (723/1323) and ʿAṭṭārīn (743/1346) *madrasas* were built in the time of Abū Saʿīd. Abu 'l-Ḥasan founded the Miṣbāḥiyya (743/1346), and Abū ʿInān the one which bears his name, the Bū-ʿInāniyya (Pls. XII, XVI). Outwardly each of different appearance, all the *madrasas* built in this last great epoch of Hispano-Moorish art are extremely beautiful. The decorations which cover them are admirably arranged and the detail of the ornament is worthy of the harmony of the whole. The latest in date and the largest, the Bū ʿInāniyya, which is the only one to possess a *minbar* and a minaret, is the last great masterpiece of the classic period of Hispano-Moorish art to be found in Morocco.

The Almoravid and Almohad monuments were planned and decorated by artists who came from Spain, but towards the end of the 7th/13th century Fās had its own workshops, closely linked with those of Granada. From the beginning of the 8th/14th century on, beautiful houses were erected both in Fās al-Djadīd and Fās al-Bālī, which, like the *madrasas*, were adorned with floors and facings of faïence mosaic, plaster and carved wood. The same decorative style prevailed in sanctuaries, palaces and rich homes.

The masonry, also very homogeneous in style, is less beautiful but almost as delicate as the ornament. In the walls, stone gives place to bonded or glazed brick, and often also to cobwork. Cedar wood plays a large part in all the architecture of Fās. Whether in beams, lintels, corbelling, ceilings or *artesonados* domes, it provides both roof beams and cover for all types of buildings. In the framework of doors and openings and in joinery, it is moulded, decorated with pieces of applied ornament, or carved. At the tops of walls and court-yards, it is worked into friezes and projecting porches resting upon carved and painted corbels. This wide use of wood, the frequency of pillars and the rarety of columns, are the only characteristics which distinguish the Marīnid monuments from contemporary Naṣrid buildings.

Vaulted architecture is to be found only in the great store-houses of Fās al-Djadīd and in the *ḥammāms* which follow the very simple plans of the Andalusian baths.

Thus under the Marīnids Fās received not only its shape as two distinct agglomerations, but also its architectural appearance. From then on it was, second only to Granada, the most active centre of Hispano-Moorish art. Once Muslim Spain had disappeared, all the processes of masonry, techniques and ornamental forms inherited from the 14th century continued to be used in Fās up to our own

times, in a slow decline and with a touching fidelity.

Under the Saʿdīs. — The end of the Marīnid dynasty and the reign of the Banū Waṭṭās produced no great monuments in Fās. Nevertheless, its buildings maintained the same architectural and decorative traditions as those of the art which preceded this period. Relations with Granada had become more rare, and from the end of the 8th/14th century onwards, the latest innovations in ornament of the Alhambra of Muḥammad V had not been passed on to Fās. And in 896/1492, Granada was reconquered. In the victorious thrust of Renaissance art in Spain, Hispano-Moorish art became confined by the 10th/16th century to its African domain.

Under the Saʿdīs, who struggled for a long time against the Banū Waṭṭās for the possession of Fās, the city went through difficult times. Marrākus͟h once again became the capital of Morocco and the sultans distrusted the metropolis of the North. They reinforced the ramparts of Fās al-D̲j̲adīd, which remained the headquarters of government, with bastions for the use of cannon. Two works of the same kind but even more powerful, the northern *burd̲j̲* and the southern *burd̲j̲*, dominated and overlooked Fās al-Bālī. The Ḳarawiyyīn was enriched with two fountain kiosks, jutting out of the shorter sides of the *ṣaḥn* (Pl. XV). In the anarchy in which the Saʿdī dynasty went down, Fās passed through terrible times and in such a troubled period no monuments could be constructed

Under the ʿAlawīs. — The founder of the dynasty, Mawlāy al-Ras͟hīd, hastened to give Fās al-Bālī a new *madrasa*, that of the S͟harrāṭīn (1081/1670). His successor, Mawlāy Ismāʿīl, transferred his capital to Miknās. Nevertheless, he had the mausoleum and sanctuary of Mawlāy Idrīs rebuilt.

At the beginning of the 18th century, Fās once again became the customary residence of the sultan and the central government. Almost all the sovereigns, from Sīdī Muḥammad b. ʿAbd al-Allāh on, had work done on the palaces of Fās al-D̲j̲adīd. The most important groups of buildings which still exist to-day date mainly from Mawlāy ʿAbd al-Raḥmān (1237-75/1822-59) and Mawlāy al-Ḥasan (1289-1311/1873-94). The ramparts were repaired many times and one of the great gates, Bāb al-Futūḥ, was entirely rebuilt by Mawlāy Sulaymān.

Numerous sanctuaries, whether cathedral-mosques or simple places of prayer, were built in Fās under the ʿAlawī sovereigns and very often through their initiative. The most important of these were the mosques of Bāb Gīsa (D̲j̲īsa), of al-Raṣīf and of al-Siyād̲j̲ at Fās al-Bālī, and the mosque of Mawlāy ʿAbd Allāh at Fās al-D̲j̲adīd. Local mosques, places of prayer dedicated to saints, headquarters of brotherhoods, were built in great numbers. Sanctuaries of reasonably large dimensions consisted according to local tradition of naves parallel to the wall of the *ḳibla*. The minarets were square towers surmounted by turrets but the decoration of a network of interlacing and faïence was almost always omitted and the walls of brick, glazed or not, were ornamented with simple blind arcades. Some little sanctuaries still keep their 'platform' minarets of a very archaic type. An occasional *madrasa* was built: those of Bāb Gīsa and al-Wād preserve very nearly the traditional arrangement.

Most of the houses of Fās date from the ʿAlawī period but continue the Marīnid tradition. The walls are made either of cobwork or more commonly of brick, and sometimes of coated rubble. In the old town, the houses rise vertically, mostly on two floors around narrow court-yards. These houses, though poor in light and ventilation, are nevertheless sometimes sumptuous; the pillars of the court-yard and the bases of the walls are panelled in faïence mosaics; carved plaster often ornaments the door and window frames and the tympanums of the openings, and sometimes even the walls themselves. A cornice of moulded or even carved cedar-wood crowns the whole. The ceilings and the joinery—also of cedar-wood—are worked with care. In the less dense outlying districts, there are lower houses around vast court-yards and even gardens.

The *funduḳs*, with several storeys and galleries, follow the same arrangement as that of the Marīnid hostelries, and are, in this city of commerce, very often beautiful buildings.

Thus in the work of these last centuries there is nothing new, but a remarkable fidelity to a great architectural and decorative tradition. Despite the baldness of the ornamental detail, both the civil and the religious architecture of Fās preserves, sometimes not without grandeur, a sense of balance which does not exclude the picturesque. Above all, a perfect unity of style, maintained by guilds of artisans, knowing and loving their work, has given Fās al-Bālī and even more, Fās al-D̲j̲adīd, an astonishing harmony. Regulations concerning matters of art have succeeded in preserving in Fās, as in other ancient cities in Morocco, their originality and beauty. In Fās, more than elsewhere, there has been preserved the architectural and decorative climate of Muslim Andalusia.

FASĀ (formerly Pasā), is situated in 28° 56′ N. Lat. and 53° 39′ E. Long. (Greenwich); it is 1,561 metres above sea level. Fasā is 164 km. from S͟hīrāz, 55 from Dārābd̲j̲ird and 70 from D̲j̲ahrum. The district (*s͟hahristān*) of which Fasā is the capital forms part of the seventh *Ustān* (Fārs). The Muslim Arabs under ʿUt͟hmān b. Abi 'l-ʿĀṣ captured Fasā in 23/644. According to Ḥamd Allah Mustawfī (*Nuzha*, 124), it was originally called Sāsān and was triangular in shape. Ibn al-Balk͟hī (*Fārs-nāma*, 130) stated that Fasā was as large as Iṣfahān; it had been destroyed by the S͟habānkāra tribes, but was rebuilt by the Atabeg Čawlī. The climate was temperate and the surrounding district produced the fruits of both the cold and hot regions. The abundant water supply was entirely from *ḳanāt*s, there being no wells. The cathedral mosque was of burnt brick and rivalled that of Madīna for splendour (Muḳaddasī, 431). Fasā was famous for its carpets and brocades and also (according to the *Ḥudūd al-ʿālam*, 127) for its rose-water. In 1951 the population was 8,300. 4 km. to the south of the town is the ancient mound known as the Tell-i Ḍaḥāk.

FASĀD [see fāsid, kawn].

FAṢĀḤA, an Arabic word, properly "clarity, purity", abstract noun from *faṣīḥ*, "clear, pure". To summarize the definitive analysis of the concept as it was achieved in the work of D̲j̲alāl al-Dīn al-Ḳazwīnī, the K̲h̲aṭīb Dimas̲h̲ḳ (666-739/1267-1338), and his commentator, Saʿd al-Dīn al-Taftazānī (722-91/1322-89), in Arabic rhetoric *faṣīḥ* is applied to: (1) a single word when it is not difficult to pronounce, is not a foreign or rare word and its form is not an exception to the usual; (2) a whole sentence, when it does not contain an objectionable construction, a discord, an obscurity (through a confusion in the arrangement of the words) or a metaphor too far-fetched and therefore incomprehensible. The first kind of *faṣāḥa* is called *faṣāḥat al-mufrad*, the latter *faṣāḥat al-kalām*. There is also (3) a *faṣāḥat al-mutakallim*. This is peculiar to a person whose style conforms to the above conditions (Ḳazwīnī, *Talk̲h̲īṣ al-Miftāḥ*, Cairo 1342/1923, i, 70-6, with Taftazānī's *Muk̲h̲taṣar*). The adjective *faṣīḥ* denotes a word or a sentence only when free from objection in itself; it is distinguished from *balīg̲h̲*, which also implies that the expression is relevant in its context.

From its inception Arabic theory gravitated towards a strict separation between the stylistic areas where the ideal accomplishment is represented by *faṣāḥa* and *balāg̲h̲a* respectively; in practice, the dividing line between the two concepts was not always clearly drawn. A number of critics tended to enlarge the scope of *faṣāḥa* at the expense, as it were, of *balāg̲h̲a*, and the general public, as Nuwayrī (d. 732/1332), *Nihāya*, vii, 7, observes, was inclined to use the two terms indiscriminately. (Similarly, Ḳazwīnī, *Īḍāḥ*, i, 136-7. Cf. Ibn Ḳayyim al-D̲j̲awziyya (d. 751/1350), *Fawāʾid*, Cairo 1327/1909, 9, where the opinion of some authorities is noted that *faṣāḥa* and *balāg̲h̲a* are alternative terms for the same concept).

Without attempting to develop an integrated concept, al-D̲j̲āḥiẓ (d. 255/869) collects a great deal of the materials and states a number of the value judgments that later theorists were to work into a system. Every language has certain sounds that are characteristic for it, such as the 's' in Greek. Among its sounds there will be some that do not agreeably fit together; in Arabic, *e.g.*, the *ḥarf* 'd̲j̲' cannot stand side by side with ẓ, ḳ, ṭ, g̲h̲; and the 'z' with ẓ, s, ḍ and d̲h̲ (*Bayān*, Cairo 1932, i, 69-72). The best *kalām* in all the world is the mode of speech, or narrative, of the *faṣīḥ* among the *ʿArab*; but the common people, too, sometimes achieve pertinence in their speech (i, 133). Solecism, *laḥn*, endangers *faṣāḥa* but does not necessarily destroy it. For in the view of Abū ʿAmr b. al-ʿAlāʾ (d. c. 153/770), al-Ḥasan al-Baṣrī (d. 110/728) and al-Ḥad̲j̲d̲j̲ād̲j̲ (d. 95/714) were *afṣaḥ* of all, yet not entirely free from *laḥn* (i, 146; a list of the most disturbing *alḥān* is given, i, 134; the worst is the manner of speaking of Bedouins whose speech has been affected by that of the town mob; cf. also i, 146 on the deteriorating influence of the language of the city on that of the Bedouin. In the 5th/11th century K̲h̲afād̲j̲ī, *Sirr*, 53, was to note that the Bedouin had become dependent on the townsman for linguistic perfection). Altogether *kalām* must be graded in various *ṭabaḳāt* (*d̲j̲azl, sak̲h̲īf, malīḥ, ḥasan, ḳabīḥ, k̲h̲afīf* and *t̲h̲aḳīf*) precisely as the people themselves. Since the speaker, *k̲h̲aṭīb*, should adapt his speech to both his ideas and his audience he must ordinarily refrain from using the vocabulary of the *mutakallimīn* (here: scholars in the technical sense) even if he should himself be one of them. In scientific discussion, on the other hand, the employment of the terminology of the *mutakallimīn* is indicated. It is they who developed (*tak̲h̲ayyarū, is̲h̲taḳḳū, iṣṭalaḥū*) a scientific language in regard to which they are *salaf*[an] *li-kull k̲h̲alaf*, (authoritative) ancestors to all posterity. While the *k̲h̲aṭīb* must use their terms only when common expressions fail to convey his thoughts, their insertion into poems is allowable as a piece of witticism, *ʿalā d̲j̲ihat al-ẓazarruf wa 'l-tamalluḥ* (i, 128-31).

The clever though disjointed remarks of D̲j̲āḥiẓ are interesting in themselves but significant mainly as a foil to the rapid consolidation of the theorists' ideas on *faṣāḥa*, spurred as it was by the need to document the uniqueness, *iʿd̲j̲āz*, of the Ḳurʾān from the formal point of view. Abū Hilāl al-ʿAskarī (d. after 395/1005) makes the (often repeated) statement that after theology the science most worthy to engage our study is *ʿilm al-balāg̲h̲a wa-maʿrifat al-faṣāḥa*, by means of which the *iʿd̲j̲āz* is recognised (*Kitāb al-ṣināʿatayn*, Constantinople 1320, 2). To ʿAskarī *faṣāḥa* is the perfect tool, *āla*, of clear exposition, *bayān*; the scope is confined to the wording because the idea of tool bears only on the wording and not on the idea, *maʿnā*. Hence a parrot could be called *faṣīḥ*, but never *balīg̲h̲*. An isolated *kalām*, however, may be described as *faṣīḥ balīg̲h̲* provided it is clear in concept and smoothly fluent, *sahl*, in style (*ibid.*, 7; some authorities require in addition a certain stateliness, *fak̲h̲āma*, without which a discourse may qualify as *balīg̲h̲* but not *faṣīḥ*; this reversal of the usual terminology deserves to be noted).

ʿAbd al-Ḳāhir al-D̲j̲urd̲j̲ānī (d. 1078 or 1081; cf. Ritter, *Asrār*, German translation, Wiesbaden 1959, 5*) clearly felt dissatisfied with the treatment accorded *faṣāḥa*. The more he studied what scholars had to say about it the more did he realise that their statements failed because of their all too general character. After all, nothing much is gained from explanations where *faṣāḥa* is merely described as a peculiar trait in the putting together of words, *k̲h̲uṣūṣiyya fī naẓm al-kalim* (*Dalāʾil al-iʿd̲j̲āz*, Cairo 1331/1913, 30). Specifically, he is critical of those who maintain that *faṣāḥa* has no meaning beyond the "harmony within the words and the adjustment of the sequence of the letters so the meeting in pronunciation of letters that are difficult for the tongue will be avoided", *al-talāʾum al-lafẓī wa-taʿdīl mizād̲j̲ al-ḥurūf ḥattā lā yatalāḳā fī 'l-nuṭḳ ḥurūf tat̲h̲ḳulu ʿala 'l-lisān*. This view would lead to separating *faṣāḥa* from *balāg̲h̲a* (as a separate science or approach) and would constitute euphony the only criterion of rhetorical perfection and the *iʿdjāz al-Ḳurʾān*, or at least lend it too much importance against such virtues as *ḥusn al-tartīb*, good organization. The reason why the ancients, *al-ḳudamāʾ*, maintained the strict division between *lafẓ* and *maʿnā* and stressed the function and merits of the *lafẓ* is that the *maʿānī* are manifested by words only. Hence the custom of attributing to the word what in fact belongs to the *maʿnā* and to speak, *e.g.*, of *lafẓ mutamakkin*, solid wording, when actually the ideas expressed are intended by this characterization (*ibid.*, 45-51).

From these remarks one is led to conclude that D̲j̲urd̲j̲ānī did not know al-K̲h̲afād̲j̲ī's (d. 465/1073) *Sirr al-faṣāḥa* (completed 2 S̲h̲aʿbān 454/11 August

1062; cf. *Sirr*, Cairo 1932, 276), perhaps the most thorough examination of the concept. Khafādjī, too, was, ostensibly at least, motivated by a desire to investigate the *iʿdjāz al-Ḳurʾān* whose *faṣāḥa* "broke the custom", in other words, was miraculous, *ibid.*, 4. The special excellence which Khafādjī claims for his work consists in its comprehensiveness—the *mutakallimūn* neglect the study of phonetics; the grammarians that of the principles, *al-aṣl wa 'l-uss*; the critics, *ahl naḳd al-kalām*, do not rise above the *aperçu, ibid.*, 5. Khafādjī is deeply concerned with the phonetic aspect. He observes that Arabic disposes of 29 (or according to al-Mubarrad, who does not count the *hamza*, 28) *ḥurūf*; actually, the language has 14 more for which there does not exist any graphic representation. Of these, six add to the *faṣīḥ* (*e.g.*, the *imāla*, the *z* for *ṣ* in the pronunciation '*mazdar*' in lieu of *maṣdar*), whereas eight detract from it (*e.g.*, the *sh* for *dj* in the pronunciation '*kharashat*' for *kharadjat*; 19, 21-2). Other languages have in part different *ḥurūf*; thus Armenian has 36 against the Arabs' 29 (53). The putting together of *ḥurūf* into words is guided by aesthetic principles; three consonants of the same phonetic category are avoided in the formation of any given word. The best procedure is to combine sounds with distant bases of articulation (53-4).

Faṣāḥa then, as a property confined to individual words (55), can be attributed to the *alfāẓ* if certain requirements, *shurūṭ*, are met. (A) Some of these are manifest in the isolated word, (B) others when the words are connected one with the other (60). The *shurūṭ* of the first type (A) are the following: (1) the words must be composed of sounds whose bases of articulation are varied; (2) over and above this condition their sequence must be acoustically pleasing; (3) the words must be neither 'raw' nor barbarous, *mutawaʿʿir* and *waḥshī* (Suyūṭī, *Muzhir*, Cairo 1282, i, 114-15, offers a definition of the *waḥshī* and a listing of [near-]synonyms of this term); (4) nor must they be low and vulgar, *sāḳiṭ* and *ʿāmmī* (both these requirements are to be found in Djāḥiẓ, Khafādjī observes); (5) the words must conform to correct Arabic usage, *ʿurf*; here objections may arise from fourteen causes, such as (a) the un-Arabic origin of a word; (b) the wrong use of an Arabic word; (c) the unwarranted shortening or (d) lengthening of a word; (e) the extreme rarity of a word or the particular form of a common word as, *e.g.*, an unusual plural; etc. Trespasses of this kind do not impair *faṣāḥa* very badly yet had better be avoided. (6) The word must not have a second meaning which brings to mind something one does not wish the hearer to think of; (7) the word should be "well-balanced" and not composed of (too) many *ḥurūf*; (8) if the word is a diminutive it should be used only where a diminutive is directly appropriate: Khafādjī dislikes the *taṣghīr bi-maʿnā al-taʿẓīm*.

Of these *shurūṭ*, nos. 1 to 6 apply also to (B) *al-alfāẓ al-muʾallafa*, *i.e.*, they constitute requirements for a sequence of words exactly as for a sequence of *ḥurūf* within the individual word; in fact, nos. 2 to 4 depend in *taʾlīf* entirely on their occurrence in the *lafẓa mufrada*. A7 and A8 do not bear on B. To be *faṣīḥ*, *taʾlīf* must instead fulfil these additional *shurūṭ*: (1) the words must be placed exactly where they belong; no unjustified changes of the customary word order are allowable (thus *taḳdīm* and *taʾkhīr* as well as the *ḳalb al-kalām* are to be avoided); (2) they must exhibit *ḥusn al-istiʿāra*, appropriate metaphors; (3) be free from *ḥashw*, padding; in opposition, however, to both the Muʿtazilī al-Djubbāʾī (d. 303/915) and his orthodox critic al-Rummānī (d. 387/994), Khafādjī admits (140-1) that some *ḥashw* enriches the meaning and adds lustre to the discourse; (4) there must not be any unnecessary repetitions; (5) the words must be properly selected according to the purpose; this includes the use of *kināya*, metonymy, where *taṣrīḥ*, plain speech, would be out of place; (6) technical terms are inadmissible (60-161).

There is another set of properties of *faṣāḥa* which Khafādjī treats separately (162 ff.) even though they could be subsumed under the requirements of (B). These are: (1) *munāsaba* or *tanāsub*, correspondence between words in regard either (i) to their pattern or (ii) to their meaning. It is under (i) that Khafādjī deals with *sadjʿ* and *izdiwādj*, *ḳawāfī*, *luzūm mā lam yalzam* and *taṣrīʿ* (internal rhyme), *tarṣīʿ*, *ḥaml al-lafẓ ʿala 'l-lafẓ fi'l-tartīb* (an unusual name for *al-laff wa 'l-nashr*; *plokē*), *al-tanāsub fi 'l-miḳdār* (requirements concerning the relative length of the various *cola* in a *sadjʿ* passage), *al-mudjānas* (covering both *figura etymologica* and paronomasia) and, as the lowest form of *tanāsub*, *al-taṣḥīf* (paronomasia based on modifications of the graphic representations of two words and not on sound).

By introducing category (ii) of *tanāsub*, which is concerned with closeness and contrast of the meaning of two *lafẓa*, Khafādjī leaves definitely the area which Arabic theory is generally willing to assign to *faṣāḥa*. Considering that *ṭibāḳ*, antithesis, for instance, clearly derives from meaning and not from the word pattern or its *ḥurūf*, it can hardly be viewed as a component of *faṣāḥa* which, after all, Khafādjī himself had explicitly tied to the word while leaving the meaning to *balāgha*. Khafādjī goes on to consider *īdjāz*, concision, as a *sharṭ* of both *faṣāḥa* and *balāgha*. The same applies to clarity, *an yakūna maʿnā al-kalām wāḍiḥ^{an} ẓāhir^{an} djaliyy^{an}*. Khafādjī justifies its connexion with *faṣāḥa* by pointing to six reasons for obscurity of discourse (210), two each inherent in (a) the isolated word: the unusual expression; the use of homonyms; (b) the composition of words, *taʾlīf al-alfāẓ baʿḍa-hā maʿa baʿḍ*: excessive concision; confusion; and (c) the *maʿnā* as such: over-subtlety; too much advance knowledge required for understanding. In this context Khafādjī (212-5) takes sides in a controversial issue by asserting that some parts of the Ḳurʾān are more *afṣaḥ* than others. Since everybody agrees that Torah, Gospels and Psalms although *kalām Allāh* are less *faṣīḥ* than the Ḳurʾān there is no reason why all of the Book should be on the same level of *faṣāḥa*. Additional characteristics, *nuʿūt*, of *balāgha* and *faṣāḥa* (not integrated in any classification by Khafādjī) are (1) the designation of an idea not by its usual name but by an expression implying it, and (2) the rendering of an idea through a simile, *tamthīl*. Only at this point does Khafādjī definitely turn to the examination of the *maʿānī* and their properties such as (224 ff.) soundness, *ṣiḥḥa* (eight sub-categories), completeness, or emphatic presentation.

Fakhr al-Dīn al-Rāzī's (d. 606/1209) motivation in discussing *faṣāḥa* is the same as Khafādjī's: its *faṣāḥa* makes the Ḳurʾān *muʿdjiz* (*Nihāyat al-īdjāz*, Cairo 1317, 5). This fact makes its investigation research into the noblest of all religious subjects, *viz.* the manner in which the Holy Book indicates the veracity of Muḥammad (7). But although Rāzī follows his predecessor in overextending the content of *faṣāḥa* his presentation is much more orderly

and shows the progress of scholastic disciplining of scientific thinking in the intervening century.

Faṣāḥa is defined (9) as *khulūṣ al-kalām min al-taʿḳīd*, the freedom of the discourse from obscurity, or confusion, from anything that "ties" tongue and mind. (This definition recurs, *e.g.*, in Ibn Ḳayyim, *Fawāʾid*, 9; the concept of *taʿḳīd* is discussed by Ḳazwīnī and Taftazānī, *Talkhīṣ*, i, 102-108). The purpose of *kalām*, the conveying of meaning, is achieved on the verbal and the intellectual level. Neither *faṣāḥa* nor *balāgha* can be predicated of the connexion, established θέσει, between word and meaning, the signifier and the signified. Were it otherwise, *faṣāḥa* would have to inhere in the individual *ḥurūf* or in their agglomeration which, however, could not possess any *ṣifa* lacking in the individual *ḥarf*. Also in this case, a person ignorant of the Arabic tongue would have to be able to recognize *al-kalām al-ʿarabī al-faṣīḥ*. Besides, *faṣāḥa* is a "plus" achieved by the free choice of the speaker; the qualities of the individual words, on the other hands, are due to the *waḍʿ al-wāḍiʿ*, not to the speaker. Furthermore, a word will be *faṣīḥ* in one, *rakīk*, "weak", in another context. The Prophet challenged the Arabs to match the *faṣāḥa* of the Book; had this *faṣāḥa* rested on the individual words the challenge could easily have been met. Metaphor, metonymy and simile are for Rāzī as for Khafādjī *abwāb al-faṣāḥa*; since these figures of speech have reference to the *maʿnā*, not to the *lafẓ*, *faṣāḥa* cannot, in its entirety, be word-bound (12-4). The objection (15-6) that everybody speaks of *lafẓ faṣīḥ* and nobody of *maʿnā faṣīḥ* is countered by the observation that the attribution of *faṣāḥa* to the *lafẓ* refers to its *dalāla maʿnawiyya* (not its *dalāla lafẓiyya*). In disposing of the criticism that since the same *maʿnā* may often be expressed by two *lafẓ*, one *faṣīḥ*, the other *rakīk*, *faṣāḥa* cannot refer to the *maʿnā*—nor would if it did the *tafsīr al-mufassir* be inferior in beauty to the poetic passage which it explains—, Rāzī gropes for the concept of the emotive etc. associations surrounding the different words and phrases without quite piercing through to an adequate terminology. Rāzī insists correctly that the *faṣāḥa* of a *kināya* (against *ifṣāḥ*, Rāzī's term for *taṣrīḥ*; 18) has to do with the intellectual rather than the phonetic and lexicographical structure of the phrase, an insight which, incidentally, al-Djurdjānī had acquired before him without tying it so closely to the concept of *faṣāḥa*.

Ḍiyāʾ al-Dīn Ibn al-Athīr (d. 631/1234), who veers away sharply from the blurring between the areas of *faṣāḥa* and *balāgha* which is characteristic of Khafādjī's and Rāzī's position, is concerned with reducing the subjective element in ascribing *faṣāḥa* to a given expression. The frequently proposed definition of the *faṣīḥ* as *al-ẓāhir al-bayyin* is inadequate. For it is open to three objections: (1) a *lafẓ* would be judged *faṣīḥ* when clearly understood and non-*faṣīḥ* when not clearly understood by the hearer; thereby a subjective element would become decisive; (2) consequently an expression would become *faṣīḥ* to Zayd and *ghayr faṣīḥ* to ʿAmr, whereas the *faṣīḥ* is uncontrovertibly so for everybody; (3) an ugly word would be *faṣīḥ* as long as it was *ẓāhir* and *bayyin*, evident and clear; yet *faṣāḥa* is *waṣf ḥusn al-lafẓ lā waṣf ḳubḥ*, *i.e.*, it indicates the properties which make a word beautiful, not those that make it ugly. Unfortunately, Ibn al-Athīr's amendment to the definition fails of its objective when it explains understandability by familiarity in prose and poetry and accounts for this familiarity by the beauty of the particular expressions which induces the writers to seek them out. The criterion is phonetic attraction, which proves that *faṣāḥa* is not connected with the *maʿnā* but merely with the acoustics of the expression (26)—a position which Ibn al-Ḥadīd (d. 655/1257), *al-Falak al-dāʾir ʿala 'l-mathal al-sāʾir*, Bombay 1308, 39-40, was seriously to question. If it is argued that to equate the *faṣīḥ* with the *mafhūm* would raise the problem that many Ḳurʾānic verses even though necessarily *faṣīḥ* require a commentary, the answer (which applies to many a poem and other literary document as well) is that the individual words are all clear and *faṣīḥ*; a *tafsīr* is needed because of the profundity of the *maʿnā* (*al-Mathal al-sāʾir*, Cairo 1312, 27). Ibn al-Athīr notes that every language has its own *faṣāḥa* (and *balāgha*) but Arabic is superior to all other tongues because of its amplitude, *tawassuʿāt* (28). (On 73 Ibn al-Athīr reports the opinion of an unidentified Jew that Arabic is the most beautiful language because it was the last to be created and the *Wāḍiʿ* improved on the defects of those created earlier. Nuwayrī, vii, 6, was to reserve *faṣāḥa*, defined as freedom from *al-lukna al-aʿdjamiyya*, exclusively for the Arabs; by contrast, Ibn Ḳayyim, *Fawāʾid*, 9, states expressly that neither *faṣāḥa* nor *balāgha* are peculiar to *al-alfāẓ al-ʿarabiyya*; the concepts apply to any phrase whose wording is unusual and which is yet easily understood, *lafẓu-hu gharīb wa-fahmu-hu ḳarīb*). It is foolish to maintain as some do that every word is *ḥasan* because the *Wāḍiʿ* has not coined any ugly word. In (unstated) agreement with the principles of legal *idjmāʿ*, Ibn al-Athīr considers *ḥasan* and *ḳabīḥ* what has always been so considered by the Arabs. In doing so personal preferences are eliminated (59-60). It must be realised that the class of beautiful words comprises such words as have always been in use and others that were in use formerly but are no longer (*e.g.*, many expressions occurring in Ḳurʾān and *ḥadīth*)—this fact restricts the use of *ʿurf* as a criterion of beauty (62, 61). On the whole, Ibn al-Athīr makes his own the criteria for the beauty of a *lafẓa* which Khafādjī had developed. (Ibn al-Athīr's eight requirements correspond to Khafādjī's A 1, 5, 8, 4, 3, 6, 7, 2; in 2 the agreement is slightest; in regard to 7 he differs, 72-3, with Khafādjī on detail and is, in turn, attacked by Ibn al-Ḥadīd, 85-6, who (83-4) also finds fault with his position on 1. Ibn al-Athīr's description of the effect of phonetic *tanāfur*, 60-1, is deservedly referred to by Taftazānī, *Mukhtaṣar*, i, 80).

Ibn al-Athīr's treatment of "composition", *ṣināʿat taʾlīf al-alfāẓ*, is superior to Khafādjī's in clarity. He lists eight "parts" (74), the first five of which are traceable in Khafādjī: *musadjdjaʿ* (= *sadjʿ* and *izdiwādj*), *taṣrīʿ*, *tadjnīs* (= *mudjānas*), *tarṣīʿ* and *luzūm mā lam yalzam*; a sixth, *muwāzana*, corresponds to Khafādjī's *tanāsub fi 'l-miḳdār*; for the seventh, *ikhtilāf ṣiyagh al-alfāẓ*, the variation of the aesthetic effect when the same root appears in different moulds, Ibn al-Athīr claims originality (110); the eighth, *takrīr al-ḥurūf*, is in the actual discussion replaced by two: *al-muʿāẓala al-lafẓiyya*, the "crowding of one part of *kalām* upon another" (cf. Lane, 2086a), and, again presented as an original contribution, *al-munāfara bayn al-alfāẓ fi 'l-sabk* (118-9), the juxtaposition of words that do not fit together in the particular context.

To carry the presentation to the conventional limits of the Middle Ages reference may be made to al-Suyūṭī (d. 911/1505) who, *Muzhir*, i, 91-2, adopts Ḳazwīnī's concept except for the tacit omission of

the *faṣāḥa* pertaining to a whole sentence. Usage would appear to be for Suyūṭī the decisive factor constituting an expression *faṣīḥ*. *Faṣāḥa* allows of gradation. Some words are more *afṣaḥ* than others; thus *burr* in relation to *ḳamḥ* and *ḥinṭa* (i, 105; cf. Ibn al-Athīr, 26-7 and 59-60 with Ibn al-Ḥadīd, 40, on *muzna* and *dīma* as *afṣaḥ* than *buʿāḳ*); so of course are some speakers, and the Prophet is *afṣaḥ* of all (103).

To be fully understood, the distinction between *faṣāḥa* and *balāgha* must be seen, on the one hand, in the context of the dualism of form and content that dominates the critical thought of the Arab-Muslim theorist and, on the other, in the context of the dualism which the Muslim philosophy of language predicates of its subject. When the activity which results in language is analysed into its two components, *faṣāḥa* emerges as the "virtue" co-ordinated with man's physiological, phonetic effort and *balāgha* as the "virtue" registering the realization of his mental endeavour (for the Ikhwān al-Safāʾ as representatives of this "dualism of language" cf. J. Lecerf, *Stud. Isl.*, xii (1960), 22-3).

(G. E. von Grunebaum)

FASANDJUS (Banū), the name of one of the families which hereditarily shared among themselves the high administrative offices under the Buwayhid régime. The founder of this family's fortune was Abu 'l-Faḍl al-ʿAbbās b. Fasandjus, a rich notable of Shīrāz who, after being fined 600,000 dirhams by ʿAlī b. Buwayh (ʿImād al-Dawla), had taken a part in the farming of taxes for that prince (322/934), and then, in 338/949, had entered the service of Muʿizz al-Dawla, for whom he administered the finances of Baṣra. It was there that he died in 342/953, at the age of 77, leaving his son Abu 'l-Faradj Muḥammad to inherit his position; the latter, on the death of the vizier al-Muhallabī, succeeded him, though without the title, at the head of the administration of ʿIrāḳ (352/963). In 355/966 Muʿizz al-Dawla sent him to conquer ʿUmān (a letter from al-Ṣābī has been preserved, replying to his report of the victory, Paris MS arabe 6195, 167 v°); he returned on the death of that ruler in the following year. Under ʿIzz al-Dawla Bakhtiyār he shared the vizierate and then came into conflict with Abu 'l-Faḍl al-ʿAbbās al-Shīrāzī, and finally lived in retirement from 360 until 370 (971-81) when he died. However, his death did not bring about the ruin of his family, which apparently remained strongly established in Fars. Abū Muḥammad ʿAlī, brother of Abu 'l-Faradj, was vizier to Sharaf al-Dawla in 373-4/984-5, and Abu 'l-Faradj's son Abu 'l-Ḳāsim Djaʿfar (355-419/966-1029) also vizier to Sulṭān al-Dawla, in Fārs and then for a time in Baghdād (408-9/1017-8). The son of Abu 'l-Ḳāsim, named like his grandfather Abu 'l-Faradj Muḥammad, with the additional name Dhu 'l-Saʿādāt, was vizier to Djalāl al-Dawla in ʿIrāḳ from 421/1030 at the latest until that ruler's death in 435/1044; he was retained in the same office by Abū Kālīdjār, who however had him arrested in 439/1047 and put to death in the following year, at the age of 51 (Ibn al-Athīr gives the name of Djalāl al-Dawla's vizier in 428/1037 as Abu 'l-Faḍl al-ʿAbbās b. al-Ḥasan b. Djaʿfar, another member of this family, who in any case cannot have held this office for any length of time). Abu 'l-Faradj's son, ʿAlāʾ al-Dīn Abu 'l-Ghanāʾim Saʿd, seems to have been vizier to the last Buwayhid in Baghdād, al-Malik al-Raḥīm, at the time of Tughrīl-Beg's entry into the city; the Saldjūḳid vizier al-Kundurī had him made governor of Wāsiṭ, perhaps because in his father's lifetime he had successfully fought against the lord of Baṭīḥa there; but, feeling his position to be insecure, he had the town fortified, an action which resulted in making him suspect. Attacked by a Saldjūḳ force, he openly allied himself with al-Basāsīrī [*q.v.*] and proclaimed the Fāṭimid *khuṭba* in Wāsiṭ (the Fāṭimid envoy al-Muʾayyad al-Shīrāzī who alludes to this event in his *Sīra*, 136-7, gives the governor's name as Ibn Ḳāʾid b. Raḥma). Defeated and taken prisoner at the beginning of 449/March-April 1057 with his brother, he was crucified and dismembered, and from that time nothing further is heard of the family.

Bibliography: The chronicles of Miskawayh, Abū Shudjāʿ Rudhrawārī, al-Hamadhānī, and then of Ibn al-Djawzī, Ibn al-Athīr and Sibṭ Ibn al-Djawzī referred to in BUWAYHIDS, and also the two texts mentioned in the article. The genealogical table of Zambaur is entirely invalidated as a result of the division of Abu 'l-Ḳāsim into two homonyms, and the untenable identification of Abu 'l-Faradj II with al-Maḥalbān of Takrīt (because each had a son named Abu 'l-Ghanāʾim).

(Cl. Cahen)

AL-FĀSHIR (El Fasher), the capital of Dār Fūr [*q.v.*], formerly a sultanate, now a province of the Republic of the Sudan. The term *fāshir*, meaning a royal residence, more precisely signified an open space, serving for public audience by a sultan, or as a market-place, and was also used in Sinnār under the Fundj [*q.v.*], and in Waddāī, where *wara* appears as a synonym (see J. L. Burckhardt, *Travels in Nubia*, London 1819, 486). The *fāshir* of the Fūrāwī sultan was established in 1206/1791-2 at Wādī Tandaltī, on a sandy ridge, overlooking a seasonal lake. Around this royal residence, the town developed. It was visited between 1793-6 by W. G. Browne, who has left a plan and description of the palace area, but says nothing of the town. Fuller information, and an elaborate but schematized plan of the palace area, were given by al-Tūnusī, who spent eight years in Dār Fūr from 1218/1803. Outside the palace area, which was surrounded by a triple thorn-fence (*zarība*), were the houses of royal officials, holy men (*fuḳarāʾ*) and others. The inhabitants were divided into two groups, the people of *Warradayā* (the Men's Gate of the palace), and those of *Warrabayā* (the *Ḥarīm* Gate). The houses of the poor were built of millet straw, those of the ruler and notables of mud. Al-Fāshir remained the capital of the sultanate until the annexation of Dār Fūr to the Egyptian Sudan in 1291/1874. Sporadic Fūrāwī resistance continued, and on one occasion al-Fāshir nearly fell to the troops of the shadow-sultan Hārūn. In January 1884, the khedivial garrison surrendered to Muḥammad Khālid Zuḳal, the first Mahdist governor of Dār Fūr. When the Mahdist state was overthrown in 1898, al-Fāshir became the capital of the revived Fūrāwī sultanate of ʿAlī Dīnār. In 1916 Dār Fūr was annexed to the Anglo-Egyptian Sudan, and al-Fāshir became again a provincial capital. Although al-Fāshir has long superseded Kubbayh (Cobbé), which in Browne's time was the trade-centre of Dār Fūr, its difficulty of access from the east has led in recent years to a shift of road-traffic southwards to Nyala, to which town a railway-line was opened in 1959. The population of al-Fāshir, of varied origins, was estimated at c. 2,650 in 1875, and c. 10,000 in 1905. In 1959 it was 26,161.

FĀSHŌDA proper, the royal village of the Shilluk, lies near the west bank of the White Nile at 9° 50′ N., 31° 58′ E. It is the principal site of the elaborate ceremonies by which a *Reth* of the Shilluk is invested with his 'divine' attributes.

An Egyptian expedition under the *Ḥukmdār* ʿAlī Khūrshīd reached Fāshōda in 1830. In 1855 a government post was founded on the river some 18 kms. downstream, at 9° 53′ N., 32° 07′ E., and was named after Fāshōda as the nearest place of importance. In 1863 this post became the headquarters of the newly-created *mudīriyya* of the White Nile. Its garrison contributed to the suppression of the riverain slave-trade, but Fāshōda acquired an evil reputation as an unhealthy 'punishment station' for criminal and political exiles. Heavy taxation and forced recruiting led to conflict with the Shilluk. Although the Egyptians were sometimes able to procure the election of friendly *Reth*s, in 1866 and again in 1875 the post was almost overwhelmed by Shilluk risings.

On 9 December 1881, near Djabal Ḳadīr in south-eastern Kordofān, Muḥammad Aḥmad al-Mahdī [*q.v.*] annihilated a force from Fāshōda under the *mudīr* Rāshid Aymān. The rout of this strong, but ill-planned and unauthorized, expedition greatly increased the Mahdī's prestige and influence. Further Mahdist successes in Kordofān, culminating in the total defeat of Hicks at Shaykān (5 November 1883), threatened communications with Fāshōda and enforced its evacuation early in 1884.

In 1891, the Shilluk having refused to pay *zakāt*, Fāshōda was occupied and the Shilluk country harried by a Mahdist force under al-Zākī Ṭamal. Late in 1892 the Mahdists withdrew, leaving the *Reth*ship in the hands of their nominee, Kūr Galdwan *alias* ʿAbd al-Fāḍil. *Reth* Kūr maintained Fāshōda as a staging-post in the Mahdist communications with Equatoria and paid occasional tribute in grain; the Mahdists supported him against rival claimants and disaffected Shilluk sections.

On 10 July 1898 J.-B. Marchand, with about 100 men, occupied the former Egyptian fort at Fāshōda. On 25 August he repelled an attack by a Mahdist flotilla under Saʿīd al-Ṣughayyar. On 3 September, by treaty with *Reth* Kūr, he placed the Shilluk country under French protection. On 19 September Kitchener arrived from Omdurmān with five steamers and a mainly Egyptian force of over 1,000 men. Marchand's presence and status were referred to Europe for diplomatic solution; but Kitchener hoisted the Egyptian flag and installed H. W. Jackson as Egyptian *mudīr* of Fāshōda. The ensuing Anglo-French crisis was resolved on 3 November, when the French Cabinet, under an implicit British threat of war, agreed to withdraw Marchand from Fāshōda unconditionally. This news, unnecessarily delayed by Cromer, did not however reach Fāshōda until 4 December; meanwhile, relations between the rival commanders had deteriorated almost to the point of armed conflict. Marchand evacuated Fāshōda on 11 December 1898.

From 1898 until 1902, when Baḥr al-Ghazāl was constituted as a separate province, the entire southern Sudan was administered from Fāshōda. In 1903 the 'administrative' Fāshōda was re-named Kodok (after the nearest Shilluk hamlet), and the Fāshōda Province was henceforth termed Upper Nile Province. Its equatorial regions became a separate province (Mongalla) in 1906. In 1914 the headquarters of the truncated Upper Nile Province were transferred to Malakāl: Kodok has since been merely the headquarters of Shilluk District.

AL-FĀSĪ, TAḲĪ AL-DĪN MUḤAMMAD B. AḤMAD B. ʿALĪ AL-MAKKĪ AL-ḤASANĪ AL-MĀLIKĪ (775-832/1373-1429), historian of Mecca, was, through family connexions and upbringing, eminently qualified for his lifework as the outstanding historian of his native city. His father Aḥmad (754-819/1353-1416) had received an excellent scholarly education and was married to a daughter of the Meccan chief judge Abu 'l-Faḍl Muḥammad b. Aḥmad b. ʿAbd-al-ʿAzīz al-Nuwayrī; a daughter of his, and half-sister of the historian, was, in her first marriage, married briefly to the amīr of Mecca, Ḥasan b. ʿAdjlān. Among al-Fāsī's teachers we find the author of Mālikī biographies, Ibn Farḥūn, with whom he studied al-Maṭarī's *History of Medina* in Medina (where he had already lived for a few years as a young boy) in 796/1393-4. In Damascus, he studied with Abū Hurayra, the son of al-Dhahabī, and of Ibn Khaldūn, whom he may have met in Egypt, he speaks as "our shaykh". Thus, the interest in historical studies, which was characteristic of his times, came to him naturally.

His professional life followed the usual pattern. He travelled much as a student and in later life. His first visit to Egypt took place in 797/1394-5, followed by a trip to Damascus and the scholarly centres of Palestine in the next year and, in 805/1402-3, by a first trip to South Arabia, where he spent much time later on; his remarks on the history of the composition of his works, which he conscientiously appended to them, permit us to follow his travels in some detail. He was appointed Mālikī judge of Mecca in 807/1405 and remained in this position, with brief interruptions in 817/December 1414-January 1415 and 819-20/January-May 1417, until he became blind four years before his death. He managed to obtain a *fatwā* from Mālikī authorities in Cairo permitting him to remain in office for a while, but soon he had to retire permanently; during his blindness, he continued his scholarly work. His learning, character, and social bearing were highly praised, but there must have been some latent discontent stored up in him since

the *waḳf* deed for his works contained the stipulation that they be not lent to a Meccan.

His numerous works included an abridgment of the *Ḥayāt al-ḥayawān* of his teacher, al-Damīrī, and a number of writings on *ḥadīth* and other religious subjects, of which two are preserved, *Djawāhir al-uṣūl fi 'l-ḥadīth* and *al-Arbaʿūn al-ḥadīth al-mutabāyināt al-isnād*. Biographical works on religious scholars included his Supplement to Ibn Nuḳṭa's *Taḳyīd* (which also contained an autobiography of his) and a negative appreciation of Ibn ʿArabī. Of general historical titles, we may mention the *Muntakhab al-Mukhtār*, an abridgment of Ibn Rāfiʿ's supplement to Ibn al-Nadjdjār's supplement to the *Taʾrīkh Baghdād* (Baghdād 1357/1938; another old ms. in Mecca, cf. *Shifāʾ*, ii, 432, n. 2); a partly preserved supplement to al-Dhahabī's *Nubalāʾ* (Berlin 9873); a supplement to the same author's *Ishāra* and a History of the Rasūlids (not preserved).

Al-Fāsī's fame, however, rests upon his works on the history of Mecca, a subject which had been strangely neglected practically since the times of al-Azraḳī and al-Fākihī [*q.v.*]. His basic works are *Shifāʾ al-gharām bi-akhbār al-balad al-ḥarām* (Mecca-Cairo 1956; some chapters in Wüstenfeld, *Die Chroniken der Stadt Mekka*, Leipzig 1857-61, ii, 55 ff.) and *al-ʿIḳd al-thamīn fī taʾrīkh al-balad al-amīn* (Cairo 1289-90; Mecca 1314; additional mss. Cairo Taymūr, *taʾrīkh* 849; Yale L-305 [Cat. Nemoy 1179]; Kattānī, cf. *Revue Inst. Mss. ar.*, v [1959], 184; Istanbul Feyzullah [*not* Fatih] 1482; al-Azhar, cf. *Fihris al-makhṭūṭāt al-muṣawwara*, ii/1, 181 f., ii/2, 106, etc.). The *Shifāʾ* contains (1) the description and history of the physical features, both natural and man-made, of Mecca and environs, including a discussion of the holy places and the rituals connected with them; (2) the ancient pre-Islamic history of the city; (3) a chronological list of its governors and rulers; and (4) a selection of historical events connected with it. The *ʿIḳd*, on the other hand, although it starts out with the holy topography of the city (abridged from the *Shifāʾ* and entitled *al-Zuhūr al-muḳtaṭafa min taʾrīkh Makka al-musharrafa*), is a collection of biographies of persons connected in some way with the city, beginning with a biography of the Prophet (entitled *al-Djawāhir al-saniyya fi 'l-sīra al-nabawiyya*) and biographies of the other Muḥammads and Aḥmads, including a lengthy autobiography of the author in the third person, and then using an alphabetic arrangement. Of the *Shifāʾ*, al-Fāsī produced five or six successive abridgments, among them *Tuḥfat al-kirām bi-akhbār al-balad al-ḥarām* and, as an abridgment of the *Tuḥfa*, *Taḥṣīl al-marām min taʾrīkh al-balad al-ḥarām* (additional mss. in Princeton 594 [393B]; Bursa, Hüseyin Çelebi 794). An abridged edition of the *ʿIḳd* is preserved in *ʿUdjālat al-ḳirā li 'l-ghārib fī taʾrīkh Umm al-Ḳurā*. A work entitled *al-Muḳniʿ fī akhbār al-mulūk wa 'l-khulafāʾ wa-wulāt Makka al-musharrafa* was published by F. Erdmann (Kazan 1822), and a work on Medina, *al-Riḍā wa 'l-ḳabūl fī faḍāʾil al-Madīna wa-ziyārat al-Rasūl*, appears in the margin of the Meccan edition of the *ʿIḳd* (neither of them seen by this writer).

Bibliography: Wüstenfeld, *op. cit.*, ii, vi-xvi; Brockelmann, II, 221 f., S II, 221 f. In addition to the autobiography in the *ʿIḳd*, cf., for instance, Muḥammad Ibn Fahd, *Laḥẓ al-alḥāẓ*, Damascus 1347, 291-7; Sakhāwī, *Ḍawʾ*, vii, 18-20; idem, *Iʿlān*, in F. Rosenthal, *A history of Muslim historiography*, Leiden 1952, 404, 408, 414 f. (and *ibid.*, 524, for al-Sakhāwī, *al-Djawāhir wa 'l-durar*); Ibn al-ʿImād, *Shadharāt*, vii, 199. According to *Ḍawʾ*, al-Fāsī also has biographies in works of younger contemporaries such as Ibn Ḥadjar, *Inbāʾ* and *Muʿdjam*; al-Maḳrīzī, *ʿUḳūd*; ʿUmar b. Muḥammad Ibn Fahd (who also wrote monographs on the Meccan families of the Fāsīs and Nuwayrīs [*Ḍawʾ*, vi, 128 f.] as well as a continuation of the *ʿIḳd*), *Muʿdjam* of his father.

(F. ROSENTHAL)

FĀSID WA BĀṬIL, In the terminology of the Ḥanafī jurists, *bāṭil* denotes the act which lacks one of the elements essential for the existence of any legal activity. *Buṭlān* embodies the notion of non-existence, and the act which lacks one of these elements which are considered fundamental is, in effect, deemed non-existent.

If, while fulfilling the necessary conditions for its formation, a legal act does not observe the conditions of validity *stricto sensu* required for its perfection (*awṣāf*, sing. *waṣf*, quality), it is then said to be *fāsid*, or vitiated and therefore null. But this nullity (*fasād*) is of a fundamental nature, and therefore has nothing in common with the relative nullity familiar to the Western jurist, who sees only in this latter concept a means of protecting those of defective legal capacity and all those whose agreement has been tainted by duress, error or deceit. Although it sometimes happens—by negligence or inadvertence—that *fāsid* and *bāṭil* are used interchangeably, even by Ḥanafī authors who have a reputation for the scientific rigidity of their definitions, it is none the less true that the distinction between *bāṭil* and *fāsid* is the principal characteristic of the Ḥanafī theory of nullity.

The three other orthodox schools, as well as the former Ẓāhiri school, reject this distinction. According to their writers, there cannot be two degrees of invalidity based upon the nature of the rules whose non-observance is the subject of legal sanction. Thus they use the terms *fāsid* or *bāṭil* indifferently to describe the legal act which is not valid in the eyes of the law. In the doctrine of these schools, the two terms are synonymous, the synonymity reflecting their notion of a single sanction. However, we must state at the outset that for the Shāfiʿīs and the Ḥanbalīs this uniform nullity corresponds to the *bāṭil* form of nullity in Ḥanafī law, while for the Mālikīs its incidents coincide almost exactly with those of the *fāsid* type of nullity as expounded by Ḥanafī law.

If the practical application of the principles we have just expounded does not present serious difficulties, even in Ḥanafī law, when it is only a question of dealings with property (sale, hire, pledge, etc.), it appears, on the contrary, singularly complicated in relation to the contract of marriage. In this sphere, the fluctuations of the classical doctrine, as it grappled with a contract arbitrarily classified in the same category as sale or hire (*tamlīkāt*), but which, in fact, is radically distinct from them, have reverberated down the course of the centuries in the works of authors and have reappeared at the present time—always on the same point—in the codes and laws of personal status recently promulgated in numerous Arab countries. It is therefore necessary to study the theory of nullity in the sphere of marriage separately in a third section.

I. Ḥanafī doctrine. (A). Non-existence, *al-buṭlān*. This, as has just been explained, is the sanction for the lack of any of the essential elements of a legal act, *e.g.*, free will of the two parties (in

contracts), which, furthermore, must be expressed by the use of a verb in the past tense and which must be declared in those conditions of time and place which together constitute what is called the session of the contract or the *madjlis*. Free will is presumed impossible (thence occasioning the non-existence of the act) in the case of a mentally defective person, a minor of tender years, and even in the case of a minor who has reached the age of discretion, when this latter performs an act, such as gift, which must necessarily cause him a material loss. Further elements considered fundamental are the actual existence of the object, its quality of legal property and the possibility of its delivery (the sale of fish in the sea and birds in the air is *bāṭil*).

The *bāṭil* act, since it is considered non-existent, cannot have any legal effect, whether there has been delivery or not. Reasoning on the classical hypothesis of sale—the same rules applying *mutatis mutandis* to all legal acts—it follows that the purchaser, who has not become the owner, cannot constrain the vendor to deliver to him the sale object, no more than the vendor can require the purchaser to pay him the agreed price. If, in fact, there has been a performance of the agreement reached between them (which is no more than the semblance of a sale) the *status quo* must be restored, *i.e.*, the vendor must return the price received and the purchaser the object delivered, without any need of recourse to law, at least to establish the non-existence of the act. Suppose, now, that after a *bāṭil* sale followed by delivery the transferee in turn alienates the object, either for a consideration or gratuitously, or that he subjects it to some kind of lien, or that he hires it out or constitutes it as a *waḳf*. In either event, the original vendor will not be deprived of the right to regain his property from the hands of a third party, whether this latter be a purchaser for value, a lessee, or the beneficiary of a *waḳf*. The property, in fact, has never left his ownership because the sale concluded by him was legally non-existent—so much so, the Ḥanafī authors state, that his heirs will succeed to his right and will be able, after his death, to reclaim from the third party the object of which they are now the owners.

There is one case where the application of the principles outlined above may possibly result in injustice. This is where the object sold has perished when in the possession of the transferee.

Strict logic would require that the risks should lie with the vendor: he has remained the owner, since, by reason of the *bāṭil* character of the sale, transfer of ownership has not been effected. The transferee, after having taken possession of the object, can only be considered, at most, as a trustee; and risks, in the case of a trust, lie with the owner. There exists on this point some uncertainty in the doctrine. In general, authors confine themselves—without taking one side or the other—to expounding two applicable arguments: (a) the transferee is simply a trustee (*amīn*), and the loss of the object releases him; (b) the transferee is a guarantor of the object, for this has been delivered to him not in the interests of the owner, but in his own interests. His taking of possession more closely resembles *ghaṣb* (usurpation) than a trust (*amāna*).

It would seem that this latter argument prevailed. In the *bāṭil* sale, therefore, the risks will lie with the purchaser, when this latter has taken possession of the sale object which has then perished in his possession. He becomes liable for its value if it is a specific object, and where it is a fungible commodity, he will be bound to restore its equivalent (*mithl*).

(B). Fundamental nullity, *fasād*, is the sanction for the infringement of conditions of validity which do not have the character of constituent elements of a legal act. Such are held to be the precise determination of the object, as regards both its nature and its value, the absence of any illicit gain (*ribā*) and of the majority of accompanying conditions, and the exclusion of any prejudice which would be occasioned by the delivery of possession. As for the act obtained by duress, this also is regarded as *fāsid* in Ḥanafī law; but this kind of *fāsid* nullity is regulated in a particular fashion which distinguishes it from the *fāsid* nullity of common law.

As a general proposition, we may say that the great majority of *fāsid* acts derive their character, in Ḥanafī law, from the fact that they contain accompanying conditions: an uncertain term or a suspensive condition (in the majority of the *tamlīkāt*), immoral or illegal stipulations, or simply conditions which are not in harmony with the nature of the act to which they are attached. This extends considerably the sphere of *fāsid* nullity, which can thus be regarded as parallel with the nullity of common law, as opposed to the *bāṭil* nullity whose rôle is most often confined to those theoretical arguments of a school which have no real practical interest.

The effects of *fāsid* nullity are less extreme than those attached to *bāṭil* nullity. This is easily explained inasmuch as the *fāsid* act, although void, is nevertheless constituted; juridically speaking, it exists, although it is vitiated and therefore needs to be negated. The difference between the two kinds of nullity is especially apparent after the delivery of possession or voluntary performance. (a) *Before* delivery of possession (or, for certain contracts, voluntary performance) the *fāsid* act is not greatly distinct from the *bāṭil* act. As is the case with the latter it does not give any of the parties the power to compel performance from the other. Each of them has the right, and the duty, to avail himself of the nullity. A judicial decree is not at all necessary, and the nullity will be established by the declaration of one of the parties or even by the simple act, of the vendor, for example, in alienating the object for the benefit of a third party. The judge who has knowledge of such an act, must, by virtue of his office, pronounce its nullity. It is self-evident that *fāsid* nullity cannot be removed by confirmation. The act must be performed again in its entirety. However, if the nullity does not stem from a defect in the sale object, but results from the presence of a prohibited condition, the elimination of the offending condition will validate the act, which, thenceforth, will produce its normal effects. A usurious sale, from which the parties, by common agreement, have eliminated the clauses which gave it this character, will transfer ownership from the moment that the forbidden clause disappeared. (b) *After* the taking of possession authorized by the vendor (reasoning always on the basis of a sale), the *fāsid* act will produce certain effects which the *bāṭil* act can never have. It is not that the taking of possession transforms it into a valid act (*ṣaḥīḥ*): this is certainly not so. It continues to be tainted with an absolute nullity, although the vendor has authorized the purchaser to take possession; and this latter is bound to restore the object received and to take back the price he has paid. Delivery of possession, then, following upon a *fāsid* sale, does not transfer ownership in Ḥanafī law, although such an assertion is often made without the necessary reservations.

According to the opinion which prevails in the school, delivery of possession does not in reality transfer ownership, or at least ownership in the normal sense, since the vendor can always reclaim his property as long as it is in the possession of the transferee. Furthermore, this transferee cannot enjoy or use the thing which he has received (with the agreement of the vendor). "He cannot eat it, nor wear it (if it is a garment), nor ride it (if it is a beast of burden), nor live in the house (which he has bought), nor avail himself of the services of the slave girl that he has acquired" (al-Kāsānī). What does result from delivery of possession following a *fāsid* sale is solely the transferee's power validly to dispose of the object delivered to him, either gratuitously or for a consideration—*e.g.*, he may sell it, give it away, constitute it as a *waḳf*, or, if it is a slave, set him free. This fiction of ownership, albeit an odd ownership (*k̲h̲abīt̲h̲a*, bad, defective) in that it confers upon the one in whom it vests the *abusus*, but not the *usus* or the *fructus*, is quite obviously designed to protect subsequent transferees against a claim for restitution by the original vendor, in so far as their title cannot be impugned on the ground that they acquired the property from one who was not the owner. It is this Ḥanafī system, perhaps, which appears the least complicated.

Apart from this result, vital for the protection of future transferees, delivery of possession or performance following a *fāsid* contract operates to produce two other effects, less important but not altogether devoid of interest. In the first place, where *fāsid* nullity is solely the result of the incorporation of a prohibited term within the transaction (an uncertain period, for example), the party in whose interests the term was stipulated has the option of relying upon the nullity or, on the other hand, validating the transaction by renouncing the benefit of the term; whereas, prior to delivery of possession, confirmation of the transaction by repudiation of the offending term could only have been effected by the mutual agreement of the two parties. The second result of the *fāsid* character of a legal transaction comes into play where the transferee has in fact utilised the property delivered to him, or, in case of a contract for services, these services have been performed, or, of course, where the first transferee has alienated the property sold. In this case, in order that nullity may not result in unjust enrichment, the price, rent or wages which become due will not be the agreed price, rent or wages (since the contract is null), but will be the market value of the property, or the rent customarily payable, or the usual wages.

II. The doctrine of the other schools. The three other schools refuse to admit degrees of invalidity. To fail to observe the conditions required by the S̲h̲arīʿa for the validity of an act is equally serious whether it is a question of a fundamental condition or of an attribute (*waṣf*), which, although it does not have an essential character, is nevertheless imposed by the law. In both cases there is "disobedience" to the rules of the S̲h̲arīʿa which must be sanctioned by the same nullity.

For the S̲h̲āfiʿīs and the Ḥanbalīs, this single nullity corresponds with the *bāṭil* nullity of Ḥanafī law, at least as far as concerns the invalidity of acts of disposition effected by the transferee in a void sale: subsequent transferees are not protected against the claim of the original vendor. On this point the texts are explicit. However, outside contracts which operate to transfer ownership, the S̲h̲āfiʿīs and the Ḥanbalīs sometimes accept the distinction between *bāṭil* and *fāsid* in order to avoid, as far as possible, the injustice which would be entailed by the voluntary performance of a void contract if the *status quo ante* was purely and simply restored as the principle of *buṭlān* would require. Finally, the possibility, admitted by both these schools, of the partial annulment of a composite contract concluded by a single legal transaction (*ṣafḳa*), which contains both valid and invalid components (the sale, at the same time, of a free man and a slave), fortunately serves to relax, to some degree, the rigidity of their principles.

The Mālikīs, on their part, regulate the single nullity which sanctions invalid acts (termed *fāsid* or *bāṭil*) in a different way, with the result that their system is closely parallel to the system of *fāsid* nullity in Ḥanafī law, at least as far as concerns sale, the prototype contract of Islamic law. Recovery by the original vendor in a void sale is impossible, state the Mālikī authors, when the purchaser has disposed of the property to the profit of a third party, whether by way of sale for a consideration or by gift, or when he has set free a slave, or even when he has merely made the property a pledge or has transferred it to a bailee. In these last two cases the original vendor is bound by the pledge or the bailment for their full duration. Equally, recovery by the original vendor is inadmissible when the form (*ṣūra*) of the sale-object has been changed, by "increase or decrease", while in the possession of the first transferee. In this case the vendor will have to be satisfied with monetary compensation.

III. Nullity of marriage. Certain Ḥanafī authors of authority assert that the distinction between *bāṭil* and *fāsid* which, for reasons readily understandable, does not apply to ritual obligations (*ʿibādāt*), is equally alien to the contract of marriage, where all defects, whether they attach to the essence of the contract or to its external conditions of validity, are sanctioned by the same single nullity which is neither exactly a *fāsid* nullity nor exactly a *bāṭil* nullity. In point of fact, the thought of the classical authors is difficult to follow on this matter, and the question of nullity in marriage presents one of the most difficult problems of Ḥanafī law. For the other schools the problem is hardly more simple, and the solutions which appear to have prevailed with them seem, paradoxically enough, to establish the distinction between *bāṭil* and *fāsid* which they rejected in other spheres of the law.

Difficulties and uncertainties stem from the fact that the question is bound up with a problem peculiar to Islamic penal law—that of *s̲h̲ubha*, or semblance, which is one of the grounds for avoidance of the fixed penalties. The doctrine of each school —and, in the Ḥanafī school, the two doctrines there adopted concerning nullity in marriage—are directly influenced by the position taken by the jurists in regard to this theory of *s̲h̲ubha*. Indeed, it must not be forgotten that the annulment of a marriage, with its retrospective effect, results in the assumption that the spouses have never in fact been married; if, therefore, there has been consummation, this will, in principle, be held to be fornication, punishable by the severe fixed penalty (*ḥadd*) prescribed in cases of *zinā*. This penalty, like all the other fixed penalties (*ḥudūd*), is avoided whenever there exists a *s̲h̲ubha*, or semblance, between the deed with which the accused is charged and another deed of the same nature which is indisputably not criminal. According to Abū Ḥanīfa, such a semblance is found in three

sets of circumstances: firstly, when the action with which the accused is charged resembles an action which is normally permissible (*shubha fi 'l-fiʿl*), although here the accused must have acted in good faith and in ignorance of the criminal character of the act—a husband, for example, has had sexual relations with his wife, believing them to be permissible, during the period of retirement which follows an irrevocable repudiation; secondly, when the illegality founded upon a proof text may appear dubious because of the existence of another, ambiguous text (*shubha fi 'l-maḥall*) which precludes any unanimity of juristic opinion on the point concerned,—a Ḥanafī, for example, could believe that the presence of witnesses at the moment of the conclusion of a marriage is not indispensible since they are not required, at that moment, by the Mālikīs; finally, when the act has been done as the result of a contract which observed merely the conditions of formation (*shubhat al-ʿaḳd*). This third category of *shubha* is admitted by Abū Ḥanīfa alone, and is rejected by his two pupils (Abū Yūsuf and al-Shaybānī) and by the three other Imāms: its result is the avoidance of the *ḥadd* for fornication in every case where the dissolution of a marriage has taken place for any reason whatsoever, even where it is a case of a contract vitiated in its essence. Accordingly, in the opinion of Abu Ḥanīfa—and in his opinion alone—if the contract of marriage is ostensibly valid because it fulfills all the necessary conditions of formation, but its nullity is nevertheless manifest because there exists an impediment to marriage between these two spouses (too close a blood-relationship, foster relationship, the husband already having four wives, the wife already being married to another man who has not repudiated her, etc.) then, in these cases, the penalty for fornication will not be applied after the separation of the couple; and this will be so whether or not the spouses acted in good faith, *i.e.*, whether they knew, or did not know, of the prohibition they were infringing. The two pupils of Abū Ḥanīfa, and all the jurists of the three other schools, did not admit the *shubhat al-ʿaḳd*, and accordingly decided that in such a case the penalty for fornication would lapse only if one, at least, of the two spouses believed that the law was not being broken by their contract of marriage—this, by applying the *shubha fi 'l-fiʿl*. In other words, the dissolution of a marriage on the ground that there existed a legal impediment between the spouses will entail the application of the *ḥadd* only where the two spouses acted in bad faith, knowing that they were being married in contravention of a legal prohibition.

In seeking to reconcile the preceding solutions, which are of a penal nature and are strictly concerned only with the offence of fornication, with the rules relating to the conditions of formation and validity of a marriage, the authors arrived at two systems of nullity. The Ḥanafī school always hesitated between the two, while the three other schools adopted the second. It is necessary, at the beginning, to stress that if the ground for nullity is established before consummation, the marriage is deemed, purely and simply, never to have existed: there is no dower, no maintenance and no rights of succession should one of the spouses die before the declaration of nullity. Any Muslim has the right to invoke such a declaration by the court, if the spouses themselves have not made it: this, in fact, they are obliged to do and, moreover, no formalities are required. On this point there is a consensus of opinion. When nullity is established after consummation, Abū Ḥanīfa distinguishes between the fact that it results from the absence of a condition of the existence of marriage (legal capacity of the spouses, mutual agreement in the course of the same contractual session) and the fact that it results from any other cause external to the formation of the contract. In the first case the marriage does not exist. It is *bāṭil* and it produces no effect, neither entitlement to succession, nor legitimacy of children, nor the obligation of the wife to observe the 'waiting period' (*ʿidda*). However, because of the *shubhat al-ʿaḳd* which results from the semblance of a contract the spouses are not liable for the *ḥadd* penalty, and, because there is no *ḥadd*, the wife is entitled to the dower, by virtue of the maxim: 'Sexual relations with a woman entail either a payment (*ʿuḳr*) or a penalty (*ʿaḳr*). In the second case, there exists a marriage which, as a matter of form, is ostensibly valid although the violation of a legal prohibition renders it null (*fāsid*): Abū Ḥanīfa accordingly ascribes to the union certain of the effects which flow from a valid marriage, even though the two spouses should be aware of the illicit nature of their union: (a) firstly, there is no longer any question of the *ḥadd*, the spouses being relieved therefrom by *shubhat al-ʿaḳd*: (b) because the penalty is avoided, the woman has the right to a dower—the proper (customary) or stipulated dower, whichever is less; (c) the woman will be bound to observe the period of retirement, which will last until the completion of three menstrual periods (*ḳurūʾ*); (d) the issue born of this sexual relationship will be the legitimate children of their father; (e) finally, the *fāsid* marriage will raise a bar to marriage between the relatives of the spouses whose union has been terminated.

According to the two pupils of Abū Ḥanīfa and the three other Imāms (al-Shāfiʿī, Mālik and Ibn Ḥanbal), when nullity is incurred on the ground that the marriage has been concluded in defiance of some prohibition concerning blood relationship, affinity, fosterage, religion, or the fact that the woman was already married or in her period of retirement, or that the husband already had four wives etc., in all cases enquiry must first be made as to whether the ground of nullity is or is not disputed. Where there is no unanimity of the jurists that an impediment in fact exists, the spouses will benefit from the *shubha* which arises from such disagreement. And even when it is admitted that the *idjmāʿ* condemns the union, still enquiry must be made as to whether the spouses were acting, at the moment of the conclusion of the marriage, in good or in bad faith. Where they acted in good faith, the marriage, although naturally null or *fāsid*, will nevertheless give rise to the limited effects which, in Abū Ḥanīfa's view, follow the dissolution of a *fāsid* marriage—although certain schools hold that the wife is necessarily entitled to the proper dower, even if this exceeds the agreed dower.

Where the two spouses acted in bad faith, they are liable to the *ḥadd* for fornication, and none of the normal effects of marriage follows the dissolution of their union (except the *istibrāʾ* of one menstrual period in Mālikī law).

One cannot help drawing a parallel between this system and the institution of putative marriage in Christian canon law. In any event, those who adopt it are returning, without acknowledging it and, indeed, without mentioning it, to the distinction between *fāsid* and *bāṭil*.

The contemporary Codes of Personal Status or laws on the status of the family, which have been recently promulgated (Ottoman Law of 1917, arts. 52-8 and 75-6; Jordanian Law of 1951, arts. 28-9, 37-8; Syrian Code of 1953, arts. 47-51; Tunisian Code of 1956, arts. 21-2; Moroccan Code of 1958, art. 37), although freed from the concern of having to avoid the *ḥadd* for fornication, which is no longer anywhere applied, have adopted the thesis of Abū Ḥanīfa in its broad outlines. However, the Ottoman Law and the Syrian Code consider as *bāṭil* the marriage of a Muslim woman with a non-Muslim, and the Jordanian Law attributes the same character to a marriage between persons within the prohibited degrees, neither of which rules agrees with the principles of Abū Ḥanīfa. The criterion of good faith appears only in a single Code—the Moroccan Code, where art. 37, sec. 5, provides that "where good faith is established, a void marriage will result in a legal connexion between the children born of such a union and their parents".

FAṢĪḤ [see faṣāḥa].

FAṢĪḤ DEDE, Aḥmed (d. 1111/1699), Turkish poet of the Mewlewī order, born in Istanbul. He was the son of Meḥmed, of the Dūḳakīnzāde family. After a thorough grounding in oriental literatures he entered the service of the grand vizier Köprülüzāde Aḥmed Pasha, but soon abandoned this easy life to enter the order of the Mewlewīs, and became a disciple of Ghawthī Dede, the sheykh of the famous Galata convent.

Apart from a *dīwān* he is the author of many poems in Persian and Arabic and several *mathnawīs*, strongly mystic in nature and terminology.

(Fahir İz)

FĀSIḲ, unjust man, guilty of *fisḳ*,—that is to say, one who has committed one or several "great sins" (*kabāʾir*). Most of the authors of *ʿilm al-kalām* avoid extending the term *fāsiḳ* to the believer who is guilty only of "lesser sins" (*ṣaghāʾir*).

The "name and status" (*al-ism wa 'l-ḥukm*) of the *fāsiḳ* is one of the cardinal points discussed by the *kalām*. Its origin goes back to the battle of Ṣiffīn and to the question which believers then raised, as to the destiny on earth and the future destiny of the Muslim leader, and hence of all Muslims who sinned.

Two initial trains of thought: a) the Khāridjīs purely and simply condemned the unrepentant *fāsiḳ* to eternal hell and, on earth, denied his right to stand at the head of the Community. To commit an act of *fisḳ* rendered the *imām* unable to hold his office. (N.B.: for the Shīʿa, the lawful *imām* is inherently sinless). b) The Murdjiʾīs made the unjust man subject, on earth, to the fixed legal penalties (*ḥudūd*); but once this debt to the Community was paid, he remained in full exercise of his status as a believer, and, for the life to come, every believer is saved in hope.

These extreme solutions were to undergo certain modifications in the course of scholastic controversies, but were also to be a source of inspiration for them. It was on this theme that the Muʿtazila elaborated the thesis of the so-called "intermediary status", one of their particular characteristics which is attributed to Wāṣil ibn ʿAṭāʾ. The *fāsiḳ* is not entirely a believer (*muʾmin*) nor entirely an infidel (*kāfir*), but "in a position between the two", *fī manzilat*[in] *bayna 'l-manzilatayn*. On earth, he is answerable to the laws of the Muslim Community; but if he does not repent, he will be punished with eternal hell (e.g. *Ḳurʾān*, XXXII, 20)—though his punishment, it is true, will be less severe than that of the *kāfir*. This reply is entirely dependent on the conception of faith (*īmān*) which is involved. In the eyes of the Muʿtazila indeed, to be a believer signifies at once adhering in one's heart, professing with the tongue, and witnessing "with the limbs" by performing the actions prescribed by the Law. Whoever does not fulfil the third condition cannot truly be a believer, and so cannot be saved.

In the *Ibāna* (Cairo 1348, ii) and the *Maḳālāt* (ed. Ritter, i, 293) Abu 'l-Ḥasan al-Ashʿarī defines the faith as "words and deeds", *ḳawl* and *aʿmāl*, thereby appearing to integrate the "witness of the limbs" with it, like the Muʿtazila. But his *Kitāb al-Lumaʿ* (ed. McCarthy, Beirut 1953, 75/104) states: "faith in God is *taṣdīḳ* (adherence) to God". And he taught clearly that it was impossible for a *fāsiḳ* to be neither a believer nor an unbeliever; if he was a believer before becoming a sinner, he said, the "great sin" committed will not invalidate his standing as a believer (*Lumaʿ*, 75-6/104-6). And al-Ashʿarī upholds this opinion with the tradition of the *ahl al-istiḳāma* ("people of Rectitude", in R. J. McCarthy's translation). The later Ashʿarites were to maintain the same principle even more forcibly since, for them, faith came to be identified solely with *taṣdīḳ*, adherence, inner judgement.—The same solution appears in the Ḥanafī-Māturīdī line of thought which defines faith as *taṣdīḳ* and its avowal in the spoken word (thus *Fiḳh Akbar I*, 1; *Waṣiyyat Abī Ḥanīfa*, 4; *Fiḳh Akbar II*, 14). The *fāsiḳ* is a sinner, but a believer.

In its apparent sense, verse XXXII, 18 of the Ḳurʾān certainly seemed to open the way to the Muʿtazila solution: "Is then the man who is a believer like him who is *fāsiḳ*? (No), they are in no way the same". But from the 4th/10th century, the dominant tendencies of *ʿilm al-kalām* taught that the *fāsiḳ* would be saved in the Hereafter. He *can* be punished by a certain time in the (eternal) hell:

Ash^carīs; or he will *certainly* be punished in that way: Māturīdīs (*Fiḳh Akbar II*, 14). But finally God will make him enter Paradise. "Those whose heart contains only an atom of faith", says the *ḥadīth*, "will leave hell" (al-Bukhārī, *Īmān*, 33). According to the opinion which became generally accepted, good deeds enhance faith, but cease to form an integral part of its expression; to fail in a prescribed duty does not therefore render faith invalid.—Abū Ḥāmid al-Ghazzālī, who accepted as equally legitimate both the definition which identifies faith with internal adherence alone, and also that which adds verbal profession and bodily actions (cf. *Iḥyā'*, Cairo 1352/1933, i, 104-5), defended the same thesis. He defines the *fāsiḳ* as the Muslim who adhered to the faith in his heart, professed it in his words, performed *certain* prescribed actions, but who committed "great sins".

The Ashʿarī solution is, in short, that of the *ahl al-sunna* taken as a whole, including the Ḥanbalīs, the opponents of *kalām*. It will be found for example in Ibn Taymiyya, and subsequently it became one of the articles of the Wahhābī profession of faith (cf. H. Laoust, *Doctrines sociales et politiques de Taḳī-d-Dīn Aḥmad b. Taimīya*, Cairo 1939, 621).

Two problems. — 1) Can a prophet be said to be *fāsiḳ*? Literalists (called *hashwiyya* by their adversaries) have admitted this; but it is a question of purely material or unintentional sins, some will point out. The majority of Sunnīs will consider it blasphemous to attribute the name of *fāsiḳ* to a prophet. In his case they will admit, at most, only "minor sins", and that only insofar as neither the transmission of the message received from God (cf. al-Bādjūrī, *Ḥāshiya* ... *ʿalā Djawharat al-tawḥīd*, Cairo 1352/1934, 71-3), nor even the personal observance of the Law by the prophet is concerned. Moreover, certain acts which appear to be sins have been performed by prophets merely "by way of teaching". The Shīʿa (*e.g.*, Naṣīr al-Dīn al-Ṭūsī, Ḥillī) were to teach the absolute sinlessness (*ʿiṣma*) of the prophet, and their doctrine was to influence their adversaries themselves. Thus the "modern" Fakhr al-Dīn Rāzī [*q.v.*], who nevertheless maintains the possibility of trifling errors arising from involuntary forgetfulness or from obscurities in the regulations; but still more the Ḥanbalī Ibn Taymiyya who adopts the Shīʿa thesis in its entirety, though making the *ʿisma* a gratuitous (and no longer "obligatory") favour of God (cf. Laoust, *op. cit.*, 191).

2) Is it lawful to rise against an *imām* who is *fāsiḳ*? Yes, answered the Khāridjīs and Muʿtazila, who even regarded insurrection as a duty in that event. The same attitude is found with the Zaydīs (moderate Shīʿa) and various Shīʿa trends, but the dogma of the *imām*'s sinlessness widely prevailed among the Shīʿa.—Certain jurists make a distinction: no revolt against the *imām* who is *fāsiḳ*, but refusal to obey the agents who are enforcing the injustice. Common Sunnī doctrine calls for obedience to the *imām* (and his agents), even if he be *fāsiḳ* in his private life, so long as he orders nothing contrary to Ḳurʾānic law. But if a command of his runs counter to a precise Ḳurʾānic or traditional precept, disobedience is permitted and even obligatory; if there is a guarantee of success, he must be deposed, if necessary by force.

In legal terminology, *fāsiḳ* is the opposite of *ʿadl* [*q.v.*].

Bibliography: in the article; and all the treatises on *ʿilm al-kalām* under the heading *al-aḥkām wa 'l-asmā'* (e.g. Baḳillānī, Djuwaynī, Djurdjānī, Bādjūrī, etc.); A. J. Wensinck, *The Muslim Creed*, Cambridge 1932, index s.v.; L. Gardet, *Les noms et les statuts*, in *Stud. Isl.*, iii, Paris 1956. (L. GARDET)

FĀṢILA in its original usage indicates a separative: "a pearl (*kharaza*) which effects a separation between two other pearls in the stringing of the latter" when a necklace or piece of jewellery is being made (see Lane s.v.); *fāṣila*, with this sense of separative, has received two technical usages, one in Arabic prosody, the other in Ḳurʾānic terminology.

In Arabic prosody (*ʿarūḍ* [*q.v.*]), *fāṣila* denotes a division in the primitive feet, meaning three *ḥurūf mutaḥarrika* followed by one *ḥarf sākin*, *e.g.*: *ḳatalat* (*al-fāsila al-ṣughrā*), or else four *ḥurūf mutaḥarrika* followed by one *ḥarf sākin*, *e.g.*: *ḳatala-hum* (*al-fāṣila al-kubrā*). Al-Khalīl (according to *LA*, xiv, 38, l. 21-2/xi, 523b, l. 27 ff.) used *fāṣila* for the first group and *fāḍila* for the second. The first denotes the series two short syllables + one long syllable, the *anapaest* of Graeco-Latin prosody; the second denotes the series three short syllables + one long syllable, the *fourth paeon* in the said prosody. But there is an important difference: the anapaest and the fourth paeon denote rhythmic units, whilst *fāṣila ṣughrā* or *kubrā* relate to divisions, groups, within primary rhythmic units (the *tafāʿīl*), in order to explain the composition of the latter.

The Ḳurʾānic text carries rhymes. The question was raised in the Muslim world, by what technical term are these rhymes to be designated? There was no hesitation in rejecting the *ḳāfiya* of *shiʿr*, for the Ḳurʾān is not a work of *shiʿr* (poetry). Was the Ḳurʾān *sadjʿ* [*q.v.*]? Many of those who did not profess Ashʿarism (this must refer to the Muʿtazila) adopted and defended this point of view. But after al-Ashʿarī and al-Bāḳillānī it was abandoned: in fact, on the one hand the verses of the Ḳurʾān, in general, are not balanced according to the rules of *sadjʿ* and the rhymes are given a freedom not permitted by the latter (see Th. Nöldeke, *Geschichte des Qorans*², i, 37-41); on the other hand, Muslim religious sentiment was reluctant to apply to the Ḳurʾān, *kalām Allāh*, a designation not derived from Him, and which was moreover taken from a human source, namely the *sadjʿ* of the soothsayers, whom Muḥammad disliked. The solution was to consider the Ḳurʾānic text as prose of a particular kind and to designate its rhymes by a special term, *fāṣila*, pl. *fawāṣil*, which could be compared with the Ḳurʾānic expression *faṣṣalnā 'l-āyāt* (VI, 97, 98, 126). Ibn Khaldūn repeats the opinion which for long had been common, when he writes on the subject of the Ḳurʾān: *wa-in kāna min al-manthūr illā annahū* ... *laysa yusammā mursal*^{an} *iṭlāḳ*^{an} *wa-lā musadjdja*$^{c an}$, "although it is prose, it is however not free prose, nor rhymed prose (*sadjʿ*)" and he expounds its particular character (*Muḳaddima*, iii, 322; Eng. tr., Rosenthal, iii, 368).

The technical designation of rhyme is thus established according to a triple division: *ḳāfiya* for *shiʿr* (poetry), *fāṣila* for Ḳurʾānic prose, and *ḳarīna* for *sadjʿ*, and the Ḳurʾānic *fāṣila* was explained by comparison with its partners: *al-fāṣila kalimat ākhir al-āya ka-ḳāfiyat al-shiʿr wa-ḳarīnat al-sadjʿ*, "*al-fāṣila* is the word at the end of the verse, like the *ḳāfiya* in poetry and the *ḳarīna* in *sadjʿ*" (al-Suyūṭī, *Itḳān*, beginning of Ch. 59); see also *Ḳāmūs*, root *f ṣ l*.

FAṢĪLA, verbal adjective of the *faʿīl* type in the passive sense, as the Arab lexicographers record, denoting an object which is "separated", like the young animal when weaned (young camel or calf), in the feminine *faṣīla*; and the same feminine form is used for a palmtree sucker when transplanted. It is no doubt the same semantic derivation which explains the meaning of the smallest "section" of a tribe, the closest relatives: thus ʿAbbās, according to the *LA*, is called *faṣīlat al-Nabī* "close kinship with the Prophet". However, Arabic philological doctrine advances one meaning of *faṣīla* "fragment of the flesh of the thigh" by virtue of the principle which makes every term of this tribal nomenclature correspond with the name of one part of the body. Robertson Smith has, not without probability, claimed to discern in the origin of this series various allusions to the female organs such as *baṭn* "belly" (starting with *ḥayy* which seems to be connected), upon which the denominations of male organs would be superimposed when the patriarchal organization was substituted for the matriarchy. (J. Lecerf)

AL-**FĀSIYYŪN** or AHL FĀS, a name given to the inhabitants of Fās. In the local dialect this name does not apply to all those who live in Fās, but to those who were born there and have right of citizenship through having adopted the ways and customs of the city and its code of good manners.

The population of Fās was formed little by little of many diverse elements. The original basis was certainly made up of Berbers and some Arab companions of the Idrīsids. From the beginning of the 3rd/9th century on, the population grew through the coming of political refugees from Cordova and Ḳayrawān, who brought the traditions and techniques of long-rooted urban peoples to the new town. Even though the people of Ḳayrawān did not continue to swarm into Fās, the Muslims of Andalusia came time after time to establish themselves there, at any rate up to the conquest of Granada by the Catholic Kings (1492).

In addition, various groups were added to the original kernel of the population through the circumstances of Morocco's dynastic history: Berbers from South Morocco under the Almoravids and the Almohads; Berbers from East Morocco and members of Arab tribes under the Marīnids; Berbers from the oases of the Sahara and negroes under the Saʿdīs; Filālīs and negroes under the ʿAlawids. At different periods, the Muslim population of the town was augmented by a number of families of Jewish converts to Islam of whom several, the Cohens for example, have preserved their original names. It must also not be forgotten that, at any rate in the 19th century, groups of Muslims came to Fās from outside for the purpose of practising various specialized trades, Berbers of the High Guir, for instance, who are porters, the people of Tuwāt who handle fatty substances, those from the Draʿ who are gardeners, those of Sūs who are dealers in fatty substances, and those of the Rīf who take part in the pressing of the olives. It is interesting that the Middle Atlas, although so near, has provided Fās with very few immigrants.

Since the French conquest of Algeria, Fās has formed a refuge for a number of families from the Oran area, notably Tlemcen, who preferred emigration to foreign domination. This was the case especially first in 1835 and then in 1911.

Before the 20th century the population scarcely ever seems to have passed the 100,000 mark, if it was as high, but no reliable document exists on this subject. Since the Protectorate, the number of Muslim inhabitants has grown, but in modest proportions compared with many other Moroccan towns: 163,000 in the 1952 census. This relative stagnation means that the traditional citizens have not been swamped in an enormous mass of new arrivals but preserve their personality and pre-eminence. This personality is characterized by a happy balance between economic activity, intellectual activity, and the religious life of the city, and by the existence of an etiquette (*ḳāʿida*) which rules most stringently the relationships of the people of Fās amongst themselves. Only those whose roots are truly in the city follow this etiquette, and they alone have a right to the name of Fāsiyyūn. They can be divided into several social strata which complement rather than compete with each other: at the top of the social ladder are the big merchants, the high functionaries and the religious leaders who form the middle-classes; then come the small tradesmen and the artisans; finally there are the workmen settled in the city or about to become a part of it. The mass of labourers originally from the country who live miserably in their 'bidonvilles', form a quite separate society entirely different from the people of Fās. The strong personality of these people has caused them to preserve almost up to the present time a great number of legal and social customs inherited from their ancestors; the rules and ceremonies of marriage are an example. This state of things is in the course of being modified owing to European influence, which was most marked during the Protectorate. The behaviour of the Europeans living in Fās, and even more the ideas which they spread, the contact which they helped to establish between the society of Fās and the outside world, introduced the seeds of transformation into the city, not only in matters to do with the habits of daily life but also in matters concerning family and social structure and behaviour. It is still too early to judge how far this evolution will go.

There is every right to consider the Jews as Fāsiyyūn because they were to be found in Fās from the time of its foundation and for centuries lived in the Madīna side by side with the Muslims. It was only in the 9th/15th century that they were compelled to live in a special quarter, the Mellāḥ. Apart from those Jews installed there since the city's beginnings, whose exact origin it is impossible to discover, it is well known that the Jewish community has been enriched on a number of occasions by families or individuals emigrating from Spain; in the 19th century Spanish was still the daily language of more than a few families. In general, the relationship between the Jews and the Muslim middle classes has been correct and sometimes cordial. On the other hand, it has happened that the people of Fās al-Djadīd have broken out against the Mellāḥ, as was the case in April 1912, at the time of the revolt of the Moroccan troops. More rarely, the government has persecuted the Jewish community, notably during the short reign of Mawlāy al-Yazīd (1790-1792). Even more than the Muslims, the Jews of Fās have been affected by European influences since the beginning of the 20th century; many have left the Mellāḥ for the New Town (Ville Nouvelle).

(R. LE TOURNEAU)

FASKH—The term *faskh*, in the language of the Islamic jurists, has a very wide meaning. It serves in a general way to designate the dissolution of any contractual bond whatever (Ibn Nudjaym, *al-Ashbāh*, ii, 114). Whether or not the contract was validly formed, the intervention of *faskh* will reduce it to nought. But *faskh* presupposes a contract which at least fulfils all the conditions necessary to its formation, *i.e.*, a *munʿaḳid* contract. A non-existent contract cannot be the object of *faskh*. On the other hand, a formed contract which happens to be vitiated by some irregularity (*fāsid*) can be dissolved only by means of *faskh*, even though in the meantime it does not produce any of its legal effects. *Faskh*, in this case, is equivalent to annulment. In cases of error or injurious misrepresentation Islamic doctrine does not regard the contract as *fāsid*. It is nevertheless subject to *faskh*, under certain conditions. *Faskh* in this case constitutes the sanction of an express or implied condition included in the contract. Generally speaking, *faskh* is admitted whenever one of the contracting parties fails to fulfil one of the express or implied conditions stipulated in the contract. It is by the application of this principle that a sale is annulled in cases of redhibitory defect or eviction. In this sense *faskh* can be identified with rescission. But the domain of rescission is singularly restricted in Islamic law. In effect, in the absence of an express or implied rescissory clause, it is impossible in Islamic law to obtain the rescission of a contract by reason of the failure of the other party to discharge his obligation. The only remedy available is compulsory performance (Chafik Chehata, *Théorie de l'obligation en droit musulman*, 147, 204).

Faskh is not only annulment or rescission. The revocation of a gift, or of any other contract revocable by its nature, takes place equally by way of *faskh*. Likewise, a contract by nature irrevocable becomes susceptible of *faskh*, or revocable, whenever it includes a right of option (*khiyār*).

Finally, an irrevocable contract can be dissolved by *mutuus dissensus* (*iḳāla*). This dissolution effected by a mutual agreement is equally termed *faskh* by the jurists—at least with regard to relations *inter partes*.

Thus the term *faskh* comes to embrace also the cases of revocation and cancellation.

In every case *faskh* is effected, as a rule, by means of a declaration of intention pronounced in the presence of the other contracting party. This is why *faskh* is regarded by the jurists as a juridical act in its own right. However, in certain cases *faskh* must be obtained by judicial process. This is so in the case of redhibitory defects discovered after the delivery of the object sold. Likewise, the revocation of a gift must, as a rule, be pronounced by the judge. It should be mentioned here that the judge can pronounce officially the *faskh* of a vitiated contract when one or other of the parties has not requested it.

Moreover, *faskh* is clearly distinguished in the texts from *infisākh*, which comes about without the need of any declaration or judicial decree. An example is provided by the case of impossibility of performance. If the object sold perishes before delivery to the buyer, the contract is dissolved by the normal operation of the law. Here the authors are fond of the term nullity or *buṭlān* (Sarakhsī, xii, *Mabsūt*, xii, 174). Likewise in the case where proof of the contract is held impossible by reason of the conflicting oaths sworn by either side, the contract is dissolved by the normal operation of the law: *infisākh* (Kāsānī, *Badāʾiʿ*, v, 238).

Once *faskh* is effected the contract stands dissolved, and things must be restored to their former condition: the *status quo ante*. This is why *faskh* becomes impossible if the thing representing the object of a contract has happened to perish in the meantime. As a rule, *faskh* has a retro-active effect (Kāsānī, v, 239): the contract is held never to have existed. The effects of the contract disappear as from the day it was formed. However, with a view to protecting the rights of third parties, the *mutuus dissensus* (*iḳāla*) is considered a new alienation with respect to third parties. As far as they are concerned it does not have a retroactive effect. Likewise the alienation of a thing to the profit of a third party prevents the operation of *faskh*. Thus the right to dissolve the contract is destroyed, and the thing is established in the ownership of the third party who has acquired it.

We must notice, finally, that in family law *faskh* is distinguished from *ṭalāḳ*. *Ṭalāḳ*, which is the exclusive right of the man, brings about the dissolution of the marriage by a simple unilateral declaration. It always presupposes a validly formed contract. Dissolution of marriage by way of *faskh* takes place at the instance of the wife or her relatives. It generally comes about by judicial process. Like any other *faskh*, this dissolution embraces cases of failure to fulfil an express or implied condition, as well as those cases where the contract is vitiated by some irregularity. The grounds for dissolution of marriage by way of *faskh* are defined by the law, and *faskh* constitutes the legal means open to the wife of dissolving the conjugal tie in case of serious cruelty (Egyptian laws, no. 25 of 1920, no. 25 of 1929).

(CHAFIK CHEHATA)

FAṢL etymologically, like *farḳ*, expresses the general meaning of separation or disjunction (for the various meanings, see *LA*, xiv, 35-9 for *faṣl*; xii, 174-82 for *farḳ*; Abu 'l-Baḳāʾ, *K. al-Kulliyyāt*, 275). In logic, *faṣl* signifies "difference" and especially "specific difference", the διαφορά of the five predicables of Porphyry (1. γενός, *djins*, genus; 2. εἶδος, *nawʿ*, species; 3. διαφορά, *faṣl*, difference; 4. ἴδιον, *khāṣṣa*, property; 5. συμβεβηκός, *ʿaraḍ*, accident. The Ikhwān al-Ṣafāʾ add, in the tenth *risāla*, *shakhṣ*, person). For the logicians, *faṣl* has two meanings: the first covers every attribute by which one thing is distinguished from another, whether it be individual or universal, the second, in transposition (*ʿalā naḳl*), covering that by which a thing is essentially distinguished. In transposition in this way, *faṣl* is used, *per prius et posterius* (*bi-ḥasab al-taḳdīm wa 'l-taʾkhīr*) to designate three ideas; common dif erence (*al-faṣl al-ʿāmm*), particular difference (*al-*

faṣl al-khāṣṣ), and the particular of the particular (*khāṣṣ al-khāṣṣ*). Common difference (*al-faṣl al-ʿāmm*) is what allows a thing to differ from another and that other to differ from the former; equally it is what allows a thing to differ from itself at another time. This is the case of separable accidents. Particular difference (*al-faṣl al-khāṣṣ*) is the predicate which is necessarily associated (*lāzim, comitans*) with accidents, *e.g.*, the difference between a horse and a man constituted by the whiteness of the latter's skin Finally, specific difference or the particular of the particular (*khāṣṣ al-khāṣṣ*) is what constitutes the species. It is the simple universal attributed to the species in reply to the question: what is it (*in quale quid*) in its essence in relation to its genus (*fī djawāb ayyu shayʾ huwa fī dhātihi min djinsihi*), *e.g.*, rationality for man.

The Platonic method of analysis or division (διαιρεσίς) is distinguished by the name of *ṭarīḳ al-ḳisma* from the Aristotelian *ṭarīḳ al-ḳiyās* (συλλογισμός) (al-Fārābī, *Abhandlungen*, ed. Dieterici, 2).

For the metaphysical difference between the incorporeal and the body, *farḳ* (χωρισμός) is used. God is *mufāraḳ*, that is, separated, free of all that is material or corporeal. In the essence of God, there is neither *farḳ* nor *faṣl* (*Theology of Aristotle*, ed. Dieterici, 40). Purely spiritual beings (*ʿuḳūl*), the intelligences of the spheres and the heavenly bodies are *mufāraḳāt* (syn. *mudjarradāt*).

Bibliography: I. Pollak, *Die Hermeneutik des Aristoteles*, Leipzig 1913, glossary; the major text for *faṣl* is that of Ibn Sīnā, *Shifāʾ*, *al-Madkhal*, pub. Cairo 1952, ch. XIII, 72-82; the Latin translation of this text was used by Prantl, *Geschichte der Logik*, ii, 345-8; cf. also A. M. Goichon, *Lexique de la langue philosophique d'Ibn Sīnā*, no. 504, and Madkour, *L'Organon d'Aristote dans le monde arabe*, Paris 1934, 70-133; see also DJINS and ḤADD.

(TJ. DE BOER-[G. C. ANAWATI])

FAṢL [see FILĀḤA, MAFṢŪL].

FASTS [see ṢAWM].

FATĀ, pl. *fityān*, strictly "young man", has assumed a certain number of meanings in Arabic [see FUTUWWA]: here we confine ourselves to one exclusively Andalusian usage. In Muslim Spain the slaves, whether eunuchs or not, employed in the service of the prince and his household, and then of the *ḥādjib* [*q.v.*] at the time when the latter was in practice taking over the reins of power, were in fact called *ghilmān* (sing. *ghulām* [*q.v.*]), whilst those who held an elevated rank in the palace hierarchy bore the title *fatā*, the entire management of the household being placed under the control of two majordomos or "high officers", *al-fatayānⁱ al-kabīrānⁱ*. In the course of the history of al-Andalus a certain number of these slaves, generally of European origin [see ṢAḲĀLIBA], after obtaining the status of free men, were promoted to the highest positions in the social hierarchy and played an outstanding political part, even succeeding in creating independent principalities for themselves, like the ʿĀmirid *fatā* Mudjāhid [*q.v.*] of Denia. Their elevation inevitably gave rise to disputes with the aristocratic Arab families, with whom they came to blows, not without sometimes resorting to arguments of a Shuʿūbī character (see I. Goldziher, in *ZDMG*, 1898).

FATALISM [see AL-ḲAḌĀʾ WA'L-ḲADAR].

AL-**FATĀWĀ** AL-ʿ**ĀLAMGĪRIYYA**, a compendium of Ḥanafī law, in India ranking second only to al-Marghīnānī's *Hidāya*, compiled by order of Awrangzīb during the years 1075/1664-1083/1672. The intention was to arrange in systematic order the most authoritative decisions by earlier legists which were scattered in a number of *fiḳh* books, and thus provide a convenient work of reference. The board in charge of the compilation was presided over by Shaykh Niẓām of Burhānpur (d. 1090/1679), who had four superintendents under him: Shaykh Wadjīh al-Dīn of Gopāmaw, Shaykh Djalāl al-Dīn Muḥammad of Mačhlīshahr; Ḳāḍī Muḥammad Ḥusayn and Mullā Ḥāmid, both of Djawnpur; each of them was assisted by a team of ten or more *ʿulamāʾ*. The book has repeatedly been printed (see Brockelmann).

(A. S. BAZMEE ANSARI)

FATḤ [see ḤARAKA].

AL-**FATḤ** B. **KHĀḲĀN** was the son of Khāḳān b. ʿUrṭūdj (or Ghurṭūdj) of the Turkish ruling family at Farghānā and chief of the Turkish soldiers from Central Asia who formed part of the troops of the guard of the caliph al-Muʿtaṣim. Biographical information concerning him is scarce: he must have been born ca. 200/817-8, because he was probably the same age as al-Mutawakkil, son of al-Muʿtaṣim, with whom he was educated since infancy at the court of the caliph, who had adopted him at the age of seven. Hardly had al-Mutawakkil been elected caliph in 232/846-7 when he made him his secretary (*kātib*, and not *wazīr* as incorrectly stated in some sources), and later, in 235/848-9 or 236/849-50, appointed him superintendent of works at Sāmarrā; in 242/855-6 governor of Egypt for a short time in place of his son al-Muntaṣir; and in 244/857-8 as his lieutenant at Damascus. He was a member of the caliph's literary circle, and was a great patron of young and little-known authors, a friend of many writers and poets such as al-Djāḥiẓ and al-Buḥturī, of historians like al-Thaʿlabī, etc. He was himself a writer and poet, but of his works (*K. Akhlāḳ al-mulūk*, *K. al-Ṣayd wa 'l-djawāriḥ*, *K. al-Rawḍa wa 'l-zuhr*) none has come down to us, and only 13 verses of his poetry are known (cf. Yāḳūt, *Udabāʾ*, vi, 118). In his palace at Sāmarrā he had collected a very valuable library (consisting in particular of philosophical works), which was much visited by many students of Baṣra and Kūfa. On the night of 4 Shawwāl 247/11 December 861, at the caliph's palace in the new capital al-Mutawakkiliyya (or al-Djaʿfariyya) he was murdered with his caliph and friend defending him with his own bodv against the hired assassins sent by al-Muntaṣir, son of al-Mutawakkil.

AL-FATḤ B. MUḤAMMAD B. ʿUBAYD ALLĀH B. **KHĀḲĀN**, ABŪ NAṢR AL-ḲAYSĪ AL-IS̲H̲BĪLĪ, an Andalusian anthologist whose history is somewhat obscure. We do, however, know that he studied seriously under well-known teachers and that he led an adventurous life, travelling through much of Muslim Spain and enjoying to the full pleasures strictly forbidden by the laws of Islam. Despite this, he obtained a position as secretary to the governor of Granada, Abū Yūsuf Tās̲h̲fīn b. ʿAlī, but did not keep it and went to Marrākus̲h̲ where, at the instigation of an Almoravid prince or even perhaps of Sultan ʿAlī b. Yūsuf b. Tās̲h̲fīn, he was assassinated in a *funduḳ* at a date which, in various sources, varies between 528/1134 and 555/1160, the year 529/1134 being the most probable.

When he decided to compile the first of his anthologies, dedicated to the brother of the above-mentioned sultan, Abū Isḥāḳ Ibrāhīm b. Yūsuf b. Tās̲h̲fīn, he wrote to a certain number of prominent personalities who were reputed to be also men of letters, informing them of his project and asking them to send him some of their own documents; those who accepted and included gifts as well as documents were made the subject of panegyrics, while the others were passed over in silence or criticised adversely. This was the treatment accorded to Ibn Bād̲j̲d̲j̲a [*q.v.*] in particular, except that it was his privilege to have two notices, one of blame, the other of praise (text in Yāḳūt). For the earlier writers, Ibn K̲h̲āḳān had no hesitation in ransacking the anthologies and, it is said, even involved himself in a lawsuit with his contemporary Ibn Bassām [*q.v.*].

He is the author of two anthologies. The first, entitled *Ḳalāʾid al-ʿiḳyān fī* (var. *wa-*) *maḥāsin al-aʿyān*, was published in Marseilles-Paris in 1277/1860 in the journal *al-Bard̲j̲īs* and as an independent volume, later at Būlāḳ in 1283-1284; R. Dozy included some chapters from it in his history of the ʿAbbādids, and H. Pérès published extracts from it in Algiers in 1946; it is divided into four parts: princes, viziers, *ḳāḍīs* and jurists, poets and men of letters. A commentary, *Farāʾid al-tibyān alā Ḳalāʾid al-ʿiḳyān*, was written by Muḥ. b. Ḳāsim Ibn Zākūr al-Fāsī (d. 1120/1708); H. Pérès (see *Poésie andalouse*², xxxii) has a manuscript of it in his possession; but the French translation announced by E. Bourgade has still to appear.—The second anthology, *Maṭmaḥ al-anfus wa-masraḥ al-taʾannus fī mulaḥ ahl al-Andalus*, seems to have been made in three versions, large, medium and small, but only the last of the three has survived (published in Istanbul in 1302 at the *al-D̲j̲awāʾib* press [see D̲J̲ARĪDA] and in Cairo in 1325; cf. also Dozy, *Abbadides*); it is in some way complementary to the preceding work, in three parts: viziers, *ḳāḍīs* and jurists, men of letters.—To these anthologies we should add a biography of one of the author's teachers, al-Baṭalyawsī [*q.v.*], followed by a short anthology (see Derenbourg, *Mss. ar. de l'Escurial*, 448), and a *maḳāma* on his teacher (Derenbourg, *op. cit.*, 538), as well as a *Bidāyat al-maḥāsin wa-g̲h̲āyat al-muḥāsin* and a collection of his letters which is lost.

In the two published anthologies, the articles contain biographical and historical information (cf. A. Cour, *De l'opinion d'Ibn al-Ḫaṭīb sur les ouvrages d'Ibn Ḫâqân considérés comme source historique*, in *Mél. R. Basset*, ii, Paris 1925, 17-32), but it requires the application and long experience of H. Pérès (see *Bibl.*) to understand and interpret them, for the rhyming prose, which is made up of short clauses and used exclusively, holds the reader spell-bound and prevents him from paying attention to the meaning, in the opinion even of a modern critic, Aḥmad Ḍayf. This prose, which can be regarded as *vers libres*, eventually becomes wearisome, but it is acknowledged to possess a rare elegance, and anthologists show unconcealed pleasure in reproducing long extracts from it (see especially al-Maḳḳarī, *Analectes*, index). The principal interest of the *Ḳalāʾid* and the *Maṭmaḥ* rests, however, in the poetical works which Ibn K̲h̲āḳān has saved from oblivion and which form fundamental sources for the study of Arabic literature in Spain, principally in the 5th/11th century.

FATḤ ʿALĪ ĀK̲H̲UND-ZĀDA [see ĀK̲H̲UND ZĀDA, MĪRZĀ FATḤ ʿALĪ].

FATḤ-ʿALĪ S̲H̲ĀH, the second ruler of the Ḳād̲j̲ār [*q.v.*] dynasty, was born in 1185/1771 and bore the name Bābā K̲h̲ān. He was made governor of Fārs, Kirmān, and Yazd by his uncle, Āḳā Muḥammad K̲h̲ān, and heir apparent in 1211/1796-7. He succeeded to the throne in 1212/1797. He died in 1250/1834 and was buried at Ḳumm. Much of his reign of 38 years and 5 months was spent in military expeditions against internal rebels and external foes. On the assassination of Aḳā Muḥammad K̲h̲ān in 1212/1797 Bābā K̲h̲ān hastened from S̲h̲īrāz to Tehrān, where Mīrzā Muḥammad K̲h̲ān Ḳād̲j̲ār had closed the gates pending his arrival. On reaching Tehrān he ascended the throne as Fatḥ ʿAlī on 4 Ṣafar 1212/30 July 1797, but was not crowned until 1 S̲h̲awwāl 1212/21 March 1798. Ṣādiḳ K̲h̲ān S̲h̲akākī, who opposed his succession, was defeated near Ḳazwīn. Various attempts at rebellion by Fatḥ ʿAlī's brother, Ḥusayn Ḳulī Mīrzā, Ṣādiḳ K̲h̲ān S̲h̲akākī, and Muḥammad K̲h̲ān b. Zakī K̲h̲ān were defeated; and in a series of expeditions to K̲h̲urāsān Fatḥ ʿAlī succeeded in establishing his nominal authority over most of that province. Relations with Europe were actively joined. In 1798 Lord Wellesley, the Governor General of India, sent Mihdī ʿAlī K̲h̲ān, the East India Company's resident at Bushire, to the Persian Court to induce it to take measures to keep the Afg̲h̲ān ruler, Zamān K̲h̲ān Durrānī, in check. A subsequent mission sent under Captain (later Sir) John Malcolm resulted in a political and commercial treaty concluded in 1801. In 1802 France made unsuccessful overtures to

Persia for a Franco-Persian alliance against Russia. In 1804 the Perso-Russian war was resumed. Fatḥ ʿAlī sent an envoy to India to seek aid under the British alliance but his request was coldly received. In 1805 a French envoy, Romieux, reached Tehrān and urged Persia to repudiate the British alliance. Disappointed of British help, Fatḥ ʿAlī sent Mīrzā Muḥammad Riḍā to treat with Napoleon. A treaty was signed at Finkenstein (1807), but was nullified almost immediately by the Franco-Russian treaty of Tilsit. Renewed French activities and the possibility of Franco-Russian activities in Persia induced the British Government to send a mission under Sir Harford Jones to the court of Fatḥ ʿAlī. In March 1809 a Preliminary Treaty was concluded. This was followed by a Definitive Treaty in March 1812, which was superseded in 1814 by the Treaty of Tehrān. Under this treaty Persia undertook not to allow any European army to advance on India through Persia and Britain undertook in the case of a European nation invading Persia to send a military force or in lieu thereof to pay an annual subsidy. The subsidy articles were abrogated in 1828. The long war with Russia was concluded by the peace of Gulistān [*q.v.*] (1813), by which Georgia and a number of other districts were acknowledged as belonging to Russia, Russian vessels of war were given the exclusive right of navigation of the Caspian Sea, and a 5% *ad valorem* duty on Russian imports into Persia was fixed. A rebellion in Khurāsān fomented by Maḥmūd Shāh of Afghānistān gave Fatḥ ʿAlī an opportunity to seize Herāt (1813), but he failed to keep it. A war with the Porte (1821-3) was concluded by the Treaty of Erzurum (1813). In 1826 war broke out again with Russia and ended disastrously for Persia. In addition to the territory going to Russia under the Treaty of Gulistān, Persia lost Erīvān and Nakhdjivān; and the exclusive right of Russian vessels of war to navigate the Caspian was reaffirmed. A commercial treaty signed on the same day gave Russian subjects extra-territorial privileges and established the pattern of the capitulations enjoyed by Europeans in Persia under the Ḳādjār dynasty. Fatḥ ʿAlī died in 1834. He was survived by fifty-seven sons and forty-six daughters. His favourite son ʿAbbās Mīrzā [*q.v.*], who had been declared *walī ʿahd*, died in 1833. ʿAbbās Mīrzā's son, Muḥammad Mīrzā, was proclaimed *walī ʿahd* and succeeded to the throne on Fatḥ ʿAlī's death.

The rule of Fatḥ ʿAlī was arbitrary and autocratic. Pomp and ceremony distinguished his public audiences, but much of his time was spent in camp on military expeditions. Military reform was begun during his reign, first under French officers accompanying General Gardane, who came to Persia as envoy in 1806, and later under British officers, when an attempt was made to introduce European methods and discipline into the army in Ādharbāydjān commanded by ʿAbbās Mīrzā. Fatḥ ʿAlī is described by some European travellers as being intelligent and having a lively and curious mind, by others as being ignorant and vain. Like many of the Ḳādjār princes he had a great love of hunting. His besetting sin was avarice. He made, or repaired, a number of buildings in Tehrān, Ḳumm, Kāẓimayn, Karbalāʾ and elsewhere.

(A. K. S. Lambton)

FATḤNĀME, an official announcement of a victory. This definition excludes large numbers of '*fatḥnāme*s' written by private persons as literary exercises, such as the *Maḥrūse-i Istanbul Fatḥnāmesi* of Tādjīzāde Djaʿfar Čelebi [*q.v.*], which was composed at least a generation after the conquest (*TOEM*, nos. 20-1) and works such as Murādī's *Fatḥnāme-i Khayr al-Dīn Pasha* (A. S. Levend, *Ġazavāt-nāmeler*, Ankara 1956, 70-3), a versified narrative of the exploits of Barbarossa and his brother Oruč. According to Uzunçarşılı (*Osmanlı devletinin saray teşkilâtı*, Ankara 1945, 288), a *fatḥnāme* consists of 15 elements: (1) praise to God, (2) encomia on the Prophet, (3) the sovereign's duty to relieve oppression, (4) reasons for ending the wrong-doing of the tyrant in question, (5) the Sulṭān's departure, (6) the multitude of his troops, (7) the position of the enemy, (8) the boldness of the enemy, (9) description of the battle, (10) the Sulṭān's victory, (11) thanks to God, (12) occupation of the enemy's territory, (13) this success to be proclaimed by land and sea (only in *fatḥnāme*s addressed to the Sulṭān's own dominions), (14) the names of the place to which the *fatḥnāme* is sent and of the bearer, (15) the Sulṭān's joy at the victory, his communication of the good tidings to the recipient and his request for prayers. Although this scheme may well have served as a model to literary men, there is some reason to suppose that it was not closely followed by the official (usually the *nishāndjī*?) entrusted with composing the *fatḥnāme* after a battle. It is difficult to be precise on this subject because of the dearth of original *fatḥnāme*s available for study. Of the dozens of examples in Ferīdūn there is none of whose genuineness we can be sure, nor do they seem to bear out Pakalın's statement (s.v. *Fetihname*) that *fatḥnāme*s are of great historical importance as being short histories of battles. What Ferīdūn describes as the *fatḥnāme* on the conquest of Eger in 1005/1596, for instance (*Madjmūʿa-i munshaʾāt al-salāṭīn*, Istanbul 1265, ii, 2-3), contains no mention of the massacre of the garrison (see G. L. Lewis, *The Utility of Ottoman Fethnames*, in Bernard Lewis and P. M. Holt, *Historians of the Middle East*, Oxford 1962, and cf. Naʿīmā, *Taʾrīkh*, Istanbul 1281, i, 151). Nor does Ferīdūn's text bear any relation to Naʿīmā's statement (*ibid.*, 173) that the Nishāndjī Lām ʿAlī Čelebi was dismissed for exaggerating, in this same *fatḥnāme*, the part played in the conquest by Djighalazāde Sinān Pasha. On the other hand, we do have one published *fatḥnāme* which appears to be the genuine article and not a literary exercise: the Uygur account of Meḥemmed II's victory in 878/1473 over Uzun Ḥasan (R. Rahmeti Arat, *Fatih Sultan Mehmed'in yarlığı*, in *TM*, vi (1939), 285-322; cf. idem, *Un yarlık de Mehmed II, le Conquérant*, in *Annali del R. Ist. Sup. Orientale di Napoli*, n.s. i (1940), 25-68). It is laconic in style and full of information, including a complete order of battle with the names of the principal

commanders on both sides. There is none of the verbosity and sanctimonious self-justification which we see in the literary *fatḥnāmes*; the occasion for the campaign is refreshingly stated thus: 'Uzun Ḥasan having burned the city of Tokat, we came to fight him'. The most suggestive feature of the document is its conclusion: the Sulṭān is coming to winter in Istanbul and adjures various officials there to be steadfast in their work and not to neglect the business of the *dīwān*; the chief men of all towns are to keep the mosques in a flourishing state, to perform the five daily prayers in congregation and to fulfil the ordinances of the *sharīʿa* and the commandments of God. Yet the fact that the document is in Uygur shows that it was intended only for the eastern territories. The inference is that for this victory, at any rate, there was only one *fatḥnāme*, of which copies and, in this special case, a translation were sent to all parts of the Sulṭān's dominions. Ferīdūn (*op. cit.*, i, 283-6) gives the texts of three accounts of the victory: a *ḥukm-i sherīf* to Prince Djem, a letter (*nāme-i humāyūn*) to Ḥusayn Bayḳarā and a *fatḥnāme* 'to the Guarded Dominions'. None contains any useful details of the campaign; compared with the Uygur *yarlīḳ* their historical value is negligible. For the victory of Čaldirān, 41 years later, Ferīdūn gives no fewer than ten different *fatḥnāmes*, none of them giving a full account of the battle (for a partial analysis see Lewis's article cited above). A working hypothesis is that there was only one true *fatḥnāme* for each victory, which would add greatly to our knowledge of Ottoman military history if only we could lay hands on it. Other so-called *fatḥnāmes* are merely elegant variations on a theme, their value being mainly literary, though they may be of some interest as early specimens of war-propaganda. The last word cannot be said on this subject until more work has been done in the Ottoman archives, particularly perhaps on the *ordu mühimmesi* registers (see Uriel Heyd, *Ottoman documents on Palestine*, Oxford 1960, 5).

Bibliography: Works cited in text. Pakalın's article consists mainly in a lengthy quotation from M. F. Köprülü, *Bizans müesseselerinin ... tesiri*, in *Türk Hukuk ve Iktisat Tarihi Mecmuası*, i (1931) [Italian translation, *Alcune osservazioni ....*, Pubblicazioni dell'Inst. per l'Oriente di Roma, 1944], rejecting the theory of a connexion between the *fatḥnāme* and the Roman *litterae laureatae*. For some examples see G. Vajda, *Un bulletin de victoire de Bajazet II*, in *JA*, 236 (1948), 87-102; L. Fekete, *A fetḥnāméröl*, in *A Magyar Tudományos Akadémia Nyelv — és Irodalomtudományi Osztályának Közleményei*, xix/1-4 (1963), 65-101 (a *fatḥnāme* of Uzun Ḥasan); Adnan Sadık Erzi, *Türkiye Kütüphanelerinden notlar ve vesikalar*, ii, in *Belleten*, xiv/56 (1950), 612 ff.

(G. L. Lewis)

FATḤPŪR-SĪKRĪ, a deserted city, 23 miles from Agra, situated in 27° 5′ N. and 77° 40′ E., on a ridge of sandstone rocks near the ancient village of Sīkrī. In 1569 when Akbar visited Shaykh Salīm Čishtī, who was living in a cave on the Sīkrī ridge, the saint foretold the birth of a son to the childless monarch, and in 1570 Sultan Salīm, afterwards known as the Emperor Djahāngīr [*q.v.*] was born there. Akbar then commenced building a city, covering an area of about 1³/₄ sq. m. and enclosed by a wall (still standing) 3³/₄ m. long. On his return from his campaign in Gudjarāt in 1574, he found his new capital ready for occupation and named it Fatḥpūr (the City of Victory); he resided here until 1586, when he abandoned it as a capital, probably on account of the brackish nature of the water obtainable there, and shortly after his death it began to fall into ruin. Many of the buildings, however, still remain in an excellent state of preservation; among these may be mentioned the official buildings, such as the mint, the treasury, the record office, and the hall of public audience, and the royal palace, including the private apartments of the Emperor and the residences of several of his wives. The house of the Turkī Sulṭāna is remarkable for the elaborate carving with which it is covered, both within and without; the interior is decorated with a dado, 4 ft. high, divided into eight oblong panels, richly decorated with carvings representing forest and garden scenes. The two-storeyed building, known as Bīrbal's house (though it was undoubtedly the palace of one of Akbar's queens), is similarly covered with carving exhibiting a profuse variety of patterns executed in minute detail. In close proximity to the royal apartments are some curious buildings, of a unique design, *e.g.*, the Pānč Maḥall, a five-storeyed pavilion, each storey of which is smaller than the one on which it rests, and the so-called Dīwān-i-Khāṣṣ (or private audience hall), a building consisting of one room only, in the centre of which rises an octagonal column surmounted by an enormous circular capital, from the top of which radiate four narrow causeways, each about 10 ft. long, to the corners of the building; the top of this capital is thus connected with a gallery, running round the upper part of the room and communicating by staircases (made in the thickness of the wall) both with the roof and the courtyard below. It is not possible to enumerate here the many other buildings connected with the emperor and his court, but special mention must be made of the great mosque, which is one of the finest monuments of Mughal architecture. It covers an area of 438 ft. by 542 ft., having a central court (360 ft. by 439 ft.) enclosed by cloisters, except at the three gateways, of which the Buland Darwāza (facing the south), erected by Akbar in 1602 to commemorate his victories in the Dakkan, ranks as one of the noblest gateways in India. In the court of the mosque stands the tomb of Shaykh Salīm Čishtī, a single-storeyed building, encased in white marble and surmounted by a dome; the marble lattice screens which enclose the veranda of this building are of extraordinary delicacy and intricacy of geometrical pattern; over the cenotaph is a wooden canopy inlaid with mother-of-pearl arranged in beautiful geometrical designs.

Among the noteworthy features of the buildings at Fatḥpūr-Sīkrī are the evidences of the influence of Hindu architecture, in construction and decoration, and the frescoes painted on the walls of the Khʷābgāh and the Sōnahrā Makān, and the colour decoration of the Ḥammām and other buildings.

FĀTIḤA, "the opening (Sūra)", or, more exactly, *Fātiḥat al-Kitāb* "(the Sūra) which opens the scripture (of revelation)", designation of the first Sūra of the Ḳur'ān. Occasionally the terms *umm al-kitāb* (according to Sūra III, 7; XIII, 39; XLIII, 4) and *al-sabʿ al-mat͟hānī* (according to Sūra XV, 87) are also found. With reference to the last-named term one must count the Basmala which comes before the Sūra as a verse on its own, to make up the total of seven verses (= *mat͟hānī*).

While the other Sūras are arranged fairly accurately according to length (that is to say, the longer they are the nearer the beginning they are to be found, the shorter they are, the nearer the end) the Fātiḥa, despite its shortness, is prefaced to the Ḳur'ān as a sort of introductory prayer. Like the last two Sūrās (*al-muʿawwid͟hatān*), it is said not to have been preserved originally in the Codex of Ibn Masʿūd. It is markedly liturgical in character, as is also shown by the use of the first person plural (verses 5 and 6). Its chronological position (within the Mecca period) cannot be established more precisely.

The Fātiḥa is an indispensible component of the prayer-ritual. It must be recited at the beginning of every *rakʿa*, that is to say at least seventeen times a day (twice at the morning *ṣalāt*, three times at the sunset *ṣalāt*, and four times at each of the other three hours of prayer). It is often said at other times too. "With this recitation a seal is put on almost all important resolutions, almost all prayer formulae at the holy places are closed, and all joyful news is welcomed: while tradesmen who cannot come to terms over the price of goods seek in the united recitation of the fâtihah new strength for a decision" (Snouck Hurgronje, *Mekka*, 1931, 29). On many tombs there is an inscription asking the traveller visiting the spot to pray a *fātiḥa* for the soul of the dead man (H. Ritter, *Meer der Seele*, 1955, 317). In some respects, therefore, the *fātiḥa* may be compared with the Lord's Prayer in Christian practice. However, H. Winkler's attempt to show that the one is derived from the other must be said to have failed (*ZS*, vi, 1928, 238-46). M. Gaster's guess that the Fātiḥa is an imitation of the Samaritan Enṣira (*EI*[1], iv, art. Samaritans) is equally unconvincing.

Buk͟hārī and Muslim tell of a sick man who was cured by exorcism with the *umm al-kitāb*. There are numerous examples of the *fātiḥa* being used as a powerful prayer in the making of amulets. The *sawāḳiṭ al-fātiḥa*, that is, the seven letters which are significant by their absence from the *fātiḥa*, play an important part in this. Al-Būnī gives the requisite instructions in his book of magic *S͟hams al-maʿārif*.

In certain Arab countries, particularly in North Africa, the term *fātiḥa* (or *fatḥa*) is used to mean a prayer ceremony in which the arms are stretched out with the palms upwards, but without any recitation of the first Sūra (Snouck Hurgronje, *Mekka*, 1931, 29, note; E. Westermarck, *Ritual and belief in Morocco*, 1926, i, 186, note). Philipp Vassel gives as a translation "prayer with open hands" (*MSOS*, v, 1902, ii, 188). But it seems probable that even this prayer-ceremony is called after the first Sūra, and that originally it involved a recitation of the *fātiḥa* which only subsequently and as a result of much repetition disappeared to be replaced by a silent prayer.

AL-**FĀTIK** [see NAD͟JĀḤ, BANŪ].

FĀṬIMA, daughter of Muḥammad and K͟hadīd͟ja, wife of ʿAlī b. Abī Ṭālib, mother of al-Ḥasan and al-Ḥusayn, was the only one of the Prophet's daughters to enjoy great renown. She became the object of great veneration by all Muslims. This may be because she lived closest to her father, lived longest, and gave him numerous descendants, who spread throughout the Muslim world (the other sons and daughters of Muḥammad either died young or, if they had descendants, these soon died out); or it may be because there was reflected upon her, besides the greatness of her father, the historical importance of her husband and her sons; or because, as time went on, the Muslims attributed to her extraordinary qualities. Throughout the Muslim world, as is well known, it is customary to add to her name the honorific title al-Zahrā', "the Shining One", and she is always spoken of with the greatest respect; but it was above all the S͟hīʿīs who surrounded her with a halo of beliefs and glorified her some centuries after her death. That Fāṭima—a woman who, unlike other women associated with the Prophet, remained on the fringe of the great events of the early years of Islam and hence receives little attention in the historical sources—should be exalted to the level of legend, presents no problem to the believer: Western scholars, on the other hand, have set themselves to recover the real Fāṭima from the haze which envelops her. Did she really possess merits so special as to explain her posthumous fame, or is this fame to be attributed to a complex of circumstances which includes the human tendency to render extreme veneration to Woman? Two eminent European orientalists, Father Henri Lammens and Louis Massignon, have presented diametrically opposed judgements of Fāṭima.

The former, in *Fāṭima et les filles de Mahomet*, has sketched, in sparkling and lively style, ingeniously but not without malice, a thoroughly gloomy portrait of the daughter of the Prophet: as he describes her, Fāṭima becomes a woman devoid of attraction, of mediocre intelligence, completely insignificant, little esteemed by her father, ill-treated by her husband, "caractère chagrin et perpétuellement voilé de deuil", "ombre gémissante de femme", anaemic, often ill, prone to tears, who died perhaps of consumption. It is profitable to read the criticism of this thesis by G. Levi Della Vida, in *RSO*, vi (1913), 536-47 and C. H. Becker, *Grundsätzliches zur Leben-Muhammed-Forschung*, in *Islamstudien*, i, 520-7 = *Prinzipielles zu Lammens' Sīrastudien*, in *Isl.*, iv (1913), 263-9.

Massignon, on the other hand, has made Fāṭima sublime, elevating her to a position often reminiscent of that which the Virgin Mary holds among Christians. He accuses Lammens of having contented himself with putting together isolated fragments of anecdotes without attempting to arrange them in plausible patterns so as to bring them to life. "Yet it

is only this method", he says, "which allows us to understand how Fāṭima's intuitive actions (hardly consciously performed) have, throughout the collective history of Islam, penetrated the tangle of deceptions, accommodations and theories". Fāṭima, as he conceives her, is the Woman whose soul was unappreciated during her lifetime, who enjoyed privileges (*khaṣāʾiṣ*) accorded her by her father; she is Mistress of the Tent of hospitality, the Hostess of the Prophet's freedmen and of the non-Arab converts, and, as such, she represents the beginnings of universal Islam (*La notion*, 118 f.). To avoid any misrepresentation of Massignon's conception, we reproduce verbatim some of the concluding sentences of his *Mubāhala*. According to him, Fāṭima had a "vie secrète . . . voilée bien au delà de la jalousie de ʿAyisha, par une autre Jalousie, celle de Dieu. Vie de compassion intérieure, de larmes, prières pour les morts (à Uḥud) et dans les cimetières, voeux de jeûne, choses de peu de poids pour des théologiens philosophes ou canonistes. Vie qui les survole et les surplombe en Islam, comme une menace, de plus en plus imminente, de la Grâce de Dieu: du Voeu secret de la Femme, Vierge ou Mère qui transcende tous les axiomes et serments des hommes. L'hyperdulie des âmes en douleur, en Islam, pour Fāṭima, n'est selon le Coran lui-même qu'une figure de l'hyperdulie mariale . . .". This interpretation of the figure of Fāṭima will doubtless satisfy the mystic who lives in a world of extraordinary religious experiences and, perhaps, the scholar concerned with religious problems, because it gives a psychologico-religious explanation for the origin and development of the legend of the daughter of the Prophet and bridges the gap between legend and reality, as Lammens's book fails to do; but it cannot escape the objections of the historian, who will consider that the author subordinates the facts to beliefs about Fāṭima which appeared only later.

In the following survey will be found, placed in chronological order, arranged schematically, and accompanied sometimes by a commentary, the references to Fāṭima which can be collected from the sources belonging to the 2nd/8th and 3rd/9th centuries and the first half of the 4th/10th century (particularly al-Balādhurī, *Ansāb*, Ibn Saʿd and collections of *ḥadīths* regarded as canonical by the Sunnīs, for Ibn Hishām and the historians had little occasion to concern themselves with Fāṭima, so obscure was the life that she led; later sources such as Ibn ʿAbd al-Barr's *Istīʿāb*, Ibn al-Athīr's *Usd al-ghāba*, Ibn Ḥadjar's *Iṣāba*, the *Sīra al-Ḥalabiyya* and the *Taʾrīkh al-khamīs*, have purposely been ignored, the aim being to get as near as possible, if not to the reality, at least to the time when Fāṭima lived). In the survey some apparently trivial facts have been mentioned: this is because they had, particularly among the Shīʿīs, unforeseen developments; Fāṭima's trousseau, for example, became the subject of Persian religious dramas, the famous *taʿziyas*.

The Historical Fāṭima

Birth and childhood. The date of Fāṭima's birth is uncertain; however that indicated as most probable is the year of the re-building of the Kaʿba, *i.e.*, five years before the beginning of the Prophet's mission. This implies, as will appear, that the girl was married when she was over 18, a rather unusual age for an Arab bride. But if we take her birth as being a few years later (see al-Yaʿḳūbī, ii, 19) we encounter another difficulty—that when she was born her mother Khadīdja would have been over fifty. The question of Fāṭima's age is treated at some length in Lammens's book (8-14). There is also some uncertainty as to Fāṭima's place in the sequence of Muḥammad's daughters, who are generally listed in the order: Zaynab, Ruḳayya, Umm Kulthūm, Fāṭima. Of her childhood and her life at Mecca two episodes only are related: (1) she was overcome by grief at her mother's death, and the Prophet consoled her by saying that Djibrīl had come down to tell him that God had built for Khadīdja in Paradise a pavilion of brilliant pearls (*ḳaṣab*; see Lane, s.v., 2529 f.), free of weariness and noise (al-Yaʿḳūbī, ii, 35); (2) she removed the refuse which ʿUḳba b. Abī Muʿayṭ, one of the Ḳuraysh most hostile to Islam, had flung over the Prophet while he was at prayer, and her indignation led her to curse the offender (al-Bukhārī, ed. Krehl, ii, 300).

Journey from Mecca to Medina and betrothal. After the Hidjra, Muḥammad moved his daughters Fāṭima and Umm Kulthūm and his wife Sawda bint Zamaʿa from Mecca to Medina, charging his adopted son Zayd b. Ḥāritha [*q.v.*] and Abū Rāfiʿ to go and fetch them, giving them two camels and a sum of money. There is however a completely different version of this: al-ʿAbbās escorted these women to Medina and the departure was not a peaceful one, for al-Ḥuwayrith b. Nuḳayẓ b. Wahb prodded their camels, causing them to be thrown to the ground, for which act, it is said, he was killed after the occupation of Mecca. On the betrothal of Fāṭima and ʿAlī the sources give much information, but, as usual, they do not completely agree. Both Abū Bakr and ʿUmar had asked for Fāṭima's hand, but Muḥammad had refused, saying that he was waiting for the moment fixed by destiny (*ḳaḍāʾ*: Ibn Saʿd, viii, 11). ʿAlī did not dare to put forward his proposal because of his poverty, and it was Muḥammad who made his task easier; he reminded him that he owned a breast-plate which, if sold, would provide him with enough money for the bridal gift (*mahr*). ʿAlī, adding to the breast-plate some other objects and a camel or a ewe, raised the very modest sum of 480 dirhams or thereabouts. Of this money he spent, on Muḥammad's advice, one-third or two-thirds on perfumes, and the rest on objects necessary for the household. When Muḥammad informed his daughter of the promise which he had made to ʿAlī, Fāṭima (according to Ibn Saʿd) said nothing, and her silence was interpreted by the Prophet as consent (according to other sources, she protested and her father had to console her by saying that he had married her to that member of the family who was the most learned and wise, and who had been the first to embrace Islam).

Marriage. The accounts are at variance concerning the year and the month of the marriage and its consummation: the first or second year of the Hidjra, more likely the latter. According to some sources the consummation was postponed for a few days or for a few months, and some say that it did not take place until ʿAlī's return from the expedition of Badr. To celebrate their marriage, the bridegroom prepared a feast, Muḥammad having told him that this was necessary; the Anṣār gave their contributions in *dhura*, and ʿAlī killed a sheep. Two wives of the Prophet, ʿĀʾisha and Umm Salama, arranged the house and prepared the wedding-feast. It is said that at this time ʿAlī was 25 and Fāṭima between 15 and 21. The sources give a rather long account of a rite inaugurated by the Prophet: having warned the bridal pair to expect him, Muḥammad went to their

house on the wedding-night, asked for water in a jar, washed his hands in it (or spat in it, or spat back into it the water he had used to rinse his mouth) and sprinkled with it the breast (the shoulders and the forearms) of ʿAlī and of Fāṭima; finally he invoked God's blessing on them.

Poverty of the household. At night the newly-married pair lay on the fleece of an untanned sheepskin, which contained camel fodder during the day; for a covering they used an old piece of striped Yemenī cloth, which was not large enough to cover both feet and head. The pillow was of leather stuffed with *līf* (palm fibres); the trousseau was indeed meagre: a goatskin bottle, a sieve, a duster, a cup. Muḥammad had made some wedding-gifts: a velvet garment (*k̲h̲amla* or *k̲h̲amil*), two pitchers, a leather bottle, a pillow and some bunches of fragrant herbs. Fāṭima, having no maid-servants, ground the corn herself, which gave her blisters; ʿAlī, to earn a little money, drew water from the wells and watered other people's land; because of this hard work he complained of pains in the chest. One day, the Prophet having received some slaves, ʿAlī sent Fāṭima to ask for one, and, as his wife lacked the courage to make this request, he went with her himself but met with a refusal. "I cannot allow the *ahl al-ṣuffa* [*q.v.*] to be tormented with hunger", exclaimed the Prophet, "I shall sell the slaves and spend the money to help them". To console his daughter and son-in-law, Muḥammad went later to their house and taught them some litanies (so many repetitions of *Allāh akbar*, so many of *al-ḥamdu li'llāh*, so many of *subḥān Allāh*), and ʿAlī did not fail to repeat them every night before going to sleep.

There seems no reason to reject the *ḥadīt̲h̲*s which speak of the poverty of the household of ʿAlī and Fāṭima; only its duration must be limited to the first years of their marriage; many members of the community were just as poor and it was only after the occupation of K̲h̲aybar that the situation improved for ʿAlī and Fāṭima, as for a good number of Muslims, for they then received shares in the produce of the rich oasis and ʿĀʾis̲h̲a could exclaim: "Now we shall eat our fill of dates".

Fāṭima's house after the marriage. ʿAlī built a dwelling not far from that of the Prophet but, as Fāṭima wanted to live nearer to her father, the Medinan al-Ḥārit̲h̲a b. al-Nuʿmān gave up his own house to them.

Sons of ʿAlī and Fāṭima. Al-Ḥasan was born in 2/624 (but in this case the consummation of the marriage cannot have taken place after Badr!) or in 3/625, in Ramaḍān; al-Ḥusayn was conceived 50 days after the birth of al-Ḥasan and born in 4/626, in the first days of S̲h̲aʿbān. Besides these two sons and a third, Muḥassin (or Muḥsin), still-born, Fāṭima had two daughters, who were called by the names of two of their aunts: Umm Kult̲h̲ūm and Zaynab [see further ʿALIDS].

Disputes between ʿAlī and Fāṭima, and Muḥammad's intervention. ʿAlī and Fāṭima did not always live in harmony. ʿAlī treated his wife with too much harshness (*s̲h̲idda*, *ghilāẓ*), and Fāṭima went to complain to her father. There are some *ḥadīt̲h̲*s which are real vignettes of family life, describing in a vivid and fresh manner how the Prophet intervened and how his face shone with satisfaction after the reconciliation of those dear to him. The most serious disputes between the pair arose when the Banū His̲h̲ām b. al-Mug̲h̲īra of the Ḳurays̲h̲ suggested to ʿAlī that he should marry one of their women. ʿAlī did not reject the proposal, but Muḥammad, when some of the tribe came to sound him on the matter, came to the defence of his daughter. "Fāṭima", he said, "is a part of me (*baḍʿa minnī*) and whoever offends her offends me" (al-Balād̲h̲urī, *Ansāb*, i, 403; al-Tirmid̲h̲ī, ii, 319, etc.) or "what angers her angers me also" (this *ḥadīt̲h̲* has many variants which, however, do not much change the meaning). It seems that at the same time ʿAlī was asking in marriage a daughter of Abū D̲j̲ahl nicknamed al-ʿAwrāʾ (the One-eyed). Muḥammad protested from the *minbar* against ʿAlī, who proposed to shelter under one roof the daughter of the Apostle of God and the daughter of the enemy of God (*i.e.*, Abū D̲j̲ahl). On this occasion also the Prophet pronounced the phrase: *Innahā baḍʿa minnī* ("she is indeed a part of me"), and added that if ʿAlī wanted to accomplish his project he must first divorce Fāṭima (Aḥmad b. Ḥanbal, *Musnad*, Cairo 1313, iv, 326; al-Buk̲h̲ārī, ed. Krehl, ii, 440, etc.). Some authors have deduced from this that monogamy was one of the *k̲h̲aṣāʾiṣ* of the daughter of the Prophet.

The name Abū Turāb, "the man of dust", given to ʿAlī has, among other explanations, one connecting it with the disputes between ʿAlī and Fāṭima: instead of answering his wife in anger, ʿAlī would go out of the house and put dust on his head; Muḥammad, seeing him do this, gave him the famous nickname.

Historical events in which Fāṭima was involved during the life of Muḥammad. The following is all that can be collected: (1) After the battle of Uḥud Fāṭima tended Muḥammad's wounds and was charged by him and by ʿAlī to clean their bloodstained swords; after this it became her custom to go to pray on the graves of those killed in this battle; (2) Abū Sufyān, foreseeing the occupation of Mecca, sought her and ʿAlī's intercession with Muḥammad (al-Ṭabarī, i, 1623); (3) she received a share of the products of K̲h̲aybar and ʿAlī another, separate, share; (4) she went to Mecca while the town was being occupied, and on this occasion Abū Sufyān begged her to give him her protection, but she refused and refused also to allow her child to do so, the Prophet having prohibited this (al-Wāḳidī, 324); in 10/632 she performed the *ʿumra*; (5) with her husband and her sons, Fāṭima played an important part in the *mubāhala*, an episode which had strong repercussions among the S̲h̲īʿa [see MUBĀHALA].

Fāṭima as one of the five members of the *Ahl al-bayt*. A verse of the Ḳurʾān (XXXIII, 33) says: "God wishes only to remove from you the uncleanness, O People of the House" (*Ahl al-bayt* [*q.v.*]). The preceding verses contain instructions to the wives of the Prophet, and there the verbs and pronouns are in the feminine plural; but in this verse, addressed to the People of the House, the pronouns are in the masculine plural. Thus, it has been said, it is no longer a question of the Prophet's wives, or of them alone. To whom then does it refer? The expression *Ahl al-bayt* can only mean "Family of the Prophet". The privilege accorded by God to the latter (originally entirely spiritual, but later not merely so) naturally led all the relatives of Muḥammad—those nearest to him, those belonging to the collateral branches of the family, and beyond this such groups of the community as the Anṣār, or indeed the whole of the community—to claim a place in the *Ahl al-bayt*. But there is a story given in many traditions according to which Muḥammad sheltered under his cloak (or under a covering or under a sort of tent), in varying circumstances

(including the occasion when he was preparing for the *mubāhala*), his grandchildren al-Ḥasan and al-Ḥusayn, his daughter Fāṭima and his son-in-law ʿAlī; and so it is these five who are given the title *Ahl al-kisāʾ* [*q.v.*] or "People of the Mantle". Efforts have been made to include among the latter Muḥammad's wives; in general however the number of the privileged is limited to these five. Now according to the Shīʿa, without exception, but also according to the pro-ʿAlid Sunnīs, the *Ahl al-bayt* are identical with the *Ahl al-kisāʾ*. The verse quoted above (XXXIII, 33) is associated with Fāṭima and ʿAlī on one other occasion: it is related that Muḥammad, rising early in the morning to perform the *ṣubḥ*, was in the habit of knocking on their door and using this verse to remind them of the duty of prayer.

During the Prophet's illness. Fāṭima, who loved her father greatly, was much grieved by his illness and wept and lamented. During this period she received a confidence from Muḥammad. It is ʿĀʾisha who relates the episode in many *ḥadīth*s: she saw Fāṭima weep when her father spoke to her in secret and then smile. After the Prophet's death, she asked her what her father had said to her on that occasion; Fāṭima replied that Muḥammad had told her that Djibrīl came down once a year to bring him the Ḳurʾān, but that, as he had recently come down twice, he deduced that the end of his life was near, then he had added that she, Fāṭima, would be the first member of the family to join him in the next world. Then Fāṭima had wept. But Muḥammad had said to her: "Are you not pleased to be the *sayyida* of the women of this people?" (or "of the women of the Believers", or "of the women of the world", or "of the women of Paradise"—all these variants are found in the *ḥadīth*s). Then Fāṭima had smiled. As will be seen, this story is interesting because of the developments it underwent among the Shīʿa.

After the death of the Prophet. Fāṭima, a timid woman who had never taken part in political matters, found herself indirectly involved in some of the events which followed the death of the Prophet. After his election, Abū Bakr made his way with some companions towards Fāṭima's house, where a number of Anṣār and of ʿAlī's supporters had assembled. The newly-elected Khalīfa wanted to obtain the homage of these dissidents also, but ʿAlī went forward to meet him with sword drawn, and Fāṭima, when her husband had been disarmed by ʿUmar and the party was preparing to enter the house, raised such cries and threatened so boldly to uncover her hair that Abū Bakr preferred to withdraw (al-Yaʿḳūbī, ii, 141). There are other accounts of the same episode: Fāṭima saw in ʿUmar's hand a brand, and asked him if he intended to set fire to her door because of his hostility to her (al-Balādhurī, *Ansāb*, i, 586). In one book, *al-Imāma wa 'l-siyāsa* (which is certainly very early, even though the attribution to Ibn Ḳutayba is wrong), the episode is related with more serious details: ʿUmar really had evil intentions; he had wood brought and threatened to burn the house with everything in it. When he was asked, "Even if Fāṭima is there?", he replied in the affirmative. Then those who were in the house came out and rendered the homage demanded—except for ʿAlī. Fāṭima, appearing at the door, reproached them: "You have left the body of the Apostle of God with us and you have decided among yourselves without consulting us, without respecting our rights!" When Abū Bakr and ʿUmar repeated their attempts to make ʿAlī comply, she is said to have cried out, "O father! O Apostle of God! What evils we have suffered at the hands of ʿUmar and Abū Bakr after your death!" When they came back to her house and asked permission to enter, she again refused, and it was ʿAlī who let them in. Fāṭima turned her face to the wall. If one is to believe another account preserved in the same book (12), Fāṭima played an active part at the time when the decision was being made on the choice of a successor to the Prophet in the capacity of head of the community: she went on horseback with ʿAlī to the meeting-places of the Anṣār to ask them to support her husband; but the Anṣār replied that ʿAlī had come to them too late, when they were already committed to Abū Bakr. We have spent some time on these episodes because (1) even if they have been expanded by invented details, they are based on fact; (2) they represent Fāṭima's only political action; (3) to the motives for the hatred felt by the Shīʿa for ʿUmar they add one more, true or false: his treatment of the daughter of the Prophet.

Fāṭima's claim to Muḥammad's estate. After the death of her father, Fāṭima asked Abū Bakr to hand over the possessions of Muḥammad which he was holding. It is not clear whether these possessions included the property which Mukhayriḳ, the Jew converted to Islam, had given to the Prophet at Medina on the land of the Banu 'l-Naḍīr; probably there was no dispute about this. It was over the land of Fadak [*q.v.*] and over the share of Khaybar [*q.v.*] that Abū Bakr met Fāṭima's claims with a flat refusal, asserting that he had heard the Prophet say that he had no heirs and that everything that he left would be *ṣadaḳa* [*q.v.*]. Nor is it known whether the claim to the inheritance was put forward by Fāṭima alone or together with al-ʿAbbās; the examination of many *ḥadīth*s leads us to believe that the attempt to gain possession of this property was made twice and with different arguments, on the first occasion probably by both of them, on the second by Fāṭima alone. This dispute between such a prominent person as Abū Bakr and the daughter of the Prophet has always been disagreeable to Muslims; consequently they have tried to minimize its gravity by maintaining, for example, that Fāṭima claimed Fadak intending to give the rents of it to the poor (Shīʿī sources add: to the *mawālī*); they like to depict Abū Bakr as grieved by the duty of refusing a request of the daughter of the Prophet, but forced to act thus by the conduct of Muḥammad himself. The Shīʿa naturally do not forgive the Caliph for having disbelieved Fāṭima, who maintained that she had received Fadak as a gift from her father, and have continued for centuries to argue about this question.

Illness and death of Fāṭima. Fāṭima fell ill soon after her father's death. According to some sources she was reconciled during her illness with Abū Bakr, who had asked to visit her, but, according to the majority she remained angry to the end. There is an oft-repeated story about the last moments of her life: she prepared for death by washing herself, putting on coarse garments and rubbing herself with balm, and she charged her sister-in-law, Asmāʾ b. ʿUmays, the widow of Djaʿfar b. Abī Ṭālib, who was helping her with these tasks, that no-one should uncover her after her death; then she lay down on a clean bed in the middle of the room and awaited the end. As she had complained about the custom of covering the dead with a material which revealed their forms, Asmāʾ prepared for her a bier made, in the manner of the Abyssinians, of wood and fresh palm-leaves.

Fāṭima was content with this. Unfortunately these accounts which would allow us to assume that Fāṭima was gentle, modest, and calm in the face of death are contradicted by others: according to al-Yaʿḳūbī (ii, 128-30), she rebuked severely the Prophet's wives and the women of the Ḳuraysh̲ who came to visit her during her illness; through Asmāʾ she prevented ʿĀʾis̲h̲a from entering; her anxiety to hide her form from people's gaze was prompted by shame at her extreme thinness (al-Ṭabarī, iii, 2436); it was ʿAlī who washed the body, or it was she herself who begged her husband to perform this task. It is difficult, if not impossible, to choose among these different accounts.

There is the same uncertainty over the date of her death as surrounds other events of her private life: it was certainly the year 11, but the month is doubtful; the commonest report is that she died six months after the Prophet. Her death was kept secret and her burial took place by night. According to most versions, neither Abū Bakr nor ʿUmar was informed; but there are accounts which relate that Abū Bakr recited the ritual prayers over Fāṭima's grave. Nearly all the sources agree that Fāṭima was buried in the Baḳīʿ, and some specify the place of her grave: near the mosque called, from the name of the woman who built it, Masd̲j̲id Ruḳayya, at the corner of the *dār* of ʿAḳīl (ʿAlī's brother), seven cubits from the road etc., but according to other sources, either immediately after the burial or some time later, the exact position of the grave was no longer known. Al-Masʿūdī (*Murūd̲j̲*, vi, 165) asserts that there was a tomb which bore an inscription giving as the names of those buried there Fāṭima and three ʿAlids (he is however the only one to give this detail), but al-Muḳaddasī (*BGA*, iii, 46) includes the tomb of the daughter of the Prophet in the list of places on which there is disagreement, for it was also possible that Fāṭima had been buried "in the room" (*fi 'l-ḥud̲j̲ra*). Nowadays S̲h̲īʿī pilgrims, to pay homage to the *sayyidat al-nisāʾ*, visit three places: her house, the Baḳīʿ and the space in the Great Mosque between the *rawḍa* and the tomb of the Prophet. For a small *maḳṣūra* which may mark her place of burial and "Fāṭima's Garden", also in the Great Mosque, see *EI*[1], art. al-Madīna, 90 f.

Physical and moral attributes. Fāṭima had a very strange *kunya*: Umm Abīhā, "mother of her father". The explanations given for this name make us suspect that it originated among the S̲h̲īʿa, all the more so that it is apparently mentioned only in the more recent sources, *e.g.*, the *Usd al-g̲h̲āba*. An Imāmī source says that she was called "mother of her father" because she learned through a revelation that the name of her very last descendant would be Muḥammad, like that of her father. There are other explanations, for which see below, sections on The celestial apple and Fāṭima's names. Given the connexions between the cult of Mary among Christians and that of Fāṭima among Muslims (to which Massignon has drawn attention), it is possible that the title arose as a counterpart to that of "Mother of God".

Fāṭima was certainly not a beautiful woman, for the sources are silent about her appearance, whereas they mention the beauty of her sister Ruḳayya; they confine themselves to reporting that she resembled the Prophet in her gait. In any case she cannot have appeared the weak and sickly woman which Lammens took her to be on the strength of two *ḥadīt̲h̲*s, which may refer to purely temporary situations, for there are other facts (her bearing five children; her discharge of arduous household tasks, her two journeys to Mecca) which prove that Faṭima enjoyed fairly good health.

In attempting to form a judgement on the moral qualities of Fāṭima we encounter many obstacles. When some accounts permit us to attribute to her a certain characteristic, there are others which contradict it. It seems certain that she was hard-working, content to perform her domestic work diligently and patiently. She appears to have taken pleasure in helping others, and the Prophet's wives used her as a spokesman to express their resentment over the preference which he showed for ʿĀʾis̲h̲a; we can easily imagine, however, that she performed this service willingly, for she herself had no great fondness for ʿĀʾis̲h̲a. On this occasion she proved incapable of defending the case for which she had approached her father, for when he asked her: "Do you not love what I love?" (meaning ʿĀʾis̲h̲a), she quickly agreed that she too loved her; so the Prophet's wives had to choose a less timorous advocate from among their number to maintain their rights. Are we then to conclude from this and other accounts that Fāṭima was timid? On the day of her marriage she stumbled on the hem of her garment, but we see her support her husband so boldly against Abū Bakr that there is no question of timidity, and she appears as a woman of quite different calibre. There is no doubt that she was meek and submissive towards the Prophet, but what was her attitude to her husband? It was really she who prevented ʿAlī from taking a second wife, and in the affair of the inheritance, when it was a question of defending the interests of the family, although she was obliged to yield to the wishes of the head of the State, she did it unwillingly, refusing to acknowledge the validity of Abū Bakr's decision.

The Fāṭima of Legend

As no systematic study of this subject exists, we have limited ourselves to selecting the main themes of the Fāṭima legend from three early S̲h̲īʿī works (see *Bibl.*) in which some chapters are devoted to the daughter of the Prophet. The authors are: (1) Ibn Rustam al-Ṭabarī who, according to the editor of his *Dalāʾil al-imāma*, lived in the 4th/10th century (siglum: IRṬ); (2) Ḥusayn b. ʿAbd al-Wahhāb, who began to write in 448/1056-7 the work which we have used and which was one of the sources of al-Mad̲j̲lisī's *Biḥār al-anwār* and of al-Baḥrānī's *Madīnat al-maʿād̲j̲iz*; he presents some stories about Fāṭima which differ strikingly from those of the other sources (siglum: ḤʿAW); (3) Ibn S̲h̲ahrās̲h̲ūb, who died in 588/1192. Of the three works, his *Manāḳib Āl Abī Ṭālib* yields the most information and quotes form the largest number of sources (siglum: IS̲h̲).

K̲h̲adīd̲j̲a's pregnancy and accouchement. K̲h̲adīd̲j̲a was despised by the Ḳuraysh̲ because of her marriage with a poor man from a social class lower than her own (IRṬ, 8). On going in to her, Muḥammad told her that D̲j̲ibrīl had informed him that she would bear a daughter, a pure and blessed soul, and that from this daughter would spring his posterity and the *imām*s destined to be the rulers on earth when his own inspiration ended (IRṬ, 8). Fāṭima, while still in her mother's womb, conversed with her (IRṬ, 8; ḤʿAW, 48, 51; IS̲h̲, 119). Because of their contempt for K̲h̲adīd̲j̲a, the women of the Ḳuraysh̲ refused to help her during her confinement. So four women came down from Paradise to assist her: Sāra, Āsiya, Mary and Ṣafūrāʾ, daughter of S̲h̲uʿayb and wife of Mūsā. Ten houris came with a bowl and a jug filled with water from the Kawt̲h̲ar, and the first of

them washed the new-born child, wrapped her in perfumed fine linen, and handed her, pure, purified, fortunate, blessed also in her posterity, to Khadīdja, who suckled her (IRṬ, 9; Ḥ'AW, 48; ISh, 119). Fāṭima grew as much in a month as other children in a year (IRṬ, 9; ISh, 119). The women who had come to assist her mother departed as soon as they had completed their task, but before they went the new-born child greeted them by their names (Ḥ'AW, 48). At the moment of Fāṭima's birth, light spread over the sky and the earth, to the West and to the East (hence her title al-Zahrā') (IRṬ, 9; ISh, 119). Immediately after her birth Fāṭima uttered the profession of faith, praised God, recognized the imamate of 'Alī, recited the Ḳur'ān and predicted future events (IRṬ, 9; Ḥ'AW, 48, 51; ISh, 119).

Betrothal. 'Abd al-Raḥmān b. 'Awf wished to marry Fāṭima and offered an enormous *mahr* (100 camels loaded with Coptic cloth, and 10,000 *dīnārs*). 'Uthmān then offered the same *mahr*, and advanced the argument that he had embraced Islam earlier than 'Abd al-Raḥmān. This flaunting of wealth angered Muḥammad, who threw at 'Abd al-Raḥmān (or placed on the hem of his garment) pebbles which turned into pearls (a single one of them worth all the riches of 'Abd al-Raḥmān). Djibrīl descended from heaven to announce that 'Alī was to be the husband of Fāṭima, for God had already commanded the angel Riḍwān to adorn the four Paradises and another angel to built a *minbar* of light (IRṬ, 12; ISh, 123).

Marriage of Fāṭima and 'Alī. The Ḳuraysh women criticized Fāṭima's marrying 'Alī, a poor man, but Muḥammad had destined her for him because he had learned through Djibrīl (or through an angel named Maḥmūd) not only that this was the will of God but that the marriage had already taken place in heaven, with God as *walī*, Djibrīl as *khaṭīb* and the angels as witnesses. The *mahr* had been half of the earth (or a fifth, or a quarter) and, in addition, Paradise and Hell (hence Fāṭima enables her supporters to enter the one and consigns her enemies to the other). The *mahr* on earth was only about 500 *dirhams* because it was to serve as *sunna* for the community. Perhaps in order to leave the *mahr* at this low figure, there are some references to a *niḥla* from 'Alī, consisting of a fifth of the earth, two-thirds of Paradise, and four rivers: the Euphrates, the Tigris, the Nile and the Oxus. The tree *Ṭūbā* or the *Sidrat al-muntahā*, at God's command, covered itself with robes, pearls and precious stones, and scattered them in vast quantities; the houris gathered these jewels and will keep them until the Day of Resurrection, for they are Fāṭima's *nithār*. The same tree, according to some accounts, let fall also missives written in light, which the angels gathered up because they are the safe-conducts of the supporters of the 'Alids (IRṬ, 12 f., cf. also 14, 18, 19 f., 23 f.; Ḥ'AW, 48 f.; ISh, 109, 123, 128, 134 f.). When Muḥammad learned this, he called to him 'Ammār b. Yāsir, Salmān, and al-'Abbās and in their presence told 'Alī what God's will was; on his advice, 'Alī sold his breast-plate to Diḥya [*q.v.*], who then made him a present of it (Diḥya = Djibrīl: IRṬ, 14). The marriage in heaven, according to two of our sources, took place forty days before the marriage on earth (or on the night of the *isrā'*). The angel Maḥmūd revealed also the reason for the union: light must be joined to light (*ibid.*).

Trousseau. Muḥammad charged Asmā' bint 'Umays, Umm Salama and a freedwoman, 'Ammār, Abū Bakr and Bilāl to make the purchases necessary for the household of Fāṭima and 'Alī. The list of their purchases is recorded, in some cases with the prices (ISh, 123). Umm Salama bought the mattress-cover of Egyptian cloth which was to be filled with *līf*; Bilāl or 'Ammār saw to the perfumes (IRṬ, 14 f., 26).

The marriage ceremony. During the marriage ceremony on earth, Djibrīl cried from heaven "*Allāhu akbar*"; Muḥammad heard him, and he too, with his Companions, cried "*Allāhu akbar*". This was the first *takbīr* to be called during a wedding procession (*zifāf*) and from that day onwards it became *sunna* (Ḥ'AW, 51). But there is another and stranger story concerning this *takbīr*: Muḥammad mounted Fāṭima on his mule and pushed the animal, while Salmān led it; suddenly there was great confusion in the street: Djibrīl and Mīkhā'īl, each at the head of 70,000 angels, had come down for the ceremony and raised with Muḥammad the cry "*Allāhu akbar!*" (IRṬ, 23, 25).

Gifts from heaven. Djibrīl brought to Muḥammad a clove and an ear of corn from Paradise, announcing that God had commanded him to adorn Paradise for the marriage of Fāṭima and 'Alī (IRṬ, 14, 20). 'Alī, told by Muḥammad to look up into the sky, saw richly-clad maidens bringing presents: these were his own and Fāṭima's future servants in Paradise (IRṬ, 26). When 'Ammār brought to Fāṭima the perfume which Muḥammad had sent him to buy for her, Fāṭima announced that the angel Riḍwān had sent her some from heaven, brought by houris each of whom had in her right hand a fruit and in her left some basil; these gifts were intended for the people of her House and for her supporters (IRṬ, 26). Like Mary who, according to the Ḳur'ān (III, 32/37), received a necessary provision (*rizḳ*), Fāṭima received pomegranates, grapes, apples, quinces, etc., and ate besides things which other creatures had never tasted since the fall of Adam and Eve (ISh, 135). One day Muḥammad entered Fāṭima's house while she was at prayer, and saw behind her a steaming cauldron; he asked what this was and she replied: "Divine Providence" (ISh, 135). Another day 'Alī invited Salmān to the house because Fāṭima had received a gift from heaven and wished to share it with him. Three houris had brought it to her, with a message of sympathy from God while she was weeping for the death of her father. These three houris were called Dharra, Miḳdāda and Salmā, because they had been created for Abū Dharr [*q.v.*], Miḳdād [*q.v.*] and Salmān [*q.v.*] respectively. The gift was a dish of white dates, cooled and so fragrant that Salmān was asked, as he was taking five of them home, whether he had perfumed himself with musk. The dates had no stones; God had created them for Fāṭima beneath His throne from the prayers which Muḥammad had taught her (IRṬ, 29). Fāṭima wished for a ring, and asked it of God during the night-prayer, Muḥammad having taught her that she should make her requests at those times. A mysterious voice informed her that the ring was under the prayer-rug. In a dream Fāṭima saw castles destined for her in Paradise and noticed that the ring had been made from the foot of a bed which was in one of these castles and which had only three feet; but next day Muḥammad told her that the family of 'Abd al-Muṭṭalib should set their attention on the next world and not on earthly things, and ordered her to put the ring back under the rug. In a dream Fāṭima saw the bed, which now again had four feet (ISh, 118). After the death of her father, Fāṭima

received from heaven a book with covers of red chrysolite and pages of white pearl, which contained nothing from the Ḳur'ān, but instruction on all that had been and would be until the Day of Resurrection (in IRṬ, 27, the source which speaks of this book, there is a summary of the information contained in it: it ranged from the numbers of the angels, the Prophets, etc. to the names of places on the earth, statistics of the believers, the events which would take place during 50,000 years, etc.). This book was brought to Fāṭima while she was at prayer, and the angels waited until she had completed her devotions before giving it to her and returning to heaven. Fāṭima read the book, and all—men, *djinns*, birds, beasts, prophets and angels—are bound to obey her. Later the book was handed on to ʿAlī, and after that to the *imāms* (IRṬ, 227 f.).

Physical privileges. Having been born pure and purified (she was a houri from heaven: ḤʿAW, 50), Fāṭima was exempt from the physiological troubles of women: she did not menstruate, and lost no blood during her confinements. She gave birth through the left thigh, while Mary gave birth through the right thigh (ḤʿAW, 48, 51). Her pregnancies lasted only nine hours.

Miracles. Several miracles were worked by Fāṭima: the stone for grinding corn turned without anyone moving it, an angel (Ḳūḳabīl or Djibrīl) rocked her baby's cradle. One of her garments, given as a pledge to a Jew by the wife of Zayd b. Ḥāritha, gave forth light, and the Jew and eighty other people, astonished at this miracle, embraced Islam (ISh, 16 f.). When, after the election of Abū Bakr, those who wanted to compel ʿAlī to offer the *bayʿa* made him leave the house, Fāṭima went to the mosque and, standing near her father's tomb, threatened to uncover her head; at that moment Salmān saw the walls of the mosque rise up: "My mistress and my patroness", he cried, "God sent your father in His mercy: you should not bring us misfortune!" The walls then returned to their place (ISh, 118). When Fāṭima was weeping for her father's death, it was Djibrīl himself who consoled her. The miracles continued even after Fāṭima's death, benefiting one of her servants and the descendant of one of her servants (ISh, 16 f.).

Fāṭima in Paradise. Fāṭima will be the first person to enter Paradise after the Resurrection (ISh, 110). All will have to lower their gaze when she crosses the Bridge (*ṣirāṭ*) which leads across Hell to Paradise. She will be escorted by seventy houris. In Paradise she will proceed, mounted on a wondrous camel with legs of emerald, eyes of ruby, etc., under a dome of light. It will be Djibrīl who leads the camel up to the throne of God. There she will descend and ask God to mete out justice to those who were guilty of the deaths of al-Ḥasan and al-Ḥusayn. Then God will say to her, "My beloved, daughter of my beloved, ask of me what you will and I will grant it to you". Fāṭima will procure entry into Paradise for all her own people and all her supporters (ISh, 107-9). She is called al-Zahrā' because of the dome of rubies which hangs over her in Paradise—a wonderful dome of immense height (a whole year's journey), upheld in the sky neither suspended from above nor supported from below, with 10,000 doors and 100 angels at each one (ISh, 111). In Paradise Fāṭima will have a privilege: she will be the sole wife of ʿAlī, while other men will have as many houris as they please (ISh, 106); it was the houris who told her this (IRṬ, 26; ISh, 106), and it is out of respect for Fāṭima that there is no mention of houris in Sūra LXXVI, where Paradise is described (ISh, 106).

The celestial apple. An early story, which goes back at least as far as al-Ghullābī (d. 298/910) runs as follows: Muḥammad, on being reproached for embracing Fāṭima but not his other daughters, told how Djibrīl had presented him with an apple of Paradise, which he had eaten and which had become water in his loins; he then placed it within Khadīdja, who conceived Fāṭima. He finished by saying that he smelled in Fāṭima the fragrance of Paradise. Other similar accounts are given in the same source (ḤʿAW, 49 f.), with slight variants: Muḥammad ate the apple and a date in Paradise during the *miʿrādj* [*q.v.*]; both were transformed into water in his loins, etc. In ISh (135) Djibrīl gives Muḥammad a celestial date instead of an apple; the story then continues as above. A notable difference appears when there is introduced into the story the Light which forms the central point of other accounts; the themes then become interwoven: God created the light of Fāṭima and Fāṭima uttered His praises; then He placed the light of Fāṭima in a tree of Paradise, which shone with the splendour of it; Muḥammad, ascending to Paradise, was advised by God to pick the fruit of this tree. God caused its juice to pass into the throat of ʿAlī, and then placed Fāṭima in the loins of Muḥammad, who deposited her in Khadīdja; the latter bore Fāṭima, who was of that light: she knew what was, what would be and what was not (ḤʿAW, 47). This last account (the Light of Fāṭima lodged in the loins of Muḥammad) would explain her *kunya* Umm Abīhā.

The Light and Fāṭima. Muḥammad explained thus the reason for the preference accorded to the People of the House: God, he said, created me and ʿAlī as light, and separated off from our light that of my descendants; then He separated from our light the light of the Throne, and from that of my descendants the light of the sun and of the moon. We teach the angels the *tasbīḥ*, the *tahlīl* and the *taḥmīd* (*i.e.*, the formulas for the praise of God). God then said to the angels: "By My power, My majesty, My generosity, My eminence, I will act", and He created the light of Fāṭima like a lamp, and it is through her that the heavens were illuminated. Fāṭima was called al-Zahrā' because the horizon took its light from her (ḤʿAW, 46). This story is of particular interest because, with its description of successive divine emanations, it contains some features characteristic of Ismāʿīlī beliefs. Another story collected by ISh (106) also speaks of light, but in a different way: God created Paradise from the light of His countenance; He took this light, and threw it; with a third of it He struck Muḥammad, with another third Fāṭima, and with the remaining third ʿAlī and the People of the House. Whoever is thus struck recognizes the *walāya* [*q.v.*] of the family of Muḥammad.

Fāṭima's names. Attempts have been made to see a significance in the name Fāṭima. As the root has the meaning of "weaning a child", "breaking someone of a habit", she has been said to be so called because she, and her descendants and supporters, will be spared from Hell, or because she was exempt from evil (ISh, 110, cf. 107), or because she was removed from polytheism (IRṬ, 10). The list of her names in IRṬ (10 f.) consists of nine: Fāṭima, al-Ṣiddīḳa, al-Mubāraka, al-Ṭāhira, al-Zakiyya, al-Raḍiyya, al-Rāḍiya, al-Muḥaddatha, al-Zahrā'. She was called al-Muḥaddatha because the angels spoke to her as to Mary, and she to them; they told her "God has chosen you and purified you; He

has chosen you from among the women of the world". According to Ḥ'AW (46), her names on earth are: Fāṭim (*sic*, in the masculine), Fāṭir, al-Zahrā', al-Batūl, al-Ḥaṣān, al-Ḥawrā', al-Sayyida, al-Ṣiddīḳa, and Maryam al-Kubrā. Ibn Bābūya (d. 381/991) knew of 16 names for Fāṭima on earth and three in heaven, and Ibn Shahrāshūb (133) who records them appends a list of 69 names and attributes which must have served as a litany, for they are linked by the rhymes in groups, usually of three. Among the names listed by Ḥ'AW should be noted Fāṭir, *i.e.*, Creator, for not only is it masculine, but it carried with it a glorification of Fāṭima which seems to be characteristic of the extreme Ismā'īlīs and of aberrant sects such as the Nuṣayrīs (Bausani, 189) rather than of the Imāmīs. Have we here a borrowing by the latter from the former? The belief that Fāṭima is Fāṭir, Creator, would also explain her *kunya* Umm Abīhā.

References to Fāṭima in the Ḳur'ān; her other merits. The Ḳur'ān too is made to contribute to the glorification of Fāṭima, thanks to the exegesis of Shī'ī writers, who maintain that many verses allude to 'Alī and his wife. When the Book speaks of women in general, a hidden reference to Fāṭima is intended: thus in III, 193/195, "I shall not permit to be lost the work of one who works [well] among you, male or female", the "male" is 'Alī and the "female" Fāṭima at the time of the *hidjra*. Similarly they identify with 'Alī and Fāṭima the reference to the creation of man and woman in XCII, 3.

Twelve women are alluded to in the Ḳur'ān without their names being mentioned (*e.g.*, Eve, Sarah, Pharaoh's wife, etc.). There is such an allusion to Fāṭima in LV, 19, which speaks of two seas which God has caused to flow together: this confluence is the reconciliation of 'Alī and Fāṭima after a dispute, for he is the sea of knowledge and Fāṭima the sea of prophecy; the barrier between them, mentioned in the following verse, is the Apostle of God, who prevents 'Alī from distressing himself over the life of this world and Fāṭima from quarrelling with her husband over earthly things; the pearls and the coral of verse 22 are, since they come from these seas, allusions to al-Ḥasan and al-Ḥusayn (ISh, 101, 102 f.). Each of the women of the Ḳur'ān has a particular quality which is apparent from a phrase in the Book, *e.g.*, Eve has repentance (cf. Ḳur'ān, VII, 22/23), Pharaoh's wife desire (LXVI, 11), Fāṭima *'iṣma* (because of the *mubāhala*, III, 54/61). Ten of these women received a gift from God, Fāṭima's being knowledge. Support for all these, and other, assertions is found in verses of the Ḳur'ān (ISh, 102-4). The best women of Paradise are Fāṭima, Khadīdja, Āsiya bint Muzāḥim, Pharaoh's wife, and Maryam bint 'Imrān (= Mary), but Fāṭima is the *sayyida* par excellence (an angel had announced this to Muḥammad: Ḥ'AW, 51; ISh, 104 f.). Fāṭima is often compared with Mary. On one occasion she asked the angels, "Is not Mary the chosen one?", to which the reply was "Mary is the *sayyida* of her world; God has made you the *sayyida* of the women of this world and the next" (IRṬ, 10); further, Fāṭima had the privilege of being married to a great man in this life and the next (ISh, 105), and thus is superior. And although Mary preserved her virginity, so did Fāṭima, whence her title al-Batūl (also explained, however, as meaning that no woman comparable with her ever existed) (ISh, 134 f.). Fāṭima is numbered among the four best known "returners to God" (*tawwāb* [*q.v.*]): Ādam, Yūnus, Dāwūd and Fāṭima, and it is to her that the Ḳur'ān refers in III, 188/191; the best known "weepers" (*bakkā'* [*q.v.*]) number seven: Ādam, Nūḥ, Ya'ḳūb, Yūsuf, Shu'ayb, Dāwūd, Zayn al-'Ābidīn, and she is the eighth; she had become so accustomed to weep at all times for the death of her father that the people of Medina urged her to devote herself to weeping either by night or by day (ISh, 104).

Fāṭima in the *ta'ziyas*. The rich collection of *ta'ziyas* presented by Enrico Cerulli to the Vatican Library (of which E. Rossi and A. Bombaci have published the Index, and the latter proposes to publish resumés) presents several texts based on episodes of the Fāṭima legend, *e.g.*, her trousseau (Salmān and Abū Dharr are commissioned to make the purchases); her invitation to the wedding of a woman of the Ḳuraysh, which led to the conversion of those present; her hard work to support herself; the misappropriation of Fadak and the violence shown by 'Umar to her and 'Alī; the visit of Abū Bakr and 'Umar during her last illness; her will; her death (a pomegranate is brought to her from heaven); her arrival at the camp of al-Ḥusayn on the 10th Muḥarram to visit the People of the Tent, and on the day following the massacre to see her son's body; various of her miracles, etc. In the introduction to the work mentioned above will be found references to other collections of these Persian sacred dramas, where too, very probably, Fāṭima plays the principal or a leading role.
